

## Correction to OpenVX Specification 1.3.1 Section 7.6.3: vxAddUserKernel API

The data type of the `name` parameter changed from `const vx_char name[VX_MAX_KERNEL_NAME]` to `const vx_char * name`. Below is corrected `vxAddUserKernel` API declaration:

```
vx_kernel vxAddUserKernel(  
    vx_context          context,  
    const vx_char *    name,  
    vx_enum            enumeration,  
    vx_kernel_f        func_ptr,  
    vx_uint32          numParams,  
    vx_kernel_validate_f validate,  
    vx_kernel_initialize_f init,  
    vx_kernel_deinitialize_f deinit);
```

The above change is reflected in the latest header package on Khronos OpenVX registry dated Nov 2023.
