Each allocation has an *allocation scope* defining its lifetime and which object it is associated with. Possible values passed to the **allocationScope** parameter of the callback functions specified by **VkAllocationCallbacks**, indicating the allocation scope, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkSystemAllocationScope {
    VK_SYSTEM_ALLOCATION_SCOPE_COMMAND = 0,
    VK_SYSTEM_ALLOCATION_SCOPE_OBJECT = 1,
    VK_SYSTEM_ALLOCATION_SCOPE_CACHE = 2,
    VK_SYSTEM_ALLOCATION_SCOPE_DEVICE = 3,
    VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE = 4,
} VkSystemAllocationScope;
```

• **VK_SYSTEM_ALLOCATION_SCOPE_COMMAND** specifies that the allocation is scoped to the duration of the Vulkan command.

• **VK_SYSTEM_ALLOCATION_SCOPE_OBJECT** specifies that the allocation is scoped to the lifetime of the Vulkan object that is being created or used.

• **VK_SYSTEM_ALLOCATION_SCOPE_CACHE** specifies that the allocation is scoped to the lifetime of a VkPipelineCache or VkValidationCacheEXT object.

• **VK_SYSTEM_ALLOCATION_SCOPE_DEVICE** specifies that the allocation is scoped to the lifetime of the Vulkan device.

• **VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE** specifies that the allocation is scoped to the lifetime of the Vulkan instance.

Most Vulkan commands operate on a single object, or there is a sole object that is being created or manipulated. When an allocation uses an allocation scope of **VK_SYSTEM_ALLOCATION_SCOPE_OBJECT** or **VK_SYSTEM_ALLOCATION_SCOPE_CACHE**, the allocation is scoped to the object being created or manipulated.

When an implementation requires host memory, it will make callbacks to the application using the most specific allocator and allocation scope available:

• If an allocation is scoped to the duration of a command, the allocator will use the **VK_SYSTEM_ALLOCATION_SCOPE_COMMAND** allocation scope. The most specific allocator available is used: if the object being created or manipulated has an allocator, that object's allocator will be used, else if the parent **VkDevice** has an allocator it will be used, else if the parent **VkInstance** has an allocator it will be used. Else,

• If an allocation is associated with a **VkValidationCacheEXT** or **VkPipelineCache** object, the allocator will use the **VK_SYSTEM_ALLOCATION_SCOPE_CACHE** allocation scope. The most specific allocator available is used (cache, else device, else instance). Else,
If an allocation is scoped to the lifetime of an object, that object is being created or manipulated by the command, and that object's type is not `VkDevice` or `VkInstance`, the allocator will use an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_OBJECT`. The most specific allocator available is used (object, else device, else instance). Else,

- If an allocation is scoped to the lifetime of a device, the allocator will use an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_DEVICE`. The most specific allocator available is used (device, else instance). Else,

- If the allocation is scoped to the lifetime of an instance and the instance has an allocator, its allocator will be used with an allocation scope of `VK_SYSTEM_ALLOCATION_SCOPE_INSTANCE`.

- Otherwise an implementation will allocate memory through an alternative mechanism that is unspecified.

Objects that are allocated from pools do not specify their own allocator. When an implementation requires host memory for such an object, that memory is sourced from the object's parent pool’s allocator.

The application is not expected to handle allocating memory that is intended for execution by the host due to the complexities of differing security implementations across multiple platforms. The implementation will allocate such memory internally and invoke an application provided informational callback when these *internal allocations* are allocated and freed. Upon allocation of executable memory, `PFN_INTERNAL_ALLOCATION` will be called. Upon freeing executable memory, `PFN_INTERNAL_FREE` will be called. An implementation will only call an informational callback for executable memory allocations and frees.

The `allocationType` parameter to the `PFN_INTERNAL_ALLOCATION` and `PFN_INTERNAL_FREE` functions may be one of the following values:

```c
// Provided by VK_VERSION_1_0
typedef enum VkInternalAllocationType {
    VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE = 0,
} VkInternalAllocationType;
```

- `VK_INTERNAL_ALLOCATION_TYPE_EXECUTABLE` specifies that the allocation is intended for execution by the host.

An implementation must only make calls into an application-provided allocator during the execution of an API command. An implementation must only make calls into an application-provided allocator from the same thread that called the provoking API command. The implementation should not synchronize calls to any of the callbacks. If synchronization is needed, the callbacks must provide it themselves. The informational callbacks are subject to the same restrictions as the allocation callbacks.

If an implementation intends to make calls through a `VkAllocationCallbacks` structure between the time a `VkCreate*` command returns and the time a corresponding `VkDestroy*` command begins, that implementation must save a copy of the allocator before the `vkCreate*` command returns. The callback functions and any data structures they rely upon must remain valid for the lifetime of the object they are associated with.
If an allocator is provided to a `vkCreate*` command, a compatible allocator **must** be provided to the corresponding `vkDestroy*` command. Two `VkAllocationCallbacks` structures are compatible if memory allocated with `pfnAllocation` or `pfnReallocation` in each can be freed with `pfnReallocation` or `pfnFree` in the other. An allocator **must** not be provided to a `vkDestroy*` command if an allocator was not provided to the corresponding `vkCreate*` command.

If a non-NULL allocator is used, the `pfnAllocation`, `pfnReallocation` and `pfnFree` members **must** be non-NULL and point to valid implementations of the callbacks. An application can choose to not provide informational callbacks by setting both `pfnInternalAllocation` and `pfnInternalFree` to NULL. `pfnInternalAllocation` and `pfnInternalFree` **must** either both be NULL or both be non-NULL.

If `pfnAllocation` or `pfnReallocation` fail, the implementation may fail object creation and/or generate a `VK_ERROR_OUT_OF_HOST_MEMORY` error, as appropriate.

Allocation callbacks **must** not call any Vulkan commands.

The following sets of rules define when an implementation is permitted to call the allocator callbacks.

`pfnAllocation` or `pfnReallocation` **may** be called in the following situations:

- Allocations scoped to a `VkDevice` or `VkInstance` **may** be allocated from any API command.
- Allocations scoped to a command **may** be allocated from any API command.
- Allocations scoped to a `VkPipelineCache` **may** only be allocated from:
  - `vkCreatePipelineCache`
  - `vkMergePipelineCaches` for `dstCache`
  - `vkCreateGraphicsPipelines` for `pipelineCache`
  - `vkCreateComputePipelines` for `pipelineCache`
- Allocations scoped to a `VkValidationCacheEXT` **may** only be allocated from:
  - `vkCreateValidationCacheEXT`
  - `vkMergeValidationCachesEXT` for `dstCache`
  - `vkCreateShaderModule` for `validationCache` in `VkShaderModuleValidationCacheCreateInfoEXT`
- Allocations scoped to a `VkDescriptorPool` **may** only be allocated from:
  - any command that takes the pool as a direct argument
  - `vkAllocateDescriptorSets` for the `descriptorPool` member of its `pAllocateInfo` parameter
  - `vkCreateDescriptorPool`
- Allocations scoped to a `VkCommandPool` **may** only be allocated from:
  - any command that takes the pool as a direct argument
  - `vkCreateCommandPool`
  - `vkAllocateCommandBuffers` for the `commandPool` member of its `pAllocateInfo` parameter
  - any `vkCmd*` command whose `commandBuffer` was allocated from that `VkCommandPool`
• Allocations scoped to any other object may only be allocated in that object’s vkCreate* command.

PFNFree, or pfnReallocation with zero size, may be called in the following situations:

• Allocations scoped to a VkDevice or VkInstance may be freed from any API command.
• Allocations scoped to a command must be freed by any API command which allocates such memory.
• Allocations scoped to a VkPipelineCache may be freed from vkDestroyPipelineCache.
• Allocations scoped to a VkValidationCacheEXT may be freed from vkDestroyValidationCacheEXT.
• Allocations scoped to a VkDescriptorPool may be freed from
  ◦ any command that takes the pool as a direct argument
• Allocations scoped to a VkCommandPool may be freed from:
  ◦ any command that takes the pool as a direct argument
  ◦ vkResetCommandBuffer whose commandBuffer was allocated from that VkCommandPool
• Allocations scoped to any other object may be freed in that object’s vkDestroy* command.
• Any command that allocates host memory may also free host memory of the same scope.

11.2. Device Memory

Device memory is memory that is visible to the device — for example the contents of the image or buffer objects, which can be natively used by the device.

11.2.1. Device Memory Properties

Memory properties of a physical device describe the memory heaps and memory types available.

To query memory properties, call:

```c
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceMemoryProperties(
    VkPhysicalDevice physicalDevice,
    VkPhysicalDeviceMemoryProperties* pMemoryProperties);
```

• physicalDevice is the handle to the device to query.
• pMemoryProperties is a pointer to a VkPhysicalDeviceMemoryProperties structure in which the properties are returned.

Valid Usage (Implicit)

• VUID-vkGetPhysicalDeviceMemoryProperties-physicalDevice-parameter
  physicalDevice must be a valid VkPhysicalDevice handle
• VUID-vkGetPhysicalDeviceMemoryProperties-pMemoryProperties-parameter
The `VkPhysicalDeviceMemoryProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceMemoryProperties {
    uint32_t memoryTypeCount;
    VkMemoryType memoryTypes[VK_MAX_MEMORY_TYPES];
    uint32_t memoryHeapCount;
    VkMemoryHeap memoryHeaps[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryProperties;
```

- `memoryTypeCount` is the number of valid elements in the `memoryTypes` array.
- `memoryTypes` is an array of `VK_MAX_MEMORY_TYPES` `VkMemoryType` structures describing the memory types that can be used to access memory allocated from the heaps specified by `memoryHeaps`.
- `memoryHeapCount` is the number of valid elements in the `memoryHeaps` array.
- `memoryHeaps` is an array of `VK_MAX_MEMORY_HEAPS` `VkMemoryHeap` structures describing the memory heaps from which memory can be allocated.

The `VkPhysicalDeviceMemoryProperties` structure describes a number of memory heaps as well as a number of memory types that can be used to access memory allocated in those heaps. Each heap describes a memory resource of a particular size, and each memory type describes a set of memory properties (e.g. host cached vs. uncached) that can be used with a given memory heap. Allocations using a particular memory type will consume resources from the heap indicated by that memory type's heap index. More than one memory type may share each heap, and the heaps and memory types provide a mechanism to advertise an accurate size of the physical memory resources while allowing the memory to be used with a variety of different properties.

The number of memory heaps is given by `memoryHeapCount` and is less than or equal to `VK_MAX_MEMORY_HEAPS`. Each heap is described by an element of the `memoryHeaps` array as a `VkMemoryHeap` structure. The number of memory types available across all memory heaps is given by `memoryTypeCount` and is less than or equal to `VK_MAX_MEMORY_TYPES`. Each memory type is described by an element of the `memoryTypes` array as a `VkMemoryType` structure.

At least one heap must include `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` in `VkMemoryHeap::flags`. If there are multiple heaps that all have similar performance characteristics, they may all include `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT`. In a unified memory architecture (UMA) system there is often only a single memory heap which is considered to be equally “local” to the host and to the device, and such an implementation must advertise the heap as device-local.

Each memory type returned by `vkGetPhysicalDeviceMemoryProperties` must have its `propertyFlags` set to one of the following values:

- 0
• VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT

• VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT

• VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

• VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT | VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT | VK_MEMORY_PROPERTY_HOST_CACHED_BIT | VK_MEMORY_PROPERTY_HOST_COHERENT_BIT | VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD

...
There must be at least one memory type with both the `VK_MEMORYPROPERTY_HOST_VISIBLE_BIT` and `VK_MEMORYPROPERTY_HOST_COHERENT_BIT` bits set in its `propertyFlags`. There must be at least one memory type with the `VK_MEMORYPROPERTY_DEVICE_LOCAL_BIT` bit set in its `propertyFlags`. If the `deviceCoherentMemory` feature is enabled, there must be at least one memory type with the `VK_MEMORYPROPERTY_DEVICE_COHERENT_BIT_AMD` bit set in its `propertyFlags`.

For each pair of elements X and Y returned in `memoryTypes`, X must be placed at a lower index position than Y if:

- the set of bit flags returned in the `propertyFlags` member of X is a strict subset of the set of bit flags returned in the `propertyFlags` member of Y; or
- the `propertyFlags` members of X and Y are equal, and X belongs to a memory heap with greater performance (as determined in an implementation-specific manner); or
- the `propertyFlags` members of Y includes `VK_MEMORYPROPERTYDEVICE_COHERENT_BIT_AMD` or `VK_MEMORYPROPERTYDEVICE_UNCACHED_BIT_AMD` and X does not

**Note**

There is no ordering requirement between X and Y elements for the case their `propertyFlags` members are not in a subset relation. That potentially allows more than one possible way to order the same set of memory types. Notice that the list of all allowed memory property flag combinations is written in a valid order. But if
instead \( VK\_MEMORY\_PROPERTY\_DEVICE\_LOCAL\_BIT \) was before \( VK\_MEMORY\_PROPERTY\_HOST\_VISIBLE\_BIT \) | \( VK\_MEMORY\_PROPERTY\_HOST\_COHERENT\_BIT \), the list would still be in a valid order.

There may be a performance penalty for using device coherent or uncached device memory types, and using these accidentally is undesirable. In order to avoid this, memory types with these properties always appear at the end of the list; but are subject to the same rules otherwise.

This ordering requirement enables applications to use a simple search loop to select the desired memory type along the lines of:

```c
// Find a memory in 'memoryTypeBitsRequirement' that includes all of 'requiredProperties'
int32_t findProperties(const VkPhysicalDeviceMemoryProperties* pMemoryProperties, uint32_t memoryTypeBitsRequirement, VkMemoryPropertyFlags requiredProperties) {
    const uint32_t memoryCount = pMemoryProperties->memoryTypeCount;
    for (uint32_t memoryIndex = 0; memoryIndex < memoryCount; ++memoryIndex) {
        const uint32_t memoryTypeBits = (1 << memoryIndex);
        const bool isRequiredMemoryType = memoryTypeBitsRequirement & memoryTypeBits;

        const VkMemoryPropertyFlags properties = pMemoryProperties->memoryTypes[memoryIndex].propertyFlags;
        const bool hasRequiredProperties = (properties & requiredProperties) == requiredProperties;

        if (isRequiredMemoryType && hasRequiredProperties) {
            return static_cast<int32_t>(memoryIndex);
        }
    }

    // failed to find memory type
    return -1;
}
```

// Try to find an optimal memory type, or if it does not exist try fallback memory type
// 'device' is the VkDevice
// 'image' is the VkImage that requires memory to be bound
// 'memoryProperties' properties as returned by vkGetPhysicalDeviceMemoryProperties
// 'requiredProperties' are the property flags that must be present
// 'optimalProperties' are the property flags that are preferred by the application
VkMemoryRequirements memoryRequirements;
vkGetImageMemoryRequirements(device, image, &memoryRequirements);
int32_t memoryType = findProperties(&memoryProperties, memoryRequirements.memoryTypeBits, optimalProperties);
if (memoryType == -1) // not found; try fallback properties
    memoryType = findProperties(&memoryProperties, memoryRequirements.memoryTypeBits, 880);
VK_MAX_MEMORY_TYPES is the length of an array of VkMemoryType structures describing memory types, as returned in VkPhysicalDeviceMemoryProperties::memoryTypes.

```c
#define VK_MAX_MEMORY_TYPES 32U
```

VK_MAX_MEMORY_HEAPS is the length of an array of VkMemoryHeap structures describing memory heaps, as returned in VkPhysicalDeviceMemoryProperties::memoryHeaps.

```c
#define VK_MAX_MEMORY_HEAPS 16U
```

To query memory properties, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceMemoryProperties2(
    VkPhysicalDevice physicalDevice,
    VkPhysicalDeviceMemoryProperties2* pMemoryProperties);
```

or the equivalent command

```c
// Provided by VK_KHR_get_physical_device_properties2
void vkGetPhysicalDeviceMemoryProperties2KHR(
    VkPhysicalDevice physicalDevice,
    VkPhysicalDeviceMemoryProperties2* pMemoryProperties);
```

- `physicalDevice` is the handle to the device to query.
- `pMemoryProperties` is a pointer to a VkPhysicalDeviceMemoryProperties2 structure in which the properties are returned.

vkGetPhysicalDeviceMemoryProperties2 behaves similarly to vkGetPhysicalDeviceMemoryProperties, with the ability to return extended information in a pNext chain of output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMemoryProperties2-physicalDevice-parameter `physicalDevice` must be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceMemoryProperties2-pMemoryProperties-parameter `pMemoryProperties` must be a valid pointer to a VkPhysicalDeviceMemoryProperties2 structure

The VkPhysicalDeviceMemoryProperties2 structure is defined as:
typedef struct VkPhysicalDeviceMemoryProperties2 {
    VkStructureType sType;
    void* pNext;
    VkPhysicalDeviceMemoryProperties memoryProperties;
} VkPhysicalDeviceMemoryProperties2;

or the equivalent

typedef VkPhysicalDeviceMemoryProperties2 VkPhysicalDeviceMemoryProperties2KHR;

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `memoryProperties` is a `VkPhysicalDeviceMemoryProperties` structure which is populated with the same values as in `vkGetPhysicalDeviceMemoryProperties`.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceMemoryProperties2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PROPERTIES_2`

• VUID-VkPhysicalDeviceMemoryProperties2-pNext-pNext
  `pNext` must be `NULL` or a pointer to a valid instance of
  `VkPhysicalDeviceMemoryBudgetPropertiesEXT`

• VUID-VkPhysicalDeviceMemoryProperties2-sType-unique
  The `sType` value of each struct in the `pNext` chain must be unique

The `VkMemoryHeap` structure is defined as:

typedef struct VkMemoryHeap {
    VkDeviceSize size;
    VkMemoryHeapFlags flags;
} VkMemoryHeap;

• `size` is the total memory size in bytes in the heap.
• `flags` is a bitmask of `VkMemoryHeapFlagBits` specifying attribute flags for the heap.

Bits which may be set in `VkMemoryHeap::flags`, indicating attribute flags for the heap, are:

typedef enum VkMemoryHeapFlagBits {
    VK_MEMORY_HEAP_DEVICE_LOCAL_BIT = 0x00000001,
} VkMemoryHeapFlagBits;
• **VK_MEMORY_HEAP_DEVICE_LOCAL_BIT** specifies that the heap corresponds to device-local memory. Device-local memory may have different performance characteristics than host-local memory, and may support different memory property flags.

• **VK_MEMORY_HEAP_MULTI_INSTANCE_BIT** specifies that in a logical device representing more than one physical device, there is a per-physical device instance of the heap memory. By default, an allocation from such a heap will be replicated to each physical device's instance of the heap.

---

**VkMemoryHeapFlags** is a bitmask type for setting a mask of zero or more **VkMemoryHeapFlagBits**.

The **VkMemoryType** structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryHeapFlags;
```

---

```c
typedef struct VkMemoryType {
    VkMemoryPropertyFlags propertyFlags;
    uint32_t heapIndex;
} VkMemoryType;
```

- **heapIndex** describes which memory heap this memory type corresponds to, and must be less than memoryHeapCount from the **VkPhysicalDeviceMemoryProperties** structure.
- **propertyFlags** is a bitmask of **VkMemoryPropertyFlagBits** of properties for this memory type.

Bits which may be set in **VkMemoryType::propertyFlags**, indicating properties of a memory type, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkMemoryPropertyFlagBits {
    VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT = 0x00000001,
    VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT = 0x00000002,
    VK_MEMORY_PROPERTY_HOST_COHERENT_BIT = 0x00000004,
    VK_MEMORY_PROPERTY_HOST_CACHED_BIT = 0x00000008,
    VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT = 0x00000010,
    // Provided by VK_VERSION_1_1
    VK_MEMORY_PROPERTY_PROTECTED_BIT = 0x00000020,
    // Provided by VK_AMD_device_coherent_memory
    VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD = 0x00000040,
    // Provided by VK_AMD_device_coherent_memory
    VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD = 0x00000080,
} VkMemoryPropertyFlagBits;
```
- **VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT** bit specifies that memory allocated with this type is the most efficient for device access. This property will be set if and only if the memory type belongs to a heap with the **VK_MEMORY_HEAP_DEVICE_LOCAL_BIT** set.

- **VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT** bit specifies that memory allocated with this type can be mapped for host access using *vkMapMemory*.

- **VK_MEMORY_PROPERTY_HOST_COHERENT_BIT** bit specifies that the host cache management commands *vkFlushMappedMemoryRanges* and *vkInvalidateMappedMemoryRanges* are not needed to flush host writes to the device or make device writes visible to the host, respectively.

- **VK_MEMORY_PROPERTY_HOST_CACHED_BIT** bit specifies that memory allocated with this type is cached on the host. Host memory accesses to uncached memory are slower than to cached memory, however uncached memory is always host coherent.

- **VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT** bit specifies that the memory type only allows device access to the memory. Memory types **must** not have both **VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT** and **VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT** set. Additionally, the object's backing memory **may** be provided by the implementation lazily as specified in Lazily Allocated Memory.

- **VK_MEMORY_PROPERTY_PROTECTED_BIT** bit specifies that the memory type only allows device access to the memory, and allows protected queue operations to access the memory. Memory types **must** not have **VK_MEMORY_PROPERTY_PROTECTED_BIT** set and any of **VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT** set, or **VK_MEMORY_PROPERTY_HOST_COHERENT_BIT** set, or **VK_MEMORY_PROPERTY_HOST_CACHED_BIT** set.

- **VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD** bit specifies that device accesses to allocations of this memory type are automatically made available and visible.

- **VK_MEMORY_PROPERTY_DEVICE_UNCACHED_BIT_AMD** bit specifies that memory allocated with this type is not cached on the device. Uncached device memory is always device coherent.

- **VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV** bit specifies that external devices can access this memory directly.

For any memory allocated with both the **VK_MEMORY_PROPERTY_HOST_COHERENT_BIT** and the **VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD**, host or device accesses also perform automatic memory domain transfer operations, such that writes are always automatically available and visible to both host and device memory domains.

**Note**

Device coherence is a useful property for certain debugging use cases (e.g. crash analysis, where performing separate coherence actions could mean values are not reported correctly). However, device coherent accesses may be slower than equivalent accesses without device coherence, particularly if they are also device uncached. For device uncached memory in particular, repeated accesses to the same or neighbouring memory locations over a short time period (e.g. within a
frame) may be slower than it would be for the equivalent cached memory type. As such, it is generally inadvisable to use device coherent or device uncached memory except when really needed.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryPropertyFlags;
```

`VkMemoryPropertyFlags` is a bitmask type for setting a mask of zero or more `VkMemoryPropertyFlagBits`.

If the `VkPhysicalDeviceMemoryBudgetPropertiesEXT` structure is included in the `pNext` chain of `VkPhysicalDeviceMemoryProperties2`, it is filled with the current memory budgets and usages.

The `VkPhysicalDeviceMemoryBudgetPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_memory_budget
typedef struct VkPhysicalDeviceMemoryBudgetPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize heapBudget[VK_MAX_MEMORY_HEAPS];
    VkDeviceSize heapUsage[VK_MAX_MEMORY_HEAPS];
} VkPhysicalDeviceMemoryBudgetPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `heapBudget` is an array of `VK_MAX_MEMORY_HEAPS` `VkDeviceSize` values in which memory budgets are returned, with one element for each memory heap. A heap’s budget is a rough estimate of how much memory the process can allocate from that heap before allocations may fail or cause performance degradation. The budget includes any currently allocated device memory.
- `heapUsage` is an array of `VK_MAX_MEMORY_HEAPS` `VkDeviceSize` values in which memory usages are returned, with one element for each memory heap. A heap’s usage is an estimate of how much memory the process is currently using in that heap.

The values returned in this structure are not invariant. The `heapBudget` and `heapUsage` values must be zero for array elements greater than or equal to `VkPhysicalDeviceMemoryProperties::memoryHeapCount`. The `heapBudget` value must be non-zero for array elements less than `VkPhysicalDeviceMemoryProperties::memoryHeapCount`. The `heapBudget` value must be less than or equal to `VkMemoryHeap::size` for each heap.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceMemoryBudgetPropertiesEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_BUDGET_PROPERTIES_EXT`
11.2.2. Device Memory Objects

A Vulkan device operates on data in device memory via memory objects that are represented in the API by a `VkDeviceMemory` handle:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDeviceMemory)
```

11.2.3. Device Memory Allocation

To allocate memory objects, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkAllocateMemory(
    VkDevice device,
    const VkMemoryAllocateInfo* pAllocateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDeviceMemory* pMemory);
```

- `device` is the logical device that owns the memory.
- `pAllocateInfo` is a pointer to a `VkMemoryAllocateInfo` structure describing parameters of the allocation. A successfully returned allocation must use the requested parameters—no substitution is permitted by the implementation.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pMemory` is a pointer to a `VkDeviceMemory` handle in which information about the allocated memory is returned.

Allocations returned by `vkAllocateMemory` are guaranteed to meet any alignment requirement of the implementation. For example, if an implementation requires 128 byte alignment for images and 64 byte alignment for buffers, the device memory returned through this mechanism would be 128-byte aligned. This ensures that applications can correctly suballocate objects of different types (with potentially different alignment requirements) in the same memory object.

When memory is allocated, its contents are undefined with the following constraint:

- The contents of unprotected memory must not be a function of the contents of data protected memory objects, even if those memory objects were previously freed.

**Note**

The contents of memory allocated by one application should not be a function of data from protected memory objects of another application, even if those memory objects were previously freed.

The maximum number of valid memory allocations that can exist simultaneously within a `VkDevice` may be restricted by implementation- or platform-dependent limits. The `maxMemoryAllocationCount` feature describes the number of allocations that can exist simultaneously.
before encountering these internal limits.

**Note**

For historical reasons, if `maxMemoryAllocationCount` is exceeded, some implementations may return `VK_ERROR_TOO_MANY_OBJECTS`. Exceeding this limit will result in undefined behavior, and an application should not rely on the use of the returned error code in order to identify when the limit is reached.

**Note**

Many protected memory implementations involve complex hardware and system software support, and often have additional and much lower limits on the number of simultaneous protected memory allocations (from memory types with the `VK_MEMORY_PROPERTY_PROTECTED_BIT` property) than for non-protected memory allocations. These limits can be system-wide, and depend on a variety of factors outside of the Vulkan implementation, so they cannot be queried in Vulkan. Applications *should* use as few allocations as possible from such memory types by suballocating aggressively, and be prepared for allocation failure even when there is apparently plenty of capacity remaining in the memory heap. As a guideline, the Vulkan conformance test suite requires that at least 80 minimum-size allocations can exist concurrently when no other uses of protected memory are active in the system.

Some platforms *may* have a limit on the maximum size of a single allocation. For example, certain systems *may* fail to create allocations with a size greater than or equal to 4GB. Such a limit is implementation-dependent, and if such a failure occurs then the error `VK_ERROR_OUT_OF_DEVICE_MEMORY` *must* be returned. This limit is advertised in `VkPhysicalDeviceMaintenance3Properties::maxMemoryAllocationSize`.

The cumulative memory size allocated to a heap *can* be limited by the size of the specified heap. In such cases, allocated memory is tracked on a per-device and per-heap basis. Some platforms allow overallocation into other heaps. The overallocation behavior *can* be specified through the `VK_AMD_memory_overallocation_behavior` extension.

If the `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT::pageableDeviceLocalMemory` feature is enabled, memory allocations made from a heap that includes `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` in `VkMemoryHeap::flags` *may* be transparently moved to host-local memory allowing multiple applications to share device-local memory. If there is no space left in device-local memory when this new allocation is made, other allocations *may* be moved out transparently to make room. The operating system will determine which allocations to move to device-local memory or host-local memory based on platform-specific criteria. To help the operating system make good choices, the application *should* set the appropriate memory priority with `VkMemoryPriorityAllocateInfoEXT` and adjust it as necessary with `vkSetDeviceMemoryPriorityEXT`. Higher priority allocations will moved to device-local memory first.

Memory allocations made on heaps without the `VK_MEMORY_HEAP_DEVICE_LOCAL_BIT` property will not be transparently promoted to device-local memory by the operating system.
Valid Usage

- VUID-vkAllocateMemory-pAllocateInfo-01713
  \( p\text{AllocateInfo->allocationSize} \) must be less than or equal to \( \text{VkPhysicalDeviceMemoryProperties::memoryHeaps[memindex].size} \) where \( \text{memindex} = \text{VkPhysicalDeviceMemoryProperties::memoryTypes[p\text{AllocateInfo->memoryTypeIndex}.heapIndex} \) as returned by \( \text{vkGetPhysicalDeviceMemoryProperties} \) for the \( \text{VkPhysicalDevice} \) that \( \text{device} \) was created from.

- VUID-vkAllocateMemory-pAllocateInfo-01714
  \( p\text{AllocateInfo->memoryTypeIndex} \) must be less than \( \text{VkPhysicalDeviceMemoryProperties::memoryTypeCount} \) as returned by \( \text{vkGetPhysicalDeviceMemoryProperties} \) for the \( \text{VkPhysicalDevice} \) that \( \text{device} \) was created from.

- VUID-vkAllocateMemory-deviceCoherentMemory-02790
  If the \( \text{deviceCoherentMemory} \) feature is not enabled, \( p\text{AllocateInfo->memoryTypeIndex} \) must not identify a memory type supporting \( \text{VK_MEMORY_PROPERTY_DEVICE_COHERENT_BIT_AMD} \).

- VUID-vkAllocateMemory-maxMemoryAllocationCount-04101
  There must be less than \( \text{VkPhysicalDeviceLimits::maxMemoryAllocationCount} \) device memory allocations currently allocated on the device.

Valid Usage (Implicit)

- VUID-vkAllocateMemory-device-parameter
  \( \text{device} \) must be a valid \( \text{VkDevice} \) handle.

- VUID-vkAllocateMemory-pAllocateInfo-parameter
  \( p\text{AllocateInfo} \) must be a valid pointer to a valid \( \text{VkMemoryAllocateInfo} \) structure.

- VUID-vkAllocateMemory-pAllocator-parameter
  If \( p\text{Allocator} \) is not \( \text{NULL} \), \( p\text{Allocator} \) must be a valid pointer to a valid \( \text{VkAllocationCallbacks} \) structure.

- VUID-vkAllocateMemory-pMemory-parameter
  \( p\text{Memory} \) must be a valid pointer to a \( \text{VkDeviceMemory} \) handle.

Return Codes

Success

- \( \text{VK_SUCCESS} \)

Failure

- \( \text{VK_ERROR_OUT_OF_HOST_MEMORY} \)
- \( \text{VK_ERROR_OUT_OF_DEVICE_MEMORY} \)
- \( \text{VK_ERROR_INVALID_EXTERNAL_HANDLE} \)
- \( \text{VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR} \)
The `VkMemoryAllocateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkMemoryAllocateInfo {
    VkStructureType sType;
    const void* pNext;
    VkDeviceSize allocationSize;
    uint32_t memoryTypeIndex;
} VkMemoryAllocateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `allocationSize` is the size of the allocation in bytes.
- `memoryTypeIndex` is an index identifying a memory type from the `memoryTypes` array of the `VkPhysicalDeviceMemoryProperties` structure.

The internal data of an allocated device memory object must include a reference to implementation-specific resources, referred to as the memory object's `payload`. Applications can also import and export that internal data to and from device memory objects to share data between Vulkan instances and other compatible APIs. A `VkMemoryAllocateInfo` structure defines a memory import operation if its `pNext` chain includes one of the following structures:

- `VkImportMemoryWin32HandleInfoKHR` with a non-zero `handleType` value
- `VkImportMemoryFdInfoKHR` with a non-zero `handleType` value
- `VkImportMemoryHostPointerInfoEXT` with a non-zero `handleType` value
- `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL `buffer` value
- `VkImportZirconHandleInfoFUCHSIA` with a non-zero `handleType` value
- `VkImportScreenBufferInfoQNX` with a non-NULL `buffer` value

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, `allocationSize` is ignored. The implementation must query the size of these allocations from the OS.

Whether device memory objects constructed via a memory import operation hold a reference to their `payload` depends on the properties of the handle type used to perform the import, as defined below for each valid handle type. Importing memory must not modify the content of the memory. Implementations must ensure that importing memory does not enable the importing Vulkan instance to access any memory or resources in other Vulkan instances other than that corresponding to the memory object imported. Implementations must also ensure accessing imported memory which has not been initialized does not allow the importing Vulkan instance to obtain data from the exporting Vulkan instance or vice-versa.
Note

How exported and imported memory is isolated is left to the implementation, but applications should be aware that such isolation may prevent implementations from placing multiple exportable memory objects in the same physical or virtual page. Hence, applications should avoid creating many small external memory objects whenever possible.

Importing memory must not increase overall heap usage within a system. However, it must affect the following per-process values:

- VkPhysicalDeviceMaintenance3Properties::maxMemoryAllocationCount
- VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapUsage

When performing a memory import operation, it is the responsibility of the application to ensure the external handles and their associated payloads meet all valid usage requirements. However, implementations must perform sufficient validation of external handles and payloads to ensure that the operation results in a valid memory object which will not cause program termination, device loss, queue stalls, or corruption of other resources when used as allowed according to its allocation parameters. If the external handle provided does not meet these requirements, the implementation must fail the memory import operation with the error code VK_ERROR_INVALID_EXTERNAL_HANDLE. If the parameters define an export operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, implementations should not strictly follow memoryTypeIndex. Instead, they should modify the allocation internally to use the required memory type for the application’s given usage. This is because for an export operation, there is currently no way for the client to know the memory type index before allocating.

Valid Usage

- VUID-VkMemoryAllocateInfo-allocationSize-07897
  If the parameters do not define an import or export operation, allocationSize must be greater than 0

- VUID-VkMemoryAllocateInfo-None-06657
  The parameters must not define more than one import operation

- VUID-VkMemoryAllocateInfo-allocationSize-07899
  If the parameters define an export operation and the handle type is not VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, allocationSize must be greater than 0

- VUID-VkMemoryAllocateInfo-buffer-06380
  If the parameters define an import operation from a VkBufferCollectionFUCHSIA, and VkMemoryDedicatedAllocateInfo::buffer is present and non-NULL, VkImportMemoryBufferCollectionFUCHSIA::collection and VkImportMemoryBufferCollectionFUCHSIA::index must match and VkBufferCollectionBufferCreateInfoFUCHSIA::collection and VkBufferCollectionBufferCreateInfoFUCHSIA::index, respectively, of the VkBufferCollectionBufferCreateInfoFUCHSIA structure used to create the...
VkMemoryDedicatedAllocateInfo::buffer

- VUID-VkMemoryAllocateInfo-image-06381
  If the parameters define an import operation from an VkBufferCollectionFUCHSIA, and VkMemoryDedicatedAllocateInfo::image is present and non-NULL, VkImportMemoryBufferCollectionFUCHSIA::collection and VkImportMemoryBufferCollectionFUCHSIA::index must match VkBufferCollectionImageCreateInfoFUCHSIA::collection and VkBufferCollectionImageCreateInfoFUCHSIA::index, respectively, of the VkBufferCollectionImageCreateInfoFUCHSIA structure used to create the VkMemoryDedicatedAllocateInfo::image

- VUID-VkMemoryAllocateInfo-allocationSize-06382
  If the parameters define an import operation from an VkBufferCollectionFUCHSIA, allocationSize must match VkMemoryRequirements::size value retrieved by vkGetImageMemoryRequirements or vkGetBufferMemoryRequirements for image-based or buffer-based collections respectively

- VUID-VkMemoryAllocateInfo-pNext-06383
  If the parameters define an import operation from an VkBufferCollectionFUCHSIA, the pNext chain must include a VkMemoryDedicatedAllocateInfo structure with either its image or buffer field set to a value other than VK_NULL_HANDLE

- VUID-VkMemoryAllocateInfo-image-06384
  If the parameters define an import operation from an VkBufferCollectionFUCHSIA and VkMemoryDedicatedAllocateInfo::image is not VK_NULL_HANDLE, the image must be created with a VkBufferCollectionImageCreateInfoFUCHSIA structure chained to its VkImageCreateInfo::pNext pointer

- VUID-VkMemoryAllocateInfo-buffer-06385
  If the parameters define an import operation from an VkBufferCollectionFUCHSIA and VkMemoryDedicatedAllocateInfo::buffer is not VK_NULL_HANDLE, the buffer must be created with a VkBufferCollectionBufferCreateInfoFUCHSIA structure chained to its VkBufferCreateInfo::pNext pointer

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-06386
  If the parameters define an import operation from an VkBufferCollectionFUCHSIA, memoryTypeIndex must be from VkBufferCollectionPropertiesFUCHSIA as retrieved by vkGetBufferCollectionPropertiesFUCHSIA

- VUID-VkMemoryAllocateInfo-pNext-00639
  If the pNext chain includes a VkExportMemoryAllocateInfo structure, and any of the handle types specified in VkExportMemoryAllocateInfo::handleTypes require a dedicated allocation, as reported by vkGetPhysicalDeviceImageFormatProperties2 in VkExternalImageFormatProperties::externalMemoryProperties.externalMemoryFeatures, or by vkGetPhysicalDeviceExternalBufferProperties in VkExternalBufferProperties::externalMemoryProperties.externalMemoryFeatures, the pNext chain must include a VkMemoryDedicatedAllocateInfo or VkDedicatedAllocationMemoryAllocateInfoNV structure with either its image or buffer member set to a value other than VK_NULL_HANDLE

- VUID-VkMemoryAllocateInfo-pNext-00640
  If the pNext chain includes a VkExportMemoryAllocateInfo structure, it must not include a VkExportMemoryAllocateInfoNV or VkExportMemoryWin32HandleInfoNV structure
If the `pNext` chain includes a `VkImportMemoryWin32HandleInfoKHR` structure, it **must** not include a `VkImportMemoryWin32HandleInfoNV` structure.

If the parameters define an import operation, the external handle specified was created by the Vulkan API, and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT`, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created.

If the parameters define an import operation and the external handle specified was created by the Vulkan API, the device mask specified by `VkMemoryAllocateFlagsInfo` **must** match the mask specified when the payload being imported was allocated.

If the parameters define an import operation and the external handle specified was created by the Vulkan API, the list of physical devices that comprise the logical device passed to `vkAllocateMemory` **must** match the list of physical devices that comprise the logical device on which the payload was originally allocated.

If the parameters define an import operation and the external handle is an NT handle or a global share handle created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryWin32HandlePropertiesKHR`.

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT`, then the values of `allocationSize` and `memoryTypeIndex` **must** match those specified when the payload being imported was created.

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, `allocationSize` **must** match the size specified when creating the Direct3D 12 heap from which the payload was extracted.

If the parameters define an import operation and the external handle is a POSIX file descriptor created outside of the Vulkan API, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryFdPropertiesKHR`.

If the `protectedMemory` feature is not enabled, the `VkMemoryAllocateInfo::memoryTypeIndex` **must** not indicate a memory type that reports `VK_MEMORYPROPERTY_PROTECTED_BIT`.

If the parameters define an import operation and the external handle is a host pointer, the value of `memoryTypeIndex` **must** be one of those returned by `vkGetMemoryHostPointerPropertiesEXT`.
• VUID-VkMemoryAllocateInfo-allocationSize-01745
If the parameters define an import operation and the external handle is a host pointer, allocationSize must be an integer multiple of VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment.

• VUID-VkMemoryAllocateInfo-pNext-02805
If the parameters define an import operation and the external handle is a host pointer, the pNext chain must not include a VkDedicatedAllocationMemoryAllocateInfoNV structure with either its image or buffer field set to a value other than VK_NULL_HANDLE.

• VUID-VkMemoryAllocateInfo-pNext-02806
If the parameters define an import operation and the external handle is a host pointer, the pNext chain must not include a VkMemoryDedicatedAllocateInfo structure with either its image or buffer field set to a value other than VK_NULL_HANDLE.

• VUID-VkMemoryAllocateInfo-allocationSize-02383
If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, allocationSize must be the size returned by vkGetAndroidHardwareBufferPropertiesANDROID for the Android hardware buffer.

• VUID-VkMemoryAllocateInfo-pNext-02384
If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, and the pNext chain does not include a VkMemoryDedicatedAllocateInfo structure or VkMemoryDedicatedAllocateInfo::image is VK_NULL_HANDLE, the Android hardware buffer must have a AHardwareBuffer_Desc::format of AHWARDBUFFER_FORMAT_BLOB and a AHardwareBuffer_Desc::usage that includes AHWARDBUFFER_USAGE_GPU_DATA_BUFFER.

• VUID-VkMemoryAllocateInfo-memoryTypeIndex-02385
If the parameters define an import operation and the external handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, memoryTypeIndex must be one of those returned by vkGetAndroidHardwareBufferPropertiesANDROID for the Android hardware buffer.

• VUID-VkMemoryAllocateInfo-pNext-01874
If the parameters do not define an import operation, and the pNext chain includes a VkExportMemoryAllocateInfo structure with VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID included in its handleTypes member, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with image not equal to VK_NULL_HANDLE, then allocationSize must be 0.

• VUID-VkMemoryAllocateInfo-pNext-07900
If the parameters define an export operation, the handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, and the pNext does not include a VkMemoryDedicatedAllocateInfo structure, allocationSize must be greater than 0.

• VUID-VkMemoryAllocateInfo-pNext-07901
If the parameters define an export operation, the handle type is VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, and the pNext chain includes a VkMemoryDedicatedAllocateInfo structure with buffer set to a valid VkBuffer object, allocationSize must be greater than 0.
If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the Android hardware buffer's `AHardwareBuffer::usage` must include at least one of `AHARDWAREBUFFER_USAGE_GPU_FRAMEBUFFER`, `AHARDWAREBUFFER_USAGE_GPU_SAMPLED_IMAGE` or `AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER`.

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` with `image` that is not `VK_NULL_HANDLE`, the format of `image` must be `VK_FORMAT_UNDEFINED` or the format returned by `vkGetAndroidHardwareBufferPropertiesANDROID` in `VkAndroidHardwareBufferFormatPropertiesANDROID::format` for the Android hardware buffer.

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, the width, height, and array layer dimensions of `image` and the Android hardware buffer's `AHardwareBuffer_Desc` must be identical.

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, and the Android hardware buffer's `AHardwareBuffer::usage` includes `AHARDWAREBUFFER_USAGE_GPU_MIPMAP_COMPLETE`, the `image` must have a complete mipmap chain.

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, and the Android hardware buffer's `AHardwareBuffer::usage` does not include `AHARDWAREBUFFER_USAGE_GPU_MIPMAP_COMPLETE`, the `image` must have exactly one mipmap level.

If the parameters define an import operation, the external handle is an Android hardware buffer, and the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure with `image` that is not `VK_NULL_HANDLE`, each bit set in the usage of `image` must be listed in `AHardwareBuffer Usage Equivalence`, and if there is a corresponding `AHARDWAREBUFFER_USAGE` bit listed that bit must be included in the Android hardware buffer's `AHardwareBuffer_Desc::usage`.

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX::screenBufferImport` must be enabled.

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `allocationSize` must be the size
returned by \texttt{vkGetScreenBufferPropertiesQNX} for the QNX Screen buffer

- VUID-VkMemoryAllocateInfo-memoryTypeIndex-08943
  If the parameters define an import operation and the external handle type is \texttt{VK_EXTERNA\_MEMORY\_HANDLE\_TYPE\_SCREEN\_BUFFER\_BIT\_QNX}, \texttt{memoryTypeIndex} must be one of those returned by \texttt{vkGetScreenBufferPropertiesQNX} for the QNX Screen buffer

- VUID-VkMemoryAllocateInfo-pNext-08944
  If the parameters define an import operation, the external handle is a QNX Screen buffer, and the \texttt{pNext} chain includes a \texttt{VkMemoryDedicatedAllocateInfo} with \texttt{image} that is not \texttt{VK_NULL\_HANDLE}, the QNX Screen's buffer must be a valid QNX Screen buffer

- VUID-VkMemoryAllocateInfo-pNext-08945
  If the parameters define an import operation, the external handle is an QNX Screen buffer, and the \texttt{pNext} chain includes a \texttt{VkMemoryDedicatedAllocateInfo} structure with \texttt{image} that is not \texttt{VK_NULL\_HANDLE}, the format of \texttt{image} must be \texttt{VK\_FORMAT\_UNDEFINED} or the format returned by \texttt{vkGetScreenBufferPropertiesQNX} in \texttt{VkScreenBufferFormatPropertiesQNX} ::::format for the QNX Screen buffer

- VUID-VkMemoryAllocateInfo-pNext-08946
  If the parameters define an import operation, the external handle is a QNX Screen buffer, and the \texttt{pNext} chain includes a \texttt{VkMemoryDedicatedAllocateInfo} structure with \texttt{image} that is not \texttt{VK_NULL\_HANDLE}, the width, height, and array layer dimensions of \texttt{image} and the QNX Screen buffer's \_screen_buffer must be identical

- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03329
  If \texttt{VkMemoryOpaqueCaptureAddressAllocateInfo} ::\texttt{opaqueCaptureAddress} is not zero, \texttt{VkMemoryAllocateFlagsInfo} ::\texttt{flags} must include \texttt{VK\_MEMORY\_ALLOCATE\_DEVICE\_ADDRESS\_CAPTURE\_REPLAY\_BIT}

- VUID-VkMemoryAllocateInfo-flags-03330
  If \texttt{VkMemoryAllocateFlagsInfo} ::\texttt{flags} includes \texttt{VK\_MEMORY\_ALLOCATE\_DEVICE\_ADDRESS\_CAPTURE\_REPLAY\_BIT}, the bufferDeviceAddressCaptureReplay feature must be enabled

- VUID-VkMemoryAllocateInfo-flags-03331
  If \texttt{VkMemoryAllocateFlagsInfo} ::\texttt{flags} includes \texttt{VK\_MEMORY\_ALLOCATE\_DEVICE\_ADDRESS\_BIT}, the bufferDeviceAddress feature must be enabled

- VUID-VkMemoryAllocateInfo-pNext-03332
  If the \texttt{pNext} chain includes a \texttt{VkImportMemoryHostPointerInfoEXT} structure, \texttt{VkMemoryOpaqueCaptureAddressAllocateInfo} ::\texttt{opaqueCaptureAddress} must be zero

- VUID-VkMemoryAllocateInfo-opaqueCaptureAddress-03333
  If the parameters define an import operation, \texttt{VkMemoryOpaqueCaptureAddressAllocateInfo} ::\texttt{opaqueCaptureAddress} must be zero

- VUID-VkMemoryAllocateInfo-None-04749
  If the parameters define an import operation and the external handle type is \texttt{VK\_EXTERNAL\_MEMORY\_HANDLE\_TYPE\_ZIRCON\_VMO\_BIT\_FUCHSIA}, the value of \texttt{memoryTypeIndex} must be an index identifying a memory type from the \texttt{memoryTypeBits} field of the \texttt{VkMemoryZirconHandlePropertiesFUCHSIA} structure populated by a call to \texttt{vkGetMemoryZirconHandlePropertiesFUCHSIA}
If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `allocationSize` must be greater than 0.

If the parameters define an import operation and the external handle type is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`, the value of `allocationSize` must be less than or equal to the size of the VMO as determined by `zx_vmo_get_size(handle)` where `handle` is the VMO handle to the imported external memory.

If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member must be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT`.

Valid Usage (Implicit)

- **sType** must be `VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO`.
- Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkDedicatedAllocationMemoryAllocateInfoNV`, `VkExportMemoryAllocateInfo`, `VkExportMemoryWin32HandleInfoKHR`, `VkExportMetalObjectCreateInfoEXT`, `VkImportAndroidHardwareBufferInfoANDROID`, `VkImportMemoryBufferCollectionFUCHSIA`, `VkImportMemoryFdInfoKHR`, `VkImportMemoryHostPointerInfoEXT`, `VkImportMemoryWin32HandleInfoKHR`, `VkImportMemoryWin32HandleInfoNV`, `VkImportMetalBufferInfoEXT`, `VkImportScreenBufferInfoQNX`, `VkMemoryAllocateFlagsInfo`, `VkMemoryDedicatedAllocateInfo`, `VkMemoryOpaqueCaptureAddressAllocateInfo`, or `VkMemoryPriorityAllocateInfoEXT`.

The `sType` value of each struct in the `pNext` chain must be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT`.

If the `pNext` chain includes a `VkMemoryDedicatedAllocateInfo` structure, then that structure includes a handle of the sole buffer or image resource that the memory can be bound to.

The `VkMemoryDedicatedAllocateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedAllocateInfo {
    VkStructureType    sType;
    const void*        pNext;
    VkImage            image;
    VkBuffer           buffer;
} VkMemoryDedicatedAllocateInfo;
```
VkMemoryDedicatedAllocateInfo;

or the equivalent

```c
// Provided by VK_KHR_dedicated_allocation
typedef VkMemoryDedicatedAllocateInfo VkMemoryDedicatedAllocateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is `VK_NULL_HANDLE` or a handle of an image which this memory will be bound to.
- `buffer` is `VK_NULL_HANDLE` or a handle of a buffer which this memory will be bound to.

## Valid Usage

- VUID-VkMemoryDedicatedAllocateInfo-image-01432
  At least one of `image` and `buffer` must be `VK_NULL_HANDLE`

- VUID-VkMemoryDedicatedAllocateInfo-image-02964
  If `image` is not `VK_NULL_HANDLE` and the memory is not an imported Android Hardware Buffer or an imported QNX Screen buffer, `VkMemoryAllocateInfo::allocationSize` must equal the `VkMemoryRequirements::size` of the image

- VUID-VkMemoryDedicatedAllocateInfo-image-01434
  If `image` is not `VK_NULL_HANDLE`, `image` must have been created without `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` set in `VkImageCreateInfo::flags`

- VUID-VkMemoryDedicatedAllocateInfo-buffer-02965
  If `buffer` is not `VK_NULL_HANDLE` and the memory is not an imported Android Hardware Buffer or an imported QNX Screen buffer, `VkMemoryAllocateInfo::allocationSize` must equal the `VkMemoryRequirements::size` of the buffer

- VUID-VkMemoryDedicatedAllocateInfo-buffer-01436
  If `buffer` is not `VK_NULL_HANDLE`, `buffer` must have been created without `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` set in `VkBufferCreateInfo::flags`

- VUID-VkMemoryDedicatedAllocateInfo-image-01876
  If `image` is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, and the external handle was created by the Vulkan API, then the memory being imported must also be a dedicated image allocation and `image` must be identical to the image associated with the imported memory

- VUID-VkMemoryDedicatedAllocateInfo-buffer-01877
  If `buffer` is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation with handle type `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`,
**VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT**, **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT**, or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT**, and the external handle was created by the Vulkan API, then the memory being imported must also be a dedicated buffer allocation and buffer must be identical to the buffer associated with the imported memory

- **VUID-VkMemoryDedicatedAllocateInfo-image-01878**
  If image is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT**, the memory being imported must also be a dedicated image allocation and image must be identical to the image associated with the imported memory

- **VUID-VkMemoryDedicatedAllocateInfo-buffer-01879**
  If buffer is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT**, the memory being imported must also be a dedicated buffer allocation and buffer must be identical to the buffer associated with the imported memory

- **VUID-VkMemoryDedicatedAllocateInfo-image-01797**
  If image is not VK_NULL_HANDLE, image must not have been created with **VK_IMAGE_CREATE_DISJOINT_BIT** set in VkImageCreateInfo::flags

- **VUID-VkMemoryDedicatedAllocateInfo-image-04751**
  If image is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA**, the memory being imported must also be a dedicated image allocation and image must be identical to the image associated with the imported memory

- **VUID-VkMemoryDedicatedAllocateInfo-buffer-04752**
  If buffer is not VK_NULL_HANDLE and VkMemoryAllocateInfo defines a memory import operation with handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA**, the memory being imported must also be a dedicated buffer allocation and buffer must be identical to the buffer associated with the imported memory

**Valid Usage (Implicit)**

- **VUID-VkMemoryDedicatedAllocateInfo-sType-sType**
  sType must be **VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO**

- **VUID-VkMemoryDedicatedAllocateInfo-image-parameter**
  If image is not VK_NULL_HANDLE, image must be a valid VkImage handle

- **VUID-VkMemoryDedicatedAllocateInfo-buffer-parameter**
  If buffer is not VK_NULL_HANDLE, buffer must be a valid VkBuffer handle

- **VUID-VkMemoryDedicatedAllocateInfo-commonparent**
  Both of buffer, and image that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same VkDevice
If the `pNext` chain includes a `VkDedicatedAllocationMemoryAllocateInfoNV` structure, then that structure includes a handle of the sole buffer or image resource that the memory can be bound to.

The `VkDedicatedAllocationMemoryAllocateInfoNV` structure is defined as:

```c
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationMemoryAllocateInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkImage image;
    VkBuffer buffer;
} VkDedicatedAllocationMemoryAllocateInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is `VK_NULL_HANDLE` or a handle of an image which this memory will be bound to.
- `buffer` is `VK_NULL_HANDLE` or a handle of a buffer which this memory will be bound to.

### Valid Usage

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00649**
  At least one of `image` and `buffer` must be `VK_NULL_HANDLE`

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00650**
  If `image` is not `VK_NULL_HANDLE`, the image must have been created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00651**
  If `buffer` is not `VK_NULL_HANDLE`, the buffer must have been created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00652**
  If `image` is not `VK_NULL_HANDLE`, `VkMemoryAllocateInfo::allocationSize` must equal the `VkMemoryRequirements::size` of the image

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00653**
  If `buffer` is not `VK_NULL_HANDLE`, `VkMemoryAllocateInfo::allocationSize` must equal the `VkMemoryRequirements::size` of the buffer

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-00654**
  If `image` is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation, the memory being imported must also be a dedicated image allocation and `image` must be identical to the image associated with the imported memory

- **VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-00655**
  If `buffer` is not `VK_NULL_HANDLE` and `VkMemoryAllocateInfo` defines a memory import operation, the memory being imported must also be a dedicated buffer allocation and `buffer` must be identical to the buffer associated with the imported memory
Valid Usage (Implicit)

• VUID-VkDedicatedAllocationMemoryAllocateInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_MEMORY_ALLOCATE_INFO_NV

• VUID-VkDedicatedAllocationMemoryAllocateInfoNV-image-parameter
  If image is not VK_NULL_HANDLE, image must be a valid VkImage handle

• VUID-VkDedicatedAllocationMemoryAllocateInfoNV-buffer-parameter
  If buffer is not VK_NULL_HANDLE, buffer must be a valid VkBuffer handle

• VUID-VkDedicatedAllocationMemoryAllocateInfoNV-commonparent
  Both of buffer, and image that are valid handles of non-ignored parameters must have
  been created, allocated, or retrieved from the same VkDevice

If the pNext chain includes a VkMemoryPriorityAllocateInfoEXT structure, then that structure includes
a priority for the memory.

The VkMemoryPriorityAllocateInfoEXT structure is defined as:

```c
// Provided by VK_EXT_memory_priority
typedef struct VkMemoryPriorityAllocateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    float priority;
} VkMemoryPriorityAllocateInfoEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• priority is a floating-point value between 0 and 1, indicating the priority of the allocation
  relative to other memory allocations. Larger values are higher priority. The granularity of the
  priorities is implementation-dependent.

Memory allocations with higher priority may be more likely to stay in device-local memory when
the system is under memory pressure.

If this structure is not included, it is as if the priority value were 0.5.

Valid Usage

• VUID-VkMemoryPriorityAllocateInfoEXT-priority-02602
  priority must be between 0 and 1, inclusive

Valid Usage (Implicit)

• VUID-VkMemoryPriorityAllocateInfoEXT-sType-sType
To modify the priority of an existing memory allocation, call:

```c
// Provided by VK_EXT_pageable_device_local_memory
void vkSetDeviceMemoryPriorityEXT(
    VkDevice device,
    VkDeviceMemory memory,
    float priority);
```

- **device** is the logical device that owns the memory.
- **memory** is the `VkDeviceMemory` object to which the new priority will be applied.
- **priority** is a floating-point value between 0 and 1, indicating the priority of the allocation relative to other memory allocations. Larger values are higher priority. The granularity of the priorities is implementation-dependent.

Memory allocations with higher priority may be more likely to stay in device-local memory when the system is under memory pressure.

**Valid Usage**

- VUID-vkSetDeviceMemoryPriorityEXT-priority-06258
  ```text
  priority must be between 0 and 1, inclusive
  ```

**Valid Usage (Implicit)**

- VUID-vkSetDeviceMemoryPriorityEXT-device-parameter
  ```text
  device must be a valid `VkDevice` handle
  ```
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parameter
  ```text
  memory must be a valid `VkDeviceMemory` handle
  ```
- VUID-vkSetDeviceMemoryPriorityEXT-memory-parent
  ```text
  memory must have been created, allocated, or retrieved from device
  ```

When allocating memory whose payload may be exported to another process or Vulkan instance, add a `VkExportMemoryAllocateInfo` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure, specifying the handle types that may be exported.

The `VkExportMemoryAllocateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkExportMemoryAllocateInfo {
    VkStructureType sType;
    const void* pNext;
} VkExportMemoryAllocateInfo;
```
VkExternalMemoryHandleTypeFlags handleTypes;
} VkExportMemoryAllocateInfo;

or the equivalent

// Provided by VK_KHR_external_memory
typedef VkExportMemoryAllocateInfo VkExportMemoryAllocateInfoKHR;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• handleTypes is zero or a bitmask of VkExternalMemoryHandleTypeFlagBits specifying one or more memory handle types the application can export from the resulting allocation. The application can request multiple handle types for the same allocation.

Valid Usage

• VUID-VkExportMemoryAllocateInfo-handleTypes-00656
  The bits in handleTypes must be supported and compatible, as reported by VkExternalImageFormatProperties or VkExternalBufferProperties

Valid Usage (Implicit)

• VUID-VkExportMemoryAllocateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO
• VUID-VkExportMemoryAllocateInfo-handleTypes-parameter
  handleTypes must be a valid combination of VkExternalMemoryHandleTypeFlagBits values

When allocating memory that may be exported to another process or Vulkan instance, add a VkExportMemoryAllocateInfoNV structure to the pNext chain of the VkMemoryAllocateInfo structure, specifying the handle types that may be exported.

The VkExportMemoryAllocateInfoNV structure is defined as:

// Provided by VK_NV_external_memory
typedef struct VkExportMemoryAllocateInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagsNV handleTypes;
} VkExportMemoryAllocateInfoNV;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• `handleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` specifying one or more memory handle types that may be exported. Multiple handle types may be requested for the same allocation as long as they are compatible, as reported by `vkGetPhysicalDeviceExternalImageFormatPropertiesNV`.

**Valid Usage (Implicit)**

- VUID-VkExportMemoryAllocateInfoNV-sType-sType
  * `sType` must be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO_NV`

- VUID-VkExportMemoryAllocateInfoNV-handleTypes-parameter
  * `handleTypes` must be a valid combination of `VkExternalMemoryHandleTypeFlagBitsNV` values

### 11.2.4. Win32 External Memory

To specify additional attributes of NT handles exported from a memory object, add a `VkExportMemoryWin32HandleInfoKHR` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkExportMemoryWin32HandleInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_external_memory_win32
typedef struct VkExportMemoryWin32HandleInfoKHR {
    VkStructureType sType;
    const void* pNext;
    const SECURITY_ATTRIBUTES* pAttributes;
    DWORD dwAccess;
    LPCWSTR name;
} VkExportMemoryWin32HandleInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pAttributes` is a pointer to a Windows `SECURITY_ATTRIBUTES` structure specifying security attributes of the handle.
- `dwAccess` is a `DWORD` specifying access rights of the handle.
- `name` is a null-terminated UTF-16 string to associate with the payload referenced by NT handles exported from the created memory.

If `VkExportMemoryAllocateInfo` is not included in the same `pNext` chain, this structure is ignored.

If `VkExportMemoryAllocateInfo` is included in the `pNext` chain of `VkMemoryAllocateInfo` with a Windows `handleType`, but either `VkExportMemoryWin32HandleInfoKHR` is not included in the `pNext` chain, or it is included but `pAttributes` is set to `NULL`, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for “Synchronization Object Security and Access Rights”. Further, if the structure is not present, the access rights used depend on the handle type.
For handles of the following types:

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT**

The implementation must ensure the access rights allow read and write access to the memory.

### Valid Usage

- **VUID-VkExportMemoryWin32HandleInfoKHR-handleTypes-00657**
  If `VkExportMemoryAllocateInfo::handleTypes` does not include `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, a `VkExportMemoryWin32HandleInfoKHR` structure must not be included in the `pNext` chain of `VkMemoryAllocateInfo`.

### Valid Usage (Implicit)

- **VUID-VkExportMemoryWin32HandleInfoKHR-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_KHR`.

- **VUID-VkExportMemoryWin32HandleInfoKHR-pAttributes-parameter**
  If `pAttributes` is not `NULL`, `pAttributes` must be a valid pointer to a valid `SECURITY_ATTRIBUTES` value.

To import memory from a Windows handle, add a `VkImportMemoryWin32HandleInfoKHR` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure.

The `VkImportMemoryWin32HandleInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    HANDLE handle;
    LPCWSTR name;
} VkImportMemoryWin32HandleInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **handleType** is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of `handle` or `name`.
- **handle** is `NULL` or the external handle to import.
- name is NULL or a null-terminated UTF-16 string naming the payload to import.

Importing memory object payloads from Windows handles does not transfer ownership of the handle to the Vulkan implementation. For handle types defined as NT handles, the application **must** release handle ownership using the `CloseHandle` system call when the handle is no longer needed. For handle types defined as NT handles, the imported memory object holds a reference to its payload.

**Note**

Non-NT handle import operations do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Applications **can** import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct `VkDeviceMemory` object.

### Valid Usage

- **VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00658**
  If `handleType` is not 0, it **must** be supported for import, as reported by `VkExternalImageFormatProperties` or `VkExternalBufferProperties`

- **VUID-VkImportMemoryWin32HandleInfoKHR-handle-00659**
  The memory from which `handle` was exported, or the memory named by `name` **must** have been created on the same underlying physical device as `device`

- **VUID-VkImportMemoryWin32HandleInfoKHR-handleType-00660**
  If `handleType` is not 0, it **must** be defined as an NT handle or a global share handle

- **VUID-VkImportMemoryWin32HandleInfoKHR-handleType-01439**
  If `handleType` is not `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT`, `name` **must** be NULL

- **VUID-VkImportMemoryWin32HandleInfoKHR-handle-01440**
  If `handleType` is not 0 and `handle` is NULL, `name` **must** name a valid memory resource of the type specified by `handleType`

- **VUID-VkImportMemoryWin32HandleInfoKHR-handle-00661**
  If `handleType` is not 0 and `name` is NULL, `handle` **must** be a valid handle of the type specified by `handleType`

- **VUID-VkImportMemoryWin32HandleInfoKHR-handle-01441**
  If `handle` is not NULL, `name` **must** be NULL

- **VUID-VkImportMemoryWin32HandleInfoKHR-handle-01518**
  If `handle` is not NULL, it **must** obey any requirements listed for `handleType` in `external memory handle types compatibility`

- **VUID-VkImportMemoryWin32HandleInfoKHR-name-01519**
If name is not NULL, it must obey any requirements listed for handleType in external memory handle types compatibility.

Valid Usage (Implicit)

- VUID-VkImportMemoryWin32HandleInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_KHR
- VUID-VkImportMemoryWin32HandleInfoKHR-handleType-parameter
  If handleType is not 0, handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

To export a Windows handle representing the payload of a Vulkan device memory object, call:

```c
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandleKHR(
    VkDevice device,
    const VkMemoryGetWin32HandleInfoKHR* pGetWin32HandleInfo,
    HANDLE* pHandle);
```

- device is the logical device that created the device memory being exported.
- pGetWin32HandleInfo is a pointer to a VkMemoryGetWin32HandleInfoKHR structure containing parameters of the export operation.
- pHandle will return the Windows handle representing the payload of the device memory object.

For handle types defined as NT handles, the handles returned by vkGetMemoryWin32HandleKHR are owned by the application and hold a reference to their payload. To avoid leaking resources, the application must release ownership of them using the CloseHandle system call when they are no longer needed.

Note
Non-NT handle types do not add a reference to their associated payload. If the original object owning the payload is destroyed, all resources and handles sharing that payload will become invalid.

Valid Usage (Implicit)

- VUID-vkGetMemoryWin32HandleKHR-device-parameter
  device must be a valid VkDevice handle
- VUID-vkGetMemoryWin32HandleKHR-pGetWin32HandleInfo-parameter
  pGetWin32HandleInfo must be a valid pointer to a valid VkMemoryGetWin32HandleInfoKHR structure
- VUID-vkGetMemoryWin32HandleKHR-pHandle-parameter
  pHandle must be a valid pointer to a HANDLE value
Return Codes

Success
  • VK_SUCCESS

Failure
  • VK_ERROR_TOO_MANY_OBJECTS
  • VK_ERROR_OUT_OF_HOST_MEMORY

The `VkMemoryGetWin32HandleInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_external_memory_win32
typedef struct VkMemoryGetWin32HandleInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkDeviceMemory memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetWin32HandleInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object from which the handle will be exported.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of handle requested.

The properties of the handle returned depend on the value of `handleType`. See `VkExternalMemoryHandleTypeFlagBits` for a description of the properties of the defined external memory handle types.

Valid Usage

- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00662
  `handleType` must have been included in `VkExportMemoryAllocateInfo::handleTypes` when `memory` was created.

- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00663
  If `handleType` is defined as an NT handle, `vkGetMemoryWin32HandleKHR` must be called no more than once for each valid unique combination of `memory` and `handleType`.

- VUID-VkMemoryGetWin32HandleInfoKHR-handleType-00664
  `handleType` must be defined as an NT handle or a global share handle.

Valid Usage (Implicit)

- VUID-VkMemoryGetWin32HandleInfoKHR-sType-sType
sType must be VK_STRUCTURE_TYPE_MEMORY_GET_WIN32_HANDLE_INFO_KHR

• VUID-VkMemoryGetWin32HandleInfoKHR-pNext-pNext
  pNext must be NULL

• VUID-VkMemoryGetWin32HandleInfoKHR-memory-parameter
  memory must be a valid VkDeviceMemory handle

• VUID-VkMemoryGetWin32HandleInfoKHR-handleType-parameter
  handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

Windows memory handles compatible with Vulkan may also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```c
// Provided by VK_KHR_external_memory_win32
VkResult vkGetMemoryWin32HandlePropertiesKHR(
  VkDevice device,
  VkExternalMemoryHandleTypeFlagBits handleType,
  HANDLE handle,
  VkMemoryWin32HandlePropertiesKHR* pMemoryWin32HandleProperties);
```

• device is the logical device that will be importing handle.

• handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the type of the handle handle.

• handle is the handle which will be imported.

• pMemoryWin32HandleProperties is a pointer to a VkMemoryWin32HandlePropertiesKHR structure in which properties of handle are returned.

Valid Usage

• VUID-vkGetMemoryWin32HandlePropertiesKHR-handle-00665
  handle must point to a valid Windows memory handle

• VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-00666
  handleType must not be one of the handle types defined as opaque

Valid Usage (Implicit)

• VUID-vkGetMemoryWin32HandlePropertiesKHR-device-parameter
  device must be a valid VkDevice handle

• VUID-vkGetMemoryWin32HandlePropertiesKHR-handleType-parameter
  handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

• VUID-vkGetMemoryWin32HandlePropertiesKHR-pMemoryWin32HandleProperties-parameter
  pMemoryWin32HandleProperties must be a valid pointer to a
The `VkMemoryWin32HandlePropertiesKHR` structure returned is defined as:

```c
typedef struct VkMemoryWin32HandlePropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t memoryTypeBits;
} VkMemoryWin32HandlePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified windows handle can be imported as.

### Valid Usage (Implicit)

- VUID-VkMemoryWin32HandlePropertiesKHR-sType-sType `sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_WIN32_HANDLE_PROPERTIES_KHR`
- VUID-VkMemoryWin32HandlePropertiesKHR-pNext-pNext `pNext` **must** be `NULL`

When `VkExportMemoryAllocateInfoNV::handleTypes` includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV`, add a `VkExportMemoryWin32HandleInfoNV` structure to the `pNext` chain of the `VkExportMemoryAllocateInfoNV` structure to specify security attributes and access rights for the memory object's external handle.

The `VkExportMemoryWin32HandleInfoNV` structure is defined as:

```c
typedef struct VkExportMemoryWin32HandleInfoNV {
    VkStructureType sType;
    const void* pNext;
} VkExportMemoryWin32HandleInfoNV;
```
const SECURITY_ATTRIBUTES* pAttributes;
DWORD dwAccess;
} VkExportMemoryWin32HandleInfoNV;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• pAttributes is a pointer to a Windows SECURITY_ATTRIBUTES structure specifying security attributes of the handle.
• dwAccess is a DWORD specifying access rights of the handle.

If this structure is not present, or if pAttributes is set to NULL, default security descriptor values will be used, and child processes created by the application will not inherit the handle, as described in the MSDN documentation for “Synchronization Object Security and Access Rights”. Further, if the structure is not present, the access rights will be

DXGI_SHARED_RESOURCE_READ | DXGI_SHARED_RESOURCE_WRITE

1

Valid Usage (Implicit)

• VUID-VkExportMemoryWin32HandleInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_NV

• VUID-VkExportMemoryWin32HandleInfoNV-pAttributes-parameter
  If pAttributes is not NULL, pAttributes must be a valid pointer to a valid SECURITY_ATTRIBUTES value

To import memory created on the same physical device but outside of the current Vulkan instance, add a VkImportMemoryWin32HandleInfoNV structure to the pNext chain of the VkMemoryAllocateInfo structure, specifying a handle to and the type of the memory.

The VkImportMemoryWin32HandleInfoNV structure is defined as:

```c
// Provided by VK_NV_external_memory_win32
typedef struct VkImportMemoryWin32HandleInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagsNV handleType;
    HANDLE handle;
} VkImportMemoryWin32HandleInfoNV;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• **handleType** is 0 or a **VkExternalMemoryHandleTypeFlagBitsNV** value specifying the type of memory handle in **handle**.

• **handle** is a Windows **HANDLE** referring to the memory.

If **handleType** is 0, this structure is ignored by consumers of the **VkMemoryAllocateInfo** structure it is chained from.

### Valid Usage

- **VUID-VkImportMemoryWin32HandleInfoNV-handleType-01327**
  - **handleType** must not have more than one bit set

- **VUID-VkImportMemoryWin32HandleInfoNV-handle-01328**
  - **handle** must be a valid handle to memory, obtained as specified by **handleType**

### Valid Usage (Implicit)

- **VUID-VkImportMemoryWin32HandleInfoNV-sType-sType**
  - **sType** must be **VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_NV**

- **VUID-VkImportMemoryWin32HandleInfoNV-handleType-parameter**
  - **handleType** must be a valid combination of **VkExternalMemoryHandleTypeFlagBitsNV** values

Bits which can be set in **handleType** are:

Possible values of **VkImportMemoryWin32HandleInfoNV::handleType**, specifying the type of an external memory handle, are:

```c
// Provided by VK_NV_external_memory_capabilities
typedef enum VkExternalMemoryHandleTypeFlagBitsNV {
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV = 0x00000001,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV = 0x00000002,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV = 0x00000004,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV = 0x00000008,
} VkExternalMemoryHandleTypeFlagBitsNV;
```

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV** specifies a handle to memory returned by **vkGetMemoryWin32HandleNV**.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV** specifies a handle to memory returned by **vkGetMemoryWin32HandleNV**, or one duplicated from such a handle using **DuplicateHandle()**.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV** specifies a valid NT handle to memory returned by **IDXGIFactory1::CreateSharedHandle**, or a handle duplicated from such a handle using **DuplicateHandle()**.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_KMT_BIT_NV** specifies a handle to memory returned
by IDXGIResource::GetSharedHandle().

// Provided by VK_NV_external_memory_capabilities
typedef VkFlags VkExternalMemoryHandleTypeFlagsNV;

VkExternalMemoryHandleTypeFlagsNV is a bitmask type for setting a mask of zero or more VkExternalMemoryHandleTypeFlagBitsNV.

To retrieve the handle corresponding to a device memory object created with VkExportMemoryAllocateInfoNV::handleTypes set to include VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV or VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_NV, call:

// Provided by VK_NV_external_memory_win32
VkResult vkGetMemoryWin32HandleNV(
    VkDevice device,               // Provided by VK_NV_external_memory_win32
    VkDeviceMemory memory,        // Provided by VK_NV_external_memory_win32
    VkExternalMemoryHandleTypeFlagsNV handleType,    // Provided by VK_NV_external_memory_win32
    HANDLE* pHandle);             // Provided by VK_NV_external_memory_win32

• device is the logical device that owns the memory.

• memory is the VkDeviceMemory object.

• handleType is a bitmask of VkExternalMemoryHandleTypeFlagBitsNV containing a single bit specifying the type of handle requested.

• handle is a pointer to a Windows HANDLE in which the handle is returned.

Valid Usage

• VUID-vkGetMemoryWin32HandleNV-handleType-01326
  handleType must be a flag specified in VkExportMemoryAllocateInfoNV::handleTypes when allocating memory

Valid Usage (Implicit)

• VUID-vkGetMemoryWin32HandleNV-device-parameter
device must be a valid VkDevice handle

• VUID-vkGetMemoryWin32HandleNV-memory-parameter
memory must be a valid VkDeviceMemory handle

• VUID-vkGetMemoryWin32HandleNV-handleType-parameter
(handleType must be a valid combination of VkExternalMemoryHandleTypeFlagBitsNV values

• VUID-vkGetMemoryWin32HandleNV-handleType-requiredbitmap
handleType must not be 0
• VUID-vkGetMemoryWin32HandleNV-pHandle-parameter
  pHandle must be a valid pointer to a HANDLE value
• VUID-vkGetMemoryWin32HandleNV-memory-parent
  memory must have been created, allocated, or retrieved from device

Return Codes

Success
  • VK_SUCCESS

Failure
  • VK_ERROR_TOO_MANY_OBJECTS
  • VK_ERROR_OUT_OF_HOST_MEMORY

11.2.5. File Descriptor External Memory

To import memory from a POSIX file descriptor handle, add a VkImportMemoryFdInfoKHR structure to the pNext chain of the VkMemoryAllocateInfo structure. The VkImportMemoryFdInfoKHR structure is defined as:

```c
// Provided by VK_KHR_external_memory_fd
typedef struct VkImportMemoryFdInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    int fd;
} VkImportMemoryFdInfoKHR;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the handle type of fd.
• fd is the external handle to import.

Importing memory from a file descriptor transfers ownership of the file descriptor from the application to the Vulkan implementation. The application must not perform any operations on the file descriptor after a successful import. The imported memory object holds a reference to its payload.

Applications can import the same payload into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation must create a distinct VkDeviceMemory object.
Valid Usage

• VUID-VkImportMemoryFdInfoKHR-handleType-00667
  If handleType is not 0, it must be supported for import, as reported by VkExternalImageFormatProperties or VkExternalBufferProperties

• VUID-VkImportMemoryFdInfoKHR-fd-00668
  The memory from which fd was exported must have been created on the same underlying physical device as device

• VUID-VkImportMemoryFdInfoKHR-handleType-00669
  If handleType is not 0, it must be VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT or VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT

• VUID-VkImportMemoryFdInfoKHR-handleType-00669
  If handleType is not 0, fd must be a valid handle of the type specified by handleType

• VUID-VkImportMemoryFdInfoKHR-fd-01746
  The memory represented by fd must have been created from a physical device and driver that is compatible with device and handleType, as described in External memory handle types compatibility

• VUID-VkImportMemoryFdInfoKHR-fd-01520
  fd must obey any requirements listed for handleType in external memory handle types compatibility

Valid Usage (Implicit)

• VUID-VkImportMemoryFdInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMPORT_MEMORY_FD_INFO_KHR

• VUID-VkImportMemoryFdInfoKHR-handleType-parameter
  If handleType is not 0, handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

To export a POSIX file descriptor referencing the payload of a Vulkan device memory object, call:

```c
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdKHR(
    VkDevice device,
    const VkMemoryGetFdInfoKHR* pGetFdInfo,
    int* pFd);
```

• device is the logical device that created the device memory being exported.

• pGetFdInfo is a pointer to a VkMemoryGetFdInfoKHR structure containing parameters of the export operation.

• pFd will return a file descriptor referencing the payload of the device memory object.
Each call to `vkGetMemoryFdKHR` must create a new file descriptor holding a reference to the memory object's payload and transfer ownership of the file descriptor to the application. To avoid leaking resources, the application must release ownership of the file descriptor using the `close` system call when it is no longer needed, or by importing a Vulkan memory object from it. Where supported by the operating system, the implementation must set the file descriptor to be closed automatically when an `execve` system call is made.

### Valid Usage (Implicit)

- VUID-vkGetMemoryFdKHR-device-parameter  
  `device` must be a valid `VkDevice` handle  
- VUID-vkGetMemoryFdKHR-pGetFdInfo-parameter  
  `pGetFdInfo` must be a valid pointer to a valid `VkMemoryGetFdInfoKHR` structure  
- VUID-vkGetMemoryFdKHR-pFd-parameter  
  `pFd` must be a valid pointer to an `int` value

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkMemoryGetFdInfoKHR` structure is defined as:

```c
typedef struct VkMemoryGetFdInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkDeviceMemory memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetFdInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` is the memory object from which the handle will be exported.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of handle requested.

The properties of the file descriptor exported depend on the value of `handleType`. See `VkExternalMemoryHandleTypeFlagBits` for a description of the properties of the defined external
memory handle types.

**Note**
The size of the exported file may be larger than the size requested by `VkMemoryAllocateInfo::allocationSize`. If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`, then the application can query the file’s actual size with `lseek`.

### Valid Usage

- VUID-VkMemoryGetFdInfoKHR-handleType-00671
  
  `handleType must` have been included in `VkExportMemoryAllocateInfo::handleTypes` when `memory` was created.

- VUID-VkMemoryGetFdInfoKHR-handleType-00672
  
  `handleType must be` `VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT`.

### Valid Usage (Implicit)

- VUID-VkMemoryGetFdInfoKHR-sType-sType
  
  `sType must` be `VK_STRUCTURE_TYPE_MEMORY_GET_FD_INFO_KHR`.

- VUID-VkMemoryGetFdInfoKHR-pNext-pNext
  
  `pNext must` be `NULL`.

- VUID-VkMemoryGetFdInfoKHR-memory-parameter
  
  `memory must` be a valid `VkDeviceMemory` handle.

- VUID-VkMemoryGetFdInfoKHR-handleType-parameter
  
  `handleType must` be a valid `VkExternalMemoryHandleTypeFlagBits` value.

POSIX file descriptor memory handles compatible with Vulkan may also be created by non-Vulkan APIs using methods beyond the scope of this specification. To determine the correct parameters to use when importing such handles, call:

```c
// Provided by VK_KHR_external_memory_fd
VkResult vkGetMemoryFdPropertiesKHR(
  VkDevice device,
  VkExternalMemoryHandleTypeFlagBits handleType,
  int fd,
  VkMemoryFdPropertiesKHR* pMemoryFdProperties);
```

- `device` is the logical device that will be importing `fd`.

- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle `fd`.
• *fd* is the handle which will be imported.

• *pMemoryFdProperties* is a pointer to a *VkMemoryFdPropertiesKHR* structure in which the properties of the handle *fd* are returned.

**Valid Usage**

• VUID-vkGetMemoryFdPropertiesKHR-fd-00673
  *fd* must point to a valid POSIX file descriptor memory handle

• VUID-vkGetMemoryFdPropertiesKHR-handleType-00674
  *handleType* must not be *VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT*

**Valid Usage (Implicit)**

• VUID-vkGetMemoryFdPropertiesKHR-device-parameter
  *device* must be a valid *VkDevice* handle

• VUID-vkGetMemoryFdPropertiesKHR-handleType-parameter
  *handleType* must be a valid *VkExternalMemoryHandleTypeFlagBits* value

• VUID-vkGetMemoryFdPropertiesKHR-pMemoryFdProperties-parameter
  *pMemoryFdProperties* must be a valid pointer to a *VkMemoryFdPropertiesKHR* structure

**Return Codes**

- **Success**
  • *VK_SUCCESS*

- **Failure**
  • *VK_ERROR_OUT_OF_HOST_MEMORY*
  • *VK_ERROR_INVALID_EXTERNAL_HANDLE*

The *VkMemoryFdPropertiesKHR* structure returned is defined as:

```c
// Provided by VK_KHR_external_memory_fd
typedef struct VkMemoryFdPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t memoryTypeBits;
} VkMemoryFdPropertiesKHR;
```

• *sType* is a *VkStructureType* value identifying this structure.

• *pNext* is *NULL* or a pointer to a structure extending this structure.

