This specification is protected by copyright laws and contains material proprietary to the Khronos Group, Inc. It or any components may not be reproduced, republished, distributed, transmitted, displayed, broadcast, or otherwise exploited in any manner without the express prior written permission of the Khronos Group. You may use this specification for implementing the functionality therein, without altering or removing any trademark, copyright or other notice from the specification, but the receipt or possession of this specification does not convey any rights to reproduce, disclose, or distribute its contents, or to manufacture, use, or sell anything that it may describe, in whole or in part.

Khronos Group grants express permission to any current Promoter, Contributor or Adopter member of Khronos to copy and redistribute UNMODIFIED versions of this specification in any fashion, provided that NO CHARGE is made for the specification and the latest available update of the specification for any version of the API is used whenever possible. Such distributed specification may be reformatted AS LONG AS the contents of the specification are not changed in any way. The specification may be incorporated into a product that is sold as long as such product includes significant independent work developed by the seller. A link to the current version of this specification on the Khronos Group website should be included whenever possible with specification distributions.

Khronos Group makes no, and expressly disclaims any, representations or warranties, express or implied, regarding this specification, including, without limitation, any implied warranties of merchantability or fitness for a particular purpose or non-infringement of any intellectual property. Khronos Group makes no, and expressly disclaims any, warranties, express or implied, regarding the correctness, accuracy, completeness, timeliness, and reliability of the specification. Under no circumstances will the Khronos Group, or any of its Promoters, Contributors or Members or their respective partners, officers, directors, employees, agents or representatives be liable for any damages, whether direct, indirect, special or consequential damages for lost revenues, lost profits, or otherwise, arising from or in connection with these materials.

SAMPLE CODE and EXAMPLES, as identified herein, are expressly depicted herein with a “grey” watermark and are included for illustrative purposes only and are expressly outside of the Scope as defined in Attachment A - Khronos Group Intellectual Property (IP) Rights Policy of the Khronos Group Membership Agreement. A Member or Promoter Member shall have no obligation to grant any licenses under any Necessary Patent Claims covering SAMPLE CODE and EXAMPLES.

1 Overview

1.1 Purpose of this Document

This document details the API for an extension to OpenMAX Application Layer (AL) 1.0. Developed as an open standard by the Khronos Group, OpenMAX AL EGLStream Extension consists of a macro and structure definitions. It provides a mechanism for OpenMAX AL media objects to interface with an EGLStream object in a standardized fashion.

1.1.1 About the Khronos Group

The Khronos Group is a member-funded industry consortium focused on the creation of open standard, royalty-free APIs to enable the authoring and accelerated playback of dynamic media on a wide variety of platforms and devices. All Khronos members can contribute to the development of Khronos API specifications, are empowered to vote at various stages before public deployment, and may accelerate the delivery of their multimedia platforms and applications through early access to specification drafts and conformance tests. The Khronos Group is responsible for open APIs such as OpenGL ES, OpenKODE, OpenSL ES and OpenVG.

1.2 Intended Audience

This specification is meant for application-developers and implementers.

2 OpenMAX AL EGLStream DataLocator

2.1 Motivation

There is a need for OpenMAX AL to interoperate with EGL to facilitate advanced multimedia/graphics use cases. These use cases involve exchange of video content between OpenMAX AL and graphics APIs like OpenGL ES and OpenVG and windowing APIs like OpenWF, with EGL acting as the “go-between”.

The EGL_KHR_stream [EGL STRM] extension to EGL utilizes an EGLStream object to transport video frames produced by a producer API (like OpenMAX AL) to a consumer API (like OpenGL ES). It can also be used to transport video frames in the reverse direction (e.g. OpenGL ES acting as the producer API and OpenMAX AL acting as the consumer API). There is currently no standardized mechanism in the OpenMAX AL specification to facilitate this interaction between AL and the graphics/windowing APIs.

2.2 Functional Overview

This extension adds a new data locator (XADDataLocator_EGLStream) that can be used to inject decoded video frames produced by an OpenMAX AL media object into the EGLStream or to extract video frames from EGLStream to be fed into an OpenMAX AL media object for encoding.

2.3 New Data Locator: XADDataLocator_EGLStream

We define a new data locator, XADDataLocator_EGLStream, represented by the following macro:

```
#define XA_DATALOCATOR_EGLSTREAM ((XAuint32) 0x0000000A)
```

and the following structure definition:

```
typedef struct XADDataLocator_EGLStream_ {
    XAuint32 locatorType;
    const void * pEGLStream;
    const void * pEGLDisplay;
} XADDataLocator_EGLStream;
```

Fields include:

Field	Description
locatorType	Locator type, which must be XA_DATALOCATOR_EGLSTREAM for this structure.
pEGLStream	Pointer to the EGLStream object. Refer to the EGLStream extension specification [EGL STRM] for details.
pEGLDisplay	Pointer to the EGLDisplay object. Refer to Section 2.1.2 of the EGL specification [EGL 1.4] for details.

The two pointers are of type void * to avoid a direct reference and dependency to types

defined outside the OpenMAX AL specification. Users of this data locator should cast these void * pointers to the appropriate types.

This data locator contains pointers to both the EGLStream and EGLDisplay objects and can be used in the XADDataSink (Section 9.1.19 in [AL 1.1] and XADDataSource (Section 9.1.20 in [AL 1.1] structures to specify the destination and source respectively for the video frames.

When this data locator is used in XADDataSink or XADDataSource, the pFormat field of these structures is ignored as there is no XADDataFormat structure (Section 9.2.24 in [AL 1.1] appropriate for XADDataLocator_EGLStream.

2.4 New Extension Header: OpenMAXAL_EGL_EXT.h

In keeping with the extensibility rules defined in Section 3.6 of the AL 1.1 specification, the proposed `XA_DATALOCATOR_EGLSTREAM` macro and the `XADDataLocator_EGLStream` structure are in a separate extension header called `OpenMAXAL_EGL_EXT.h`.