• *memoryTypeBits* is a bitmask containing one bit set for every memory type which the specified file descriptor can be imported as.
Valid Usage (Implicit)

- VUID-VkMemoryFdPropertiesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_MEMORY_FD_PROPERTIES_KHR

- VUID-VkMemoryFdPropertiesKHR-pNext-pNext
  pNext must be NULL

11.2.6. Host External Memory

To import memory from a host pointer, add a VkImportMemoryHostPointerInfoEXT structure to the pNext chain of the VkMemoryAllocateInfo structure. The VkImportMemoryHostPointerInfoEXT structure is defined as:

```c
// Provided by VK_EXT_external_memory_host
typedef struct VkImportMemoryHostPointerInfoEXT {
  VkStructureType sType;
  const void* pNext;
  VkExternalMemoryHandleTypeFlagBits handleType;
  void* pHostPointer;
} VkImportMemoryHostPointerInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- handleType is a VkExternalMemoryHandleTypeFlagBits value specifying the handle type.
- pHostPointer is the host pointer to import from.

Importing memory from a host pointer shares ownership of the memory between the host and the Vulkan implementation. The application can continue to access the memory through the host pointer but it is the application’s responsibility to synchronize device and non-device access to the payload as defined in Host Access to Device Memory Objects.

Applications can import the same payload into multiple instances of Vulkan and multiple times into a given Vulkan instance. However, implementations may fail to import the same payload multiple times into a given physical device due to platform constraints.

Importing memory from a particular host pointer may not be possible due to additional platform-specific restrictions beyond the scope of this specification in which case the implementation must fail the memory import operation with the error code VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR.

Whether device memory objects imported from a host pointer hold a reference to their payload is undefined. As such, the application must ensure that the imported memory range remains valid and accessible for the lifetime of the imported memory object.
Valid Usage

• VUID-VkImportMemoryHostPointerInfoEXT-handleType-01747
  If `handleType` is not 0, it must be supported for import, as reported in `VkExternalMemoryProperties`

• VUID-VkImportMemoryHostPointerInfoEXT-handleType-01748
  If `handleType` is not 0, it must be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`

• VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-01749
  `pHostPointer` must be a pointer aligned to an integer multiple of `VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment`

• VUID-VkImportMemoryHostPointerInfoEXT-handleType-01750
  If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT`, `pHostPointer` must be a pointer to `allocationSize` number of bytes of host memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to

• VUID-VkImportMemoryHostPointerInfoEXT-handleType-01751
  If `handleType` is `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`, `pHostPointer` must be a pointer to `allocationSize` number of bytes of host mapped foreign memory, where `allocationSize` is the member of the `VkMemoryAllocateInfo` structure this structure is chained to

Valid Usage (Implicit)

• VUID-VkImportMemoryHostPointerInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_HOST_POINTER_INFO_EXT`

• VUID-VkImportMemoryHostPointerInfoEXT-handleType-parameter
  `handleType` must be a valid `VkExternalMemoryHandleTypeFlagBits` value

• VUID-VkImportMemoryHostPointerInfoEXT-pHostPointer-parameter
  `pHostPointer` must be a pointer value

To determine the correct parameters to use when importing host pointers, call:

```c
// Provided by VK_EXT_external_memory_host
VkResult vkGetMemoryHostPointerPropertiesEXT(
    VkDevice device,                 // device,                  
    VkExternalMemoryHandleTypeFlagBits handleType,                  
    const void* pHostPointer,       // pHostPointer,             
    VkMemoryHostPointerPropertiesEXT* pMemoryHostPointerProperties); // pMemoryHostPointerProperties);
```

• `device` is the logical device that will be importing `pHostPointer`.

• `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle
pHostPointer.

- **pHostPointer** is the host pointer to import from.
- **pMemoryHostPointerProperties** is a pointer to a VkMemoryHostPointerPropertiesEXT structure in which the host pointer properties are returned.

## Valid Usage

- **VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01752**
  handleType **must** be
  VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT or
  VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT

- **VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-01753**
  pHostPointer **must** be a pointer aligned to an integer multiple of
  VkPhysicalDeviceExternalMemoryHostPropertiesEXT::minImportedHostPointerAlignment

- **VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01754**
  If handleType is
  VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT, pHostPointer **must** be a pointer to host memory

- **VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-01755**
  If handleType is
  VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT, pHostPointer **must** be a pointer to host mapped foreign memory

## Valid Usage (Implicit)

- **VUID-vkGetMemoryHostPointerPropertiesEXT-device-parameter**
  device **must** be a valid VkDevice handle

- **VUID-vkGetMemoryHostPointerPropertiesEXT-handleType-parameter**
  handleType **must** be a valid VkExternalMemoryHandleTypeFlagBits value

- **VUID-vkGetMemoryHostPointerPropertiesEXT-pHostPointer-parameter**
  pHostPointer **must** be a pointer value

- **VUID-vkGetMemoryHostPointerPropertiesEXT-pMemoryHostPointerProperties-parameter**
  pMemoryHostPointerProperties **must** be a valid pointer to a
  VkMemoryHostPointerPropertiesEXT structure

## Return Codes

### Success

- **VK_SUCCESS**

### Failure

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_INVALID_EXTERNAL_HANDLE**
The `VkMemoryHostPointerPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_external_memory_host
typedef struct VkMemoryHostPointerPropertiesEXT {
    VkStructureType sType;
    void*pNext;
    uint32_t memoryTypeBits;
} VkMemoryHostPointerPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryTypeBits` is a bitmask containing one bit set for every memory type which the specified host pointer can be imported as.

The value returned by `memoryTypeBits must` only include bits that identify memory types which are host visible.

### Valid Usage (Implicit)

- `VUID-VkMemoryHostPointerPropertiesEXT-sType-sType`  
  `sType must` be `VK_STRUCTURE_TYPE_MEMORY_HOST_POINTER_PROPERTIES_EXT`
- `VUID-VkMemoryHostPointerPropertiesEXT-pNext-pNext`  
  `pNext must` be `NULL`

### 11.2.7. Android Hardware Buffer External Memory

To import memory created outside of the current Vulkan instance from an Android hardware buffer, add a `VkImportAndroidHardwareBufferInfoANDROID` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportAndroidHardwareBufferInfoANDROID` structure is defined as:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkImportAndroidHardwareBufferInfoANDROID {
    VkStructureType sType;
    const void* pNext;
    struct AHardwareBuffer* buffer;
} VkImportAndroidHardwareBufferInfoANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the Android hardware buffer to import.

If the `vkAllocateMemory` command succeeds, the implementation must acquire a reference to the imported hardware buffer, which it must release when the device memory object is freed. If the
command fails, the implementation **must** not retain a reference.

**Valid Usage**

- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-01880
  If buffer is not NULL, Android hardware buffers **must** be supported for import, as reported by VkExternalImageFormatProperties or VkExternalBufferProperties

- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-01881
  If buffer is not NULL, it **must** be a valid Android hardware buffer object with AHardwareBuffer_Desc::usage compatible with Vulkan as described in Android Hardware Buffers

**Valid Usage (Implicit)**

- VUID-VkImportAndroidHardwareBufferInfoANDROID-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMPORT_ANDROID_HARDWARE_BUFFER_INFO_ANDROID

- VUID-VkImportAndroidHardwareBufferInfoANDROID-buffer-parameter
  buffer **must** be a valid pointer to an AHardwareBuffer value

To export an Android hardware buffer referencing the payload of a Vulkan device memory object, call:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
VkResult vkGetMemoryAndroidHardwareBufferANDROID(
    VkDevice device,
    const VkMemoryGetAndroidHardwareBufferInfoANDROID* pInfo,
    struct AHardwareBuffer** pBuffer);
```

- **device** is the logical device that created the device memory being exported.
- **pInfo** is a pointer to a VkMemoryGetAndroidHardwareBufferInfoANDROID structure containing parameters of the export operation.
- **pBuffer** will return an Android hardware buffer referencing the payload of the device memory object.

Each call to **vkGetMemoryAndroidHardwareBufferANDROID** **must** return an Android hardware buffer with a new reference acquired in addition to the reference held by the VkDeviceMemory. To avoid leaking resources, the application **must** release the reference by calling AHardwareBuffer_release when it is no longer needed. When called with the same handle in VkMemoryGetAndroidHardwareBufferInfoANDROID::memory, **vkGetMemoryAndroidHardwareBufferInfoANDROID** **must** return the same Android hardware buffer object. If the device memory was created by importing an Android hardware buffer, **vkGetMemoryAndroidHardwareBufferInfoANDROID** **must** return that same Android hardware buffer object.
Valid Usage (Implicit)

- VUID-vkGetMemoryAndroidHardwareBufferANDROID-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetMemoryAndroidHardwareBufferANDROID-pInfo-parameter
  pInfo must be a valid pointer to a valid VkMemoryGetAndroidHardwareBufferInfoANDROID structure

- VUID-vkGetMemoryAndroidHardwareBufferANDROID-pBuffer-parameter
  pBuffer must be a valid pointer to a valid pointer to an AHardwareBuffer value

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_OUT_OF_HOST_MEMORY

The VkMemoryGetAndroidHardwareBufferInfoANDROID structure is defined as:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkMemoryGetAndroidHardwareBufferInfoANDROID {
    VkStructureType sType;
    const void* pNext;
    VkDeviceMemory memory;
} VkMemoryGetAndroidHardwareBufferInfoANDROID;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `memory` is the memory object from which the Android hardware buffer will be exported.

Valid Usage

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-handleTypes-01882
  VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID must have been included in VkExportMemoryAllocateInfo:handleTypes when memory was created

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-pNext-01883
  If the `pNext` chain of the VkMemoryAllocateInfo used to allocate memory included a VkMemoryDedicatedAllocateInfo with non-NULL image member, then that image must already be bound to memory
Valid Usage (Implicit)

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_MEMORY_GET_ANDROID_HARDWARE_BUFFER_INFO_ANDROID

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-pNext-pNext
  
  pNext must be NULL

- VUID-VkMemoryGetAndroidHardwareBufferInfoANDROID-memory-parameter
  
  memory must be a valid VkDeviceMemory handle

To determine the memory parameters to use when importing an Android hardware buffer, call:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
VkResult vkGetAndroidHardwareBufferPropertiesANDROID(
    VkDevice device,
    const struct AHardwareBuffer* buffer,
    VkAndroidHardwareBufferPropertiesANDROID* pProperties);
```

- device is the logical device that will be importing buffer.
- buffer is the Android hardware buffer which will be imported.
- pProperties is a pointer to a VkAndroidHardwareBufferPropertiesANDROID structure in which the properties of buffer are returned.

Valid Usage

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-buffer-01884
  
  buffer must be a valid Android hardware buffer object with at least one of the AHWARDBUFFE_USAGE_GPU_* flags in its AHardwareBuffer_Desc::usage

Valid Usage (Implicit)

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-device-parameter
  
  device must be a valid VkDevice handle

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-buffer-parameter
  
  buffer must be a valid pointer to a valid AHardwareBuffer value

- VUID-vkGetAndroidHardwareBufferPropertiesANDROID-pProperties-parameter
  
  pProperties must be a valid pointer to a VkAndroidHardwareBufferPropertiesANDROID structure
Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR

The `VkAndroidHardwareBufferPropertiesANDROID` structure returned is defined as:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferPropertiesANDROID {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize allocationSize;
    uint32_t memoryTypeBits;
} VkAndroidHardwareBufferPropertiesANDROID;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **allocationSize** is the size of the external memory
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified Android hardware buffer can be imported as.

Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferPropertiesANDROID-sType-sType
  The `sType` value of each struct in the `pNext` chain must be unique

To obtain format properties of an Android hardware buffer, include a `VkAndroidHardwareBufferFormatPropertiesANDROID` structure in the `pNext` chain of the `VkAndroidHardwareBufferPropertiesANDROID` structure passed to `vkGetAndroidHardwareBufferPropertiesANDROID`. This structure is defined as:
typedef struct VkAndroidHardwareBufferFormatPropertiesANDROID {
    VkStructureType sType;
    void* pNext;
    VkFormat format;
    uint64_t externalFormat;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrModelConversion suggestedYcbcrRange;
    VkChromaLocation suggestedXChromaOffset;
    VkChromaLocation suggestedYChromaOffset;
} VkAndroidHardwareBufferFormatPropertiesANDROID;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **format** is the Vulkan format corresponding to the Android hardware buffer’s format, or `VK_FORMAT_UNDEFINED` if there is not an equivalent Vulkan format.
- **externalFormat** is an implementation-defined external format identifier for use with `VkExternalFormatANDROID`. It **must** not be zero.
- **formatFeatures** describes the capabilities of this external format when used with an image bound to memory imported from `buffer`.
- **samplerYcbcrConversionComponents** is the component swizzle that **should** be used in `VkSamplerYcbcrConversionCreateInfo`.
- **suggestedYcbcrModel** is a suggested color model to use in the `VkSamplerYcbcrConversionCreateInfo`.
- **suggestedYcbcrRange** is a suggested numerical value range to use in `VkSamplerYcbcrConversionCreateInfo`.
- **suggestedXChromaOffset** is a suggested X chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.
- **suggestedYChromaOffset** is a suggested Y chroma offset to use in `VkSamplerYcbcrConversionCreateInfo`.

If the Android hardware buffer has one of the formats listed in the **Format Equivalence table**, then **format** **must** have the equivalent Vulkan format listed in the table. Otherwise, **format** **may** be `VK_FORMAT_UNDEFINED`, indicating the Android hardware buffer **can** only be used with an external format.

The **formatFeatures** member **must** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` and at least one of `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT` or `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, and **should** include `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`.

Note
The `formatFeatures` member only indicates the features available when using an 
external-format image created from the Android hardware buffer. Images from 
Android hardware buffers with a format other than `VK_FORMAT_UNDEFINED` are 
subject to the format capabilities obtained from `vkGetPhysicalDeviceFormatProperties2`, 
and `vkGetPhysicalDeviceImageFormatProperties2` with appropriate parameters. These 
sets of features are independent of each other, e.g. the external format will support 
sampler Y’C_bC_r conversion even if the non-external format does not, and rendering 
directly to the external format will not be supported even if the non-external 
format does support this.

Android hardware buffers with the same external format must have the same support for 
`VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`, 
`VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT`, `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, 
`VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT`, 
`VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT`, and 
`VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT` in `formatFeatures`. Other format features may differ between Android hardware buffers that have 
the same external format. This allows applications to use the same `VkSamplerYcbcrConversion` object (and samplers and pipelines created from them) for any Android hardware buffers that have 
the same external format.

If `format` is not `VK_FORMAT_UNDEFINED`, then the value of `samplerYcbcrConversionComponents` must be 
valid when used as the `components` member of `VkSamplerYcbcrConversionCreateInfo` with that 
format. If `format` is `VK_FORMAT_UNDEFINED`, all members of `samplerYcbcrConversionComponents` must be 
the identity swizzle.

Implementations may not always be able to determine the color model, numerical range, or 
chroma offsets of the image contents, so the values in `VkAndroidHardwareBufferFormatPropertiesANDROID` are only suggestions. Applications should 
treat these values as sensible defaults to use in the absence of more reliable information obtained 
through some other means. If the underlying physical device is also usable via OpenGL ES with the 
`GL_OES_EGL_image_external` extension, the implementation should suggest values that will produce 
similar sampled values as would be obtained by sampling the same external image via 
`samplerExternalOES` in OpenGL ES using equivalent sampler parameters.

**Note**
Since `GL_OES_EGL_image_external` does not require the same sampling and 
conversion calculations as Vulkan does, achieving identical results between APIs 
may not be possible on some implementations.

---

**Valid Usage (Implicit)**

- VUID-VkAndroidHardwareBufferFormatPropertiesANDROID-sType-sType
  * `sType` must be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_ANDROID`
VkAndroidHardwareBufferFormatProperties2ANDROID structure in the pNext chain of the VkAndroidHardwareBufferPropertiesANDROID structure passed to vkGetAndroidHardwareBufferPropertiesANDROID. This structure is defined as:

```c
typedef struct VkAndroidHardwareBufferFormatProperties2ANDROID {
    VkStructureType sType;
    void* pNext;
    VkFormat format;
    uint64_t externalFormat;
    VkFormatFeatureFlags2 formatFeatures;
    VkComponentMapping samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange suggestedYcbcrRange;
    VkChromaLocation suggestedXChromaOffset;
    VkChromaLocation suggestedYChromaOffset;
} VkAndroidHardwareBufferFormatProperties2ANDROID;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `format` is the Vulkan format corresponding to the Android hardware buffer’s format, or VK_FORMAT_UNDEFINED if there is not an equivalent Vulkan format.
- `externalFormat` is an implementation-defined external format identifier for use with VkExternalFormatANDROID. It must not be zero.
- `formatFeatures` describes the capabilities of this external format when used with an image bound to memory imported from buffer.
- `samplerYcbcrConversionComponents` is the component swizzle that should be used in VkSamplerYcbcrConversionCreateInfo.
- `suggestedYcbcrModel` is a suggested color model to use in the VkSamplerYcbcrConversionCreateInfo.
- `suggestedYcbcrRange` is a suggested numerical value range to use in VkSamplerYcbcrConversionCreateInfo.
- `suggestedXChromaOffset` is a suggested X chroma offset to use in VkSamplerYcbcrConversionCreateInfo.
- `suggestedYChromaOffset` is a suggested Y chroma offset to use in VkSamplerYcbcrConversionCreateInfo.

The bits reported in `formatFeatures` must include the bits reported in the corresponding fields of VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures.

**Valid Usage (Implicit)**

- VUID-VkAndroidHardwareBufferFormatProperties2ANDROID-sType-sType
The `VkAndroidHardwareBufferFormatResolvePropertiesANDROID` structure is defined as:

```c
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkAndroidHardwareBufferFormatResolvePropertiesANDROID {
    VkStructureType sType;
    void* pNext;
    VkFormat colorAttachmentFormat;
} VkAndroidHardwareBufferFormatResolvePropertiesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `colorAttachmentFormat` is a `VkFormat` specifying the format of color attachment images that must be used for color attachments when resolving to the specified external format. If the implementation supports external format resolves for the specified external format, this value will be set to a color format supporting the `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures` as returned by `vkGetPhysicalDeviceFormatProperties` with `format` equal to `colorAttachmentFormat`. If external format resolves are not supported, this value will be set to `VK_FORMAT_UNDEFINED`.

Any Android hardware buffer created with the `GRALLOC_USAGE_HW_RENDER` flag must be renderable in some way in Vulkan, either:

- `VkAndroidHardwareBufferFormatPropertiesANDROID::format` must be a format that supports `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures`; or
- `colorAttachmentFormat` must be a format that supports `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` in `VkFormatProperties::optimalTilingFeatures`.

### Valid Usage (Implicit)

- VUID-VkAndroidHardwareBufferFormatResolvePropertiesANDROID-sType-sType must be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_RESOLVE_PROPERTIES_ANDROID`.

#### 11.2.8. Remote Device External Memory

To export an address representing the payload of a Vulkan device memory object accessible by remote devices, call:

```c
// Provided by VK_NV_external_memory_rdma
VkResult vkGetMemoryRemoteAddressNV(VkDevice device, const VkMemoryGetRemoteAddressInfoNV* pMemoryGetRemoteAddressInfo,
```
• *device* is the logical device that created the device memory being exported.

• *pMemoryGetRemoteAddressInfo* is a pointer to a *VkMemoryGetRemoteAddressInfoNV* structure containing parameters of the export operation.

• *pAddress* is a pointer to a *VkRemoteAddressNV* value in which an address representing the payload of the device memory object is returned.

More communication may be required between the kernel-mode drivers of the devices involved. This information is out of scope of this documentation and should be requested from the vendors of the devices.

### Valid Usage (Implicit)

- VUID-vkGetMemoryRemoteAddressNV-device-parameter
  device must be a valid *VkDevice* handle

- VUID-vkGetMemoryRemoteAddressNV-pMemoryGetRemoteAddressInfo-parameter
  *pMemoryGetRemoteAddressInfo* must be a valid pointer to a valid *VkMemoryGetRemoteAddressInfoNV* structure

- VUID-vkGetMemoryRemoteAddressNV-pAddress-parameter
  *pAddress* must be a valid pointer to a *VkRemoteAddressNV* value

### Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_INVALID_EXTERNAL_HANDLE

The *VkMemoryGetRemoteAddressInfoNV* structure is defined as:

```c
// Provided by VK_NV_external_memory_rdma
typedef struct VkMemoryGetRemoteAddressInfoNV {
  VkStructureType sType;
  const void* pNext;
  VkDeviceMemory memory;
  VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetRemoteAddressInfoNV;
```

- *sType* is a *VkStructureType* value identifying this structure.

- *pNext* is NULL or a pointer to a structure extending this structure.

- *memory* is the memory object from which the remote accessible address will be exported.
• **handleType** is the type of handle requested.

## Valid Usage

- **VUID-VkMemoryGetRemoteAddressInfoNV-handleType-04966**
  
  **handleType must** have been included in **VkExportMemoryAllocateInfo::handleTypes** when **memory** was created.

## Valid Usage (Implicit)

- **VUID-VkMemoryGetRemoteAddressInfoNV-sType-sType**
  
  **sType must** be **VK_STRUCTURE_TYPE_MEMORY_GET_REMOTE_ADDRESS_INFO_NV**

- **VUID-VkMemoryGetRemoteAddressInfoNV-pNext-pNext**
  
  **pNext must** be **NULL**

- **VUID-VkMemoryGetRemoteAddressInfoNV-memory-parameter**
  
  **memory must** be a valid **VkDeviceMemory** handle

- **VUID-VkMemoryGetRemoteAddressInfoNV-handleType-parameter**
  
  **handleType must** be a valid **VkExternalMemoryHandleTypeFlagBits** value

**VkRemoteAddressNV** represents an address of a memory object accessible by remote devices, as returned in **vkGetMemoryRemoteAddressNV::pAddress**.

```c
// Provided by VK_NV_external_memory_rdma
typedef void* VkRemoteAddressNV;
```

### 11.2.9. Fuchsia External Memory

On Fuchsia, when allocating memory that **may** be imported from another device, process or Vulkan instance, add a **VkImportMemoryZirconHandleInfoFUCHSIA** structure to the **pNext** chain of the **VkMemoryAllocateInfo** structure.

External memory on Fuchsia is imported and exported using VMO handles of type **zx_handle_t**. VMO handles to external memory are canonically obtained from Fuchsia's Sysmem service or from syscalls such as **zx_vmo_create()**. VMO handles for import can also be obtained by exporting them from another Vulkan instance as described in **exporting fuchsia device memory**.

Importing VMO handles to the Vulkan instance transfers ownership of the handle to the instance from the application. The application **must** not perform any operations on the handle after successful import.

Applications **can** import the same underlying memory into multiple instances of Vulkan, into the same instance from which it was exported, and multiple times into a given Vulkan instance. In all cases, each import operation **must** create a distinct **VkDeviceMemory** object.
Importing Fuchsia External Memory

The `VkImportMemoryZirconHandleInfoFUCHSIA` structure is defined as:

```c
// Provided by VK_FUCHSIA_external_memory
typedef struct VkImportMemoryZirconHandleInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
    zx_handle_t handle;
} VkImportMemoryZirconHandleInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of `handle`.
- `handle` is a `zx_handle_t` (Zircon) handle to the external memory.

**Valid Usage**

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handleType-04771
  `handleType` must be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`
- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handle-04772
  `handle` must be a valid VMO handle

**Valid Usage (Implicit)**

- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_IMPORT_MEMORY_ZIRCON_HANDLE_INFO_FUCHSIA`
- VUID-VkImportMemoryZirconHandleInfoFUCHSIA-handleType-parameter
  If `handleType` is not `0`, `handleType` must be a valid `VkExternalMemoryHandleTypeFlagBits` value

To obtain the `memoryTypeIndex` for the `VkMemoryAllocateInfo` structure, call `vkGetMemoryZirconHandlePropertiesFUCHSIA`:

```c
// Provided by VK_FUCHSIA_external_memory
VkResult vkGetMemoryZirconHandlePropertiesFUCHSIA(
    VkDevice device,
    VkExternalMemoryHandleTypeFlagBits handleType,
    zx_handle_t zirconHandle,
    VkMemoryZirconHandlePropertiesFUCHSIA* pMemoryZirconHandleProperties);
```

- `device` is the `VkDevice`. 
• **handleType** is a *VkExternalMemoryHandleTypeFlagBits* value specifying the type of *zirconHandle*

• **zirconHandle** is a *zx_handle_t* (Zircon) handle to the external resource.

• **pMemoryZirconHandleProperties** is a pointer to a *VkMemoryZirconHandlePropertiesFUCHSIA* structure in which the result will be stored.

### Valid Usage

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-handleType-04773: **handleType** must be `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-zirconHandle-04774: **zirconHandle** must reference a valid VMO

### Valid Usage (Implicit)

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-device-parameter: **device** must be a valid *VkDevice* handle

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-handleType-parameter: **handleType** must be a valid *VkExternalMemoryHandleTypeFlagBits* value

- VUID-vkGetMemoryZirconHandlePropertiesFUCHSIA-pMemoryZirconHandleProperties-parameter: **pMemoryZirconHandleProperties** must be a valid pointer to a *VkMemoryZirconHandlePropertiesFUCHSIA* structure

### Return Codes

**Success**
- **VK_SUCCESS**

**Failure**
- **VK_ERROR_INVALID_EXTERNAL_HANDLE**

The *VkMemoryZirconHandlePropertiesFUCHSIA* structure is defined as:

```c
// Provided by VK_FUCHSIA_external_memory
typedef struct VkMemoryZirconHandlePropertiesFUCHSIA {
    VkStructureType sType;
    void* pNext;
    uint32_t memoryTypeBits;
} VkMemoryZirconHandlePropertiesFUCHSIA;
```

- **sType** is a *VkStructureType* value identifying this structure.

- **pNext** is **NULL** or a pointer to a structure extending this structure.
• `memoryTypeBits` a bitmask containing one bit set for every memory type which the specified handle can be imported as.

### Valid Usage (Implicit)

- VUID-VkMemoryZirconHandlePropertiesFUCHSIA-sType-sType
  - `sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_ZIRCON_HANDLE_PROPERTIES_FUCHSIA`
- VUID-VkMemoryZirconHandlePropertiesFUCHSIA-pNext-pNext
  - `pNext` **must** be `NULL`

With `pMemoryZirconHandleProperties` now successfully populated by `vkGetMemoryZirconHandlePropertiesFUCHSIA`, assign the `VkMemoryAllocateInfo` memoryTypeIndex field to a memory type which has a bit set in the `VkMemoryZirconHandlePropertiesFUCHSIA` memoryTypeBits field.

### Exporting Fuchsia Device Memory

Similar to importing, exporting a VMO handle from Vulkan transfers ownership of the handle from the Vulkan instance to the application. The application is responsible for closing the handle with `zx_handle_close()` when it is no longer in use.

To export device memory as a Zircon handle that can be used by another instance, device, or process, the handle to the `VkDeviceMemory` must be retrieved using `vkGetMemoryZirconHandleFUCHSIA`:

```c
// Provided by VK_FUCHSIA_external_memory
VkResult vkGetMemoryZirconHandleFUCHSIA(
    VkDevice device,
    const VkMemoryGetZirconHandleInfoFUCHSIA* pGetZirconHandleInfo,
    zx_handle_t* pZirconHandle);
```

- `device` is the `VkDevice`.
- `pGetZirconHandleInfo` is a pointer to a `VkMemoryGetZirconHandleInfoFUCHSIA` structure.
- `pZirconHandle` is a pointer to a `zx_handle_t` which holds the resulting Zircon handle.

### Valid Usage (Implicit)

- VUID-vkGetMemoryZirconHandleFUCHSIA-device-parameter
  - `device` **must** be a valid `VkDevice` handle
- VUID-vkGetMemoryZirconHandleFUCHSIA-pGetZirconHandleInfo-parameter
  - `pGetZirconHandleInfo` **must** be a valid pointer to a valid `VkMemoryGetZirconHandleInfoFUCHSIA` structure
- VUID-vkGetMemoryZirconHandleFUCHSIA-pZirconHandle-parameter
  - `pZirconHandle` **must** be a valid pointer to a `zx_handle_t` value
Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_OUT_OF_HOST_MEMORY

`VkMemoryGetZirconHandleInfoFUCHSIA` is defined as:

```c
// Provided by VK_FUCHSIA_external_memory
typedef struct VkMemoryGetZirconHandleInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkDeviceMemory memory;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkMemoryGetZirconHandleInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` the `VkDeviceMemory` being exported.
- `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the type of the handle pointed to by `vkGetMemoryZirconHandleFUCHSIA::pZirconHandle`.

**Valid Usage**

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-04775
  `handleType must be VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA`

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-04776
  `handleType must have been included in the handleTypes field of the VkExportMemoryAllocateInfo structure when the external memory was allocated`

**Valid Usage (Implicit)**

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-sType-sType
  `sType must be VK_STRUCTURE_TYPE_MEMORY_GET_ZIRCON_HANDLE_INFO_FUCHSIA`

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-pNext-pNext
  `pNext must be NULL`

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-memory-parameter
  `memory must be a valid VkDeviceMemory handle`

- VUID-VkMemoryGetZirconHandleInfoFUCHSIA-handleType-parameter
  `handleType-parameter`
**handleType** must be a valid `VkExternalMemoryHandleTypeFlagBits` value

With the result `pZirconHandle` now obtained, the memory properties for the handle can be retrieved using `vkGetMemoryZirconHandlePropertiesFUCHSIA` as documented above substituting the dereferenced, retrieved `pZirconHandle` in for the `zirconHandle` argument.

## 11.2.10. Metal Objects

A Vulkan implementation that is layered on top of Metal on Apple device platform, and implements the `VK_EXT_metal_objects` extension, supports the ability to import and export the underlying Metal objects associated with specific Vulkan objects.

The underlying Metal objects associated with certain Vulkan objects can be exported from those Vulkan objects using the `pNext` chain of the `VkExportMetalObjectsInfoEXT` parameter of the `vkExportMetalObjectsEXT` command.

An `VkDeviceMemory` object can be allocated on an existing `MTLBuffer` object, by including the `MTLBuffer` object in a `VkImportMetalBufferInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in the `vkAllocateMemory` command.

A new `VkImage` object can be created on an existing `IOSurface` object, or one or more existing Metal `MTLTexture` objects, by including those Metal objects in either `VkImportMetalIOSurfaceInfoEXT` or `VkImportMetalTextureInfoEXT` structures in the `pNext` chain of the `VkImageCreateInfo` structure in the `vkCreateImage` command.

To export Metal objects from Vulkan objects, the app **must** first indicate the intention to do so during the creation of the Vulkan object, by including one or more `VkExportMetalObjectCreateInfoEXT` structures in the `pNext` chain of the `VkInstanceCreateInfo`, `VkMemoryAllocateInfo`, `VkImageCreateInfo`, `VkImageViewCreateInfo`, `VkBufferViewCreateInfo`, `VkSemaphoreCreateInfo`, or `VkEventCreateInfo`, in the corresponding Vulkan object creation command.

The `VkExportMetalObjectCreateInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkExportMetalObjectTypeFlagBitsEXT exportObjectType;
} VkExportMetalObjectCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exportObjectType` is a `VkExportMetalObjectTypeFlagBitsEXT` indicating the type of Metal object that the application may request to be exported from the Vulkan object.
Valid Usage (Implicit)

- VUID-VkExportMetalObjectCreateInfoEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECT_CREATE_INFO_EXT`

- VUID-VkExportMetalObjectCreateInfoEXT-exportObjectType-parameter
  
  If `exportObjectType` is not `0`, `exportObjectType` must be a valid `VkExportMetalObjectTypeFlagBitsEXT` value

Bits which indicate the types of Metal objects that may be exported from a corresponding Vulkan object are:

```c
// Provided by VK_EXT_metal_objects
typedef enum VkExportMetalObjectTypeFlagBitsEXT {
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT = 0x00000001,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT = 0x00000002,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT = 0x00000004,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT = 0x00000008,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT = 0x00000010,
    VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT = 0x00000020,
} VkExportMetalObjectTypeFlagBitsEXT;
```

- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT` indicates a Metal `MTLDevice` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT` indicates a Metal `MTLCommandQueue` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT` indicates a Metal `MTLBuffer` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT` indicates a Metal `MTLTexture` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT` indicates a Metal `IOSurface` may be exported.
- `VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT` indicates a Metal `MTLSharedEvent` may be exported.

```c
// Provided by VK_EXT_metal_objects
typedef VkFlags VkExportMetalObjectTypeFlagsEXT;
```

`VkExportMetalObjectTypeFlagsEXT` is a bitmask type for setting a mask of zero or more `VkExportMetalObjectTypeFlagBitsEXT`.

To export Metal objects that underlie Vulkan objects, call:

```c
// Provided by VK_EXT_metal_objects
void vkExportMetalObjectsEXT(
    VkDevice device,
    ...)
```
• `device` is the device that created the Vulkan objects.

• `pMetalObjectsInfo` is a pointer to a `VkExportMetalObjectsInfoEXT` structure whose `pNext` chain contains structures, each identifying a Vulkan object and providing a pointer through which the Metal object will be returned.

### Valid Usage (Implicit)

- **VUID-vkExportMetalObjectsEXT-device-parameter**
  `device` must be a valid `VkDevice` handle

- **VUID-vkExportMetalObjectsEXT-pMetalObjectsInfo-parameter**
  `pMetalObjectsInfo` must be a valid pointer to a `VkExportMetalObjectsInfoEXT` structure

The `VkExportMetalObjectsInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalObjectsInfoEXT {
    VkStructureType sType;
    const void* pNext;
} VkExportMetalObjectsInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.

### Valid Usage

- **VUID-VkExportMetalObjectsInfoEXT-pNext-06791**
  If the `pNext` chain includes a `VkExportMetalDeviceInfoEXT` structure, the `VkInstance` must have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_DEVICE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkInstanceCreateInfo` structure in the `vkCreateInstance` command

- **VUID-VkExportMetalObjectsInfoEXT-pNext-06792**
  If the `pNext` chain includes a `VkExportMetalCommandQueueInfoEXT` structure, the `VkInstance` must have been created with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_COMMAND_QUEUE_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkInstanceCreateInfo` structure in the `vkCreateInstance` command

- **VUID-VkExportMetalObjectsInfoEXT-pNext-06793**
  If the `pNext` chain includes a `VkExportMetalBufferInfoEXT` structure, the `VkDeviceMemory` in its `memory` member must have been allocated with `VK_EXPORT_METAL_OBJECT_TYPE_METAL_BUFFER_BIT_EXT` in the `exportObjectType` member of a `VkExportMetalObjectCreateInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in the `vkAllocateMemory` command
If the pNext chain includes a VkExportMetalTextureInfoEXT structure, exactly one of its image, imageView, or bufferView members must not be VK_NULL_HANDLE.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and its image member is not VK_NULL_HANDLE, the VkImage in its image member must have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkImageCreateInfo structure in the vkCreateImage command.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and its imageView member is not VK_NULL_HANDLE, the VkImageView in its imageView member must have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkImageViewCreateInfo structure in the vkCreateImageView command.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and its bufferView member is not VK_NULL_HANDLE, the VkBufferView in its bufferView member must have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkBufferViewCreateInfo structure in the vkCreateBufferView command.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if either its image or imageView member is not VK_NULL_HANDLE, then plane must be VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or VK_IMAGE_ASPECT_PLANE_2_BIT.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImage in its image member does not have a multi-planar format, then its plane member must be VK_IMAGE_ASPECT_PLANE_0_BIT.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImage in its image member has a multi-planar format with only two planes, then its plane member must not be VK_IMAGE_ASPECT_PLANE_2_BIT.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImageView in its imageView member does not have a multi-planar format, then its plane member must be VK_IMAGE_ASPECT_PLANE_0_BIT.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImageView in its imageView member has a multi-planar format with only two planes, then its plane member must not be VK_IMAGE_ASPECT_PLANE_2_BIT.

If the pNext chain includes a VkExportMetalTextureInfoEXT structure, and if the VkImage in its image member must have been created with VK_IMAGE_ASPECT_PLANE_0_BIT.
VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkImageCreateInfo structure in the vkCreateImage command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06804
  If the pNext chain includes a VkExportMetalSharedEventInfoEXT structure, exactly one of its semaphore or event members must not be VK_NULL_HANDLE

- VUID-VkExportMetalObjectsInfoEXT-pNext-06805
  If the pNext chain includes a VkExportMetalSharedEventInfoEXT structure, and its semaphore member is not VK_NULL_HANDLE, the VkSemaphore in its semaphore member must have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkSemaphoreCreateInfo structure in the vkCreateSemaphore command

- VUID-VkExportMetalObjectsInfoEXT-pNext-06806
  If the pNext chain includes a VkExportMetalSharedEventInfoEXT structure, and its event member is not VK_NULL_HANDLE, the VkEvent in its event member must have been created with VK_EXPORT_METAL_OBJECT_TYPE_METAL_SHARED_EVENT_BIT_EXT in the exportObjectType member of a VkExportMetalObjectCreateInfoEXT structure in the pNext chain of the VkEventCreateInfo structure in the vkCreateEvent command

Valid Usage (Implicit)

- VUID-VkExportMetalObjectsInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECTS_INFO_EXT

- VUID-VkExportMetalObjectsInfoEXT-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkExportMetalBufferInfoEXT, VkExportMetalCommandQueueInfoEXT, VkExportMetalDeviceInfoEXT, VkExportMetalIOSurfaceInfoEXT, VkExportMetalSharedEventInfoEXT, or VkExportMetalTextureInfoEXT

- VUID-VkExportMetalObjectsInfoEXT-sType-unique
  The sType value of each struct in the pNext chain must be unique, with the exception of structures of type VkExportMetalBufferInfoEXT, VkExportMetalCommandQueueInfoEXT, VkExportMetalIOSurfaceInfoEXT, VkExportMetalSharedEventInfoEXT, or VkExportMetalTextureInfoEXT

To export the Metal MTLDevice object underlying the VkPhysicalDevice associated with a VkDevice object, include a VkExportMetalDeviceInfoEXT structure in the pNext chain of the pMetalObjectsInfo parameter of a vkExportMetalObjectsEXT call.

The VkExportMetalDeviceInfoEXT structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalDeviceInfoEXT {
```
**VkExportMetalDeviceInfoEXT**

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlDevice` is the Metal `id<MTLDevice>` object underlying the `VkPhysicalDevice` associated with the `VkDevice` object identified in the call. The implementation will return the `MTLDevice` in this member, or it will return `NULL` if no `MTLDevice` could be found underlying the `VkPhysicalDevice` object.

### Valid Usage (Implicit)

- VUID-VkExportMetalDeviceInfoEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_EXPORT_METAL_DEVICE_INFO_EXT`

The type `id<MTLDevice>` is defined in Apple's Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLDevice_id` is provided in the Vulkan headers:

```c
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLDevice;
typedef id<MTLDevice> MTLDevice_id;
#else
typedef void* MTLDevice_id;
#endif
```

To export the Metal `MTLCommandQueue` object underlying a `VkQueue` object, include a `VkExportMetalCommandQueueInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalCommandQueueInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalCommandQueueInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkQueue queue;
    MTLCommandQueue_id mtlCommandQueue;
} VkExportMetalCommandQueueInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
• queue is a VkQueue.

• mtlCommandQueue is the Metal id<MTLCommandQueue> object underlying the VkQueue object in queue. The implementation will return the MTLCommandQueue in this member, or it will return NULL if no MTLCommandQueue could be found underlying the VkQueue object.

Valid Usage (Implicit)

- VUID-VkExportMetalCommandQueueInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXPORT_METAL_COMMAND_QUEUE_INFO_EXT

- VUID-VkExportMetalCommandQueueInfoEXT-queue-parameter
  queue must be a valid VkQueue handle

The type id<MTLCommandQueue> is defined in Apple’s Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLCommandQueue_id is provided in the Vulkan headers:

```c
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLCommandQueue;
typedef id<MTLCommandQueue> MTLCommandQueue_id;
#else
typedef void* MTLCommandQueue_id;
#endif
```

To export the Metal MTLBuffer object underlying a VkDeviceMemory object, include a VkExportMetalBufferInfoEXT structure in the pNext chain of the pMetalObjectsInfo parameter of a vkExportMetalObjectsEXT call.

The VkExportMetalBufferInfoEXT structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalBufferInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDeviceMemory memory;
    MTLBuffer_id mtlBuffer;
} VkExportMetalBufferInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- memory is a VkDeviceMemory.
- mtlBuffer is the Metal id<MTLBuffer> object underlying the VkDeviceMemory object in memory. The implementation will return the MTLBuffer in this member, or it will return NULL if no MTLBuffer could be found underlying the VkDeviceMemory object.
Valid Usage (Implicit)

- VUID-VkExportMetalBufferInfoEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_EXPORT_METAL_BUFFER_INFO_EXT`

- VUID-VkExportMetalBufferInfoEXT-memory-parameter
  
  `memory` must be a valid `VkDeviceMemory` handle

To import a Metal `MTLBuffer` object to underlie a `VkDeviceMemory` object, include a `VkImportMetalBufferInfoEXT` structure in the `pNext` chain of the `VkMemoryAllocateInfo` structure in a `vkAllocateMemory` command.

The `VkImportMetalBufferInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalBufferInfoEXT {
    VkStructureType sType;
    const void* pNext;
    MTLBuffer_id mtlBuffer;
} VkImportMetalBufferInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `mtlBuffer` is the Metal `id<MTLBuffer>` object that is to underlie the `VkDeviceMemory`.

The app must ensure that the configuration of the `id<MTLBuffer>` object is compatible with the configuration of the `VkDeviceMemory`. Failure to do so results in undefined behavior.

Valid Usage (Implicit)

- VUID-VkImportMetalBufferInfoEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_IMPORT_METAL_BUFFER_INFO_EXT`

The type `id<MTLBuffer>` is defined in Apple’s Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `MTLBuffer_id` is provided in the Vulkan headers:

```c
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLBuffer;
typedef id<MTLBuffer> MTLBuffer_id;
#else
typedef void* MTLBuffer_id;
#endif
```
To export a Metal `MTLTexture` object underlying a `VkImage`, `VkImageView`, or `VkBufferView` object, include a `VkExportMetalTextureInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalTextureInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalTextureInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkImage image;
    VkImageView imageView;
    VkBufferView bufferView;
    VkImageAspectFlagBits plane;
    MTLTexture_id mtlTexture;
} VkExportMetalTextureInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is `VK_NULL_HANDLE` or a `VkImage`.
- `imageView` is `VK_NULL_HANDLE` or a `VkImageView`.
- `bufferView` is `VK_NULL_HANDLE` or a `VkBufferView`.
- `plane` indicates the plane of a multi-planar `VkImage` or `VkImageView`.
- `mtlTexture` is the Metal `id<MTLTexture>` object underlying the `VkImage`, `VkImageView`, or `VkBufferView` object in `image`, `imageView`, or `bufferView`, respectively, at the plane indicated in `aspectMask`. The implementation will return the `MTLTexture` in this member, or it will return `NULL` if no `MTLTexture` could be found underlying the `VkImage`, `VkImageView`, or `VkBufferView` object, at the plane indicated in `aspectMask`.

**Valid Usage (Implicit)**

- VUID-VkExportMetalTextureInfoEXT-sType-sType `sType must be VK_STRUCTURE_TYPE_EXPORT_METAL_TEXTURE_INFO_EXT`
- VUID-VkExportMetalTextureInfoEXT-image-parameter `If image is not VK_NULL_HANDLE, image must be a valid VkImage handle`
- VUID-VkExportMetalTextureInfoEXT-imageView-parameter `If imageView is not VK_NULL_HANDLE, imageView must be a valid VkImageView handle`
- VUID-VkExportMetalTextureInfoEXT-bufferView-parameter `If bufferView is not VK_NULL_HANDLE, bufferView must be a valid VkBufferView handle`
- VUID-VkExportMetalTextureInfoEXT-plane-parameter `plane must be a valid VkImageAspectFlagBits value`
- VUID-VkExportMetalTextureInfoEXT-commonparent `Each of bufferView, image, and imageView that are valid handles of non-ignored parameters`
must have been created, allocated, or retrieved from the same VkDevice

To import one or more existing Metal MTLTexture objects to underlie a VkImage object, include one or more VkImportMetalTextureInfoEXT structures in the pNext chain of the VkImageCreateInfo structure in a vkCreateImage command.

The VkImportMetalTextureInfoEXT structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalTextureInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkImageAspectFlagBits plane;
    MTLTexture_id mtlTexture;
} VkImportMetalTextureInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **plane** indicates the plane of the VkImage that the id<MTLTexture> object should be attached to.
- **mtlTexture** is a Metal id<MTLTexture> object that is to underlie the VkImage plane.

The pNext chain must include one VkImportMetalTextureInfoEXT structure for each plane in the VkImage. The app must ensure that the configuration of the Metal id<MTLTexture> objects are compatible with the configuration of the VkImage. Failure to do so results in undefined behavior.

### Valid Usage (Implicit)

- VUID-VkImportMetalTextureInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMPORT_METAL_TEXTURE_INFO_EXT
- VUID-VkImportMetalTextureInfoEXT-plane-parameter
  plane must be a valid VkImageAspectFlagBits value

The type id<MTLTexture> is defined in Apple’s Metal framework, but to remove an unnecessary compile time dependency, an incomplete type definition of MTLTexture_id is provided in the Vulkan headers:

```c
// Provided by VK_EXT_metal_objects
#ifdef __OBJC__
@protocol MTLTexture;
typedef id<MTLTexture> MTLTexture_id;
#else
typedef void* MTLTexture_id;
#endif
```
To export the Metal IOSurfaceRef object underlying a VkImage object, include a VkExportMetalIOSurfaceInfoEXT structure in the pNext chain of the pMetalObjectsInfo parameter of a vkExportMetalObjectsEXT call.

The VkExportMetalIOSurfaceInfoEXT structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalIOSurfaceInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkImage image;
    IOSurfaceRef ioSurface;
} VkExportMetalIOSurfaceInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **image** is a VkImage.
- **ioSurface** is the Metal IOSurfaceRef object underlying the VkImage object in image. The implementation will return the IOSurfaceRef in this member, or it will return NULL if no IOSurfaceRef could be found underlying the VkImage object.

**Valid Usage (Implicit)**

- VUID-VkExportMetalIOSurfaceInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXPORT_METAL_IO_SURFACE_INFO_EXT
- VUID-VkExportMetalIOSurfaceInfoEXT-image-parameter
  image must be a valid VkImage handle

To import, or create, a Metal IOSurfaceRef object to underlie a VkImage object, include a VkImportMetalIOSurfaceInfoEXT structure in the pNext chain of the VkImageCreateInfo structure in a vkCreateImage command.

The VkImportMetalIOSurfaceInfoEXT structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalIOSurfaceInfoEXT {
    VkStructureType sType;
    const void* pNext;
    IOSurfaceRef ioSurface;
} VkImportMetalIOSurfaceInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **ioSurface** is VK_NULL_HANDLE or the Metal IOSurfaceRef object that is to underlie the
If `ioSurface` is not `VK_NULL_HANDLE`, it will be used to underlie the `VkImage`. If `ioSurface` is `VK_NULL_HANDLE`, the implementation will create a new `IOSurface` to underlie the `VkImage`.

If provided, the app **must** ensure that the configuration of the `IOSurfaceRef` object is compatible with the configuration of the `VkImage`. Failure to do so results in undefined behavior.

---

### Valid Usage (Implicit)

- **VUID-VkImportMetalIOSurfaceInfoEXT-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_IMPORT_METAL_IO_SURFACE_INFO_EXT`.

The type `IOSurfaceRef` is defined in Apple’s CoreGraphics framework, but to remove an unnecessary compile time dependency, an incomplete type definition of `IOSurfaceRef` is provided in the Vulkan headers:

```c
// Provided by VK_EXT_metal_objects
typedef struct __IOSurface* IOSurfaceRef;
```

To export the Metal `MTLSharedEvent` object underlying a `VkSemaphore` or `VkEvent` object, include a `VkExportMetalSharedEventInfoEXT` structure in the `pNext` chain of the `pMetalObjectsInfo` parameter of a `vkExportMetalObjectsEXT` call.

The `VkExportMetalSharedEventInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_metal_objects
typedef struct VkExportMetalSharedEventInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkSemaphore semaphore;
    VkEvent event;
    MTLSharedEvent_id mtlSharedEvent;
} VkExportMetalSharedEventInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `semaphore` is `VK_NULL_HANDLE` or a `VkSemaphore`.
- `event` is `VK_NULL_HANDLE` or a `VkEvent`.
- `mtlSharedEvent` is the Metal `id<MTLSharedEvent>` object underlying the `VkSemaphore` or `VkEvent` object in `semaphore` or `event`, respectively. The implementation will return the `MTLSharedEvent` in this member, or it will return `NULL` if no `MTLSharedEvent` could be found underlying the `VkSemaphore` or `VkEvent` object.
Valid Usage (Implicit)

• VUID-VkExportMetalSharedEventInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_EXPORT_METAL_SHARED_EVENT_INFO_EXT

• VUID-VkExportMetalSharedEventInfoEXT-semaphore-parameter
  If semaphore is not VK_NULL_HANDLE, semaphore **must** be a valid VkSemaphore handle

• VUID-VkExportMetalSharedEventInfoEXT-event-parameter
  If event is not VK_NULL_HANDLE, event **must** be a valid VkEvent handle

• VUID-VkExportMetalSharedEventInfoEXT-commonparent
  Both of event, and semaphore that are valid handles of non-ignored parameters **must** have
  been created, allocated, or retrieved from the same VkDevice

To import a Metal id<MTLSharedEvent> object to underlie a VkSemaphore or VkEvent object, include
a VkImportMetalSharedEventInfoEXT structure in the pNext chain of the VkSemaphoreCreateInfo or
VkEventCreateInfo structure in a vkCreateSemaphore or vkCreateEvent command, respectively.

The VkImportMetalSharedEventInfoEXT structure is defined as:

```
// Provided by VK_EXT_metal_objects
typedef struct VkImportMetalSharedEventInfoEXT {
    VkStructureType     sType;
    const void*         pNext;
    MTLSharedEvent_id   mtlSharedEvent;
} VkImportMetalSharedEventInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **mtlSharedEvent** is the Metal id<MTLSharedEvent> object that is to underlie the VkSemaphore or
  VkEvent.

If the **pNext** chain of the VkSemaphoreCreateInfo structure includes both
VkImportMetalSharedEventInfoEXT and VkSemaphoreTypeCreateInfo, the signaledValue property of
the imported id<MTLSharedEvent> object will be set to initialValue of VkSemaphoreTypeCreateInfo.

Valid Usage (Implicit)

• VUID-VkImportMetalSharedEventInfoEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_IMPORT_METAL_SHARED_EVENT_INFO_EXT

The type id<MTLSharedEvent> is defined in Apple’s Metal framework, but to remove an unnecessary
compile time dependency, an incomplete type definition of MTLSharedEvent_id is provided in the
Vulkan headers:
11.2.11. QNX Screen Buffer External Memory

To import memory created outside of the current Vulkan instance from a QNX Screen buffer, add a `VkImportScreenBufferInfoQNX` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkImportScreenBufferInfoQNX` structure is defined as:

```c
typedef struct VkImportScreenBufferInfoQNX {
    VkStructureType sType;
    const void* pNext;
    struct _screen_buffer* buffer;
} VkImportScreenBufferInfoQNX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is a pointer to a `struct _screen_buffer`, the QNX Screen buffer to import

The implementation may not acquire a reference to the imported Screen buffer. Therefore, the application must ensure that the object referred to by `buffer` stays valid as long as the device memory to which it is imported is being used.

### Valid Usage

- **VUID-VkImportScreenBufferInfoQNX-buffer-08966**
  If `buffer` is not `NULL`, QNX Screen Buffers must be supported for import, as reported by `VkExternalImageFormatProperties` or `VkExternalBufferProperties`

- **VUID-VkImportScreenBufferInfoQNX-buffer-08967**
  `buffer` is not `NULL`, it must be a pointer to valid QNX Screen buffer

### Valid Usage (Implicit)

- **VUID-VkImportScreenBufferInfoQNX-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_IMPORT_SCREEN_BUFFER_INFO_QNX`
VkResult vkGetScreenBufferPropertiesQNX(VkDevice device, const struct _screen_buffer* buffer, VkScreenBufferPropertiesQNX* pProperties);

- **device** is the logical device that will be importing **buffer**.
- **buffer** is the QNX Screen buffer which will be imported.
- **pProperties** is a pointer to a `VkScreenBufferPropertiesQNX` structure in which the properties of **buffer** are returned.

**Valid Usage**

- VUID-vkGetScreenBufferPropertiesQNX-buffer-08968
  **buffer** must be a valid QNX Screen buffer

**Valid Usage (Implicit)**

- VUID-vkGetScreenBufferPropertiesQNX-device-parameter
  **device** must be a valid `VkDevice` handle
- VUID-vkGetScreenBufferPropertiesQNX-buffer-parameter
  **buffer** must be a valid pointer to a valid `_screen_buffer` value
- VUID-vkGetScreenBufferPropertiesQNX-pProperties-parameter
  **pProperties** must be a valid pointer to a ` VkScreenBufferPropertiesQNX` structure

**Return Codes**

**Success**

- **VK_SUCCESS**

**Failure**

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR**

The `VkScreenBufferPropertiesQNX` structure returned is defined as:

```c
typedef struct VkScreenBufferPropertiesQNX {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize allocationSize;
    uint32_t memoryTypeBits;
} VkScreenBufferPropertiesQNX;
```
VkScreenBufferPropertiesQNX;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **allocationSize** is the size of the external memory.
- **memoryTypeBits** is a bitmask containing one bit set for every memory type which the specified Screen buffer can be imported as.

### Valid Usage (Implicit)

- VUID-VkScreenBufferPropertiesQNX-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_SCREEN_BUFFER_PROPERTIES_QNX`

- VUID-VkScreenBufferPropertiesQNX-pNext-pNext
  
  `pNext` must be `NULL` or a pointer to a valid instance of `VkScreenBufferFormatPropertiesQNX`

- VUID-VkScreenBufferPropertiesQNX-sType-unique
  The `sType` value of each struct in the `pNext` chain must be unique

To obtain format properties of a QNX Screen buffer, include a `VkScreenBufferFormatPropertiesQNX` structure in the `pNext` chain of the `VkScreenBufferPropertiesQNX` structure passed to `vkGetScreenBufferPropertiesQNX`. This structure is defined as:

```c
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkScreenBufferFormatPropertiesQNX {
    VkStructureType sType;
    void* pNext;
    VkFormat format;
    uint64_t externalFormat;
    uint64_t screenUsage;
    VkFormatFeatureFlags formatFeatures;
    VkComponentMapping samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange suggestedYcbcrRange;
    VkChromaLocation suggestedXChromaOffset;
    VkChromaLocation suggestedYChromaOffset;
} VkScreenBufferFormatPropertiesQNX;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **format** is the Vulkan format corresponding to the Screen buffer's format or `VK_FORMAT_UNDEFINED` if there is not an equivalent Vulkan format.
- **externalFormat** is an implementation-defined external format identifier for use with `VkExternalFormatQNX`. It must not be zero.
• **screenUsage** is an implementation-defined external usage identifier for the QNX Screen buffer.

• **formatFeatures** describes the capabilities of this external format when used with an image bound to memory imported from buffer.

• **samplerYcbcrConversionComponents** is the component swizzle that **should** be used in VkSamplerYcbcrConversionCreateInfo.

• **suggestedYcbcrModel** is a suggested color model to use in VkSamplerYcbcrConversionCreateInfo.

• **suggestedYcbcrRange** is a suggested numerical value range to use in VkSamplerYcbcrConversionCreateInfo.

• **suggestedXChromaOffset** is a suggested X chroma offset to use in VkSamplerYcbcrConversionCreateInfo.

• **suggestedYChromaOffset** is a suggested Y chroma offset to use in VkSamplerYcbcrConversionCreateInfo.

If the QNX Screen buffer has one of the formats listed in the QNX Screen Format Equivalence table, then **format** must have the equivalent Vulkan format listed in the table. Otherwise, **format** may be VK_FORMAT_UNDEFINED, indicating the QNX Screen buffer can only be used with an external format. The **formatFeatures** member must include VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT and **should** include VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT.

### Valid Usage (Implicit)

- VUID-VkScreenBufferFormatPropertiesQNX-sType-sType
  
  **sType** must be VK_STRUCTURE_TYPE_SCREEN_BUFFER_FORMAT_PROPERTIES_QNX

## 11.2.12. Device Group Memory Allocations

If the **pNext** chain of VkMemoryAllocateInfo includes a VkMemoryAllocateFlagsInfo structure, then that structure includes flags and a device mask controlling how many instances of the memory will be allocated.

The **VkMemoryAllocateFlagsInfo** structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkMemoryAllocateFlagsInfo {
    VkStructureType sType;
    const void* pNext;
    VkMemoryAllocateFlags flags;
    uint32_t deviceMask;
} VkMemoryAllocateFlagsInfo;
```

or the equivalent
// Provided by VK_KHR_device_group
typedef VkMemoryAllocateFlagsInfo VkMemoryAllocateFlagsInfoKHR;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of `VkMemoryAllocateFlagBits` controlling the allocation.
- **deviceMask** is a mask of physical devices in the logical device, indicating that memory **must** be allocated on each device in the mask, if `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is set in `flags`.

If `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is not set, the number of instances allocated depends on whether `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` is set in the memory heap. If `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` is set, then memory is allocated for every physical device in the logical device (as if `deviceMask` has bits set for all device indices). If `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` is not set, then a single instance of memory is allocated (as if `deviceMask` is set to one).

On some implementations, allocations from a multi-instance heap **may** consume memory on all physical devices even if the `deviceMask` excludes some devices. If `VkPhysicalDeviceGroupProperties::subsetAllocation` is `VK_TRUE`, then memory is only consumed for the devices in the device mask.

In practice, most allocations on a multi-instance heap will be allocated across all physical devices. Unicast allocation support is an optional optimization for a minority of allocations.

**Valid Usage**

- **VUID-VkMemoryAllocateFlagsInfo-deviceMask-00675**
  If `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT` is set, `deviceMask` **must** be a valid device mask

- **VUID-VkMemoryAllocateFlagsInfo-deviceMask-00676**
  If `VK_MEMORY_ALLOCATEDEVICE_MASK_BIT` is set, `deviceMask` **must** not be zero

**Valid Usage (Implicit)**

- **VUID-VkMemoryAllocateFlagsInfo-sType-sType**
  `sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_FLAGS_INFO`

- **VUID-VkMemoryAllocateFlagsInfo-flags-parameter**
  `flags` **must** be a valid combination of `VkMemoryAllocateFlagBits` values

Bits which **can** be set in `VkMemoryAllocateFlagsInfo::flags`, controlling device memory allocation, are:
typedef enum VkMemoryAllocateFlagBits {
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT = 0x00000001,
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT = 0x00000002,
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT = 0x00000004,
    VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT,
    VK_MEMORY_ALLOCATEDEVICE_ADDRESS_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT,
    VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR = VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT,
} VkMemoryAllocateFlagBits;

or the equivalent

// Provided by VK_KHR_device_group
typedef VkMemoryAllocateFlagBits VkMemoryAllocateFlagBitsKHR;

• VK_MEMORY_ALLOCATEDEVICE_MASK_BIT specifies that memory will be allocated for the devices in 
  VkMemoryAllocateFlagsInfo::deviceMask.

• VK_MEMORY_ALLOCATEDEVICE_ADDRESS_BIT specifies that the memory can be attached to a buffer 
  object created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT bit set in usage, and that the 
  memory handle can be used to retrieve an opaque address via 
  vkGetDeviceMemoryOpaqueCaptureAddress.

• VK_MEMORY_ALLOCATEDEVICE_ADDRESS_CAPTURE_REPLAY_BIT specifies that the memory's address can 
  be saved and reused on a subsequent run (e.g. for trace capture and replay), see 
  VkBufferOpaqueCaptureAddressCreateInfo for more detail.

typedef VkFlags VkMemoryAllocateFlags;

or the equivalent

// Provided by VK_KHR_device_group
typedef VkMemoryAllocateFlags VkMemoryAllocateFlagsKHR;

VkMemoryAllocateFlags is a bitmask type for setting a mask of zero or more 
VkMemoryAllocateFlagBits.
11.2.13. Opaque Capture Address Allocation

To request a specific device address for a memory allocation, add a `VkMemoryOpaqueCaptureAddressAllocateInfo` structure to the `pNext` chain of the `VkMemoryAllocateInfo` structure. The `VkMemoryOpaqueCaptureAddressAllocateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkMemoryOpaqueCaptureAddressAllocateInfo {
    VkStructureType sType;
    const void*    pNext;
    uint64_t       opaqueCaptureAddress;
} VkMemoryOpaqueCaptureAddressAllocateInfo;
```

or the equivalent

```c
// Provided by VK_KHR_buffer_device_address
typedef VkMemoryOpaqueCaptureAddressAllocateInfo VkMemoryOpaqueCaptureAddressAllocateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `opaqueCaptureAddress` is the opaque capture address requested for the memory allocation.

If `opaqueCaptureAddress` is zero, no specific address is requested.

If `opaqueCaptureAddress` is not zero, it **should** be an address retrieved from `vkGetDeviceMemoryOpaqueCaptureAddress` on an identically created memory allocation on the same implementation.

**Note**

In most cases, it is expected that a non-zero `opaqueAddress` is an address retrieved from `vkGetDeviceMemoryOpaqueCaptureAddress` on an identically created memory allocation. If this is not the case, it is likely that `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS` errors will occur.

This is, however, not a strict requirement because trace capture/replay tools may need to adjust memory allocation parameters for imported memory.

If this structure is not present, it is as if `opaqueCaptureAddress` is zero.

**Valid Usage (Implicit)**

- `VUID-VkMemoryOpaqueCaptureAddressAllocateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_MEMORY_OPAQUE_CAPTURE_ADDRESS_ALLOCATE_INFO`
11.2.14. Freeing Device Memory

To free a memory object, call:

```c
// Provided by VK_VERSION_1_0
define vkFreeMemory(
    VkDevice device,
    VkDeviceMemory memory,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that owns the memory.
- **memory** is the *VkDeviceMemory* object to be freed.
- **pAllocator** controls host memory allocation as described in the *Memory Allocation* chapter.

Before freeing a memory object, an application **must** ensure the memory object is no longer in use by the device — for example by command buffers in the *pending state*. Memory **can** be freed whilst still bound to resources, but those resources **must** not be used afterwards. Freeing a memory object releases the reference it held, if any, to its payload. If there are still any bound images or buffers, the memory object's payload **may** not be immediately released by the implementation, but **must** be released by the time all bound images and buffers have been destroyed. Once all references to a payload are released, it is returned to the heap from which it was allocated.

How memory objects are bound to Images and Buffers is described in detail in the *Resource Memory Association* section.

If a memory object is mapped at the time it is freed, it is implicitly unmapped.

**Note**

As described below, host writes are not implicitly flushed when the memory object is unmapped, but the implementation **must** guarantee that writes that have not been flushed do not affect any other memory.

### Valid Usage

- **VUID-vkFreeMemory-memory-00677**
  All submitted commands that refer to **memory** (via images or buffers) **must** have completed execution

### Valid Usage (Implicit)

- **VUID-vkFreeMemory-device-parameter**
  **device** **must** be a valid *VkDevice* handle

- **VUID-vkFreeMemory-memory-parameter**
  If **memory** is not *VK_NULL_HANDLE*, **memory** **must** be a valid *VkDeviceMemory* handle
Host Synchronization

Host access to memory must be externally synchronized.

11.2.15. Host Access to Device Memory Objects

Memory objects created with vkAllocateMemory are not directly host accessible.

Memory objects created with the memory property VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT are considered mappable. Memory objects must be mappable in order to be successfully mapped on the host.

To retrieve a host virtual address pointer to a region of a mappable memory object, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkMapMemory(
    VkDevice device,                   // Provided by VK_VERSION_1_0
    VkDeviceMemory memory,            // Provided by VK_VERSION_1_0
    VkDeviceSize offset,              // Provided by VK_VERSION_1_0
    VkDeviceSize size,                // Provided by VK_VERSION_1_0
    VkMemoryMapFlags flags,           // Provided by VK_VERSION_1_0
    void** ppData);                   // Provided by VK_VERSION_1_0
```

- `device` is the logical device that owns the memory.
- `memory` is the VkDeviceMemory object to be mapped.
- `offset` is a zero-based byte offset from the beginning of the memory object.
- `size` is the size of the memory range to map, or VK_WHOLE_SIZE to map from offset to the end of the allocation.
- `flags` is reserved for future use.
- `ppData` is a pointer to a void* variable in which a host-accessible pointer to the beginning of the mapped range is returned. This pointer minus offset must be aligned to at least VkPhysicalDeviceLimits::minMemoryMapAlignment.

After a successful call to vkMapMemory the memory object memory is considered to be currently host mapped.

Note

It is an application error to call vkMapMemory on a memory object that is already...
host mapped.

Note

vkMapMemory will fail if the implementation is unable to allocate an appropriately sized contiguous virtual address range, e.g. due to virtual address space fragmentation or platform limits. In such cases, vkMapMemory must return VK_ERROR_MEMORY_MAP_FAILED. The application can improve the likelihood of success by reducing the size of the mapped range and/or removing unneeded mappings using vkUnmapMemory.

vkMapMemory does not check whether the device memory is currently in use before returning the host-accessible pointer. The application must guarantee that any previously submitted command that writes to this range has completed before the host reads from or writes to that range, and that any previously submitted command that reads from that range has completed before the host writes to that region (see here for details on fulfilling such a guarantee). If the device memory was allocated without the VK_MEMORY_PROPERTY_HOST_COHERENT_BIT set, these guarantees must be made for an extended range: the application must round down the start of the range to the nearest multiple of VkPhysicalDeviceLimits::nonCoherentAtomSize, and round the end of the range up to the nearest multiple of VkPhysicalDeviceLimits::nonCoherentAtomSize.

While a range of device memory is host mapped, the application is responsible for synchronizing both device and host access to that memory range.

Note

It is important for the application developer to become meticulously familiar with all of the mechanisms described in the chapter on Synchronization and Cache Control as they are crucial to maintaining memory access ordering.

Calling vkMapMemory is equivalent to calling vkMapMemory2KHR with an empty pNext chain.

Valid Usage

- VUID-vkMapMemory-memory-00678
  memory must not be currently host mapped

- VUID-vkMapMemory-offset-00679
  offset must be less than the size of memory

- VUID-vkMapMemory-size-00680
  If size is not equal to VK_WHOLE_SIZE, size must be greater than 0

- VUID-vkMapMemory-size-00681
  If size is not equal to VK_WHOLE_SIZE, size must be less than or equal to the size of the memory minus offset

- VUID-vkMapMemory-memory-00682
  memory must have been created with a memory type that reports VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT

- VUID-vkMapMemory-memory-00683
memory must not have been allocated with multiple instances

## Valid Usage (Implicit)

- VUID-vkMapMemory-device-parameter
  
  device must be a valid `VkDevice` handle

- VUID-vkMapMemory-memory-parameter
  
  memory must be a valid `VkDeviceMemory` handle

- VUID-vkMapMemory-flags-zerobitmask
  
  flags must be 0

- VUID-vkMapMemory-ppData-parameter
  
  ppData must be a valid pointer to a pointer value

- VUID-vkMapMemory-memory-parent
  
  memory must have been created, allocated, or retrieved from device

## Host Synchronization

- Host access to memory must be externally synchronized

## Return Codes

### Success

- VK_SUCCESS

### Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_MEMORY_MAP_FAILED

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkMemoryMapFlags;

VkMemoryMapFlags is a bitmask type for setting a mask, but is currently reserved for future use.

Alternatively, to retrieve a host virtual address pointer to a region of a mappable memory object, call:

```c
// Provided by VK_KHR_map_memory2
VkResult vkMapMemory2KHR(
    VkDevice               device,
    const VkMemoryMapInfoKHR* pMemoryMapInfo,
) {
    // Implementation...
}
```
void** ppData);

- **device** is the logical device that owns the memory.
- **pMemoryMapInfo** is a pointer to a VkMemoryMapInfoKHR structure describing parameters of the map.
- **pData** is a pointer to a void * variable in which is returned a host-accessible pointer to the beginning of the mapped range. This pointer minus VkMemoryMapInfoKHR:offset must be aligned to at least VkPhysicalDeviceLimits::minMemoryMapAlignment.

This function behaves identically to vkMapMemory except that it gets its parameters via an extensible structure pointer rather than directly as function arguments.

### Valid Usage (Implicit)

- VUID-vkMapMemory2KHR-device-parameter
device must be a valid VkDevice handle

- VUID-vkMapMemory2KHR-pMemoryMapInfo-parameter
pMemoryMapInfo must be a valid pointer to a valid VkMemoryMapInfoKHR structure

- VUID-vkMapMemory2KHR-ppData-parameter
pData must be a valid pointer to a pointer value

### Return Codes

**Success**

- VK_SUCCESS

**Failure**

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_MEMORY_MAP_FAILED

The VkMemoryMapInfoKHR structure is defined as:

```c
// Provided by VK_KHR_map_memory2
typedef struct VkMemoryMapInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkMemoryMapFlags flags;
    VkDeviceMemory memory;
    VkDeviceSize offset;
    VkDeviceSize size;
} VkMemoryMapInfoKHR;
```
- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **memory** is the `VkDeviceMemory` object to be mapped.
- **offset** is a zero-based byte offset from the beginning of the memory object.
- **size** is the size of the memory range to map, or `VK_WHOLE_SIZE` to map from `offset` to the end of the allocation.

### Valid Usage

- `VUID-VkMemoryMapInfoKHR-memory-07958`  
  memory must not be currently host mapped

- `VUID-VkMemoryMapInfoKHR-offset-07959`  
  offset must be less than the size of memory

- `VUID-VkMemoryMapInfoKHR-size-07960`  
  If size is not equal to `VK_WHOLE_SIZE`, size must be greater than 0

- `VUID-VkMemoryMapInfoKHR-size-07961`  
  If size is not equal to `VK_WHOLE_SIZE`, size must be less than or equal to the size of the memory minus offset

- `VUID-VkMemoryMapInfoKHR-memory-07962`  
  memory must have been created with a memory type that reports `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT`

- `VUID-VkMemoryMapInfoKHR-memory-07963`  
  memory must not have been allocated with multiple instances

### Valid Usage (Implicit)

- `VUID-VkMemoryMapInfoKHR-sType-sType`  
  sType must be `VK_STRUCTURE_TYPE_MEMORY_MAP_INFO_KHR`

- `VUID-VkMemoryMapInfoKHR-pNext-pNext`  
  pNext must be `NULL`

- `VUID-VkMemoryMapInfoKHR-flags-zero bitmask`  
  flags must be 0

- `VUID-VkMemoryMapInfoKHR-memory-parameter`  
  memory must be a valid `VkDeviceMemory` handle

### Host Synchronization

- Host access to memory must be externally synchronized
Two commands are provided to enable applications to work with non-coherent memory allocations: `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`.

**Note**

If the memory object was created with the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` set, `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges` are unnecessary and may have a performance cost. However, availability and visibility operations still need to be managed on the device. See the description of host access types for more information.

**Note**

While memory objects imported from a handle type of `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT` or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT` are inherently mapped to host address space, they are not considered to be host mapped device memory unless they are explicitly host mapped using `vkMapMemory`. That means flushing or invalidating host caches with respect to host accesses performed on such memory through the original host pointer specified at import time is the responsibility of the application and must be performed with appropriate synchronization primitives provided by the platform which are outside the scope of Vulkan. `vkFlushMappedMemoryRanges` and `vkInvalidateMappedMemoryRanges`, however, can still be used on such memory objects to synchronize host accesses performed through the host pointer of the host mapped device memory range returned by `vkMapMemory`.

After a successful call to `vkMapMemory` or `vkMapMemory2KHR` the memory object `memory` is considered to be currently host mapped.

To flush ranges of non-coherent memory from the host caches, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkFlushMappedMemoryRanges(
    VkDevice device,
    uint32_t memoryRangeCount,
    const VkMappedMemoryRange* pMemoryRanges);
```

- `device` is the logical device that owns the memory ranges.
- `memoryRangeCount` is the length of the `pMemoryRanges` array.
- `pMemoryRanges` is a pointer to an array of `VkMappedMemoryRange` structures describing the memory ranges to flush.

`vkFlushMappedMemoryRanges` guarantees that host writes to the memory ranges described by `pMemoryRanges` are made available to the host memory domain, such that they can be made available to the device memory domain via memory domain operations using the `VK_ACCESS_HOST_WRITE_BIT` access type.
Within each range described by \( p_{MemoryRanges} \), each set of \( \text{nonCoherentAtomSize} \) bytes in that range is flushed if any byte in that set has been written by the host since it was first host mapped, or the last time it was flushed. If \( p_{MemoryRanges} \) includes sets of \( \text{nonCoherentAtomSize} \) bytes where no bytes have been written by the host, those bytes must not be flushed.

Unmapping non-coherent memory does not implicitly flush the host mapped memory, and host writes that have not been flushed may not ever be visible to the device. However, implementations must ensure that writes that have not been flushed do not become visible to any other memory.

**Note**

The above guarantee avoids a potential memory corruption in scenarios where host writes to a mapped memory object have not been flushed before the memory is unmapped (or freed), and the virtual address range is subsequently reused for a different mapping (or memory allocation).

---

### Valid Usage (Implicit)

- **VUID-vkFlushMappedMemoryRanges-device-parameter**
  - \( device \) must be a valid \( VkDevice \) handle

- **VUID-vkFlushMappedMemoryRanges-pMemoryRanges-parameter**
  - \( p_{MemoryRanges} \) must be a valid pointer to an array of \( \text{memoryRangeCount} \) valid \( VkMappedMemoryRange \) structures

- **VUID-vkFlushMappedMemoryRanges-memoryRangeCount-arraylength**
  - \( \text{memoryRangeCount} \) must be greater than 0

---

### Return Codes

**Success**

- VK_SUCCESS

**Failure**

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

---

To invalidate ranges of non-coherent memory from the host caches, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkInvalidateMappedMemoryRanges(
    VkDevice device,
    uint32_t memoryRangeCount,
    const VkMappedMemoryRange* pMemoryRanges);
```

- \( device \) is the logical device that owns the memory ranges.
- \( \text{memoryRangeCount} \) is the length of the \( p_{MemoryRanges} \) array.
• **pMemoryRanges** is a pointer to an array of **VkMappedMemoryRange** structures describing the memory ranges to invalidate.

**vkInvalidateMappedMemoryRanges** guarantees that device writes to the memory ranges described by **pMemoryRanges**, which have been made available to the host memory domain using the **VK_ACCESS_HOST_WRITE_BIT** and **VK_ACCESS_HOST_READ_BIT** access types, are made visible to the host. If a range of non-coherent memory is written by the host and then invalidated without first being flushed, its contents are undefined.

Within each range described by **pMemoryRanges**, each set of **nonCoherentAtomSize** bytes in that range is invalidated if any byte in that set has been written by the device since it was first host mapped, or the last time it was invalidated.

**Note**
Mapping non-coherent memory does not implicitly invalidate that memory.

### Valid Usage (Implicit)

- **VUID-vkInvalidateMappedMemoryRanges-device-parameter**  
  * **device** must be a valid **VkDevice** handle

- **VUID-vkInvalidateMappedMemoryRanges-pMemoryRanges-parameter**  
  * **pMemoryRanges** must be a valid pointer to an array of **memoryRangeCount** valid **VkMappedMemoryRange** structures

- **VUID-vkInvalidateMappedMemoryRanges-memoryRangeCount-arraylength**  
  * **memoryRangeCount** must be greater than 0

### Return Codes

**Success**
- **VK_SUCCESS**

**Failure**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

The **VkMappedMemoryRange** structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkMappedMemoryRange {
    VkStructureType sType;
    const void* pNext;
    VkDeviceMemory memory;
    VkDeviceSize offset;
    VkDeviceSize size;
} VkMappedMemoryRange;
```
sType is a VkStructureType value identifying this structure.

pNext is NULL or a pointer to a structure extending this structure.

memory is the memory object to which this range belongs.

offset is the zero-based byte offset from the beginning of the memory object.

size is either the size of range, or VK_WHOLE_SIZE to affect the range from offset to the end of the current mapping of the allocation.

Valid Usage

• VUID-VkMappedMemoryRange-memory-00684
  memory must be currently host mapped

• VUID-VkMappedMemoryRange-size-00685
  If size is not equal to VK_WHOLE_SIZE, offset and size must specify a range contained within the currently mapped range of memory

• VUID-VkMappedMemoryRange-size-00686
  If size is equal to VK_WHOLE_SIZE, offset must be within the currently mapped range of memory

• VUID-VkMappedMemoryRange-offset-00687
  offset must be a multiple of VkPhysicalDeviceLimits::nonCoherentAtomSize

• VUID-VkMappedMemoryRange-size-01389
  If size is equal to VK_WHOLE_SIZE, the end of the current mapping of memory must either be a multiple of VkPhysicalDeviceLimits::nonCoherentAtomSize bytes from the beginning of the memory object, or be equal to the end of the memory object

• VUID-VkMappedMemoryRange-size-01390
  If size is not equal to VK_WHOLE_SIZE, size must either be a multiple of VkPhysicalDeviceLimits::nonCoherentAtomSize, or offset plus size must equal the size of memory

Valid Usage (Implicit)

• VUID-VkMappedMemoryRange-sType-sType
  sType must be VK_STRUCTURE_TYPE_MAPPED_MEMORY_RANGE

• VUID-VkMappedMemoryRange-pNext-pNext
  pNext must be NULL

• VUID-VkMappedMemoryRange-memory-parameter
  memory must be a valid VkDeviceMemory handle

To unmap a memory object once host access to it is no longer needed by the application, call:
void vkUnmapMemory(
    VkDevice   device,
    VkDeviceMemory memory);

• device is the logical device that owns the memory.

• memory is the memory object to be unmapped.

Calling vkUnmapMemory is equivalent to calling vkUnmapMemory2KHR with an empty pNext chain and the flags parameter set to zero.

Valid Usage

• VUID-vkUnmapMemory-memory-00689
  memory must be currently host mapped

Valid Usage (Implicit)

• VUID-vkUnmapMemory-device-parameter
  device must be a valid VkDevice handle

• VUID-vkUnmapMemory-memory-parameter
  memory must be a valid VkDeviceMemory handle

• VUID-vkUnmapMemory-memory-parent
  memory must have been created, allocated, or retrieved from device

Host Synchronization

• Host access to memory must be externally synchronized

Alternatively, to unmap a memory object once host access to it is no longer needed by the application, call:

// Provided by VK_KHR_map_memory2
VkResult vkUnmapMemory2KHR(
    VkDevice   device,
    const VkMemoryUnmapInfoKHR* pMemoryUnmapInfo);

• device is the logical device that owns the memory.

• pMemoryUnmapInfo is a pointer to a VkMemoryUnmapInfoKHR structure describing parameters of the unmap.

This function behaves identically to vkUnmapMemory except that it gets its parameters via an
extensible structure pointer rather than directly as function arguments.

### Valid Usage (Implicit)

- VUID-vkUnmapMemory2KHR-device-parameter
  
  `device` must be a valid `VkDevice` handle

- VUID-vkUnmapMemory2KHR-pMemoryUnmapInfo-parameter
  
  `pMemoryUnmapInfo` must be a valid pointer to a valid `VkMemoryUnmapInfoKHR` structure

---

### Return Codes

**Success**

- `VK_SUCCESS`

---

The `VkMemoryUnmapInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_map_memory2
typedef struct VkMemoryUnmapInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkMemoryUnmapFlagsKHR flags;
    VkDeviceMemory memory;
} VkMemoryUnmapInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **memory** is the `VkDeviceMemory` object to be unmapped.

---

### Valid Usage

- VUID-VkMemoryUnmapInfoKHR-memory-07964
  
  `memory` must be currently host mapped

---

### Valid Usage (Implicit)

- VUID-VkMemoryUnmapInfoKHR-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_MEMORY_UNMAP_INFO_KHR`

- VUID-VkMemoryUnmapInfoKHR-pNext-pNext
  
  `pNext` must be `NULL`

- VUID-VkMemoryUnmapInfoKHR-flags-zerobitmask
flags must be 0

- VUID-VkMemoryUnmapInfoKHR-memory-parameter

memory must be a valid VkDeviceMemory handle

Host Synchronization

- Host access to memory must be externally synchronized

```c
// Provided by VK_KHR_map_memory2
typedef VkFlags VkMemoryUnmapFlagsKHR;
```

VkMemoryUnmapFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

### 11.2.16. Lazily Allocated Memory

If the memory object is allocated from a heap with the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set, that object’s backing memory may be provided by the implementation lazily. The actual committed size of the memory may initially be as small as zero (or as large as the requested size), and monotonically increases as additional memory is needed.

A memory type with this flag set is only allowed to be bound to a VkImage whose usage flags include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`.

**Note**

Using lazily allocated memory objects for framebuffer attachments that are not needed once a render pass instance has completed may allow some implementations to never allocate memory for such attachments.

To determine the amount of lazily-allocated memory that is currently committed for a memory object, call:

```c
// Provided by VK_VERSION_1_0
void vkGetDeviceMemoryCommitment(
    VkDevice device,
    VkDeviceMemory memory,
    VkDeviceSize* pCommittedMemoryInBytes);
```

- device is the logical device that owns the memory.
- memory is the memory object being queried.
- pCommittedMemoryInBytes is a pointer to a VkDeviceSize value in which the number of bytes currently committed is returned, on success.

The implementation may update the commitment at any time, and the value returned by this query may be out of date.
The implementation guarantees to allocate any committed memory from the heapIndex indicated by the memory type that the memory object was created with.

**Valid Usage**
- VUID-vkGetDeviceMemoryCommitment-memory-00690
  
  memory must have been created with a memory type that reports VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT

**Valid Usage (Implicit)**
- VUID-vkGetDeviceMemoryCommitment-device-parameter
  
  device must be a valid VkDevice handle

- VUID-vkGetDeviceMemoryCommitment-memory-parameter
  
  memory must be a valid VkDeviceMemory handle

- VUID-vkGetDeviceMemoryCommitment-pCommittedMemoryInBytes-parameter
  
  pCommittedMemoryInBytes must be a valid pointer to a VkDeviceSize value

- VUID-vkGetDeviceMemoryCommitment-memory-parent
  
  memory must have been created, allocated, or retrieved from device

### 11.2.17. Protected Memory

Protected memory divides device memory into protected device memory and unprotected device memory.

Protected memory adds the following concepts:

- **Memory:**
  - Unprotected device memory, which can be visible to the device and can be visible to the host
  - Protected device memory, which can be visible to the device but must not be visible to the host
- **Resources:**
  - Unprotected images and unprotected buffers, to which unprotected memory can be bound
  - Protected images and protected buffers, to which protected memory can be bound
- **Command buffers:**
  - Unprotected command buffers, which can be submitted to a device queue to execute unprotected queue operations
  - Protected command buffers, which can be submitted to a protected-capable device queue to execute protected queue operations
- **Device queues:**
Unprotected device queues, to which unprotected command buffers can be submitted
Protected-capable device queues, to which unprotected command buffers or protected command buffers can be submitted

• Queue submissions
  • Unprotected queue submissions, through which unprotected command buffers can be submitted
  • Protected queue submissions, through which protected command buffers can be submitted

• Queue operations
  • Unprotected queue operations
  • Protected queue operations

Note
When the protectedMemory feature is enabled, all pipelines may be recorded in either protected or unprotected command buffers (or both), which may incur an extra cost on some implementations. This can be mitigated by enabling the pipelineProtectedAccess feature, in which case pipelines created with VK_PIPELINE_CREATE_PROTECTED_ACCESS_ONLY_BIT_EXT may only be recorded in protected command buffers, and pipelines created with VK_PIPELINE_CREATE_NO_PROTECTED_ACCESS_BIT_EXT may only be recorded in unprotected command buffers.

Protected Memory Access Rules

If VkPhysicalDeviceProtectedMemoryProperties::protectedNoFault is VK_FALSE, applications must not perform any of the following operations:

• Write to unprotected memory within protected queue operations.
• Access protected memory within protected queue operations other than in framebuffer-space pipeline stages, the compute shader stage, or the transfer stage.
• Perform a query within protected queue operations.

If VkPhysicalDeviceProtectedMemoryProperties::protectedNoFault is VK_TRUE, these operations are valid, but reads will return undefined values, and writes will either be dropped or store undefined values.

Additionally, indirect operations must not be performed within protected queue operations.

Whether these operations are valid or not, or if any other invalid usage is performed, the implementation must guarantee that:

• Protected device memory must never be visible to the host.
• Values written to unprotected device memory must not be a function of values from protected memory.
11.2.18. External Memory Handle Types

Android Hardware Buffer

Android's NDK defines \texttt{AHardwareBuffer} objects, which represent device memory that is shareable across processes and that can be accessed by a variety of media APIs and the hardware used to implement them. These Android hardware buffer objects may be imported into \texttt{VkDeviceMemory} objects for access via Vulkan, or exported from Vulkan. An \texttt{VkImage} or \texttt{VkBuffer} can be bound to the imported or exported \texttt{VkDeviceMemory} object if it is created with \texttt{VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID}.

To remove an unnecessary compile time dependency, an incomplete type definition of \texttt{AHardwareBuffer} is provided in the Vulkan headers:

\begin{verbatim}
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
struct AHardwareBuffer;
\end{verbatim}

The actual \texttt{AHardwareBuffer} type is defined in Android NDK headers.

\textbf{Note}

The NDK format, usage, and size/dimensions of an \texttt{AHardwareBuffer} object can be obtained with the \texttt{AHardwareBuffer_describe} function. While Android hardware buffers can be imported to or exported from Vulkan without using that function, valid usage and implementation behavior is defined in terms of the \texttt{AHardwareBuffer_Desc} properties it returns.

Android hardware buffer objects are reference-counted using Android NDK functions outside of the scope of this specification. A \texttt{VkDeviceMemory} imported from an Android hardware buffer or that can be exported to an Android hardware buffer must acquire a reference to its \texttt{AHardwareBuffer} object, and must release this reference when the device memory is freed. During the host execution of a Vulkan command that has an Android hardware buffer as a parameter (including indirect parameters via \texttt{pNext} chains), the application must not decrement the Android hardware buffer's reference count to zero.

Android hardware buffers can be mapped and unmapped for CPU access using the NDK functions. These lock and unlock APIs are considered to acquire and release ownership of the Android hardware buffer, and applications must follow the rules described in \texttt{External Resource Sharing} to transfer ownership between the Vulkan instance and these native APIs.

Android hardware buffers can be shared with external APIs and Vulkan instances on the same device, and also with foreign devices. When transferring ownership of the Android hardware buffer, the external and foreign special queue families described in \texttt{Queue Family Ownership Transfer} are not identical. All APIs which produce or consume Android hardware buffers are considered to use foreign devices, except OpenGL ES contexts and Vulkan logical devices that have matching device and driver UUIDs. Implementations may treat a transfer to or from the foreign queue family as if it were a transfer to or from the external queue family when the Android hardware buffer's usage only permits it to be used on the same physical device.
**Android Hardware Buffer Optimal Usages**

Vulkan buffer and image usage flags do not correspond exactly to Android hardware buffer usage flags. When allocating Android hardware buffers with non-Vulkan APIs, if any `AHARDWAREBUFFER_USAGE_GPU_*` usage bits are included, by default the allocator must allocate the memory in such a way that it supports Vulkan usages and creation flags in the usage equivalence table which do not have Android hardware buffer equivalents.

An `VkAndroidHardwareBufferUsageANDROID` structure can be included in the `pNext` chain of a `VkImageFormatProperties2` structure passed to `vkGetPhysicalDeviceImageFormatProperties2` to obtain optimal Android hardware buffer usage flags for specific Vulkan resource creation parameters. Some usage flags returned by these commands are required based on the input parameters, but additional vendor-specific usage flags (`AHARDWAREBUFFER_USAGE_VENDOR_*) may also be returned. Any Android hardware buffer allocated with these vendor-specific usage flags and imported to Vulkan must only be bound to resources created with parameters that are a subset of the parameters used to obtain the Android hardware buffer usage, since the memory may have been allocated in a way incompatible with other parameters. If an Android hardware buffer is successfully allocated with additional non-vendor-specific usage flags in addition to the recommended usage, it must support being used in the same ways as an Android hardware buffer allocated with only the recommended usage, and also in ways indicated by the additional usage.

**Android Hardware Buffer External Formats**

Android hardware buffers may represent images using implementation-specific formats, layouts, color models, etc., which do not have Vulkan equivalents. Such external formats are commonly used by external image sources such as video decoders or cameras. Vulkan can import Android hardware buffers that have external formats, but since the image contents are in an undiscoverable and possibly proprietary representation, images with external formats must only be used as resolve images or sampled images, and must have optimal tiling. Images with external formats must only be sampled with a sampler that has Y′C_{b}C_{r} conversion enabled.

Images that will be backed by an Android hardware buffer can use an external format by setting `VkImageCreateInfo::format` to `VK_FORMAT_UNDEFINED` and including a `VkExternalFormatANDROID` structure in the `pNext` chain. Images can be created with an external format even if the Android hardware buffer has a format which has an equivalent Vulkan format to enable consistent handling of images from sources that might use either category of format. However, all images created with an external format are subject to the valid usage requirements associated with external formats, even if the Android hardware buffer's format has a Vulkan equivalent. The external format of an Android hardware buffer can be obtained by passing a `VkAndroidHardwareBufferFormatPropertiesANDROID` structure to `vkGetAndroidHardwareBufferPropertiesANDROID`.

**Android Hardware Buffer Image Resources**

Android hardware buffers have intrinsic width, height, format, and usage properties, so Vulkan images bound to memory imported from an Android hardware buffer must use dedicated allocations: `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` must be `VK_TRUE` for images created with `VkExternalMemoryImageCreateInfo::handleTypes` that includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`. When creating an image that will be bound to an imported Android hardware buffer, the image creation parameters must be
equivalent to the AHardwareBuffer properties as described by the valid usage of VkMemoryAllocateInfo. Similarly, device memory allocated for a dedicated image must not be exported to an Android hardware buffer until it has been bound to that image, and the implementation must return an Android hardware buffer with properties derived from the image:

- The width and height members of AHardwareBuffer_Desc must be the same as the width and height members of VkImageCreateInfo::extent, respectively.
- The layers member of AHardwareBuffer_Desc must be the same as the arrayLayers member of VkImageCreateInfo.
- The format member of AHardwareBuffer_Desc must be equivalent to VkImageCreateInfo::format as defined by AHardwareBuffer Format Equivalence.
- The usage member of AHardwareBuffer_Desc must include bits corresponding to bits included in VkImageCreateInfo::usage and VkImageCreateInfo::flags where such a correspondence exists according to AHardwareBuffer Usage Equivalence. It may also include additional usage bits, including vendor-specific usages. Presence of vendor usage bits may make the Android hardware buffer only usable in ways indicated by the image creation parameters, even when used outside Vulkan, in a similar way that allocating the Android hardware buffer with usage returned in VkAndroidHardwareBufferUsageANDROID does.

Implementations may support fewer combinations of image creation parameters for images with Android hardware buffer external handle type than for non-external images. Support for a given set of parameters can be determined by passing VkExternalImageFormatProperties to vkGetPhysicalDeviceImageFormatProperties2 with handleType set to VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID. Any Android hardware buffer successfully allocated outside Vulkan with usage that includes AHWAREBUFFER_USAGE_GPU_* must be supported when using equivalent Vulkan image parameters. If a given choice of image parameters are supported for import, they can also be used to create an image and memory that will be exported to an Android hardware buffer.

</table>

1. Vulkan does not differentiate between AHardwareBuffer_FORMAT_R8G8B8A8_UNORM and AHardwareBuffer_FORMAT_R8G8B8X8_UNORM: they both behave as VK_FORMAT_R8G8B8A8_UNORM. After an external entity writes to a AHardwareBuffer_FORMAT_R8G8B8X8_UNORM Android hardware buffer, the values read by Vulkan from the X/A component are undefined. To emulate the traditional behavior of the X component during sampling or blending, applications should use VK_COMPONENT_SWIZZLE_ONE in image view component mappings and VK_BLEND_FACTOR_ONE in color blend factors. There is no way to avoid copying these undefined values when copying from such an image to another image or buffer.

2. The AHardwareBuffer_USAGE_GPU_MIPMAP_COMPLETE flag does not correspond to a Vulkan image usage or creation flag. Instead, its presence indicates that the Android hardware buffer contains a complete mipmap chain, and its absence indicates that the Android hardware buffer contains only a single mip level.

3. Only image usages valid for the format are valid. It would be invalid to take a Android Hardware Buffer with a format of AHardwareBuffer_FORMAT_R8G8B8A8_UNORM that has a AHardwareBuffer_USAGE_GPU_FRAMEBUFFER usage and try to create an image with VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT.

4. In combination with a hardware buffer format other than BLOB.

Note

When using VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT with Android hardware buffer images, applications should use VkImageFormatListCreateInfo to inform the
implementation which view formats will be used with the image. For some common sets of format, this allows some implementations to provide significantly better performance when accessing the image via Vulkan.

**Android Hardware Buffer Buffer Resources**

Android hardware buffers with a format of `AHARDWAREBUFFER_FORMAT_BLOB` and usage that includes `AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER` can be used as the backing store for `VkBuffer` objects. Such Android hardware buffers have a size in bytes specified by their `width`, `height` and `layers` are both 1.

Unlike images, buffer resources backed by Android hardware buffers do not require dedicated allocations.

Exported `AHardwareBuffer` objects that do not have dedicated images must have a format of `AHARDWAREBUFFER_FORMAT_BLOB`, usage must include `AHARDWAREBUFFER_USAGE_GPU_DATA_BUFFER`, width must equal the device memory allocation size, and `height` and `layers` must be 1.

**QNX Screen Buffer**

The QNX SDP defines `_screen_buffer` objects, which represent a buffer that the QNX Screen graphics subsystem can use directly in its windowing system APIs. More specifically, a Screen buffer is an area of memory that stores pixel data. It can be attached to Screen windows, streams, or pixmaps. These QNX Screen buffer objects may be imported into `VkDeviceMemory` objects for access via Vulkan. An `VkImage` or `VkBuffer` can be bound to the imported `VkDeviceMemory` object if it is created with `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`.

`struct _screen_buffer` is strongly typed, so naming the handle type is redundant. The internal layout and therefore size of a `struct _screen_buffer` image may depend on native usage flags that do not have corresponding Vulkan counterparts.

**QNX Screen Buffer Validity**

The design of Screen in the QNX SDP makes it difficult to determine the validity of objects from outside of Screen. Therefore, applications must ensure that QNX Screen buffer objects provided used in various Vulkan interfaces are ones created explicitly with QNX Screen APIs. See QNX SDP documentation for more information.

A `VkDeviceMemory` imported from a QNX Screen buffer has no way to acquire a reference to its `_screen_buffer` object. Therefore, during the host execution of a Vulkan command that has a QNX Screen buffer as a parameter (including indirect parameters via `pNext` chains), the application must ensure that the QNX Screen buffer resource remains valid.

Generally, for a `_screen_buffer` object to be valid for use within a Vulkan implementation, the buffer object should have a `_screen_buffer::SCREEN_PROPERTY_USAGE` that includes at least one of: `SCREEN_USAGE_VULKAN`, `SCREEN_USAGE_OPENGL_ES2`, `SCREEN_USAGE_OPENGL_ES3`, or `SCREEN_USAGE_NATIVE`. The exact Screen-native usage flags required depends on the Vulkan implementation, and QNX Screen itself will not necessarily enforce these requirements. Note that Screen-native usage flags are in no way related to usage flags in the Vulkan specification.
QNX Screen Buffer External Formats

QNX Screen buffers may represent images using implementation-specific formats, layouts, color models, etc., which do not have Vulkan equivalents. Such external formats are commonly used by external image sources such as video decoders or cameras. Vulkan can import QNX Screen buffers that have external formats, but since the image contents are in an undiscoverable and possibly proprietary representation, images with external formats must only be used as sampled images, must only be sampled with a sampler that has \(Y'CBC_R\) conversion enabled, and must have optimal tiling.

Images that will be backed by a QNX Screen buffer can use an external format by setting `VkImageCreateInfo::format` to `VK_FORMAT_UNDEFINED` and including a `VkExternalFormatQNX` structure in the `pNext` chain. Images can be created with an external format even if the QNX Screen buffer has a format which has an equivalent Vulkan format to enable consistent handling of images from sources that might use either category of format. The external format of a QNX Screen buffer can be obtained by passing a `VkScreenBufferFormatPropertiesQNX` structure to `vkGetScreenBufferPropertiesQNX`.

QNX Screen Buffer Image Resources

QNX Screen buffers have intrinsic width, height, format, and usage properties, so Vulkan images bound to memory imported from a QNX Screen buffer must use dedicated allocations: `VkMemoryDedicatedRequirements::requiresDedicatedAllocation` must be `VK_TRUE` for images created with `VkExternalMemoryImageCreateInfo::handleTypes` that includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`. When creating an image that will be bound to an imported QNX Screen buffer, the image creation parameters must be equivalent to the `_screen_buffer` properties as described by the valid usage of `VkMemoryAllocateInfo`.

Table 15. QNX Screen Buffer Format Equivalence

</tr>
</tbody>
</table>

1 Vulkan does not differentiate between `SCREEN_FORMAT_RGBA8888` and `SCREEN_FORMAT_RGBX8888`: they...
both behave as VK_FORMAT_R8G8B8A8_UNORM. After an external entity writes to a SCREEN_FORMAT_RGBX8888 QNX Screen buffer, the values read by Vulkan from the X/A component are undefined. To emulate the traditional behavior of the X component during sampling or blending, applications should use VK_COMPONENT_SWIZZLE_ONE in image view component mappings and VK_BLEND_FACTOR_ONE in color blend factors. There is no way to avoid copying these undefined values when copying from such an image to another image or buffer. The same behavior applies to the following pairs: SCREEN_FORMAT_BGRA8888 and SCREEN_FORMAT_BGRX8888, SCREEN_FORMAT_RGBA1010102 and SCREEN_FORMAT_RGBX1010102, SCREEN_FORMAT_BGRA1010102 and SCREEN_FORMAT_BGRX1010102, SCREEN_FORMAT_RGBA5551 and SCREEN_FORMAT_RGBX5551.

11.2.19. Peer Memory Features

Peer memory is memory that is allocated for a given physical device and then bound to a resource and accessed by a different physical device, in a logical device that represents multiple physical devices. Some ways of reading and writing peer memory may not be supported by a device.

To determine how peer memory can be accessed, call:

```c
// Provided by VK_VERSION_1_1
void vkGetDeviceGroupPeerMemoryFeatures
(VkDevice device, uint32_t heapIndex,
 uint32_t localDeviceIndex, uint32_t remoteDeviceIndex,
 VkPeerMemoryFeatureFlags* pPeerMemoryFeatures);
```

or the equivalent command

```c
// Provided by VK_KHR_device_group
void vkGetDeviceGroupPeerMemoryFeaturesKHR
(VkDevice device, uint32_t heapIndex,
 uint32_t localDeviceIndex, uint32_t remoteDeviceIndex,
 VkPeerMemoryFeatureFlags* pPeerMemoryFeatures);
```

- **device** is the logical device that owns the memory.
- **heapIndex** is the index of the memory heap from which the memory is allocated.
- **localDeviceIndex** is the device index of the physical device that performs the memory access.
- **remoteDeviceIndex** is the device index of the physical device that the memory is allocated for.
- **pPeerMemoryFeatures** is a pointer to a VkPeerMemoryFeatureFlags bitmask indicating which types of memory accesses are supported for the combination of heap, local, and remote devices.
Valid Usage

- **VUID-vkGetDeviceGroupPeerMemoryFeatures-heapIndex-00691**
  
  `heapIndex` **must** be less than `memoryHeapCount`

- **VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00692**
  
  `localDeviceIndex` **must** be a valid device index

- **VUID-vkGetDeviceGroupPeerMemoryFeatures-remoteDeviceIndex-00693**
  
  `remoteDeviceIndex` **must** be a valid device index

- **VUID-vkGetDeviceGroupPeerMemoryFeatures-localDeviceIndex-00694**
  
  `localDeviceIndex` **must** not equal `remoteDeviceIndex`

Valid Usage (Implicit)

- **VUID-vkGetDeviceGroupPeerMemoryFeatures-device-parameter**
  
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkGetDeviceGroupPeerMemoryFeatures-pPeerMemoryFeatures-parameter**
  
  `pPeerMemoryFeatures` **must** be a valid pointer to a `VkPeerMemoryFeatureFlags` value

Bits which **may** be set in `vkGetDeviceGroupPeerMemoryFeatures::pPeerMemoryFeatures`, indicating supported peer memory features, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkPeerMemoryFeatureFlagBits {
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT = 0x00000001,
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT = 0x00000002,
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT = 0x00000004,
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT = 0x00000008,

    // Provided by VK_KHR_device_group
    VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT,
    VK_PEER_MEMORY_FEATURE_COPY_DST_BIT_KHR = VK_PEER_MEMORY_FEATURE_COPY_DST_BIT,
    VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT_KHR = VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT,
    VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT_KHR = VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT,
} VkPeerMemoryFeatureFlagBits;
```

or the equivalent

```c
// Provided by VK_KHR_device_group
typedef VkPeerMemoryFeatureFlagBits VkPeerMemoryFeatureFlagBitsKHR;
```
• VK_PEER_MEMORY_FEATURE_COPY_SRC_BIT specifies that the memory can be accessed as the source of any vkCmdCopy* command.

• VK_PEER_MEMORY_FEATURE_COPY_DST_BIT specifies that the memory can be accessed as the destination of any vkCmdCopy* command.

• VK_PEER_MEMORY_FEATURE_GENERIC_SRC_BIT specifies that the memory can be read as any memory access type.

• VK_PEER_MEMORY_FEATURE_GENERIC_DST_BIT specifies that the memory can be written as any memory access type. Shader atomics are considered to be writes.

**Note**
The peer memory features of a memory heap also apply to any accesses that may be performed during image layout transitions.

VK_PEER_MEMORY_FEATURE_COPY_DST_BIT must be supported for all host local heaps and for at least one device-local memory heap.

If a device does not support a peer memory feature, it is still valid to use a resource that includes both local and peer memory bindings with the corresponding access type as long as only the local bindings are actually accessed. For example, an application doing split-frame rendering would use framebuffer attachments that include both local and peer memory bindings, but would scissor the rendering to only update local memory.

```cpp
// Provided by VK_VERSION_1_1
typedef VkFlags VkPeerMemoryFeatureFlags;
```

or the equivalent

```cpp
// Provided by VK_KHR_device_group
typedef VkPeerMemoryFeatureFlags VkPeerMemoryFeatureFlagsKHR;
```

**VkPeerMemoryFeatureFlags** is a bitmask type for setting a mask of zero or more **VkPeerMemoryFeatureFlagBits**.

### 11.2.20. Opaque Capture Address Query

To query a 64-bit opaque capture address value from a memory object, call:

```cpp
// Provided by VK_VERSION_1_2
uint64_t vkGetDeviceMemoryOpaqueCaptureAddress(
    VkDevice device,
    const VkDeviceMemoryOpaqueCaptureAddressInfo* pInfo);
```

or the equivalent command
The 64-bit return value is an opaque address representing the start of pInfo->memory.

If the memory object was allocated with a non-zero value of VkMemoryOpaqueCaptureAddressAllocateInfo::opaqueCaptureAddress, the return value must be the same address.

Note
The expected usage for these opaque addresses is only for trace capture/replay tools to store these addresses in a trace and subsequently specify them during replay.

Valid Usage
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-None-03334
  The bufferDeviceAddress feature must be enabled
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-03335
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature must be enabled

Valid Usage (Implicit)
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-device-parameter
  device must be a valid VkDevice handle
- VUID-vkGetDeviceMemoryOpaqueCaptureAddress-pInfo-parameter
  pInfo must be a valid pointer to a valid VkDeviceMemoryOpaqueCaptureAddressInfo structure

The VkDeviceMemoryOpaqueCaptureAddressInfo structure is defined as:
or the equivalent

```c
// Provided by VK_KHR_buffer_device_address
typedef VkDeviceMemoryOpaqueCaptureAddressInfo
VkDeviceMemoryOpaqueCaptureAddressInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memory` specifies the memory whose address is being queried.

### Valid Usage

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-memory-03336
  
  `memory` must have been allocated with `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT`

### Valid Usage (Implicit)

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_DEVICE_MEMORY_OPAQUE_CAPTURE_ADDRESS_INFO`

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-pNext-pNext
  
  `pNext` must be `NULL`

- VUID-VkDeviceMemoryOpaqueCaptureAddressInfo-memory-parameter
  
  `memory` must be a valid `VkDeviceMemory` handle
Chapter 12. Resource Creation

Vulkan supports two primary resource types: buffers and images. Resources are views of memory with associated formatting and dimensionality. Buffers provide access to raw arrays of bytes, whereas images can be multidimensional and may have associated metadata.

Other resource types, such as acceleration structures and micromaps use buffers as the backing store for opaque data structures.

12.1. Buffers

Buffers represent linear arrays of data which are used for various purposes by binding them to a graphics or compute pipeline via descriptor sets or certain commands, or by directly specifying them as parameters to certain commands.

Buffers are represented by VkBuffer handles:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBuffer)
```

To create buffers, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkCreateBuffer(  
  VkDevice device,  
  const VkBufferCreateInfo* pCreateInfo,  
  const VkAllocationCallbacks* pAllocator,  
  VkBuffer* pBuffer);
```

- `device` is the logical device that creates the buffer object.
- `pCreateInfo` is a pointer to a VkBufferCreateInfo structure containing parameters affecting creation of the buffer.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pBuffer` is a pointer to a VkBuffer handle in which the resulting buffer object is returned.

Valid Usage

- VUID-vkCreateBuffer-flags-00911
  If the flags member of pCreateInfo includes VK_BUFFER_CREATE_SPARSE_BINDING_BIT, and the extendedSparseAddressSpace feature is not enabled, creating this VkBuffer must not cause the total required sparse memory for all currently valid sparse resources on the device to exceed VkPhysicalDeviceLimits::sparseAddressSpaceSize
- VUID-vkCreateBuffer-flags-09383
  If the flags member of pCreateInfo includes VK_BUFFER_CREATE_SPARSE_BINDING_BIT, the
extendedSparseAddressSpace feature is enabled, and the usage member of pCreateInfo contains bits not in VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags, creating this VkBuffer must not cause the total required sparse memory for all currently valid sparse resources on the device, excluding VkBuffer created with usage member of pCreateInfo containing bits in VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags and VkImage created with usage member of pCreateInfo containing bits in VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags, to exceed VkPhysicalDeviceLimits::sparseAddressSpaceSize

- VUID-vkCreateBuffer-flags-09384
  If the flags member of pCreateInfo includes VK_BUFFER_CREATE_SPARSE_BINDING_BIT and the extendedSparseAddressSpace feature is enabled, creating this VkBuffer must not cause the total required sparse memory for all currently valid sparse resources on the device to exceed VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseAddressSpaceSize

- VUID-vkCreateBuffer-pNext-06387
  If using the VkBuffer for an import operation from a VkBufferCollectionFUCHSIA where a VkBufferCollectionBufferCreateInfoFUCHSIA has been chained to pNext, pCreateInfo must match the VkBufferConstraintsInfoFUCHSIA::createInfo used when setting the constraints on the buffer collection with vkSetBufferCollectionBufferConstraintsFUCHSIA

Valid Usage (Implicit)

- VUID-vkCreateBuffer-device-parameter
  device must be a valid VkDevice handle

- VUID-vkCreateBuffer-pCreateInfo-parameter
  pCreateInfo must be a valid pointer to a valid VkBufferCreateInfo structure

- VUID-vkCreateBuffer-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateBuffer-pBuffer-parameter
  pBuffer must be a valid pointer to a VkBuffer handle

Return Codes

Success
  - VK_SUCCESS

Failure
  - VK_ERROR_OUT_OF_HOST_MEMORY
  - VK_ERROR_OUT_OF_DEVICE_MEMORY
  - VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
The `VkBufferCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkBufferCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkBufferCreateFlags flags;
    VkDeviceSize size;
    VkBufferUsageFlags usage;
    VkSharingMode sharingMode;
    uint32_t queueFamilyIndexCount;
    const uint32_t* pQueueFamilyIndices;
} VkBufferCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkBufferCreateFlagBits` specifying additional parameters of the buffer.
- `size` is the size in bytes of the buffer to be created.
- `usage` is a bitmask of `VkBufferUsageFlagBits` specifying allowed usages of the buffer.
- `sharingMode` is a `VkSharingMode` value specifying the sharing mode of the buffer when it will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of queue families that will access this buffer. It is ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`.

If a `VkBufferUsageFlags2CreateInfoKHR` structure is present in the `pNext` chain, `VkBufferUsageFlags2CreateInfoKHR::usage` from that structure is used instead of `usage` from this structure.

### Valid Usage

- **VUID-VkBufferCreateInfo-None-09499**
  If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfoKHR` structure, `usage` must be a valid combination of `VkBufferUsageFlagBits` values.

- **VUID-VkBufferCreateInfo-None-09500**
  If the `pNext` chain does not include a `VkBufferUsageFlags2CreateInfoKHR` structure, `usage` must not be 0.

- **VUID-VkBufferCreateInfo-size-00912**
  `size` must be greater than 0.

- **VUID-VkBufferCreateInfo-sharingMode-00914**
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` must be a valid pointer to an array of `queueFamilyIndexCount uint32_t` values.

- **VUID-VkBufferCreateInfo-sharingMode-00913**
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `pQueueFamilyIndices` must be a valid pointer to an array of `queueFamilyIndexCount uint32_t` values.
If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, `queueFamilyIndexCount` must be greater than 1.

- **VUID-VkBufferCreateInfo-sharingMode-01419**
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` must be unique and must be less than `pQueueFamilyPropertyCount` returned by either `vkGetPhysicalDeviceQueueFamilyProperties2` or `vkGetPhysicalDeviceQueueFamilyProperties` for the `physicalDevice` that was used to create `device`.

- **VUID-VkBufferCreateInfo-flags-00915**
  If the `sparseBinding` feature is not enabled, `flags` must not contain `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`.

- **VUID-VkBufferCreateInfo-flags-00916**
  If the `sparseResidencyBuffer` feature is not enabled, `flags` must not contain `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`.

- **VUID-VkBufferCreateInfo-flags-00917**
  If the `sparseResidencyAliased` feature is not enabled, `flags` must not contain `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`.

- **VUID-VkBufferCreateInfo-flags-00918**
  If `flags` contains `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`, it must also contain `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`.

- **VUID-VkBufferCreateInfo-pNext-00920**
  If the `pNext` chain includes a `VkExternalMemoryBufferCreateInfo` structure, its `handleTypes` member must only contain bits that are also in `VkExternalBufferProperties::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceExternalBufferProperties` with `pExternalBufferInfo->handleType` equal to any one of the handle types specified in `VkExternalMemoryBufferCreateInfo::handleTypes`.

- **VUID-VkBufferCreateInfo-flags-01887**
  If the `protectedMemory` feature is not enabled, `flags` must not contain `VK_BUFFER_CREATE_PROTECTED_BIT`.

- **VUID-VkBufferCreateInfo-None-01888**
  If any of the bits `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` are set, `VK_BUFFER_CREATE_PROTECTED_BIT` must not also be set.

- **VUID-VkBufferCreateInfo-pNext-01571**
  If the `pNext` chain includes a `VkDedicatedAllocationBufferCreateInfoNV` structure, and the `dedicatedAllocation` member of the chained structure is `VK_TRUE`, then `flags` must not include `VK_BUFFER_CREATE_SPARSE_BINDING_BIT`, `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT`.

- **VUID-VkBufferCreateInfo-deviceAddress-02604**
  If `VkBufferDeviceAddressCreateInfoEXT::deviceAddress` is not zero, `flags` must include `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`.
• VUID-VkBufferCreateInfo-opaqueCaptureAddress-03337
  If VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress is not zero, flags must include VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT

• VUID-VkBufferCreateInfo-flags-03338
  If flags includes VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, the bufferDeviceAddressCaptureReplay feature must be enabled

• VUID-VkBufferCreateInfo-usage-04813
  If usage includes VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR or VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR, and flags does not include VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the pNext chain must include a VkVideoProfileListInfoKHR structure with profileCount greater than 0 and pProfiles including at least one VkVideoProfileInfoKHR structure with a videoCodecOperation member specifying a decode operation

• VUID-VkBufferCreateInfo-usage-04814
  If usage includes VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR or VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR, and flags does not include VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the pNext chain must include a VkVideoProfileListInfoKHR structure with profileCount greater than 0 and pProfiles including at least one VkVideoProfileInfoKHR structure with a videoCodecOperation member specifying an encode operation

• VUID-VkBufferCreateInfo-flags-08325
  If flags includes VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then videoMaintenance1 must be enabled

• VUID-VkBufferCreateInfo-size-06409
  size must be less than or equal to VkPhysicalDeviceMaintenance4Properties::maxBufferSize

• VUID-VkBufferCreateInfo-usage-08097
  If usage includes VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT, creating this VkBuffer must not cause the total required space for all currently valid buffers using this flag on the device to exceed VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerDescriptorBufferAddressSpaceSize or VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferAddressSpaceSize

• VUID-VkBufferCreateInfo-usage-08098
  If usage includes VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT, creating this VkBuffer must not cause the total required space for all currently valid buffers using this flag on the device to exceed VkPhysicalDeviceDescriptorBufferPropertiesEXT::resourceDescriptorBufferAddressSpaceSize or VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferAddressSpaceSize

• VUID-VkBufferCreateInfo-flags-08099
  If flags includes VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the descriptorBufferCaptureReplay feature must be enabled

• VUID-VkBufferCreateInfo-pNext-08100
  If the pNext chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, flags must contain VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT
If `usage` includes `VK_BUFFER_USAGE.PushDescriptors_DescriptorBuffer_BIT_EXT`, the descriptorBufferPushDescriptors feature **must** be enabled.

If `usage` includes `VK_BUFFER_USAGE.PushDescriptors_DescriptorBuffer_BIT_EXT`, `VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors` **must** be `VK_FALSE`.

If `usage` includes `VK_BUFFER_USAGE.PushDescriptors_DescriptorBuffer_BIT_EXT`, `usage` **must** contain at least one of `VK_BUFFER_USAGE.Resource_DescriptorBuffer_BIT_EXT` or `VK_BUFFER_USAGE.Sampler_DescriptorBuffer_BIT_EXT`.

**Valid Usage (Implicit)**

- **VUID-VkBufferCreateInfo.sType-sType**
  - `sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_CREATE_INFO`.

- **VUID-VkBufferCreateInfo.pNext-pNext**
  - Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkBufferCollectionBufferCreateInfoFUCHSIA`, `VkBufferDeviceAddressCreateInfoEXT`, `VkBufferOpaqueCaptureAddressCreateInfo`, `VkBufferUsageFlags2CreateInfoKHR`, `VkDedicatedAllocationBufferCreateInfoNV`, `VkExternalMemoryBufferCreateInfo`, `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, or `VkVideoProfileListInfoKHR`.

- **VUID-VkBufferCreateInfo.sType-unique**
  - The `sType` value of each struct in the `pNext` chain **must** be unique.

- **VUID-VkBufferCreateInfo.flags-parameter**
  - `flags` **must** be a valid combination of `VkBufferCreateFlagBits` values.

- **VUID-VkBufferCreateInfo.sharingMode-parameter**
  - `sharingMode` **must** be a valid `VkSharingMode` value.

The `VkBufferUsageFlags2CreateInfoKHR` structure is defined as:

```c
// Provided by VK_KHR.maintenance5
typedef struct VkBufferUsageFlags2CreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkBufferUsageFlags2KHR usage;
} VkBufferUsageFlags2CreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `usage` is a bitmask of `VkBufferUsageFlagBits2KHR` specifying allowed usages of the buffer.
If this structure is included in the `pNext` chain of a buffer creation structure, `usage` is used instead of the corresponding `usage` value passed in that creation structure, allowing additional usage flags to be specified. If this structure is included in the `pNext` chain of a buffer query structure, the usage flags of the buffer are returned in `usage` of this structure, and the usage flags representable in `usage` of the buffer query structure are also returned in that field.

### Valid Usage (Implicit)

- VUID-VkBufferUsageFlags2CreateInfoKHR-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_USAGE_FLAGS_2_CREATE_INFO_KHR`

- VUID-VkBufferUsageFlags2CreateInfoKHR-usage-parameter
  
  `usage` **must** be a valid combination of `VkBufferUsageFlagBits2KHR` values

- VUID-VkBufferUsageFlags2CreateInfoKHR-usage-requiredbitmap

  `usage` **must** not be `0`

Bits which **can** be set in `VkBufferUsageFlags2CreateInfoKHR::usage`, specifying usage behavior of a buffer, are:

```c
// Provided by VK_KHR_maintenance5
// Flag bits for VkBufferUsageFlagBits2KHR
typedef VkFlags64 VkBufferUsageFlagBits2KHR;
static const VkBufferUsageFlagBits2KHR VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT_KHR = 0x00000001ULL;
static const VkBufferUsageFlagBits2KHR VK_BUFFER_USAGE_2_TRANSFER_DST_BIT_KHR = 0x00000002ULL;

static const VkBufferUsageFlagBits2KHR VK_BUFFER_USAGE_2_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT = 0x00800000ULL;
• `VK_BUFFER_USAGE_2_TRANSFER_SRC_BIT_KHR` specifies that the buffer can be used as the source of a transfer command (see the definition of `VK_PIPELINE_STAGE_TRANSFER_BIT`).

• `VK_BUFFER_USAGE_2_TRANSFER_DST_BIT_KHR` specifies that the buffer can be used as the destination of a transfer command.

• `VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT_KHR` specifies that the buffer can be used to create a `VkBufferView` suitable for occupying a `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.

• `VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT_KHR` specifies that the buffer can be used to create a `VkBufferView` suitable for occupying a `VkDescriptorSet` slot of type `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.

• `VK_BUFFER_USAGE_2_UNIFORM_BUFFER_BIT_KHR` specifies that the buffer can be used in a `VkDescriptorBufferInfo` suitable for occupying a `VkDescriptorSet` slot either of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`.

• `VK_BUFFER_USAGE_2_STORAGE_BUFFER_BIT_KHR` specifies that the buffer can be used in a `VkDescriptorBufferInfo` suitable for occupying a `VkDescriptorSet` slot either of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`.

• `VK_BUFFER_USAGE_2_INDEX_BUFFER_BIT_KHR` specifies that the buffer is suitable for passing as the buffer parameter to `vkCmdBindIndexBuffer2KHR` and `vkCmdBindIndexBuffer`.

• `VK_BUFFER_USAGE_2_VERTEX_BUFFER_BIT_KHR` specifies that the buffer is suitable for passing as an element of the `pBuffers` array to `vkCmdBindVertexBuffer`.

• `VK_BUFFER_USAGE_2_INDIRECT_BUFFER_BIT_KHR` specifies that the buffer is suitable for passing as the buffer parameter to `vkCmdDrawIndirect`, `vkCmdDrawIndexedIndirect`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawClusterIndirectHUAWEI`, or `vkCmdDispatchIndirect`. It is also suitable for passing as the buffer member of `VkIndirectCommandsStreamNV`, or `sequencesCountBuffer` or `sequencesIndexBuffer` or `preprocessedBuffer` member of `VkGeneratedCommandsInfoNV`.

• `VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT` specifies that the buffer is suitable for passing as the buffer parameter to `vkCmdBeginConditionalRenderingEXT`.

• `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT` specifies that the buffer is suitable for using for binding as a transform feedback buffer with `vkCmdBindTransformFeedbackBuffersEXT`.

• `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT` specifies that the buffer is suitable for using as a counter buffer with `vkCmdBeginTransformFeedbackEXT` and `vkCmdEndTransformFeedbackEXT`.

• `VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors must also specify `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`.

• `VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` specifies that the buffer is suitable to
contain resource descriptors when bound as a descriptor buffer.

- **VK_BUFFER_USAGE_2_PUSH_DESCRIPTORs_DESCRIPTOR_BUFFER_BIT_EXT** specifies that the buffer, when bound, can be used by the implementation to support push descriptors when using descriptor buffers.

- **VK_BUFFER_USAGE_2_RAY_TRACING_BIT_NV** specifies that the buffer is suitable for use in `vkCmdTraceRaysNV`.

- **VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR** specifies that the buffer is suitable for use as a Shader Binding Table.

- **VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR** specifies that the buffer is suitable for use as a read-only input to an acceleration structure build.

- **VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR** specifies that the buffer is suitable for storage space for a `VkAccelerationStructureKHR`.

- **VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT_KHR** specifies that the buffer can be used to retrieve a buffer device address via `vkGetBufferDeviceAddress` and use that address to access the buffer’s memory from a shader.

- **VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR** specifies that the buffer can be used as the source video bitstream buffer in a video decode operation.

- **VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR** is reserved for future use.

- **VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR** specifies that the buffer can be used as the destination video bitstream buffer in a video encode operation.

- **VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR** is reserved for future use.

- **VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMD** specifies that the buffer can be used for as scratch memory for execution graph dispatch.

```c
// Provided by VK_KHR_maintenance5
typedef VkFlags64 VkBufferUsageFlags2KHR;
```

`VkBufferUsageFlags2KHR` is a bitmask type for setting a mask of zero or more `VkBufferUsageFlagBits2KHR`.

Bits which can be set in `VkBufferCreateInfo::usage`, specifying usage behavior of a buffer, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkBufferUsageFlagBits {
    VK_BUFFER_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_BUFFER_USAGE_TRANSFER_DST_BIT = 0x00000002,
    VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT = 0x00000004,
    VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT = 0x00000008,
    VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT = 0x00000010,
    VK_BUFFER_USAGE_STORAGE_BUFFER_BIT = 0x00000020,
    VK_BUFFER_USAGE_INDEX_BUFFER_BIT = 0x00000040,
    VK_BUFFER_USAGE_VERTEX_BUFFER_BIT = 0x00000080,
    VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT = 0x00000100,
};
```
• **VK_BUFFER_USAGE_TRANSFER_SRC_BIT** specifies that the buffer can be used as the source of a transfer command (see the definition of **VK_PIPELINE_STAGE_TRANSFER_BIT**).

• **VK_BUFFER_USAGE_TRANSFER_DST_BIT** specifies that the buffer can be used as the destination of a transfer command.
• **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT** specifies that the buffer can be used to create a VkBufferView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER.

• **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT** specifies that the buffer can be used to create a VkBufferView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER.

• **VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT** specifies that the buffer can be used in a VkDescriptorBufferInfo suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC.

• **VK_BUFFER_USAGE_STORAGE_BUFFER_BIT** specifies that the buffer can be used in a VkDescriptorBufferInfo suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC.

• **VK_BUFFER_USAGE_INDEX_BUFFER_BIT** specifies that the buffer is suitable for passing as the buffer parameter to vkCmdBindIndexBuffer2KHR and vkCmdBindIndexBuffer.

• **VK_BUFFER_USAGE_VERTEX_BUFFER_BIT** specifies that the buffer is suitable for passing as an element of the pBuffers array to vkCmdBindVertexBuffers.

• **VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT** specifies that the buffer is suitable for passing as the buffer parameter to vkCmdDrawIndirect, vkCmdDrawIndexedIndirect, vkCmdDrawMeshTasksIndirectNV, vkCmdDrawMeshTasksIndirectEXT, vkCmdDrawMeshTasksIndirectCountNV, vkCmdDrawMeshTasksIndirectCountEXT, vkCmdDrawClusterIndirectHUAWEI, or vkCmdDispatchIndirect. It is also suitable for passing as the buffer member of VkIndirectCommandsStreamNV, or sequencesCountBuffer or sequencesIndexBuffer or preprocessedBuffer member of VkGeneratedCommandsInfoNV.

• **VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT** specifies that the buffer is suitable for passing as the buffer parameter to vkCmdBeginConditionalRenderingEXT.

• **VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT** specifies that the buffer is suitable for using for binding as a transform feedback buffer with vkCmdBindTransformFeedbackBuffersEXT.

• **VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT** specifies that the buffer is suitable for using as a counter buffer with vkCmdBeginTransformFeedbackEXT and vkCmdEndTransformFeedbackEXT.

• **VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT** specifies that the buffer is suitable to contain sampler and combined image sampler descriptors when bound as a descriptor buffer. Buffers containing combined image sampler descriptors must also specify **VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT**.

• **VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT** specifies that the buffer is suitable to contain resource descriptors when bound as a descriptor buffer.

• **VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT** specifies that the buffer, when bound, can be used by the implementation to support push descriptors when using descriptor buffers.

• **VK_BUFFER_USAGE_RAY_TRACING_BIT_NV** specifies that the buffer is suitable for use in vkCmdTraceRaysNV.

• **VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR** specifies that the buffer is suitable for use as a
Shader Binding Table.

- **VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR** specifies that the buffer is suitable for use as a read-only input to an acceleration structure build.

- **VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR** specifies that the buffer is suitable for storage space for a `VkAccelerationStructureKHR`.

- **VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT** specifies that the buffer can be used to retrieve a buffer device address via `vkGetBufferDeviceAddress` and use that address to access the buffer’s memory from a shader.

- **VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR** specifies that the buffer can be used as the source video bitstream buffer in a video decode operation.

- **VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR** is reserved for future use.

- **VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR** specifies that the buffer can be used as the destination video bitstream buffer in a video encode operation.

- **VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR** is reserved for future use.

- **VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDIX** specifies that the buffer can be used as scratch memory for execution graph dispatch.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferUsageFlags;
```

`VkBufferUsageFlags` is a bitmask type for setting a mask of zero or more `VkBufferUsageFlagBits`.

Bits which can be set in `VkBufferCreateInfo::flags`, specifying additional parameters of a buffer, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkBufferCreateFlagBits {
    VK_BUFFER_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_BUFFER_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
    // Provided by VK_VERSION_1_1
    VK_BUFFER_CREATE_PROTECTED_BIT = 0x00000008,
    // Provided by VK_VERSION_1_2
    VkBufferCreateDeviceAddressCaptureReplayBit = 0x00000010,
    // Provided by VK_EXT_descriptor_buffer
    VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000020,
    // Provided by VK_KHR_video_maintenance1
    VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00000040,
    // Provided by VK_KHR_buffer_device_address
    VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR = 0x00000080
};
```
VK_BUFFER_CREATE_SPARSE_BINDING_BIT specifies that the buffer will be backed using sparse memory binding.

VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT specifies that the buffer can be partially backed using sparse memory binding. Buffers created with this flag must also be created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT flag.

VK_BUFFER_CREATE_SPARSE_ALIASED_BIT specifies that the buffer will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another buffer (or another portion of the same buffer). Buffers created with this flag must also be created with the VK_BUFFER_CREATE_SPARSE_BINDING_BIT flag.

VK_BUFFER_CREATE_PROTECTED_BIT specifies that the buffer is a protected buffer.

VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT specifies that the buffer’s address can be saved and reused on a subsequent run (e.g. for trace capture and replay), see VkBufferOpaqueCaptureAddressCreateInfo for more detail.

VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the buffer can be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.

VK_BUFFER_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR specifies that the buffer can be used in video coding operations without having to specify at buffer creation time the set of video profiles the buffer will be used with.

See Sparse Resource Features and Physical Device Features for details of the sparse memory features supported on a device.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferCreateFlags;
```

VkBufferCreateFlags is a bitmask type for setting a mask of zero or more VkBufferCreateFlagBits.

If the pNext chain includes a VkDedicatedAllocationBufferCreateInfoNV structure, then that structure includes an enable controlling whether the buffer will have a dedicated memory allocation bound to it.

The VkDedicatedAllocationBufferCreateInfoNV structure is defined as:

```c
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationBufferCreateInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkBool32 dedicatedAllocation;
} VkDedicatedAllocationBufferCreateInfoNV;
```

- sType is a VkStructureType value identifying this structure.
To define a set of external memory handle types that may be used as backing store for a buffer, add a VkExternalMemoryBufferCreateInfo structure to the pNext chain of the VkBufferCreateInfo structure. The VkExternalMemoryBufferCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryBufferCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryBufferCreateInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory
typedef VkExternalMemoryBufferCreateInfoKHR VkExternalMemoryBufferCreateInfo;
```

Note

A VkExternalMemoryBufferCreateInfo structure with a non-zero handleTypes field must be included in the creation parameters for a buffer that will be bound to memory that is either exported or imported.

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **handleTypes** is zero or a bitmask of VkExternalMemoryHandleTypeFlagBits specifying one or more external memory handle types.

Valid Usage (Implicit)

- VUID-VkExternalMemoryBufferCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_BUFFER_CREATE_INFO

- VUID-VkExternalMemoryBufferCreateInfo-handleTypes-parameter
  handleTypes must be a valid combination of VkExternalMemoryHandleTypeFlagBits values

To request a specific device address for a buffer, add a VkBufferOpaqueCaptureAddressCreateInfo structure:
structure to the pNext chain of the VkBufferCreateInfo structure. The VkBufferOpaqueCaptureAddressCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkBufferOpaqueCaptureAddressCreateInfo {
    VkStructureType sType;
    const void* pNext;
    uint64_t opaqueCaptureAddress;
} VkBufferOpaqueCaptureAddressCreateInfo;
```
or the equivalent

```c
// Provided by VK_KHR_buffer_device_address
typedef VkBufferOpaqueCaptureAddressCreateInfo
        VkBufferOpaqueCaptureAddressCreateInfoKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **opaqueCaptureAddress** is the opaque capture address requested for the buffer.

If `opaqueCaptureAddress` is zero, no specific address is requested.

If `opaqueCaptureAddress` is not zero, then it **should** be an address retrieved from `vkGetBufferOpaqueCaptureAddress` for an identically created buffer on the same implementation.

If this structure is not present, it is as if `opaqueCaptureAddress` is zero.

Apps **should** avoid creating buffers with app-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS errors.

**Note**

The expected usage for this is that a trace capture/replay tool will add the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag to all buffers that use VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT, and during capture will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Apps/tools should avoid mixing app-provided and implementation-provided addresses for buffers created with VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT, to avoid address space allocation conflicts.
Valid Usage (Implicit)

- VUID-VkBufferOpaqueCaptureAddressCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_BUFFER_OPAQUE_CAPTURE_ADDRESS_CREATE_INFO

Alternatively, to request a specific device address for a buffer, add a VkBufferDeviceAddressCreateInfo structure to the pNext chain of the VkBufferCreateInfo structure. The VkBufferDeviceAddressCreateInfo structure is defined as:

```c
// Provided by VK_EXT_buffer_device_address
typedef struct VkBufferDeviceAddressCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDeviceAddress deviceAddress;
} VkBufferDeviceAddressCreateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- deviceAddress is the device address requested for the buffer.

If deviceAddress is zero, no specific address is requested.

If deviceAddress is not zero, then it must be an address retrieved from an identically created buffer on the same implementation. The buffer must also be bound to an identically created VkDeviceMemory object.

If this structure is not present, it is as if deviceAddress is zero.

Apps should avoid creating buffers with app-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of VK_ERROR_INVALID_DEVICE_ADDRESS_EXT errors.

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressCreateInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_CREATE_INFO_EXT

The VkBufferCollectionBufferCreateInfoFUCHSIA structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionBufferCreateInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t index;
} VkBufferCollectionBufferCreateInfoFUCHSIA;
```
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure
• **collection** is the `VkBufferCollectionFUCHSIA` handle
• **index** is the index of the buffer in the buffer collection from which the memory will be imported

### Valid Usage

- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-index-06388
  - `index` **must** be less than `VkBufferCollectionPropertiesFUCHSIA::bufferCount`

### Valid Usage (Implicit)

- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-sType-sType
  - `sType` **must** be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_BUFFER_CREATE_INFO_FUCHSIA`
- VUID-VkBufferCollectionBufferCreateInfoFUCHSIA-collection-parameter
  - `collection` **must** be a valid `VkBufferCollectionFUCHSIA` handle

To destroy a buffer, call:

```c
// Provided by VK_VERSION_1_0
define vkDestroyBuffer
void vkDestroyBuffer(
    VkDevice device,
    VkBuffer buffer,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the buffer.
- **buffer** is the buffer to destroy.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

### Valid Usage

- VUID-vkDestroyBuffer-buffer-00922
  - All submitted commands that refer to **buffer**, either directly or via a `VkBufferView`, **must** have completed execution
- VUID-vkDestroyBuffer-buffer-00923
  - If `VkAllocationCallbacks` were provided when **buffer** was created, a compatible set of callbacks **must** be provided here
- VUID-vkDestroyBuffer-buffer-00924
  - If no `VkAllocationCallbacks` were provided when **buffer** was created, **pAllocator** **must** be
Valid Usage (Implicit)

- VUID-vkDestroyBuffer-device-parameter
  
  device must be a valid VkDevice handle

- VUID-vkDestroyBuffer-buffer-parameter
  
  If buffer is not VK_NULL_HANDLE, buffer must be a valid VkBuffer handle

- VUID-vkDestroyBuffer-pAllocator-parameter
  
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroyBuffer-buffer-parent
  
  If buffer is a valid handle, it must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to buffer must be externally synchronized

12.2. Buffer Views

A buffer view represents a contiguous range of a buffer and a specific format to be used to interpret the data. Buffer views are used to enable shaders to access buffer contents using image operations. In order to create a valid buffer view, the buffer must have been created with at least one of the following usage flags:

- VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT
- VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT

Buffer views are represented by VkBufferView handles:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferView)
```

To create a buffer view, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkCreateBufferView(
    VkDevice device,
    const VkBufferViewCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkBufferView* pView);
```
• **device** is the logical device that creates the buffer view.

• **pCreateInfo** is a pointer to a `VkBufferViewCreateInfo` structure containing parameters to be used to create the buffer view.

• **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

• **pView** is a pointer to a `VkBufferView` handle in which the resulting buffer view object is returned.

---

### Valid Usage (Implicit)

- **VUID-vkCreateBufferView-device-parameter**
  
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkCreateBufferView-pCreateInfo-parameter**
  
  `pCreateInfo` **must** be a valid pointer to a valid `VkBufferViewCreateInfo` structure

- **VUID-vkCreateBufferView-pAllocator-parameter**
  
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- **VUID-vkCreateBufferView-pView-parameter**
  
  `pView` **must** be a valid pointer to a `VkBufferView` handle

---

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

---

The `VkBufferViewCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkBufferViewCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkBufferViewCreateFlags flags;
    VkBuffer buffer;
    VkFormat format;
    VkDeviceSize offset;
    VkDeviceSize range;
} VkBufferViewCreateInfo;
```

- **sType** is a `VkStructureType` value identifying this structure.

- **pNext** is `NULL` or a pointer to a structure extending this structure.
• flags is reserved for future use.
• buffer is a VkBuffer on which the view will be created.
• format is a VkFormat describing the format of the data elements in the buffer.
• offset is an offset in bytes from the base address of the buffer. Accesses to the buffer view from shaders use addressing that is relative to this starting offset.
• range is a size in bytes of the buffer view. If range is equal to VK_WHOLE_SIZE, the range from offset to the end of the buffer is used. If VK_WHOLE_SIZE is used and the remaining size of the buffer is not a multiple of the texel block size of format, the nearest smaller multiple is used.

The buffer view has a buffer view usage identifying which descriptor types can be created from it. This usage can be defined by including the VkBufferUsageFlagsCreateInfoKHR structure in the pNext chain, and specifying the usage value there. If this structure is not included, it is equal to the VkBufferCreateInfo::usage value used to create buffer.

### Valid Usage

- VUID-VkBufferViewCreateInfo-offset-00925
  offset must be less than the size of buffer
- VUID-VkBufferViewCreateInfo-range-00928
  If range is not equal to VK_WHOLE_SIZE, range must be greater than 0
- VUID-VkBufferViewCreateInfo-range-00929
  If range is not equal to VK_WHOLE_SIZE, range must be an integer multiple of the texel block size of format
- VUID-VkBufferViewCreateInfo-range-00930
  If range is not equal to VK_WHOLE_SIZE, the number of texel buffer elements given by (\(\text{size} - \text{offset}\) / (texel block size)) \(\times\) (texels per block)) where size is the size of buffer, and texel block size and texels per block are as defined in the Compatible Formats table for format, must be less than or equal to VkPhysicalDeviceLimits::maxTexelBufferElements
- VUID-VkBufferViewCreateInfo-offset-00931
  If range is not equal to VK_WHOLE_SIZE, the sum of offset and range must be less than or equal to the size of buffer
- VUID-VkBufferViewCreateInfo-range-04059
  If range is equal to VK_WHOLE_SIZE, the number of texel buffer elements given by (\(\text{size} - \text{offset}\) / (texel block size)) \(\times\) (texels per block)) where size is the size of buffer, and texel block size and texels per block are as defined in the Compatible Formats table for format, must be less than or equal to VkPhysicalDeviceLimits::maxTexelBufferElements
- VUID-VkBufferViewCreateInfo-buffer-00932
  buffer must have been created with a usage value containing at least one of VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT or VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT
- VUID-VkBufferViewCreateInfo-format-08778
  If the buffer view usage contains VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT, then format features of format must contain VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT
- VUID-VkBufferViewCreateInfo-format-08779
If the buffer view usage contains VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT, then format features of format must contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT

- VUID-VkBufferViewCreateInfo-buffer-00935
  If buffer is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkBufferViewCreateInfo-offset-02749
  If the texelBufferAlignment feature is not enabled, offset must be a multiple of VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment

- VUID-VkBufferViewCreateInfo-buffer-02750
  If the texelBufferAlignment feature is enabled and if buffer was created with usage containing VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT, offset must be a multiple of the lesser of VkPhysicalDeviceTexelBufferAlignmentProperties::storageTexelBufferOffsetAlignmentBytes or, if VkPhysicalDeviceTexelBufferAlignmentProperties::storageTexelBufferOffsetSingleTexelAlignment is VK_TRUE, the size of a texel of the requested format. If the size of a texel is a multiple of three bytes, then the size of a single component of format is used instead

- VUID-VkBufferViewCreateInfo-buffer-02751
  If the texelBufferAlignment feature is enabled and if buffer was created with usage containing VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT, offset must be a multiple of the lesser of VkPhysicalDeviceTexelBufferAlignmentProperties::uniformTexelBufferOffsetAlignmentBytes or, if VkPhysicalDeviceTexelBufferAlignmentProperties::uniformTexelBufferOffsetSingleTexelAlignment is VK_TRUE, the size of a texel of the requested format. If the size of a texel is a multiple of three bytes, then the size of a single component of format is used instead

- VUID-VkBufferViewCreateInfo-pNext-06782
  If the pNext chain includes a VkExportMetalObjectCreateInfoEXT structure, its exportObjectType member must be VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT

- VUID-VkBufferViewCreateInfo-pNext-08780
  If the pNext chain includes a VkBufferUsageFlags2CreateInfoKHR, its usage must not contain any other bit than VK_BUFFER_USAGE_2_UNIFORM_TEXEL_BUFFER_BIT_KHR or VK_BUFFER_USAGE_2_STORAGE_TEXEL_BUFFER_BIT_KHR

- VUID-VkBufferViewCreateInfo-pNext-08781
  If the pNext chain includes a VkBufferUsageFlags2CreateInfoKHR, its usage must be a subset of the VkBufferCreateInfo::usage specified or VkBufferUsageFlags2CreateInfoKHR::usage from VkBufferCreateInfo::pNext when creating buffer

### Valid Usage (Implicit)

- VUID-VkBufferViewCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_BUFFER_VIEW_CREATE_INFO

- VUID-VkBufferViewCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkBufferUsageFlags2CreateInfoKHR or
 VkExportMetalObjectCreateInfoEXT

- VUID-VkBufferViewCreateInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique, with the exception of structures of type VkExportMetalObjectCreateInfoEXT

- VUID-VkBufferViewCreateInfo-flags-zerobitmask
  flags must be 0

- VUID-VkBufferViewCreateInfo-buffer-parameter
  buffer must be a valid VkBuffer handle

- VUID-VkBufferViewCreateInfo-format-parameter
  format must be a valid VkFormat value

// Provided by VK_VERSION_1_0
typedef VkFlags VkBufferViewCreateFlags;

VkBufferViewCreateFlags is a bitmask type for setting a mask, but is currently reserved for future use.

To destroy a buffer view, call:

// Provided by VK_VERSION_1_0
void vkDestroyBufferView(
  VkDevice device,
  VkBufferView bufferView,
  const VkAllocationCallbacks* pAllocator);

- device is the logical device that destroys the buffer view.
- bufferView is the buffer view to destroy.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyBufferView-bufferView-00936
  All submitted commands that refer to bufferView must have completed execution

- VUID-vkDestroyBufferView-bufferView-00937
  If VkAllocationCallbacks were provided when bufferView was created, a compatible set of callbacks must be provided here

- VUID-vkDestroyBufferView-bufferView-00938
  If no VkAllocationCallbacks were provided when bufferView was created, pAllocator must be NULL
Valid Usage (Implicit)

- VUID-vkDestroyBufferView-device-parameter
device must be a valid VkDevice handle

- VUID-vkDestroyBufferView-bufferView-parameter
  If bufferView is not VK_NULL_HANDLE, bufferView must be a valid VkBufferView handle

- VUID-vkDestroyBufferView-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroyBufferView-bufferView-parent
  If bufferView is a valid handle, it must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to bufferView must be externally synchronized

12.2.1. Buffer View Format Features

Valid uses of a VkBufferView may depend on the buffer view’s format features, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the VK_KHR_format_feature_flags2 extension is supported, then the buffer view’s set of format features is the value of VkFormatProperties3::bufferFeatures found by calling vkGetPhysicalDeviceFormatProperties2 on the same format as VkBufferViewCreateInfo::format.

12.3. Images

Images represent multidimensional - up to 3 - arrays of data which can be used for various purposes (e.g. attachments, textures), by binding them to a graphics or compute pipeline via descriptor sets, or by directly specifying them as parameters to certain commands.

Images are represented by VkImage handles:

    // Provided by VK_VERSION_1_0
    VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImage)

To create images, call:

    // Provided by VK_VERSION_1_0
    VkResult vkCreateImage(
        VkDevice device,
const VkImageCreateInfo* pCreateInfo,
const VkAllocationCallbacks* pAllocator,
VkImage* pImage);

- **device** is the logical device that creates the image.
- **pCreateInfo** is a pointer to a VkImageCreateInfo structure containing parameters to be used to create the image.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.
- **pImage** is a pointer to a VkImage handle in which the resulting image object is returned.

### Valid Usage

- **VUID-vkCreateImage-flags-00939**
  If the flags member of pCreateInfo includes VK_IMAGE_CREATE_SPARSE_BINDING_BIT, and the extendedSparseAddressSpace feature is not enabled, creating this VkImage must not cause the total required sparse memory for all currently valid sparse resources on the device to exceed VkPhysicalDeviceLimits::sparseAddressSpaceSize

- **VUID-vkCreateImage-flags-09385**
  If the flags member of pCreateInfo includes VK_IMAGE_CREATE_SPARSE_BINDING_BIT, the extendedSparseAddressSpace feature is enabled, and the usage member of pCreateInfo contains bits not in VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags, creating this VkImage must not cause the total required sparse memory for all currently valid sparse resources on the device, excluding VkBuffer created with usage member of pCreateInfo containing bits in VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseBufferUsageFlags and VkImage created with usage member of pCreateInfo containing bits in VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseImageUsageFlags, to exceed VkPhysicalDeviceLimits::sparseAddressSpaceSize

- **VUID-vkCreateImage-flags-09386**
  If the flags member of pCreateInfo includes VK_IMAGE_CREATE_SPARSE_BINDING_BIT and the extendedSparseAddressSpace feature is enabled, creating this VkImage must not cause the total required sparse memory for all currently valid sparse resources on the device to exceed VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV::extendedSparseAddressSpaceSize

- **VUID-vkCreateImage-pNext-06389**
  If a VkBufferCollectionImageCreateInfoFUCHSIA has been chained to pNext, pCreateInfo must match the Sysmem chosen VkImageCreateInfo excepting members VkImageCreateInfo::extent and VkImageCreateInfo::usage in the match criteria

### Valid Usage (Implicit)

- **VUID-vkCreateImage-device-parameter**
  device must be a valid VkDevice handle

1006
pCreateInfo must be a valid pointer to a valid VkImageCreateInfo structure

If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

pImage must be a valid pointer to a VkImage handle

**Return Codes**

**Success**

- VK_SUCCESS

**Failure**

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_COMPRESSION_EXHAUSTED_EXT
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR

The VkImageCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageCreateInfo {
    VkStructureType     sType;
    const void*         pNext;
    VkImageCreateFlags  flags;
    VkImageType         imageType;
    VkFormat            format;
    VkExtent3D          extent;
    uint32_t            mipLevels;
    uint32_t            arrayLayers;
    VkSampleCountFlagBits samples;
    VkImageTiling       tiling;
    VkImageUsageFlags   usage;
    VkSharingMode       sharingMode;
    uint32_t            queueFamilyIndexCount;
    const uint32_t*     pQueueFamilyIndices;
    VkImageLayout       initialLayout;
} VkImageCreateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkImageCreateFlagBits describing additional parameters of the image.
- **imageType** is a `VkImageType` value specifying the basic dimensionality of the image. Layers in array textures do not count as a dimension for the purposes of the image type.

- **format** is a `VkFormat` describing the format and type of the texel blocks that will be contained in the image.

- **extent** is a `VkExtent3D` describing the number of data elements in each dimension of the base level.

- **mipLevels** describes the number of levels of detail available for minified sampling of the image.

- **arrayLayers** is the number of layers in the image.

- **samples** is a `VkSampleCountFlagBits` value specifying the number of samples per texel.

- **tiling** is a `VkImageTiling` value specifying the tiling arrangement of the texel blocks in memory.

- **usage** is a bitmask of `VkImageUsageFlagBits` describing the intended usage of the image.

- **sharingMode** is a `VkSharingMode` value specifying the sharing mode of the image when it will be accessed by multiple queue families.

- **queueFamilyIndexCount** is the number of entries in the `pQueueFamilyIndices` array.

- **pQueueFamilyIndices** is a pointer to an array of queue families that will access this image. It is ignored if `sharingMode` is not `VK_SHARING_MODE_CONCURRENT`.

- **initialLayout** is a `VkImageLayout` value specifying the initial `VkImageLayout` of all image subresources of the image. See Image Layouts.

Images created with `tiling` equal to `VK_IMAGE_TILING_LINEAR` have further restrictions on their limits and capabilities compared to images created with `tiling` equal to `VK_IMAGE_TILING_OPTIMAL`. Creation of images with `tiling` `VK_IMAGE_TILING_LINEAR` may not be supported unless other parameters meet all of the constraints:

- **imageType** is `VK_IMAGE_TYPE_2D`
- **format** is not a depth/stencil format
- **mipLevels** is 1
- **arrayLayers** is 1
- **samples** is `VK_SAMPLE_COUNT_1_BIT`
- **usage** only includes `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and/or `VK_IMAGE_USAGE_TRANSFER_DST_BIT`

Images created with one of the formats that require a sampler Y’CbCr conversion, have further restrictions on their limits and capabilities compared to images created with other formats. Creation of images with a format requiring Y’CbCr conversion may not be supported unless other parameters meet all of the constraints:

- **imageType** is `VK_IMAGE_TYPE_2D`
- **mipLevels** is 1
- **arrayLayers** is 1, unless the `ycbcrImageArrays` feature is enabled, or otherwise indicated by `VkImageFormatProperties::maxArrayLayers`, as returned by `vkGetPhysicalDeviceImageFormatProperties`
*samples is VK_SAMPLE_COUNT_1_BIT*

Implementations may support additional limits and capabilities beyond those listed above.

To determine the set of valid usage bits for a given format, call `vkGetPhysicalDeviceFormatProperties`.

If the size of the resultant image would exceed `maxResourceSize`, then `vkCreateImage` must fail and return `VK_ERROR_OUT_OF_DEVICE_MEMORY`. This failure may occur even when all image creation parameters satisfy their valid usage requirements.

If the implementation reports `VK_TRUE` in `VkPhysicalDeviceHostImageCopyPropertiesEXT::identicalMemoryTypeRequirements`, usage of `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` must not affect the memory type requirements of the image as described in Sparse Resource Memory Requirements and Resource Memory Association.

**Note**

For images created without `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` a usage bit is valid if it is supported for the format the image is created with.

For images created with `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT` a usage bit is valid if it is supported for at least one of the formats a `VkImageView` created from the image can have (see Image Views for more detail).

---

**Image Creation Limits**

Valid values for some image creation parameters are limited by a numerical upper bound or by inclusion in a bitset. For example, `VkImageCreateInfo::arrayLayers` is limited by `imageCreateMaxArrayLayers`, defined below; and `VkImageCreateInfo::samples` is limited by `imageCreateSampleCounts`, also defined below.

Several limiting values are defined below, as well as assisting values from which the limiting values are derived. The limiting values are referenced by the relevant valid usage statements of `VkImageCreateInfo`.

- Let `uint64_t imageCreateDrmFormatModifiers[]` be the set of Linux DRM format modifiers that the resultant image may have.
  - If tiling is not `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `imageCreateDrmFormatModifiers` is empty.
  - If `VkImageCreateInfo::pNext` contains `VkImageDrmFormatModifierExplicitCreateInfoEXT`, then `imageCreateDrmFormatModifiers` contains exactly one modifier, `VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier`.
  - If `VkImageCreateInfo::pNext` contains `VkImageDrmFormatModifierListCreateInfoEXT`, then `imageCreateDrmFormatModifiers` contains the entire array `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`.
- Let `VkBool32 imageCreateMaybeLinear` indicate if the resultant image may be linear.
• If tiling is VK_IMAGE_TILING_LINEAR, then imageCreateMaybeLinear is VK_TRUE.

• If tiling is VK_IMAGE_TILING_OPTIMAL, then imageCreateMaybeLinear is VK_FALSE.

• If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then imageCreateMaybeLinear is VK_TRUE if and only if imageCreateDrmFormatModifiers contains DRM_FORMAT_MOD_LINEAR.

Let VkFormatFeatureFlags imageCreateFormatFeatures be the set of valid format features available during image creation.

• If tiling is VK_IMAGE_TILING_LINEAR, then imageCreateFormatFeatures is the value of VkFormatProperties::linearTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties with parameter format equal to VkImageCreateInfo::format.

• If tiling is VK_IMAGE_TILING_OPTIMAL, and if the pNext chain includes no VkExternalFormatANDROID or VkExternalFormatQNX structure with non-zero externalFormat, then imageCreateFormatFeatures is the value of VkFormatProperties::optimalTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties with parameter format equal to VkImageCreateInfo::format.

• If tiling is VK_IMAGE_TILING_OPTIMAL, and if the pNext chain includes a VkExternalFormatANDROID structure with non-zero externalFormat, then imageCreateFormatFeatures is the value of VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures obtained by vkGetAndroidHardwareBufferPropertiesANDROID with a matching externalFormat value.

• If tiling is VK_IMAGE_TILING_OPTIMAL, and if the pNext chain includes a VkExternalFormatQNX structure with non-zero externalFormat, then imageCreateFormatFeatures is the value of VkScreenBufferFormatPropertiesQNX::formatFeatures obtained by vkGetScreenBufferPropertiesQNX with a matching externalFormat value.

• If the pNext chain includes a VkBufferCollectionImageCreateInfoFUCHSIA structure, then imageCreateFormatFeatures is the value of VkBufferCollectionFormatProperties2::formatFeatures found by calling vkGetBufferCollectionPropertiesFUCHSIA with a parameter collection equal to VkBufferCollectionImageCreateInfoFUCHSIA::collection.

• If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the value of imageCreateFormatFeatures is found by calling vkGetPhysicalDeviceFormatProperties2 with VkImageFormatProperties::format equal to VkImageCreateInfo::format and with VkDrmFormatModifierPropertiesListEXT chained into VkFormatProperties2; by collecting all members of the returned array VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties whose drmFormatModifier belongs to imageCreateDrmFormatModifiers; and by taking the bitwise intersection, over the collected array members, of drmFormatModifierTilingFeatures. (The resultant imageCreateFormatFeatures may be empty).

Let VkImageFormatProperties2 imageCreateImageFormatPropertiesList[] be defined as follows.

• If VkImageCreateInfo::pNext contains no VkExternalFormatANDROID or
 VkExternalFormatQNX structure with non-zero externalFormat, then
imageCreateImageFormatPropertiesList is the list of structures obtained by calling
vkGetPhysicalDeviceImageFormatProperties2, possibly multiple times, as follows:

- The parameters VkPhysicalDeviceImageFormatInfo2::format, imageType, tiling,
  usage, and flags must be equal to those in VkImageCreateInfo.

- If VkImageCreateInfo::pNext contains a VkExternalMemoryImageCreateInfo
  structure whose handleTypes is not 0, then VkPhysicalDeviceImageFormatInfo2
  ::pNext must contain a VkPhysicalDeviceExternalImageFormatInfo structure
  whose handleType is not 0; and vkGetPhysicalDeviceImageFormatProperties2 must
  be called for each handle type in VkExternalMemoryImageCreateInfo::handleTypes,
successively setting VkPhysicalDeviceExternalImageFormatInfo::handleType on
each call.

- If VkImageCreateInfo::pNext contains no VkExternalMemoryImageCreateInfo
  structure, or contains a structure whose handleTypes is 0, then
  VkPhysicalDeviceImageFormatInfo2::pNext must either contain no
  VkPhysicalDeviceExternalImageFormatInfo structure, or contain a structure
  whose handleType is 0.

- If VkImageCreateInfo::pNext contains a VkVideoProfileListInfoKHR structure then
  VkPhysicalDeviceImageFormatInfo2::pNext must also contain the same
  VkVideoProfileListInfoKHR structure on each call.

- If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then:
  - VkPhysicalDeviceImageFormatInfo2::pNext must contain a
    VkPhysicalDeviceImageDrmFormatModifierInfoEXT structure where
    sharingMode is equal to VkImageCreateInfo::sharingMode;
  - if sharingMode is VK_SHARING_MODE_CONCURRENT, then queueFamilyIndexCount and
    pQueueFamilyIndices must be equal to those in VkImageCreateInfo;
  - if flags contains VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, then the
    VkImageFormatListCreateInfo structure included in the pNext chain of
    VkPhysicalDeviceImageFormatInfo2 must be equivalent to the one included in
    the pNext chain of VkImageCreateInfo;
  - if VkImageCreateInfo::pNext contains a VkImageCompressionControlEXT
    structure, then the VkPhysicalDeviceImageFormatInfo2::pNext chain must
    contain an equivalent structure;
  - vkGetPhysicalDeviceImageFormatProperties2 must be called for each modifier
    in imageCreateDrmFormatModifiers, successively setting
    VkPhysicalDeviceImageDrmFormatModifierInfoEXT::drmFormatModifier on
    each call.

- If tiling is not VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then
  VkPhysicalDeviceImageFormatInfo2::pNext must contain no
  VkPhysicalDeviceImageDrmFormatModifierInfoEXT structure.

- If any call to vkGetPhysicalDeviceImageFormatProperties2 returns an error, then
  imageCreateImageFormatPropertiesList is defined to be the empty list.

- If VkImageCreateInfo::pNext contains a VkExternalFormatANDROID structure with
non-zero externalFormat, then `imageCreateImageFormatPropertiesList` contains a single element where:

- `VkImageFormatProperties::maxMipLevels` is \( \log_2(\max(\text{extent.width}, \text{extent.height}, \text{extent.depth})) \) + 1.
- `VkImageFormatProperties::maxArrayLayers` is `VkPhysicalDeviceLimits::maxArrayLayers`.
- Each component of `VkImageFormatProperties::maxExtent` is `VkPhysicalDeviceLimits::maxImageDimension2D`.
- `VkImageFormatProperties::sampleCounts` contains exactly `VK_SAMPLE_COUNT_1_BIT`.

- Let `uint32_t imageCreateMaxMipLevels` be the minimum value of `VkImageFormatProperties::maxMipLevels` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `uint32_t imageCreateMaxArrayLayers` be the minimum value of `VkImageFormatProperties::maxArrayLayers` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkExtent3D imageCreateMaxExtent` be the component-wise minimum over all `VkImageFormatProperties::maxExtent` values in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.
- Let `VkSampleCountFlags imageCreateSampleCounts` be the intersection of each `VkImageFormatProperties::sampleCounts` in `imageCreateImageFormatPropertiesList`. The value is undefined if `imageCreateImageFormatPropertiesList` is empty.

- Let `VkVideoFormatPropertiesKHR videoFormatProperties[]` be defined as follows.
  - If `VkImageCreateInfo::pNext` contains a `VkVideoProfileListInfoKHR` structure, then `videoFormatProperties` is the list of structures obtained by calling `vkGetPhysicalDeviceVideoFormatPropertiesKHR` with `VkPhysicalDeviceVideoFormatInfoKHR::imageUsage` equal to the `usage` member of `VkImageCreateInfo` and `VkPhysicalDeviceVideoFormatInfoKHR::pNext` containing the same `VkVideoProfileListInfoKHR` structure chained to `VkImageCreateInfo`.
  - If `VkImageCreateInfo::pNext` contains no `VkVideoProfileListInfoKHR` structure, then `videoFormatProperties` is an empty list.

- Let `VkBool32 supportedVideoFormat` indicate if the image parameters are supported by the specified video profiles.
  - `supportedVideoFormat` is `VK_TRUE` if there exists an element in the `videoFormatProperties` list for which all of the following conditions are true:
    - `VkImageCreateInfo::format` equals `VkVideoFormatPropertiesKHR::format`.
    - `VkImageCreateInfo::flags` only contains bits also set in `VkVideoFormatPropertiesKHR::imageCreateFlags`.
    - `VkImageCreateInfo::imageType` equals `VkVideoFormatPropertiesKHR::imageType`.
    - `VkImageCreateInfo::tiling` equals `VkVideoFormatPropertiesKHR::imageTiling`.
    - `VkImageCreateInfo::usage` only contains bits also set in `VkVideoFormatPropertiesKHR::imageUsageFlags`. 
Otherwise supportedVideoFormat is VK_FALSE.

Valid Usage

• VUID-VkImageCreateInfo-imageCreateMaxMipLevels-02251
  Each of the following values (as described in Image Creation Limits) must not be undefined: imageCreateMaxMipLevels, imageCreateMaxArrayLayers, imageCreateMaxExtent, and imageCreateSampleCounts

• VUID-VkImageCreateInfo-sharingMode-00941
  If sharingMode is VK_SHARING_MODE_CONCURRENT, pQueueFamilyIndices must be a valid pointer to an array of queueFamilyIndexCount uint32_t values

• VUID-VkImageCreateInfo-sharingMode-00942
  If sharingMode is VK_SHARING_MODE_CONCURRENT, queueFamilyIndexCount must be greater than 1

• VUID-VkImageCreateInfo-sharingMode-01420
  If sharingMode is VK_SHARING_MODE_CONCURRENT, each element of pQueueFamilyIndices must be unique and must be less than pQueueFamilyPropertyCount returned by either vkGetPhysicalDeviceQueueFamilyProperties or vkGetPhysicalDeviceQueueFamilyProperties2 for the physicalDevice that was used to create device

• VUID-VkImageCreateInfo-pNext-01974
  If the pNext chain includes a VkExternalFormatANDROID structure, and its externalFormat member is non-zero the format must be VK_FORMAT_UNDEFINED

• VUID-VkImageCreateInfo-pNext-01975
  If the pNext chain does not include a VkExternalFormatANDROID structure, or does and its externalFormat member is 0, the format must not be VK_FORMAT_UNDEFINED

• VUID-VkImageCreateInfo-extent-00944
  extent.width must be greater than 0

• VUID-VkImageCreateInfo-extent-00945
  extent.height must be greater than 0

• VUID-VkImageCreateInfo-extent-00946
  extent.depth must be greater than 0

• VUID-VkImageCreateInfo-mipLevels-00947
  mipLevels must be greater than 0

• VUID-VkImageCreateInfo-arrayLayers-00948
  arrayLayers must be greater than 0

• VUID-VkImageCreateInfo-flags-00949
  If flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, imageType must be VK_IMAGE_TYPE_2D

• VUID-VkImageCreateInfo-flags-08865
  If flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, extent.width and extent.height must be equal
• VUID-VkImageCreateInfo-flags-08866
  If flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT, arrayLayers must be greater than or equal to 6

• VUID-VkImageCreateInfo-flags-02557
  If flags contains VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT, imageType must be VK_IMAGE_TYPE_2D

• VUID-VkImageCreateInfo-flags-00950
  If flags contains VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT, imageType must be VK_IMAGE_TYPE_3D

• VUID-VkImageCreateInfo-flags-09403
  If flags contains VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT, flags must not include VK_IMAGE_CREATE_SPARSE_ALIASED_BIT, VK_IMAGE_CREATE_SPARSE_BINDING_BIT, or VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-flags-07755
  If flags contains VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT, imageType must be VK_IMAGE_TYPE_3D

• VUID-VkImageCreateInfo-extent-02252
  extent.width must be less than or equal to imageCreateMaxExtent.width (as defined in Image Creation Limits)

• VUID-VkImageCreateInfo-extent-02253
  extent.height must be less than or equal to imageCreateMaxExtent.height (as defined in Image Creation Limits)

• VUID-VkImageCreateInfo-extent-02254
  extent.depth must be less than or equal to imageCreateMaxExtent.depth (as defined in Image Creation Limits)

• VUID-VkImageCreateInfo-imageType-00956
  If imageType is VK_IMAGE_TYPE_1D, both extent.height and extent.depth must be 1

• VUID-VkImageCreateInfo-imageType-00957
  If imageType is VK_IMAGE_TYPE_2D, extent.depth must be 1

• VUID-VkImageCreateInfo-mipLevels-00958
  mipLevels must be less than or equal to the number of levels in the completeipmap chain based on extent.width, extent.height, and extent.depth

• VUID-VkImageCreateInfo-mipLevels-02255
  mipLevels must be less than or equal to imageCreateMaxMipLevels (as defined in Image Creation Limits)

• VUID-VkImageCreateInfo-arrayLayers-02256
  arrayLayers must be less than or equal to imageCreateMaxArrayLayers (as defined in Image Creation Limits)

• VUID-VkImageCreateInfo-imageType-00961
  If imageType is VK_IMAGE_TYPE_3D, arrayLayers must be 1

• VUID-VkImageCreateInfo-samples-02257
  If samples is not VK_SAMPLE_COUNT_1_BIT, then imageType must be VK_IMAGE_TYPE_2D, flags
must not contain \texttt{VK\_IMAGE\_CREATE\_CUBE\_COMPATIBLE\_BIT}, \texttt{mipLevels} must be equal to 1, and \texttt{imageCreateMaybeLinear} (as defined in \textit{Image Creation Limits}) must be \texttt{VK\_FALSE},

- **VUID-VkImageCreateInfo-samples-02558**
  If \texttt{samples} is not \texttt{VK\_SAMPLE\_COUNT\_1\_BIT}, \texttt{usage} must not contain \texttt{VK\_IMAGE\_USAGE\_FRAME\_DENSITY\_MAP\_BIT\_EXT}

- **VUID-VkImageCreateInfo-usage-00963**
  If \texttt{usage} includes \texttt{VK\_IMAGE\_USAGE\_TRANSIENT\_ATTACHMENT\_BIT}, then bits other than \texttt{VK\_IMAGE\_USAGE\_COLOR\_ATTACHMENT\_BIT}, \texttt{VK\_IMAGE\_USAGE\_DEPTH\_STENCIL\_ATTACHMENT\_BIT}, and \texttt{VK\_IMAGE\_USAGE\_INPUT\_ATTACHMENT\_BIT} must not be set

- **VUID-VkImageCreateInfo-usage-00964**
  If \texttt{usage} includes \texttt{VK\_IMAGE\_USAGE\_COLOR\_ATTACHMENT\_BIT}, \texttt{VK\_IMAGE\_USAGE\_DEPTH\_STENCIL\_ATTACHMENT\_BIT}, \texttt{VK\_IMAGE\_USAGE\_TRANSIENT\_ATTACHMENT\_BIT}, or \texttt{VK\_IMAGE\_USAGE\_INPUT\_ATTACHMENT\_BIT}, \texttt{extent.width} must be less than or equal to \texttt{VkPhysicalDeviceLimits::maxFramebufferWidth}

- **VUID-VkImageCreateInfo-usage-00965**
  If \texttt{usage} includes \texttt{VK\_IMAGE\_USAGE\_COLOR\_ATTACHMENT\_BIT}, \texttt{VK\_IMAGE\_USAGE\_DEPTH\_STENCIL\_ATTACHMENT\_BIT}, \texttt{VK\_IMAGE\_USAGE\_TRANSIENT\_ATTACHMENT\_BIT}, or \texttt{VK\_IMAGE\_USAGE\_INPUT\_ATTACHMENT\_BIT}, \texttt{extent.height} must be less than or equal to \texttt{VkPhysicalDeviceLimits::maxFramebufferHeight}

- **VUID-VkImageCreateInfo-fragmentDensityMapOffset-06514**
  If the \texttt{fragmentDensityMapOffset} feature is not enabled and \texttt{usage} includes \texttt{VK\_IMAGE\_USAGE\_FRAME\_DENSITY\_MAP\_BIT\_EXT}, \texttt{extent.width} must be less than or equal to \[
\frac{\text{maxFramebufferWidth}}{\text{minFragmentDensityTexelSize.width}}
\]

- **VUID-VkImageCreateInfo-fragmentDensityMapOffset-06515**
  If the \texttt{fragmentDensityMapOffset} feature is not enabled and \texttt{usage} includes \texttt{VK\_IMAGE\_USAGE\_FRAME\_DENSITY\_MAP\_BIT\_EXT}, \texttt{extent.height} must be less than or equal to \[
\frac{\text{maxFramebufferHeight}}{\text{minFragmentDensityTexelSize.height}}
\]

- **VUID-VkImageCreateInfo-usage-00966**
  If \texttt{usage} includes \texttt{VK\_IMAGE\_USAGE\_TRANSIENT\_ATTACHMENT\_BIT}, \texttt{usage} must also contain at least one of \texttt{VK\_IMAGE\_USAGE\_COLOR\_ATTACHMENT\_BIT}, \texttt{VK\_IMAGE\_USAGE\_DEPTH\_STENCIL\_ATTACHMENT\_BIT}, or \texttt{VK\_IMAGE\_USAGE\_INPUT\_ATTACHMENT\_BIT}

- **VUID-VkImageCreateInfo-samples-02258**
  \texttt{samples} must be a valid \texttt{VkSampleCountFlagBits} value that is set in \texttt{imageCreateSampleCounts} (as defined in \textit{Image Creation Limits})

- **VUID-VkImageCreateInfo-usage-00968**
  If the \texttt{shaderStorageImageMultisample} feature is not enabled, and \texttt{usage} contains \texttt{VK\_IMAGE\_USAGE\_STORAGE\_BIT}, \texttt{samples} must be \texttt{VK\_SAMPLE\_COUNT\_1\_BIT}

- **VUID-VkImageCreateInfo-flags-00969**
  If the \texttt{sparseBinding} feature is not enabled, \texttt{flags} must not contain \texttt{VK\_IMAGE\_CREATE\_SPARSE\_BINDING\_BIT}

- **VUID-VkImageCreateInfo-flags-01924**
  If the \texttt{sparseResidencyAliased} feature is not enabled, \texttt{flags} must not contain \texttt{VK\_IMAGE\_CREATE\_SPARSE\_ALIASED\_BIT}
• VUID-VkImageCreateInfo-tiling-04121
   If tiling is VK_IMAGE_TILING_LINEAR, flags must not contain
   VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00970
   If imageType is VK_IMAGE_TYPE_1D, flags must not contain
   VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00971
   If the sparseResidencyImage2D feature is not enabled, and imageType is VK_IMAGE_TYPE_2D,
   flags must not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00972
   If the sparseResidencyImage3D feature is not enabled, and imageType is VK_IMAGE_TYPE_3D,
   flags must not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00973
   If the sparseResidency2Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and
   samples is VK_SAMPLE_COUNT_2_BIT, flags must not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00974
   If the sparseResidency4Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and
   samples is VK_SAMPLE_COUNT_4_BIT, flags must not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00975
   If the sparseResidency8Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and
   samples is VK_SAMPLE_COUNT_8_BIT, flags must not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-imageType-00976
   If the sparseResidency16Samples feature is not enabled, imageType is VK_IMAGE_TYPE_2D, and
   samples is VK_SAMPLE_COUNT_16_BIT, flags must not contain VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkImageCreateInfo-flags-00987
   If flags contains VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT or
   VK_IMAGE_CREATE_SPARSE_ALIASED_BIT, it must also contain
   VK_IMAGE_CREATE_SPARSE_BINDING_BIT

• VUID-VkImageCreateInfo-None-01925
   If any of the bits VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT are set,
   VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT must not also be set

• VUID-VkImageCreateInfo-flags-01890
   If the protectedMemory feature is not enabled, flags must not contain
   VK_IMAGE_CREATE_PROTECTED_BIT

• VUID-VkImageCreateInfo-None-01891
   If any of the bits VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT are set,
   VK_IMAGE_CREATE_PROTECTED_BIT must not also be set
If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, it must not contain a `VkExternalMemoryImageCreateInfo` structure.

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure, its `handleTypes` member must only contain bits that are also in `VkExternalImageFormatProperties::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceImageFormatProperties2` with format, imageType, tiling, usage, and flags equal to those in this structure, and with a `VkPhysicalDeviceExternalImageFormatInfo` structure included in the `pNext` chain, with a `handleType` equal to any one of the handle types specified in `VkExternalMemoryImageCreateInfo::handleTypes`.

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, its `handleTypes` member must only contain bits that are also in `VkExternalImageFormatPropertiesNV::externalMemoryProperties.compatibleHandleTypes`, as returned by `vkGetPhysicalDeviceExternalImageFormatPropertiesNV` with format, imageType, tiling, usage, and flags equal to those in this structure, and with `externalHandleType` equal to any one of the handle types specified in `VkExternalMemoryImageCreateInfoNV::handleTypes`.

If the logical device was created with `VkDeviceGroupDeviceCreateInfo::physicalDeviceCount` equal to 1, `flags` must not contain `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT`.

If `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, then `format` must be a compressed image format.

If `flags` contains `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT`, then `flags` must also contain `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`.

`initialLayout` must be `VK_IMAGE_LAYOUT_UNDEFINED` or `VK_IMAGE_LAYOUT_PREINITIALIZED`.

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` or `VkExternalMemoryImageCreateInfoNV` structure whose `handleTypes` member is not 0, `initialLayout` must be `VK_IMAGE_LAYOUT_UNDEFINED`.

If the image `format` is one of the formats that require a `Y’C_uC_v` conversion, `mipLevels` must be 1.

If the image `format` is one of the formats that require a sampler `Y’C_uC_v` conversion, `mipLevels` must be 1.
If the image format is one of the formats that require a sampler Y’C₆C₉ conversion, samples must be VK_SAMPLE_COUNT_1_BIT

- VUID-VkImageCreateInfo-format-06412
  If the image format is one of the formats that require a sampler Y’C₆C₉ conversion, imageType must be VK_IMAGE_TYPE_2D

- VUID-VkImageCreateInfo-imageCreateFormatFeatures-02260
  If format is a multi-planar format, and if imageCreateFormatFeatures (as defined in Image Creation Limits) does not contain VK_FORMAT_FEATURE_DISJOINT_BIT, then flags must not contain VK_IMAGE_CREATE_DISJOINT_BIT

- VUID-VkImageCreateInfo-imageCreateFormatInfo-format-01577
  If format is not a multi-planar format, and flags does not include VK_IMAGE_CREATE_ALIAS_BIT, flags must not contain VK_IMAGE_CREATE_DISJOINT_BIT

- VUID-VkImageCreateInfo-format-04712
  If format has a _422 or _420 suffix, width must be a multiple of 2

- VUID-VkImageCreateInfo-format-04713
  If format has a _420 suffix, height must be a multiple of 2

- VUID-VkImageCreateInfo-tiling-02261
  If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the pNext chain must include exactly one of VkImageDrmFormatModifierListCreateInfoEXT or VkImageDrmFormatModifierExplicitCreateInfoEXT structures

- VUID-VkImageCreateInfo-pNext-02262
  If the pNext chain includes a VkImageDrmFormatModifierListCreateInfoEXT or VkImageDrmFormatModifierExplicitCreateInfoEXT structure, then tiling must be VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT

- VUID-VkImageCreateInfo-tiling-02353
  If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT and flags contains VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, then the pNext chain must include a VkImageFormatListCreateInfo structure with non-zero viewFormatCount

- VUID-VkImageCreateInfo-flags-01533
  If flags contains VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT format must be a depth or depth/stencil format

- VUID-VkImageCreateInfo-pNext-02393
  If the pNext chain includes a VkExternalMemoryImageCreateInfo structure whose handleTypes member includes VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, imageType must be VK_IMAGE_TYPE_2D

- VUID-VkImageCreateInfo-pNext-02394
  If the pNext chain includes a VkExternalMemoryImageCreateInfo structure whose handleTypes member includes VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID, mipLevels must either be 1 or equal to the number of levels in the complete mipmap chain based on extent.width, extent.height, and extent.depth

- VUID-VkImageCreateInfo-pNext-02396
If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, `flags` must not include `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`

- **VUID-VkImageCreateInfo-pNext-02397**
  If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, `usage` must not include any usages except `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, or `VK_IMAGE_USAGE_SAMPLED_BIT`

- **VUID-VkImageCreateInfo-pNext-09457**
  If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, and `externalFormatResolve` feature is not enabled, `usage` must not include `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` or `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`

- **VUID-VkImageCreateInfo-pNext-02398**
  If the `pNext` chain includes a `VkExternalFormatANDROID` structure whose `externalFormat` member is not 0, `tiling` must be `VK_IMAGE_TILING_OPTIMAL`

- **VUID-VkImageCreateInfo-pNext-08951**
  If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `imageType` must be `VK_IMAGE_TYPE_2D`

- **VUID-VkImageCreateInfo-pNext-08952**
  If the `pNext` chain includes a `VkExternalMemoryImageCreateInfo` structure whose `handleTypes` member includes `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX`, `mipLevels` must either be 1 or equal to the number of levels in the complete mipmap chain based on `extent.width`, `extent.height`, and `extent.depth`

- **VUID-VkImageCreateInfo-pNext-08953**
  If the `pNext` chain includes a `VkExternalFormatQNX` structure whose `externalFormat` member is not 0, `flags` must not include `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`

- **VUID-VkImageCreateInfo-pNext-08954**
  If the `pNext` chain includes a `VkExternalFormatQNX` structure whose `externalFormat` member is not 0, `usage` must not include any usages except `VK_IMAGE_USAGE_SAMPLED_BIT`

- **VUID-VkImageCreateInfo-pNext-08955**
  If the `pNext` chain includes a `VkExternalFormatQNX` structure whose `externalFormat` member is not 0, `tiling` must be `VK_IMAGE_TILING_OPTIMAL`

- **VUID-VkImageCreateInfo-format-02795**
  If `format` is a depth-stencil format, `usage` includes `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member must also include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`

- **VUID-VkImageCreateInfo-format-02796**
  If `format` is a depth-stencil format, `usage` does not include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member must also not include `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`
• VUID-VkImageCreateInfo-format-02797
  If `format` is a depth-stencil format, `usage` includes `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member **must** also include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`.

• VUID-VkImageCreateInfo-format-02798
  If `format` is a depth-stencil format, `usage` does not include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`, and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure, then its `VkImageStencilUsageCreateInfo::stencilUsage` member **must** also not include `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT`.

• VUID-VkImageCreateInfo-Format-02536
  If `Format` is a depth-stencil format and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure with its `stencilUsage` member including `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `extent.width` **must** be less than or equal to `VkPhysicalDeviceLimits::maxFramebufferWidth`.

• VUID-VkImageCreateInfo-Format-02537
  If `Format` is a depth-stencil format and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure with its `stencilUsage` member including `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, `extent.height` **must** be less than or equal to `VkPhysicalDeviceLimits::maxFramebufferHeight`.

• VUID-VkImageCreateInfo-format-02538
  If the `shaderStorageImageMultisample` feature is not enabled, `format` is a depth-stencil format and the `pNext` chain includes a `VkImageStencilUsageCreateInfo` structure with its `stencilUsage` member including `VK_IMAGE_USAGE_STORAGE_BIT`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`.

• VUID-VkImageCreateInfo-flags-02050
  If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`, `imageType` **must** be `VK_IMAGE_TYPE_2D` or `VK_IMAGE_TYPE_3D`.

• VUID-VkImageCreateInfo-flags-02051
  If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`, it **must** not contain `VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT` and the `format` **must** not be a depth/stencil format.

• VUID-VkImageCreateInfo-flags-02052
  If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` and `imageType` is `VK_IMAGE_TYPE_2D`, `extent.width` and `extent.height` **must** be greater than 1.

• VUID-VkImageCreateInfo-flags-02053
  If `flags` contains `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` and `imageType` is `VK_IMAGE_TYPE_3D`, `extent.width`, `extent.height`, and `extent.depth` **must** be greater than 1.

• VUID-VkImageCreateInfo-imageType-02082
  If `usage` includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `imageType` **must** be `VK_IMAGE_TYPE_2D`.

• VUID-VkImageCreateInfo-samples-02083
  If `usage` includes `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`.
If the shadingRateImage feature is enabled and usage includes VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV, tiling must be VK_IMAGE_TILING_OPTIMAL.

If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, tiling must be VK_IMAGE_TILING_OPTIMAL.

If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, imageType must be VK_IMAGE_TYPE_2D.

If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, flags must not contain VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT.

If flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT, mipLevels must be 1.

If usage includes VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI, tiling must be VK_IMAGE_TILING_LINEAR.

If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageView2DOn3DImage is VK_FALSE, flags must not contain VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT.

If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::multisampleArrayImage is VK_FALSE, and samples is not VK_SAMPLE_COUNT_1_BIT, then arrayLayers must be 1.

If a VkImageFormatListCreateInfo structure was included in the pNext chain and VkImageFormatListCreateInfo::viewFormatCount is not zero, then each format in VkImageFormatListCreateInfo::pViewFormats must either be compatible with the format as described in the compatibility table or, if flags contains VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT, be an uncompressed format that is size-compatible with format.

If flags does not contain VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and the pNext chain includes a VkImageFormatListCreateInfo structure, then VkImageFormatListCreateInfo::viewFormatCount must be 0 or 1.

If usage includes VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR, VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR, or VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, and flags does not include VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then the pNext chain must include a VkVideoProfileListInfoKHR structure with profileCount greater than 0 and pProfiles including at least one VkVideoProfileInfoKHR structure with a videoCodecOperation member specifying a decode operation.

If a VkImageFormatListCreateInfo structure was included in the pNext chain and VkImageFormatListCreateInfo::viewFormatCount is not zero, then each format in VkImageFormatListCreateInfo::pViewFormats must either be compatible with the format as described in the compatibility table or, if flags contains VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT, be an uncompressed format that is size-compatible with format.
If `usage` includes `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, and `flags` does not include `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then the `pNext` chain **must** include a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0 and `pProfiles` including at least one `VkVideoProfileInfoKHR` structure with a `videoCodecOperation` member specifying an encode operation.

- **VUID-VkImageCreateInfo-flags-08328**
  If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `videoMaintenance1` **must** be enabled.

- **VUID-VkImageCreateInfo-flags-08329**
  If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` does not include `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, then `usage` **must** not include `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`.

- **VUID-VkImageCreateInfo-flags-08331**
  If `flags` includes `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `usage` **must** not include `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`.

- **VUID-VkImageCreateInfo-pNext-06811**
  If the `pNext` chain includes a `VkVideoProfileListInfoKHR` structure with `profileCount` greater than 0, then `supportedVideoFormat` **must** be `VK_TRUE`.

- **VUID-VkImageCreateInfo-pNext-06390**
  If the `VkImage` is to be used to import memory from a `VkBufferCollectionFUCHSIA`, a `VkBufferCollectionImageCreateInfoFUCHSIA` structure **must** be chained to `pNext`.

- **VUID-VkImageCreateInfo-multisampledRenderToSingleSampled-06882**
  If the `multisampledRenderToSingleSampled` feature is not enabled, `flags` **must** not contain `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT`.

- **VUID-VkImageCreateInfo-flags-06883**
  If `flags` contains `VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT`, `samples` **must** be `VK_SAMPLE_COUNT_1_BIT`.

- **VUID-VkImageCreateInfo-pNext-06743**
  If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, `format` is a multi-planar format, and `VkImageCompressionControlEXT::flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then `VkImageCompressionControlEXT::compressionControlPlaneCount` **must** be equal to the number of planes in `format`.

- **VUID-VkImageCreateInfo-pNext-06744**
  If the `pNext` chain includes a `VkImageCompressionControlEXT` structure, `format` is not a multi-planar format, and `VkImageCompressionControlEXT::flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, then `VkImageCompressionControlEXT::compressionControlPlaneCount` **must** be 1.

- **VUID-VkImageCreateInfo-pNext-06746**
  If the `pNext` chain includes a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure, it **must** not contain a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure.

- **VUID-VkImageCreateInfo-flags-08104**
  If `flags` includes `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the
descriptorBufferCaptureReplay feature must be enabled

- **VUID-VkImageCreateInfo-pNext-08105**
  If the **pNext** chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure, flags must contain VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

- **VUID-VkImageCreateInfo-pNext-06783**
  If the **pNext** chain includes a VkExportMetalObjectCreateInfoEXT structure, its exportObjectType member must be either VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT or VK_EXPORT_METAL_OBJECT_TYPE_METAL_IOSURFACE_BIT_EXT

- **VUID-VkImageCreateInfo-pNext-06784**
  If the **pNext** chain includes a VkImportMetalTextureInfoEXT structure its **plane** member must be VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or VK_IMAGE_ASPECT_PLANE_2_BIT

- **VUID-VkImageCreateInfo-pNext-06785**
  If the **pNext** chain includes a VkImportMetalTextureInfoEXT structure and the image does not have a multi-planar format, then VkImportMetalTextureInfoEXT::**plane** must be VK_IMAGE_ASPECT_PLANE_0_BIT

- **VUID-VkImageCreateInfo-pNext-06786**
  If the **pNext** chain includes a VkImportMetalTextureInfoEXT structure and the image has a multi-planar format with only two planes, then VkImportMetalTextureInfoEXT::**plane** must not be VK_IMAGE_ASPECT_PLANE_2_BIT

- **VUID-VkImageCreateInfo-imageCreateFormatFeatures-09048**
  If imageCreateFormatFeatures (as defined in Image Creation Limits) does not contain VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT_EXT, then usage must not contain VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT

### Valid Usage (Implicit)

- **VUID-VkImageCreateInfo-sType-sType**
  sType must be VK_STRUCTURE_TYPE_IMAGE_CREATE_INFO

- **VUID-VkImageCreateInfo-pNext-pNext**
  Each **pNext** member of any structure (including this one) in the **pNext** chain must be either NULL or a pointer to a valid instance of VkBufferCollectionImageCreateInfoFUCHSIA, VkDedicatedAllocationImageCreateInfoNV, VkExportMetalObjectCreateInfoEXT, VkExternalFormatANDROID, VkExternalFormatQNX, VkExternalMemoryImageCreateInfo, VkExternalMemoryImageCreateInfoNV, VkImageCompressionControlEXT, VkImageDrmFormatModifierExplicitCreateInfoEXT, VkImageDrmFormatModifierListCreateInfoEXT, VkImageFormatListCreateInfo, VkImageStencilUsageCreateInfo, VkImageSwapchainCreateInfoKHR, VkImportMetalIOSurfaceInfoEXT, VkImportMetalTextureInfoEXT, VkOpaqueCaptureDescriptorDataCreateInfoEXT, VkOpticalFlowImageFormatInfoNV, or VkVideoProfileListInfoKHR

- **VUID-VkImageCreateInfo-sType-unique**
The `sType` value of each struct in the `pNext` chain must be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT` or `VkImportMetalTextureInfoEXT`.

- VUID-VkImageCreateInfo-flags-parameter flags must be a valid combination of `VkImageCreateFlagBits` values.
- VUID-VkImageCreateInfo-imageType-parameter `imageType` must be a valid `VkImageType` value.
- VUID-VkImageCreateInfo-format-parameter `format` must be a valid `VkFormat` value.
- VUID-VkImageCreateInfo-samples-parameter `samples` must be a valid `VkSampleCountFlagBits` value.
- VUID-VkImageCreateInfo-tiling-parameter `tiling` must be a valid `VkImageTiling` value.
- VUID-VkImageCreateInfo-usage-parameter `usage` must be a valid combination of `VkImageUsageFlagBits` values.
- VUID-VkImageCreateInfo-usage-requiredBitmask usage must not be 0.
- VUID-VkImageCreateInfo-sharingMode-parameter `sharingMode` must be a valid `VkSharingMode` value.
- VUID-VkImageCreateInfo-initialLayout-parameter `initialLayout` must be a valid `VkImageLayout` value.

The `VkBufferCollectionImageCreateInfoFUCHSIA` structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionImageCreateInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t index;
} VkBufferCollectionImageCreateInfoFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `collection` is the `VkBufferCollectionFUCHSIA` handle.
- `index` is the index of the buffer in the buffer collection from which the memory will be imported.

**Valid Usage**

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-index-06391 `index` must be less than `VkBufferCollectionPropertiesFUCHSIA::bufferCount`
Valid Usage (Implicit)

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_IMAGE_CREATE_INFO_FUCHSIA`

- VUID-VkBufferCollectionImageCreateInfoFUCHSIA-collection-parameter
  
  `collection` must be a valid `VkBufferCollectionFUCHSIA` handle

The `VkImageStencilUsageCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkImageStencilUsageCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkImageUsageFlags stencilUsage;
} VkImageStencilUsageCreateInfo;
```

or the equivalent

```c
// Provided by VK_EXT_separate_stencil_usage
typedef VkImageStencilUsageCreateInfo VkImageStencilUsageCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stencilUsage` is a bitmask of `VkImageUsageFlagBits` describing the intended usage of the stencil aspect of the image.

If the `pNext` chain of `VkImageCreateInfo` includes a `VkImageStencilUsageCreateInfo` structure, then that structure includes the usage flags specific to the stencil aspect of the image for an image with a depth-stencil format.

This structure specifies image usages which only apply to the stencil aspect of a depth/stencil format image. When this structure is included in the `pNext` chain of `VkImageCreateInfo`, the stencil aspect of the image must only be used as specified by `stencilUsage`. When this structure is not included in the `pNext` chain of `VkImageCreateInfo`, the stencil aspect of an image must only be used as specified by `VkImageCreateInfo::usage`. Use of other aspects of an image are unaffected by this structure.

This structure can also be included in the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` to query additional capabilities specific to image creation parameter combinations including a separate set of usage flags for the stencil aspect of the image using `vkGetPhysicalDeviceImageFormatProperties2`. When this structure is not included in the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` then the implicit value of `stencilUsage` matches that of `VkPhysicalDeviceImageFormatInfo2::usage`. 
Valid Usage

- VUID-VkImageStencilUsageCreateInfo-stencilUsage-02539
  If stencilUsage includes VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT, it must not include bits other than VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT or VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT

Valid Usage (Implicit)

- VUID-VkImageStencilUsageCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_STENCIL_USAGE_CREATE_INFO

- VUID-VkImageStencilUsageCreateInfo-stencilUsage-parameter
  stencilUsage must be a valid combination of VkImageUsageFlagBits values

- VUID-VkImageStencilUsageCreateInfo-stencilUsage-requiredbitmask
  stencilUsage must not be 0

If the pNext chain includes a VkDedicatedAllocationImageCreateInfoNV structure, then that structure includes an enable controlling whether the image will have a dedicated memory allocation bound to it.

The VkDedicatedAllocationImageCreateInfoNV structure is defined as:

```c
// Provided by VK_NV_dedicated_allocation
typedef struct VkDedicatedAllocationImageCreateInfoNV {
  VkStructureType sType;
  const void* pNext;
  VkBool32 dedicatedAllocation;
} VkDedicatedAllocationImageCreateInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- dedicatedAllocation specifies whether the image will have a dedicated allocation bound to it.

**Note**
Using a dedicated allocation for color and depth/stencil attachments or other large images may improve performance on some devices.

Valid Usage

- VUID-VkDedicatedAllocationImageCreateInfoNV-dedicatedAllocation-00994
  If dedicatedAllocation is VK_TRUE, VkImageCreateInfo::flags must not include VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT

1026
To define a set of external memory handle types that may be used as backing store for an image, add a `VkExternalMemoryImageCreateInfo` structure to the `pNext` chain of the `VkImageCreateInfo` structure. The `VkExternalMemoryImageCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkExternalMemoryImageCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlags handleTypes;
} VkExternalMemoryImageCreateInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory
typedef VkExternalMemoryImageCreateInfo VkExternalMemoryImageCreateInfoKHR;
```

**Note**

A `VkExternalMemoryImageCreateInfo` structure with a non-zero `handleTypes` field must be included in the creation parameters for an image that will be bound to memory that is either exported or imported.

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `handleTypes` is zero or a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying one or more external memory handle types.

If the `pNext` chain includes a `VkExternalMemoryImageCreateInfoNV` structure, then that structure defines a set of external memory handle types that may be used as backing store for the image.

The `VkExternalMemoryImageCreateInfoNV` structure is defined as:
typedef struct VkExternalMemoryImageCreateInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagsNV handleTypes;
} VkExternalMemoryImageCreateInfoNV;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• handleTypes is zero or a bitmask of VkExternalMemoryHandleTypeFlagBitsNV specifying one or more external memory handle types.

Valid Usage (Implicit)

• VUID-VkExternalMemoryImageCreateInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO_NV
• VUID-VkExternalMemoryImageCreateInfoNV-handleTypes-parameter
  handleTypes must be a valid combination of VkExternalMemoryHandleTypeFlagBitsNV values

VkExternalFormatANDROID is defined as:

typedef struct VkExternalFormatANDROID {
    VkStructureType sType;
    void* pNext;
    uint64_t externalFormat;
} VkExternalFormatANDROID;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• externalFormat is an implementation-defined identifier for the external format

When included in the pNext chain of another structure, it indicates additional format information beyond what is provided by VkFormat values for an Android hardware buffer. If externalFormat is zero, it indicates that no external format is used, and implementations should rely only on other format information. If this structure is not present, it is equivalent to setting externalFormat to zero.

Valid Usage

• VUID-VkExternalFormatANDROID-externalFormat-01894
  externalFormat must be 0 or a value returned in the externalFormat member of VkAndroidHardwareBufferFormatPropertiesANDROID by an earlier call to
Valid Usage (Implicit)

- VUID-VkExternalFormatANDROID-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_ANDROID

To create an image with an QNX Screen external format, add a VkExternalFormatQNX structure in the pNext chain of VkImageCreateInfo. VkExternalFormatQNX is defined as:

```c
// Provided by VK_QNX_external_memory_screen_buffer
typedef struct VkExternalFormatQNX {
    VkStructureType sType;
    void* pNext;
    uint64_t externalFormat;
} VkExternalFormatQNX;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- externalFormat is an implementation-defined identifier for the external format

If externalFormat is zero, the effect is as if the VkExternalFormatQNX structure was not present. Otherwise, the image will have the specified external format.

Valid Usage

- VUID-VkExternalFormatQNX-externalFormat-08956
  externalFormat must be 0 or a value returned in the externalFormat member of VkScreenBufferFormatPropertiesQNX by an earlier call to vkGetScreenBufferPropertiesQNX

Valid Usage (Implicit)

- VUID-VkExternalFormatQNX-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_QNX

If the pNext chain of VkImageCreateInfo includes a VkImageSwapchainCreateInfoKHR structure, then that structure includes a swapchain handle indicating that the image will be bound to memory from that swapchain.

The VkImageSwapchainCreateInfoKHR structure is defined as:

```c
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with
```
typedef struct VkImageSwapchainCreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkSwapchainKHR swapchain;
} VkImageSwapchainCreateInfoKHR;

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **swapchain** is VK_NULL_HANDLE or a handle of a swapchain that the image will be bound to.

### Valid Usage

- VUID-VkImageSwapchainCreateInfoKHR-swapchain-00995
  If swapchain is not VK_NULL_HANDLE, the fields of VkImageCreateInfo must match the implied image creation parameters of the swapchain

### Valid Usage (Implicit)

- VUID-VkImageSwapchainCreateInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR
- VUID-VkImageSwapchainCreateInfoKHR-swapchain-parameter
  If swapchain is not VK_NULL_HANDLE, swapchain must be a valid VkSwapchainKHR handle

If the pNext chain of VkImageCreateInfo includes a VkImageFormatListCreateInfo structure, then that structure contains a list of all formats that can be used when creating views of this image.

The VkImageFormatListCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkImageFormatListCreateInfo {
    VkStructureType sType;
    const void* pNext;
    uint32_t viewFormatCount;
    const VkFormat* pViewFormats;
} VkImageFormatListCreateInfo;
```

or the equivalent

```c
// Provided by VK_KHR_image_format_list
typedef VkImageFormatListCreateInfo VkImageFormatListCreateInfoKHR;
```
• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• viewFormatCount is the number of entries in the pViewFormats array.
• pViewFormats is a pointer to an array of VkFormat values specifying all formats which can be used when creating views of this image.

If viewFormatCount is zero, pViewFormats is ignored and the image is created as if the VkImageFormatListCreateInfo structure were not included in the pNext chain of VkImageCreateInfo.

Valid Usage

• VUID-VkImageFormatListCreateInfo-viewFormatCount-09540
  If viewFormatCount is not 0, each element of pViewFormats must not be VK_FORMAT_UNDEFINED

Valid Usage (Implicit)

• VUID-VkImageFormatListCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_FORMAT_LIST_CREATE_INFO
• VUID-VkImageFormatListCreateInfo-pViewFormats-parameter
  If viewFormatCount is not 0, pViewFormats must be a valid pointer to an array of viewFormatCount valid VkFormat values

If the pNext chain of VkImageCreateInfo includes a VkImageDrmFormatModifierListCreateInfoEXT structure, then the image will be created with one of the Linux DRM format modifiers listed in the structure. The choice of modifier is implementation-dependent.

The VkImageDrmFormatModifierListCreateInfoEXT structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierListCreateInfoEXT {
  VkStructureType     sType;
  const void*          pNext;
  uint32_t             drmFormatModifierCount;
  const uint64_t*      pDrmFormatModifiers;
} VkImageDrmFormatModifierListCreateInfoEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• drmFormatModifierCount is the length of the pDrmFormatModifiers array.
• pDrmFormatModifiers is a pointer to an array of Linux DRM format modifiers.
Valid Usage

- **VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-02263**
  
  Each *modifier* in *pDrmFormatModifiers* must be compatible with the parameters in *VkImageCreateInfo* and its *pNext* chain, as determined by querying *VkPhysicalDeviceImageFormatInfo2* extended with *VkPhysicalDeviceImageDrmFormatModifierInfoEXT*.

Valid Usage (Implicit)

- **VUID-VkImageDrmFormatModifierListCreateInfoEXT-sType-sType**
  
  *sType* must be *VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_LIST_CREATE_INFO_EXT*.

- **VUID-VkImageDrmFormatModifierListCreateInfoEXT-pDrmFormatModifiers-parameter**
  
  *pDrmFormatModifiers* must be a valid pointer to an array of *drmFormatModifierCount* `uint64_t` values.

- **VUID-VkImageDrmFormatModifierListCreateInfoEXT-drmFormatModifierCount-arraylength**
  
  *drmFormatModifierCount* must be greater than 0.

If the *pNext* chain of *VkImageCreateInfo* includes a *VkImageDrmFormatModifierExplicitCreateInfoEXT* structure, then the image will be created with the *Linux DRM format modifier* and memory layout defined by the structure.

The *VkImageDrmFormatModifierExplicitCreateInfoEXT* structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierExplicitCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    uint64_t drmFormatModifier;
    uint32_t drmFormatModifierPlaneCount;
    const VkSubresourceLayout* pPlaneLayouts;
} VkImageDrmFormatModifierExplicitCreateInfoEXT;
```

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **drmFormatModifier** is the *Linux DRM format modifier* with which the image will be created.
- **drmFormatModifierPlaneCount** is the number of *memory planes* in the image (as reported by *VkDrmFormatModifierPropertiesEXT*) as well as the length of the *pPlaneLayouts* array.
- **pPlaneLayouts** is a pointer to an array of *VkSubresourceLayout* structures describing the image’s *memory planes*.

The *i*th member of *pPlaneLayouts* describes the layout of the image’s *i*th *memory plane* (that is,
VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT). In each element of `pPlaneLayouts`, the implementation must ignore `size`. The implementation calculates the size of each plane, which the application can query with `vkGetImageSubresourceLayout`.

When creating an image with `VkImageDrmFormatModifierExplicitCreateInfoEXT`, it is the application’s responsibility to satisfy all valid usage requirements. However, the implementation must validate that the provided `pPlaneLayouts`, when combined with the provided `drmFormatModifier` and other creation parameters in `VkImageCreateInfo` and its `pNext` chain, produce a valid image. (This validation is necessarily implementation-dependent and outside the scope of Vulkan, and therefore not described by valid usage requirements). If this validation fails, then `vkCreateImage` returns `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`.

### Valid Usage

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifier-02264
  - `drmFormatModifier` must be compatible with the parameters in `VkImageCreateInfo` and its `pNext` chain, as determined by querying `VkPhysicalDeviceImageFormatInfo2` extended with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-02265
  - `drmFormatModifierPlaneCount` must be equal to the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with `VkImageCreateInfo::format` and `drmFormatModifier`, as found by querying `VkDrmFormatModifierPropertiesListEXT`

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-size-02267
  - For each element of `pPlaneLayouts`, `size` must be 0

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-arrayPitch-02268
  - For each element of `pPlaneLayouts`, `arrayPitch` must be 0 if `VkImageCreateInfo::arrayLayers` is 1

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-depthPitch-02269
  - For each element of `pPlaneLayouts`, `depthPitch` must be 0 if `VkImageCreateInfo::extent.depth` is 1

### Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_EXPLICIT_CREATE_INFO_EXT`

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-pPlaneLayouts-parameter
  - `pPlaneLayouts` must be a valid pointer to an array of `drmFormatModifierPlaneCount` `VkSubresourceLayout` structures

- VUID-VkImageDrmFormatModifierExplicitCreateInfoEXT-drmFormatModifierPlaneCount-arraylength
  - `drmFormatModifierPlaneCount` must be greater than 0

If the `pNext` list of `VkImageCreateInfo` includes a `VkImageCompressionControlEXT` structure, then that
structure describes compression controls for this image.

The `VkImageCompressionControlEXT` structure is defined as:

```c
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionControlEXT {
    VkStructureType sType;
    const void* pNext;
    VkImageCompressionFlagsEXT flags;
    uint32_t compressionControlPlaneCount;
    VkImageCompressionFixedRateFlagsEXT* pFixedRateFlags;
} VkImageCompressionControlEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkImageCompressionFlagBitsEXT` describing compression controls for the image.
- `compressionControlPlaneCount` is the number of entries in the `pFixedRateFlags` array.
- `pFixedRateFlags` is `NULL` or a pointer to an array of `VkImageCompressionFixedRateFlagsEXT` bitfields describing allowed fixed-rate compression rates of each image plane. It is ignored if `flags` does not include `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`.

If enabled, fixed-rate compression is done in an implementation-defined manner and may be applied at block granularity. In that case, a write to an individual texel may modify the value of other texels in the same block.

**Valid Usage**

- VUID-VkImageCompressionControlEXT-flags-06747
  - `flags` must be one of `VK_IMAGE_COMPRESSION_DEFAULT_EXT`, `VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT`, `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, or `VK_IMAGE_COMPRESSION_DISABLED_EXT`

- VUID-VkImageCompressionControlEXT-flags-06748
  - If `flags` includes `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT`, `pFixedRateFlags` must not be `NULL`

**Valid Usage (Implicit)**

- VUID-VkImageCompressionControlEXT-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_CONTROL_EXT`

**Note**

Some combinations of compression properties may not be supported. For example,
some implementations may not support different fixed-rate compression rates per plane of a multi-planar format and will not be able to enable fixed-rate compression for any plane if the requested rates differ.

Possible values of `VkImageCompressionControlEXT::flags`, specifying compression controls for an image, are:

```c
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFlagBitsEXT {
    VK_IMAGE_COMPRESSION_DEFAULT_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_DISABLED_EXT = 0x00000004,
} VkImageCompressionFlagBitsEXT;
```

- **VK_IMAGE_COMPRESSION_DEFAULT_EXT** specifies that the default image compression setting is used. Implementations **must** not apply fixed-rate compression.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_DEFAULT_EXT** specifies that the implementation **may** choose any supported fixed-rate compression setting in an implementation-defined manner based on the properties of the image.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT** specifies that fixed-rate compression **may** be used and that the allowed compression rates are specified by `VkImageCompressionControlEXT::pFixedRateFlags`.
- **VK_IMAGE_COMPRESSION_DISABLED_EXT** specifies that all lossless and fixed-rate compression **should** be disabled.

If `VkImageCompressionControlEXT::flags` is **VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT**, then the \( i \)th member of the `pFixedRateFlags` array specifies the allowed compression rates for the image’s \( i \)th plane.

**Note**

If **VK_IMAGE_COMPRESSION_DISABLED_EXT** is included in `VkImageCompressionControlEXT::flags`, both lossless and fixed-rate compression will be disabled. This is likely to have a negative impact on performance and is only intended to be used for debugging purposes.

```c
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFlagsEXT;
```

`VkImageCompressionFlagsEXT` is a bitmask type for setting a mask of zero or more `VkImageCompressionFlagBitsEXT`.

```c
// Provided by VK_EXT_image_compression_control
typedef VkFlags VkImageCompressionFixedRateFlagsEXT;
```
VkImageCompressionFixedRateFlagsEXT is a bitmask type for setting a mask of zero or more VkImageCompressionFixedRateFlagBitsEXT.

Bits which can be set in VkImageCompressionControlEXT::pFixedRateFlags, specifying allowed compression rates for an image plane, are:

```cpp
// Provided by VK_EXT_image_compression_control
typedef enum VkImageCompressionFixedRateFlagBitsEXT {
    VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT = 0,
    VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT = 0x00000001,
    VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT = 0x00000002,
    VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT = 0x00000004,
    VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT = 0x00000008,
    VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT = 0x00000010,
    VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT = 0x00000020,
    VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT = 0x00000040,
    VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT = 0x00000080,
    VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT = 0x00000100,
    VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT = 0x00000200,
    VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT = 0x00000400,
    VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT = 0x00000800,
    VK_IMAGE_COMPRESSION_FIXED_RATE_13BPC_BIT_EXT = 0x00001000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_14BPC_BIT_EXT = 0x00002000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_15BPC_BIT_EXT = 0x00004000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_16BPC_BIT_EXT = 0x00008000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_17BPC_BIT_EXT = 0x00010000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_18BPC_BIT_EXT = 0x00020000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_19BPC_BIT_EXT = 0x00040000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_20BPC_BIT_EXT = 0x00080000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_21BPC_BIT_EXT = 0x00100000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_22BPC_BIT_EXT = 0x00200000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_23BPC_BIT_EXT = 0x00400000,
    VK_IMAGE_COMPRESSION_FIXED_RATE_24BPC_BIT_EXT = 0x00800000,
} VkImageCompressionFixedRateFlagBitsEXT;
```

- **VK_IMAGE_COMPRESSION_FIXED_RATE_NONE_EXT** specifies that fixed-rate compression must not be used.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_1BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [1,2) bits per component may be used.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [2,3) bits per component may be used.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_3BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [3,4) bits per component may be used.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [4,5) bits per component may be used.
- **VK_IMAGE_COMPRESSION_FIXED_RATE_5BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [5,6) bits per component may be used.
• **VK_IMAGE_COMPRESSION_FIXED_RATE_6BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [6,7) bits per component may be used.

• **VK_IMAGE_COMPRESSION_FIXED_RATE_7BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [7,8) bits per component may be used.

• **VK_IMAGE_COMPRESSION_FIXED_RATE_8BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [8,9) bits per component may be used.

• **VK_IMAGE_COMPRESSION_FIXED_RATE_9BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [9,10) bits per component may be used.

• **VK_IMAGE_COMPRESSION_FIXED_RATE_10BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [10,11) bits per component may be used.

• **VK_IMAGE_COMPRESSION_FIXED_RATE_11BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of [11,12) bits per component may be used.

• **VK_IMAGE_COMPRESSION_FIXED_RATE_12BPC_BIT_EXT** specifies that fixed-rate compression with a bitrate of at least 12 bits per component may be used.

If the format has a different bit rate for different components, **VkImageCompressionControlEXT::pFixedRateFlags** describes the rate of the component with the largest number of bits assigned to it, scaled pro rata. For example, to request that a **VK_FORMAT_A2R10G10B10_UNORM_PACK32** format be stored at a rate of 8 bits per pixel, use **VK_IMAGE_COMPRESSION_FIXED_RATE_2BPC_BIT_EXT** (10 bits for the largest component, stored at quarter the original size, 2.5 bits, rounded down).

If **flags** includes **VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT**, and multiple bits are set in **VkImageCompressionControlEXT::pFixedRateFlags** for a plane, implementations should apply the lowest allowed bitrate that is supported.

**Note**
The choice of “bits per component” terminology was chosen so that the same compression rate describes the same degree of compression applied to formats that differ only in the number of components. For example, **VK_FORMAT_R8G8_UNORM** compressed to half its original size is a rate of 4 bits per component, 8 bits per pixel. **VK_FORMAT_R8G8B8A8_UNORM** compressed to half its original size is 4 bits per component, 16 bits per pixel. Both of these cases can be requested with **VK_IMAGE_COMPRESSION_FIXED_RATE_4BPC_BIT_EXT**.

To query the compression properties of an image, add a **VkImageCompressionPropertiesEXT** structure to the **pNext** chain of the **VkSubresourceLayout2EXT** structure in a call to **vkGetImageSubresourceLayout2KHR** or **vkGetImageSubresourceLayout2EXT**.

To determine the compression rates that are supported for a given image format, add a **VkImageCompressionPropertiesEXT** structure to the **pNext** chain of the **VkImageFormatProperties2** structure in a call to **vkGetPhysicalDeviceImageFormatProperties2**.

**Note**
Since fixed-rate compression is disabled by default, the **VkImageCompressionPropertiesEXT** structure passed to **vkGetPhysicalDeviceImageFormatProperties2** will not indicate any fixed-rate
compression support unless a VkImageCompressionControlEXT structure is also included in the pNext chain of the VkPhysicalDeviceImageFormatInfo2 structure passed to the same command.

The VkImageCompressionPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_image_compression_control
typedef struct VkImageCompressionPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkImageCompressionFlagsEXT imageCompressionFlags;
    VkImageCompressionFixedRateFlagsEXT imageCompressionFixedRateFlags;
} VkImageCompressionPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `imageCompressionFlags` returns a value describing the compression controls that apply to the image. The value will be either `VK_IMAGE_COMPRESSION_DEFAULT_EXT` to indicate no fixed-rate compression, `VK_IMAGE_COMPRESSION_FIXED_RATE_EXPLICIT_EXT` to indicate fixed-rate compression, or `VK_IMAGE_COMPRESSION_DISABLED_EXT` to indicate no compression.
- `imageCompressionFixedRateFlags` returns a VkImageCompressionFixedRateFlagsEXT value describing the compression rates that apply to the specified aspect of the image.

### Valid Usage (Implicit)

- **VUID-VkImageCompressionPropertiesEXT-sType-sType**
  
  *sType* must be `VK_STRUCTURE_TYPE_IMAGE_COMPRESSION_PROPERTIES_EXT`

Bits which can be set in

- VkImageViewUsageCreateInfo::usage
- VkImageStencilUsageCreateInfo::stencilUsage
- VkImageCreateInfo::usage

specify intended usage of an image, and are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkImageUsageFlagBits {
    VK_IMAGE_USAGE_TRANSFER_SRC_BIT = 0x00000001,
    VK_IMAGE_USAGE_TRANSFER_DST_BIT = 0x00000002,
    VK_IMAGE_USAGE_SAMPLED_BIT = 0x00000004,
    VK_IMAGE_USAGE_STORAGE_BIT = 0x00000008,
    VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT = 0x00000010,
    VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT = 0x00000020,
    VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT = 0x00000040,
} VkImageUsageFlagBits;
```
VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT = 0x00000080,
// Provided by VK_KHR_video_decode_queue

VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR = 0x00000400,
// Provided by VK_KHR_video_decode_queue

// Provided by VK_KHR_fragment_shading_rate

VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR = 0x00000100,
// Provided by VK_KHR_fragment_shading_rate

VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT = 0x00400000,
// Provided by VK_KHR_video_encode_queue

VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR = 0x00002000,
// Provided by VK_KHR_video_encode_queue

VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR = 0x00004000,
// Provided by VK_KHR_video_encode_queue

VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR = 0x00008000,
// Provided by VK_KHR_video_encode_queue

VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT = 0x00080000,
// Provided by VK_KHR_attachment_feedback_loop_layout

VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI = 0x00040000,
// Provided by VK_KHR_host_image_copy

VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM = 0x00100000,
// Provided by VK_KHR_host_image_copy

VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM = 0x00200000,
// Provided by VK_KHR_host_image_copy

VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV =\
VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR,
} VkImageUsageFlagBits;

- **VK_IMAGE_USAGE_TRANSFER_SRC_BIT** specifies that the image can be used as the source of a transfer command.

- **VK_IMAGE_USAGE_TRANSFER_DST_BIT** specifies that the image can be used as the destination of a transfer command.

- **VK_IMAGE_USAGE_SAMPLED_BIT** specifies that the image can be used to create a VkImageView suitable for occupying a VkDescriptorSet slot either of type VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and be sampled by a shader.

- **VK_IMAGE_USAGE_STORAGE_BIT** specifies that the image can be used to create a VkImageView suitable for occupying a VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE.

- **VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT** specifies that the image can be used to create a VkImageView suitable for use as a color or resolve attachment in a VkFramebuffer.

- **VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT** specifies that the image can be used to create a VkImageView suitable for use as a depth/stencil or depth/stencil resolve attachment in a VkFramebuffer.

- **VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT** specifies that implementations may support using
memory allocations with the VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT to back an image with this usage. This bit can be set for any image that can be used to create a VkImageView suitable for use as a color, resolve, depth/stencil, or input attachment.

- **VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT** specifies that the image can be used to create a VkImageView suitable for occupying VkDescriptorSet slot of type VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT; be read from a shader as an input attachment; and be used as an input attachment in a framebuffer.
- **VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT** specifies that the image can be used to create a VkImageView suitable for use as a fragment density map image.
- **VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR** specifies that the image can be used to create a VkImageView suitable for use as a fragment shading rate attachment or shading rate image.
- **VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR** specifies that the image can be used as a decode output picture in a video decode operation.
- **VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR** is reserved for future use.
- **VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR** specifies that the image can be used as an output reconstructed picture or an input reference picture in a video decode operation.
- **VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR** is reserved for future use.
- **VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR** specifies that the image can be used as an encode input picture in a video encode operation.
- **VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR** specifies that the image can be used as an output reconstructed picture or an input reference picture in a video encode operation.
- **VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT** specifies that the image can be transitioned to the VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT layout to be used as a color or depth/stencil attachment in a VkFramebuffer and/or as a read-only input resource in a shader (sampled image, combined image sampler or input attachment) in the same render pass.
- **VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT** specifies that the image can be used with host copy commands and host layout transitions.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageUsageFlags;
```

**VkImageUsageFlags** is a bitmask type for setting a mask of zero or more VkImageUsageFlagBits.

When creating a VkImageView one of the following VkImageUsageFlagBits must be set:

- **VK_IMAGE_USAGE_SAMPLED_BIT**
- **VK_IMAGE_USAGE_STORAGE_BIT**
- **VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT**
- **VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT**
- **VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT**
Bits which can be set in `VkImageCreateInfo::flags`, specifying additional parameters of an image, are:

```cpp
// Provided by VK_VERSION_1_0
typedef enum VkImageCreateFlagBits {
    VK_IMAGE_CREATE_SPARSE_BINDING_BIT = 0x00000001,
    VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT = 0x00000002,
    VK_IMAGE_CREATE_SPARSE_ALIASED_BIT = 0x00000004,
    VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT = 0x00000008,
    VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT = 0x00000010,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_ALIAS_BIT = 0x00000400,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT = 0x00000040,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT = 0x00000020,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT = 0x00000080,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_EXTENDED_USAGE_BIT = 0x00000100,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_PROTECTED_BIT = 0x00000800,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_CREATE_DISJOINT_BIT = 0x00000200,
    // Provided by VK_NV_corner_sampled_image
    VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV = 0x00002000,
    // Provided by VK_EXT_sample_locations
    VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT = 0x00001000,
    // Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00010000,
    // Provided by VK_EXT_multisampled_render_to_single_sampled
    VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT = 0x00040000,
    // Provided by VK_EXT_image_2d_view_of_3d
    VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT = 0x00020000,
    // Provided by VK_QCOM_fragment_density_map_offset
```

1041
VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM = 0x00008000,
// Provided by VK_KHR_video_maintenance
VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR = 0x00100000,
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR = VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT,
// Provided by VK_KHR_maintenance1
VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT_KHR = VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT,
// Provided by VK_KHR_maintenance1
VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR = VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT,
// Provided by VK_KHR_maintenance2
VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR = VK_IMAGE_CREATE_EXTENDED_USAGE_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_IMAGE_CREATE_DISJOINT_BIT_KHR = VK_IMAGE_CREATE_DISJOINT_BIT,
// Provided by VK_KHR_bind_memory2
VK_IMAGE_CREATE_ALIAS_BIT_KHR = VK_IMAGE_CREATE_ALIAS_BIT,
} VkImageCreateFlagBits;

• **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** specifies that the image will be backed using sparse memory binding.

• **VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT** specifies that the image *can* be partially backed using sparse memory binding. Images created with this flag *must* also be created with the **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** flag.

• **VK_IMAGE_CREATE_SPARSE_ALIASED_BIT** specifies that the image will be backed using sparse memory binding with memory ranges that might also simultaneously be backing another image (or another portion of the same image). Images created with this flag *must* also be created with the **VK_IMAGE_CREATE_SPARSE_BINDING_BIT** flag.

• **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT** specifies that the image *can* be used to create a **VkImageView** with a different format from the image. For multi-planar formats, **VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT** specifies that a **VkImageView** can be created of a *plane* of the image.

• **VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT** specifies that the image *can* be used to create a **VkImageView** of type **VK_IMAGE_VIEW_TYPE_CUBE** or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**.

• **VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT** specifies that the image *can* be used to create a **VkImageView** of type **VK_IMAGE_VIEW_TYPE_2D** or **VK_IMAGE_VIEW_TYPE_2D_ARRAY**.

• **VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT** specifies that the image *can* be used to create a **VkImageView** of type **VK_IMAGE_VIEW_TYPE_2D**.

• **VK_IMAGE_CREATE_PROTECTED_BIT** specifies that the image is a protected image.

• **VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT** specifies that the image *can* be used with a non-zero value of the **splitInstanceBindRegionCount** member of a **VkBindImageMemoryDeviceGroupInfo** structure passed into **vkBindImageMemory2**. This flag also has the effect of making the image use the standard sparse image block dimensions.

• **VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT** specifies that the image having a compressed
format can be used to create a VkImageView with an uncompressed format where each texel in
the image view corresponds to a compressed texel block of the image.

- **VK_IMAGE_CREATE_EXTENDED_USAGE_BIT** specifies that the image can be created with usage flags that
are not supported for the format the image is created with but are supported for at least one
format a VkImageView created from the image can have.

- **VK_IMAGE_CREATE_DISJOINT_BIT** specifies that an image with a multi-planar format must have
each plane separately bound to memory, rather than having a single memory binding for the
whole image; the presence of this bit distinguishes a disjoint image from an image without this
bit set.

- **VK_IMAGE_CREATE_ALIAS_BIT** specifies that two images created with the same creation parameters
and aliased to the same memory can interpret the contents of the memory consistently with
each other, subject to the rules described in the Memory Aliasing section. This flag further
specifies that each plane of a disjoint image can share an in-memory non-linear representation
with single-plane images, and that a single-plane image can share an in-memory non-linear
representation with a plane of a multi-planar disjoint image, according to the rules in
Compatible Formats of Planes of Multi-Planar Formats. If the pNext chain includes a
VkExternalMemoryImageCreateInfo or VkExternalMemoryImageCreateInfoNV structure whose
handleTypes member is not 0, it is as if VK_IMAGE_CREATE_ALIAS_BIT is set.

- **VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT** specifies that an image with a
depth or depth/stencil format can be used with custom sample locations when used as a
depth/stencil attachment.

- **VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV** specifies that the image is a corner-sampled image.

- **VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT** specifies that an image can be in a subsampled format
which may be more optimal when written as an attachment by a render pass that has a
fragment density map attachment. Accessing a subsampled image has additional
considerations:

  ◦ Image data read as an image sampler will have undefined values if the sampler was not
  created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT or was not sampled
  through the use of a combined image sampler with an immutable sampler in
  VkDescriptorSetLayoutBinding.

  ◦ Image data read with an input attachment will have undefined values if the contents were
  not written as an attachment in an earlier subpass of the same render pass.

  ◦ Image data read as an image sampler in the fragment shader will be additionally be read by
  the device during VK_PIPELINE_STAGE_VERTEX_SHADER_BIT if
  VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledCoarseReconstructionEarlyAccess
  is VK_TRUE and the sampler was created with flags containing
  VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT.

  ◦ Image data read with load operations are resampled to the fragment density of the render
  pass if VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::subsampledLoads is VK_TRUE.
  Otherwise, values of image data are undefined.

  ◦ Image contents outside of the render area take on undefined values if the image is stored as
  a render pass attachment.

- **VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM** specifies that an image can be used in a
render pass with non-zero fragment density map offsets. In a render pass with non-zero offsets, fragment density map attachments, input attachments, color attachments, depth/stencil attachment, resolve attachments, and preserve attachments must be created with VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM.

- VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT specifies that the image can be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see VkOpaqueCaptureDescriptorDataCreateInfoEXT for more detail.

- VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT specifies that an image can be used with multisampled rendering as a single-sampled framebuffer attachment

- VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR specifies that the image can be used in video coding operations without having to specify at image creation time the set of video profiles the image will be used with, except for images used only as DPB pictures, as long as the image is otherwise compatible with the video profile in question.

Note
This enables exchanging video picture data without additional copies or conversions when used as:

- Decode output pictures, indifferent of the video profile used to produce them.
- Encode input pictures, indifferent of the video profile used to consume them.

This includes images created with both VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR and VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR, which is necessary to use the same video picture as the reconstructed picture and decode output picture in a video decode operation on implementations supporting VK_VIDEO_Decode_capability_dpb_and_output_coincide_bit_KHR.

However, images with only DPB usage remain tied to the video profiles the image was created with, as the data layout of such DPB-only images may be implementation- and codec-dependent.

If an application would like to share or reuse the device memory backing such images (e.g. for the purposes of temporal aliasing), then it should create separate image objects for each video profile and bind them to the same underlying device memory range, similar to how memory resources can be shared across separate video sessions or any other memory-backed resource.

See Sparse Resource Features and Sparse Physical Device Features for more details.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageCreateFlags;
```

VkImageCreateFlags is a bitmask type for setting a mask of zero or more VkImageCreateFlagBits.
Possible values of `VkImageCreateInfo::imageType`, specifying the basic dimensionality of an image, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkImageType {
    VK_IMAGE_TYPE_1D = 0,
    VK_IMAGE_TYPE_2D = 1,
    VK_IMAGE_TYPE_3D = 2,
} VkImageType;
```

- `VK_IMAGE_TYPE_1D` specifies a one-dimensional image.
- `VK_IMAGE_TYPE_2D` specifies a two-dimensional image.
- `VK_IMAGE_TYPE_3D` specifies a three-dimensional image.

Possible values of `VkImageCreateInfo::tiling`, specifying the tiling arrangement of texel blocks in an image, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkImageTiling {
    VK_IMAGE_TILING_OPTIMAL = 0,
    VK_IMAGE_TILING_LINEAR = 1,
    // Provided by VK_EXT_image_drm_format_modifier
    VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT = 1000158000,
} VkImageTiling;
```

- `VK_IMAGE_TILING_OPTIMAL` specifies optimal tiling (texels are laid out in an implementation-dependent arrangement, for more efficient memory access).
- `VK_IMAGE_TILING_LINEAR` specifies linear tiling (texels are laid out in memory in row-major order, possibly with some padding on each row).
- `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` indicates that the image's tiling is defined by a Linux DRM format modifier. The modifier is specified at image creation with `VkImageDrmFormatModifierListCreateInfoEXT` or `VkImageDrmFormatModifierExplicitCreateInfoEXT`, and can be queried with `vkGetImageDrmFormatModifierPropertiesEXT`.

To query the memory layout of an image subresource, call:

```c
// Provided by VK_VERSION_1_0
void vkGetImageSubresourceLayout(
    VkDevice device, 
    VkImage image, 
    const VkImageSubresource* pSubresource, 
    VkSubresourceLayout* pLayout);
```

- `device` is the logical device that owns the image.
• **image** is the image whose layout is being queried.

• **pSubresource** is a pointer to a **VkImageSubresource** structure selecting a specific image subresource from the image.

• **pLayout** is a pointer to a **VkSubresourceLayout** structure in which the layout is returned.

If the image is **linear**, then the returned layout is valid for **host access**.

If the image's tiling is **VK_IMAGE_TILING_LINEAR** and its format is a **multi-planar format**, then **vkGetImageSubresourceLayout** describes one **format plane** of the image. If the image's tiling is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**, then **vkGetImageSubresourceLayout** describes one **memory plane** of the image. If the image's tiling is **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT** and the image is **non-linear**, then the returned layout has an implementation-dependent meaning; the vendor of the image's **DRM format modifier** may provide documentation that explains how to interpret the returned layout.

**vkGetImageSubresourceLayout** is invariant for the lifetime of a single image. However, the subresource layout of images in Android hardware buffer or QNX Screen buffer external memory is not known until the image has been bound to memory, so applications **must** not call **vkGetImageSubresourceLayout** for such an image before it has been bound.

---

**Valid Usage**

• **VUID-vkGetImageSubresourceLayout-image-07790**
  image **must** have been created with **tiling** equal to **VK_IMAGE_TILING_LINEAR** or **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT**

• **VUID-vkGetImageSubresourceLayout-aspectMask-00997**
  The **aspectMask** member of **pSubresource** **must** only have a single bit set

• **VUID-vkGetImageSubresourceLayout-mipLevel-01716**
  The **mipLevel** member of **pSubresource** **must** be less than the **mipLevels** specified in **image**

• **VUID-vkGetImageSubresourceLayout-arrayLayer-01717**
  The **arrayLayer** member of **pSubresource** **must** be less than the **arrayLayers** specified in **image**

• **VUID-vkGetImageSubresourceLayout-format-08886**
  If **format** of the **image** is a color format that is not a **multi-planar image format**, and **tiling** of the **image** is **VK_IMAGE_TILING_LINEAR** or **VK_IMAGE_TILING_OPTIMAL**, the **aspectMask** member of **pSubresource** **must** be **VK_IMAGE_ASPECT_COLOR_BIT**

• **VUID-vkGetImageSubresourceLayout-format-04462**
  If **format** of the **image** has a depth component, the **aspectMask** member of **pSubresource** **must** contain **VK_IMAGE_ASPECT_DEPTH_BIT**

• **VUID-vkGetImageSubresourceLayout-format-04463**
  If **format** of the **image** has a stencil component, the **aspectMask** member of **pSubresource** **must** contain **VK_IMAGE_ASPECT_STENCIL_BIT**

• **VUID-vkGetImageSubresourceLayout-format-04464**
  If **format** of the **image** does not contain a stencil or depth component, the **aspectMask**
member of pSubresource must not contain VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT

- VUID-vkGetImageSubresourceLayout-tiling-08717
  If the tiling of the image is VK_IMAGE_TILING_LINEAR and has a multi-planar image format, then the aspectMask member of pSubresource must be a single valid multi-planar aspect mask bit

- VUID-vkGetImageSubresourceLayout-image-09432
  If image was created with the VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID external memory handle type, then image must be bound to memory

- VUID-vkGetImageSubresourceLayout-tiling-09433
  If the tiling of the image is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the aspectMask member of pSubresource must be VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT and the index i must be less than the VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount associated with the image’s format and VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetImageSubresourceLayout-image-parameter
  image must be a valid VkImage handle

- VUID-vkGetImageSubresourceLayout-pSubresource-parameter
  pSubresource must be a valid pointer to a valid VkImageSubresource structure

- VUID-vkGetImageSubresourceLayout-pLayout-parameter
  pLayout must be a valid pointer to a VkSubresourceLayout structure

- VUID-vkGetImageSubresourceLayout-image-parent
  image must have been created, allocated, or retrieved from device

The VkImageSubresource structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresource {
    VkImageAspectFlags aspectMask;
    uint32_t mipLevel;
    uint32_t arrayLayer;
} VkImageSubresource;
```

- aspectMask is a VkImageAspectFlags value selecting the image aspect.
- mipLevel selects the mipmap level.
- arrayLayer selects the array layer.
Valid Usage (Implicit)

- VUID-VkImageSubresource-aspectMask-parameter
  aspectMask must be a valid combination of VkImageAspectFlagBits values
- VUID-VkImageSubresource-aspectMask-requiredbitmask
  aspectMask must not be 0

Information about the layout of the image subresource is returned in a VkSubresourceLayout structure:

```c
// Provided by VK_VERSION_1_0
typedef struct VkSubresourceLayout {
    VkDeviceSize offset;
    VkDeviceSize size;
    VkDeviceSize rowPitch;
    VkDeviceSize arrayPitch;
    VkDeviceSize depthPitch;
} VkSubresourceLayout;
```

- offset is the byte offset from the start of the image or the plane where the image subresource begins.
- size is the size in bytes of the image subresource. size includes any extra memory that is required based on rowPitch.
- rowPitch describes the number of bytes between each row of texels in an image.
- arrayPitch describes the number of bytes between each array layer of an image.
- depthPitch describes the number of bytes between each slice of 3D image.

If the image is linear, then rowPitch, arrayPitch and depthPitch describe the layout of the image subresource in linear memory. For uncompressed formats, rowPitch is the number of bytes between texels with the same x coordinate in adjacent rows (y coordinates differ by one). arrayPitch is the number of bytes between texels with the same x and y coordinate in adjacent array layers of the image (array layer values differ by one). depthPitch is the number of bytes between texels with the same x and y coordinate in adjacent slices of a 3D image (z coordinates differ by one). Expressed as an addressing formula, the starting byte of a texel in the image subresource has address:

```c
// (x,y,z,layer) are in texel coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x*elementSize + offset
```

For compressed formats, the rowPitch is the number of bytes between compressed texel blocks in adjacent rows. arrayPitch is the number of bytes between compressed texel blocks in adjacent array layers. depthPitch is the number of bytes between compressed texel blocks in adjacent slices of a 3D image.
// (x,y,z,layer) are in compressed texel block coordinates
address(x,y,z,layer) = layer*arrayPitch + z*depthPitch + y*rowPitch + x
*compressedTexelBlockSize + offset;

The value of arrayPitch is undefined for images that were not created as arrays. depthPitch is defined only for 3D images.

If the image has a single-plane color format and its tiling is VK_IMAGE_TILING_LINEAR, then the aspectMask member of VkImageSubresource must be VK_IMAGE_ASPECT_COLOR_BIT.

If the image has a depth/stencil format and its tiling is VK_IMAGE_TILING_LINEAR, then aspectMask must be either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT. On implementations that store depth and stencil aspects separately, querying each of these image subresource layouts will return a different offset and size representing the region of memory used for that aspect. On implementations that store depth and stencil aspects interleaved, the same offset and size are returned and represent the interleaved memory allocation.

If the image has a multi-planar format and its tiling is VK_IMAGE_TILING_LINEAR, then the aspectMask member of VkImageSubresource must be VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or (for 3-plane formats only) VK_IMAGE_ASPECT_PLANE_2_BIT. Querying each of these image subresource layouts will return a different offset and size representing the region of memory used for that plane. If the image is disjoint, then the offset is relative to the base address of the plane. If the image is non-disjoint, then the offset is relative to the base address of the image.

If the image’s tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the aspectMask member of VkImageSubresource must be one of VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT, where the maximum allowed plane index i is defined by the VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount associated with the image’s VkImageCreateInfo::format and modifier. The memory range used by the subresource is described by offset and size. If the image is disjoint, then the offset is relative to the base address of the memory plane. If the image is non-disjoint, then the offset is relative to the base address of the image. If the image is non-linear, then rowPitch, arrayPitch, and depthPitch have an implementation-dependent meaning.

To query the memory layout of an image subresource, call:

```
// Provided by VK_KHR_maintenance5
void vkGetImageSubresourceLayout2KHR(
    VkDevice device,
    VkImage image,
    const VkImageSubresource2KHR* pSubresource,
    VkSubresourceLayout2KHR* pLayout);
```

or the equivalent command

```
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
void vkGetImageSubresourceLayout2EXT(
    VkDevice device,
```
• device is the logical device that owns the image.
• image is the image whose layout is being queried.
• pSubresource is a pointer to a VkImageSubresource2KHR structure selecting a specific image for the image subresource.
• pLayout is a pointer to a VkSubresourceLayout2KHR structure in which the layout is returned.

vkGetImageSubresourceLayout2KHR behaves similarly to vkGetImageSubresourceLayout, with the ability to specify extended inputs via chained input structures, and to return extended information via chained output structures.

It is legal to call vkGetImageSubresourceLayout2KHR with a image created with tiling equal to VK_IMAGE_TILING_OPTIMAL, but the members of VkSubresourceLayout2KHR::subresourceLayout will have undefined values in this case.

Note
Structures chained from VkImageSubresource2KHR::pNext will also be updated when tiling is equal to VK_IMAGE_TILING_OPTIMAL.

Valid Usage

• VUID-vkGetImageSubresourceLayout2KHR-aspectMask-00997
  The aspectMask member of pSubresource must only have a single bit set

• VUID-vkGetImageSubresourceLayout2KHR-mipLevel-01716
  The mipLevel member of pSubresource must be less than the mipLevels specified in image

• VUID-vkGetImageSubresourceLayout2KHR-arrayLayer-01717
  The arrayLayer member of pSubresource must be less than the arrayLayers specified in image

• VUID-vkGetImageSubresourceLayout2KHR-format-08886
  If format of the image is a color format that is not a multi-planar image format, and tiling of the image is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, the aspectMask member of pSubresource must be VK_IMAGE_ASPECT_COLOR_BIT

• VUID-vkGetImageSubresourceLayout2KHR-format-04462
  If format of the image has a depth component, the aspectMask member of pSubresource must contain VK_IMAGE_ASPECT_DEPTH_BIT

• VUID-vkGetImageSubresourceLayout2KHR-format-04463
  If format of the image has a stencil component, the aspectMask member of pSubresource must contain VK_IMAGE_ASPECT_STENCIL_BIT

• VUID-vkGetImageSubresourceLayout2KHR-format-04464
  If format of the image does not contain a stencil or depth component, the aspectMask member of pSubresource must not contain VK_IMAGE_ASPECT_DEPTH_BIT or
If the tiling of the image is VK_IMAGE_TILING_LINEAR and has a multi-planar image format, then the aspectMask member of pSubresource must be a single valid multi-planar aspect mask bit.

If image was created with the VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID external memory handle type, then image must be bound to memory.

If the tiling of the image is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then the aspectMask member of pSubresource must be VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT and the index i must be less than the VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount associated with the image’s format and VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier.

Valid Usage (Implicit)

- VUID-vkGetImageSubresourceLayout2KHR-device-parameter device must be a valid VkDevice handle
- VUID-vkGetImageSubresourceLayout2KHR-image-parameter image must be a valid VkImage handle
- VUID-vkGetImageSubresourceLayout2KHR-pSubresource-parameter pSubresource must be a valid pointer to a valid VkImageSubresource2KHR structure
- VUID-vkGetImageSubresourceLayout2KHR-pLayout-parameter pLayout must be a valid pointer to a VkSubresourceLayout2KHR structure
- VUID-vkGetImageSubresourceLayout2KHR-image-parent image must have been created, allocated, or retrieved from device

The VkImageSubresource2KHR structure is defined as:

```c
// Provided by VK_KHR_maintenance5
typedef struct VkImageSubresource2KHR {
    VkStructureType sType;
    void* pNext;
    VkImageSubresource imageSubresource;
} VkImageSubresource2KHR;
```

or the equivalent

```c
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
typedef VkImageSubresource2KHR VkImageSubresource2EXT;
```
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **imageSubresource** is a `VkImageSubresource` structure.

**Valid Usage (Implicit)**

- VUID-VkImageSubresource2KHR-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_SUBRESOURCE_2_KHR`

- VUID-VkImageSubresource2KHR-pNext-pNext
  
  `pNext` **must** be `NULL`

- VUID-VkImageSubresource2KHR-imageSubresource-parameter
  
  `imageSubresource` **must** be a valid `VkImageSubresource` structure

Information about the layout of the image subresource is returned in a `VkSubresourceLayout2KHR` structure:

```c
// Provided by VK_KHR_maintenance5
typedef struct VkSubresourceLayout2KHR {
    VkStructureType sType;
    void* pNext;
    VkSubresourceLayout subresourceLayout;
} VkSubresourceLayout2KHR;
```

or the equivalent

```c
// Provided by VK_EXT_host_image_copy, VK_EXT_image_compression_control
typedef VkSubresourceLayout2KHR VkSubresourceLayout2EXT;
```

• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **subresourceLayout** is a `VkSubresourceLayout` structure.

**Valid Usage (Implicit)**

- VUID-VkSubresourceLayout2KHR-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_SUBRESOURCE_LAYOUT_2_KHR`

- VUID-VkSubresourceLayout2KHR-pNext-pNext
  
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkImageCompressionPropertiesEXT` or `VkSubresourceHostMemcpySizeEXT`

- VUID-VkSubresourceLayout2KHR-sType-unique
  
  The `sType` value of each struct in the `pNext` chain **must** be unique
To query the memory size needed to copy to or from an image using \texttt{vkCopyMemoryToImageEXT} or \texttt{vkCopyImageToMemoryEXT} when the \texttt{VK_HOST_IMAGE_COPY_MEMCPY_EXT} flag is specified, add a \texttt{VkSubresourceHostMemcpySizeEXT} structure to the \texttt{pNext} chain of the \texttt{VkSubresourceLayout2EXT} structure in a call to \texttt{vkGetImageSubresourceLayout2EXT}.

The \texttt{VkSubresourceHostMemcpySizeEXT} structure is defined as:

```c
// Provided by VK_EXT_host_image_copy
typedef struct VkSubresourceHostMemcpySizeEXT {
    VkStructureType sType;
    void*     pNext;
    VkDeviceSize size;
} VkSubresourceHostMemcpySizeEXT;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is NULL or a pointer to a structure extending this structure.
- \texttt{size} is the size in bytes of the image subresource.

### Valid Usage (Implicit)

- \texttt{VUID-VkSubresourceHostMemcpySizeEXT-sType-sType}
  \texttt{sType must be VK_STRUCTURE_TYPE_SUBRESOURCE_HOST_MEMCPY_SIZE_EXT}

To query the memory layout of an image subresource, without an image object, call:

```c
// Provided by VK_KHR_maintenance5
void vkGetDeviceImageSubresourceLayoutKHR(
    VkDevice device,
    const VkDeviceImageSubresourceInfoKHR* pInfo,
    VkSubresourceLayout2KHR* pLayout);
```

- \texttt{device} is the logical device that owns the image.
- \texttt{pInfo} is a pointer to a \texttt{VkDeviceImageSubresourceInfoKHR} structure containing parameters required for the subresource layout query.
- \texttt{pLayout} is a pointer to a \texttt{VkSubresourceLayout2KHR} structure in which the layout is returned.

\texttt{vkGetDeviceImageSubresourceLayoutKHR} behaves similarly to \texttt{vkGetImageSubresourceLayout2KHR}, but uses a \texttt{VkImageCreateInfo} structure to specify the image rather than a \texttt{VkImage} object.

### Valid Usage (Implicit)

- \texttt{VUID-vkGetDeviceImageSubresourceLayoutKHR-device-parameter}
  \texttt{device must be a valid VkDevice handle}
- \texttt{VUID-vkGetDeviceImageSubresourceLayoutKHR-pInfo-parameter}
The `VkDeviceImageSubresourceInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_maintenance5
typedef struct VkDeviceImageSubresourceInfoKHR {
    VkStructureType sType;
    const void* pNext;
    const VkImageCreateInfo* pCreateInfo;
    const VkImageSubresource2KHR* pSubresource;
} VkDeviceImageSubresourceInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pCreateInfo` is a pointer to a `VkImageCreateInfo` structure containing parameters affecting creation of the image to query.
- `pSubresource` is a pointer to a `VkImageSubresource2KHR` structure selecting a specific image subresource for the query.

**Valid Usage**

- VUID-VkDeviceImageSubresourceInfoKHR-aspectMask-00997
  The aspectMask member of `pSubresource` must only have a single bit set
- VUID-VkDeviceImageSubresourceInfoKHR-mipLevel-01716
  The mipLevel member of `pSubresource` must be less than the mipLevels specified in `pCreateInfo`
- VUID-VkDeviceImageSubresourceInfoKHR-arrayLayer-01717
  The arrayLayer member of `pSubresource` must be less than the arrayLayers specified in `pCreateInfo`
- VUID-VkDeviceImageSubresourceInfoKHR-format-08886
  If format of the image is a color format that is not a multi-planar image format, and tiling of the `pCreateInfo` is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, the aspectMask member of `pSubresource` must be `VK_IMAGE_ASPECT_COLOR_BIT`
- VUID-VkDeviceImageSubresourceInfoKHR-format-04462
  If format of the `pCreateInfo` has a depth component, the aspectMask member of `pSubresource` must contain `VK_IMAGE_ASPECT_DEPTH_BIT`
- VUID-VkDeviceImageSubresourceInfoKHR-format-04463
  If format of the `pCreateInfo` has a stencil component, the aspectMask member of `pSubresource` must contain `VK_IMAGE_ASPECT_STENCIL_BIT`
- VUID-VkDeviceImageSubresourceInfoKHR-format-04464
  If format of the `pCreateInfo` has a stencil component, the aspectMask member of `pSubresource` must contain `VK_IMAGE_ASPECT_STENCIL_BIT`
If `format` of the `pCreateInfo` does not contain a stencil or depth component, the `aspectMask` member of `pSubresource` must not contain `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`.

- VUID-VkDeviceImageSubresourceInfoKHR-tiling-08717
  If the `tiling` of the `pCreateInfo` is `VK_IMAGE_TILING_LINEAR` and has a multi-planar image format, then the `aspectMask` member of `pSubresource` must be a single valid multi-planar aspect mask bit.

### Valid Usage (Implicit)

- VUID-VkDeviceImageSubresourceInfoKHR-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_DEVICE_IMAGE_SUBRESOURCE_INFO_KHR`

- VUID-VkDeviceImageSubresourceInfoKHR-pNext-pNext
  `pNext` must be `NULL`

- VUID-VkDeviceImageSubresourceInfoKHR-pCreateInfo-parameter
  `pCreateInfo` must be a valid pointer to a valid `VkImageCreateInfo` structure

- VUID-VkDeviceImageSubresourceInfoKHR-pSubresource-parameter
  `pSubresource` must be a valid pointer to a valid `VkImageSubresource2KHR` structure

If an image was created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then the image has a Linux DRM format modifier. To query the modifier, call:

```c
// Provided by VK_EXT_image_drm_format_modifier
VkResult vkGetImageDrmFormatModifierPropertiesEXT(
    VkDevice device, 
    VkImage image, 
    VkImageDrmFormatModifierPropertiesEXT* pProperties);
```

- `device` is the logical device that owns the image.
- `image` is the queried image.
- `pProperties` is a pointer to a `VkImageDrmFormatModifierPropertiesEXT` structure in which properties of the image's DRM format modifier are returned.

### Valid Usage

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-02272
  `image` must have been created with `tiling` equal to `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

### Valid Usage (Implicit)

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-device-parameter
device must be a valid VkDevice handle

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parameter
  image must be a valid VkImage handle

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-pProperties-parameter
  pProperties must be a valid pointer to a VkImageDrmFormatModifierPropertiesEXT structure

- VUID-vkGetImageDrmFormatModifierPropertiesEXT-image-parent
  image must have been created, allocated, or retrieved from device

---

### Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY

The VkImageDrmFormatModifierPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkImageDrmFormatModifierPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint64_t drmFormatModifier;
} VkImageDrmFormatModifierPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- drmFormatModifier returns the image's Linux DRM format modifier.

If the image was created with VkImageDrmFormatModifierListCreateInfoEXT, then the returned drmFormatModifier must belong to the list of modifiers provided at time of image creation in VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers. If the image was created with VkImageDrmFormatModifierExplicitCreateInfoEXT, then the returned drmFormatModifier must be the modifier provided at time of image creation in VkImageDrmFormatModifierExplicitCreateInfoEXT::drmFormatModifier.

---

### Valid Usage (Implicit)

- VUID-VkImageDrmFormatModifierPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_PROPERTIES_EXT

- VUID-VkImageDrmFormatModifierPropertiesEXT-pNext-pNext
  pNext must be NULL
To destroy an image, call:

```c
// Provided by VK_VERSION_1_0
void vkDestroyImage(
    VkDevice device,
    VkImage image,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the image.
- **image** is the image to destroy.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

**Valid Usage**

- **VUID-vkDestroyImage-image-01000**
  All submitted commands that refer to image, either directly or via a VkImageView, must have completed execution

- **VUID-vkDestroyImage-image-01001**
  If VkAllocationCallbacks were provided when image was created, a compatible set of callbacks must be provided here

- **VUID-vkDestroyImage-image-01002**
  If no VkAllocationCallbacks were provided when image was created, pAllocator must be NULL

- **VUID-vkDestroyImage-image-04882**
  image must not have been acquired from vkGetSwapchainImagesKHR

**Valid Usage (Implicit)**

- **VUID-vkDestroyImage-device-parameter**
  device must be a valid VkDevice handle

- **VUID-vkDestroyImage-image-parameter**
  If image is not VK_NULL_HANDLE, image must be a valid VkImage handle

- **VUID-vkDestroyImage-pAllocator-parameter**
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- **VUID-vkDestroyImage-image-parent**
  If image is a valid handle, it must have been created, allocated, or retrieved from device

**Host Synchronization**

- Host access to image must be externally synchronized
12.3.1. Image Format Features

Valid uses of a *VkImage may* depend on the image’s *format features*, defined below. Such constraints are documented in the affected valid usage statement.

- If the image was created with `VK_IMAGE_TILING_LINEAR`, then its set of *format features* is the value of `VkFormatProperties::linearTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` on the same *format* as `VkImageCreateInfo::format`.

- If the image was created with `VK_IMAGE_TILING_OPTIMAL`, but without an Android hardware buffer external format, or a QNX Screen Buffer external format or an `VkBufferCollectionImageCreateInfoFUCHSIA`, then its set of *format features* is the value of `VkFormatProperties::optimalTilingFeatures` found by calling `vkGetPhysicalDeviceFormatProperties` on the same *format* as `VkImageCreateInfo::format`.

- If the image was created with an Android hardware buffer external format, then its set of *format features* is the value of `VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures` found by calling `vkGetAndroidHardwareBufferPropertiesANDROID` on the Android hardware buffer that was imported to the *VkDeviceMemory* to which the image is bound.

- If the image was created with an QNX Screen buffer external format, then its set of *format features* is the value of `VkScreenBufferFormatPropertiesQNX::formatFeatures` found by calling `vkGetScreenBufferPropertiesQNX` on the QNX Screen buffer that was imported to the *VkDeviceMemory* to which the image is bound.

- If the image was created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then:
  - The image’s DRM format modifier is the value of `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier` found by calling `vkGetImageDrmFormatModifierPropertiesEXT`.
  - Let `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties` be the array found by calling `vkGetPhysicalDeviceFormatProperties2` on the same *format* as `VkImageCreateInfo::format`.
  - Let `VkDrmFormatModifierPropertiesEXT prop` be the array element whose `drmFormatModifier` member is the value of the image’s DRM format modifier.
  - Then the image’s set of *format features* is the value of `prop::drmFormatModifierTilingFeatures`.

12.3.2. Corner-Sampled Images

A *corner-sampled image* is an image where unnormalized texel coordinates are centered on integer values rather than half-integer values.

A corner-sampled image has a number of differences compared to conventional texture image:

- Texels are centered on integer coordinates. See *Unnormalized Texel Coordinate Operations*.
- Normalized coordinates are scaled using `coord × (dim - 1)` rather than `coord × dim`, where `dim` is the size of one dimension of the image. See *normalized texel coordinate transform*.
- Partial derivatives are scaled using `coord × (dim - 1)` rather than `coord × dim`. See *Scale Factor Operation*.  

1058
• Calculation of the next higher LOD size goes according to $\lceil \text{dim} / 2 \rceil$ rather than $\lfloor \text{dim} / 2 \rfloor$. See Image Mip Level Sizing.

• The minimum level size is 2x2 for 2D images and 2x2x2 for 3D images. See Image Mip Level Sizing.

Corner-sampling is only supported for 2D and 3D images. When sampling a corner-sampled image, the sampler addressing mode must be VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE. Corner-sampled images are not supported as cube maps or depth/stencil images.

12.3.3. Image Mip Level Sizing

A complete mipmap chain is the full set of mip levels, from the largest mip level provided, down to the minimum mip level size.

Conventional Images

For conventional images, the dimensions of each successive mip level, $n+1$, are:

$$\text{width}_{n+1} = \max(\lceil \text{width}_n / 2 \rceil, 1)$$

$$\text{height}_{n+1} = \max(\lceil \text{height}_n / 2 \rceil, 1)$$

$$\text{depth}_{n+1} = \max(\lceil \text{depth}_n / 2 \rceil, 1)$$

where $\text{width}_n$, $\text{height}_n$, and $\text{depth}_n$ are the dimensions of the next larger mip level, $n$.

The minimum mip level size is:

• 1 for one-dimensional images,
• 1x1 for two-dimensional images, and
• 1x1x1 for three-dimensional images.

The number of levels in a complete mipmap chain is:

$$\lceil \log_2(\max(\text{width}_0, \text{height}_0, \text{depth}_0)) \rceil + 1$$

where $\text{width}_0$, $\text{height}_0$, and $\text{depth}_0$ are the dimensions of the largest (most detailed) mip level, 0.

Corner-Sampled Images

For corner-sampled images, the dimensions of each successive mip level, $n+1$, are:

$$\text{width}_{n+1} = \max(\lceil \text{width}_n / 2 \rceil, 2)$$
\[ \text{height}_{n+1} = \max(\lceil \frac{\text{height}_n}{2} \rceil, 2) \]

\[ \text{depth}_{n+1} = \max(\lceil \frac{\text{depth}_n}{2} \rceil, 2) \]

where \text{width}_n, \text{height}_n, \text{and depth}_n are the dimensions of the next larger mip level, \( n \).

The minimum mip level size is:

- 2x2 for two-dimensional images, and
- 2x2x2 for three-dimensional images.

The number of levels in a complete mipmap chain is:

\[ \lceil \log_2(\max(\text{width}_0, \text{height}_0, \text{depth}_0)) \rceil \]

where \text{width}_0, \text{height}_0, \text{and depth}_0 are the dimensions of the largest (most detailed) mip level, \( 0 \).

## 12.4. Image Layouts

Images are stored in implementation-dependent opaque layouts in memory. Each layout has limitations on what kinds of operations are supported for image subresources using the layout. At any given time, the data representing an image subresource in memory exists in a particular layout which is determined by the most recent layout transition that was performed on that image subresource. Applications have control over which layout each image subresource uses, and can transition an image subresource from one layout to another. Transitions can happen with an image memory barrier, included as part of a \texttt{vkCmdPipelineBarrier} or a \texttt{vkCmdWaitEvents} command buffer command (see \textit{Image Memory Barriers}), or as part of a subpass dependency within a render pass (see \texttt{VkSubpassDependency}).

Image layout is per-image subresource. Separate image subresources of the same image can be in different layouts at the same time, with the exception that depth and stencil aspects of a given image subresource can only be in different layouts if the \texttt{separateDepthStencilLayouts} feature is enabled.

\textit{Note}

Each layout may offer optimal performance for a specific usage of image memory. For example, an image with a layout of \texttt{VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL} may provide optimal performance for use as a color attachment, but be unsupported for use in transfer commands. Applications can transition an image subresource from one layout to another in order to achieve optimal performance when the image subresource is used for multiple kinds of operations. After initialization, applications need not use any layout other than the general layout, though this may produce suboptimal performance on some implementations.

Upon creation, all image subresources of an image are initially in the same layout, where that
layout is selected by the VkImageCreateInfo::initialLayout member. The initialLayout must be either
VK_IMAGE_LAYOUT_UNDEFINED or VK_IMAGE_LAYOUT_PREINITIALIZED. If it is
VK_IMAGE_LAYOUT_PREINITIALIZED, then the image data can be preinitialized by the host while using
this layout, and the transition away from this layout will preserve that data. If it is
VK_IMAGE_LAYOUT_UNDEFINED, then the contents of the data are considered to be undefined, and the
transition away from this layout is not guaranteed to preserve that data. For either of these initial
layouts, any image subresources must be transitioned to another layout before they are accessed
by the device.

Host access to image memory is only well-defined for linear images and for image subresources of
those images which are currently in either the VK_IMAGE_LAYOUT_PREINITIALIZED or
VK_IMAGE_LAYOUT_GENERAL layout. Calling vkGetImageSubresourceLayout for a linear image returns a
subresource layout mapping that is valid for either of those image layouts.

The set of image layouts consists of:

```c
// Provided by VK_VERSION_1_0
typedef enum VkImageLayout {
    VK_IMAGE_LAYOUT_UNDEFINED = 0,
    VK_IMAGE_LAYOUT_GENERAL = 1,
    VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL = 2,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL = 3,
    VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL = 4,
    VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL = 5,
    VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL = 6,
    VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL = 7,
    VK_IMAGE_LAYOUT_PREINITIALIZED = 8,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL = 1000117000,
    // Provided by VK_VERSION_1_1
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL = 1000117001,
    // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL = 1000241000,
    // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL = 1000241001,
    // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL = 1000241002,
    // Provided by VK_VERSION_1_2
    VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL = 1000241003,
    // Provided by VK_VERSION_1_3
    VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL = 1000314000,
    // Provided by VK_KHR_swapchain
    VK_IMAGE_LAYOUT_PRESENT_SRC_KHR = 1000001002,
    // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR = 1000024000,
    // Provided by VK_KHR_video_decode_queue
    VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR = 1000024001,
    // Provided by VK_KHR_video_decode_queue
```
The type(s) of device access supported by each layout are:

- **VK_IMAGE_LAYOUT_UNDEFINED** specifies that the layout is unknown. Image memory cannot be transitioned into this layout. This layout cannot be used as the `initialLayout` member of `VkImageCreateInfo`. This layout can be used in place of the current image layout in a layout transition, but doing so will cause the contents of the image’s memory to be undefined.
• **VK_IMAGE_LAYOUT_PREINITIALIZED** specifies that an image's memory is in a defined layout and can be populated by data, but that it has not yet been initialized by the driver. Image memory cannot be transitioned into this layout. This layout can be used as the `initialLayout` member of `VkImageCreateInfo`. This layout is intended to be used as the initial layout for an image whose contents are written by the host, and hence the data can be written to memory immediately, without first executing a layout transition. Currently, **VK_IMAGE_LAYOUT_PREINITIALIZED** is only useful with linear images because there is not a standard layout defined for **VK_IMAGE_TILING_OPTIMAL** images.

• **VK_IMAGE_LAYOUT_GENERAL** supports all types of device access.

• **VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL** specifies a layout that must only be used with attachment accesses in the graphics pipeline.

• **VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL** specifies a layout allowing read only access as an attachment, or in shaders as a sampled image, combined image/sampler, or input attachment.

• **VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL** must only be used as a color or resolve attachment in a `VkFramebuffer`. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT` usage bit enabled.

• **VK_IMAGE_LAYOUT_DEPTH_STENCIL_ATTACHMENT_OPTIMAL** specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read and write access as a depth/stencil attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL** and **VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL**.

• **VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL** specifies a layout for both the depth and stencil aspects of a depth/stencil format image allowing read only access as a depth/stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_READONLY_OPTIMAL** and **VK_IMAGE_LAYOUT_STENCIL_READONLY_OPTIMAL**.

• **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL** specifies a layout for depth/stencil format images allowing read and write access to the stencil aspect as a stencil attachment, and read only access to the depth aspect as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READONLY_OPTIMAL**.

• **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL** specifies a layout for depth/stencil format images allowing read and write access to the depth aspect as a depth attachment, and read only access to the stencil aspect as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment. It is equivalent to **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READONLY_OPTIMAL**.

• **VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL** specifies a layout for the depth aspect of a depth/stencil format image allowing read and write access as a depth attachment.

• **VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL** specifies a layout for the depth aspect of a depth/stencil format image allowing read-only access as a depth attachment or in shaders as a sampled image, combined image/sampler, or input attachment.

• **VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL** specifies a layout for the stencil aspect of a depth/stencil format image allowing read and write access as a stencil attachment.

• **VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL** specifies a layout for the stencil aspect of a depth/stencil format image allowing read and write access as a stencil attachment.
depth/stencil format image allowing read-only access as a stencil attachment or in shaders as a sampled image, combined image/sampler, or input attachment.

- **VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL** specifies a layout allowing read-only access in a shader as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_SAMPLED_BIT` or `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` usage bits enabled.

- **VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL** must only be used as a source image of a transfer command (see the definition of `VK_PIPELINE_STAGE_TRANSFER_BIT`). This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage bit enabled.

- **VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL** must only be used as a destination image of a transfer command. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage bit enabled.

- **VK_IMAGE_LAYOUT_PRESENT_SRC_KHR** must only be used for presenting a presentable image for display.

- **VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR** is valid only for shared presentable images, and must be used for any usage the image supports.

- **VK_IMAGE_LAYOUT_FRAGMENT_SHADING_RATE_ATTACHMENT_OPTIMAL_KHR** must only be used as a fragment shading rate attachment or shading rate image. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` usage bit enabled.

- **VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT** must only be used as a fragment density map attachment in a `VkRenderPass`. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT` usage bit enabled.

- **VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR** must only be used as a decode output picture in a video decode operation. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR` usage bit enabled.

- **VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR** is reserved for future use.

- **VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR** must only be used as an output reconstructed picture or an input reference picture in a video encode operation. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR` usage bit enabled.

- **VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR** is reserved for future use.

- **VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR** must only be used as an encode input picture in a video encode operation. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR` usage bit enabled.

- **VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR** must only be used as an output reconstructed picture or an input reference picture in a video encode operation. This layout is valid only for image subresources of images created with the `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR` usage bit enabled.

- **VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT** must only be used as either a color attachment or depth/stencil attachment in a `VkFramebuffer` and/or read-only access in a shader...
as a sampled image, combined image/sampler, or input attachment. This layout is valid only for image subresources of images created with the VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT usage bit enabled and either the VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT or VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT and either the VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT or VK_IMAGE_USAGE_SAMPLED_BIT usage bits enabled.

- **VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR** must only be used as either a storage image, or a color or depth/stencil attachment and an input attachment. This layout is valid only for image subresources of images created with either VK_IMAGE_USAGE_STORAGE_BIT, or both VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT and either of VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT or VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT.

The layout of each image subresource is not a state of the image subresource itself, but is rather a property of how the data in memory is organized, and thus for each mechanism of accessing an image in the API the application must specify a parameter or structure member that indicates which image layout the image subresource(s) are considered to be in when the image will be accessed. For transfer commands, this is a parameter to the command (see Clear Commands and Copy Commands). For use as a framebuffer attachment, this is a member in the substructures of the VkRenderPassCreateInfo (see Render Pass). For use in a descriptor set, this is a member in the VkDescriptorImageInfo structure (see Descriptor Set Updates).

### 12.4.1. Image Layout Matching Rules

At the time that any command buffer command accessing an image executes on any queue, the layouts of the image subresources that are accessed must all match exactly the layout specified via the API controlling those accesses, except in case of accesses to an image with a depth/stencil format performed through descriptors referring to only a single aspect of the image, where the following relaxed matching rules apply:

- Descriptors referring just to the depth aspect of a depth/stencil image only need to match in the image layout of the depth aspect, thus VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL and VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL are considered to match.
- Descriptors referring just to the stencil aspect of a depth/stencil image only need to match in the image layout of the stencil aspect, thus VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL and VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL are considered to match.

When performing a layout transition on an image subresource, the old layout value must either equal the current layout of the image subresource (at the time the transition executes), or else be VK_IMAGE_LAYOUT_UNDEFINED (implying that the contents of the image subresource need not be preserved). The new layout used in a transition must not be VK_IMAGE_LAYOUT_UNDEFINED or VK_IMAGE_LAYOUT_PREINITIALIZED.

The image layout of each image subresource of a depth/stencil image created with VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT is dependent on the last sample locations used to render to the image subresource as a depth/stencil attachment, thus applications must provide the same sample locations that were last used to render to the given image subresource whenever a layout transition of the image subresource happens, otherwise the contents of the depth aspect of the image subresource become undefined.
In addition, depth reads from a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range return undefined values.

Similarly, depth writes to a depth/stencil attachment referring to an image subresource range of a depth/stencil image created with `VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT` using different sample locations than what have been last used to perform depth writes to the image subresources of the same image subresource range make the contents of the depth aspect of those image subresources undefined.

### 12.5. Image Views

Image objects are not directly accessed by pipeline shaders for reading or writing image data. Instead, *image views* representing contiguous ranges of the image subresources and containing additional metadata are used for that purpose. Views **must** be created on images of compatible types, and **must** represent a valid subset of image subresources.

Image views are represented by `VkImageView` handles:

```cpp
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkImageView)
```

`VK_REMAINING_ARRAY_LAYERS` is a special constant value used for image views to indicate that all remaining array layers in an image after the base layer should be included in the view.

```cpp
#define VK_REMAINING_ARRAY_LAYERS (-0U)
```

`VK_REMAINING_MIP_LEVELS` is a special constant value used for image views to indicate that all remaining mipmap levels in an image after the base level should be included in the view.

```cpp
#define VK_REMAINING_MIP_LEVELS (-0U)
```

The types of image views that **can** be created are:

```cpp
// Provided by VK_VERSION_1_0
typedef enum VkImageViewType {
    VK_IMAGE_VIEW_TYPE_1D = 0,
    VK_IMAGE_VIEW_TYPE_2D = 1,
    VK_IMAGE_VIEW_TYPE_3D = 2,
    VK_IMAGE_VIEW_TYPE_CUBE = 3,
    VK_IMAGE_VIEW_TYPE_1D_ARRAY = 4,
    VK_IMAGE_VIEW_TYPE_2D_ARRAY = 5,
    VK_IMAGE_VIEW_TYPE_CUBE_ARRAY = 6,
} VkImageViewType;
```
To create an image view, call:

```
// Provided by VK_VERSION_1_0
VkResult vkCreateImageView(
    VkDevice device,
    const VkImageViewCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkImageView* pView);
```

- **device** is the logical device that creates the image view.
- **pCreateInfo** is a pointer to a `VkImageViewCreateInfo` structure containing parameters to be used to create the image view.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.
- **pView** is a pointer to a `VkImageView` handle in which the resulting image view object is returned.

### Valid Usage

- VUID-vkCreateImageView-image-09179
  ```
  VkImageViewCreateInfo::image must have been created from device
  ```

### Valid Usage (Implicit)

- VUID-vkCreateImageView-device-parameter
  ```
  device must be a valid VkDevice handle
  ```
- VUID-vkCreateImageView-pCreateInfo-parameter
  ```
  pCreateInfo must be a valid pointer to a valid VkImageViewCreateInfo structure
  ```
- VUID-vkCreateImageView-pAllocator-parameter
  ```
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure
  ```
- VUID-vkCreateImageView-pView-parameter
  ```
  pView must be a valid pointer to a VkImageView handle
  ```

### Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR
The `VkImageViewCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageViewCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkImageViewCreateFlags flags;
    VkImage image;
    VkImageViewType viewType;
    VkFormat format;
    VkComponentMapping components;
    VkImageSubresourceRange subresourceRange;
} VkImageViewCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkImageViewCreateFlagBits` specifying additional parameters of the image view.
- `image` is a `VkImage` on which the view will be created.
- `viewType` is a `VkImageViewType` value specifying the type of the image view.
- `format` is a `VkFormat` specifying the format and type used to interpret texel blocks of the image.
- `components` is a `VkComponentMapping` structure specifying a remapping of color components (or of depth or stencil components after they have been converted into color components).
- `subresourceRange` is a `VkImageSubresourceRange` structure selecting the set of mipmap levels and array layers to be accessible to the view.

Some of the `image` creation parameters are inherited by the view. In particular, image view creation inherits the implicit parameter `usage` specifying the allowed usages of the image view that, by default, takes the value of the corresponding `usage` parameter specified in `VkImageCreateInfo` at image creation time. The implicit `usage` can be overridden by adding a `VkImageViewUsageCreateInfo` structure to the `pNext` chain, but the view usage must be a subset of the image usage. If `image` has a depth-stencil format and was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, the usage is calculated based on the `subresource.aspectMask` provided:

- If `aspectMask` includes only `VK_IMAGE_ASPECT_STENCIL_BIT`, the implicit `usage` is equal to `VkImageStencilUsageCreateInfo::stencilUsage`.
- If `aspectMask` includes only `VK_IMAGE_ASPECT_DEPTH_BIT`, the implicit `usage` is equal to `VkImageCreateInfo::usage`.
- If both aspects are included in `aspectMask`, the implicit `usage` is equal to the intersection of `VkImageCreateInfo::usage` and `VkImageStencilUsageCreateInfo::stencilUsage`.

If `image` is a 3D image, its Z range can be restricted to a subset by adding a `VkImageViewSlicedCreateInfoEXT` to the `pNext` chain.
If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` flag, and if the `format` of the image is not `multi-planar`, `format` can be different from the image's format, but if `image` was created without the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag and they are not equal they must be compatible. Image format compatibility is defined in the `Format Compatibility Classes` section. Views of compatible formats will have the same mapping between texel coordinates and memory locations irrespective of the `format`, with only the interpretation of the bit pattern changing.

If `image` was created with a `multi-planar` format, and the image view's `aspectMask` is one of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`, the view's aspect mask is considered to be equivalent to `VK_IMAGE_ASPECT_COLOR_BIT` when used as a framebuffer attachment.

**Note**

Values intended to be used with one view format may not be exactly preserved when written or read through a different format. For example, an integer value that happens to have the bit pattern of a floating point denorm or NaN may be flushed or canonicalized when written or read through a view with a floating point format. Similarly, a value written through a signed normalized format that has a bit pattern exactly equal to $-2^b$ may be changed to $-2^b + 1$ as described in Conversion from Normalized Fixed-Point to Floating-Point.

If `image` was created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag, `format` must be compatible with the image's format as described above; or `must` be an uncompressed format, in which case it must be size-compatible with the image's format. In this case, the resulting image view's texel dimensions equal the dimensions of the selected mip level divided by the compressed texel block size and rounded up.

The `VkComponentMapping` components member describes a remapping from components of the image to components of the vector returned by shader image instructions. This remapping must be the identity swizzle for storage image descriptors, input attachment descriptors, framebuffer attachments, and any `VkImageView` used with a combined image sampler that enables `sampler Y′CbCr conversion`.

If the image view is to be used with a sampler which supports `sampler Y′CbCr conversion`, an identically defined object of type `VkSamplerYcbcrConversion` to that used to create the sampler must be passed to `vkCreateImageView` in a `VkSamplerYcbcrConversionInfo` included in the `pNext` chain of `VkImageViewCreateInfo`. Conversely, if a `VkSamplerYcbcrConversion` object is passed to `vkCreateImageView`, an identically defined `VkSamplerYcbcrConversion` object must be used when sampling the image.

If the image has a `multi-planar` format, `subresourceRange.aspectMask` is `VK_IMAGE_ASPECT_COLOR_BIT`, and usage includes `VK_IMAGE_USAGE_SAMPLED_BIT`, then the `format` must be identical to the image `format` and the sampler to be used with the image view must enable `sampler Y′CbCr conversion`.

When such an image is used in a video coding operation, the `sampler Y′CbCr conversion` has no effect.

If `image` was created with the `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and the image has a `multi-planar` format, and if `subresourceRange.aspectMask` is `VK_IMAGE_ASPECT_PLANE_0_BIT`,
VK_IMAGE_ASPECT_PLANE_1_BIT, or VK_IMAGE_ASPECT_PLANE_2_BIT, format must be compatible with the corresponding plane of the image, and the sampler to be used with the image view must not enable sampler Y’C_bC_a conversion. The width and height of the single-plane image view must be derived from the multi-planar image’s dimensions in the manner listed for plane compatibility for the plane.

Any view of an image plane will have the same mapping between texel coordinates and memory locations as used by the components of the color aspect, subject to the formulae relating texel coordinates to lower-resolution planes as described in Chroma Reconstruction. That is, if an R or B plane has a reduced resolution relative to the G plane of the multi-planar image, the image view operates using the \((u_{plane}, v_{plane})\) unnormalized coordinates of the reduced-resolution plane, and these coordinates access the same memory locations as the \((u_{color}, v_{color})\) unnormalized coordinates of the color aspect for which chroma reconstruction operations operate on the same \((u_{plane}, v_{plane})\) or \((i_{plane}, j_{plane})\) coordinates.

**Valid Usage**

- **VUID-VkImageViewCreateInfo-image-01003**
  If image was not created with VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT then viewType must not be VK_IMAGE_VIEW_TYPE_CUBE or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

- **VUID-VkImageViewCreateInfo-viewType-01004**
  If the imageCubeArray feature is not enabled, viewType must not be VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

- **VUID-VkImageViewCreateInfo-image-06723**
  If image was created with VK_IMAGE_TYPE_3D but without VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT set then viewType must not be VK_IMAGE_VIEW_TYPE_2D_ARRAY

- **VUID-VkImageViewCreateInfo-image-06728**
  If image was created with VK_IMAGE_TYPE_3D but without VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, then viewType must not be VK_IMAGE_VIEW_TYPE_2D

- **VUID-VkImageViewCreateInfo-image-04970**
  If image was created with VK_IMAGE_TYPE_3D and viewType is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY then subresourceRange.levelCount must be 1
If `image` was created with `VK_IMAGE_TYPE_3D` and `viewType` is `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY` then `VkImageCreateInfo::flags` must not contain any of `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`.

If `image` was created with a `samples` value not equal to `VK_SAMPLE_COUNT_1_BIT` then `viewType` must be either `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`.

If `image` must have been created with a `usage` value containing at least one of the usages defined in the valid image usage list for image views.

The format features of the resultant image view must contain at least one bit.

If `usage` contains `VK_IMAGE_USAGE_SAMPLED_BIT`, then the format features of the resultant image view must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`.

If `usage` contains `VK_IMAGE_USAGE_STORAGE_BIT`, then the image view's format features must contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`.

If `usage` contains `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, then the image view's format features must contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`.

If `usage` contains `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, then the image view's format features must contain `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`.

If `image` was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` contains `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, then the image view's format features must contain `VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR`.

If `image` was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` contains `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`, then the image view's format features must contain `VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR`.

If `image` was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR`, then `usage` must not include `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`.

If `image` was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` contains `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, then the image view's format features must contain `VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR`.

If `image` was created with `VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR` and `usage` contains `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, then the image view's format features must contain `VK_FORMAT_FEATURE_VIDEO_ENCODE_OUTPUT_BIT_KHR`. 
contains VK_IMAGE_USAGE_VIDEO_ENCODE_DP8_BIT_KHR, then the image view's format features must contain VK_FORMAT_FEATURE_VIDEO_ENCODE_DP8_BIT_KHR

- VUID-VkImageViewCreateInfo-image-08338
  If image was created with VK_IMAGE_CREATE_VIDEO_PROFILE_INDEPENDENT_BIT_KHR, then usage must not include VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR

- VUID-VkImageViewCreateInfo-usage-08932
  If usage contains VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT, and any of the following is true:
  - the externalFormatResolve feature is not enabled
  - the nullColorAttachmentWithExternalFormatResolve property is VK_FALSE
  - image was created with an VkExternalFormatANDROID::externalFormat value of 0
  then the image view's format features must contain at least one of VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT or VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT or VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV

- VUID-VkImageViewCreateInfo-subresourceRange-01478
  subresourceRange.baseMipLevel must be less than the mipLevels specified in VkImageCreateInfo when image was created

- VUID-VkImageViewCreateInfo-subresourceRange-01718
  If subresourceRange.levelCount is not VK_REMAINING_MIP_LEVELS,
  subresourceRange.baseMipLevel + subresourceRange.levelCount must be less than or equal to the mipLevels specified in VkImageCreateInfo when image was created

- VUID-VkImageViewCreateInfo-image-02571
  If image was created with usage containing VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT,
  subresourceRange.levelCount must be 1

- VUID-VkImageViewCreateInfo-image-06724
  If image is not a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, or viewType is not VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.baseArrayLayer must be less than the arrayLayers specified in VkImageCreateInfo when image was created

- VUID-VkImageViewCreateInfo-subresourceRange-06725
  If subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS,
  image is not a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT or VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set, or viewType is not VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.layerCount must be non-zero and
  subresourceRange.baseArrayLayer + subresourceRange.layerCount must be less than or equal to the arrayLayers specified in VkImageCreateInfo when image was created

- VUID-VkImageViewCreateInfo-image-02724
  If image is a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT set, and viewType is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.baseArrayLayer must be less than the depth computed from baseMipLevel and extent.depth specified in VkImageCreateInfo when image was created, according to the formula defined in Image Mip Level Sizing
• VUID-VkImageViewCreateInfo-subresourceRange-02725
  If subresourceRange.layerCount is not VK_REMAINING_ARRAY_LAYERS, image is a 3D image created with VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT set, and viewType is VK_IMAGE_VIEW_TYPE_2D or VK_IMAGE_VIEW_TYPE_2D_ARRAY, subresourceRange.layerCount must be non-zero and subresourceRange.baseArrayLayer + subresourceRange.layerCount must be less than or equal to the depth computed from baseMipLevel and extent.depth specified in VkImageCreateInfo when image was created, according to the formula defined in Image Mip Level Sizing

• VUID-VkImageViewCreateInfo-image-01761
  If image was created with the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT flag, but without the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag, and if the format of the image is not a multi-planar format, format must be compatible with the format used to create image, as defined in Format Compatibility Classes

• VUID-VkImageViewCreateInfo-image-01583
  If image was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag, format must be compatible with, or must be an uncompressed format that is size-compatible with, the format used to create image

• VUID-VkImageViewCreateInfo-image-07072
  If image was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag and format is a non-compressed format, the levelCount member of subresourceRange must be 1

• VUID-VkImageViewCreateInfo-image-09487
  If image was created with the VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT flag, the VkPhysicalDeviceMaintenance6PropertiesKHR::blockTexelViewCompatibleMultipleLayers property is not set to VK_TRUE, and format is a non-compressed format, then the layerCount member of subresourceRange must be 1

• VUID-VkImageViewCreateInfo-pNext-01585
  If a VkImageFormatListCreateInfo structure was included in the pNext chain of the VkImageCreateInfo structure used when creating image and VkImageFormatListCreateInfo::viewFormatCount is not zero then format must be one of the formats in VkImageFormatListCreateInfo::pViewFormats

• VUID-VkImageViewCreateInfo-image-01586
  If image was created with the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT flag, if the format of the image is a multi-planar format, and if subresourceRange.aspectMask is one of the multi-planar aspect mask bits, then format must be compatible with the VkFormat for the plane of the image format indicated by subresourceRange.aspectMask, as defined in Compatible Formats of Planes of Multi-Planar Formats

• VUID-VkImageViewCreateInfo-subresourceRange-07818
  subresourceRange.aspectMask must only have at most 1 valid multi-planar aspect mask bit

• VUID-VkImageViewCreateInfo-image-01762
  If image was not created with the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT flag, or if the format of the image is a multi-planar format and if subresourceRange.aspectMask is VK_IMAGE_ASPECT_COLOR_BIT, format must be identical to the format used to create image

• VUID-VkImageViewCreateInfo-format-06415
  If the image view requires a sampler YCbCr conversion and usage contains 1073
VK_IMAGE_USAGE_SAMPLED_BIT, then the pNext chain must include a VkSamplerYcbcrConversionInfo structure with a conversion value other than VK_NULL_HANDLE

- VUID-VkImageViewCreateInfo-format-04714
  If format has a _422 or _420 suffix then image must have been created with a width that is a multiple of 2

- VUID-VkImageViewCreateInfo-format-04715
  If format has a _420 suffix then image must have been created with a height that is a multiple of 2

- VUID-VkImageViewCreateInfo-pNext-01970
  If the pNext chain includes a VkSamplerYcbcrConversionInfo structure with a conversion value other than VK_NULL_HANDLE, all members of components must have the identity swizzle

- VUID-VkImageViewCreateInfo-pNext-06658
  If the pNext chain includes a VkSamplerYcbcrConversionInfo structure with a conversion value other than VK_NULL_HANDLE, format must be the same used in VkSamplerYcbcrConversionCreateInfo::format

- VUID-VkImageViewCreateInfo-image-01020
  If image is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkImageViewCreateInfo-subResourceRange-01021
  viewType must be compatible with the type of image as shown in the view type compatibility table

- VUID-VkImageViewCreateInfo-image-02399
  If image has an Android external format, format must be VK_FORMAT_UNDEFINED

- VUID-VkImageViewCreateInfo-image-02400
  If image has an Android external format, the pNext chain must include a VkSamplerYcbcrConversionInfo structure with a conversion object created with the same external format as image

- VUID-VkImageViewCreateInfo-image-02401
  If image has an Android external format, all members of components must be the identity swizzle

- VUID-VkImageViewCreateInfo-image-08957
  If image has an QNX Screen external format, format must be VK_FORMAT_UNDEFINED

- VUID-VkImageViewCreateInfo-image-08958
  If image has an QNX Screen external format, the pNext chain must include a VkSamplerYcbcrConversionInfo structure with a conversion object created with the same external format as image

- VUID-VkImageViewCreateInfo-image-08959
  If image has an QNX Screen external format, all members of components must be the identity swizzle

- VUID-VkImageViewCreateInfo-image-02086
  If image was created with usage containing
• VUID-VkImageViewCreateInfo-image-02087
  If the shadingRateImage feature is enabled, and if image was created with usage containing VK_IMAGE_USAGE_SHADING_RATE_IMAGE_BIT_NV, format must be VK_FORMAT_R8_UINT

• VUID-VkImageViewCreateInfo-image-04550
  If the attachmentFragmentShadingRate feature is enabled, and if usage for the image view includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, then the image view’s format features must contain VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

• VUID-VkImageViewCreateInfo-image-04551
  If the attachmentFragmentShadingRate feature is enabled, the usage for the image view includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, and layeredShadingRateAttachments is VK_FALSE, subresourceRange.layerCount must be 1

• VUID-VkImageViewCreateInfo-flags-02572
  If the fragmentDensityMapDynamic feature is not enabled, flags must not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT

• VUID-VkImageViewCreateInfo-flags-03567
  If the fragmentDensityMapDeferred feature is not enabled, flags must not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT

• VUID-VkImageViewCreateInfo-flags-03568
  If flags contains VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT, flags must not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT

• VUID-VkImageViewCreateInfo-image-03569
  If image was created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT and usage containing VK_IMAGE_USAGE_SAMPLED_BIT, subresourceRange.layerCount must be less than or equal to VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxSubsampledArrayLayers

• VUID-VkImageViewCreateInfo-invocationMask-04993
  If the invocationMask feature is enabled, and if image was created with usage containing VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI, format must be VK_FORMAT_R8_UINT

• VUID-VkImageViewCreateInfo-flags-04116
  If flags does not contain VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT and image was created with usage containing VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT, its flags must not contain any of VK_IMAGE_CREATE_PROTECTED_BIT, VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT

• VUID-VkImageViewCreateInfo-pNext-02662
  If the pNext chain includes a VkImageViewUsageCreateInfo structure, and image was not created with a VkImageStencilUsageCreateInfo structure included in the pNext chain of VkImageCreateInfo, its usage member must not include any bits that were not set in the usage member of the VkImageCreateInfo structure used to create image

• VUID-VkImageViewCreateInfo-pNext-02663
  If the pNext chain includes a VkImageViewUsageCreateInfo structure, image was created
with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, and `subresourceRange.aspectMask` includes `VK_IMAGE_ASPECT_STENCIL_BIT`, the `usage` member of the `VkImageViewUsageCreateInfo` structure must not include any bits that were not set in the `usage` member of the `VkImageStencilUsageCreateInfo` structure used to create `image`.

- **VUID-VkImageViewCreateInfo-pNext-02664**
  If the `pNext` chain includes a `VkImageViewUsageCreateInfo` structure, `image` was created with a `VkImageStencilUsageCreateInfo` structure included in the `pNext` chain of `VkImageCreateInfo`, and `subresourceRange.aspectMask` includes bits other than `VK_IMAGE_ASPECT_STENCIL_BIT`, the `usage` member of the `VkImageViewUsageCreateInfo` structure must not include any bits that were not set in the `usage` member of the `VkImageCreateInfo` structure used to create `image`.

- **VUID-VkImageViewCreateInfo-imageViewType-04973**
  If `viewType` is `VK_IMAGE_VIEW_TYPE_1D`, `VK_IMAGE_VIEW_TYPE_2D`, or `VK_IMAGE_VIEW_TYPE_3D`; and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, then `subresourceRange.layerCount` must be `1`.

- **VUID-VkImageViewCreateInfo-imageViewType-04974**
  If `viewType` is `VK_IMAGE_VIEW_TYPE_1D`, `VK_IMAGE_VIEW_TYPE_2D`, or `VK_IMAGE_VIEW_TYPE_3D`; and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, then the remaining number of layers must be `1`.

- **VUID-VkImageViewCreateInfo-viewType-02960**
  If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `subresourceRange.layerCount` must be `6`.

- **VUID-VkImageViewCreateInfo-viewType-02961**
  If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` and `subresourceRange.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers must be `6`.

- **VUID-VkImageViewCreateInfo-viewType-02962**
  If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE` and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers must be a multiple of `6`.

- **VUID-VkImageViewCreateInfo-viewType-02963**
  If `viewType` is `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY` and `subresourceRange.layerCount` is `VK_REMAINING_ARRAY_LAYERS`, the remaining number of layers must be a multiple of `6`.

- **VUID-VkImageViewCreateInfo-imageViewFormatSwizzle-04465**
  If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatSwizzle` is `VK_FALSE`, all elements of `components` must have the identity swizzle.

- **VUID-VkImageViewCreateInfo-imageViewFormatReinterpretation-04466**
  If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::imageViewFormatReinterpretation` is `VK_FALSE`, the `VkFormat` in `format` must not contain a different number of components, or a different number of bits in each component, than the format of the `VkImage` in `image`.

- **VUID-VkImageViewCreateInfo-imageViewFormat-04817**
  If `image` was created with `usage` containing `VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR`,
then the `viewType` must be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- **VUID-VkImageViewCreateInfo-image-04818**
  If `image` was created with `usage` containing `VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR`, `VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`, or `VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR`, then the `viewType` must be `VK_IMAGE_VIEW_TYPE_2D` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- **VUID-VkImageViewCreateInfo-flags-08106**
  If `flags` includes `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature must be enabled

- **VUID-VkImageViewCreateInfo-pNext-08107**
  If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` must contain `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

- **VUID-VkImageViewCreateInfo-pNext-06787**
  If the `pNext` chain includes a `VkExportMetalObjectCreateInfoEXT` structure, its `exportObjectType` member must be `VK_EXPORT_METAL_OBJECT_TYPE_METAL_TEXTURE_BIT_EXT`

- **VUID-VkImageViewCreateInfo-pNext-06944**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `textureSampleWeighted` feature must be enabled

- **VUID-VkImageViewCreateInfo-pNext-06945**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `image` must have been created with `usage` containing `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`

- **VUID-VkImageViewCreateInfo-pNext-06946**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `components` must be `VK_COMPONENT_SWIZZLE_IDENTITY` for all components

- **VUID-VkImageViewCreateInfo-pNext-06947**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `subresourceRange.aspectMask` must be `VK_IMAGE_ASPECT_COLOR_BIT`

- **VUID-VkImageViewCreateInfo-pNext-06948**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `subresourceRange.levelCount` must be 1

- **VUID-VkImageViewCreateInfo-pNext-06949**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure, then `viewType` must be `VK_IMAGE_VIEW_TYPE_1D_ARRAY` or `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

- **VUID-VkImageViewCreateInfo-pNext-06950**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and if `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `image` must have been created with `imageType` `VK_IMAGE_TYPE_1D`

- **VUID-VkImageViewCreateInfo-pNext-06951**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and `viewType` is `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, then `subresourceRange.layerCount` must be equal to 2

- **VUID-VkImageViewCreateInfo-pNext-06952**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and
viewType is VK_IMAGE_VIEW_TYPE_1D_ARRAY, then image must have been created with `width` equal to or greater than \((num\text{Phases} \times \text{max}(\text{align}(\text{filterSize.width, 4}), \text{filterSize.height}))\)

- **VUID-VkImageViewCreateInfo-pNext-06953**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and if viewType is VK_IMAGE_VIEW_TYPE_2D_ARRAY, then image must have been created with `imageType` VK_IMAGE_TYPE_2D

- **VUID-VkImageViewCreateInfo-pNext-06954**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and viewType is VK_IMAGE_VIEW_TYPE_2D_ARRAY, then `subresourceRange.layerCount` must be equal or greater than `numPhases`

- **VUID-VkImageViewCreateInfo-pNext-06955**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and viewType is VK_IMAGE_VIEW_TYPE_2D_ARRAY, then image must have been created with `width` equal to or greater than `filterSize.width`

- **VUID-VkImageViewCreateInfo-pNext-06956**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure and viewType is VK_IMAGE_VIEW_TYPE_2D_ARRAY, then image must have been created with `height` equal to or greater than `filterSize.height`

- **VUID-VkImageViewCreateInfo-pNext-06957**
  If the `pNext` chain includes `VkImageViewSampleWeightCreateInfoQCOM` structure then `VkImageViewSampleWeightCreateInfoQCOM::filterSize.height` must be less than or equal to `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.height`

### Valid Usage (Implicit)

- **VUID-VkImageViewCreateInfo-sType-sType**
  `sType` must be VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO

- **VUID-VkImageViewCreateInfo-pNext-pNext**
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkExportMetalObjectCreateInfoEXT`, `VkImageViewASTCDecodeModeEXT`, `VkImageViewMinLodCreateInfoEXT`, `VkImageViewSampleWeightCreateInfoQCOM`, `VkImageViewSlicedCreateInfoEXT`, `VkImageViewUsageCreateInfo`, `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, or `VkSamplerYcbcrConversionInfo`

- **VUID-VkImageViewCreateInfo-sType-unique**
  The `sType` value of each struct in the `pNext` chain must be unique, with the exception of structures of type `VkExportMetalObjectCreateInfoEXT`

- **VUID-VkImageViewCreateInfo-flags-parameter**
  `flags` must be a valid combination of `VkImageViewCreateFlagBits` values

- **VUID-VkImageViewCreateInfo-image-parameter**
  `image` must be a valid `VkImage` handle

- **VUID-VkImageViewCreateInfo-viewType-parameter**
  `viewType` must be a valid `VkImageViewType` value
Bits which can be set in `VkImageViewCreateInfo::flags`, specifying additional parameters of an image view, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkImageViewCreateFlagBits {
    // Provided by VK_EXT_fragment_density_map
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT = 0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000004,
    // Provided by VK_EXT_fragment_density_map2
    VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT = 0x00000002,
} VkImageViewCreateFlagBits;
```

- `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` specifies that the fragment density map will be read by device during `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT` specifies that the fragment density map will be read by the host during `vkEndCommandBuffer` for the primary command buffer that the render pass is recorded into
- `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` specifies that the image view can be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see `VkOpaqueCaptureDescriptorDataCreateInfoEXT` for more detail.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkImageViewCreateFlags;
```

`VkImageViewCreateFlags` is a bitmask type for setting a mask of zero or more `VkImageViewCreateFlagBits`.

The set of usages for the created image view can be restricted compared to the parent image’s usage flags by adding a `VkImageViewUsageCreateInfo` structure to the `pNext` chain of `VkImageViewCreateInfo`.

The `VkImageViewUsageCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkImageViewUsageCreateInfo {
    VkStructureType sType;
    const void* pNext;
} VkImageViewUsageCreateInfo;
```
VkImageUsageFlags usage;
} VkImageViewUsageCreateInfo;

or the equivalent

// Provided by VK_KHR_maintenance2
typedef VkImageViewUsageCreateInfo VkImageViewUsageCreateInfoKHR;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **usage** is a bitmask of `VkImageUsageFlagBits` specifying allowed usages of the image view.

When this structure is chained to `VkImageViewCreateInfo` the `usage` field overrides the implicit `usage` parameter inherited from image creation time and its value is used instead for the purposes of determining the valid usage conditions of `VkImageViewCreateInfo`.

### Valid Usage (Implicit)

- VUID-VkImageViewUsageCreateInfo-sType-sType
  - **sType** must be `VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_CREATE_INFO`
- VUID-VkImageViewUsageCreateInfo-usage-parameter
  - **usage** must be a valid combination of `VkImageUsageFlagBits` values
- VUID-VkImageViewUsageCreateInfo-usage-requiredbitmask
  - **usage** must not be 0

The range of 3D slices for the created image view can be restricted to a subset of the parent image’s Z range by adding a `VkImageViewSlicedCreateInfoEXT` structure to the `pNext` chain of `VkImageViewCreateInfo`.

The `VkImageViewSlicedCreateInfoEXT` structure is defined as:

// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkImageViewSlicedCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    uint32_t sliceOffset;
    uint32_t sliceCount;
} VkImageViewSlicedCreateInfoEXT;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **sliceOffset** is the Z-offset for the first 3D slice accessible to the image view.
- **sliceCount** is the number of 3D slices accessible to the image view.
When this structure is chained to VkImageViewCreateInfo the sliceOffset field is treated as a Z-offset for the sliced view and sliceCount specifies the range. Shader accesses using a Z coordinate of 0 will access the depth slice corresponding to sliceOffset in the image, and in a shader, the maximum in-bounds Z coordinate for the view is sliceCount - 1.

A sliced 3D view must only be used with a single mip level. The slice coordinates are integer coordinates within the subresourceRange.baseMipLevel used to create the image view.

The effective view depth is equal to extent.depth used to create the image for this view adjusted by subresourceRange.baseMipLevel as specified in Image Mip Level Sizing.

Shader access to this image view is only affected by VkImageViewSlicedCreateInfoEXT if it uses a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE. For access using any other descriptor type, the contents of VkImageViewSlicedCreateInfoEXT are ignored; instead, sliceOffset is treated as being equal to 0, and sliceCount is treated as being equal to VK_REMAINING_3D_SLICES_EXT.

Valid Usage

- VUID-VkImageViewSlicedCreateInfoEXT-sliceOffset-07867
  sliceOffset must be less than the effective view depth as specified in Image Mip Level Sizing

- VUID-VkImageViewSlicedCreateInfoEXT-sliceCount-07868
  If sliceCount is not VK_REMAINING_3D_SLICES_EXT, it must be non-zero and sliceOffset + sliceCount must be less than or equal to the effective view depth as specified in Image Mip Level Sizing

- VUID-VkImageViewSlicedCreateInfoEXT-image-07869
  image must have been created with imageType equal to VK_IMAGE_TYPE_3D

- VUID-VkImageViewSlicedCreateInfoEXT-viewType-07909
  viewType must be VK_IMAGE_VIEW_TYPE_3D

- VUID-VkImageViewSlicedCreateInfoEXT-None-07870
  The image view must reference exactly 1 mip level

- VUID-VkImageViewSlicedCreateInfoEXT-None-07871
  The imageSlicedViewOf3D feature must be enabled on the device

Valid Usage (Implicit)

- VUID-VkImageViewSlicedCreateInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_VIEW_SLICED_CREATE_INFO_EXT

VK_REMAINING_3D_SLICES_EXT is a special constant value used for VkImageViewSlicedCreateInfoEXT::sliceCount to indicate that all remaining 3D slices in an image after the first slice offset specified should be included in the view.
#define VK_REMAINING_3D_SLICES_EXT ~0U

The `VkImageSubresourceRange` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceRange {
    VkImageAspectFlags aspectMask;
    uint32_t baseMipLevel;
    uint32_t levelCount;
    uint32_t baseArrayLayer;
    uint32_t layerCount;
} VkImageSubresourceRange;
```

- `aspectMask` is a bitmask of `VkImageAspectFlagBits` specifying which aspect(s) of the image are included in the view.
- `baseMipLevel` is the first mipmap level accessible to the view.
- `levelCount` is the number of mipmap levels (starting from `baseMipLevel`) accessible to the view.
- `baseArrayLayer` is the first array layer accessible to the view.
- `layerCount` is the number of array layers (starting from `baseArrayLayer`) accessible to the view.

The number of mipmap levels and array layers **must** be a subset of the image subresources in the image. If an application wants to use all mip levels or layers in an image after the `baseMipLevel` or `baseArrayLayer`, it **can** set `levelCount` and `layerCount` to the special values `VK_REMAINING_MIP_LEVELS` and `VK_REMAINING_ARRAY_LAYERS` without knowing the exact number of mip levels or layers.

For cube and cube array image views, the layers of the image view starting at `baseArrayLayer` correspond to faces in the order +X, -X, +Y, -Y, +Z, -Z. For cube arrays, each set of six sequential layers is a single cube, so the number of cube maps in a cube map array view is `layerCount / 6`, and image array layer (`baseArrayLayer + i`) is face index `(i mod 6)` of cube `i / 6`. If the number of layers in the view, whether set explicitly in `layerCount` or implied by `VK_REMAINING_ARRAY_LAYERS`, is not a multiple of 6, the last cube map in the array **must** not be accessed.

`aspectMask` **must** be only `VK_IMAGE_ASPECT_COLOR_BIT`, `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` if `format` is a color, depth-only or stencil-only format, respectively, except if `format` is a **multi-planar format**. If using a depth/stencil format with both depth and stencil components, `aspectMask` **must** include at least one of `VK_IMAGE_ASPECT_DEPTH_BIT` and `VK_IMAGE_ASPECT_STENCIL_BIT`, and **can** include both.

When the `VkImageSubresourceRange` structure is used to select a subset of the slices of a 3D image’s mip level in order to create a 2D or 2D array image view of a 3D image created with `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT`, `baseArrayLayer` and `layerCount` specify the first slice index and the number of slices to include in the created image view. Such an image view **can** be used as a framebuffer attachment that refers only to the specified range of slices of the selected mip level. However, any layout transitions performed on such an attachment view during a render pass instance still apply to the entire subresource referenced which includes all the slices of the selected mip level.
When using an image view of a depth/stencil image to populate a descriptor set (e.g. for sampling in the shader, or for use as an input attachment), the `aspectMask` **must** only include one bit, which selects whether the image view is used for depth reads (i.e. using a floating-point sampler or input attachment in the shader) or stencil reads (i.e. using an unsigned integer sampler or input attachment in the shader). When an image view of a depth/stencil image is used as a depth/stencil framebuffer attachment, the `aspectMask` is ignored and both depth and stencil image subresources are used.

When creating a `VkImageView`, if sampler Y’CbCr conversion is enabled in the sampler, the `aspectMask` of a `subresourceRange` used by the `VkImageView` **must** be `VK_IMAGE_ASPECT_COLOR_BIT`.

When creating a `VkImageView`, if sampler Y’CbCr conversion is not enabled in the sampler and the image format is multi-planar, the image **must** have been created with `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, and the `aspectMask` of the `VkImageView`’s `subresourceRange` **must** be `VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT or VK_IMAGE_ASPECT_PLANE_2_BIT`.

### Valid Usage

- **VUID-VkImageSubresourceRange-levelCount-01720**
  If `levelCount` is not `VK_REMAINING_MIP_LEVELS`, it **must** be greater than 0

- **VUID-VkImageSubresourceRange-layerCount-01721**
  If `layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, it **must** be greater than 0

- **VUID-VkImageSubresourceRange-aspectMask-01670**
  If `aspectMask` includes `VK_IMAGE_ASPECT_COLOR_BIT`, then it **must** not include any of `VK_IMAGE_ASPECT_PLANE_0_BIT, VK_IMAGE_ASPECT_PLANE_1_BIT, or VK_IMAGE_ASPECT_PLANE_2_BIT`

- **VUID-VkImageSubresourceRange-aspectMask-02278**
  `aspectMask` **must** not include `VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT` for any index `i`

### Valid Usage (Implicit)

- **VUID-VkImageSubresourceRange-aspectMask-parameter**
  `aspectMask` **must** be a valid combination of `VkImageAspectFlagBits` values

- **VUID-VkImageSubresourceRange-aspectMask-requiredbitmask**
  `aspectMask` **must** not be 0

Bits which **can** be set in an aspect mask to specify aspects of an image for purposes such as identifying a subresource, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkImageAspectFlagBits {
    VK_IMAGE_ASPECT_COLOR_BIT = 0x00000001,
    VK_IMAGE_ASPECT_DEPTH_BIT = 0x00000002,
    VK_IMAGE_ASPECT_STENCIL_BIT = 0x00000004,
    VK_IMAGE_ASPECT_METADATA_BIT = 0x00000008,
} VkImageAspectFlagBits;
// Provided by VK_VERSION_1_1
```
VK_IMAGE_ASPECT_PLANE_0_BIT = 0x00000010,
// Provided by VK_VERSION_1_1
VK_IMAGE_ASPECT_PLANE_1_BIT = 0x00000020,
// Provided by VK_VERSION_1_1
VK_IMAGE_ASPECT_PLANE_2_BIT = 0x00000040,
// Provided by VK_VERSION_1_3
VK_IMAGE_ASPECT_NONE = 0,
// Provided by VK_EXT_image_drm_format_modifier
VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT = 0x00000080,
// Provided by VK_EXT_image_drm_format_modifier
VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT = 0x00000100,
// Provided by VK_EXT_image_drm_format_modifier
VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT = 0x00000200,
// Provided by VK_EXT_image_drm_format_modifier
VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT = 0x00000400,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_IMAGE_ASPECT_PLANE_0_BIT_KHR = VK_IMAGE_ASPECT_PLANE_0_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_IMAGE_ASPECT_PLANE_1_BIT_KHR = VK_IMAGE_ASPECT_PLANE_1_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_IMAGE_ASPECT_PLANE_2_BIT_KHR = VK_IMAGE_ASPECT_PLANE_2_BIT,
// Provided by VK_KHR_maintenance4
VK_IMAGE_ASPECT_NONE_KHR = VK_IMAGE_ASPECT_NONE,
} VkImageAspectFlagBits;

- **VK_IMAGE_ASPECT_NONE** specifies no image aspect, or the image aspect is not applicable.
- **VK_IMAGE_ASPECT_COLOR_BIT** specifies the color aspect.
- **VK_IMAGE_ASPECT_DEPTH_BIT** specifies the depth aspect.
- **VK_IMAGE_ASPECT_STENCIL_BIT** specifies the stencil aspect.
- **VK_IMAGE_ASPECT_METADATA_BIT** specifies the metadata aspect used for sparse resource operations.
- **VK_IMAGE_ASPECT_PLANE_0_BIT** specifies plane 0 of a multi-planar image format.
- **VK_IMAGE_ASPECT_PLANE_1_BIT** specifies plane 1 of a multi-planar image format.
- **VK_IMAGE_ASPECT_PLANE_2_BIT** specifies plane 2 of a multi-planar image format.
- **VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT** specifies memory plane 0.
- **VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT** specifies memory plane 1.
- **VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT** specifies memory plane 2.
- **VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT** specifies memory plane 3.

// Provided by VK_VERSION_1_0
typedef VkFlags VkImageAspectFlags;

**VkImageAspectFlags** is a bitmask type for setting a mask of zero or more **VkImageAspectFlagBits**.

The **VkComponentMapping** structure is defined as:
// Provided by VK_VERSION_1_0
typedef struct VkComponentMapping {
    VkComponentSwizzle r;
    VkComponentSwizzle g;
    VkComponentSwizzle b;
    VkComponentSwizzle a;
} VkComponentMapping;

- **r** is a *VkComponentSwizzle* specifying the component value placed in the R component of the output vector.
- **g** is a *VkComponentSwizzle* specifying the component value placed in the G component of the output vector.
- **b** is a *VkComponentSwizzle* specifying the component value placed in the B component of the output vector.
- **a** is a *VkComponentSwizzle* specifying the component value placed in the A component of the output vector.

### Valid Usage (Implicit)

- VUID-VkComponentMapping-r-parameter
  *r* must be a valid *VkComponentSwizzle* value

- VUID-VkComponentMapping-g-parameter
  *g* must be a valid *VkComponentSwizzle* value

- VUID-VkComponentMapping-b-parameter
  *b* must be a valid *VkComponentSwizzle* value

- VUID-VkComponentMapping-a-parameter
  *a* must be a valid *VkComponentSwizzle* value

Possible values of the members of *VkComponentMapping*, specifying the component values placed in each component of the output vector, are:

// Provided by VK_VERSION_1_0
typedef enum VkComponentSwizzle {
    VK_COMPONENT_SWIZEE_IDENTITY = 0,
    VK_COMPONENT_SWIZEE_ZERO = 1,
    VK_COMPONENT_SWIZEE_ONE = 2,
    VK_COMPONENT_SWIZEE_R = 3,
    VK_COMPONENT_SWIZEE_G = 4,
    VK_COMPONENT_SWIZEE_B = 5,
    VK_COMPONENT_SWIZEE_A = 6,
} VkComponentSwizzle;

- **VK_COMPONENT_SWIZEE_IDENTITY** specifies that the component is set to the identity swizzle.
• **VK_COMPONENT_SWIZZLE_ZERO** specifies that the component is set to zero.

• **VK_COMPONENT_SWIZZLE_ONE** specifies that the component is set to either 1 or 1.0, depending on whether the type of the image view format is integer or floating-point respectively, as determined by the **Format Definition** section for each **VkFormat**.

• **VK_COMPONENT_SWIZZLE_R** specifies that the component is set to the value of the R component of the image.

• **VK_COMPONENT_SWIZZLE_G** specifies that the component is set to the value of the G component of the image.

• **VK_COMPONENT_SWIZZLE_B** specifies that the component is set to the value of the B component of the image.

• **VK_COMPONENT_SWIZZLE_A** specifies that the component is set to the value of the A component of the image.

Setting the identity swizzle on a component is equivalent to setting the identity mapping on that component. That is:

**Table 17. Component Mappings Equivalent To VK_COMPONENT_SWIZZLE_IDENTITY**

<table>
<thead>
<tr>
<th>Component</th>
<th>Identity Mapping</th>
</tr>
</thead>
<tbody>
<tr>
<td>components.r</td>
<td>VK_COMPONENT_SWIZZLE_R</td>
</tr>
<tr>
<td>components.g</td>
<td>VK_COMPONENT_SWIZZLE_G</td>
</tr>
<tr>
<td>components.b</td>
<td>VK_COMPONENT_SWIZZLE_B</td>
</tr>
<tr>
<td>components.a</td>
<td>VK_COMPONENT_SWIZZLE_A</td>
</tr>
</tbody>
</table>

If the **pNext** chain includes a **VkImageViewASTCDecodeModeEXT** structure, then that structure includes a parameter specifying the decode mode for image views using ASTC compressed formats.

The **VkImageViewASTCDecodeModeEXT** structure is defined as:

```c
// Provided by VK_EXT_astc_decode_mode
typedef struct VkImageViewASTCDecodeModeEXT {
    VkStructureType sType;
    const void* pNext;
    VkFormat decodeMode;
} VkImageViewASTCDecodeModeEXT;
```

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **decodeMode** is the intermediate format used to decode ASTC compressed formats.

**Valid Usage**

• **VUID-VkImageViewASTCDecodeModeEXT-decodeMode-02230**
  
  **decodeMode must be one of** **VK_FORMAT_R16G16B16A16_SFLOAT**, **VK_FORMAT_R8G8B8A8_UNORM**, or **VK_FORMAT_E5B9G9R9_UFLOAT_PACK32**
If the decodeModeSharedExponent feature is not enabled, decodeMode must not be VK_FORMAT_E5B9G9R9_UFLOAT_PACK32.

If decodeMode is VK_FORMAT_R8G8B8A8_UNORM the image view must not include blocks using any of the ASTC HDR modes.

Format of the image view must be one of the ASTC Compressed Image Formats.

If format uses sRGB encoding then the decodeMode has no effect.

Valid Usage (Implicit)

sType must be VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT.

decodeMode must be a valid VkFormat value.

If the pNext chain includes a VkImageViewSampleWeightCreateInfoQCOM structure, then that structure includes a parameter specifying the parameters for weight image views used in weight image sampling.

The VkImageViewSampleWeightCreateInfoQCOM structure is defined as:

```c
typedef struct VkImageViewSampleWeightCreateInfoQCOM {
    VkStructureType sType;
    const void* pNext;
    VkOffset2D filterCenter;
    VkExtent2D filterSize;
    uint32_t numPhases;
} VkImageViewSampleWeightCreateInfoQCOM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- filterCenter is a VkOffset2D describing the location of the weight filter origin.
- filterSize is a VkExtent2D specifying weight filter dimensions.
- numPhases is number of sub-pixel filter phases.

The filterCenter specifies the origin or center of the filter kernel, as described in Weight Sampling Operation. The numPhases describes the number of sub-pixel filter phases as described in Weight Sampling Phases.
Valid Usage

- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterSize-06958
  
  `filterSize.width` **must be less than or equal to**
  `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.width`

- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterSize-06959
  
  `filterSize.height` **must be less than or equal to**
  `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension.height`

- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterCenter-06960
  
  `filterCenter.x` **must be less than or equal to** `(filterSize.width - 1)`

- VUID-VkImageViewSampleWeightCreateInfoQCOM-filterCenter-06961
  
  `filterCenter.y` **must be less than or equal to** `(filterSize.height - 1)`

- VUID-VkImageViewSampleWeightCreateInfoQCOM-numPhases-06962
  
  `numPhases` **must be a power of two squared value** (i.e., 1, 4, 16, 64, 256, etc.)

- VUID-VkImageViewSampleWeightCreateInfoQCOM-numPhases-06963
  
  `numPhases` **must be less than or equal to** `VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterPhases`

Valid Usage (Implicit)

- VUID-VkImageViewSampleWeightCreateInfoQCOM-sType-sType
  
  `sType` **must be** `VK_STRUCTURE_TYPE_IMAGE_VIEW_SAMPLE_WEIGHT_CREATE_INFO_QCOM`

To destroy an image view, call:

```c
// Provided by VK_VERSION_1_0
void vkDestroyImageView(
    VkDevice device,         // Provided by VK_VERSION_1_0
    VkImageView imageView,  // Provided by VK_VERSION_1_0
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the image view.
- `imageView` is the image view to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyImageView-imageView-01026
  
  All submitted commands that refer to `imageView` **must have completed execution**

- VUID-vkDestroyImageView-imageView-01027
  
  If `VkAllocationCallbacks` were provided when `imageView` was created, a compatible set of
callbacks **must** be provided here

- **VUID-vkDestroyImageView-imageView-01028**
  If no `VkAllocationCallbacks` were provided when `imageView` was created, `pAllocator` **must** be **NULL**

**Valid Usage (Implicit)**

- **VUID-vkDestroyImageView-device-parameter**
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkDestroyImageView-imageView-parameter**
  If `imageView` is not `VK_NULL_HANDLE`, `imageView` **must** be a valid `VkImageView` handle

- **VUID-vkDestroyImageView-pAllocator-parameter**
  If `pAllocator` is not **NULL**, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- **VUID-vkDestroyImageView-imageView-parent**
  If `imageView` is a valid handle, it **must** have been created, allocated, or retrieved from `device`

**Host Synchronization**

- Host access to `imageView` **must** be externally synchronized

To get the handle for an image view, call:

```c
// Provided by VK_NVX_image_view_handle
uint32_t vkGetImageViewHandleNVX(
    VkDevice device, const VkImageViewHandleInfoNVX* pInfo);
```

- `device` is the logical device that owns the image view.
- `pInfo` describes the image view to query and type of handle.

**Valid Usage (Implicit)**

- **VUID-vkGetImageViewHandleNVX-device-parameter**
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkGetImageViewHandleNVX-pInfo-parameter**
  `pInfo` **must** be a valid pointer to a valid `VkImageViewHandleInfoNVX` structure

The `VkImageViewHandleInfoNVX` structure is defined as:
typedef struct VkImageViewHandleInfoNVX {
    VkStructureType sType;
    const void* pNext;
    VkImageView imageView;
    VkDescriptorType descriptorType;
    VkSampler sampler;
} VkImageViewHandleInfoNVX;

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **imageView** is the image view to query.
- **descriptorType** is the type of descriptor for which to query a handle.
- **sampler** is the sampler to combine with the image view when generating the handle.

**Valid Usage**

- VUID-VkImageViewHandleInfoNVX-descriptorType-02654
descriptorType must be VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER

- VUID-VkImageViewHandleInfoNVX-sampler-02655
sampler must be a valid VkSampler if descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER

- VUID-VkImageViewHandleInfoNVX-imageView-02656
If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the image that imageView was created from must have been created with the VK_IMAGE_USAGE_SAMPLED_BIT usage bit set

- VUID-VkImageViewHandleInfoNVX-imageView-02657
If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, the image that imageView was created from must have been created with the VK_IMAGE_USAGE_STORAGE_BIT usage bit set

**Valid Usage (Implicit)**

- VUID-VkImageViewHandleInfoNVX-sType-sType
sType must be VK_STRUCTURE_TYPE_IMAGE_VIEW_HANDLE_INFO_NVX

- VUID-VkImageViewHandleInfoNVX-pNext-pNext
pNext must be NULL

- VUID-VkImageViewHandleInfoNVX-imageView-parameter
imageView must be a valid VkImageView handle

- VUID-VkImageViewHandleInfoNVX-descriptorType-parameter
descriptorType must be a valid VkDescriptorType value
To get the device address for an image view, call:

```c
// Provided by VK_NVX_image_view_handle
VkResult vkGetImageViewAddressNVX(  
    VkDevice device,  
    VkImageView imageView,  
    VkImageViewAddressPropertiesNVX* pProperties);
```

- `device` is the logical device that owns the image view.
- `imageView` is a handle to the image view.
- `pProperties` contains the device address and size when the call returns.

**Valid Usage (Implicit)**

- **VUID-vkGetImageViewAddressNVX-device-parameter**
  - `device` must be a valid `VkDevice` handle
- **VUID-vkGetImageViewAddressNVX-imageView-parameter**
  - `imageView` must be a valid `VkImageView` handle
- **VUID-vkGetImageViewAddressNVX-pProperties-parameter**
  - `pProperties` must be a valid pointer to a `VkImageViewAddressPropertiesNVX` structure
- **VUID-vkGetImageViewAddressNVX-imageView-parent**
  - `imageView` must have been created, allocated, or retrieved from `device`

**Return Codes**

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_UNKNOWN`

The `VkImageViewAddressPropertiesNVX` structure is defined as:

```c
// Provided by VK_NVX_image_view_handle
typedef struct VkImageViewAddressPropertiesNVX {
```
VkStructureType sType;
void* pNext;
VkDeviceAddress deviceAddress;
VkDeviceSize size;
} VkImageViewAddressPropertiesNVX;

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **deviceAddress** is the device address of the image view.
- **size** is the size in bytes of the image view device memory.

### Valid Usage (Implicit)

- VUID-VkImageViewAddressPropertiesNVX-sType-sType
  
  sType must be **VK_STRUCTURE_TYPE_IMAGE_VIEW_ADDRESS_PROPERTIES_NVX**

- VUID-VkImageViewAddressPropertiesNVX-pNext-pNext
  
  pNext must be **NULL**

### 12.5.1. Image View Format Features

Valid uses of a **VkImageView** may depend on the image view’s **format features**, defined below. Such constraints are documented in the affected valid usage statement.

- If Vulkan 1.3 is supported or the **VK_KHR_format_feature_flags2** extension is supported, and **VkImageViewCreateInfo::image** was created with **VK_IMAGE_TILING_LINEAR**, then the image view’s set of **format features** is the value of **VkFormatProperties3::linearTilingFeatures** found by calling **vkGetPhysicalDeviceFormatProperties2** on the same **format** as **VkImageViewCreateInfo::format**.

- If Vulkan 1.3 is not supported and the **VK_KHR_format_feature_flags2** extension is not supported, and **VkImageViewCreateInfo::image** was created with **VK_IMAGE_TILING_LINEAR**, then the image view’s set of **format features** is the union of the value of **VkFormatProperties::linearTilingFeatures** found by calling **vkGetPhysicalDeviceFormatProperties** on the same **format** as **VkImageViewCreateInfo::format**, with:
  
  - **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT** if the format is a depth/stencil format and the image view features also contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT**.
  
  - **VK_FORMAT_FEATURE_2_STORAGE_READ WITHOUT_FORMAT_BIT** if the format is one of the extended storage formats and shaderStorageImageReadWithoutFormat is enabled on the device.
  
  - **VK_FORMAT_FEATURE_2 Storage_WRITE WITHOUT_FORMAT_BIT** if the format is one of the extended storage formats and shaderStorageImageWriteWithoutFormat is enabled on the device.

- If Vulkan 1.3 is supported or the **VK_KHR_format_feature_flags2** extension is supported, and **VkImageViewCreateInfo::image** was created with **VK_IMAGE TILING OPTIMAL**, but without an Android hardware buffer external format, or a QNX Screen buffer external format, then the image view’s set of **format features** is the value of **VkFormatProperties::optimalTilingFeatures** or
If Vulkan 1.3 is not supported and the VK_KHR_format_feature_flags2 extension is not supported, and VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_OPTIMAL, but without an Android hardware buffer external format, or a QNX Screen buffer external format, then the image view's set of format features is the union of the value of VkFormatProperties::optimalTilingFeatures found by calling vkGetPhysicalDeviceFormatProperties on the same format as VkImageViewCreateInfo::format, with:

- VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT if the format is a depth/stencil format and the image view features also contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT.
- VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT if the format is one of the extended storage formats and shaderStorageImageReadWithoutFormat is enabled on the device.
- VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT if the format is one of the extended storage formats and shaderStorageImageWriteWithoutFormat is enabled on the device.

If VkImageViewCreateInfo::image was created with an Android hardware buffer external format, then the image views's set of format features is the value of VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures found by calling vkGetAndroidHardwareBufferPropertiesANDROID on the Android hardware buffer that was imported to the VkDeviceMemory to which the VkImageViewCreateInfo::image is bound.

If VkImageViewCreateInfo::image was created with a QNX Screen buffer external format, then the image view's set of format features is the value of VkScreenBufferFormatPropertiesQNX::formatFeatures found by calling vkGetScreenBufferPropertiesQNX on the QNX Screen buffer that was imported to the VkDeviceMemory to which the VkImageViewCreateInfo::image is bound.

If VkImageViewCreateInfo::image was created with a chained VkBufferCollectionImageCreateInfoFUCHSIA, then the image view's set of format features is the value of VkBufferCollectionPropertiesFUCHSIA::formatFeatures found by calling vkGetBufferCollectionPropertiesFUCHSIA on the buffer collection passed as VkBufferCollectionImageCreateInfoFUCHSIA::collection when the image was created.

If VkImageViewCreateInfo::image was created with VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then:

- The image's DRM format modifier is the value of VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier found by calling vkGetImageDrmFormatModifierPropertiesEXT.
- Let VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties be the array found by calling vkGetPhysicalDeviceFormatProperties2 on the same format as VkImageViewCreateInfo::format.
- Let VkDrmFormatModifierPropertiesEXT prop be the array element whose drmFormatModifier member is the value of the image's DRM format modifier.
- Then the image view's set of format features is prop::drmFormatModifierTilingFeatures.

The VkImageViewMinLodCreateInfoEXT structure is defined as:
typedef struct VkImageViewMinLodCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    float minLod;
} VkImageViewMinLodCreateInfoEXT;

• **sType** is a VkStructureType value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **minLod** is the value to clamp the minimum LOD accessible by this VkImageView.

If the **pNext** chain includes a VkImageViewMinLodCreateInfoEXT structure, then that structure includes a parameter specifying a value to clamp the minimum LOD value during Image Level(s) Selection, Texel Gathering and Integer Texel Coordinate Operations.

If the image view contains VkImageViewMinLodCreateInfoEXT and it is used as part of a sampling operation:

\[
\text{minLodFloat}_{\text{imageView}} = \text{minLod}
\]

otherwise:

\[
\text{minLodFloat}_{\text{imageView}} = 0.0
\]

An integer variant of this parameter is also defined for sampling operations which access integer mipmap levels:

\[
\text{minLodInteger}_{\text{imageView}} = \lfloor \text{minLodFloat}_{\text{imageView}} \rfloor
\]

### Valid Usage

- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06455
  If the **minLod** feature is not enabled, **minLod** must be **0.0**
- VUID-VkImageViewMinLodCreateInfoEXT-minLod-06456
  **minLod** must be less or equal to the index of the last mipmap level accessible to the view

### Valid Usage (Implicit)

- VUID-VkImageViewMinLodCreateInfoEXT-sType-sType
  **sType** must be VK_STRUCTURE_TYPE_IMAGE_VIEW_MIN_LOD_CREATE_INFO_EXT

### 12.6. Acceleration Structures

Acceleration structures are opaque data structures that are built by the implementation to more efficiently perform spatial queries on the provided geometric data. For this extension, an
acceleration structure is either a top-level acceleration structure containing a set of bottom-level acceleration structures or a bottom-level acceleration structure containing either a set of axis-aligned bounding boxes for custom geometry or a set of triangles.

Each instance in the top-level acceleration structure contains a reference to a bottom-level acceleration structure as well as an instance transform plus information required to index into the shader bindings. The top-level acceleration structure is what is bound to the acceleration descriptor, for example to trace inside the shader in the ray tracing pipeline.

Acceleration structures are represented by `VkAccelerationStructureKHR` handles:

```c
// Provided by VK_KHR_acceleration_structure
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureKHR)
```

Acceleration structures for the `VK_NV_ray_tracing` extension are represented by the similar `VkAccelerationStructureNV` handles:

```c
// Provided by VK_NV_ray_tracing
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkAccelerationStructureNV)
```

To create acceleration structures, call:

```c
// Provided by VK_NV_ray_tracing
VkResult vkCreateAccelerationStructureNV(
    VkDevice device,
    const VkAccelerationStructureCreateInfoNV* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureNV* pAccelerationStructure);
```

- `device` is the logical device that creates the buffer object.
- `pCreateInfo` is a pointer to a `VkAccelerationStructureCreateInfoNV` structure containing parameters affecting creation of the acceleration structure.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pAccelerationStructure` is a pointer to a `VkAccelerationStructureNV` handle in which the resulting acceleration structure object is returned.

Similarly to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape” as specified by the information in `VkAccelerationStructureCreateInfoNV` and `compactedSize` in `pCreateInfo`.

Once memory has been bound to the acceleration structure using `vkBindAccelerationStructureMemoryNV`, that memory is populated by calls to `vkCmdBuildAccelerationStructureNV` and `vkCmdCopyAccelerationStructureNV`.

Acceleration structure creation uses the count and type information from the geometries, but does not use the data references in the structures.
Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureNV-device-parameter
device must be a valid VkDevice handle

- VUID-vkCreateAccelerationStructureNV-pCreateInfo-parameter
pCreateInfo must be a valid pointer to a valid VkAccelerationStructureCreateInfoNV structure

- VUID-vkCreateAccelerationStructureNV-pAllocator-parameter
If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateAccelerationStructureNV-pAccelerationStructure-parameter
pAccelerationStructure must be a valid pointer to a VkAccelerationStructureNV handle

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY

The VkAccelerationStructureCreateInfoNV structure is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureCreateInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkDeviceSize compactedSize;
    VkAccelerationStructureInfoNV info;
} VkAccelerationStructureCreateInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- compactedSize is the size from the result of vkCmdWriteAccelerationStructuresPropertiesNV if this acceleration structure is going to be the target of a compacting copy.
- info is the VkAccelerationStructureInfoNV structure specifying further parameters of the created acceleration structure.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoNV-compactedSize-02421
If compactedSize is not 0 then both info.geometryCount and info.instanceCount must be 0
Valid Usage (Implicit)

- VUID-VkAccelerationStructureCreateInfoNV-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_NV

- VUID-VkAccelerationStructureCreateInfoNV-pNext-pNext
  
  pNext must be NULL or a pointer to a valid instance of VkOpaqueCaptureDescriptorDataCreateInfoEXT

- VUID-VkAccelerationStructureCreateInfoNV-sType-unique
  
  The sType value of each struct in the pNext chain must be unique

- VUID-VkAccelerationStructureCreateInfoNV-info-parameter
  
  info must be a valid VkAccelerationStructureInfoNV structure

The VkAccelerationStructureInfoNV structure is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkAccelerationStructureTypeNV type;
    VkBuildAccelerationStructureFlagsNV flags;
    uint32_t instanceCount;
    uint32_t geometryCount;
    const VkGeometryNV* pGeometries;
} VkAccelerationStructureInfoNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- type is a VkAccelerationStructureTypeNV value specifying the type of acceleration structure that will be created.
- flags is a bitmask of VkBuildAccelerationStructureFlagBitsNV specifying additional parameters of the acceleration structure.
- instanceCount specifies the number of instances that will be in the new acceleration structure.
- geometryCount specifies the number of geometries that will be in the new acceleration structure.
- pGeometries is a pointer to an array of geometryCount VkGeometryNV structures containing the scene data being passed into the acceleration structure.

VkAccelerationStructureInfoNV contains information that is used both for acceleration structure creation with vkCreateAccelerationStructureNV and in combination with the actual geometric data to build the acceleration structure with vkCmdBuildAccelerationStructureNV.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoNV-geometryCount-02422
geometryCount must be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::maxGeometryCount

- VUID-VkAccelerationStructureInfoNV-instanceCount-02423
  instanceCount must be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::maxInstanceCount

- VUID-VkAccelerationStructureInfoNV-maxTriangleCount-02424
  The total number of triangles in all geometries must be less than or equal to VkPhysicalDeviceRayTracingPropertiesNV::maxTriangleCount

- VUID-VkAccelerationStructureInfoNV-type-02425
  If type is VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_NV then geometryCount must be 0

- VUID-VkAccelerationStructureInfoNV-type-02426
  If type is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV then instanceCount must be 0

- VUID-VkAccelerationStructureInfoNV-type-02786
  If type is VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV then the geometryType member of each geometry in pGeometries must be the same

- VUID-VkAccelerationStructureInfoNV-type-04623
  type must not be VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR

- VUID-VkAccelerationStructureInfoNV-flags-02592
  If flags has the VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_NV bit set, then it must not have the VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_NV bit set

- VUID-VkAccelerationStructureInfoNV-scratch-02781
  scratch must have been created with VK_BUFFER_USAGE_RAY_TRACING_BIT_NV usage flag

- VUID-VkAccelerationStructureInfoNV-instanceData-02782
  If instanceData is not VK_NULL_HANDLE, instanceData must have been created with VK_BUFFER_USAGE_RAY_TRACING_BIT_NV usage flag

Valid Usage (Implicit)

- VUID-VkAccelerationStructureInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_INFO_NV

- VUID-VkAccelerationStructureInfoNV-pNext-pNext
  pNext must be NULL

- VUID-VkAccelerationStructureInfoNV-type-parameter
  type must be a valid VkAccelerationStructureTypeNV value

- VUID-VkAccelerationStructureInfoNV-flags-parameter
  flags must be a valid combination of VkBuildAccelerationStructureFlagBitsNV values

- VUID-VkAccelerationStructureInfoNV-pGeometries-parameter
  If geometryCount is not 0, pGeometries must be a valid pointer to an array of geometryCount valid VkGeometryNV structures

To create an acceleration structure, call:
Provided by VK_KHR_acceleration_structure

```c
VkResult vkCreateAccelerationStructureKHR(
    VkDevice device,
    const VkAccelerationStructureCreateInfoKHR* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkAccelerationStructureKHR* pAccelerationStructure);
```

- **device** is the logical device that creates the acceleration structure object.
- **pCreateInfo** is a pointer to a `VkAccelerationStructureCreateInfoKHR` structure containing parameters affecting creation of the acceleration structure.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.
- **pAccelerationStructure** is a pointer to a `VkAccelerationStructureKHR` handle in which the resulting acceleration structure object is returned.

Similar to other objects in Vulkan, the acceleration structure creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into an acceleration structure is determined by the parameters of `VkAccelerationStructureCreateInfoKHR`.

The acceleration structure data is stored in the object referred to by `VkAccelerationStructureCreateInfoKHR::buffer`. Once memory has been bound to that buffer, it must be populated by acceleration structure build or acceleration structure copy commands such as `vkCmdBuildAccelerationStructuresKHR`, `vkBuildAccelerationStructuresKHR`, `vkCmdCopyAccelerationStructureKHR`, and `vkCopyAccelerationStructureKHR`.

**Note**

The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the acceleration structure data using acceleration structure copy commands. During capture the tool will use `vkCopyAccelerationStructureToMemoryKHR` or `vkCmdCopyAccelerationStructureToMemoryKHR` with a mode of `VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR`, and `vkCopyMemoryToAccelerationStructureKHR` or `vkCmdCopyMemoryToAccelerationStructureKHR` with a mode of `VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR` during replay.

**Note**

Memory does not need to be bound to the underlying buffer when `vkCreateAccelerationStructureKHR` is called.

The input buffers passed to acceleration structure build commands will be referenced by the implementation for the duration of the command. After the command completes, the acceleration structure may hold a reference to any acceleration structure specified by an active instance contained therein. Apart from this referencing, acceleration structures must be fully self-contained. The application can reuse or free any memory which was used by the command as an input or as scratch without affecting the results of ray traversal.
Valid Usage

- VUID-vkCreateAccelerationStructureKHR-accelerationStructure-03611
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature must be enabled

- VUID-vkCreateAccelerationStructureKHR-deviceAddress-03488
  If `VkAccelerationStructureCreateInfoKHR::deviceAddress` is not zero, the `accelerationStructureCaptureReplay` feature must be enabled

- VUID-vkCreateAccelerationStructureKHR-device-03489
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature must be enabled

Valid Usage (Implicit)

- VUID-vkCreateAccelerationStructureKHR-device-parameter
  `device` must be a valid `VkDevice` handle

- VUID-vkCreateAccelerationStructureKHR-pCreateInfo-parameter
  `pCreateInfo` must be a valid pointer to a valid `VkAccelerationStructureCreateInfoKHR` structure

- VUID-vkCreateAccelerationStructureKHR-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkCreateAccelerationStructureKHR-pAccelerationStructure-parameter
  `pAccelerationStructure` must be a valid pointer to a `VkAccelerationStructureKHR` handle

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR

The `VkAccelerationStructureCreateInfoKHR` structure is defined as:

```
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureCreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkAccelerationStructureCreateFlagsKHR createFlags;
    VkBuffer buffer;
} VkAccelerationStructureCreateInfoKHR;
```
VkDeviceSize offset;
VkDeviceSize size;
VkAccelerationStructureTypeKHR type;
VkDeviceAddress deviceAddress;
} VkAccelerationStructureCreateInfoKHR;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **createFlags** is a bitmask of `VkAccelerationStructureCreateFlagBitsKHR` specifying additional creation parameters of the acceleration structure.
- **buffer** is the buffer on which the acceleration structure will be stored.
- **offset** is an offset in bytes from the base address of the buffer at which the acceleration structure will be stored, and **must** be a multiple of 256.
- **size** is the size required for the acceleration structure.
- **type** is a `VkAccelerationStructureTypeKHR` value specifying the type of acceleration structure that will be created.
- **deviceAddress** is the device address requested for the acceleration structure if the `accelerationStructureCaptureReplay` feature is being used. If `deviceAddress` is zero, no specific address is requested.

Applications should avoid creating acceleration structures with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR` errors.

**Note**

The expected usage for this is that a trace capture/replay tool will add the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag to all buffers that use `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT`, and will add `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` to all buffers used as storage for an acceleration structure where `deviceAddress` is not zero. This also means that the tool will need to add `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Apps/tools should avoid mixing app-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

Applications should create an acceleration structure with a specific `VkAccelerationStructureTypeKHR` other than `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR`. 
Note

VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR is intended to be used by API translation layers. This can be used at acceleration structure creation time in cases where the actual acceleration structure type (top or bottom) is not yet known. The actual acceleration structure type must be specified as VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR or VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR when the build is performed.

If the acceleration structure will be the target of a build operation, the required size for an acceleration structure can be queried with vkGetAccelerationStructureBuildSizesKHR. If the acceleration structure is going to be the target of a compacting copy, vkCmdWriteAccelerationStructuresPropertiesKHR or vkWriteAccelerationStructuresPropertiesKHR can be used to obtain the compacted size required.

If the acceleration structure will be the target of a build operation with VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV, it must include VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV in createFlags and include VkAccelerationStructureMotionInfoNV as an extension structure in pNext with the number of instances as metadata for the object.

Valid Usage

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-03612
  If deviceAddress is not zero, createFlags must include VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09488
  If deviceAddress is not zero, it must have been retrieved from an identically created acceleration structure, except for buffer and deviceAddress

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09489
  If deviceAddress is not zero, buffer must have been created identically to the buffer used to create the acceleration structure from which deviceAddress was retrieved, except for VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress

- VUID-VkAccelerationStructureCreateInfoKHR-deviceAddress-09490
  If deviceAddress is not zero, buffer must have been created with a VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress that was retrieved from vkGetBufferOpaqueCaptureAddress for the buffer that was used to create the acceleration structure from which deviceAddress was retrieved

- VUID-VkAccelerationStructureCreateInfoKHR-createFlags-03613
  If createFlags includes VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR, VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructureCaptureReplay must be VK_TRUE

- VUID-VkAccelerationStructureCreateInfoKHR-buffer-03614
  buffer must have been created with a usage value containing VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR
• VUID-VkAccelerationStructureCreateInfoKHR-buffer-03615
  buffer must not have been created with VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT

• VUID-VkAccelerationStructureCreateInfoKHR-offset-03616
  The sum of offset and size must be less than the size of buffer

• VUID-VkAccelerationStructureCreateInfoKHR-offset-03734
  offset must be a multiple of 256 bytes

• VUID-VkAccelerationStructureCreateInfoKHR-createFlags-04954
  If VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV is set in createFlags and type is
  VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR, one member of the pNext chain must be a
  pointer to a valid instance of VkAccelerationStructureMotionInfoNV

• VUID-VkAccelerationStructureCreateInfoKHR-createFlags-04955
  If any geometry includes VkAccelerationStructureGeometryMotionTrianglesDataNV then
  createFlags must contain VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV

• VUID-VkAccelerationStructureCreateInfoKHR-createFlags-08108
  If createFlags includes VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT, the
  descriptorBufferCaptureReplay feature must be enabled

• VUID-VkAccelerationStructureCreateInfoKHR-pNext-08109
  If the pNext chain includes a VkOpaqueCaptureDescriptorDataCreateInfoEXT structure,
  createFlags must contain VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

Valid Usage (Implicit)

• VUID-VkAccelerationStructureCreateInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_KHR

• VUID-VkAccelerationStructureCreateInfoKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either
  NULL or a pointer to a valid instance of VkAccelerationStructureMotionInfoNV or
  VkOpaqueCaptureDescriptorDataCreateInfoEXT

• VUID-VkAccelerationStructureCreateInfoKHR-sType-unique
  The sType value of each struct in the pNext chain must be unique

• VUID-VkAccelerationStructureCreateInfoKHR-createFlags-parameter
  createFlags must be a valid combination of VkAccelerationStructureCreateFlagBitsKHR values

• VUID-VkAccelerationStructureCreateInfoKHR-buffer-parameter
  buffer must be a valid VkBuffer handle

• VUID-VkAccelerationStructureCreateInfoKHR-type-parameter
  type must be a valid VkAccelerationStructureTypeKHR value

The VkAccelerationStructureMotionInfoNV structure is defined as:
typedef struct VkAccelerationStructureMotionInfoNV {
    VkStructureType sType;
    const void* pNext;
    uint32_t maxInstances;
    VkAccelerationStructureMotionInfoFlagsNV flags;
} VkAccelerationStructureMotionInfoNV;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **maxInstances** is the maximum number of instances that may be used in the motion top-level acceleration structure.
- **flags** is `0` and reserved for future use.

**Valid Usage (Implicit)**

- VUID-VkAccelerationStructureMotionInfoNV-sType-sType
  *sType* must be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_MOTION_INFO_NV`
- VUID-VkAccelerationStructureMotionInfoNV-flags-zerobitmask
  *flags* must be `0`

`VkAccelerationStructureMotionInfoFlagsNV` is a bitmask type for setting a mask, but is currently reserved for future use.

To get the build sizes for an acceleration structure, call:

```c
void vkGetAccelerationStructureBuildSizesKHR(
    VkDevice device,
    VkAccelerationStructureBuildTypeKHR buildType,
    const VkAccelerationStructureBuildGeometryInfoKHR* pBuildInfo,
    const uint32_t* pMaxPrimitiveCounts,
    VkAccelerationStructureBuildSizesInfoKHR* pSizeInfo);
```

- **device** is the logical device that will be used for creating the acceleration structure.
- **buildType** defines whether host or device operations (or both) are being queried for.
- **pBuildInfo** is a pointer to a `VkAccelerationStructureBuildGeometryInfoKHR` structure describing parameters of a build operation.
- **pMaxPrimitiveCounts** is a pointer to an array of `pBuildInfo->geometryCount` `uint32_t` values
defining the number of primitives built into each geometry.

- `pSizeInfo` is a pointer to a `VkAccelerationStructureBuildSizesInfoKHR` structure which returns the size required for an acceleration structure and the sizes required for the scratch buffers, given the build parameters.

The `srcAccelerationStructure`, `dstAccelerationStructure`, and `mode` members of `pBuildInfo` are ignored. Any `VkDeviceOrHostAddressKHR` or `VkDeviceOrHostAddressConstKHR` members of `pBuildInfo` are ignored by this command, except that the `hostAddress` member of `VkAccelerationStructureGeometryTrianglesDataKHR::transformData` will be examined to check if it is `NULL`.

An acceleration structure created with the `accelerationStructureSize` returned by this command supports any build or update with a `VkAccelerationStructureBuildGeometryInfoKHR` structure and array of `VkAccelerationStructureBuildRangeInfoKHR` structures subject to the following properties:

- The build command is a host build command, and `buildType` is `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR` or `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR`.

- The build command is a device build command, and `buildType` is `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR` or `VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR`.

- For `VkAccelerationStructureBuildGeometryInfoKHR`:
  - Its `type`, and `flags` members are equal to `pBuildInfo->type` and `pBuildInfo->flags`, respectively.
  - `geometryCount` is less than or equal to `pBuildInfo->geometryCount`.
  - For each element of either `pGeometries` or `ppGeometries` at a given index, its `geometryType` member is equal to the corresponding member of the same element in `pBuildInfo`.
  - For each element of either `pGeometries` or `ppGeometries` at a given index, its `flags` member is equal to the corresponding member of the same element in `pBuildInfo`.
  - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `vertexFormat` and `indexType` members of `geometry.triangles` are equal to the corresponding members of the same element in `pBuildInfo`.
  - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, the `maxVertex` member of `geometry.triangles` is less than or equal to the corresponding member of the same element in `pBuildInfo`.
  - For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the applicable address in the `transformData` member of `geometry.triangles` is not `NULL`, the corresponding `transformData.hostAddress` parameter in `pBuildInfo` is not `NULL`.

- For each `VkAccelerationStructureBuildRangeInfoKHR` corresponding to the `VkAccelerationStructureBuildGeometryInfoKHR`:
  - Its `primitiveCount` member is less than or equal to the corresponding element of
For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the `pNext` chain contains `VkAccelerationStructureTrianglesOpacityMicromapEXT` the corresponding member of `pBuildInfo` also contains `VkAccelerationStructureTrianglesOpacityMicromapEXT` and with an equivalent micromap.

For each element of either `pGeometries` or `ppGeometries` at a given index, with a `geometryType` member equal to `VK_GEOMETRY_TYPE_TRIANGLES_KHR`, if the `pNext` chain contains `VkAccelerationStructureTrianglesDisplacementMicromapNV` the corresponding member of `pBuildInfo` also contains `VkAccelerationStructureTrianglesDisplacementMicromapNV` and with an equivalent micromap.

Similarly, the `updateScratchSize` value will support any build command specifying the `VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR` mode under the above conditions, and the `buildScratchSize` value will support any build command specifying the `VK_BUILD_ACCELERATION_STRUCTURE_MODE_BUILD_KHR` mode under the above conditions.

### Valid Usage

- VUID-vkGetAccelerationStructureBuildSizesKHR-accelerationStructure-08933
  The `VkPhysicalDeviceAccelerationStructureFeaturesKHR`::accelerationStructure feature must be enabled

- VUID-vkGetAccelerationStructureBuildSizesKHR-device-03618
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature must be enabled

- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03619
  If `pBuildInfo->geometryCount` is not 0, `pMaxPrimitiveCounts` must be a valid pointer to an array of `pBuildInfo->geometryCount uint32_t` values

- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-03785
  If `pBuildInfo->pGeometries` or `pBuildInfo->ppGeometries` has a `geometryType` of `VK_GEOMETRY_TYPE_INSTANCES_KHR`, each `pMaxPrimitiveCounts[i]` must be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxInstanceCount`

### Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureBuildSizesKHR-device-parameter
  `device` must be a valid `VkDevice` handle

- VUID-vkGetAccelerationStructureBuildSizesKHR-buildType-parameter
  `buildType` must be a valid `VkAccelerationStructureBuildTypeKHR` value

- VUID-vkGetAccelerationStructureBuildSizesKHR-pBuildInfo-parameter
  `pBuildInfo` must be a valid pointer to a valid `VkAccelerationStructureBuildGeometryInfoKHR` structure

- VUID-vkGetAccelerationStructureBuildSizesKHR-pMaxPrimitiveCounts-parameter
If `pMaxPrimitiveCounts` is not `NULL`, `pMaxPrimitiveCounts` must be a valid pointer to an array of `pBuildInfo->geometryCount uint32_t` values

- VUID-vkGetAccelerationStructureBuildSizesKHR-pSizeInfo-parameter `pSizeInfo` must be a valid pointer to a `VkAccelerationStructureBuildSizesInfoKHR` structure

The `VkAccelerationStructureBuildSizesInfoKHR` structure describes the required build sizes for an acceleration structure and scratch buffers and is defined as:

```c
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureBuildSizesInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkDeviceSize accelerationStructureSize;
    VkDeviceSize updateScratchSize;
    VkDeviceSize buildScratchSize;
} VkAccelerationStructureBuildSizesInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `accelerationStructureSize` is the size in bytes required in a `VkAccelerationStructureKHR` for a build or update operation.
- `updateScratchSize` is the size in bytes required in a scratch buffer for an update operation.
- `buildScratchSize` is the size in bytes required in a scratch buffer for a build operation.

**Valid Usage (Implicit)**

- VUID-VkAccelerationStructureBuildSizesInfoKHR-sType-sType `sType must be VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR`
- VUID-VkAccelerationStructureBuildSizesInfoKHR-pNext-pNext `pNext must be NULL`

Values which can be set in `VkAccelerationStructureCreateInfoKHR::type` or `VkAccelerationStructureInfoNV::type` specifying the type of acceleration structure, are:

```c
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureTypeKHR {
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR = 0,
    VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR = 1,
    VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR = 2,
    // Provided by VK_NV_ray_tracing
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_NV =
    VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR,
    // Provided by VK_NV_ray_tracing
};
```
VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_NV =
VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR,
} VkAccelerationStructureTypeKHR;

or the equivalent

// Provided by VK_NV_ray_tracing
typedef VkAccelerationStructureTypeKHR VkAccelerationStructureTypeNV;

- **VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR** is a top-level acceleration structure containing instance data referring to bottom-level acceleration structures.

- **VK_ACCELERATION_STRUCTURE_TYPE_BOTTOM_LEVEL_KHR** is a bottom-level acceleration structure containing the AABBs or geometry to be intersected.

- **VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR** is an acceleration structure whose type is determined at build time for special circumstances. In these cases, the acceleration structure type is not known at creation time, but **must** be specified at build time as either top or bottom.

Bits which **can** be set in *VkAccelerationStructureCreateInfoKHR::createFlags*, specifying additional creation parameters for acceleration structures, are:

// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureCreateFlagBitsKHR {
    VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR =
    0x00000001,
    // Provided by VK_EXT_descriptor_buffer
    VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT =
    0x00000008,
    // Provided by VK_NV_ray_tracing_motion_blur
    VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV = 0x00000004,
} VkAccelerationStructureCreateFlagBitsKHR;

- **VK_ACCELERATION_STRUCTURE_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR** specifies that the acceleration structure's address **can** be saved and reused on a subsequent run.

- **VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT** specifies that the acceleration structure **can** be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see *VkOpaqueCaptureDescriptorDataCreateInfoEXT* for more detail.

// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkAccelerationStructureCreateFlagsKHR;

*VkAccelerationStructureCreateFlagsKHR* is a bitmask type for setting a mask of zero or more *VkAccelerationStructureCreateFlagBitsKHR*. 

1108
Bits which can be set in `VkAccelerationStructureBuildGeometryInfoKHR::flags` or `VkAccelerationStructureInfoNV::flags` specifying additional parameters for acceleration structure builds, are:

```c
// Provided by VK_KHR_acceleration_structure
typedef enum VkBuildAccelerationStructureFlagBitsKHR {
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR = 0x00000001,
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR = 0x00000002,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR = 0x00000004,
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR = 0x00000008,
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR = 0x00000010,
    // Provided by VK_NV_ray_tracing_motion_blur
    VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV = 0x00000020,
    // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT = 0x00000040,
    // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT = 0x00000080,
    // Provided by VK_EXT_opacity_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT = 0x00000100,
    // Provided by VK_NV_displacement_micromap
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV = 0x00000200,
    #ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_KHR_ray_tracing_position_fetch
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR = 0x00000800,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_NV = VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_NV = VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_NV = VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_NV = VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_NV = VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR,
} VkBuildAccelerationStructureFlagBitsKHR;
```

or the equivalent

```c
// Provided by VK_NV_ray_tracing
typedef VkBuildAccelerationStructureFlagBitsKHR
```
 VkBuildAccelerationStructureFlagBitsNV;

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR** indicates that the specified acceleration structure can be updated with a mode of **VK_BUILD_ACCELERATION_STRUCTURE_MODE_UPDATE_KHR** in **VkAccelerationStructureBuildGeometryInfoKHR** or an update of **VK_TRUE** in **vkCmdBuildAccelerationStructureNV**.

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR** indicates that the specified acceleration structure can act as the source for a copy acceleration structure command with mode of **VK_COPY_ACCELERATION_STRUCTURE_MODE_COMPACT_KHR** to produce a compacted acceleration structure.

• **VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_TRACE_BIT_KHR** indicates that the given acceleration structure build should prioritize trace performance over build time.

• **VK_BUILD_ACCELERATION_STRUCTURE_PREFER_FAST_BUILD_BIT_KHR** indicates that the given acceleration structure build should prioritize build time over trace performance.

• **VK_BUILD_ACCELERATION_STRUCTURE_LOW_MEMORY_BIT_KHR** indicates that this acceleration structure should minimize the size of the scratch memory and the final result acceleration structure, potentially at the expense of build time or trace performance.

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_UPDATE_EXT** indicates that the opacity micromaps associated with the specified acceleration structure may change with an acceleration structure update.

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_OPACITY_MICROMAP_DATA_UPDATE_EXT** indicates that the data of the opacity micromaps associated with the specified acceleration structure may change with an acceleration structure update.

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISABLE_OPACITY_MICROMAPS_EXT** indicates that the specified acceleration structure may be referenced in an instance with **VK_GEOMETRY_INSTANCE_DISABLE_OPACITY_MICROMAPS_EXT** set.

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR** indicates that the specified acceleration structure can be used when fetching the vertex positions of a hit triangle.

• **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV** indicates that the displacement micromaps associated with the specified acceleration structure may change with an acceleration structure update.

---

**Note**

**VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_UPDATE_BIT_KHR** and **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_COMPACTION_BIT_KHR** may take more time and memory than a normal build, and so should only be used when those features are needed.

```c
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkBuildAccelerationStructureFlagsKHR;
```

or the equivalent
typedef VkBuildAccelerationStructureFlagsKHR VkBuildAccelerationStructureFlagsNV;

VkBuildAccelerationStructureFlagsKHR is a bitmask type for setting a mask of zero or more VkBuildAccelerationStructureFlagBitsKHR.

The VkGeometryNV structure describes geometry in a bottom-level acceleration structure and is defined as:

```c
typedef struct VkGeometryNV {
    VkStructureType sType;
    const void* pNext;
    VkGeometryTypeKHR geometryType;
    VkGeometryDataNV geometry;
    VkGeometryFlagsKHR flags;
} VkGeometryNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **geometryType** specifies the VkGeometryTypeKHR which this geometry refers to.
- **geometry** contains the geometry data as described in VkGeometryDataNV.
- **flags** has VkGeometryFlagBitsKHR describing options for this geometry.

### Valid Usage

- VUID-VkGeometryNV-geometryType-03503
  geometryType **must** be VK_GEOMETRY_TYPE_TRIANGLES_NV or VK_GEOMETRY_TYPE_AABBS_NV

### Valid Usage (Implicit)

- VUID-VkGeometryNV-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_GEOMETRY_NV

- VUID-VkGeometryNV-pNext-pNext
  pNext **must** be NULL

- VUID-VkGeometryNV-geometryType-parameter
  geometryType **must** be a valid VkGeometryTypeKHR value

- VUID-VkGeometryNV-geometry-parameter
  geometry **must** be a valid VkGeometryDataNV structure

- VUID-VkGeometryNV-flags-parameter
  flags **must** be a valid combination of VkGeometryFlagBitsKHR values
Geometry types are specified by `VkGeometryTypeKHR`, which takes values:

```c
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryTypeKHR {
    VK_GEOMETRY_TYPE_TRIANGLES_KHR = 0,
    VK_GEOMETRY_TYPE_AABBS_KHR = 1,
    VK_GEOMETRY_TYPE_INSTANCES_KHR = 2,
    // Provided by VK_KHR_acceleration_structure
    VK_GEOMETRY_TYPE_TRIANGLES_NV = VK_GEOMETRY_TYPE_TRIANGLES_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_TYPE_AABBS_NV = VK_GEOMETRY_TYPE_AABBS_KHR,
} VkGeometryTypeKHR;
```

or the equivalent

```c
// Provided by VK_NV_ray_tracing
typedef VkGeometryTypeKHR VkGeometryTypeNV;
```

- `VK_GEOMETRY_TYPE_TRIANGLES_KHR` specifies a geometry type consisting of triangles.
- `VK_GEOMETRY_TYPE_AABBS_KHR` specifies a geometry type consisting of axis-aligned bounding boxes.
- `VK_GEOMETRY_TYPE_INSTANCES_KHR` specifies a geometry type consisting of acceleration structure instances.

Bits specifying additional parameters for geometries in acceleration structure builds, are:

```c
// Provided by VK_KHR_acceleration_structure
typedef enum VkGeometryFlagBitsKHR {
    VK_GEOMETRY_OPAQUE_BIT_KHR = 0x00000001,
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR = 0x00000002,
    // Provided by VK_KHR_acceleration_structure
    VK_GEOMETRY_OPAQUE_BIT_NV = VK_GEOMETRY_OPAQUE_BIT_KHR,
    // Provided by VK_NV_ray_tracing
    VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_NV = VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR,
} VkGeometryFlagBitsKHR;
```

or the equivalent

```c
// Provided by VK_NV_ray_tracing
typedef VkGeometryFlagBitsKHR VkGeometryFlagBitsNV;
```

- `VK_GEOMETRY_OPAQUE_BIT_KHR` indicates that this geometry does not invoke the any-hit shaders even if present in a hit group.
- `VK_GEOMETRY_NO_DUPLICATE_ANY_HIT_INVOCATION_BIT_KHR` indicates that the implementation must only call the any-hit shader a single time for each primitive in this geometry. If this bit is absent
an implementation may invoke the any-hit shader more than once for this geometry.

```c
// Provided by VK_KHR_acceleration_structure
typedef VkFlags VkGeometryFlagsKHR;
```
or the equivalent

```c
// Provided by VK_NV_ray_tracing
typedef VkGeometryFlagsKHR VkGeometryFlagsNV;
```

`VkGeometryFlagsKHR` is a bitmask type for setting a mask of zero or more `VkGeometryFlagBitsKHR`.

The `VkGeometryDataNV` structure specifies geometry in a bottom-level acceleration structure and is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryDataNV {
    VkGeometryTrianglesNV    triangles;
    VkGeometryAABBNV        aabbs;
} VkGeometryDataNV;
```

- `triangles` contains triangle data if `VkGeometryNV::geometryType` is `VK_GEOMETRY_TYPE_TRIANGLES_NV`.
- `aabbs` contains axis-aligned bounding box data if `VkGeometryNV::geometryType` is `VK_GEOMETRY_TYPE_AABBS_NV`.

**Valid Usage (Implicit)**

- `VUID-VkGeometryDataNV-triangles-parameter` triangles must be a valid `VkGeometryTrianglesNV` structure
- `VUID-VkGeometryDataNV-aabbs-parameter` aabbs must be a valid `VkGeometryAABBNV` structure

The `VkGeometryTrianglesNV` structure specifies triangle geometry in a bottom-level acceleration structure and is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkGeometryTrianglesNV {
    VkStructureType          sType;
    const void*              pNext;
    VkBuffer                 vertexData;
    VkDeviceSize             vertexOffset;
    uint32_t                  vertexCount;
    VkDeviceSize             vertexStride;
} VkGeometryTrianglesNV;
```
VkGeometryTrianglesNV;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• vertexData is the buffer containing vertex data for this geometry.
• vertexOffset is the offset in bytes within vertexData containing vertex data for this geometry.
• vertexCount is the number of valid vertices.
• vertexStride is the stride in bytes between each vertex.
• vertexFormat is a VkFormat describing the format of each vertex element.
• indexData is the buffer containing index data for this geometry.
• indexOffset is the offset in bytes within indexData containing index data for this geometry.
• indexCount is the number of indices to include in this geometry.
• indexType is a VkIndexType describing the format of each index.
• transformData is an optional buffer containing an VkTransformMatrixNV structure defining a transformation to be applied to this geometry.
• transformOffset is the offset in bytes in transformData of the transform information described above.

If indexType is VK_INDEX_TYPE_NONE_NV, then this structure describes a set of triangles determined by vertexCount. Otherwise, this structure describes a set of indexed triangles determined by indexCount.

Valid Usage

• VUID-VkGeometryTrianglesNV-vertexOffset-02428
  vertexOffset must be less than the size of vertexData

• VUID-VkGeometryTrianglesNV-vertexOffset-02429
  vertexOffset must be a multiple of the component size of vertexFormat

• VUID-VkGeometryTrianglesNV-vertexFormat-02430
  vertexFormat must be one of VK_FORMAT_R32G32B32_SFLOAT, VK_FORMAT_R32G32_SFLOAT, 
  VK_FORMAT_R16G16B16_SFLOAT, VK_FORMAT_R16G16_SFLOAT, VK_FORMAT_R16G16_SNORM, or 
  VK_FORMAT_R16G16B16_SNORM

• VUID-VkGeometryTrianglesNV-vertexStride-03818
  vertexStride must be less than or equal to 2^{32}-1

• VUID-VkGeometryTrianglesNV-indexOffset-02431
indexOffset must be less than the size of indexData

- **VUID-VkGeometryTrianglesNV-indexOffset-02432**
  indexOffset must be a multiple of the element size of indexType

- **VUID-VkGeometryTrianglesNV-indexType-02433**
  indexType must be VK_INDEX_TYPE_UINT16, VK_INDEX_TYPE_UINT32, or VK_INDEX_TYPE_NONE_NV

- **VUID-VkGeometryTrianglesNV-indexData-02434**
  indexData must be VK_NULL_HANDLE if indexType is VK_INDEX_TYPE_NONE_NV

- **VUID-VkGeometryTrianglesNV-indexData-02435**
  indexData must be a valid VkBuffer handle if indexType is not VK_INDEX_TYPE_NONE_NV

- **VUID-VkGeometryTrianglesNV-indexCount-02436**
  indexCount must be 0 if indexType is VK_INDEX_TYPE_NONE_NV

- **VUID-VkGeometryTrianglesNV-transformOffset-02437**
  transformOffset must be less than the size of transformData

- **VUID-VkGeometryTrianglesNV-transformOffset-02438**
  transformOffset must be a multiple of 16

---

**Valid Usage (Implicit)**

- **VUID-VkGeometryTrianglesNV-sType-sType**
  sType must be VK_STRUCTURE_TYPE_GEOMETRY_TRIANGLES_NV

- **VUID-VkGeometryTrianglesNV-pNext-pNext**
  pNext must be NULL

- **VUID-VkGeometryTrianglesNV-vertexData-parameter**
  If vertexData is not VK_NULL_HANDLE, vertexData must be a valid VkBuffer handle

- **VUID-VkGeometryTrianglesNV-vertexFormat-parameter**
  vertexFormat must be a valid VkFormat value

- **VUID-VkGeometryTrianglesNV-indexData-parameter**
  If indexData is not VK_NULL_HANDLE, indexData must be a valid VkBuffer handle

- **VUID-VkGeometryTrianglesNV-indexType-parameter**
  indexType must be a valid VkIndexType value

- **VUID-VkGeometryTrianglesNV-transformData-parameter**
  If transformData is not VK_NULL_HANDLE, transformData must be a valid VkBuffer handle

- **VUID-VkGeometryTrianglesNV-commonparent**
  Each of indexData, transformData, and vertexData that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same VkDevice

The **VkGeometryAABBNV** structure specifies axis-aligned bounding box geometry in a bottom-level acceleration structure, and is defined as:

```
// Provided by VK_NV_ray_tracing
```
typedef struct VkGeometryAABBNV {
    VkStructureType sType;
    const void* pNext;
    VkBuffer aabbData;
    uint32_t numAABBs;
    uint32_t stride;
    VkDeviceSize offset;
} VkGeometryAABBNV;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `aabbData` is the buffer containing axis-aligned bounding box data.
- `numAABBs` is the number of AABBs in this geometry.
- `stride` is the stride in bytes between AABBs in `aabbData`.
- `offset` is the offset in bytes of the first AABB in `aabbData`.

The AABB data in memory is six 32-bit floats consisting of the minimum x, y, and z values followed by the maximum x, y, and z values.

### Valid Usage

- VUID-VkGeometryAABBNV-offset-02439
  offset must be less than the size of `aabbData`
- VUID-VkGeometryAABBNV-offset-02440
  offset must be a multiple of 8
- VUID-VkGeometryAABBNV-stride-02441
  stride must be a multiple of 8

### Valid Usage (Implicit)

- VUID-VkGeometryAABBNV-sType-sType
  sType must be `VK_STRUCTURE_TYPE_GEOMETRY_AABB_NV`
- VUID-VkGeometryAABBNV-pNext-pNext
  pNext must be `NULL`
- VUID-VkGeometryAABBNV-aabbData-parameter
  If `aabbData` is not `VK_NULL_HANDLE`, `aabbData` must be a valid `VkBuffer` handle

To destroy an acceleration structure, call:

```c
// Provided by VK_KHR_acceleration_structure
void vkDestroyAccelerationStructureKHR(
    VkDevice device, 
```
 VkAccelerationStructureKHR accelerationStructure,
const VkAllocationCallbacks* pAllocator);

- **device** is the logical device that destroys the acceleration structure.
- **accelerationStructure** is the acceleration structure to destroy.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

## Valid Usage

- **VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-08934**
The `VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure` feature **must** be enabled.
- **VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02442**
  All submitted commands that refer to `accelerationStructure` **must** have completed execution.
- **VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02443**
  If `VkAllocationCallbacks` were provided when `accelerationStructure` was created, a compatible set of callbacks **must** be provided here.
- **VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-02444**
  If no `VkAllocationCallbacks` were provided when `accelerationStructure` was created, `pAllocator` **must** be NULL.

## Valid Usage (Implicit)

- **VUID-vkDestroyAccelerationStructureKHR-device-parameter**
  `device` **must** be a valid `VkDevice` handle.
- **VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parameter**
  If `accelerationStructure` is not `VK_NULL_HANDLE`, `accelerationStructure` **must** be a valid `VkAccelerationStructureKHR` handle.
- **VUID-vkDestroyAccelerationStructureKHR-pAllocator-parameter**
  If `pAllocator` is not NULL, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure.
- **VUID-vkDestroyAccelerationStructureKHR-accelerationStructure-parent**
  If `accelerationStructure` is a valid handle, it **must** have been created, allocated, or retrieved from `device`.

## Host Synchronization

- Host access to `accelerationStructure` **must** be externally synchronized.

To destroy an acceleration structure, call:
void vkDestroyAccelerationStructureNV(
    VkDevice device,
    VkAccelerationStructureNV accelerationStructure,
    const VkAllocationCallbacks* pAllocator);

- device is the logical device that destroys the buffer.
- accelerationStructure is the acceleration structure to destroy.
- pAllocator controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03752
  All submitted commands that refer to accelerationStructure must have completed execution

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03753
  If VkAllocationCallbacks were provided when accelerationStructure was created, a compatible set of callbacks must be provided here

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-03754
  If no VkAllocationCallbacks were provided when accelerationStructure was created, pAllocator must be NULL

Valid Usage (Implicit)

- VUID-vkDestroyAccelerationStructureNV-device-parameter
device must be a valid VkDevice handle

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-parameter
  If accelerationStructure is not VK_NULL_HANDLE, accelerationStructure must be a valid VkAccelerationStructureNV handle

- VUID-vkDestroyAccelerationStructureNV-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroyAccelerationStructureNV-accelerationStructure-parent
  If accelerationStructure is a valid handle, it must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to accelerationStructure must be externally synchronized

An acceleration structure has memory requirements for the structure object itself, scratch space for
the build, and scratch space for the update.

Scratch space is allocated as a `VkBuffer`, so for `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` and `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` the `pMemoryRequirements->alignment` and `pMemoryRequirements->memoryTypeBits` values returned by this call must be filled with zero, and should be ignored by the application.

To query the memory requirements, call:

```c
// Provided by VK_NV_ray_tracing
void vkGetAccelerationStructureMemoryRequirementsNV(
    VkDevice device,
    const VkAccelerationStructureMemoryRequirementsInfoNV* pInfo,
    VkMemoryRequirements2KHR* pMemoryRequirements);
```

- `device` is the logical device on which the acceleration structure was created.
- `pInfo` is a pointer to a `VkAccelerationStructureMemoryRequirementsInfoNV` structure specifying the acceleration structure to get memory requirements for.
- `pMemoryRequirements` is a pointer to a `VkMemoryRequirements2KHR` structure in which the requested acceleration structure memory requirements are returned.

**Valid Usage (Implicit)**

- VUID-vkGetAccelerationStructureMemoryRequirementsNV-device-parameter `device` must be a valid `VkDevice` handle
- VUID-vkGetAccelerationStructureMemoryRequirementsNV-pInfo-parameter `pInfo` must be a valid pointer to a valid `VkAccelerationStructureMemoryRequirementsInfoNV` structure
- VUID-vkGetAccelerationStructureMemoryRequirementsNV-pMemoryRequirements-parameter `pMemoryRequirements` must be a valid pointer to a `VkMemoryRequirements2KHR` structure

The `VkAccelerationStructureMemoryRequirementsInfoNV` structure is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkAccelerationStructureMemoryRequirementsInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkAccelerationStructureMemoryRequirementsTypeNV type;
    VkAccelerationStructureNV accelerationStructure;
} VkAccelerationStructureMemoryRequirementsInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `type` selects the type of memory requirement being queried.
  - `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV` returns the memory requirements for the object itself.
  - `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` returns the memory requirements for the scratch memory when doing a build.
  - `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` returns the memory requirements for the scratch memory when doing an update.

• `accelerationStructure` is the acceleration structure to be queried for memory requirements.

```
// Provided by VK_NV_ray_tracing
typedef enum VkAccelerationStructureMemoryRequirementsTypeNV {
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV = 0,
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV = 1,
    VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV = 2,
} VkAccelerationStructureMemoryRequirementsTypeNV;
```

Possible values of `type` in `VkAccelerationStructureMemoryRequirementsInfoNV` are:

- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV` requests the memory requirement for the `VkAccelerationStructureNV` backing store.
- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_BUILD_SCRATCH_NV` requests the memory requirement for scratch space during the initial build.
- `VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_UPDATE_SCRATCH_NV` requests the memory requirement for scratch space during an update.

```
// Provided by VK_KHR_acceleration_structure
typedef enum VkAccelerationStructureBuildTypeKHR {
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR = 0,
    VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR = 1,
} VkAccelerationStructureBuildTypeKHR;
```

Possible values of `buildType` in `vkGetAccelerationStructureBuildSizesKHR` are:
VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR = 2,
} VkAccelerationStructureBuildTypeKHR;

• VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR requests the memory requirement for operations performed by the host.
• VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR requests the memory requirement for operations performed by the device.
• VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_ORDEVICE_KHR requests the memory requirement for operations performed by either the host, or the device.

To attach memory to one or more acceleration structures at a time, call:

```c
// Provided by VK_NV_ray_tracing
VkResult vkBindAccelerationStructureMemoryNV(
    VkDevice device,
    uint32_t bindInfoCount,
    const VkBindAccelerationStructureMemoryInfoNV* pBindInfos);
```

• `device` is the logical device that owns the acceleration structures and memory.
• `bindInfoCount` is the number of elements in `pBindInfos`.
• `pBindInfos` is a pointer to an array of `VkBindAccelerationStructureMemoryInfoNV` structures describing acceleration structures and memory to bind.

Valid Usage (Implicit)

• VUID-vkBindAccelerationStructureMemoryNV-device-parameter device must be a valid VkDevice handle
• VUID-vkBindAccelerationStructureMemoryNV-pBindInfos-parameter pBindInfos must be a valid pointer to an array of bindInfoCount valid VkBindAccelerationStructureMemoryInfoNV structures
• VUID-vkBindAccelerationStructureMemoryNV-bindInfoCount-arraylength bindInfoCount must be greater than 0

Return Codes

Success
• VK_SUCCESS

Failure
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_OUT_OF_DEVICE_MEMORY

The `VkBindAccelerationStructureMemoryInfoNV` structure is defined as:
typedef struct VkBindAccelerationStructureMemoryInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkAccelerationStructureNV accelerationStructure;
    VkDeviceMemory memory;
    VkDeviceSize memoryOffset;
    uint32_t deviceIndexCount;
    const uint32_t* pDeviceIndices;
} VkBindAccelerationStructureMemoryInfoNV;

- *sType* is a *VkStructureType* value identifying this structure.
- *pNext* is NULL or a pointer to a structure extending this structure.
- *accelerationStructure* is the acceleration structure to be attached to memory.
- *memory* is a *VkDeviceMemory* object describing the device memory to attach.
- *memoryOffset* is the start offset of the region of memory that is to be bound to the acceleration structure. The number of bytes returned in the *VkMemoryRequirements::size* member in *memory*, starting from *memoryOffset* bytes, will be bound to the specified acceleration structure.
- *deviceIndexCount* is the number of elements in *pDeviceIndices*.
- *pDeviceIndices* is a pointer to an array of device indices.

**Valid Usage**

- VUID-VkBindAccelerationStructureMemoryInfoNV-accelerationStructure-03620
  *accelerationStructure* must not already be backed by a memory object

- VUID-VkBindAccelerationStructureMemoryInfoNV-memoryOffset-03621
  *memoryOffset* must be less than the size of *memory*

- VUID-VkBindAccelerationStructureMemoryInfoNV-memory-03622
  *memory* must have been allocated using one of the memory types allowed in the *memoryTypeBits* member of the *VkMemoryRequirements* structure returned from a call to *vkGetAccelerationStructureMemoryRequirementsNV* with *accelerationStructure* and type of *VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV*

- VUID-VkBindAccelerationStructureMemoryInfoNV-memoryOffset-03623
  *memoryOffset* must be an integer multiple of the *alignment* member of the *VkMemoryRequirements* structure returned from a call to *vkGetAccelerationStructureMemoryRequirementsNV* with *accelerationStructure* and type of *VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV*

- VUID-VkBindAccelerationStructureMemoryInfoNV-size-03624
  The *size* member of the *VkMemoryRequirements* structure returned from a call to *vkGetAccelerationStructureMemoryRequirementsNV* with *accelerationStructure* and type of *VK_ACCELERATION_STRUCTURE_MEMORY_REQUIREMENTS_TYPE_OBJECT_NV* must be less than or equal to the size of *memory minus memoryOffset*
Valid Usage (Implicit)

- VUID-VkBindAccelerationStructureMemoryInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_BIND_ACCELERATION_STRUCTURE_MEMORY_INFO_NV

- VUID-VkBindAccelerationStructureMemoryInfoNV-pNext-pNext
  pNext must be NULL

- VUID-VkBindAccelerationStructureMemoryInfoNV-accelerationStructure-parameter
  accelerationStructure must be a valid VkAccelerationStructureNV handle

- VUID-VkBindAccelerationStructureMemoryInfoNV-memory-parameter
  memory must be a valid VkDeviceMemory handle

- VUID-VkBindAccelerationStructureMemoryInfoNV-pDeviceIndices-parameter
  If deviceIndexCount is not 0, pDeviceIndices must be a valid pointer to an array of deviceIndexCount uint32_t values

- VUID-VkBindAccelerationStructureMemoryInfoNV-commonparent
  Both of accelerationStructure, and memory must have been created, allocated, or retrieved from the same VkDevice

To allow constructing geometry instances with device code if desired, we need to be able to query a opaque handle for an acceleration structure. This handle is a value of 8 bytes. To get this handle, call:

```c
// Provided by VK_NV_ray_tracing
VkResult vkGetAccelerationStructureHandleNV(
    VkDevice device,
    VkAccelerationStructureNV accelerationStructure,
    size_t dataSize,
    void* pData);
```

- **device** is the logical device that owns the acceleration structures.
- **accelerationStructure** is the acceleration structure.
- **dataSize** is the size in bytes of the buffer pointed to by **pData**.
- **pData** is a pointer to a user-allocated buffer where the results will be written.

Valid Usage

- VUID-vkGetAccelerationStructureHandleNV-dataSize-02240
  dataSize must be large enough to contain the result of the query, as described above

- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-02787
  accelerationStructure must be bound completely and contiguously to a single VkDeviceMemory object via vkBindAccelerationStructureMemoryNV
Valid Usage (Implicit)

- VUID-vkGetAccelerationStructureHandleNV-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-parameter
  accelerationStructure must be a valid VkAccelerationStructureNV handle

- VUID-vkGetAccelerationStructureHandleNV-pData-parameter
  pData must be a valid pointer to an array of dataSize bytes

- VUID-vkGetAccelerationStructureHandleNV-dataSize-arraylength
  dataSize must be greater than 0

- VUID-vkGetAccelerationStructureHandleNV-accelerationStructure-parent
  accelerationStructure must have been created, allocated, or retrieved from device

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

To query the 64-bit device address for an acceleration structure, call:

```c
// Provided by VK_KHR_acceleration_structure
VkDeviceAddress vkGetAccelerationStructureDeviceAddressKHR(
    VkDevice device,
    const VkAccelerationStructureDeviceAddressInfoKHR* pInfo);
```

- device is the logical device that the acceleration structure was created on.
- pInfo is a pointer to a VkAccelerationStructureDeviceAddressInfoKHR structure specifying the acceleration structure to retrieve an address for.

The 64-bit return value is an address of the acceleration structure, which can be used for device and shader operations that involve acceleration structures, such as ray traversal and acceleration structure building.

If the acceleration structure was created with a non-zero value of VkAccelerationStructureCreateInfoKHR::deviceAddress, the return value will be the same address.

If the acceleration structure was created with a type of VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR, the returned address must be consistent with the relative offset to other acceleration structures with type VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR allocated with the same VkBuffer. That is, the
difference in returned addresses between the two must be the same as the difference in offsets provided at acceleration structure creation.

The returned address must be aligned to 256 bytes.

Note
The acceleration structure device address may be different from the buffer device address corresponding to the acceleration structure's start offset in its storage buffer for acceleration structure types other than VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR.

Valid Usage

• VUID-vkGetAccelerationStructureDeviceAddressKHR-accelerationStructure-08935
  The VkPhysicalDeviceAccelerationStructureFeaturesKHR::accelerationStructure feature must be enabled

• VUID-vkGetAccelerationStructureDeviceAddressKHR-device-03504
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature must be enabled

• VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09541
  If the buffer on which pInfo->accelerationStructure was placed is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

• VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-09542
  The buffer on which pInfo->accelerationStructure was placed must have been created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT usage flag

Valid Usage (Implicit)

• VUID-vkGetAccelerationStructureDeviceAddressKHR-device-parameter
device must be a valid VkDevice handle

• VUID-vkGetAccelerationStructureDeviceAddressKHR-pInfo-parameter
  pInfo must be a valid pointer to a valid VkAccelerationStructureDeviceAddressInfoKHR structure

The VkAccelerationStructureDeviceAddressInfoKHR structure is defined as:

```c
// Provided by VK_KHR_acceleration_structure
typedef struct VkAccelerationStructureDeviceAddressInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkAccelerationStructureKHR accelerationStructure;
} VkAccelerationStructureDeviceAddressInfoKHR;
```
• *sType* is a `VkStructureType` value identifying this structure.
• *pNext* is `NULL` or a pointer to a structure extending this structure.
• *accelerationStructure* specifies the acceleration structure whose address is being queried.

**Valid Usage (Implicit)**

- VUID-VkAccelerationStructureDeviceAddressInfoKHR-sType-sType
  *sType* must be `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DEVICE_ADDRESS_INFO_KHR`
- VUID-VkAccelerationStructureDeviceAddressInfoKHR-pNext-pNext
  *pNext* must be `NULL`
- VUID-VkAccelerationStructureDeviceAddressInfoKHR-accelerationStructure-parameter
  *accelerationStructure* must be a valid `VkAccelerationStructureKHR` handle

### 12.7. Micromaps

Micromaps are opaque data structures that are built by the implementation to encode sub-triangle data to be included in an acceleration structure.

Micromaps are represented by `VkMicromapEXT` handles:

```c
// Provided by VK_EXT_opacity_micromap
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkMicromapEXT)
```

To create a micromap, call:

```c
// Provided by VK_EXT_opacity_micromap
VkResult vkCreateMicromapEXT(
    VkDevice device,
    const VkMicromapCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkMicromapEXT* pMicromap);
```

• *device* is the logical device that creates the acceleration structure object.
• *pCreateInfo* is a pointer to a `VkMicromapCreateInfoEXT` structure containing parameters affecting creation of the micromap.
• *pAllocator* controls host memory allocation as described in the Memory Allocation chapter.
• *pMicromap* is a pointer to a `VkMicromapEXT` handle in which the resulting micromap object is returned.

Similar to other objects in Vulkan, the micromap creation merely creates an object with a specific “shape”. The type and quantity of geometry that can be built into a micromap is determined by the parameters of `VkMicromapCreateInfoEXT`. 

1126
The micromap data is stored in the object referred to by `VkMicromapCreateInfoEXT::buffer`. Once memory has been bound to that buffer, it **must** be populated by micromap build or micromap copy commands such as `vkCmdBuildMicromapsEXT`, `vkBuildMicromapsEXT`, `vkCmdCopyMicromapsEXT`, and `vkCopyMicromapEXT`.

**Note**
The expected usage for a trace capture/replay tool is that it will serialize and later deserialize the micromap data using micromap copy commands. During capture the tool will use `vkCopyMicromapToMemoryEXT` or `vkCmdCopyMicromapToMemoryEXT` with a mode of `VK_COPY_MICROMAP_MODE_SERIALIZE_EXT`, and `vkCopyMemoryToMicromapEXT` or `vkCmdCopyMemoryToMicromapEXT` with a mode of `VK_COPY_MICROMAP_MODE_DESERIALIZE_EXT` during replay.

The input buffers passed to micromap build commands will be referenced by the implementation for the duration of the command. Micromaps **must** be fully self-contained. The application **can** reuse or free any memory which was used by the command as an input or as scratch without affecting the results of a subsequent acceleration structure build using the micromap or traversal of that acceleration structure.

### Valid Usage

- **VUID-vkCreateMicromapEXT-micromap-07430**
  The micromap feature **must** be enabled

- **VUID-vkCreateMicromapEXT-deviceAddress-07431**
  If `VkMicromapCreateInfoEXT::deviceAddress` is not zero, the micromapCaptureReplay feature **must** be enabled

- **VUID-vkCreateMicromapEXT-device-07432**
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

### Valid Usage (Implicit)

- **VUID-vkCreateMicromapEXT-device-parameter**
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkCreateMicromapEXT-pCreateInfo-parameter**
  `pCreateInfo` **must** be a valid pointer to a valid `VkMicromapCreateInfoEXT` structure

- **VUID-vkCreateMicromapEXT-pAllocator-parameter**
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure

- **VUID-vkCreateMicromapEXT-pMicromap-parameter**
  `pMicromap` **must** be a valid pointer to a `VkMicromapEXT` handle
Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR

The `VkMicromapCreateInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkMicromapCreateFlagsEXT createFlags;
    VkBuffer buffer;
    VkDeviceSize offset;
    VkDeviceSize size;
    VkMicromapTypeEXT type;
    VkDeviceAddress deviceAddress;
} VkMicromapCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `createFlags` is a bitmask of `VkMicromapCreateFlagBitsEXT` specifying additional creation parameters of the micromap.
- `buffer` is the buffer on which the micromap will be stored.
- `offset` is an offset in bytes from the base address of the buffer at which the micromap will be stored, and **must** be a multiple of 256.
- `size` is the size required for the micromap.
- `type` is a `VkMicromapTypeEXT` value specifying the type of micromap that will be created.
- `deviceAddress` is the device address requested for the micromap if the `micromapCaptureReplay` feature is being used.

If `deviceAddress` is zero, no specific address is requested.

If `deviceAddress` is not zero, `deviceAddress` **must** be an address retrieved from an identically created micromap on the same implementation. The micromap **must** also be placed on an identically created `buffer` and at the same `offset`.

Applications **should** avoid creating micromaps with application-provided addresses and implementation-provided addresses in the same process, to reduce the likelihood of `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR` errors.
Note

The expected usage for this is that a trace capture/replay tool will add the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` flag to all buffers that use `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT`, and will add `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` to all buffers used as storage for a micromap where `deviceAddress` is not zero. This also means that the tool will need to add `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` to memory allocations to allow the flag to be set where the application may not have otherwise required it. During capture the tool will save the queried opaque device addresses in the trace. During replay, the buffers will be created specifying the original address so any address values stored in the trace data will remain valid.

Implementations are expected to separate such buffers in the GPU address space so normal allocations will avoid using these addresses. Apps/tools should avoid mixing app-provided and implementation-provided addresses for buffers created with `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT`, to avoid address space allocation conflicts.

If the micromap will be the target of a build operation, the required size for a micromap can be queried with `vkGetMicromapBuildSizesEXT`.

Valid Usage

- **VUID-VkMicromapCreateInfoEXT-deviceAddress-07433**
  If `deviceAddress` is not zero, `createFlags` must include `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT`

- **VUID-VkMicromapCreateInfoEXT-createFlags-07434**
  If `createFlags` includes `VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT`, `VkPhysicalDeviceOpacityMicromapFeaturesEXT::micromapCaptureReplay` must be `VK_TRUE`

- **VUID-VkMicromapCreateInfoEXT-buffer-07435**
  `buffer` must have been created with a `usage` value containing `VK_BUFFER_USAGE_MICROMAP_STORAGE_BIT_EXT`

- **VUID-VkMicromapCreateInfoEXT-buffer-07436**
  `buffer` must not have been created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT`

- **VUID-VkMicromapCreateInfoEXT-offset-07437**
  The sum of `offset` and `size` must be less than the size of `buffer`

- **VUID-VkMicromapCreateInfoEXT-offset-07438**
  `offset` must be a multiple of 256 bytes

Valid Usage (Implicit)

- **VUID-VkMicromapCreateInfoEXT-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_MICROMAP_CREATE_INFO_EXT`

- **VUID-VkMicromapCreateInfoEXT-pNext-pNext**
pNext must be NULL

- VUID-VkMicromapCreateInfoEXT-createFlags-parameter
  createFlags must be a valid combination of VkMicromapCreateFlagBitsEXT values

- VUID-VkMicromapCreateInfoEXT-buffer-parameter
  buffer must be a valid VkBuffer handle

- VUID-VkMicromapCreateInfoEXT-type-parameter
  type must be a valid VkMicromapTypeEXT value

To get the build sizes for a micromap, call:

```
// Provided by VK_EXT_opacity_micromap
void vkGetMicromapBuildSizesEXT(
    VkDevice device,
    VkAccelerationStructureBuildTypeKHR buildType,
    const VkMicromapBuildInfoEXT* pBuildInfo,
    VkMicromapBuildSizesInfoEXT* pSizeInfo);
```

- device is the logical device that will be used for creating the micromap.
- buildType defines whether host or device operations (or both) are being queried for.
- pBuildInfo is a pointer to a VkMicromapBuildInfoEXT structure describing parameters of a build operation.
- pSizeInfo is a pointer to a VkMicromapBuildSizesInfoEXT structure which returns the size required for a micromap and the sizes required for the scratch buffers, given the build parameters.

The dstMicromap and mode members of pBuildInfo are ignored. Any VkDeviceOrHostAddressKHR members of pBuildInfo are ignored by this command.

A micromap created with the micromapSize returned by this command supports any build with a VkMicromapBuildInfoEXT structure subject to the following properties:

- The build command is a host build command, and buildType is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- The build command is a device build command, and buildType is VK_ACCELERATION_STRUCTURE_BUILD_TYPE_DEVICE_KHR or VK_ACCELERATION_STRUCTURE_BUILD_TYPE_HOST_OR_DEVICE_KHR
- For VkMicromapBuildInfoEXT:
  - Its type, and flags members are equal to pBuildInfo->type and pBuildInfo->flags, respectively.
  - The sum of usage information in either pUsageCounts or ppUsageCounts is equal to the sum of usage information in either pBuildInfo->pUsageCounts or pBuildInfo->ppUsageCounts.

Similarly, the buildScratchSize value will support any build command specifying the
VK_BUILD_MICROMAP_MODE_BUILD_EXT mode under the above conditions.

Valid Usage

- VUID-vkGetMicromapBuildSizesEXT-dstMicromap-09180
  VkMicromapBuildInfoEXT::dstMicromap must have been created from device

- VUID-vkGetMicromapBuildSizesEXT-micromap-07439
  The micromap feature must be enabled

- VUID-vkGetMicromapBuildSizesEXT-device-07440
  If device was created with multiple physical devices, then the
  bufferDeviceAddressMultiDevice feature must be enabled

Valid Usage (Implicit)

- VUID-vkGetMicromapBuildSizesEXT-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetMicromapBuildSizesEXT-buildType-parameter
  buildType must be a valid VkAccelerationStructureBuildTypeKHR value

- VUID-vkGetMicromapBuildSizesEXT-pBuildInfo-parameter
  pBuildInfo must be a valid pointer to a valid VkMicromapBuildInfoEXT structure

- VUID-vkGetMicromapBuildSizesEXT-pSizeInfo-parameter
  pSizeInfo must be a valid pointer to a VkMicromapBuildSizesInfoEXT structure

The VkMicromapBuildSizesInfoEXT structure describes the required build sizes for a micromap and
scratch buffers and is defined as:

```c
// Provided by VK_EXT_opacity_micromap
typedef struct VkMicromapBuildSizesInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDeviceSize micromapSize;
    VkDeviceSize buildScratchSize;
    VkBool32 discardable;
} VkMicromapBuildSizesInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **micromapSize** is the size in bytes required in a VkMicromapEXT for a build or update operation.
- **buildScratchSize** is the size in bytes required in a scratch buffer for a build operation.
- **discardable** indicates whether or not the micromap object may be destroyed after an
  acceleration structure build or update. A false value means that acceleration structures built
  with this micromap may contain references to the data contained therein, and the application
must not destroy the micromap until ray traversal has concluded. A true value means that the information in the micromap will be copied by value into the acceleration structure, and the micromap may be destroyed after the acceleration structure build concludes.

Valid Usage (Implicit)

- VUID-VkMicromapBuildSizesInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_MICROMAP_BUILD_SIZES_INFO_EXT
- VUID-VkMicromapBuildSizesInfoEXT-pNext-pNext
  pNext must be NULL

Values which can be set in VkMicromapCreateInfoEXT::type specifying the type of micromap, are:

```cpp
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapTypeEXT {
    VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT = 0,
    #ifdef VK_ENABLE_BETA_EXTENSIONS
    // Provided by VK_NV_displacement_micromap
        VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV = 1000397000,
    #endif
} VkMicromapTypeEXT;
```

- VK_MICROMAP_TYPE_OPACITY_MICROMAP_EXT is a micromap containing data to control the opacity of a triangle.
- VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV is a micromap containing data to control the displacement of subtriangles within a triangle.

Bits which can be set in VkMicromapCreateInfoEXT::createFlags, specifying additional creation parameters for micromaps, are:

```cpp
// Provided by VK_EXT_opacity_micromap
typedef enum VkMicromapCreateFlagBitsEXT {
    VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT = 0x00000001,
} VkMicromapCreateFlagBitsEXT;
```

- VK_MICROMAP_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT specifies that the micromap’s address can be saved and reused on a subsequent run.

```cpp
typedef VkFlags VkMicromapCreateFlagsEXT;
```

VkMicromapCreateFlagsEXT is a bitmask type for setting a mask of zero or more VkMicromapCreateFlagBitsEXT.

Bits which can be set in VkMicromapBuildInfoEXT::flags specifying additional parameters for
micromap builds, are:

```c
typedef enum VkBuildMicromapFlagBitsEXT {
    VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT = 0x00000001,
    VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT = 0x00000002,
    VK_BUILD_MICROMAP_ALLOW_COMPACTION_BIT_EXT = 0x00000004,
} VkBuildMicromapFlagBitsEXT;
```

- **VK_BUILD_MICROMAP_PREFER_FAST_TRACE_BIT_EXT** indicates that the given micromap build should prioritize trace performance over build time.
- **VK_BUILD_MICROMAP_PREFER_FAST_BUILD_BIT_EXT** indicates that the given micromap build should prioritize build time over trace performance.

```c
typedef VkFlags VkBuildMicromapFlagsEXT;
```

**VkBuildMicromapFlagsEXT** is a bitmask type for setting a mask of zero or more **VkBuildMicromapFlagBitsEXT**.

To destroy a micromap, call:

```c
void vkDestroyMicromapEXT(
    VkDevice device,
    VkMicromapEXT micromap,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that destroys the micromap.
- **micromap** is the micromap to destroy.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

**Valid Usage**

- **VUID-vkDestroyMicromapEXT-micromap-07441**
  All submitted commands that refer to micromap must have completed execution

- **VUID-vkDestroyMicromapEXT-micromap-07442**
  If VkAllocationCallbacks were provided when micromap was created, a compatible set of callbacks must be provided here

- **VUID-vkDestroyMicromapEXT-micromap-07443**
  If no VkAllocationCallbacks were provided when micromap was created, pAllocator must be NULL
Valid Usage (Implicit)

- VUID-vkDestroyMicromapEXT-device-parameter
  device must be a valid VkDevice handle

- VUID-vkDestroyMicromapEXT-micromap-parameter
  If micromap is not VK_NULL_HANDLE, micromap must be a valid VkMicromapEXT handle

- VUID-vkDestroyMicromapEXT-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroyMicromapEXT-micromap-parent
  If micromap is a valid handle, it must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to micromap must be externally synchronized

12.8. Resource Memory Association

Resources are initially created as virtual allocations with no backing memory. Device memory is allocated separately (see Device Memory) and then associated with the resource. This association is done differently for sparse and non-sparse resources.

Resources created with any of the sparse creation flags are considered sparse resources. Resources created without these flags are non-sparse. The details on resource memory association for sparse resources is described in Sparse Resources.

Non-sparse resources must be bound completely and contiguously to a single VkDeviceMemory object before the resource is passed as a parameter to any of the following operations:

- creating image or buffer views
- updating descriptor sets
- recording commands in a command buffer

Once bound, the memory binding is immutable for the lifetime of the resource.

In a logical device representing more than one physical device, buffer and image resources exist on all physical devices but can be bound to memory differently on each. Each such replicated resource is an instance of the resource. For sparse resources, each instance can be bound to memory arbitrarily differently. For non-sparse resources, each instance can either be bound to the local or a peer instance of the memory, or for images can be bound to rectangular regions from the local and/or peer instances. When a resource is used in a descriptor set, each physical device interprets the descriptor according to its own instance's binding to memory.

Note
There are no new copy commands to transfer data between physical devices. Instead, an application can create a resource with a peer mapping and use it as the source or destination of a transfer command executed by a single physical device to copy the data from one physical device to another.

To determine the memory requirements for a buffer resource, call:

```c
// Provided by VK_VERSION_1_0
void vkGetBufferMemoryRequirements(
    VkDevice device,
    VkBuffer buffer,
    VkMemoryRequirements* pMemoryRequirements);
```

- device is the logical device that owns the buffer.
- buffer is the buffer to query.
- pMemoryRequirements is a pointer to a VkMemoryRequirements structure in which the memory requirements of the buffer object are returned.

**Valid Usage (Implicit)**

- VUID-vkGetBufferMemoryRequirements-device-parameter device must be a valid VkDevice handle
- VUID-vkGetBufferMemoryRequirements-buffer-parameter buffer must be a valid VkBuffer handle
- VUID-vkGetBufferMemoryRequirements-pMemoryRequirements-parameter pMemoryRequirements must be a valid pointer to a VkMemoryRequirements structure
- VUID-vkGetBufferMemoryRequirements-buffer-parent buffer must have been created, allocated, or retrieved from device

To determine the memory requirements for an image resource which is not created with the VK_IMAGE_CREATE_DISJOINT_BIT flag set, call:

```c
// Provided by VK_VERSION_1_0
void vkGetImageMemoryRequirements(
    VkDevice device,
    VkImage image,
    VkMemoryRequirements* pMemoryRequirements);
```

- device is the logical device that owns the image.
- image is the image to query.
- pMemoryRequirements is a pointer to a VkMemoryRequirements structure in which the memory requirements of the image object are returned.
Valid Usage

- VUID-vkGetImageMemoryRequirements-image-01588
  image must not have been created with the VK_IMAGE_CREATE_DISJOINT_BIT flag set

- VUID-vkGetImageMemoryRequirements-image-04004
  If image was created with the VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID external memory handle type, then image must be bound to memory

- VUID-vkGetImageMemoryRequirements-image-08960
  If image was created with the VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX external memory handle type, then image must be bound to memory

Valid Usage (Implicit)

- VUID-vkGetImageMemoryRequirements-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetImageMemoryRequirements-image-parameter
  image must be a valid VkImage handle

- VUID-vkGetImageMemoryRequirements-pMemoryRequirements-parameter
  pMemoryRequirements must be a valid pointer to a VkMemoryRequirements structure

- VUID-vkGetImageMemoryRequirements-image-parent
  image must have been created, allocated, or retrieved from device

The VkMemoryRequirements structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkMemoryRequirements {
    VkDeviceSize size;
    VkDeviceSize alignment;
    uint32_t memoryTypeBits;
} VkMemoryRequirements;
```

- size is the size, in bytes, of the memory allocation required for the resource.
- alignment is the alignment, in bytes, of the offset within the allocation required for the resource.
- memoryTypeBits is a bitmask and contains one bit set for every supported memory type for the resource. Bit i is set if and only if the memory type i in the VkPhysicalDeviceMemoryProperties structure for the physical device is supported for the resource.

The precise size of images that will be bound to external Android hardware buffer memory is unknown until the memory has been imported or allocated, so applications must not call vkGetImageMemoryRequirements or vkGetImageMemoryRequirements2 with such an VkImage
before it has been bound to memory. For this reason, applications also must not call `vkGetDeviceImageMemoryRequirements` with a `VkImageCreateInfo` describing an external Android hardware buffer. When importing Android hardware buffer memory, the allocationSize can be determined by calling `vkGetAndroidHardwareBufferPropertiesANDROID`. When allocating new memory for a `VkImage` that can be exported to an Android hardware buffer, the memory's allocationSize must be zero; the actual size will be determined by the dedicated image's parameters. After the memory has been allocated, the amount of space allocated from the memory's heap can be obtained by getting the image's memory requirements or by calling `vkGetAndroidHardwareBufferPropertiesANDROID` with the Android hardware buffer exported from the memory.

When allocating new memory for a `VkBuffer` that can be exported to an Android hardware buffer an application may still call `vkGetBufferMemoryRequirements` or `vkGetBufferMemoryRequirements2` with `VkBuffer` before it has been bound to memory.

If the resource being queried was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT`, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT`, or `VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT` external memory handle type, the value of size has no meaning and should be ignored.

The implementation guarantees certain properties about the memory requirements returned by `vkGetBufferMemoryRequirements2`, `vkGetImageMemoryRequirements2`, `vkGetDeviceBufferMemoryRequirements`, `vkGetDeviceImageMemoryRequirements`, `vkGetBufferMemoryRequirements` and `vkGetImageMemoryRequirements`:

- The `memoryTypeBits` member always contains at least one bit set.
- If `buffer` is a `VkBuffer` not created with the `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` or `VK_BUFFER_CREATE_PROTECTED_BIT` bits set, or if `image` is a linear image that was not created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit set, then the `memoryTypeBits` member always contains at least one bit set corresponding to a `VkMemoryType` with a `propertyFlags` that has both the `VK_MEMORY_PROPERTY_HOST_VISIBLE_BIT` and the `VK_MEMORY_PROPERTY_HOST_COHERENT_BIT` bits set. In other words, mappable coherent memory can always be attached to these objects.
- If `buffer` was created with `VkExternalMemoryBufferCreateInfo::handleTypes` set to 0 or `image` was created with `VkExternalMemoryImageCreateInfo::handleTypes` set to 0, the `memoryTypeBits` member always contains at least one bit set corresponding to a `VkMemoryType` with a `propertyFlags` that has the `VK_MEMORY_PROPERTY_DEVICE_LOCAL_BIT` bit set.
- The `memoryTypeBits` member is identical for all `VkBuffer` objects created with the same combination of values for the `flags` and `usage` members in the `VkBufferCreateInfo` structure and the `handleTypes` member of the `VkExternalMemoryBufferCreateInfo` structure passed to `vkCreateBuffer`. Further, if `usage1` and `usage2` of type `VkBufferUsageFlags` are such that the bits set in `usage2` are a subset of the bits set in `usage1`, and they have the same `flags` and `VkExternalMemoryBufferCreateInfo::handleTypes`, then the bits set in `memoryTypeBits` returned for `usage1` must be a subset of the bits set in `memoryTypeBits` returned for `usage2`, for all values of `flags`.
- The `alignment` member is a power of two.
- The `alignment` member is identical for all `VkBuffer` objects created with the same combination of values for the `usage` and `flags` members in the `VkBufferCreateInfo` structure passed to
vkCreateBuffer.

- If the maintenance4 feature is enabled, then the alignment member is identical for all VkImage objects created with the same combination of values for the flags, imageType, format, extent, mipLevels, arrayLayers, samples, tiling and usage members in the VkImageCreateInfo structure passed to vkCreateImage.

- The alignment member satisfies the buffer descriptor offset alignment requirements associated with the VkBuffer’s usage:
  - If `usage` included `VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT` or `VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT`, alignment must be an integer multiple of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`.
  - If `usage` included `VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT`, alignment must be an integer multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`.
  - If `usage` included `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT`, alignment must be an integer multiple of `VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment`.

- For images created with a color format, the memoryTypeBits member is identical for all VkImage objects created with the same combination of values for the tiling member, the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` bit of the flags member, the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit of the flags member, the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` bit of the usage member if the `VkPhysicalDeviceHostImageCopyPropertiesEXT::identicalMemoryTypeRequirements` property is `VK_FALSE`, handleTypes member of VkExternalMemoryImageCreateInfo, and the `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` of the usage member in the VkImageCreateInfo structure passed to vkCreateImage.

- For images created with a depth/stencil format, the memoryTypeBits member is identical for all VkImage objects created with the same combination of values for the format member, the tiling member, the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` bit of the flags member, the `VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT` bit of the flags member, the `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` bit of the usage member if the `VkPhysicalDeviceHostImageCopyPropertiesEXT::identicalMemoryTypeRequirements` property is `VK_FALSE`, handleTypes member of VkExternalMemoryImageCreateInfo, and the `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` of the usage member in the VkImageCreateInfo structure passed to vkCreateImage.

- If the memory requirements are for a VkImage, the memoryTypeBits member must not refer to a VkMemoryType with a propertyFlags that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set if the image did not have `VK_IMAGE_USAGE_TRANSIENT_ATTACHMENT_BIT` bit set in the usage member of the VkImageCreateInfo structure passed to vkCreateImage.

- If the memory requirements are for a VkBuffer, the memoryTypeBits member must not refer to a VkMemoryType with a propertyFlags that has the `VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT` bit set.

  **Note**
  The implication of this requirement is that lazily allocated memory is disallowed for buffers in all cases.

- The size member is identical for all VkBuffer objects created with the same combination of
creation parameters specified in `VkBufferCreateInfo` and its `pNext` chain.

- The `size` member is identical for all `VkImage` objects created with the same combination of creation parameters specified in `VkImageCreateInfo` and its `pNext` chain.

  **Note**
  This, however, does not imply that they interpret the contents of the bound memory identically with each other. That additional guarantee, however, can be explicitly requested using `VK_IMAGE_CREATE_ALIAS_BIT`.

- If the `maintenance4` feature is enabled, these additional guarantees apply:
  - For a `VkBuffer`, the `size` memory requirement is never greater than that of another `VkBuffer` created with a greater or equal `size` specified in `VkBufferCreateInfo`, all other creation parameters being identical.
  - For a `VkBuffer`, the `size` memory requirement is never greater than the result of aligning `VkBufferCreateInfo::size` with the `alignment` memory requirement.
  - For a `VkImage`, the `size` memory requirement is never greater than that of another `VkImage` created with a greater or equal value in each of `extent.width`, `extent.height`, and `extent.depth`; all other creation parameters being identical.
  - The memory requirements returned by `vkGetDeviceBufferMemoryRequirements` are identical to those that would be returned by `vkGetBufferMemoryRequirements2` if it were called with a `VkBuffer` created with the same `VkBufferCreateInfo` values.
  - The memory requirements returned by `vkGetDeviceImageMemoryRequirements` are identical to those that would be returned by `vkGetImageMemoryRequirements2` if it were called with a `VkImage` created with the same `VkImageCreateInfo` values.

To determine the memory requirements for a buffer resource, call:

```c
// Provided by VK_VERSION_1_1
void vkGetBufferMemoryRequirements2(
    VkDevice device,
    const VkBufferMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```c
// Provided by VK_KHR_get_memory_requirements2
void vkGetBufferMemoryRequirements2KHR(
    VkDevice device,
    const VkBufferMemoryRequirementsInfo2* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- `device` is the logical device that owns the buffer.
- `pInfo` is a pointer to a `VkBufferMemoryRequirementsInfo2` structure containing parameters required for the memory requirements query.
• **pMemoryRequirements** is a pointer to a **VkMemoryRequirements2** structure in which the memory requirements of the buffer object are returned.

## Valid Usage (Implicit)

- **VUID-vkGetBufferMemoryRequirements2-device-parameter**
  
  **device** must be a valid **VkDevice** handle

- **VUID-vkGetBufferMemoryRequirements2-pInfo-parameter**
  
  **pInfo** must be a valid pointer to a valid **VkBufferMemoryRequirementsInfo2** structure

- **VUID-vkGetBufferMemoryRequirements2-pMemoryRequirements-parameter**
  
  **pMemoryRequirements** must be a valid pointer to a **VkMemoryRequirements2** structure

To determine the memory requirements for a buffer resource without creating an object, call:

```c
// Provided by VK_VERSION_1_3
void vkGetDeviceBufferMemoryRequirements(
    VkDevice device,
    const VkDeviceBufferMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```c
// Provided by VK_KHR_maintenance4
void vkGetDeviceBufferMemoryRequirementsKHR(
    VkDevice device,
    const VkDeviceBufferMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- **device** is the logical device intended to own the buffer.
- **pInfo** is a pointer to a **VkDeviceBufferMemoryRequirements** structure containing parameters required for the memory requirements query.
- **pMemoryRequirements** is a pointer to a **VkMemoryRequirements2** structure in which the memory requirements of the buffer object are returned.

## Valid Usage (Implicit)

- **VUID-vkGetDeviceBufferMemoryRequirementsdevice-parameter**
  
  **device** must be a valid **VkDevice** handle

- **VUID-vkGetDeviceBufferMemoryRequirements-pInfo-parameter**
  
  **pInfo** must be a valid pointer to a valid **VkDeviceBufferMemoryRequirements** structure

- **VUID-vkGetDeviceBufferMemoryRequirements-pMemoryRequirements-parameter**
  
  **pMemoryRequirements** must be a valid pointer to a **VkMemoryRequirements2** structure
The `VkBufferMemoryRequirementsInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkBufferMemoryRequirementsInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkBuffer buffer;
} VkBufferMemoryRequirementsInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_get_memory_requirements2
typedef VkBufferMemoryRequirementsInfo2 VkBufferMemoryRequirementsInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the buffer to query.

### Valid Usage (Implicit)

- VUID-VkBufferMemoryRequirementsInfo2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_BUFFER_MEMORY_REQUIREMENTS_INFO_2`
- VUID-VkBufferMemoryRequirementsInfo2-pNext-pNext
  `pNext` must be `NULL`
- VUID-VkBufferMemoryRequirementsInfo2-buffer-parameter
  `buffer` must be a valid `VkBuffer` handle

The `VkDeviceBufferMemoryRequirements` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkDeviceBufferMemoryRequirements {
    VkStructureType sType;
    const void* pNext;
    const VkBufferCreateInfo* pCreateInfo;
} VkDeviceBufferMemoryRequirements;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance4
typedef VkDeviceBufferMemoryRequirements VkDeviceBufferMemoryRequirementsKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.

• **pCreateInfo** is a pointer to a **VkBufferCreateInfo** structure containing parameters affecting creation of the buffer to query.

### Valid Usage (Implicit)

- **VUID-VkDeviceBufferMemoryRequirements-sType-sType**
  
  sType **must** be **VK_STRUCTURE_TYPE_DEVICE_BUFFER_MEMORY_REQUIREMENTS**

- **VUID-VkDeviceBufferMemoryRequirements-pNext-pNext**
  
  pNext **must** be NULL

- **VUID-VkDeviceBufferMemoryRequirements-pCreateInfo-parameter**
  
  pCreateInfo **must** be a valid pointer to a valid **VkBufferCreateInfo** structure

To determine the memory requirements for an image resource, call:

```c
// Provided by VK_VERSION_1_1
void vkGetImageMemoryRequirements2(VkDevice device,
                                  const VkImageMemoryRequirementsInfo2* pInfo,
                                  VkMemoryRequirements2* pMemoryRequirements);
```

or the equivalent command

```c
// Provided by VK_KHR_get_memory_requirements2
void vkGetImageMemoryRequirements2KHR(VkDevice device,
                                      const VkImageMemoryRequirementsInfo2* pInfo,
                                      VkMemoryRequirements2* pMemoryRequirements);
```

• **device** is the logical device that owns the image.

• **pInfo** is a pointer to a **VkImageMemoryRequirementsInfo2** structure containing parameters required for the memory requirements query.

• **pMemoryRequirements** is a pointer to a **VkMemoryRequirements2** structure in which the memory requirements of the image object are returned.

### Valid Usage (Implicit)

- **VUID-vkGetImageMemoryRequirements2-device-parameter**
  
  device **must** be a valid **VkDevice** handle

- **VUID-vkGetImageMemoryRequirements2-pInfo-parameter**
  
  pInfo **must** be a valid pointer to a valid **VkImageMemoryRequirementsInfo2** structure

- **VUID-vkGetImageMemoryRequirements2-pMemoryRequirements-parameter**
  
  pMemoryRequirements **must** be a valid pointer to a **VkMemoryRequirements2** structure
To determine the memory requirements for an image resource without creating an object, call:

```c
void vkGetDeviceImageMemoryRequirements(
    VkDevice device,
    const VkDeviceImageMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```
or the equivalent command

```c
void vkGetDeviceImageMemoryRequirementsKHR(
    VkDevice device,
    const VkDeviceImageMemoryRequirements* pInfo,
    VkMemoryRequirements2* pMemoryRequirements);
```

- `device` is the logical device intended to own the image.
- `pInfo` is a pointer to a `VkDeviceImageMemoryRequirements` structure containing parameters required for the memory requirements query.
- `pMemoryRequirements` is a pointer to a `VkMemoryRequirements2` structure in which the memory requirements of the image object are returned.

**Valid Usage (Implicit)**

- VUID-vkGetDeviceImageMemoryRequirements-device-parameter
  - `device` must be a valid `VkDevice` handle
- VUID-vkGetDeviceImageMemoryRequirements-pInfo-parameter
  - `pInfo` must be a valid pointer to a valid `VkDeviceImageMemoryRequirements` structure
- VUID-vkGetDeviceImageMemoryRequirements-pMemoryRequirements-parameter
  - `pMemoryRequirements` must be a valid pointer to a `VkMemoryRequirements2` structure

The `VkImageMemoryRequirementsInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkImageMemoryRequirementsInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkImage image;
} VkImageMemoryRequirementsInfo2;
```
or the equivalent

```c
// Provided by VK_KHR_get_memory_requirements2
```
typedef VkImageMemoryRequirementsInfo2 VkImageMemoryRequirementsInfo2KHR;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `image` is the image to query.

**Valid Usage**

- VUID-VkImageMemoryRequirementsInfo2-image-01589
  If `image` was created with a multi-planar format and the `VK_IMAGE_CREATE_DISJOINT_BIT` flag, there **must** be a `VkImagePlaneMemoryRequirementsInfo` included in the `pNext` chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-02279
  If `image` was created with `VK_IMAGE_CREATE_DISJOINT_BIT` and with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then there **must** be a `VkImagePlaneMemoryRequirementsInfo` included in the `pNext` chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-01590
  If `image` was not created with the `VK_IMAGE_CREATE_DISJOINT_BIT` flag, there **must** not be a `VkImagePlaneMemoryRequirementsInfo` included in the `pNext` chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-02280
  If `image` was created with a single-plane format and with any tiling other than `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then there **must** not be a `VkImagePlaneMemoryRequirementsInfo` included in the `pNext` chain of the `VkImageMemoryRequirementsInfo2` structure

- VUID-VkImageMemoryRequirementsInfo2-image-01897
  If `image` was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` external memory handle type, then `image` **must** be bound to memory

- VUID-VkImageMemoryRequirementsInfo2-image-08961
  If `image` was created with the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX` external memory handle type, then `image` **must** be bound to memory

**Valid Usage (Implicit)**

- VUID-VkImageMemoryRequirementsInfo2-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_IMAGE_MEMORY_REQUIREMENTS_INFO_2`

- VUID-VkImageMemoryRequirementsInfo2-pNext-pNext
  `pNext` **must** be `NULL` or a pointer to a valid instance of `VkImagePlaneMemoryRequirementsInfo`

- VUID-VkImageMemoryRequirementsInfo2-sType-unique
The `sType` value of each struct in the `pNext` chain must be unique

- VUID-VkImageMemoryRequirementsInfo2-image-parameter image must be a valid `VkImage` handle

The `VkDeviceImageMemoryRequirements` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkDeviceImageMemoryRequirements {
    VkStructureType sType;
    const void* pNext;
    const VkImageCreateInfo* pCreateInfo;
    VkImageAspectFlagBits planeAspect;
} VkDeviceImageMemoryRequirements;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance4
typedef VkDeviceImageMemoryRequirements VkDeviceImageMemoryRequirementsKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pCreateInfo` is a pointer to a `VkImageCreateInfo` structure containing parameters affecting creation of the image to query.
- `planeAspect` is a `VkImageAspectFlagBits` value specifying the aspect corresponding to the image plane to query. This parameter is ignored unless `pCreateInfo->tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, or `pCreateInfo->flags` has `VK_IMAGE_CREATE_DISJOINT_BIT` set.

**Valid Usage**

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06416 The `pCreateInfo->pNext` chain must not contain a `VkImageSwapchainCreateInfoKHR` structure
- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06776 The `pCreateInfo->pNext` chain must not contain a `VkImageDrmFormatModifierExplicitCreateInfoEXT` structure
- VUID-VkDeviceImageMemoryRequirements-pNext-06996 Applications also must not call `vkGetDeviceImageMemoryRequirements` with a `VkImageCreateInfo` whose `pNext` chain includes a `VkExternalFormatANDROID` structure with non-zero externalFormat
- VUID-VkDeviceImageMemoryRequirements-pNext-08962 Applications also must not call `vkGetDeviceImageMemoryRequirements` with a `VkImageCreateInfo` whose `pNext` chain includes a `VkExternalFormatQNX` structure with
non-zero externalFormat

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06417
  If pCreateInfo->format specifies a multi-planar format and pCreateInfo->flags has VK_IMAGE_CREATE_DISJOINT_BIT set then planeAspect must not be VK_IMAGE_ASPECT_NONE_KHR

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06419
  If pCreateInfo->flags has VK_IMAGE_CREATE_DISJOINT_BIT set and if the pCreateInfo->tiling is VK_IMAGE_TILING_LINEAR or VK_IMAGE_TILING_OPTIMAL, then planeAspect must be a single valid multi-planar aspect mask bit

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-06420
  If pCreateInfo->tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then planeAspect must be a single valid memory plane for the image (that is, aspectMask must specify a plane index that is less than the VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount associated with the image's format and VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier)

Valid Usage (Implicit)

- VUID-VkDeviceImageMemoryRequirements-sType-sType
  sType must be VK_STRUCTURE_TYPE_DEVICE_IMAGE_MEMORY_REQUIREMENTS

- VUID-VkDeviceImageMemoryRequirements-pNext-pNext
  pNext must be NULL

- VUID-VkDeviceImageMemoryRequirements-pCreateInfo-parameter
  pCreateInfo must be a valid pointer to a valid VkImageCreateInfo structure

- VUID-VkDeviceImageMemoryRequirements-planeAspect-parameter
  If planeAspect is not 0, planeAspect must be a valid VkImageAspectFlagBits value

To determine the memory requirements for a plane of a disjoint image, add a VkImagePlaneMemoryRequirementsInfo structure to the pNext chain of the VkImageMemoryRequirementsInfo2 structure.

The VkImagePlaneMemoryRequirementsInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkImagePlaneMemoryRequirementsInfo {
    VkStructureType           sType;
    const void*               pNext;
    VkImageAspectFlagBits     planeAspect;
} VkImagePlaneMemoryRequirementsInfo;
```

or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
```
typedef VkImagePlaneMemoryRequirementsInfo VkImagePlaneMemoryRequirementsInfoKHR;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `planeAspect` is a `VkImageAspectFlagBits` value specifying the aspect corresponding to the image plane to query.

### Valid Usage

- **VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02281**
  If the image's tiling is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then `planeAspect` must be a single valid multi-planar aspect mask bit.

- **VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-02282**
  If the image's tiling is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `planeAspect` must be a single valid memory plane for the image (that is, `aspectMask` must specify a plane index that is less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image's format and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`).

### Valid Usage (Implicit)

- **VUID-VkImagePlaneMemoryRequirementsInfo-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_IMAGE_PLANE_MEMORY_REQUIREMENTS_INFO`.

- **VUID-VkImagePlaneMemoryRequirementsInfo-planeAspect-parameter**
  `planeAspect` must be a valid `VkImageAspectFlagBits` value.

The `VkMemoryRequirements2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkMemoryRequirements2 {
    VkStructureType sType;
    void* pNext;
    VkMemoryRequirements memoryRequirements;
} VkMemoryRequirements2;
```

or the equivalent

```c
// Provided by VK_KHR_get_memory_requirements2, VK_KHR_get_memory_requirements2 with VK_NV_ray_tracing
typedef VkMemoryRequirements2 VkMemoryRequirements2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `memoryRequirements` is a `VkMemoryRequirements` structure describing the memory requirements of the resource.

### Valid Usage (Implicit)

- **VUID-VkMemoryRequirements2-sType-sType**
  
  `sType` **must** be `VK_STRUCTURE_TYPE_MEMORY_REQUIREMENTS_2`

- **VUID-VkMemoryRequirements2-pNext-pNext**
  
  `pNext` **must** be `NULL` or a pointer to a valid instance of `VkMemoryDedicatedRequirements`

- **VUID-VkMemoryRequirements2-sType-unique**
  
  The `sType` value of each struct in the `pNext` chain **must** be unique

The `VkMemoryDedicatedRequirements` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkMemoryDedicatedRequirements {
    VkStructureType sType;
    void* pNext;
    VkBool32 prefersDedicatedAllocation;
    VkBool32 requiresDedicatedAllocation;
} VkMemoryDedicatedRequirements;
```

or the equivalent

```c
// Provided by VK_KHR_dedicated_allocation
typedef VkMemoryDedicatedRequirements VkMemoryDedicatedRequirementsKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `prefersDedicatedAllocation` specifies that the implementation would prefer a dedicated allocation for this resource. The application is still free to suballocate the resource but it **may** get better performance if a dedicated allocation is used.

- `requiresDedicatedAllocation` specifies that a dedicated allocation is required for this resource.

To determine the dedicated allocation requirements of a buffer or image resource, add a `VkMemoryDedicatedRequirements` structure to the `pNext` chain of the `VkMemoryRequirements2` structure passed as the `pMemoryRequirements` parameter of `vkGetBufferMemoryRequirements2` or `vkGetImageMemoryRequirements2`, respectively.

Constraints on the values returned for buffer resources are:

- `requiresDedicatedAllocation` **may** be `VK_TRUE` if the `pNext` chain of `VkBufferCreateInfo` for the call to `vkCreateBuffer` used to create the buffer being queried included a
 VkExternalMemoryBufferCreateInfo structure, and any of the handle types specified in
VkExternalMemoryBufferCreateInfo::handleTypes requires dedicated allocation, as reported by
vkGetPhysicalDeviceExternalBufferProperties in VkExternalBufferProperties
::externalMemoryProperties.externalMemoryFeatures. Otherwise, requiresDedicatedAllocation will
be VK_FALSE.

• When the implementation sets requiresDedicatedAllocation to VK_TRUE, it must also set
prefersDedicatedAllocation to VK_TRUE.

• If VK_BUFFER_CREATE_SPARSE_BINDING_BIT was set in VkBufferCreateInfo::flags when buffer was
created, then both prefersDedicatedAllocation and requiresDedicatedAllocation will be VK_FALSE.

Constraints on the values returned for image resources are:

• requiresDedicatedAllocation may be VK_TRUE if the pNext chain of VkImageCreateInfo for the call
to vkCreateImage used to create the image being queried included a
VkExternalMemoryImageCreateInfo structure, and any of the handle types specified in
VkExternalMemoryImageCreateInfo::handleTypes requires dedicated allocation, as reported by
vkGetPhysicalDeviceImageFormatProperties2 in VkExternalImageFormatProperties
::externalMemoryProperties.externalMemoryFeatures.

• requiresDedicatedAllocation may be VK_TRUE if the image’s tiling is
VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT.

• requiresDedicatedAllocation will otherwise be VK_FALSE.

• If VK_IMAGE_CREATE_SPARSE_BINDING_BIT was set in VkImageCreateInfo::flags when image was
created, then both prefersDedicatedAllocation and requiresDedicatedAllocation will be VK_FALSE.

Valid Usage (Implicit)

• VUID-VkMemoryDedicatedRequirements-sType-sType
sType must be VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS

To attach memory to a buffer object, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkBindBufferMemory(  
    VkDevice device,  
    VkBuffer buffer,  
    VkDeviceMemory memory,  
    VkDeviceSize memoryOffset);
```

• device is the logical device that owns the buffer and memory.

• buffer is the buffer to be attached to memory.

• memory is a VkDeviceMemory object describing the device memory to attach.

• memoryOffset is the start offset of the region of memory which is to be bound to the buffer. The
  number of bytes returned in the VkMemoryRequirements::size member in memory, starting from
  memoryOffset bytes, will be bound to the specified buffer.
vkBindBufferMemory is equivalent to passing the same parameters through VkBindBufferMemoryInfo to vkBindBufferMemory2.

Valid Usage

- VUID-vkBindBufferMemory-buffer-07459
  buffer must not have been bound to a memory object

- VUID-vkBindBufferMemory-buffer-01030
  buffer must not have been created with any sparse memory binding flags

- VUID-vkBindBufferMemory-memoryOffset-01031
  memoryOffset must be less than the size of memory

- VUID-vkBindBufferMemory-memory-01035
  memory must have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer

- VUID-vkBindBufferMemory-memoryOffset-01036
  memoryOffset must be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer

- VUID-vkBindBufferMemory-size-01037
  The size member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer must be less than or equal to the size of memory minus memoryOffset

- VUID-vkBindBufferMemory-buffer-01444
  If buffer requires a dedicated allocation (as reported by vkGetBufferMemoryRequirements2 in VkMemoryDedicatedRequirements::requiresDedicatedAllocation for buffer), memory must have been allocated with VkMemoryDedicatedAllocateInfo::buffer equal to buffer

- VUID-vkBindBufferMemory-memory-01508
  If the VkMemoryAllocateInfo provided when memory was allocated included a VkMemoryDedicatedAllocateInfo structure in its pNext chain, and VkMemoryDedicatedAllocateInfo::buffer was not VK_NULL_HANDLE, then buffer must equal VkMemoryDedicatedAllocateInfo::buffer, and memoryOffset must be zero

- VUID-vkBindBufferMemory-None-01898
  If buffer was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit set, the buffer must be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT

- VUID-vkBindBufferMemory-None-01899
  If buffer was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit not set, the buffer must not be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT

- VUID-vkBindBufferMemory-buffer-01038
  If buffer was created with VkDedicatedAllocationBufferCreateInfoNV
If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `buffer` was not created with `VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, `memory` must not have been allocated dedicated for a specific buffer or image

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate `memory` is not 0, it must include at least one of the handles set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

If `memory` was allocated with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL `buffer` value, the external handle type of the imported memory must also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

If `memory` was allocated with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation, that is not `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID` must also have been set in `VkExternalMemoryBufferCreateInfo::handleTypes` when `buffer` was created

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddress` feature is enabled and `buffer` was created with the `VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT` bit set, `memory` must have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT` bit set

If the `VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddressCaptureReplay` feature is enabled and `buffer` was created with the `VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set, `memory` must have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set

If `buffer` was created with `VkBufferCollectionBufferCreateInfoFUCHSIA` chained to `VkBufferCreateInfo::pNext`, `memory` must be allocated with a `VkImportMemoryBufferCollectionFUCHSIA` chained to `VkMemoryAllocateInfo::pNext`
Valid Usage (Implicit)

- VUID-vkBindBufferMemory-device-parameter
device must be a valid VkDevice handle

- VUID-vkBindBufferMemory-buffer-parameter
buffer must be a valid VkBuffer handle

- VUID-vkBindBufferMemory-memory-parameter
memory must be a valid VkDeviceMemory handle

- VUID-vkBindBufferMemory-buffer-parent
buffer must have been created, allocated, or retrieved from device

- VUID-vkBindBufferMemory-memory-parent
memory must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to buffer must be externally synchronized

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR

To attach memory to buffer objects for one or more buffers at a time, call:

```c
// Provided by VK_VERSION_1_1
VkResult vkBindBufferMemory2(
    VkDevice device,
    uint32_t bindInfoCount,
    const VkBindBufferMemoryInfo* pBindInfos);
```
or the equivalent command

```c
// Provided by VK_KHR_bind_memory2
VkResult vkBindBufferMemory2KHR(
    VkDevice device,
    uint32_t bindInfoCount,
```
const VkBindBufferMemoryInfo* pBindInfos);

- `device` is the logical device that owns the buffers and memory.
- `bindInfoCount` is the number of elements in `pBindInfos`.
- `pBindInfos` is a pointer to an array of `bindInfoCount` `VkBindBufferMemoryInfo` structures describing buffers and memory to bind.

On some implementations, it **may** be more efficient to batch memory bindings into a single command.

If the `maintenance6` feature is enabled, this command **must** attempt to perform all of the memory binding operations described by `pBindInfos`, and **must** not early exit on the first failure.

If any of the memory binding operations described by `pBindInfos` fail, the `VkResult` returned by this command **must** be the return value of any one of the memory binding operations which did not return `VK_SUCCESS`.

**Note**

If the `vkBindBufferMemory2` command failed, `VkBindMemoryStatusKHR` structures were not included in the `pNext` chains of each element of `pBindInfos`, and `bindInfoCount` was greater than one, then the buffers referenced by `pBindInfos` will be in an indeterminate state, and must not be used.

Applications should destroy these buffers.

### Valid Usage (Implicit)

- **VUID-vkBindBufferMemory2-device-parameter**
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkBindBufferMemory2-pBindInfos-parameter**
  `pBindInfos` **must** be a valid pointer to an array of `bindInfoCount` valid `VkBindBufferMemoryInfo` structures

- **VUID-vkBindBufferMemory2-bindInfoCount-arraylength**
  `bindInfoCount` **must** be greater than 0

### Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR`
VkBindBufferMemoryInfo contains members corresponding to the parameters of vkBindBufferMemory.

The VkBindBufferMemoryInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryInfo {
    VkStructureType sType;
    const void* pNext;
    VkBuffer buffer;
    VkDeviceMemory memory;
    VkDeviceSize memoryOffset;
} VkBindBufferMemoryInfo;
```

or the equivalent

```c
// Provided by VK_KHR_bind_memory2
typedef VkBindBufferMemoryInfo VkBindBufferMemoryInfoKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **buffer** is the buffer to be attached to memory.
- **memory** is a VkDeviceMemory object describing the device memory to attach.
- **memoryOffset** is the start offset of the region of memory which is to be bound to the buffer. The number of bytes returned in the VkMemoryRequirements::size member in memory, starting from memoryOffset bytes, will be bound to the specified buffer.

## Valid Usage

- VUID-VkBindBufferMemoryInfo-buffer-07459
  buffer must not have been bound to a memory object
- VUID-VkBindBufferMemoryInfo-buffer-01030
  buffer must not have been created with any sparse memory binding flags
- VUID-VkBindBufferMemoryInfo-memoryOffset-01031
  memoryOffset must be less than the size of memory
- VUID-VkBindBufferMemoryInfo-memory-01035
  memory must have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer
- VUID-VkBindBufferMemoryInfo-memoryOffset-01036
  memoryOffset must be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer
The size member of the VkMemoryRequirements structure returned from a call to vkGetBufferMemoryRequirements with buffer must be less than or equal to the size of memory minus memoryOffset.

If buffer requires a dedicated allocation (as reported by vkGetBufferMemoryRequirements2 in VkMemoryDedicatedRequirements::requiresDedicatedAllocation for buffer), memory must have been allocated with VkMemoryDedicatedAllocateInfo::buffer equal to buffer.

If the VkMemoryAllocateInfo provided when memory was allocated included a VkMemoryDedicatedAllocateInfo structure in its pNext chain, and VkMemoryDedicatedAllocateInfo::buffer was not VK_NULL_HANDLE, then buffer must equal VkMemoryDedicatedAllocateInfo::buffer, and memoryOffset must be zero.

If buffer was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit set, the buffer must be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT.

If buffer was created with the VK_BUFFER_CREATE_PROTECTED_BIT bit not set, the buffer must not be bound to a memory object allocated with a memory type that reports VK_MEMORY_PROPERTY_PROTECTED_BIT.

If buffer was created with VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation equal to VK_TRUE, memory must have been allocated with VkDedicatedAllocationMemoryAllocateInfoNV::buffer equal to a buffer handle created with identical creation parameters to buffer and memoryOffset must be zero.

If the VK_KHR_dedicated_allocation extension is not enabled, VkPhysicalDeviceProperties::apiVersion is less than Vulkan 1.1, and buffer was not created with VkDedicatedAllocationBufferCreateInfoNV::dedicatedAllocation equal to VK_TRUE, memory must not have been allocated dedicated for a specific buffer or image.

If the value of VkExportMemoryAllocateInfo::handleTypes used to allocate memory is not 0, it must include at least one of the handles set in VkExternalMemoryBufferCreateInfo::handleTypes when buffer was created.

If memory was allocated by a memory import operation, that is not VkImportAndroidHardwareBufferInfoANDROID with a non-NULL buffer value, the external handle type of the imported memory must also have been set in VkExternalMemoryBufferCreateInfo::handleTypes when buffer was created.

If memory was allocated with the VkImportAndroidHardwareBufferInfoANDROID memory import operation with a non-NULL buffer value,
must also have been set in VkExternalMemoryBufferCreateInfo::handleTypes when buffer was created

• VUID-VkBindBufferMemoryInfo-bufferDeviceAddress-03339
  If the VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddress feature is enabled and buffer was created with the VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT bit set, memory must have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set

• VUID-VkBindBufferMemoryInfo-bufferDeviceAddressCaptureReplay-09200
  If the VkPhysicalDeviceBufferDeviceAddressFeatures::bufferDeviceAddressCaptureReplay feature is enabled and buffer was created with the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set, memory must have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set

• VUID-VkBindBufferMemoryInfo-buffer-06408
  If buffer was created with VkBufferCollectionBufferCreateInfoFUCHSIA chained to VkBufferCreateInfo::pNext, memory must be allocated with a VkImportMemoryBufferCollectionFUCHSIA chained to VkMemoryAllocateInfo::pNext

• VUID-VkBindBufferMemoryInfo-descriptorBufferCaptureReplay-08112
  If the buffer was created with the VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT bit set, memory must have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT bit set

• VUID-VkBindBufferMemoryInfo-buffer-09201
  If the buffer was created with the VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT bit set, memory must have been allocated with the VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT bit set

• VUID-VkBindBufferMemoryInfo-pNext-01605
  If the pNext chain includes a VkBindBufferMemoryDeviceGroupInfo structure, all instances of memory specified by VkBindBufferMemoryDeviceGroupInfo::pDeviceIndices must have been allocated

Valid Usage (Implicit)

• VUID-VkBindBufferMemoryInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_INFO

• VUID-VkBindBufferMemoryInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkBindBufferMemoryDeviceGroupInfo or VkBindMemoryStatusKHR

• VUID-VkBindBufferMemoryInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique

• VUID-VkBindBufferMemoryInfo-buffer-parameter
  buffer must be a valid VkBuffer handle

• VUID-VkBindBufferMemoryInfo-memory-parameter
  memory must be a valid VkDeviceMemory handle
Both of buffer, and memory must have been created, allocated, or retrieved from the same VkDevice.

The VkBindBufferMemoryDeviceGroupInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkBindBufferMemoryDeviceGroupInfo {
    VkStructureType sType;
    const void* pNext;
    uint32_t deviceIndexCount;
    const uint32_t* pDeviceIndices;
} VkBindBufferMemoryDeviceGroupInfo;
```

or the equivalent

```c
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
typedef VkBindBufferMemoryDeviceGroupInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.

If the `pNext` chain of VkBindBufferMemoryInfo includes a VkBindBufferMemoryDeviceGroupInfo structure, then that structure determines how memory is bound to buffers across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index i the buffer is attached to the instance of memory on the physical device with device index `pDeviceIndices[i]`.

If `deviceIndexCount` is zero and memory comes from a memory heap with the VK_MEMORY_HEAP_MULTI_INSTANCE_BIT bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of memory.

If `deviceIndexCount` is zero and memory comes from a memory heap without the VK_MEMORY_HEAP_MULTI_INSTANCE_BIT bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

Valid Usage

• VUID-VkBindBufferMemoryDeviceGroupInfo-deviceIndexCount-01606
deviceIndexCount must either be zero or equal to the number of physical devices in the logical device
All elements of `pDeviceIndices` must be valid device indices.

**Valid Usage (Implicit)**

- VUID-VkBindBufferMemoryDeviceGroupInfo-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_DEVICE_GROUP_INFO`.

- VUID-VkBindBufferMemoryDeviceGroupInfo-pDeviceIndices-parameter
  
  If `deviceIndexCount` is not 0, `pDeviceIndices` must be a valid pointer to an array of `deviceIndexCount` `uint32_t` values.

The `VkBindMemoryStatusKHR` structure is defined as:

```c
// Provided by VK_KHR_maintenance6
typedef struct VkBindMemoryStatusKHR {
    VkStructureType sType;
    const void* pNext;
    VkResult* pResult;
} VkBindMemoryStatusKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pResult` is a pointer to a `VkResult` value.

If the `pNext` chain of `VkBindBufferMemoryInfo` or `VkBindImageMemoryInfo` includes a `VkBindMemoryStatusKHR` structure, then the `VkBindMemoryStatusKHR::pResult` will be populated with a value describing the result of the corresponding memory binding operation.

**Valid Usage (Implicit)**

- VUID-VkBindMemoryStatusKHR-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_BIND_MEMORY_STATUS_KHR`.

- VUID-VkBindMemoryStatusKHR-pResult-parameter
  
  `pResult` must be a valid pointer to a `VkResult` value.

To attach memory to a `VkImage` object created without the `VK_IMAGE_CREATE_DISJOINT_BIT` set, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkBindImageMemory(
    VkDevice device,
    VkImage image,
    VkDeviceMemory memory,
    VkDeviceSize memoryOffset);
```
• **device** is the logical device that owns the image and memory.

• **image** is the image.

• **memory** is the **VkDeviceMemory** object describing the device memory to attach.

• **memoryOffset** is the start offset of the region of **memory** which is to be bound to the image. The number of bytes returned in the **VkMemoryRequirements::size** member in **memory**, starting from **memoryOffset** bytes, will be bound to the specified image.

**vkBindImageMemory** is equivalent to passing the same parameters through **VkBindImageMemoryInfo** to **vkBindImageMemory2**.

### Valid Usage

- **VUID-vkBindImageMemory-image-07460**  
  **image** must not have been bound to a memory object

- **VUID-vkBindImageMemory-image-01045**  
  **image** must not have been created with any sparse memory binding flags

- **VUID-vkBindImageMemory-memoryOffset-01046**  
  **memoryOffset** must be less than the size of **memory**

- **VUID-vkBindImageMemory-image-01445**  
  If **image** requires a dedicated allocation (as reported by **vkGetImageMemoryRequirements2** in **VkMemoryDedicatedRequirements::requiresDedicatedAllocation** for **image**), **memory** must have been created with **VkMemoryDedicatedAllocateInfo::image** equal to **image**

- **VUID-vkBindImageMemory-memory-02628**  
  If the dedicatedAllocationImageAliasing feature is not enabled, and the **VkMemoryAllocateInfo** provided when **memory** was allocated included a **VkMemoryDedicatedAllocateInfo** structure in its **pNext** chain, and **VkMemoryDedicatedAllocateInfo::image** was not **VK_NULL_HANDLE**, then **image** must equal **VkMemoryDedicatedAllocateInfo::image** and **memoryOffset** must be zero

- **VUID-vkBindImageMemory-memory-02629**  
  If the dedicatedAllocationImageAliasing feature is enabled, and the **VkMemoryAllocateInfo** provided when **memory** was allocated included a **VkMemoryDedicatedAllocateInfo** structure in its **pNext** chain, and **VkMemoryDedicatedAllocateInfo::image** was not **VK_NULL_HANDLE**, then **memoryOffset** must be zero, and **image** must be either equal to **VkMemoryDedicatedAllocateInfo::image** or an image that was created using the same parameters in **VkImageCreateInfo**, with the exception that **extent** and **arrayLayers** may differ subject to the following restrictions: every dimension in the **extent** parameter of the image being bound must be equal to or smaller than the original image for which the allocation was created; and the **arrayLayers** parameter of the image being bound must be equal to or smaller than the original image for which the allocation was created

- **VUID-vkBindImageMemory-None-01901**  
  If **image** was created with the **VK_IMAGE_CREATE_PROTECTED_BIT** bit set, the image must be bound to a memory object allocated with a memory type that reports **VK_MEMORY_PROPERTY_PROTECTED_BIT**
If image was created with the `VK_IMAGE_CREATE_PROTECTED_BIT` bit not set, the image must not be bound to a memory object created with a memory type that reports `VK_MEMORY_PROPERTY_PROTECTED_BIT`.

If `image` was created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, memory must have been created with `VkDedicatedAllocationImageCreateInfoNV::image` equal to an image handle created with identical creation parameters to `image` and `memoryOffset` must be zero.

If the `VK_KHR_dedicated_allocation` extension is not enabled, `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, and `image` was not created with `VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation` equal to `VK_TRUE`, memory must not have been allocated dedicated for a specific buffer or image.

If the value of `VkExportMemoryAllocateInfo::handleTypes` used to allocate memory is not 0, it must include at least one of the handles set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created.

If memory was created by a memory import operation, that is not `VkImportAndroidHardwareBufferInfoANDROID` with a non-NULL buffer value, the external handle type of the imported memory must also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created.

If memory was created with the `VkImportAndroidHardwareBufferInfoANDROID` memory import operation with a non-NULL buffer value, `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BITANDROID` must also have been set in `VkExternalMemoryImageCreateInfo::handleTypes` when `image` was created.

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, memory must have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set.

If the `image` was created with the `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` bit set, memory must have been allocated with the `VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT` bit set.

Image must not have been created with the `VK_IMAGE_CREATE_DISJOINT_BIT` set.

Memory must have been allocated using one of the memory types allowed in the `memoryTypeBits` member of the `VkMemoryRequirements` structure returned from a call to `vkGetImageMemoryRequirements` with `image`.

MemoryOffset must be an integer multiple of the `alignment` member of the
The difference of the size of memory and memoryOffset must be greater than or equal to the size member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements with the same image.

If image was created with VkBufferCollectionImageCreateInfoFUCHSIA chained to VkImageCreateInfo::pNext, memory must be allocated with a VkImportMemoryBufferCollectionFUCHSIA chained to VkMemoryAllocateInfo::pNext.

Valid Usage (Implicit)

- VUID-vkBindImageMemory-device-parameter
device must be a valid VkDevice handle

- VUID-vkBindImageMemory-image-parameter
image must be a valid VkImage handle

- VUID-vkBindImageMemory-memory-parameter
memory must be a valid VkDeviceMemory handle

- VUID-vkBindImageMemory-image-parent
image must have been created, allocated, or retrieved from device

- VUID-vkBindImageMemory-memory-parent
memory must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to image must be externally synchronized

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

To attach memory to image objects for one or more images at a time, call:

```c
// Provided by VK_VERSION_1_1
VkResult vkbBindImageMemory2(
```
or the equivalent command

```c
// Provided by VK_KHR_bind_memory2
VkResult vkBindImageMemory2KHR(
  VkDevice device,
  uint32_t bindInfoCount,
  const VkBindImageMemoryInfo* pBindInfos);
```

- `device` is the logical device that owns the images and memory.
- `bindInfoCount` is the number of elements in `pBindInfos`.
- `pBindInfos` is a pointer to an array of `VkBindImageMemoryInfo` structures, describing images and memory to bind.

On some implementations, it may be more efficient to batch memory bindings into a single command.

If the `maintenance6` feature is enabled, this command must attempt to perform all of the memory binding operations described by `pBindInfos`, and must not early exit on the first failure.

If any of the memory binding operations described by `pBindInfos` fail, the `VkResult` returned by this command must be the return value of any one of the memory binding operations which did not return `VK_SUCCESS`.

**Note**

If the `vkBindImageMemory2` command failed, `VkBindMemoryStatusKHR` structures were not included in the `pNext` chains of each element of `pBindInfos`, and `bindInfoCount` was greater than one, then the images referenced by `pBindInfos` will be in an indeterminate state, and must not be used.

Applications should destroy these images.

**Valid Usage**

- **VUID-vkBindImageMemory2-pBindInfos-02858**
  If any `VkBindImageMemoryInfo::image` was created with `VK_IMAGE_CREATE_DISJOINT_BIT` then all planes of `VkBindImageMemoryInfo::image` must be bound individually in separate `pBindInfos`

- **VUID-vkBindImageMemory2-pBindInfos-04006**
  `pBindInfos` must not refer to the same image subresource more than once
### Valid Usage (Implicit)

- **VUID-vkBindImageMemory2-device-parameter**
  
  ```
  device must be a valid VkDevice handle
  ```

- **VUID-vkBindImageMemory2-pBindInfos-parameter**
  
  ```
  pBindInfos must be a valid pointer to an array of bindInfoCount valid VkBindImageMemoryInfo structures
  ```

- **VUID-vkBindImageMemory2-bindInfoCount-arraylength**
  
  ```
  bindInfoCount must be greater than 0
  ```

### Return Codes

**Success**

- VK_SUCCESS

**Failure**

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

VkBindImageMemoryInfo contains members corresponding to the parameters of `vkBindImageMemory`.

The `VkBindImageMemoryInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryInfo {
    VkStructureType sType;
    const void* pNext;
    VkImage image;
    VkDeviceMemory memory;
    VkDeviceSize memoryOffset;
} VkBindImageMemoryInfo;
```

or the equivalent

```c
// Provided by VK_KHR_bind_memory2
typedef VkBindImageMemoryInfo VkBindImageMemoryInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **image** is the image to be attached to memory.
- **memory** is a `VkDeviceMemory` object describing the device memory to attach.
• **memoryOffset** is the start offset of the region of **memory** which is to be bound to the image. The number of bytes returned in the **VkMemoryRequirements::size** member in **memory**, starting from **memoryOffset** bytes, will be bound to the specified image.

### Valid Usage

- VUID-VkBindImageMemoryInfo-image-07460  
  image **must** not have been bound to a memory object

- VUID-VkBindImageMemoryInfo-image-01045  
  image **must** not have been created with any sparse memory binding flags

- VUID-VkBindImageMemoryInfo-memoryOffset-01046  
  **memoryOffset** **must** be less than the size of **memory**

- VUID-VkBindImageMemoryInfo-image-01445  
  If **image** requires a dedicated allocation (as reported by **vkGetImageMemoryRequirements2** in **VkMemoryDedicatedRequirements::requiresDedicatedAllocation** for **image**), **memory** **must** have been created with **VkMemoryDedicatedAllocateInfo::image** equal to **image**

- VUID-VkBindImageMemoryInfo-memory-02628  
  If the **dedicatedAllocationImageAliasing** feature is not enabled, and the **VkMemoryAllocateInfo** provided when **memory** was allocated included a **VkMemoryDedicatedAllocateInfo** structure in its **pNext** chain, and **VkMemoryDedicatedAllocateInfo::image** was not **VK_NULL_HANDLE**, then **image** **must** equal **VkMemoryDedicatedAllocateInfo::image** and **memoryOffset** **must** be zero

- VUID-VkBindImageMemoryInfo-memory-02629  
  If the **dedicatedAllocationImageAliasing** feature is enabled, and the **VkMemoryAllocateInfo** provided when **memory** was allocated included a **VkMemoryDedicatedAllocateInfo** structure in its **pNext** chain, and **VkMemoryDedicatedAllocateInfo::image** was not **VK_NULL_HANDLE**, then **memoryOffset** **must** be zero, and **image** **must** be either equal to **VkMemoryDedicatedAllocateInfo::image** or an image that was created using the same parameters in **VkImageCreateInfo**, with the exception that **extent** and **arrayLayers** **may** differ subject to the following restrictions: every dimension in the **extent** parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created; and the **arrayLayers** parameter of the image being bound **must** be equal to or smaller than the original image for which the allocation was created

- VUID-VkBindImageMemoryInfo-None-01901  
  If **image** was created with the **VK_IMAGE_CREATE_PROTECTED_BIT** bit set, the image **must** be bound to a memory object allocated with a memory type that reports **VK_MEMORY_PROPERTY_PROTECTED_BIT**

- VUID-VkBindImageMemoryInfo-None-01902  
  If **image** was created with the **VK_IMAGE_CREATE_PROTECTED_BIT** bit not set, the image **must** not be bound to a memory object created with a memory type that reports **VK_MEMORY_PROPERTY_PROTECTED_BIT**

- VUID-VkBindImageMemoryInfo-image-01050  
  If **image** was created with **VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation**
equal to \texttt{VK_TRUE}, memory must have been created with  
\texttt{VkDedicatedAllocationMemoryAllocateInfoNV::image} equal to an image handle created with identical creation parameters to \texttt{image} and memory\texttt{offset} must be zero.

- **VUID-VkBindImageMemoryInfo-apiVersion-07921**
  If the \texttt{VK_KHR_dedicated_allocation} extension is not enabled, \texttt{VkPhysicalDeviceProperties::apiVersion} is less than Vulkan 1.1, and \texttt{image} was not created with \texttt{VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation} equal to \texttt{VK_TRUE}, memory must not have been allocated dedicated for a specific buffer or image.

- **VUID-VkBindImageMemoryInfo-memory-02728**
  If the value of \texttt{VkExportMemoryAllocateInfo::handleTypes} used to allocate memory is not 0, it must include at least one of the handles set in \texttt{VkExternalMemoryImageCreateInfo::handleTypes} when \texttt{image} was created.

- **VUID-VkBindImageMemoryInfo-memory-02989**
  If memory was created by a memory import operation, that is not \texttt{VkImportAndroidHardwareBufferInfoANDROID} with a non-\texttt{NULL} buffer value, the external handle type of the imported memory must also have been set in \texttt{VkExternalMemoryImageCreateInfo::handleTypes} when \texttt{image} was created.

- **VUID-VkBindImageMemoryInfo-memory-02990**
  If memory was created with the \texttt{VkImportAndroidHardwareBufferInfoANDROID} memory import operation with a non-\texttt{NULL} buffer value, \texttt{VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID} must also have been set in \texttt{VkExternalMemoryImageCreateInfo::handleTypes} when \texttt{image} was created.

- **VUID-VkBindImageMemoryInfo-descriptorBufferCaptureReplay-08113**
  If the \texttt{image} was created with the \texttt{VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT} bit set, memory must have been allocated with the \texttt{VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_BIT} bit set.

- **VUID-VkBindImageMemoryInfo-image-09202**
  If the \texttt{image} was created with the \texttt{VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT} bit set, memory must have been allocated with the \texttt{VK_MEMORY_ALLOCATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT} bit set.

- **VUID-VkBindImageMemoryInfo-pNext-01615**
  If the \texttt{pNext} chain does not include a \texttt{VkBindImagePlaneMemoryInfo} structure, memory must have been allocated using one of the memory types allowed in the \texttt{memoryTypeBits} member of the \texttt{VkMemoryRequirements} structure returned from a call to \texttt{vkGetImageMemoryRequirements2} with \texttt{image}.

- **VUID-VkBindImageMemoryInfo-pNext-01616**
  If the \texttt{pNext} chain does not include a \texttt{VkBindImagePlaneMemoryInfo} structure, memory\texttt{offset} must be an integer multiple of the \texttt{alignment} member of the \texttt{VkMemoryRequirements} structure returned from a call to \texttt{vkGetImageMemoryRequirements2} with \texttt{image}.

- **VUID-VkBindImageMemoryInfo-pNext-01617**
  If the \texttt{pNext} chain does not include a \texttt{VkBindImagePlaneMemoryInfo} structure, the difference of the size of memory and memory\texttt{offset} must be greater than or equal to the \texttt{size} member of the \texttt{VkMemoryRequirements} structure returned from a call to \texttt{vkGetImageMemoryRequirements2} with \texttt{image}.
vkGetImageMemoryRequirements2 with the same image

- VUID-VkBindImageMemoryInfo-pNext-01618
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, image must have been created with the VK_IMAGE_CREATE_DISJOINT_BIT bit set

- VUID-VkBindImageMemoryInfo-image-07736
  If image was created with the VK_IMAGE_CREATE_DISJOINT_BIT bit set, then the pNext chain must include a VkBindImagePlaneMemoryInfo structure

- VUID-VkBindImageMemoryInfo-pNext-01619
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, memory must have been allocated using one of the memory types allowed in the memoryTypeBits member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with image and whereVkBindImagePlaneMemoryInfo::planeAspect corresponds to the VkImagePlaneMemoryRequirementsInfo::planeAspect in the VkImageMemoryRequirementsInfo2 structure's pNext chain

- VUID-VkBindImageMemoryInfo-pNext-01620
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, memoryOffset must be an integer multiple of the alignment member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with image and whereVkBindImagePlaneMemoryInfo::planeAspect corresponds to the VkImagePlaneMemoryRequirementsInfo::planeAspect in the VkImageMemoryRequirementsInfo2 structure's pNext chain

- VUID-VkBindImageMemoryInfo-pNext-01621
  If the pNext chain includes a VkBindImagePlaneMemoryInfo structure, the difference of the size of memory and memoryOffset must be greater than or equal to the size member of the VkMemoryRequirements structure returned from a call to vkGetImageMemoryRequirements2 with the same image and whereVkBindImagePlaneMemoryInfo::planeAspect corresponds to the VkImagePlaneMemoryRequirementsInfo::planeAspect in the VkImageMemoryRequirementsInfo2 structure's pNext chain

- VUID-VkBindImageMemoryInfo-pNext-01626
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, all instances of memory specified by VkBindImageMemoryDeviceGroupInfo::pDeviceIndices must have been allocated

- VUID-VkBindImageMemoryInfo-pNext-01627
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, and VkBindImageMemoryDeviceGroupInfo::splitInstanceBindRegionCount is not zero, then image must have been created with the VK_IMAGE_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT bit set

- VUID-VkBindImageMemoryInfo-pNext-01628
  If the pNext chain includes a VkBindImageMemoryDeviceGroupInfo structure, all elements of VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions must be valid rectangles contained within the dimensions of image

- VUID-VkBindImageMemoryInfo-pNext-01629
If the `pNext` chain includes a `VkBindImageMemoryDeviceGroupInfo` structure, the union of the areas of all elements of `VkBindImageMemoryDeviceGroupInfo::pSplitInstanceBindRegions` that correspond to the same instance of `image` must cover the entire image.

- VUID-VkBindImageMemoryInfo-image-01630
  If `image` was created with a valid swapchain handle in `VkImageSwapchainCreateInfoKHR::swapchain`, then the `pNext` chain must include a `VkBindImageMemorySwapchainInfoKHR` structure containing the same swapchain handle.

- VUID-VkBindImageMemoryInfo-pNext-01631
  If the `pNext` chain includes a `VkBindImageMemorySwapchainInfoKHR` structure, `memory` must be `VK_NULL_HANDLE`.

- VUID-VkBindImageMemoryInfo-pNext-01632
  If the `pNext` chain does not include a `VkBindImageMemorySwapchainInfoKHR` structure, `memory` must be a valid `VkDeviceMemory` handle.

### Valid Usage (Implicit)

- VUID-VkBindImageMemoryInfo-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_INFO`.

- VUID-VkBindImageMemoryInfo-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkBindImageMemoryDeviceGroupInfo`, `VkBindImageMemorySwapchainInfoKHR`, `VkBindImagePlaneMemoryInfo`, or `VkBindMemoryStatusKHR`.

- VUID-VkBindImageMemoryInfo-sType-unique
  The `sType` value of each struct in the `pNext` chain must be unique.

- VUID-VkBindImageMemoryInfo-image-parameter
  `image` must be a valid `VkImage` handle.

- VUID-VkBindImageMemoryInfo-commonparent
  Both of `image`, and `memory` that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same `VkDevice`.

The `VkBindImageMemoryDeviceGroupInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkBindImageMemoryDeviceGroupInfo {
    VkStructureType sType;
    const void* pNext;
    uint32_t deviceIndexCount;
    const uint32_t* pDeviceIndices;
    uint32_t splitInstanceBindRegionCount;
    const VkRect2D* pSplitInstanceBindRegions;
} VkBindImageMemoryDeviceGroupInfo;
```
or the equivalent

```c
// Provided by VK_KHR_bind_memory2 with VK_KHR_device_group
typedef VkBindImageMemoryDeviceGroupInfo VkBindImageMemoryDeviceGroupInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceIndexCount` is the number of elements in `pDeviceIndices`.
- `pDeviceIndices` is a pointer to an array of device indices.
- `splitInstanceBindRegionCount` is the number of elements in `pSplitInstanceBindRegions`.
- `pSplitInstanceBindRegions` is a pointer to an array of `VkRect2D` structures describing which regions of the image are attached to each instance of memory.

If the `pNext` chain of `VkBindImageMemoryInfo` includes a `VkBindImageMemoryDeviceGroupInfo` structure, then that structure determines how memory is bound to images across multiple devices in a device group.

If `deviceIndexCount` is greater than zero, then on device index `i` image is attached to the instance of the memory on the physical device with device index `pDeviceIndices[i]`.

Let `N` be the number of physical devices in the logical device. If `splitInstanceBindRegionCount` is greater than zero, then `pSplitInstanceBindRegions` is a pointer to an array of `N^2` rectangles, where the image region specified by the rectangle at element `i*N+j` in resource instance `i` is bound to the memory instance `j`. The blocks of the memory that are bound to each sparse image block region use an offset in memory, relative to `memoryOffset`, computed as if the whole image was being bound to a contiguous range of memory. In other words, horizontally adjacent image blocks use consecutive blocks of memory, vertically adjacent image blocks are separated by the number of bytes per block multiplied by the width in blocks of `image`, and the block at `(0,0)` corresponds to memory starting at `memoryOffset`.

If `splitInstanceBindRegionCount` and `deviceIndexCount` are zero and the memory comes from a memory heap with the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains consecutive indices from zero to the number of physical devices in the logical device, minus one. In other words, by default each physical device attaches to its own instance of the memory.

If `splitInstanceBindRegionCount` and `deviceIndexCount` are zero and the memory comes from a memory heap without the `VK_MEMORY_HEAP_MULTI_INSTANCE_BIT` bit set, then it is as if `pDeviceIndices` contains an array of zeros. In other words, by default each physical device attaches to instance zero.

**Valid Usage**

- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01633
At least one of `deviceIndexCount` and `splitInstanceBindRegionCount` must be zero

- VUID-VkBindImageMemoryDeviceGroupInfo-deviceIndexCount-01634
  `deviceIndexCount` must either be zero or equal to the number of physical devices in the logical device

- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-01635
  All elements of `pDeviceIndices` must be valid device indices

- VUID-VkBindImageMemoryDeviceGroupInfo-splitInstanceBindRegionCount-01636
  `splitInstanceBindRegionCount` must either be zero or equal to the number of physical devices in the logical device squared

- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-01637
  Elements of `pSplitInstanceBindRegions` that correspond to the same instance of an image must not overlap

- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01638
  The `offset.x` member of any element of `pSplitInstanceBindRegions` must be a multiple of the sparse image block width (`VkSparseImageFormatProperties::imageGranularity.width`) of all non-metadata aspects of the image

- VUID-VkBindImageMemoryDeviceGroupInfo-offset-01639
  The `offset.y` member of any element of `pSplitInstanceBindRegions` must be a multiple of the sparse image block height (`VkSparseImageFormatProperties::imageGranularity.height`) of all non-metadata aspects of the image

- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01640
  The `extent.width` member of any element of `pSplitInstanceBindRegions` must either be a multiple of the sparse image block width of all non-metadata aspects of the image, or else `extent.width + offset.x` must equal the width of the image subresource

- VUID-VkBindImageMemoryDeviceGroupInfo-extent-01641
  The `extent.height` member of any element of `pSplitInstanceBindRegions` must either be a multiple of the sparse image block height of all non-metadata aspects of the image, or else `extent.height + offset.y` must equal the height of the image subresource

Valid Usage (Implicit)

- VUID-VkBindImageMemoryDeviceGroupInfo-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_DEVICE_GROUP_INFO`

- VUID-VkBindImageMemoryDeviceGroupInfo-pDeviceIndices-parameter
  If `deviceIndexCount` is not 0, `pDeviceIndices` must be a valid pointer to an array of `deviceIndexCount uint32_t` values

- VUID-VkBindImageMemoryDeviceGroupInfo-pSplitInstanceBindRegions-parameter
  If `splitInstanceBindRegionCount` is not 0, `pSplitInstanceBindRegions` must be a valid pointer to an array of `splitInstanceBindRegionCount VkRect2D` structures

If the `pNext` chain of `VkBindImageMemoryInfo` includes a `VkBindImageMemorySwapchainInfoKHR` structure, then that structure includes a swapchain handle and image index indicating that the
image will be bound to memory from that swapchain.

The VkBindImageMemorySwapchainInfoKHR structure is defined as:

```c
// Provided by VK_VERSION_1_1 with VK_KHR_swapchain, VK_KHR_device_group with VK_KHR_swapchain
typedef struct VkBindImageMemorySwapchainInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkSwapchainKHR swapchain;
    uint32_t imageIndex;
} VkBindImageMemorySwapchainInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `swapchain` is `VK_NULL_HANDLE` or a swapchain handle.
- `imageIndex` is an image index within `swapchain`.

If `swapchain` is not `NULL`, the `swapchain` and `imageIndex` are used to determine the memory that the image is bound to, instead of `memory` and `memoryOffset`.

Memory can be bound to a swapchain and use the `pDeviceIndices` or `pSplitInstanceBindRegions` members of `VkBindImageMemoryDeviceGroupInfo`.

### Valid Usage

- VUID-VkBindImageMemorySwapchainInfoKHR-imageIndex-01644
  imageIndex must be less than the number of images in swapchain

- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-07756
  If the swapchain has been created with `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT`, imageIndex must be one that has previously been returned by `vkAcquireNextImageKHR` or `vkAcquireNextImage2KHR`

### Valid Usage (Implicit)

- VUID-VkBindImageMemorySwapchainInfoKHR-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR`

- VUID-VkBindImageMemorySwapchainInfoKHR-swapchain-parameter
  `swapchain` must be a valid `VkSwapchainKHR` handle

### Host Synchronization

- Host access to `swapchain` must be externally synchronized
In order to bind *planes* of a *disjoint image*, add a `VkBindImagePlaneMemoryInfo` structure to the `pNext` chain of `VkBindImageMemoryInfo`.

The `VkBindImagePlaneMemoryInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkBindImagePlaneMemoryInfo {
    VkStructureType sType;
    const void* pNext;
    VkImageAspectFlagBits planeAspect;
} VkBindImagePlaneMemoryInfo;
```

or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkBindImagePlaneMemoryInfo VkBindImagePlaneMemoryInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `planeAspect` is a `VkImageAspectFlagBits` value specifying the aspect of the disjoint image plane to bind.

**Valid Usage**

- **VUID-VkBindImagePlaneMemoryInfo-planeAspect-02283**
  If the image’s tiling is `VK_IMAGE_TILING_LINEAR` or `VK_IMAGE_TILING_OPTIMAL`, then `planeAspect` must be a single valid multi-planar aspect mask bit.

- **VUID-VkBindImagePlaneMemoryInfo-planeAspect-02284**
  If the image’s tiling is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `planeAspect` must be a single valid memory plane for the image (that is, `aspectMask` must specify a plane index that is less than the `VkDrmFormatModifierPropertiesEXT::drmFormatModifierPlaneCount` associated with the image’s format and `VkImageDrmFormatModifierPropertiesEXT::drmFormatModifier`).

**Valid Usage (Implicit)**

- **VUID-VkBindImagePlaneMemoryInfo-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_BIND_IMAGE_PLANE_MEMORY_INFO`

- **VUID-VkBindImagePlaneMemoryInfo-planeAspect-parameter**
  `planeAspect` must be a valid `VkImageAspectFlagBits` value

**Buffer-Image Granularity**

The implementation-dependent limit `bufferImageGranularity` specifies a page-like granularity at
which linear and non-linear resources must be placed in adjacent memory locations to avoid aliasing. Two resources which do not satisfy this granularity requirement are said to alias._bufferImageGranularity is specified in bytes, and must be a power of two. Implementations which do not impose a granularity restriction may report a bufferImageGranularity value of one.

Note
Despite its name, bufferImageGranularity is really a granularity between “linear” and “non-linear” resources.

Given resourceA at the lower memory offset and resourceB at the higher memory offset in the same VkDeviceMemory object, where one resource is linear and the other is non-linear (as defined in the Glossary), and the following:

\[
\begin{align*}
\text{resourceA.end} &= \text{resourceA.memoryOffset} + \text{resourceA.size} - 1 \\
\text{resourceA.endPage} &= \text{resourceA.end} \& \sim (\text{bufferImageGranularity} - 1) \\
\text{resourceB.start} &= \text{resourceB.memoryOffset} \\
\text{resourceB.startPage} &= \text{resourceB.start} \& \sim (\text{bufferImageGranularity} - 1)
\end{align*}
\]

The following property must hold:

\[
\text{resourceA.endPage} < \text{resourceB.startPage}
\]

That is, the end of the first resource (A) and the beginning of the second resource (B) must be on separate “pages” of size bufferImageGranularity. bufferImageGranularity may be different than the physical page size of the memory heap. This restriction is only needed when a linear resource and a non-linear resource are adjacent in memory and will be used simultaneously. The memory ranges of adjacent resources can be closer than bufferImageGranularity, provided they meet the alignment requirement for the objects in question.

Sparse block size in bytes and sparse image and buffer memory alignments must all be multiples of the bufferImageGranularity. Therefore, memory bound to sparse resources naturally satisfies the bufferImageGranularity.

12.9. Resource Sharing Mode

Buffer and image objects are created with a sharing mode controlling how they can be accessed from queues. The supported sharing modes are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkSharingMode {
    VK_SHARING_MODE_EXCLUSIVE = 0,
    VK_SHARING_MODE_CONCURRENT = 1,
} VkSharingMode;
```

- **VK_SHARING_MODE_EXCLUSIVE** specifies that access to any range or image subresource of the object
will be exclusive to a single queue family at a time.

- **VK_SHARING_MODE_CONCURRENT** specifies that concurrent access to any range or image subresource of the object from multiple queue families is supported.

  **Note**
  
  **VK_SHARING_MODE_CONCURRENT** may result in lower performance access to the buffer or image than **VK_SHARING_MODE_EXCLUSIVE**.

Ranges of buffers and image subresources of image objects created using **VK_SHARING_MODE_EXCLUSIVE** must only be accessed by queues in the queue family that has ownership of the resource. Upon creation, such resources are not owned by any queue family; ownership is implicitly acquired upon first use within a queue. Once a resource using **VK_SHARING_MODE_EXCLUSIVE** is owned by some queue family, the application must perform a queue family ownership transfer to make the memory contents of a range or image subresource accessible to a different queue family.

  **Note**
  
  Images still require a layout transition from **VK_IMAGE_LAYOUT_UNDEFINED** or **VK_IMAGE_LAYOUT_PREINITIALIZED** before being used on the first queue.

A queue family can take ownership of an image subresource or buffer range of a resource created with **VK_SHARING_MODE_EXCLUSIVE**, without an ownership transfer, in the same way as for a resource that was just created; however, taking ownership in this way has the effect that the contents of the image subresource or buffer range are undefined.

Ranges of buffers and image subresources of image objects created using **VK_SHARING_MODE_CONCURRENT** must only be accessed by queues from the queue families specified through the `queueFamilyIndexCount` and `pQueueFamilyIndices` members of the corresponding create info structures.

### 12.9.1. External Resource Sharing

Resources should only be accessed in the Vulkan instance that has exclusive ownership of their underlying memory. Only one Vulkan instance has exclusive ownership of a resource's underlying memory at a given time, regardless of whether the resource was created using **VK_SHARING_MODE_EXCLUSIVE** or **VK_SHARING_MODE_CONCURRENT**. Applications can transfer ownership of a resource's underlying memory only if the memory has been imported from or exported to another instance or external API using external memory handles. The semantics for transferring ownership outside of the instance are similar to those used for transferring ownership of **VK_SHARING_MODE_EXCLUSIVE** resources between queues, and is also accomplished using `VkBufferMemoryBarrier` or `VkImageMemoryBarrier` operations. To make the contents of the underlying memory accessible in the destination instance or API, applications must

1. Release exclusive ownership from the source instance or API.
2. Ensure the release operation has completed using semaphores or fences.
3. Acquire exclusive ownership in the destination instance or API

Unlike queue ownership transfers, the destination instance or API is not specified explicitly when
releasing ownership, nor is the source instance or API specified when acquiring ownership. Instead, the image or memory barrier's dstQueueFamilyIndex or srcQueueFamilyIndex parameters are set to the reserved queue family index VK_QUEUE_FAMILY_EXTERNAL or VK_QUEUE_FAMILY_FOREIGN_EXT to represent the external destination or source respectively.

Binding a resource to a memory object shared between multiple Vulkan instances or other APIs does not change the ownership of the underlying memory. The first entity to access the resource implicitly acquires ownership. An entity can also implicitly take ownership from another entity in the same way without an explicit ownership transfer. However, taking ownership in this way has the effect that the contents of the underlying memory are undefined.

Accessing a resource backed by memory that is owned by a particular instance or API has the same semantics as accessing a VK_SHARING_MODE_EXCLUSIVE resource, with one exception: Implementations must ensure layout transitions performed on one member of a set of identical subresources of identical images that alias the same range of an underlying memory object affect the layout of all the subresources in the set.

As a corollary, writes to any image subresources in such a set must not make the contents of memory used by other subresources in the set undefined. An application can define the content of a subresource of one image by performing device writes to an identical subresource of another image provided both images are bound to the same region of external memory. Applications may also add resources to such a set after the content of the existing set members has been defined without making the content undefined by creating a new image with the initial layout VK_IMAGE_LAYOUT_UNDEFINED and binding it to the same region of external memory as the existing images.

Note
Because layout transitions apply to all identical images aliasing the same region of external memory, the actual layout of the memory backing a new image as well as an existing image with defined content will not be undefined. Such an image is not usable until it acquires ownership of its memory from the existing owner. Therefore, the layout specified as part of this transition will be the true initial layout of the image. The undefined layout specified when creating it is a placeholder to simplify valid usage requirements.

12.10. Memory Aliasing

A range of a VkDeviceMemory allocation is aliased if it is bound to multiple resources simultaneously, as described below, via vkBindImageMemory, vkBindBufferMemory, vkBindAccelerationStructureMemoryNV, via sparse memory bindings, or by binding the memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms.

Consider two resources, resourceA and resourceB, bound respectively to memory rangeA and rangeB. Let paddedRangeA and paddedRangeB be, respectively, rangeA and rangeB aligned to bufferImageGranularity. If the resources are both linear or both non-linear (as defined in the Glossary), then the resources alias the memory in the intersection of rangeA and rangeB. If one resource is linear and the other is non-linear, then the resources alias the memory in the
intersection of paddedRange\(_A\) and paddedRange\(_B\).

Applications can alias memory, but use of multiple aliases is subject to several constraints.

**Note**

Memory aliasing can be useful to reduce the total device memory footprint of an application, if some large resources are used for disjoint periods of time.

When a non-linear, non-\(\text{VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT}\) image is bound to an aliased range, all image subresources of the image overlap the range. When a linear image is bound to an aliased range, the image subresources that (according to the image's advertised layout) include bytes from the aliased range overlap the range. When a \(\text{VK\_IMAGE\_CREATE\_SPARSE\_RESIDENCY\_BIT}\) image has sparse image blocks bound to an aliased range, only image subresources including those sparse image blocks overlap the range, and when the memory bound to the image's mip tail overlaps an aliased range all image subresources in the mip tail overlap the range.

Buffers, and linear image subresources in either the \(\text{VK\_IMAGE\_LAYOUT\_PREINITIALIZED}\) or \(\text{VK\_IMAGE\_LAYOUT\_GENERAL}\) layouts, are host-accessible subresources. That is, the host has a well-defined addressing scheme to interpret the contents, and thus the layout of the data in memory can be consistently interpreted across aliases if each of those aliases is a host-accessible subresource. Non-linear images, and linear image subresources in other layouts, are not host-accessible.

If two aliases are both host-accessible, then they interpret the contents of the memory in consistent ways, and data written to one alias can be read by the other alias.

If two aliases are both images that were created with identical creation parameters, both were created with the \(\text{VK\_IMAGE\_CREATE\_ALIAS\_BIT}\) flag set, and both are bound identically to memory except for \(\text{VkBindImageMemoryDeviceGroupInfo}\::\text{pDeviceIndices}\) and \(\text{VkBindImageMemoryDeviceGroupInfo}\::\text{pSplitInstanceBindRegions}\), then they interpret the contents of the memory in consistent ways, and data written to one alias can be read by the other alias.

Additionally, if an individual plane of a multi-planar image and a single-plane image alias the same memory, then they also interpret the contents of the memory in consistent ways under the same conditions, but with the following modifications:

- Both must have been created with the \(\text{VK\_IMAGE\_CREATE\_DISJOINT\_BIT}\) flag.
- The single-plane image must have a \text{VkFormat} that is equivalent to that of the multi-planar image's individual plane.
- The single-plane image and the individual plane of the multi-planar image must be bound identically to memory except for \(\text{VkBindImageMemoryDeviceGroupInfo}\::\text{pDeviceIndices}\) and \(\text{VkBindImageMemoryDeviceGroupInfo}\::\text{pSplitInstanceBindRegions}\).
- The width and height of the single-plane image are derived from the multi-planar image's dimensions in the manner listed for plane compatibility for the aliased plane.
- If either image's tiling is \(\text{VK\_IMAGE\_TILING\_DRM\_FORMAT\_MODIFIER\_EXT}\), then both images must be linear.
- All other creation parameters must be identical.
Aliases created by binding the same memory to resources in multiple Vulkan instances or external APIs using external memory handle export and import mechanisms interpret the contents of the memory in consistent ways, and data written to one alias can be read by the other alias.

Otherwise, the aliases interpret the contents of the memory differently, and writes via one alias make the contents of memory partially or completely undefined to the other alias. If the first alias is a host-accessible subresource, then the bytes affected are those written by the memory operations according to its addressing scheme. If the first alias is not host-accessible, then the bytes affected are those overlapped by the image subresources that were written. If the second alias is a host-accessible subresource, the affected bytes become undefined. If the second alias is not host-accessible, all sparse image blocks (for sparse partially-resident images) or all image subresources (for non-sparse image and fully resident sparse images) that overlap the affected bytes become undefined.

If any image subresources are made undefined due to writes to an alias, then each of those image subresources must have its layout transitioned from VK_IMAGE_LAYOUT_UNDEFINED to a valid layout before it is used, or from VK_IMAGE_LAYOUT_PREINITIALIZED if the memory has been written by the host. If any sparse blocks of a sparse image have been made undefined, then only the image subresources containing them must be transitioned.

Use of an overlapping range by two aliases must be separated by a memory dependency using the appropriate access types if at least one of those uses performs writes, whether the aliases interpret memory consistently or not. If buffer or image memory barriers are used, the scope of the barrier must contain the entire range and/or set of image subresources that overlap.

If two aliasing image views are used in the same framebuffer, then the render pass must declare the attachments using the VK_ATTACHMENT_DESCRIPTION_MAY_ALIAS_BIT, and follow the other rules listed in that section.

Note
Memory recycled via an application suballocator (i.e. without freeing and reallocating the memory objects) is not substantially different from memory aliasing. However, a suballocator usually waits on a fence before recycling a region of memory, and signaling a fence involves sufficient implicit dependencies to satisfy all the above requirements.

12.10.1. Resource Memory Overlap

Applications can safely access a resource concurrently as long as the memory locations do not overlap as defined in Memory Location. This includes aliased resources if such aliasing is well-defined. It also includes access from different queues and/or queue families if such concurrent access is supported by the resource. Transfer commands only access memory locations specified by the range of the transfer command.

Note
The intent is that buffers (or linear images) can be accessed concurrently, even when they share cache lines, but otherwise do not access the same memory range. The concept of a device cache line size is not exposed in the memory model.
12.11. Buffer Collections

Fuchsia's FIDL-based Sysmem service interoperates with Vulkan via the VK_FUCHSIA_buffer_collection extension.

A buffer collection is a set of one or more buffers which were allocated together as a group and which all have the same properties. These properties describe the buffers' internal representation, such as its dimensions and memory layout. This ensures that all of the buffers can be used interchangeably by tasks that require swapping among multiple buffers, such as double-buffered graphics rendering.

On Fuchsia, the Sysmem service uses buffer collections as a core construct in its design.

Buffer collections are represented by VkBufferCollectionFUCHSIA handles:

```c
// Provided by VK_FUCHSIA_buffer_collection
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkBufferCollectionFUCHSIA)
```

12.11.1. Definitions

- FIDL - Fuchsia Interface Definition Language. The declarative language used to define FIDL interprocess communication interfaces on Fuchsia. FIDL files use the fidl extension. FIDL is also used to refer to the services defined by interfaces declared in the FIDL language
- Sysmem - The FIDL service that facilitates optimal buffer sharing and reuse on Fuchsia
- client - Any participant of the buffer collection e.g. the Vulkan application
- token - A zx_handle_t Zircon channel object that allows participation in the buffer collection

12.11.2. Platform Initialization for Buffer Collections

To initialize a buffer collection on Fuchsia:

- Connect to the Sysmem service to initialize a Sysmem allocator
- Create an initial buffer collection token using the Sysmem allocator
- Duplicate the token for each participant beyond the initiator
- See the Sysmem Overview and fuchsia.sysmem FIDL documentation on fuchsia.dev for more detailed information

12.11.3. Create the Buffer Collection

To create an VkBufferCollectionFUCHSIA for Vulkan to participate in the buffer collection:

```c
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkCreateBufferCollectionFUCHSIA(
    VkDevice device,
    const VkBufferCollectionCreateInfoFUCHSIA* pCreateInfo,
```
const VkAllocationCallbacks* pAllocator,
VkBufferCollectionFUCHSIA* pCollection);

• device is the logical device that creates the VkBufferCollectionFUCHSIA
• pCreateInfo is a pointer to a VkBufferCollectionCreateInfoFUCHSIA structure containing parameters affecting creation of the buffer collection
• pAllocator is a pointer to a VkAllocationCallbacks structure controlling host memory allocation as described in the Memory Allocation chapter
• pBufferCollection is a pointer to a VkBufferCollectionFUCHSIA handle in which the resulting buffer collection object is returned

Valid Usage (Implicit)

• VUID-vkCreateBufferCollectionFUCHSIA-device-parameter
device must be a valid VkDevice handle
• VUID-vkCreateBufferCollectionFUCHSIA-pCreateInfo-parameter
pCreateInfo must be a valid pointer to a valid VkBufferCollectionCreateInfoFUCHSIA structure
• VUID-vkCreateBufferCollectionFUCHSIA-pAllocator-parameter
If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure
• VUID-vkCreateBufferCollectionFUCHSIA-pCollection-parameter
pCollection must be a valid pointer to a VkBufferCollectionFUCHSIA handle

Return Codes

Success
• VK_SUCCESS

Failure
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_INVALID_EXTERNAL_HANDLE
• VK_ERROR_INITIALIZATION_FAILED

Host Access

All functions referencing a VkBufferCollectionFUCHSIA must be externally synchronized with the exception of vkCreateBufferCollectionFUCHSIA.

The VkBufferCollectionCreateInfoFUCHSIA structure is defined as:
typedef struct VkBufferCollectionCreateInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    zx_handle_t collectionToken;
} VkBufferCollectionCreateInfoFUCHSIA;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `collectionToken` is a `zx_handle_t` containing the Sysmem client’s buffer collection token.

## Valid Usage

- VUID-VkBufferCollectionCreateInfoFUCHSIA-collectionToken-06393
  
  `collectionToken` must be a valid `zx_handle_t` to a Zircon channel allocated from Sysmem (`fuchsia.sysmem.Allocator/AllocateSharedCollection`) with `ZX_DEFAULT_CHANNEL_RIGHTS` rights.

## Valid Usage (Implicit)

- VUID-VkBufferCollectionCreateInfoFUCHSIA-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CREATE_INFO_FUCHSIA`.

- VUID-VkBufferCollectionCreateInfoFUCHSIA-pNext-pNext
  
  `pNext` must be `NULL`.

### 12.11.4. Set the Constraints

Buffer collections can be established for `VkImage` allocations or `VkBuffer` allocations.

#### Set Image-based Buffer Collection Constraints

Setting the constraints on the buffer collection initiates the format negotiation and allocation of the buffer collection. To set the constraints on a `VkImage` buffer collection, call:

```c
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkSetBufferCollectionImageConstraintsFUCHSIA(
    VkDevice device,    
    VkBufferCollectionFUCHSIA collection,  
    const VkImageConstraintsInfoFUCHSIA* pImageConstraintsInfo);
```

- `device` is the logical device.
- `collection` is the `VkBufferCollectionFUCHSIA` handle.
- `pImageConstraintsInfo` is a pointer to a `VkImageConstraintsInfoFUCHSIA` structure.
vkSetBufferCollectionImageConstraintsFUCHSIA may fail if the implementation does not support any of the formats described by the pImageConstraintsInfo structure. If that occurs, vkSetBufferCollectionImageConstraintsFUCHSIA will return VK_ERROR_FORMAT_NOT_SUPPORTED.

Valid Usage

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-06394
  vkSetBufferCollectionImageConstraintsFUCHSIA or
  vkSetBufferCollectionBufferConstraintsFUCHSIA must not have already been called on
  collection

Valid Usage (Implicit)

- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-device-parameter
device must be a valid VkDevice handle
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-parameter
collection must be a valid VkBufferCollectionFUCHSIA handle
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-pImageConstraintsInfo-parameter
  pImageConstraintsInfo must be a valid pointer to a valid VkImageConstraintsInfoFUCHSIA structure
- VUID-vkSetBufferCollectionImageConstraintsFUCHSIA-collection-parent
collection must have been created, allocated, or retrieved from device

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_FORMAT_NOT_SUPPORTED

The VkImageConstraintsInfoFUCHSIA structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImageConstraintsInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
} VkImageConstraintsInfoFUCHSIA;
```
```c
uint32_t formatConstraintsCount;
const VkImageFormatConstraintsInfoFUCHSIA* pFormatConstraints;
VkBufferCollectionConstraintsInfoFUCHSIA bufferCollectionConstraints;
VkImageConstraintsInfoFlagsFUCHSIA flags;
}
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatConstraintsCount` is the number of elements in `pFormatConstraints`.
- `pFormatConstraints` is a pointer to an array of `VkImageFormatConstraintsInfoFUCHSIA` structures of size `formatConstraintsCount` that is used to further constrain buffer collection format selection for image-based buffer collections.
- `bufferCollectionConstraints` is a `VkBufferCollectionConstraintsInfoFUCHSIA` structure used to supply parameters for the negotiation and allocation for buffer-based buffer collections.
- `flags` is a `VkImageConstraintsInfoFlagBitsFUCHSIA` value specifying hints about the type of memory Sysmem should allocate for the buffer collection.

### Valid Usage

- **VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06395**
  All elements of `pFormatConstraints` must have at least one bit set in its `VkImageFormatConstraintsInfoFUCHSIA::requiredFormatFeatures`

- **VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06396**
  If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_SAMPLED_BIT`, then `pFormatConstraints->requiredFormatFeatures` must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`

- **VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06397**
  If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_STORAGE_BIT`, then `pFormatConstraints->requiredFormatFeatures` must contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT`

- **VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06398**
  If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` must contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT`

- **VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06399**
  If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` must contain `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`

- **VUID-VkImageConstraintsInfoFUCHSIA-pFormatConstraints-06400**
  If `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT`, then `pFormatConstraints->requiredFormatFeatures` must contain at least one of `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` or `VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT`
If the `attachmentFragmentShadingRate` feature is enabled, and `pFormatConstraints->imageCreateInfo->usage` contains `VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`, then `pFormatConstraints->requiredFormatFeatures` must contain `VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`.

**Valid Usage (Implicit)**

- `sType must` be `VK_STRUCTURE_TYPE_IMAGE_CONSTRAINTS_INFO_FUCHSIA`
- `pNext must` be `NULL`
- `pFormatConstraints must` be a valid pointer to an array of `formatConstraintsCount` valid `VkImageFormatConstraintsInfoFUCHSIA` structures
- `bufferCollectionConstraints must` be a valid `VkBufferCollectionConstraintsInfoFUCHSIA` structure
- `flags must` be a valid combination of `VkImageConstraintsInfoFlagBitsFUCHSIA` values
- `formatConstraintsCount must` be greater than 0

```c
typedef VkFlags VkImageConstraintsInfoFlagsFUCHSIA;
```

`VkImageConstraintsInfoFlagsFUCHSIA` is a bitmask type for setting a mask of zero or more `VkImageConstraintsInfoFlagBitsFUCHSIA` bits.

Bits which can be set in `VkImageConstraintsInfoFlagBitsFUCHSIA::flags` include:

```c
typedef enum VkImageConstraintsInfoFlagBitsFUCHSIA {
    VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_RARELY_FUCHSIA = 0x00000001,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_OFTEN_FUCHSIA = 0x00000002,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_RARELY_FUCHSIA = 0x00000004,
    VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_OFTEN_FUCHSIA = 0x00000008,
    VK_IMAGE_CONSTRAINTS_INFO_PROTECTED_OPTIONAL_FUCHSIA = 0x00000010,
} VkImageConstraintsInfoFlagBitsFUCHSIA;
```

General hints about the type of memory that should be allocated by Sysmem based on the expected usage of the images in the buffer collection include:
• VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_RARELY_FUCHSIA
• VK_IMAGE_CONSTRAINTS_INFO_CPU_READ_OFTEN_FUCHSIA
• VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_RARELY_FUCHSIA
• VK_IMAGE_CONSTRAINTS_INFO_CPU_WRITE_OFTEN_FUCHSIA

For protected memory:

• VK_IMAGE_CONSTRAINTS_INFO_PROTECTED_OPTIONAL_FUCHSIA specifies that protected memory is optional for the buffer collection.

Note that if all participants in the buffer collection (Vulkan or otherwise) specify that protected memory is optional, Sysmem will not allocate protected memory.

The VkImageFormatConstraintsInfoFUCHSIA structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImageFormatConstraintsInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkImageCreateInfo imageCreateInfo;
    VkFormatFeatureFlags requiredFormatFeatures;
    VkImageFormatConstraintsFlagsFUCHSIA flags;
    uint64_t sysmemPixelFormat;
    uint32_t colorSpaceCount;
    const VkSysmemColorSpaceFUCHSIA* pColorSpaces;
} VkImageFormatConstraintsInfoFUCHSIA;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure
• imageCreateInfo is the VkImageCreateInfo used to create a VkImage that is to use memory from the VkBufferCollectionFUCHSIA
• requiredFormatFeatures is a bitmask of VkFormatFeatureFlagBits specifying required features of the buffers in the buffer collection
• flags is reserved for future use
• sysmemPixelFormat is a PixelFormatType value from the fuchsia.sysmem/image_formats.fidl FIDL interface
• colorSpaceCount the element count of pColorSpaces
• pColorSpaces is a pointer to an array of VkSysmemColorSpaceFUCHSIA structs of size colorSpaceCount

Valid Usage (Implicit)
• VUID-VkImageFormatConstraintsInfoFUCHSIA-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_FORMAT_CONSTRAINTS_INFO_FUCHSIA
• VUID-VkImageFormatConstraintsInfoFUCHSIA-pNext-pNext
  pNext **must** be **NULL**

• VUID-VkImageFormatConstraintsInfoFUCHSIA-imageCreateInfo-parameter
  imageCreateInfo **must** be a valid VkImageCreateInfo structure

• VUID-VkImageFormatConstraintsInfoFUCHSIA-requiredFormatFeatures-parameter
  requiredFormatFeatures **must** be a valid combination of VkFormatFeatureFlagBits values

• VUID-VkImageFormatConstraintsInfoFUCHSIA-requiredFormatFeatures-requiredbitmask
  requiredFormatFeatures **must** not be 0

• VUID-VkImageFormatConstraintsInfoFUCHSIA-flags-zerobitmask
  flags **must** be 0

• VUID-VkImageFormatConstraintsInfoFUCHSIA-pColorSpaces-parameter
  pColorSpaces **must** be a valid pointer to an array of colorSpaceCount valid
  VkSysmemColorSpaceFUCHSIA structures

• VUID-VkImageFormatConstraintsInfoFUCHSIA-colorSpaceCount-arraylength
  colorSpaceCount **must** be greater than 0

---

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef VkFlags VkImageFormatConstraintsFlagsFUCHSIA;

VkImageFormatConstraintsFlagsFUCHSIA is a bitmask type for setting a mask, but is currently reserved
for future use.

The VkBufferCollectionConstraintsInfoFUCHSIA structure is defined as:
```
```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionConstraintsInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    uint32_t minBufferCount;
    uint32_t maxBufferCount;
    uint32_t minBufferCountForCamping;
    uint32_t minBufferCountForDedicatedSlack;
    uint32_t minBufferCountForSharedSlack;
} VkBufferCollectionConstraintsInfoFUCHSIA;
```

• **sType** is a VkStructureType value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure
• **minBufferCount** is the minimum number of buffers available in the collection
• **maxBufferCount** is the maximum number of buffers allowed in the collection
• **minBufferCountForCamping** is the per-participant minimum buffers for camping
• **minBufferCountForDedicatedSlack** is the per-participant minimum buffers for dedicated slack
• **minBufferCountForSharedSlack** is the per-participant minimum buffers for shared slack

Sysmem uses all buffer count parameters in combination to determine the number of buffers it will allocate. Sysmem defines buffer count constraints in `fuchsia.sysmem/constraints.fidl`.

*Camping* as referred to by **minBufferCountForCamping**, is the number of buffers that should be available for the participant that are not for transient use. This number of buffers is required for the participant to logically operate.

*Slack* as referred to by **minBufferCountForDedicatedSlack** and **minBufferCountForSharedSlack**, refers to the number of buffers desired by participants for optimal performance. **minBufferCountForDedicatedSlack** refers to the current participant. **minBufferCountForSharedSlack** refers to buffer slack for all participants in the collection.

### Valid Usage (Implicit)

- VUID-VkBufferCollectionConstraintsInfoFUCHSIA-sType-sType  
  sType must be `VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CONSTRAINTS_INFO_FUCHSIA`

- VUID-VkBufferCollectionConstraintsInfoFUCHSIA-pNext-pNext  
  pNext must be `NULL`

The **VkSysmemColorSpaceFUCHSIA** structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkSysmemColorSpaceFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    uint32_t colorSpace;
} VkSysmemColorSpaceFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure
- `colorSpace` value of the Sysmem `ColorSpaceType`

### Valid Usage

- VUID-VkSysmemColorSpaceFUCHSIA-colorSpace-06402  
  colorSpace must be a `ColorSpaceType` as defined in `fuchsia.sysmem/image_formats.fidl`

### Valid Usage (Implicit)

- VUID-VkSysmemColorSpaceFUCHSIA-sType-sType  
  sType must be `VK_STRUCTURE_TYPE_SYSMEM_COLOR_SPACE_FUCHSIA`

- VUID-VkSysmemColorSpaceFUCHSIA-pNext-pNext
Set Buffer-based Buffer Collection Constraints

To set the constraints on a VkBuffer buffer collection, call:

```c
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkSetBufferCollectionBufferConstraintsFUCHSIA(
    VkDevice device,
    VkBufferCollectionFUCHSIA collection,
    const VkBufferConstraintsInfoFUCHSIA* pBufferConstraintsInfo);
```

- `device` is the logical device
- `collection` is the VkBufferCollectionFUCHSIA handle
- `pBufferConstraintsInfo` is a pointer to a VkBufferConstraintsInfoFUCHSIA structure

`vkSetBufferCollectionBufferConstraintsFUCHSIA` may fail if the implementation does not support the constraints specified in the bufferCollectionConstraints structure. If that occurs, `vkSetBufferCollectionBufferConstraintsFUCHSIA` will return VK_ERROR_FORMAT_NOT_SUPPORTED.

### Valid Usage

- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-06403
  - `vkSetBufferCollectionImageConstraintsFUCHSIA` or `vkSetBufferCollectionBufferConstraintsFUCHSIA` must not have already been called on `collection`

### Valid Usage (Implicit)

- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-device-parameter
  - `device` must be a valid VkDevice handle
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-parameter
  - `collection` must be a valid VkBufferCollectionFUCHSIA handle
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-pBufferConstraintsInfo-parameter
  - `pBufferConstraintsInfo` must be a valid pointer to a valid VkBufferConstraintsInfoFUCHSIA structure
- VUID-vkSetBufferCollectionBufferConstraintsFUCHSIA-collection-parent
  - `collection` must have been created, allocated, or retrieved from `device`
Return Codes

Success
• VK_SUCCESS

Failure
• VK_ERROR_INITIALIZATION_FAILED
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_FORMAT_NOT_SUPPORTED

The VkBufferConstraintsInfoFUCHSIA structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferConstraintsInfoFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkBufferCreateInfo createInfo;
    VkFormatFeatureFlags requiredFormatFeatures;
    VkBufferCollectionConstraintsInfoFUCHSIA bufferCollectionConstraints;
} VkBufferConstraintsInfoFUCHSIA;
```

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure
• `pBufferCreateInfo` a pointer to a `VkBufferCreateInfo` struct describing the buffer attributes for the buffer collection
• `requiredFormatFeatures` bitmask of `VkFormatFeatureFlagBits` required features of the buffers in the buffer collection
• `bufferCollectionConstraints` is used to supply parameters for the negotiation and allocation of the buffer collection

Valid Usage

• VUID-VkBufferConstraintsInfoFUCHSIA-requiredFormatFeatures-06404
  The `requiredFormatFeatures` bitmask of `VkFormatFeatureFlagBits` must be chosen from among the buffer compatible format features listed in `buffer compatible format features`

Valid Usage (Implicit)

• VUID-VkBufferConstraintsInfoFUCHSIA-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_BUFFER_CONSTRAINTS_INFO_FUCHSIA`
• VUID-VkBufferConstraintsInfoFUCHSIA-pNext-pNext
  `pNext` must be NULL
12.11.5. Retrieve Buffer Collection Properties

After constraints have been set on the buffer collection by calling 
vkSetBufferCollectionImageConstraintsFUCHSIA or 
vkSetBufferCollectionBufferConstraintsFUCHSIA, call 
vkGetBufferCollectionPropertiesFUCHSIA to retrieve the negotiated and finalized properties of the buffer collection.

The call to vkGetBufferCollectionPropertiesFUCHSIA is synchronous. It waits for the Sysmem format negotiation and buffer collection allocation to complete before returning.

```c
// Provided by VK_FUCHSIA_buffer_collection
VkResult vkGetBufferCollectionPropertiesFUCHSIA(
    VkDevice device,
    VkBufferCollectionFUCHSIA collection,
    VkBufferCollectionPropertiesFUCHSIA* pProperties);
```

- `device` is the logical device handle
- `collection` is the `VkBufferCollectionFUCHSIA` handle
- `pProperties` is a pointer to the retrieved `VkBufferCollectionPropertiesFUCHSIA` struct

For image-based buffer collections, upon calling `vkGetBufferCollectionPropertiesFUCHSIA`, Sysmem will choose an element of the `VkImageConstraintsInfoFUCHSIA::pImageCreateInfos` established by the preceding call to `vkSetBufferCollectionImageConstraintsFUCHSIA`. The index of the element chosen is stored in and can be retrieved from `VkBufferCollectionPropertiesFUCHSIA::createInfoIndex`.

For buffer-based buffer collections, a single `VkBufferCreateInfo` is specified as `VkBufferConstraintsInfoFUCHSIA::createInfo`. `VkBufferCollectionPropertiesFUCHSIA::createInfoIndex` will therefore always be zero.

`vkGetBufferCollectionPropertiesFUCHSIA` may fail if Sysmem is unable to resolve the constraints of all of the participants in the buffer collection. If that occurs, `vkGetBufferCollectionPropertiesFUCHSIA` will return `VK_ERROR_INITIALIZATION_FAILED`.

Valid Usage

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-None-06405
Prior to calling `vkGetBufferCollectionPropertiesFUCHSIA`, the constraints on the buffer collection must have been set by either `vkSetBufferCollectionImageConstraintsFUCHSIA` or `vkSetBufferCollectionBufferConstraintsFUCHSIA`.

**Valid Usage (Implicit)**

- VUID-vkGetBufferCollectionPropertiesFUCHSIA-device-parameter
  device must be a valid VkDevice handle
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-collection-parameter
  collection must be a valid VkBufferCollectionFUCHSIA handle
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-pProperties-parameter
  pProperties must be a valid pointer to a VkBufferCollectionPropertiesFUCHSIA structure
- VUID-vkGetBufferCollectionPropertiesFUCHSIA-collection-parent
  collection must have been created, allocated, or retrieved from device

**Return Codes**

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_INITIALIZATION_FAILED

The `VkBufferCollectionPropertiesFUCHSIA` structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkBufferCollectionPropertiesFUCHSIA {
    VkStructureType sType;
    void* pNext;
    uint32_t memoryTypeBits;
    uint32_t bufferCount;
    uint32_t createInfoIndex;
    uint64_t sysmemPixelFormat;
    VkFormatFeatureFlags formatFeatures;
    VkSysmemColorSpaceFUCHSIA sysmemColorSpaceIndex;
    VkComponentMapping samplerYcbcrConversionComponents;
    VkSamplerYcbcrModelConversion suggestedYcbcrModel;
    VkSamplerYcbcrRange suggestedYcbcrRange;
    VkChromaLocation suggestedXChromaOffset;
    VkChromaLocation suggestedYChromaOffset;
} VkBufferCollectionPropertiesFUCHSIA;
```

- `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure

• `memoryTypeBits` is a bitmask containing one bit set for every memory type which the buffer collection can be imported as buffer collection

• `bufferCount` is the number of buffers in the collection

• `createInfoIndex` as described in Sysmem chosen create infos

• `sysmemPixelFormat` is the SysmemPixelFormatType as defined in fuchsia.sysmem/image_formats.fidl

• `formatFeatures` is a bitmask of VkFormatFeatureFlagBits shared by the buffer collection

• `sysmemColorSpaceIndex` is a VkSysmemColorSpaceFUCHSIA struct specifying the color space

• `samplerYcbcrConversionComponents` is a VkComponentMapping struct specifying the component mapping

• `suggestedYcbcrModel` is a VkSamplerYcbcrModelConversion value specifying the suggested Y’C_aC_b model

• `suggestedYcbcrRange` is a VkSamplerYcbcrRange value specifying the suggested Y’C_aC_b range

• `suggestedXChromaOffset` is a VkChromaLocation value specifying the suggested X chroma offset

• `suggestedYChromaOffset` is a VkChromaLocation value specifying the suggested Y chroma offset

`systmemColorSpace` is only set for image-based buffer collections where the constraints were specified using VkImageConstraintsInfoFUCHSIA in a call to vkSetBufferCollectionImageConstraintsFUCHSIA.

For image-based buffer collections, `createInfoIndex` will identify both the VkImageConstraintsInfoFUCHSIA::pImageCreateInfos element and the VkImageConstraintsInfoFUCHSIA::pFormatConstraints element chosen by Sysmem when vkSetBufferCollectionImageConstraintsFUCHSIA was called. The value of `sysmemColorSpaceIndex` will be an index to one of the color spaces provided in the VkImageFormatConstraintsInfoFUCHSIA::pColorSpaces array.

The implementation must have `formatFeatures` with all bits set that were set in VkImageFormatConstraintsInfoFUCHSIA::requiredFormatFeatures, by the call to vkSetBufferCollectionImageConstraintsFUCHSIA, at `createInfoIndex` (other bits could be set as well).

**Valid Usage (Implicit)**

- VUID-VkBufferCollectionPropertiesFUCHSIA-sType-sType
  sType must be VK_STRUCTURE_TYPE_BUFFER_COLLECTION_PROPERTIES_FUCHSIA

- VUID-VkBufferCollectionPropertiesFUCHSIA-pNext-pNext
  pNext must be NULL

### 12.11.6. Memory Allocation

To import memory from a buffer collection into a VkImage or a VkBuffer, chain a VkImportMemoryBufferCollectionFUCHSIA structure to the `pNext` member of the VkMemoryAllocateInfo in the call to vkAllocateMemory.
The \texttt{VkImportMemoryBufferCollectionFUCHSIA} structure is defined as:

```c
// Provided by VK_FUCHSIA_buffer_collection
typedef struct VkImportMemoryBufferCollectionFUCHSIA {
    VkStructureType sType;
    const void* pNext;
    VkBufferCollectionFUCHSIA collection;
    uint32_t index;
} VkImportMemoryBufferCollectionFUCHSIA;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \texttt{collection} is the \texttt{VkBufferCollectionFUCHSIA} handle.
- \texttt{index} is the index of the buffer to import from \texttt{collection}.

### Valid Usage

- VUID-VkImportMemoryBufferCollectionFUCHSIA-index-06406
  - \texttt{index} must be less than the value retrieved as \texttt{VkBufferCollectionPropertiesFUCHSIA:bufferCount}.

### Valid Usage (Implicit)

- VUID-VkImportMemoryBufferCollectionFUCHSIA-sType-sType
  - \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_IMPORT_MEMORY_BUFFER_COLLECTION_FUCHSIA}.

- VUID-VkImportMemoryBufferCollectionFUCHSIA-collection-parameter
  - \texttt{collection} must be a valid \texttt{VkBufferCollectionFUCHSIA} handle.

To release a \texttt{VkBufferCollectionFUCHSIA}:

```c
// Provided by VK_FUCHSIA_buffer_collection
void vkDestroyBufferCollectionFUCHSIA(
    VkDevice device,
    VkBufferCollectionFUCHSIA collection,
    const VkAllocationCallbacks* pAllocator);
```

- \texttt{device} is the logical device that creates the \texttt{VkBufferCollectionFUCHSIA}.
- \texttt{collection} is the \texttt{VkBufferCollectionFUCHSIA} handle.
- \texttt{pAllocator} is a pointer to a \texttt{VkAllocationCallbacks} structure controlling host memory allocation as described in the Memory Allocation chapter.
Valid Usage

- VUID-vkDestroyBufferCollectionFUCHSIA-collection-06407
  * VkImage and VkBuffer objects that referenced *collection* upon creation by inclusion of a
    VkBufferCollectionImageCreateInfoFUCHSIA or
    VkBufferCollectionBufferCreateInfoFUCHSIA chained to their VkImageCreateInfo or
    VkBufferCreateInfo structures respectively, **may** outlive *collection*

Valid Usage (Implicit)

- VUID-vkDestroyBufferCollectionFUCHSIA-device-parameter
  * `device` **must** be a valid VkDevice handle

- VUID-vkDestroyBufferCollectionFUCHSIA-collection-parameter
  * `collection` **must** be a valid VkBufferCollectionFUCHSIA handle

- VUID-vkDestroyBufferCollectionFUCHSIA-pAllocator-parameter
  * If `pAllocator` is not NULL, `pAllocator` **must** be a valid pointer to a valid
    VkAllocationCallbacks structure

- VUID-vkDestroyBufferCollectionFUCHSIA-collection-parent
  * `collection` **must** have been created, allocated, or retrieved from `device`
Chapter 13. Samplers

VkSampler objects represent the state of an image sampler which is used by the implementation to read image data and apply filtering and other transformations for the shader.

Samplers are represented by VkSampler handles:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSampler)
```

To create a sampler object, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkCreateSampler(
    VkDevice device,
    const VkSamplerCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSampler* pSampler);
```

- `device` is the logical device that creates the sampler.
- `pCreateInfo` is a pointer to a VkSamplerCreateInfo structure specifying the state of the sampler object.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pSampler` is a pointer to a VkSampler handle in which the resulting sampler object is returned.

**Valid Usage**

- VUID-vkCreateSampler-maxSamplerAllocationCount-04110
  There **must** be less than VkPhysicalDeviceLimits::maxSamplerAllocationCount VkSampler objects currently created on the device

**Valid Usage (Implicit)**

- VUID-vkCreateSampler-device-parameter
  `device` **must** be a valid VkDevice handle

- VUID-vkCreateSampler-pCreateInfo-parameter
  `pCreateInfo` **must** be a valid pointer to a valid VkSamplerCreateInfo structure

- VUID-vkCreateSampler-pAllocator-parameter
  If `pAllocator` is not NULL, `pAllocator` **must** be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateSampler-pSampler-parameter
  `pSampler` **must** be a valid pointer to a VkSampler handle
Return Codes

Success
• VK_SUCCESS

Failure
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_OUT_OF_DEVICE_MEMORY
• VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS_KHR

The VkSamplerCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkSamplerCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkSamplerCreateFlags flags;
    VkFilter magFilter;
    VkFilter minFilter;
    VkSamplerMipmapMode mipmapMode;
    VkSamplerAddressMode addressModeU;
    VkSamplerAddressMode addressModeV;
    VkSamplerAddressMode addressModeW;
    float mipLodBias;
    VkBool32 anisotropyEnable;
    float maxAnisotropy;
    VkBool32 compareEnable;
    VkCompareOp compareOp;
    float minLod;
    float maxLod;
    VkBorderColor borderColor;
    VkBool32 unnormalizedCoordinates;
} VkSamplerCreateInfo;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **flags** is a bitmask of VkSamplerCreateFlagBits describing additional parameters of the sampler.
- **magFilter** is a VkFilter value specifying the magnification filter to apply to lookups.
- **minFilter** is a VkFilter value specifying the minification filter to apply to lookups.
- **mipmapMode** is a VkSamplerMipmapMode value specifying the mipmap filter to apply to lookups.
- **addressModeU** is a VkSamplerAddressMode value specifying the addressing mode for U coordinates outside [0,1).
- **addressModeV** is a VkSamplerAddressMode value specifying the addressing mode for V coordinates outside [0,1).
• `addressModeW` is a `VkSamplerAddressMode` value specifying the addressing mode for W coordinates outside [0,1).

• `mipLodBias` is the bias to be added to mipmap LOD calculation and bias provided by image sampling functions in SPIR-V, as described in the LOD Operation section.

• `anisotropyEnable` is `VK_TRUE` to enable anisotropic filtering, as described in the Texel Anisotropic Filtering section, or `VK_FALSE` otherwise.

• `maxAnisotropy` is the anisotropy value clamp used by the sampler when `anisotropyEnable` is `VK_TRUE`. If `anisotropyEnable` is `VK_FALSE`, `maxAnisotropy` is ignored.

• `compareEnable` is `VK_TRUE` to enable comparison against a reference value during lookups, or `VK_FALSE` otherwise.
  ◦ Note: Some implementations will default to shader state if this member does not match.

• `compareOp` is a `VkCompareOp` value specifying the comparison operator to apply to fetched data before filtering as described in the Depth Compare Operation section.

• `minLod` is used to clamp the minimum of the computed LOD value.

• `maxLod` is used to clamp the maximum of the computed LOD value. To avoid clamping the maximum value, set `maxLod` to the constant `VK_LOD_CLAMP_NONE`.

• `borderColor` is a `VkBorderColor` value specifying the predefined border color to use.

• `unnormalizedCoordinates` controls whether to use unnormalized or normalized texel coordinates to address texels of the image. When set to `VK_TRUE`, the range of the image coordinates used to lookup the texel is in the range of zero to the image size in each dimension. When set to `VK_FALSE` the range of image coordinates is zero to one.

When `unnormalizedCoordinates` is `VK_TRUE`, images the sampler is used with in the shader have the following requirements:

  ◦ The `viewType` must be either `VK_IMAGE_VIEW_TYPE_1D` or `VK_IMAGE_VIEW_TYPE_2D`.
  ◦ The image view must have a single layer and a single mip level.

When `unnormalizedCoordinates` is `VK_TRUE`, image built-in functions in the shader that use the sampler have the following requirements:

  ◦ The functions must not use projection.
  ◦ The functions must not use offsets.

---

**Mapping of OpenGL to Vulkan filter modes**

`magFilter` values of `VK_FILTER_NEAREST` and `VK_FILTER_LINEAR` directly correspond to `GL_NEAREST` and `GL_LINEAR` magnification filters. `minFilter` and `mipmapMode` combine to correspond to the similarly named OpenGL minification filter of `GL_minFilter_MIPMAP_mipmapMode` (e.g. `minFilter` of `VK_FILTER_LINEAR` and `mipmapMode` of `VK_SAMPLER_MIPMAP_MODE_NEAREST` correspond to `GL_LINEAR_MIPMAP_NEAREST`).

There are no Vulkan filter modes that directly correspond to OpenGL minification filters of `GL_LINEAR` or `GL_NEAREST`, but they can be emulated using `VK_SAMPLER_MIPMAP_MODE_NEAREST`, `minLod = 0`, and `maxLod = 0.25`, and using `minFilter = VK_FILTER_LINEAR` or `minFilter = VK_FILTER_NEAREST`, respectively.
Note that using a `maxLod` of zero would cause `magnification` to always be performed, and the `magFilter` to always be used. This is valid, just not an exact match for OpenGL behavior. Clamping the maximum LOD to 0.25 allows the $\lambda$ value to be non-zero and minification to be performed, while still always rounding down to the base level. If the `minFilter` and `magFilter` are equal, then using a `maxLod` of zero also works.

The maximum number of sampler objects which can be simultaneously created on a device is implementation-dependent and specified by the `maxSamplerAllocationCount` member of the `VkPhysicalDeviceLimits` structure.

Note
For historical reasons, if `maxSamplerAllocationCount` is exceeded, some implementations may return `VK_ERROR_TOO_MANY_OBJECTS`. Exceeding this limit will result in undefined behavior, and an application should not rely on the use of the returned error code in order to identify when the limit is reached.

Since `VkSampler` is a non-dispatchable handle type, implementations may return the same handle for sampler state vectors that are identical. In such cases, all such objects would only count once against the `maxSamplerAllocationCount` limit.

### Valid Usage

- **VUID-VkSamplerCreateInfo-mipLodBias-01069**  
The absolute value of `mipLodBias` must be less than or equal to `VkPhysicalDeviceLimits::maxSamplerLodBias`  
- **VUID-VkSamplerCreateInfo-samplerMipLodBias-04467**  
If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::samplerMipLodBias` is `VK_FALSE`, `mipLodBias` must be zero  
- **VUID-VkSamplerCreateInfo-maxLod-01973**  
`maxLod` must be greater than or equal to `minLod`  
- **VUID-VkSamplerCreateInfo-anisotropyEnable-01070**  
If the `samplerAnisotropy` feature is not enabled, `anisotropyEnable` must be `VK_FALSE`  
- **VUID-VkSamplerCreateInfo-anisotropyEnable-01071**  
If `anisotropyEnable` is `VK_TRUE`, `maxAnisotropy` must be between `1.0` and `VkPhysicalDeviceLimits::maxSamplerAnisotropy`, inclusive  
- **VUID-VkSamplerCreateInfo-minFilter-01645**  
If `sampler YC_bC_r conversion` is enabled and the potential format features of the sampler `YC_bC_r conversion` do not support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT`, `minFilter` and `magFilter` must be equal to the sampler `YC_bC_r conversion`'s `chromaFilter`  
- **VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01072**  
If `unnormalizedCoordinates` is `VK_TRUE`, `minFilter` and `magFilter` must be equal
• VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01073
  If unnormalizedCoordinates is VK_TRUE, mipmapMode must be VK_SAMPLER_MIPMAP_MODE_NEAREST

• VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01074
  If unnormalizedCoordinates is VK_TRUE, minLod and maxLod must be zero

• VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01075
  If unnormalizedCoordinates is VK_TRUE, addressModeU and addressModeV must each be either
  VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE or VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER

• VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01076
  If unnormalizedCoordinates is VK_TRUE, anisotropyEnable must be VK_FALSE

• VUID-VkSamplerCreateInfo-unnormalizedCoordinates-01077
  If unnormalizedCoordinates is VK_TRUE, compareEnable must be VK_FALSE

• VUID-VkSamplerCreateInfo-addressModeU-01078
  If any of addressModeU, addressModeV or addressModeW are
  VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER, borderColor must be a valid VkBorderColor value

• VUID-VkSamplerCreateInfo-addressModeU-01646
  If sampler Y’C_bC_r conversion is enabled, addressModeU, addressModeV, and addressModeW
  must be VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE, anisotropyEnable must be VK_FALSE, and
  unnormalizedCoordinates must be VK_FALSE

• VUID-VkSamplerCreateInfo-None-01647
  If sampler Y’C_bC_r conversion is enabled and the pNext chain includes a
  VkSamplerReductionModeCreateInfo structure, then the sampler reduction mode must
  be set to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE

• VUID-VkSamplerCreateInfo-pNext-06726
  If samplerFilterMinmax is not enabled and the pNext chain includes a
  VkSamplerReductionModeCreateInfo structure, then the sampler reduction mode must
  be set to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE

• VUID-VkSamplerCreateInfo-addressModeU-01079
  If samplerMirrorClampToEdge is not enabled, and if the
  VK_KHR_sampler_mirror_clamp_to_edge extension is not enabled,
  addressModeU, addressModeV and addressModeW must not be
  VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE

• VUID-VkSamplerCreateInfo-compareEnable-01080
  If compareEnable is VK_TRUE, compareOp must be a valid VkCompareOp value

• VUID-VkSamplerCreateInfo-magFilter-01081
  If either magFilter or minFilter is VK_FILTER_CUBIC_EXT, anisotropyEnable must be VK_FALSE

• VUID-VkSamplerCreateInfo-magFilter-07911
  If the VK_EXT_filter_cubic extension is not enabled and either magFilter or minFilter is
  VK_FILTER_CUBIC_EXT, the reductionMode member of VkSamplerReductionModeCreateInfo
  must be VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE

• VUID-VkSamplerCreateInfo-compareEnable-01423
  If compareEnable is VK_TRUE, the reductionMode member of
  VkSamplerReductionModeCreateInfo must be
  VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE
• VUID-VkSamplerCreateInfo-flags-02574
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then minFilter and magFilter must be equal

• VUID-VkSamplerCreateInfo-flags-02575
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then mipmapMode must be
  VK_SAMPLER_MIPMAP_MODE_NEAREST

• VUID-VkSamplerCreateInfo-flags-02576
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then minLod and maxLod must be zero

• VUID-VkSamplerCreateInfo-flags-02577
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then addressModeU and
  addressModeV each be either VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE or
  VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER

• VUID-VkSamplerCreateInfo-flags-02578
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then anisotropyEnable must be
  VK_FALSE

• VUID-VkSamplerCreateInfo-flags-02579
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then compareEnable must be
  VK_FALSE

• VUID-VkSamplerCreateInfo-flags-02580
  If flags includes VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT, then unnormalizedCoordinates must be
  VK_FALSE

• VUID-VkSamplerCreateInfo-nonSeamlessCubeMap-06788
  If the nonSeamlessCubeMap feature is not enabled, flags must not include
  VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT

• VUID-VkSamplerCreateInfo-borderColor-04011
  If borderColor is one of VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or
  VK_BORDER_COLOR_INT_CUSTOM_EXT, then a VkSamplerCustomBorderColorCreateInfoEXT must be included in the pNext chain

• VUID-VkSamplerCreateInfo-customBorderColorColors-04085
  If the customBorderColors feature is not enabled, borderColor must not be
  VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT

• VUID-VkSamplerCreateInfo-borderColor-04442
  If borderColor is one of VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or
  VK_BORDER_COLOR_INT_CUSTOM_EXT, and VkSamplerCustomBorderColorCreateInfoEXT::format is not VK_FORMAT_UNDEFINED, VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor must be within the range of values representable in format

• VUID-VkSamplerCreateInfo-None-04012
  The maximum number of samplers with custom border colors which can be simultaneously created on a device is implementation-dependent and specified by the maxCustomBorderColorSamplers member of the VkPhysicalDeviceCustomBorderColorPropertiesEXT structure

• VUID-VkSamplerCreateInfo-flags-08110
If `flags` includes `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, the `descriptorBufferCaptureReplay` feature must be enabled.

- **VUID-VkSamplerCreateInfo-pNext-08111**
  If the `pNext` chain includes a `VkOpaqueCaptureDescriptorDataCreateInfoEXT` structure, `flags` must contain `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

- **VUID-VkSamplerCreateInfo-flags-06964**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, then `minFilter` and `magFilter` must be `VK_FILTER_NEAREST`

- **VUID-VkSamplerCreateInfo-flags-06965**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, then `maxFilter` must be `VK_FILTER_NEAREST`

- **VUID-VkSamplerCreateInfo-flags-06966**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, then `mipmapMode` must be `VK_SAMPLER_MIPMAP_MODE_NEAREST`

- **VUID-VkSamplerCreateInfo-flags-06967**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, then `minLod` and `maxLod` must be zero

- **VUID-VkSamplerCreateInfo-flags-06968**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, and if `addressModeU` or `addressModeV` is `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER`, then `borderColor` must be `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`

- **VUID-VkSamplerCreateInfo-flags-06969**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, then `anisotropyEnable` must be `VK_FALSE`

- **VUID-VkSamplerCreateInfo-flags-06970**
  If `flags` includes `VK_SAMPLER_CREATE_IMAGEPROCESSING_BIT_QCOM`, then `compareEnable` must be `VK_FALSE`

---

### Valid Usage (Implicit)

- **VUID-VkSamplerCreateInfo-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO`

- **VUID-VkSamplerCreateInfo-pNext-pNext**
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkOpaqueCaptureDescriptorDataCreateInfoEXT`, `VkSamplerBlockMatchWindowCreateInfoQCOM`, `VkSamplerBorderColorComponentMappingCreateInfoEXT`, `VkSamplerCubicWeightsCreateInfoQCOM`, `VkSamplerCustomBorderColorCreateInfoEXT`, `VkSamplerReductionModeCreateInfo`, or `VkSamplerYcbcrConversionInfo`

- **VUID-VkSamplerCreateInfo-sType-unique**
  The `sType` value of each struct in the `pNext` chain must be unique
• VUID-VkSamplerCreateInfo-flags-parameter
  `flags` must be a valid combination of `VkSamplerCreateFlagBits` values

• VUID-VkSamplerCreateInfo-magFilter-parameter
  `magFilter` must be a valid `VkFilter` value

• VUID-VkSamplerCreateInfo-minFilter-parameter
  `minFilter` must be a valid `VkFilter` value

• VUID-VkSamplerCreateInfo-mipmapMode-parameter
  `mipmapMode` must be a valid `VkSamplerMipmapMode` value

• VUID-VkSamplerCreateInfo-addressModeU-parameter
  `addressModeU` must be a valid `VkSamplerAddressMode` value

• VUID-VkSamplerCreateInfo-addressModeV-parameter
  `addressModeV` must be a valid `VkSamplerAddressMode` value

• VUID-VkSamplerCreateInfo-addressModeW-parameter
  `addressModeW` must be a valid `VkSamplerAddressMode` value

`VK_LOD_CLAMP_NONE` is a special constant value used for `VkSamplerCreateInfo::maxLod` to indicate that maximum LOD clamping should not be performed.

```c
#define VK_LOD_CLAMP_NONE                 1000.0F
```

Bits which can be set in `VkSamplerCreateInfo::flags`, specifying additional parameters of a sampler, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkSamplerCreateFlagBits {
    // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT = 0x00000001,
    // Provided by VK_EXT_fragment_density_map
    VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT = 0x00000002,
    // Provided by VK_EXT_descriptor_buffer
    VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT = 0x00000008,
    // Provided by VK_EXT_non_seamless_cube_map
    VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT = 0x00000004,
    // Provided by VK_QCOM_image_processing
    VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM = 0x00000010,
} VkSamplerCreateFlagBits;
```

• `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` specifies that the sampler will read from an image created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.

• `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT` specifies that the implementation may use approximations when reconstructing a full color value for texture access from a subsampled image.

• `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT` specifies that cube map edge handling is not
performed.

• **VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM** specifies that the sampler will read from images using only `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatch GatherSSDQCOM`, `OpImageBlockMatch GatherSADQCOM`, `OpImageBlockMatch WindowSSDQCOM`, `OpImageBlockMatch Window SADQCOM`, `OpImageBlockMatch SSDDQCOM`, or `OpImageBlockMatch SADQCOM`.

Note

The approximations used when **VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT** is specified are implementation defined. Some implementations may interpolate between fragment density levels in a subsampled image. In that case, this bit may be used to decide whether the interpolation factors are calculated per fragment or at a coarser granularity.

• **VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT** specifies that the sampler can be used with descriptor buffers when capturing and replaying (e.g. for trace capture and replay), see **VkOpaqueCaptureDescriptorDataCreateInfoEXT** for more detail.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkSamplerCreateFlags;

VkSamplerCreateFlags` is a bitmask type for setting a mask of zero or more **VkSamplerCreateFlagBits**.

The `VkSamplerReductionModeCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkSamplerReductionModeCreateInfo {  
    VkStructureType sType;  
    const void* pNext;  
    VkSamplerReductionMode reductionMode;
} VkSamplerReductionModeCreateInfo;
```

or the equivalent

```c
// Provided by VK_EXT_sampler_filter_minmax
typedef VkSamplerReductionModeCreateInfo VkSamplerReductionModeCreateInfoEXT;
```

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **reductionMode** is a **VkSamplerReductionMode** value controlling how texture filtering combines texel values.

If the **pNext** chain of **VkSamplerCreateInfo** includes a **VkSamplerReductionModeCreateInfo** structure, then that structure includes a mode controlling how texture filtering combines texel values.
If this structure is not present, \texttt{reductionMode} is considered to be \texttt{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE}.

### Valid Usage (Implicit)

- \texttt{VUID-VkSamplerReductionModeCreateInfo-sType-sType} \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_SAMPLER_REDUCTION_MODE_CREATE_INFO}
- \texttt{VUID-VkSamplerReductionModeCreateInfo-reductionMode-parameter-reductionMode} must be a valid \texttt{VkSamplerReductionMode} value

Reduction modes are specified by \texttt{VkSamplerReductionMode}, which takes values:

```c
typedef enum VkSamplerReductionMode {
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE = 0,
    VK_SAMPLER_REDUCTION_MODE_MIN = 1,
    VK_SAMPLER_REDUCTION_MODE_MAX = 2,
    // Provided by VK_QCOM_filter_cubic_clamp
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGE_CLAMP_QCOM = 1000521000,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_EXT = VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_MIN_EXT = VK_SAMPLER_REDUCTION_MODE_MIN,
    // Provided by VK_EXT_sampler_filter_minmax
    VK_SAMPLER_REDUCTION_MODE_MAX_EXT = VK_SAMPLER_REDUCTION_MODE_MAX,
} VkSamplerReductionMode;
```

or the equivalent

```c
// Provided by VK_EXT_sampler_filter_minmax
typedef VkSamplerReductionMode VkSamplerReductionModeEXT;
```

- \texttt{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE} specifies that texel values are combined by computing a weighted average of values in the footprint, using weights as specified in the image operations chapter.
- \texttt{VK_SAMPLER_REDUCTION_MODE_MIN} specifies that texel values are combined by taking the component-wise minimum of values in the footprint with non-zero weights.
- \texttt{VK_SAMPLER_REDUCTION_MODE_MAX} specifies that texel values are combined by taking the component-wise maximum of values in the footprint with non-zero weights.
- \texttt{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGE_CLAMP_QCOM} specifies values are combined as described by \texttt{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE}, followed by a texel range clamp.

The \texttt{VkSamplerCubicWeightsCreateInfoQCOM} structure is defined as:
typedef struct VkSamplerCubicWeightsCreateInfoQCOM {
    VkStructureType sType;
    const void* pNext;
    VkCubicFilterWeightsQCOM cubicWeights;
} VkSamplerCubicWeightsCreateInfoQCOM;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- cubicWeights is a VkCubicFilterWeightsQCOM value controlling which cubic weights are used.

If the pNext chain of VkSamplerCreateInfo includes a VkSamplerCubicWeightsCreateInfoQCOM structure, then that structure specifies which cubic weights are used.

If that structure is not present, cubicWeights is considered to be VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM.

Valid Usage (Implicit)

- VUID-VkSamplerCubicWeightsCreateInfoQCOM-sType-sType sType must be VK_STRUCTURE_TYPE_SAMPLER_CUBIC_WEIGHTS_CREATE_INFO_QCOM
- VUID-VkSamplerCubicWeightsCreateInfoQCOM-cubicWeights-parameter cubicWeights must be a valid VkCubicFilterWeightsQCOM value

Possible values of the VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights, specifying cubic weights used in Texel Cubic Filtering are:

typedef enum VkCubicFilterWeightsQCOM {
    VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM = 0,
    VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM = 1,
    VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM = 2,
    VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM = 3,
} VkCubicFilterWeightsQCOM;

- VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM specifies Catmull-Rom weights.
- VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM specifies Zero Tangent Cardinal weights.
- VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM specifies B-Spline weights.
- VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM specifies Mitchell-Netravali weights.

Possible values of the VkSamplerCreateInfo::magFilter and minFilter parameters, specifying filters used for texture lookups, are:

// Provided by VK_VERSION_1_0
typedef enum VkFilter {
    VK_FILTER_NEAREST = 0,
    VK_FILTER_LINEAR = 1,
    // Provided by VK_EXT_filter_cubic
    VK_FILTER_CUBIC_EXT = 1000015000,
    // Provided by VK_IMG_filter_cubic
    VK_FILTER_CUBIC_IMG = VK_FILTER_CUBIC_EXT,
} VkFilter;

- **VK_FILTER_NEAREST** specifies nearest filtering.
- **VK_FILTER_LINEAR** specifies linear filtering.
- **VK_FILTER_CUBIC_EXT** specifies cubic filtering.

These filters are described in detail in [Texel Filtering](#).

Possible values of the `VkSamplerCreateInfo::mipmapMode`, specifying the mipmap mode used for texture lookups, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkSamplerMipmapMode {
    VK_SAMPLER_MIPMAP_MODE_NEAREST = 0,
    VK_SAMPLER_MIPMAP_MODE_LINEAR = 1,
} VkSamplerMipmapMode;
```

- **VK_SAMPLER_MIPMAP_MODE_NEAREST** specifies nearest filtering.
- **VK_SAMPLER_MIPMAP_MODE_LINEAR** specifies linear filtering.

These modes are described in detail in [Texel Filtering](#).

Possible values of the `VkSamplerCreateInfo::addressMode*` parameters, specifying the behavior of sampling with coordinates outside the range [0,1] for the respective u, v, or w coordinate as defined in the [Wrapping Operation](#) section, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkSamplerAddressMode {
    VK_SAMPLER_ADDRESS_MODE_REPEAT = 0,
    VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT = 1,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE = 2,
    VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER = 3,
    // Provided by VK_VERSION_1_2, VK_KHR_sampler_mirror_clamp_to_edge
    VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE,
} VkSamplerAddressMode;
```

- **VK_SAMPLER_ADDRESS_MODE_REPEAT** specifies that the repeat wrap mode will be used.
• `VK_SAMPLER_ADDRESS_MODE_MIRRORED_REPEAT` specifies that the mirrored repeat wrap mode will be used.

• `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE` specifies that the clamp to edge wrap mode will be used.

• `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` specifies that the clamp to border wrap mode will be used.

• `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` specifies that the mirror clamp to edge wrap mode will be used. This is only valid if `samplerMirrorClampToEdge` is enabled, or if the `VK_KHR_sampler_mirror_clamp_to_edge` extension is enabled.

Comparison operators compare a `reference` and a `test` value, and return a true ("passed") or false ("failed") value depending on the comparison operator chosen. The supported operators are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkCompareOp {
    VK_COMPARE_OP_NEVER = 0,
    VK_COMPARE_OP_LESS = 1,
    VK_COMPARE_OP_EQUAL = 2,
    VK_COMPARE_OP_LESS_OR_EQUAL = 3,
    VK_COMPARE_OP_GREATER = 4,
    VK_COMPARE_OP_NOT_EQUAL = 5,
    VK_COMPARE_OP_GREATER_OR_EQUAL = 6,
    VK_COMPARE_OP_ALWAYS = 7,
} VkCompareOp;
```

• `VK_COMPARE_OP_NEVER` specifies that the comparison always evaluates false.

• `VK_COMPARE_OP_LESS` specifies that the comparison evaluates `reference < test`.

• `VK_COMPARE_OP_EQUAL` specifies that the comparison evaluates `reference = test`.

• `VK_COMPARE_OP_LESS_OR_EQUAL` specifies that the comparison evaluates `reference ≤ test`.

• `VK_COMPARE_OP_GREATER` specifies that the comparison evaluates `reference > test`.

• `VK_COMPARE_OP_NOT_EQUAL` specifies that the comparison evaluates `reference ≠ test`.

• `VK_COMPARE_OP_GREATER_OR_EQUAL` specifies that the comparison evaluates `reference ≥ test`.

• `VK_COMPARE_OP_ALWAYS` specifies that the comparison always evaluates true.

Comparison operators are used for:

• The **Depth Compare Operation** operator for a sampler, specified by `VkSamplerCreateInfo::compareOp`.

• The stencil comparison operator for the **stencil test**, specified by `vkCmdSetStencilOp::compareOp` or `VkStencilOpState::compareOp`.

• The **Depth Comparison** operator for the **depth test**, specified by `vkCmdSetDepthCompareOp::depthCompareOp` or `VkPipelineDepthStencilStateCreateInfo::depthCompareOp`.

Each such use describes how the `reference` and `test` values for that comparison are determined.
Possible values of `VkSamplerCreateInfo::borderColor`, specifying the border color used for texture lookups, are:

```cpp
// Provided by VK_VERSION_1_0
typedef enum VkBorderColor {
    VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK = 0,
    VK_BORDER_COLOR_INT_TRANSPARENT_BLACK = 1,
    VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK = 2,
    VK_BORDER_COLOR_INT_OPAQUE_BLACK = 3,
    VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE = 4,
    VK_BORDER_COLOR_INT_OPAQUE_WHITE = 5,
    // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_FLOAT_CUSTOM_EXT = 1000287003,
    // Provided by VK_EXT_custom_border_color
    VK_BORDER_COLOR_INT_CUSTOM_EXT = 1000287004,
} VkBorderColor;
```

- `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK` specifies a transparent, floating-point format, black color.
- `VK_BORDER_COLOR_INT_TRANSPARENT_BLACK` specifies a transparent, integer format, black color.
- `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK` specifies an opaque, floating-point format, black color.
- `VK_BORDER_COLOR_INT_OPAQUE_BLACK` specifies an opaque, integer format, black color.
- `VK_BORDER_COLOR_FLOAT_OPAQUE_WHITE` specifies an opaque, floating-point format, white color.
- `VK_BORDER_COLOR_INT_OPAQUE_WHITE` specifies an opaque, integer format, white color.
- `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` indicates that a `VkSamplerCustomBorderColorCreateInfoEXT` structure is included in the `VkSamplerCreateInfo::pNext` chain containing the color data in floating-point format.
- `VK_BORDER_COLOR_INT_CUSTOM_EXT` indicates that a `VkSamplerCustomBorderColorCreateInfoEXT` structure is included in the `VkSamplerCreateInfo::pNext` chain containing the color data in integer format.

These colors are described in detail in `Texel Replacement`.

To destroy a sampler, call:

```cpp
// Provided by VK_VERSION_1_0
void vkDestroySampler(
    VkDevice  device,
    VkSampler sampler,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the sampler.
- `sampler` is the sampler to destroy.
- `pAllocator` controls host memory allocation as described in the `Memory Allocation` chapter.
Valid Usage

• VUID-vkDestroySampler-sampler-01082
  All submitted commands that refer to sampler must have completed execution

• VUID-vkDestroySampler-sampler-01083
  If VkAllocationCallbacks were provided when sampler was created, a compatible set of callbacks must be provided here

• VUID-vkDestroySampler-sampler-01084
  If no VkAllocationCallbacks were provided when sampler was created, pAllocator must be NULL

Valid Usage (Implicit)

• VUID-vkDestroySampler-device-parameter
  device must be a valid VkDevice handle

• VUID-vkDestroySampler-sampler-parameter
  If sampler is not VK_NULL_HANDLE, sampler must be a valid VkSampler handle

• VUID-vkDestroySampler-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

• VUID-vkDestroySampler-sampler-parent
  If sampler is a valid handle, it must have been created, allocated, or retrieved from device

Host Synchronization

• Host access to sampler must be externally synchronized

13.1. Sampler \(Y'C_B'C_R\) Conversion

To create a sampler with \(Y'C_B'C_R\) conversion enabled, add a VkSamplerYcbcrConversionInfo structure to the pNext chain of the VkSamplerCreateInfo structure. To create a sampler \(Y'C_B'C_R\) conversion, the samplerYcbcrConversion feature must be enabled. Conversion must be fixed at pipeline creation time, through use of a combined image sampler with an immutable sampler in VkDescriptorSetLayoutBinding.

A VkSamplerYcbcrConversionInfo must be provided for samplers to be used with image views that access VK_IMAGE_ASPECT_COLOR_BIT if the format is one of the formats that require a sampler \(Y'C_B'C_R\) conversion, or if the image view has an external format.

The VkSamplerYcbcrConversionInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
```
typedef struct VkSamplerYcbcrConversionInfo {
    VkStructureType sType;
    const void* pNext;
    VkSamplerYcbcrConversion conversion;
} VkSamplerYcbcrConversionInfo;

or the equivalent

// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversionInfo VkSamplerYcbcrConversionInfoKHR;

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **conversion** is a VkSamplerYcbcrConversion handle created with vkCreateSamplerYcbcrConversion.

Valid Usage (Implicit)

- **VUID-VkSamplerYcbcrConversionInfo-sType-sType**
  sType must be VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_INFO
- **VUID-VkSamplerYcbcrConversionInfo-conversion-parameter**
  conversion must be a valid VkSamplerYcbcrConversion handle

A sampler Y'CbCr conversion is an opaque representation of a device-specific sampler Y'CbCr conversion description, represented as a VkSamplerYcbcrConversion handle:

// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkSamplerYcbcrConversion)

or the equivalent

// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversion VkSamplerYcbcrConversionKHR;

To create a VkSamplerYcbcrConversion, call:

// Provided by VK_VERSION_1_1
VkResult vkCreateSamplerYcbcrConversion(
    VkDevice device,
    const VkSamplerYcbcrConversionCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSamplerYcbcrConversion* pYcbcrConversion);
or the equivalent command

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
VkResult vkCreateSamplerYcbcrConversionKHR(
    VkDevice device,
    const VkSamplerYcbcrConversionCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkSamplerYcbcrConversion* pYcbcrConversion);
```

- `device` is the logical device that creates the sampler $Y'CbCr$ conversion.
- `pCreateInfo` is a pointer to a `VkSamplerYcbcrConversionCreateInfo` structure specifying the requested sampler $Y'CbCr$ conversion.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pYcbcrConversion` is a pointer to a `VkSamplerYcbcrConversion` handle in which the resulting sampler $Y'CbCr$ conversion is returned.

The interpretation of the configured sampler $Y'CbCr$ conversion is described in more detail in the description of sampler $Y'CbCr$ conversion in the Image Operations chapter.

---

**Valid Usage**

- VUID-vkCreateSamplerYcbcrConversion-None-01648
  The `samplerYcbcrConversion` feature must be enabled

**Valid Usage (Implicit)**

- VUID-vkCreateSamplerYcbcrConversion-device-parameter
  `device` must be a valid `VkDevice` handle

- VUID-vkCreateSamplerYcbcrConversion-pCreateInfo-parameter
  `pCreateInfo` must be a valid pointer to a valid `VkSamplerYcbcrConversionCreateInfo` structure

- VUID-vkCreateSamplerYcbcrConversion-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkCreateSamplerYcbcrConversion-pYcbcrConversion-parameter
  `pYcbcrConversion` must be a valid pointer to a `VkSamplerYcbcrConversion` handle

**Return Codes**

**Success**

- `VK_SUCCESS`
Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The VkSamplerYcbcrConversionCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkFormat format;
    VkSamplerYcbcrModelConversion ycbcrModel;
    VkSamplerYcbcrRange ycbcrRange;
    VkComponentMapping components;
    VkChromaLocation xChromaOffset;
    VkChromaLocation yChromaOffset;
    VkFilter chromaFilter;
    VkBool32 forceExplicitReconstruction;
} VkSamplerYcbcrConversionCreateInfo;
```

or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversionCreateInfo VkSamplerYcbcrConversionCreateInfoKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **format** is the format of the image from which color information will be retrieved.
- **ycbcrModel** describes the color matrix for conversion between color models.
- **ycbcrRange** describes whether the encoded values have headroom and foot room, or whether the encoding uses the full numerical range.
- **components** applies a swizzle based on VkComponentSwizzle enums prior to range expansion and color model conversion.
- **xChromaOffset** describes the sample location associated with downsampled chroma components in the x dimension. xChromaOffset has no effect for formats in which chroma components are not downsampled horizontally.
- **yChromaOffset** describes the sample location associated with downsampled chroma components in the y dimension. yChromaOffset has no effect for formats in which the chroma components are not downsampled vertically.
- **chromaFilter** is the filter for chroma reconstruction.
- **forceExplicitReconstruction** can be used to ensure that reconstruction is done explicitly, if supported.
Note

Setting `forceExplicitReconstruction` to `VK_TRUE` may have a performance penalty on implementations where explicit reconstruction is not the default mode of operation.

If `format` supports `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT` the `forceExplicitReconstruction` value behaves as if it was set to `VK_TRUE`.

If the `pNext` chain includes a `VkExternalFormatANDROID` structure with non-zero `externalFormat` member, the sampler Y’C_bC_r conversion object represents an external format conversion, and `format` must be `VK_FORMAT_UNDEFINED`. Such conversions must only be used to sample image views with a matching external format. When creating an external format conversion, the value of `components` is ignored.

Valid Usage

- VUID-VkSamplerYcbcrConversionCreateInfo-format-01904
  If an external format conversion is being created, `format` must be `VK_FORMAT_UNDEFINED`

- VUID-VkSamplerYcbcrConversionCreateInfo-format-04061
  If an external format conversion is not being created, `format` must represent unsigned normalized values (i.e. the format must be a UNORM format)

- VUID-VkSamplerYcbcrConversionCreateInfo-format-01650
  The potential format features of the sampler Y’C_bC_r conversion must support `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT` or `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`

- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01651
  If the potential format features of the sampler Y’C_bC_r conversion do not support `VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT`, `xChromaOffset` and `yChromaOffset` must not be `VK_CHROMA_LOCATION_COSITED_EVEN` if the corresponding components are downscaled

- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-01652
  If the potential format features of the sampler Y’C_bC_r conversion do not support `VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT`, `xChromaOffset` and `yChromaOffset` must not be `VK_CHROMA_LOCATION_MIDPOINT` if the corresponding components are downscaled

- VUID-VkSamplerYcbcrConversionCreateInfo-components-02581
  If the format has a _422 or _420 suffix, then `components.g` must be the identity swizzle

- VUID-VkSamplerYcbcrConversionCreateInfo-components-02582
  If the format has a _422 or _420 suffix, then `components.a` must be the identity swizzle, `VK_COMPONENT_SWIZZLE_ONE`, or `VK_COMPONENT_SWIZZLE_ZERO`

- VUID-VkSamplerYcbcrConversionCreateInfo-components-02583
  If the format has a _422 or _420 suffix, then `components.r` must be the identity swizzle or `VK_COMPONENT_SWIZZLE_B`

- VUID-VkSamplerYcbcrConversionCreateInfo-components-02584
  If the format has a _422 or _420 suffix, then `components.b` must be the identity swizzle or...
VK_COMPONENT_SWIZZLE_R

• VUID-VkSamplerYcbcrConversionCreateInfo-components-02585
  If the format has a _422 or _420 suffix, and if either components.r or components.b is the identity swizzle, both values must be the identity swizzle

• VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-01655
  If ycbcrModel is not VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY, then components.r, components.g, and components.b must correspond to components of the format; that is, components.r, components.g, and components.b must not be VK_COMPONENT_SWIZZLE_ZERO or VK_COMPONENT_SWIZZLE_ONE, and must not correspond to a component containing zero or one as a consequence of conversion to RGBA

• VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-02748
  If ycbcrRange is VK_SAMPLER_YCBCR_RANGE_ITU_NARROW then the R, G and B components obtained by applying the component swizzle to format must each have a bit-depth greater than or equal to 8

• VUID-VkSamplerYcbcrConversionCreateInfo-forceExplicitReconstruction-01656
  If the potential format features of the sampler Y′C_b conversion do not support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT forceExplicitReconstruction must be VK_FALSE

• VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-01657
  If the potential format features of the sampler Y′C_b conversion do not support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT, chromaFilter must not be VK_FILTER_LINEAR

• VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09207
  If the pNext chain includes a VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM structure, and if the ycbcrDegamma feature is not enabled, then VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableYDegamma must be VK_FALSE

• VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09208
  If the pNext chain includes a VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM structure, and if the ycbcrDegamma feature is not enabled, then VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableCbCrDegamma must be VK_FALSE

• VUID-VkSamplerYcbcrConversionCreateInfo-pNext-09209
  If the pNext chain includes a VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM structure, format must be a format with 8-bit R, G, and B components.

Valid Usage (Implicit)

• VUID-VkSamplerYcbcrConversionCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_CREATE_INFO

• VUID-VkSamplerYcbcrConversionCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkExternalFormatANDROID,
VkExternalFormatQNX, or VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM

- VUID-VkSamplerYcbcrConversionCreateInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique
- VUID-VkSamplerYcbcrConversionCreateInfo-format-parameter
  format must be a valid VkFormat value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrModel-parameter
  ycbcrModel must be a valid VkSamplerYcbcrModelConversion value
- VUID-VkSamplerYcbcrConversionCreateInfo-ycbcrRange-parameter
  ycbcrRange must be a valid VkSamplerYcbcrRange value
- VUID-VkSamplerYcbcrConversionCreateInfo-components-parameter
  components must be a valid VkComponentMapping structure
- VUID-VkSamplerYcbcrConversionCreateInfo-xChromaOffset-parameter
  xChromaOffset must be a valid VkChromaLocation value
- VUID-VkSamplerYcbcrConversionCreateInfo-yChromaOffset-parameter
  yChromaOffset must be a valid VkChromaLocation value
- VUID-VkSamplerYcbcrConversionCreateInfo-chromaFilter-parameter
  chromaFilter must be a valid VkFilter value

If chromaFilter is VK_FILTER_NEAREST, chroma samples are reconstructed to luma component resolution using nearest-neighbour sampling. Otherwise, chroma samples are reconstructed using interpolation. More details can be found in the description of sampler Y’C_bC_r conversion in the Image Operations chapter.

VkSamplerYcbcrModelConversion defines the conversion from the source color model to the shader color model. Possible values are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrModelConversion {
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY = 0,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY = 1,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709 = 2,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601 = 3,
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020 = 4,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY_KHR =
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY_KHR =
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709_KHR =
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601_KHR =
    VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601,
```
or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrModelConversion VkSamplerYcbcrModelConversionKHR;
```

- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY** specifies that the input values to the conversion are unmodified.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY** specifies no model conversion but the inputs are range expanded as for Y′C_bC_r.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709** specifies the color model conversion from Y′C_bC_r to R′G′B′ defined in BT.709 and described in the “BT.709 Y′C_bC_r conversion” section of the Khronos Data Format Specification.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601** specifies the color model conversion from Y′C_bC_r to R′G′B′ defined in BT.601 and described in the “BT.601 Y′C_bC_r conversion” section of the Khronos Data Format Specification.
- **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020** specifies the color model conversion from Y′C_bC_r to R′G′B′ defined in BT.2020 and described in the “BT.2020 Y′C_bC_r conversion” section of the Khronos Data Format Specification.

In the **VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_** color models, for the input to the sampler Y′C_bC_r range expansion and model conversion:

- the Y (Y′ luma) component corresponds to the G component of an RGB image.
- the CB (C_b or “U” blue color difference) component corresponds to the B component of an RGB image.
- the CR (C_r or “V” red color difference) component corresponds to the R component of an RGB image.
- the alpha component, if present, is not modified by color model conversion.

These rules reflect the mapping of components after the component swizzle operation (controlled by *VkSamplerYcbcrConversionCreateInfo::components*).

**Note**

For example, an “YUVA” 32-bit format comprising four 8-bit components can be implemented as **VK_FORMAT_R8G8B8A8_UNORM** with a component mapping:

- `components.a = VK_COMPONENT_SWIZZLE_IDENTITY`
- `components.r = VK_COMPONENT_SWIZZLE_B`
- `components.g = VK_COMPONENT_SWIZZLE_R`
The `VkSamplerYcbcrRange` enum describes whether color components are encoded using the full range of numerical values or whether values are reserved for headroom and foot room. `VkSamplerYcbcrRange` is defined as:

```c
// Provided by VK_VERSION_1_1
typedef enum VkSamplerYcbcrRange {
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL = 0,
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW = 1,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_FULL_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_FULL,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_SAMPLER_YCBCR_RANGE_ITU_NARROW_KHR = VK_SAMPLER_YCBCR_RANGE_ITU_NARROW,
} VkSamplerYcbcrRange;
```

or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrRange VKSamplerYcbcrRangeKHR;
```

- `VK_SAMPLER_YCBCR_RANGE_ITU_FULL` specifies that the full range of the encoded values are valid and interpreted according to the ITU “full range” quantization rules.
- `VK_SAMPLER_YCBCR_RANGE_ITU_NARROW` specifies that headroom and foot room are reserved in the numerical range of encoded values, and the remaining values are expanded according to the ITU “narrow range” quantization rules.

The formulae for these conversions is described in the Sampler Y'CbCr Range Expansion section of the Image Operations chapter.

No range modification takes place if `ycbcrModel` is `VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY`; the `ycbcrRange` field of `VkSamplerYcbcrConversionCreateInfo` is ignored in this case.

The `VkChromaLocation` enum defines the location of downsampled chroma component samples relative to the luma samples, and is defined as:

```c
// Provided by VK_VERSION_1_1
typedef enum VkChromaLocation {
    VK_CHROMA_LOCATION_COSITED_EVEN = 0,
    VK_CHROMA_LOCATION_MIDPOINT = 1,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_COSITED_EVEN_KHR = VK_CHROMA_LOCATION_COSITED_EVEN,
    // Provided by VK_KHR_sampler_ycbcr_conversion
    VK_CHROMA_LOCATION_MIDPOINT_KHR = VK_CHROMA_LOCATION_MIDPOINT,
} VkChromaLocation;
```
or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkChromaLocation VkChromaLocationKHR;
```

- **VK_CHROMA_LOCATION_COSITED_EVEN** specifies that downscaled chroma samples are aligned with luma samples with even coordinates.
- **VK_CHROMA_LOCATION_MIDPOINT** specifies that downscaled chroma samples are located halfway between each even luma sample and the nearest higher odd luma sample.

Applications **can** enable sRGB to linear conversion for the R, G, and B components of a \(Y'CbCr\) image during **format conversion** by including \(VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM\) structure in the \(pNext\) chain of \(VkSamplerYcbcrConversionCreateInfo\).

The **VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM** structure is defined as:

```c
// Provided by VK_QCOM_ycbcr_degamma
typedef struct VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 enableYDegamma;
    VkBool32 enableCbCrDegamma;
} VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM;
```

- \(sType\) is a **VkStructureType** value identifying this structure.
- \(pNext\) is **NULL** or a pointer to a structure extending this structure.
- \(enableYDegamma\) indicates sRGB to linear conversion is enabled for the G component.
- \(enableCbCrDegamma\) indicates sRGB to linear conversion is enabled for the R and B components.

**Valid Usage (Implicit)**

- **VUID-VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM-sType-sType**

To destroy a sampler \(Y'CbCr\) conversion, call:

```c
// Provided by VK_VERSION_1_1
void vkDestroySamplerYcbcrConversion(
    VkDevice device,
    VkSamplerYcbcrConversion ycbcrConversion,
    const VkAllocationCallbacks* pAllocator);
```

or the equivalent command
void vkDestroySamplerYcbcrConversionKHR(VkDevice device, VkSamplerYcbcrConversion ycbcrConversion, const VkAllocationCallbacks* pAllocator);

- `device` is the logical device that destroys the Y’C_aC_b conversion.
- `ycbcrConversion` is the conversion to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

### Valid Usage (Implicit)

- VUID-vkDestroySamplerYcbcrConversion-device-parameter
  
  `device` must be a valid `VkDevice` handle

- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parameter
  
  If `ycbcrConversion` is not `VK_NULL_HANDLE`, `ycbcrConversion` must be a valid `VkSamplerYcbcrConversion` handle

- VUID-vkDestroySamplerYcbcrConversion-pAllocator-parameter
  
  If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure

- VUID-vkDestroySamplerYcbcrConversion-ycbcrConversion-parent
  
  If `ycbcrConversion` is a valid handle, it must have been created, allocated, or retrieved from `device`

### Host Synchronization

- Host access to `ycbcrConversion` must be externally synchronized

In addition to the predefined border color values, applications can provide a custom border color value by including the `VkSamplerCustomBorderColorCreateInfoEXT` structure in the `VkSamplerCreateInfo::pNext` chain.

The `VkSamplerCustomBorderColorCreateInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_custom_border_color
typedef struct VkSamplerCustomBorderColorCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkClearColorValue customBorderColor;
    VkFormat format;
} VkSamplerCustomBorderColorCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `customBorderColor` is a `VkClearColorValue` representing the desired custom sampler border color.

• `format` is a `VkFormat` representing the format of the sampled image view(s). This field may be `VK_FORMAT_UNDEFINED` if the `customBorderColorWithoutFormat` feature is enabled.

Note

If `format` is a depth/stencil format, the aspect is determined by the value of `VkSamplerCreateInfo::borderColor`. If `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, the depth aspect is considered. If `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT`, the stencil aspect is considered.

If `format` is `VK_FORMAT_UNDEFINED`, the `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT`, and the sampler is used with an image with a stencil format, then the implementation must source the custom border color from either the first or second components of `VkSamplerCreateInfo::customBorderColor` and should source it from the first component.

Valid Usage

• VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-07605
  If `format` is not `VK_FORMAT_UNDEFINED` and `format` is not a depth/stencil format then the `VkSamplerCreateInfo::borderColor` type must match the sampled type of the provided `format`, as shown in the SPIR-V Type column of the Interpretation of Numeric Format table.

• VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04014
  If the `customBorderColorWithoutFormat` feature is not enabled then `format` must not be `VK_FORMAT_UNDEFINED`.

• VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-04015
  If the sampler is used to sample an image view of `VK_FORMAT_B4G4R4A4_UNORM_PACK16`, `VK_FORMAT_B5G6R5_UNORM_PACK16`, `VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR`, or `VK_FORMAT_B5G5R5A1_UNORM_PACK16` format then `format` must not be `VK_FORMAT_UNDEFINED`.

Valid Usage (Implicit)

• VUID-VkSamplerCustomBorderColorCreateInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_CREATE_INFO_EXT`.

• VUID-VkSamplerCustomBorderColorCreateInfoEXT-format-parameter
  `format` must be a valid `VkFormat` value.

If the sampler is created with `VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK`, `VK_BORDER_COLOR_INT_OPAQUE_BLACK`, `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`, or `VK_BORDER_COLOR_INT_CUSTOM_EXT` border color, and that sampler will be combined with an image view...
that does not have an identity swizzle, and VkPhysicalDeviceBorderColorSwizzleFeaturesEXT:
::borderColorSwizzleFromImage is not enabled, then it is necessary to specify the component mapping of
the border color, by including the VkSamplerBorderColorComponentMappingCreateInfoEXT structure
in the VkSamplerCreateInfo::pNext chain, to get defined results.

The VkSamplerBorderColorComponentMappingCreateInfoEXT structure is defined as:

```c
// Provided by VK_EXT_border_color_swizzle
typedef struct VkSamplerBorderColorComponentMappingCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkComponentMapping components;
    VkBool32 srgb;
} VkSamplerBorderColorComponentMappingCreateInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **components** is a VkComponentMapping structure specifying a remapping of the border color
  components.
- **srgb** indicates that the sampler will be combined with an image view that has an image format
  which is sRGB encoded.

The VkComponentMapping components member describes a remapping from components of the
border color to components of the vector returned by shader image instructions when the border
color is used.

### Valid Usage

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-borderColorSwizzle-06437
  The borderColorSwizzle feature **must** be enabled

### Valid Usage (Implicit)

- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-sType-sType
  **must** be VK_STRUCTURE_TYPE_SAMPLER_BORDER_COLOR_COMPONENT_MAPPING_CREATE_INFO_EXT
- VUID-VkSamplerBorderColorComponentMappingCreateInfoEXT-components-parameter
  components **must** be a valid VkComponentMapping structure

The VkSamplerBlockMatchWindowCreateInfoQCOM structure is defined as:

```c
// Provided by VK_QCOM_image_processing2
typedef struct VkSamplerBlockMatchWindowCreateInfoQCOM {
```

---

1219
VkStructureType sType;
const void* pNext;
VkExtent2D windowExtent;
VkBlockMatchWindowCompareModeQCOM windowCompareMode;
}
VkSamplerBlockMatchWindowCreateInfoQCOM;

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **windowExtent** is a *VkExtent2D* specifying a the width and height of the block match window.
- **windowCompareMode** is a *VkBlockMatchWindowCompareModeQCOM* specifying the compare mode.

### Valid Usage

- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-WindowExtent-09210
  
  **WindowExtent** must not be larger than 
  
  *VkPhysicalDeviceImageProcessing2PropertiesQCOM::maxBlockMatchWindow*. 

### Valid Usage (Implicit)

- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-sType-sType
  
  **sType** must be *VK_STRUCTURE_TYPE_SAMPLER_BLOCK_MATCH_WINDOW_CREATE_INFO_QCOM*
  
- VUID-VkSamplerBlockMatchWindowCreateInfoQCOM-windowCompareMode-parameter
  
  **windowCompareMode** must be a valid *VkBlockMatchWindowCompareModeQCOM* value

The **VkBlockMatchWindowCompareModeQCOM** enum describes how block match values within the window are compared. **VkBlockMatchWindowCompareModeQCOM** is defined as:

```c
// Provided by VK_QCOM_image_processing2
typedef enum VkBlockMatchWindowCompareModeQCOM {
  VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MIN_QCOM = 0,
  VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MAX_QCOM = 1,
} VkBlockMatchWindowCompareModeQCOM;
```

- **VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MIN_QCOM** specifies that windowed block match operations return the minimum error within the window.
- **VK_BLOCK_MATCH_WINDOW_COMPARE_MODE_MAX_QCOM** specifies that windowed block match operations return the maximum error within the window.
Chapter 14. Resource Descriptors

A descriptor is an opaque data structure representing a shader resource such as a buffer, buffer view, image view, sampler, or combined image sampler. Descriptors are organized into descriptor sets, which are bound during command recording for use in subsequent drawing commands. The arrangement of content in each descriptor set is determined by a descriptor set layout, which determines what descriptors can be stored within it. The sequence of descriptor set layouts that can be used by a pipeline is specified in a pipeline layout. Each pipeline object can use up to maxBoundDescriptorSets (see Limits) descriptor sets.

If the descriptorBuffer feature is enabled, the implementation supports placing descriptors into descriptor buffers which are bound during command recording in a similar way to descriptor sets.

Shaders access resources via variables decorated with a descriptor set and binding number that link them to a descriptor in a descriptor set. The shader interface mapping to bound descriptor sets is described in the Shader Resource Interface section.

Shaders can also access buffers without going through descriptors by using Physical Storage Buffer Access to access them through 64-bit addresses.

14.1. Descriptor Types

There are a number of different types of descriptor supported by Vulkan, corresponding to different resources or usage. The following sections describe the API definitions of each descriptor type. The mapping of each type to SPIR-V is listed in the Shader Resource and Descriptor Type Correspondence and Shader Resource and Storage Class Correspondence tables in the Shader Interfaces chapter.

14.1.1. Storage Image

A storage image (VK_DESCRIPTOR_TYPE_STORAGE_IMAGE) is a descriptor type associated with an image resource via an image view that load, store, and atomic operations can be performed on.

Storage image loads are supported in all shader stages for image views whose format features contain VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT.

Stores to storage images are supported in task, mesh and compute shaders for image views whose format features contain VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT.

Atomic operations on storage images are supported in task, mesh and compute shaders for image views whose format features contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT.

When the fragmentStoresAndAtomics feature is enabled, stores and atomic operations are also supported for storage images in fragment shaders with the same set of image formats as supported in compute shaders. When the vertexPipelineStoresAndAtomics feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of image formats as supported in compute shaders.

The image subresources for a storage image must be in the VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR or
14.1.2. Sampler

A sampler descriptor (VK_DESCRIPTOR_TYPE_SAMPLER) is a descriptor type associated with a sampler object, used to control the behavior of sampling operations performed on a sampled image.

14.1.3. Sampled Image

A sampled image (VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE) is a descriptor type associated with an image resource via an image view that sampling operations can be performed on.

Shaders combine a sampled image variable and a sampler variable to perform sampling operations.

Sampled images are supported in all shader stages for image views whose format features contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT.

An image subresources for a sampled image must be in one of the following layouts:

- VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_GENERAL
- VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
- VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR
- VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT

14.1.4. Combined Image Sampler

A combined image sampler (VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER) is a single descriptor type associated with both a sampler and an image resource, combining both a sampler and sampled image descriptor into a single descriptor.

If the descriptor refers to a sampler that performs Y’CbCr conversion or samples a subsampled image, the sampler must only be used to sample the image in the same descriptor. Otherwise, the sampler and image in this type of descriptor can be used freely with any other samplers and images.

An image subresources for a combined image sampler must be in one of the following layouts:

- VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL
- VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_GENERAL
• VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
• VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
• VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR
• VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT

Note
On some implementations, it may be more efficient to sample from an image using a combination of sampler and sampled image that are stored together in the descriptor set in a combined descriptor.

14.1.5. Uniform Texel Buffer

A uniform texel buffer (VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER) is a descriptor type associated with a buffer resource via a buffer view that image sampling operations can be performed on.

Uniform texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image.

Load operations from uniform texel buffers are supported in all shader stages for buffer view formats which report format features support for VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT

14.1.6. Storage Texel Buffer

A storage texel buffer (VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER) is a descriptor type associated with a buffer resource via a buffer view that image load, store, and atomic operations can be performed on.

Storage texel buffers define a tightly-packed 1-dimensional linear array of texels, with texels going through format conversion when read in a shader in the same way as they are for an image. Unlike uniform texel buffers, these buffers can also be written to in the same way as for storage images.

Storage texel buffer loads are supported in all shader stages for texel buffer view formats which report format features support for VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT

Stores to storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report format features support for VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT

Atomic operations on storage texel buffers are supported in task, mesh and compute shaders for texel buffer formats which report format features support for VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

When the fragmentStoresAndAtomics feature is enabled, stores and atomic operations are also supported for storage texel buffers in fragment shaders with the same set of texel buffer formats as
supported in compute shaders. When the `vertexPipelineStoresAndAtomics` feature is enabled, stores and atomic operations are also supported in vertex, tessellation, and geometry shaders with the same set of texel buffer formats as supported in compute shaders.

### 14.1.7. Storage Buffer

A *storage buffer* (`VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`) is a descriptor type associated with a buffer resource directly, described in a shader as a structure with various members that load, store, and atomic operations can be performed on.

Note

Atomic operations can only be performed on members of certain types as defined in the SPIR-V environment appendix.

### 14.1.8. Uniform Buffer

A *uniform buffer* (`VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`) is a descriptor type associated with a buffer resource directly, described in a shader as a structure with various members that load operations can be performed on.

### 14.1.9. Dynamic Uniform Buffer

A *dynamic uniform buffer* (`VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`) is almost identical to a uniform buffer, and differs only in how the offset into the buffer is specified. The base offset calculated by the `VkDescriptorBufferInfo` when initially updating the descriptor set is added to a dynamic offset when binding the descriptor set.

### 14.1.10. Dynamic Storage Buffer

A *dynamic storage buffer* (`VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`) is almost identical to a storage buffer, and differs only in how the offset into the buffer is specified. The base offset calculated by the `VkDescriptorBufferInfo` when initially updating the descriptor set is added to a dynamic offset when binding the descriptor set.

### 14.1.11. Inline Uniform Block

An *inline uniform block* (`VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`) is almost identical to a uniform buffer, and differs only in taking its storage directly from the encompassing descriptor set instead of being backed by buffer memory. It is typically used to access a small set of constant data that does not require the additional flexibility provided by the indirection enabled when using a uniform buffer where the descriptor and the referenced buffer memory are decoupled. Compared to push constants, they allow reusing the same set of constant data across multiple disjoint sets of drawing and dispatching commands.

Inline uniform block descriptors cannot be aggregated into arrays. Instead, the array size specified for an inline uniform block descriptor binding specifies the binding's capacity in bytes.
14.1.12. Sample Weight Image

A sample weight image (VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM) is a descriptor type associated with an image resource via an image view that can be used in weight image sampling. The image view must have been created with VkImageViewSampleWeightCreateInfoQCOM.

Shaders can combine a weight image variable, a sampled image variable, and a sampler variable to perform weight image sampling.

Weight image sampling is supported in all shader stages if the weight image view specifies a format that supports format feature VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM and the sampled image view specifies a format that supports format feature VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM.

The image subresources for the weight image must be in the VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL layout in order to access its data in a shader.

14.1.13. Block Matching Image

A block matching image (VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM) is a descriptor type associated with an image resource via an image view that can be used in block matching.

Shaders can combine a target image variable, a reference image variable, and a sampler variable to perform block matching.

Block matching is supported in all shader stages for if both the target view and reference view specifies a format that supports format feature VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM.

The image subresources for block matching must be in the VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL layout in order to access its data in a shader.

An input attachment (VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT) is a descriptor type associated with an image resource via an image view that can be used for framebuffer local load operations in fragment shaders.

All image formats that are supported for color attachments (VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT or VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV) or depth/stencil attachments (VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT) for a given image tiling mode are also supported for input attachments.

An image view used as an input attachment must be in one of the following layouts:

• VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_GENERAL
• VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR
• VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL
• VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL
• VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR
• VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT
• VK_IMAGE_LAYOUT_RENDERING_LOCAL_READ_KHR

14.1.15. Acceleration Structure

An acceleration structure (VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV) is a descriptor type that is used to retrieve scene geometry from within shaders that are used for ray traversal. Shaders have read-only access to the memory.

14.1.16. Mutable

A descriptor of mutable (VK_DESCRIPTOR_TYPE_MUTABLE_EXT) type indicates that this descriptor can mutate to any of the descriptor types given in the VkMutableDescriptorTypeCreateInfoEXT::pDescriptorTypes list of descriptor types in the pNext chain of VkDescriptorSetLayoutCreateInfo for this binding. At any point, each individual descriptor of mutable type has an active descriptor type. The active descriptor type can be any one of the declared types in pDescriptorTypes. Additionally, a mutable descriptor's active descriptor type can be of the VK_DESCRIPTOR_TYPE_MUTABLE_EXT type, which is the initial active descriptor type. The active descriptor type can change when the descriptor is updated. When a descriptor is consumed by binding a descriptor set, the active descriptor type is considered, not VK_DESCRIPTOR_TYPE_MUTABLE_EXT.

An active descriptor type ofVK_DESCRIPTOR_TYPE_MUTABLE_EXT is considered an undefined descriptor. If a descriptor is consumed where the active descriptor type does not match what the shader expects, the descriptor is considered an undefined descriptor.

Note

To find which descriptor types are supported as VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the application can use vkGetDescriptorSetLayoutSupport with an VK_DESCRIPTOR_TYPE_MUTABLE_EXT binding, with the list of descriptor types to query in the VkMutableDescriptorTypeCreateInfoEXT::pDescriptorTypes array for that binding.

Note

The intention of a mutable descriptor type is that implementations allocate N bytes per descriptor, where N is determined by the maximum descriptor size for a given descriptor binding. Implementations are not expected to keep track of the active descriptor type, and it should be considered a C-like union type.

A mutable descriptor type is not considered as efficient in terms of runtime performance as using a non-mutable descriptor type, and applications are not encouraged to use them outside API layering efforts. Mutable descriptor types can
be more efficient if the alternative is using many different descriptors to emulate mutable descriptor types.

14.2. Descriptor Sets

Descriptors are grouped together into descriptor set objects. A descriptor set object is an opaque object containing storage for a set of descriptors, where the types and number of descriptors is defined by a descriptor set layout. The layout object may be used to define the association of each descriptor binding with memory or other implementation resources. The layout is used both for determining the resources that need to be associated with the descriptor set, and determining the interface between shader stages and shader resources.

14.2.1. Descriptor Set Layout

A descriptor set layout object is defined by an array of zero or more descriptor bindings. Each individual descriptor binding is specified by a descriptor type, a count (array size) of the number of descriptors in the binding, a set of shader stages that can access the binding, and (if using immutable samplers) an array of sampler descriptors.

Descriptor set layout objects are represented by VkDescriptorSetLayout handles:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorSetLayout)
```

To create descriptor set layout objects, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorSetLayout(VkDevice device, const VkDescriptorSetLayoutCreateInfo* pCreateInfo, const VkAllocationCallbacks* pAllocator, VkDescriptorSetLayout* pSetLayout);
```

- `device` is the logical device that creates the descriptor set layout.
- `pCreateInfo` is a pointer to a VkDescriptorSetLayoutCreateInfo structure specifying the state of the descriptor set layout object.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pSetLayout` is a pointer to a VkDescriptorSetLayout handle in which the resulting descriptor set layout object is returned.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorSetLayout-device-parameter
  
  `device` must be a valid VkDevice handle
Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

Information about the descriptor set layout is passed in a `VkDescriptorSetLayoutCreateInfo` structure:

```c
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutCreateInfo {
    VkStructureType sType;
    const void*pNext;
    VkDescriptorSetLayoutCreateFlags flags;
    uint32_t bindingCount;
    const VkDescriptorSetLayoutBinding* pBindings;
} VkDescriptorSetLayoutCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkDescriptorSetLayoutCreateFlagBits` specifying options for descriptor set layout creation.
- `bindingCount` is the number of elements in `pBindings`.
- `pBindings` is a pointer to an array of `VkDescriptorSetLayoutBinding` structures.

Valid Usage

- VUID-VkDescriptorSetLayoutCreateInfo-binding-00279
  If the `perStageDescriptorSet` feature is not enabled, or `flags` does not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV`, then the `VkDescriptorSetLayoutBinding::binding` members of the elements of the `pBindings` array must each have different values.
- **VUID-VkDescriptorSetLayoutCreateInfo-flags-00280**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then all elements of `pBindings` must not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-02208**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then all elements of `pBindings` must not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-00281**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then the total number of elements of all bindings must be less than or equal to `VkPhysicalDevicePushDescriptorPropertiesKHR::maxPushDescriptors`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-04590**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, `flags` must not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-04591**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, `pBindings` must not have a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-03000**
  If any binding has the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, `flags` must include `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`.

- **VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-03001**
  If any binding has the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, then all bindings must not have `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-04592**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, `flags` must not contain `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`.

- **VUID-VkDescriptorSetLayoutCreateInfo-pBindings-07303**
  If any element `pBindings[i]` has a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then a `VkMutableDescriptorTypeCreateInfoEXT` must be present in the `pNext` chain, and `mutableDescriptorTypeListCount` must be greater than `i`.

- **VUID-VkDescriptorSetLayoutCreateInfo-descriptorType-04594**
  If a binding has a `descriptorType` value of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, then `pImmutableSamplers` must be `NULL`.

- **VUID-VkDescriptorSetLayoutCreateInfo-mutableDescriptorType-04595**
  If `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` is not enabled, `pBindings` must not contain a `descriptorType` of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-04596**
  If `flags` contains `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT`, `VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType` must be enabled.

- **VUID-VkDescriptorSetLayoutCreateInfo-flags-08000**
If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, then all elements of pBindings must not have a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08001
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, flags must also contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08002
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, then flags must not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-08003
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, then flags must not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_VALVE.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-09463
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV, then perStageDescriptorSet must be enabled.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-09464
  If flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV, then there must not be any two elements of the pBindings array with the same VkDescriptorSetLayoutBinding::binding value and their VkDescriptorSetLayoutBinding::stageFlags containing the same bit.

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO.

- VUID-VkDescriptorSetLayoutCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkDescriptorSetLayoutBindingFlagsCreateInfo or VkMutableDescriptorTypeCreateInfoEXT.

- VUID-VkDescriptorSetLayoutCreateInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-parameter
  flags must be a valid combination of VkDescriptorSetLayoutCreateFlagBits values.

- VUID-VkDescriptorSetLayoutCreateInfo-flags-parameter
  If bindingCount is not 0, pBindings must be a valid pointer to an array of bindingCount valid VkDescriptorSetLayoutBinding structures.

If the pNext chain of a VkDescriptorSetLayoutCreateInfo or VkDescriptorPoolCreateInfo structure includes a VkMutableDescriptorTypeCreateInfoEXT structure, then that structure specifies information about the possible descriptor types for mutable descriptor types.

The VkMutableDescriptorTypeCreateInfoEXT structure is defined as:
// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    uint32_t mutableDescriptorTypeListCount;
    const VkMutableDescriptorTypeListEXT* pMutableDescriptorTypeLists;
} VkMutableDescriptorTypeCreateInfoEXT;

or the equivalent

// Provided by VK_VALVE_mutable_descriptor_type
typedef VkMutableDescriptorTypeCreateInfoEXT VkMutableDescriptorTypeCreateInfoVALVE;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• mutableDescriptorTypeListCount is the number of elements in pMutableDescriptorTypeLists.
• pMutableDescriptorTypeLists is a pointer to an array of VkMutableDescriptorTypeListEXT structures.

If mutableDescriptorTypeListCount is zero or if this structure is not included in the pNext chain, the VkMutableDescriptorTypeListEXT for each element is considered to be zero or NULL for each member. Otherwise, the descriptor set layout binding at VkDescriptorSetLayoutCreateInfo::pBindings[i] uses the descriptor type lists in VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i].

Valid Usage (Implicit)

• VUID-VkMutableDescriptorTypeCreateInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_MUTABLE_DESCRIPTOR_TYPE_CREATE_INFO_EXT

• VUID-VkMutableDescriptorTypeCreateInfoEXT-pMutableDescriptorTypeLists-parameter
  If mutableDescriptorTypeListCount is not 0, pMutableDescriptorTypeLists must be a valid pointer to an array of mutableDescriptorTypeListCount valid VkMutableDescriptorTypeListEXT structures

The list of potential descriptor types a given mutable descriptor can mutate to is passed in a VkMutableDescriptorTypeListEXT structure.

The VkMutableDescriptorTypeListEXT structure is defined as:

// Provided by VK_EXT_mutable_descriptor_type
typedef struct VkMutableDescriptorTypeListEXT {
    uint32_t descriptorTypeCount;
    const VkDescriptorType* pDescriptorTypes;
} VkMutableDescriptorTypeListEXT;
or the equivalent

```c
// Provided by VK_VALVEmutable_descriptor_type
typedef VkMutableDescriptorTypeListEXT VkMutableDescriptorTypeListVALVE;
```

- `descriptorTypeCount` is the number of elements in `pDescriptorTypes`.
- `pDescriptorTypes` is `NULL` or a pointer to an array of `descriptorTypeCount` `VkDescriptorType` values defining which descriptor types a given binding may mutate to.

### Valid Usage

- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04597
  - `descriptorTypeCount` must not be 0 if the corresponding binding is of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04598
  - `pDescriptorTypes` must be a valid pointer to an array of `descriptorTypeCount` valid, unique `VkDescriptorType` values if the given binding is of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` type
- VUID-VkMutableDescriptorTypeListEXT-descriptorTypeCount-04599
  - `descriptorTypeCount` must be 0 if the corresponding binding is not of `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04600
  - `pDescriptorTypes` must not contain `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04601
  - `pDescriptorTypes` must not contain `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04602
  - `pDescriptorTypes` must not contain `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`
- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-04603
  - `pDescriptorTypes` must not contain `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`

### Valid Usage (Implicit)

- VUID-VkMutableDescriptorTypeListEXT-pDescriptorTypes-parameter
  - If `descriptorTypeCount` is not 0, `pDescriptorTypes` must be a valid pointer to an array of `descriptorTypeCount` valid `VkDescriptorType` values

Bits which can be set in `VkDescriptorSetLayoutCreateInfo::flags`, specifying options for descriptor set layout, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorSetLayoutCreateFlagBits {
```
• **VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR** specifies that descriptor sets must not be allocated using this layout, and descriptors are instead pushed by `vkCmdPushDescriptorSetKHR`.

• **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** specifies that descriptor sets using this layout must be allocated from a descriptor pool created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set. Descriptor set layouts created with this bit set have alternate limits for the maximum number of descriptors per-stage and per-pipeline layout. The non-UpdateAfterBind limits only count descriptors in sets created without this flag. The UpdateAfterBind limits count all descriptors, but the limits may be higher than the non-UpdateAfterBind limits.

• **VK_DESCRIPTOR_SET_LAYOUT_CREATE_INDIRECT_BINDABLE_BIT_NV** specifies that descriptor sets using this layout allows them to be bound with compute pipelines that are created with `VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV` flag set to be used in Device-Generated Commands.

• **VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT** specifies that this layout must only be used with descriptor buffers.

• **VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT** specifies that this is a layout only containing immutable samplers that can be bound by `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`. Unlike normal immutable samplers, embedded immutable samplers do not require the application to provide them in a descriptor buffer.

• **VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT** specifies that descriptor sets using this layout must be allocated from a descriptor pool created with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_POOL_BIT` bit set. Descriptor set layouts created with this bit have no expressible limit for maximum number of descriptors per-stage. Host descriptor sets
are limited only by available host memory, but may be limited for implementation specific reasons. Implementations may limit the number of supported descriptors to UpdateAfterBind limits or non-UpdateAfterBind limits, whichever is larger.

- **VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV** specifies that binding numbers in descriptor sets using this layout may represent different resources and/or types of resources in each stage.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorSetLayoutCreateFlags;
```

**VkDescriptorSetLayoutCreateFlags** is a bitmask type for setting a mask of zero or more **VkDescriptorSetLayoutCreateFlagBits**.

The **VkDescriptorSetLayoutBinding** structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetLayoutBinding {
    uint32_t binding;
    VkDescriptorType descriptorType;
    uint32_t descriptorCount;
    VkShaderStageFlags stageFlags;
    const VkSampler* pImmutableSamplers;
} VkDescriptorSetLayoutBinding;
```

- **binding** is the binding number of this entry and corresponds to a resource of the same binding number in the shader stages.

- **descriptorType** is a **VkDescriptorType** specifying which type of resource descriptors are used for this binding.

- **descriptorCount** is the number of descriptors contained in the binding, accessed in a shader as an array, except if descriptorType is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** in which case descriptorCount is the size in bytes of the inline uniform block. If descriptorCount is zero this binding entry is reserved and the resource **must** not be accessed from any stage via this binding within any pipeline using the set layout.

- **stageFlags** member is a bitmask of **VkShaderStageFlagBits** specifying which pipeline shader stages can access a resource for this binding. **VK_SHADER_STAGE_ALL** is a shorthand specifying that all defined shader stages, including any additional stages defined by extensions, can access the resource.

  If a shader stage is not included in **stageFlags**, then a resource **must** not be accessed from that stage via this binding within any pipeline using the set layout. Other than input attachments which are limited to the fragment shader, there are no limitations on what combinations of stages can use a descriptor binding, and in particular a binding can be used by both graphics stages and the compute stage.

- **pImmutableSamplers** affects initialization of samplers. If descriptorType specifies a **VK_DESCRIPTOR_TYPE_SAMPLER** or **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER** type descriptor, then **pImmutableSamplers** can be used to initialize a set of immutable samplers. Immutable samplers
are permanently bound into the set layout and **must** not be changed; updating a
**VK_DESCRIPTOR_TYPE_SAMPLER** descriptor with immutable samplers is not allowed and updates to a
**VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER** descriptor with immutable samplers does not
modify the samplers (the image views are updated, but the sampler updates are ignored). If
`pImmutableSamplers` is not `NULL`, then it is a pointer to an array of sampler handles that will be
copied into the set layout and used for the corresponding binding. Only the sampler handles are
copied; the sampler objects **must** not be destroyed before the final use of the set layout and any
descriptor pools and sets created using it. If `pImmutableSamplers` is `NULL`, then the sampler slots
are dynamic and sampler handles **must** be bound into descriptor sets using this layout. If
descriptorType is not one of these descriptor types, then `pImmutableSamplers` is ignored.

The above layout definition allows the descriptor bindings to be specified sparsely such that not all
binding numbers between 0 and the maximum binding number need to be specified in the
`pBindings` array. Bindings that are not specified have a `descriptorCount` and `stageFlags` of zero, and
the value of `descriptorType` is undefined. However, all binding numbers between 0 and the
maximum binding number in the `VkDescriptorSetLayoutCreateInfo::pBindings` array **may** consume
memory in the descriptor set layout even if not all descriptor bindings are used, though it **should**
not consume additional memory from the descriptor pool.

### Note
The maximum binding number specified **should** be as compact as possible to
avoid wasted memory.

### Valid Usage

- **VUID-VkDescriptorSetLayoutBinding-descriptorType-00282**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `descriptorCount` is not 0 and `pImmutableSamplers` is not `NULL`, `pImmutableSamplers` **must** be a valid pointer to an array of
  `descriptorCount` valid `VkSampler` handles

- **VUID-VkDescriptorSetLayoutBinding-descriptorType-04604**
  If the `inlineUniformBlock` feature is not enabled, `descriptorType` **must** not be
  `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`

- **VUID-VkDescriptorSetLayoutBinding-descriptorType-02209**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` then `descriptorCount` **must** be a multiple of 4

- **VUID-VkDescriptorSetLayoutBinding-descriptorType-08004**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` and `VkDescriptorSetLayoutCreateInfo::flags` does not contain
  `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` then `descriptorCount` **must** be
  less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxInlineUniformBlockSize`

- **VUID-VkDescriptorSetLayoutBinding-flags-08005**
  If `VkDescriptorSetLayoutCreateInfo::flags` contains
  `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, `descriptorType`
must be VK_DESCRIPTOR_TYPE_SAMPLER

• VUID-VkDescriptorSetLayoutBinding-flags-08006
If VkDescriptorSetLayoutCreateInfo::flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, descriptorCount must less than or equal to 1

• VUID-VkDescriptorSetLayoutBinding-flags-08007
If VkDescriptorSetLayoutCreateInfo::flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, and descriptorCount is equal to 1, pImmutableSamplers must not be NULL

• VUID-VkDescriptorSetLayoutBinding-descriptorCount-09465
If descriptorCount is not 0, stageFlags must be VK_SHADER_STAGE_ALL or a valid combination of other VkShaderStageFlagBits values

• VUID-VkDescriptorSetLayoutBinding-descriptorType-01510
If descriptorType is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT and descriptorCount is not 0, then stageFlags must be 0 or VK_SHADER_STAGE_FRAGMENT_BIT

• VUID-VkDescriptorSetLayoutBinding-pImmutableSamplers-04009
The sampler objects indicated by pImmutableSamplers must not have a borderColor with one of the values VK_BORDER_COLOR_FLOAT_CUSTOM_EXT or VK_BORDER_COLOR_INT_CUSTOM_EXT

• VUID-VkDescriptorSetLayoutBinding-flags-09466
If VkDescriptorSetLayoutCreateInfo::flags contains VK_DESCRIPTOR_SET_LAYOUT_CREATE_PER_STAGE_BIT_NV, and descriptorCount is not 0, then stageFlags must be a valid combination of VK_SHADER_STAGE_VERTEX_BIT, VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT, VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT, VK_SHADER_STAGE_GEOMETRY_BIT, VK_SHADER_STAGE_FRAGMENT_BIT and VK_SHADER_STAGE_COMPUTE_BIT values

Valid Usage (Implicit)

• VUID-VkDescriptorSetLayoutBinding-descriptorType-parameter
descriptorType must be a valid VkDescriptorType value

If the pNext chain of a VkDescriptorSetLayoutCreateInfo structure includes a VkDescriptorSetLayoutBindingFlagsCreateInfo structure, then that structure includes an array of flags, one for each descriptor set layout binding.

The VkDescriptorSetLayoutBindingFlagsCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetLayoutBindingFlagsCreateInfo {    
    VkStructureType sType;
    const void* pNext;
};
```
```c
uint32_t bindingCount;
const VkDescriptorBindingFlags* pBindingFlags;
} VkDescriptorSetLayoutBindingFlagsCreateInfo;
```

or the equivalent

```c
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorSetLayoutBindingFlagsCreateInfo
VkDescriptorSetLayoutBindingFlagsCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `bindingCount` is zero or the number of elements in `pBindingFlags`.
- `pBindingFlags` is a pointer to an array of `VkDescriptorBindingFlags` bitfields, one for each descriptor set layout binding.

If `bindingCount` is zero or if this structure is not included in the `pNext` chain, the `VkDescriptorBindingFlags` for each descriptor set layout binding is considered to be zero. Otherwise, the descriptor set layout binding at `VkDescriptorSetLayoutCreateInfo::pBindings[i]` uses the flags in `pBindingFlags[i]`.

### Valid Usage

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-bindingCount-03002
  If `bindingCount` is not zero, `bindingCount` must equal `VkDescriptorSetLayoutCreateInfo::bindingCount`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-flags-03003
  If `VkDescriptorSetLayoutCreateInfo::flags` includes `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`, then all elements of `pBindingFlags` must not include `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT`, or `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03004
  If an element of `pBindingFlags` includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, then all other elements of `VkDescriptorSetLayoutCreateInfo::pBindings` must have a smaller value of `binding`

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-09379
  If an element of `pBindingFlags` includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, then it must be the element with the highest `binding` number

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformBufferUpdateAfterBind-03005
  If `VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformBufferUpdateAfterBind` is not enabled, all bindings with
descriptor type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingSampledImageUpdateAfterBind-03006
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingSampledImageUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageImageUpdateAfterBind-03007
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageImageUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageBufferUpdateAfterBind-03008
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUniformTexelBufferUpdateAfterBind-03009
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUniformTexelBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingStorageTexelBufferUpdateAfterBind-03010
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingStorageTexelBufferUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingInlineUniformBlockUpdateAfterBind-02211
  If VkPhysicalDeviceInlineUniformBlockFeatures::descriptorBindingInlineUniformBlockUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingAccelerationStructureUpdateAfterBind-03570
  If VkPhysicalDeviceAccelerationStructureFeaturesKHR::descriptorBindingAccelerationStructureUpdateAfterBind is not enabled, all bindings with descriptor type VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-None-03011
  All bindings with descriptor type VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC must not use VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingUpdateUnusedWhilePending-03012
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingUpdateUnusedWhilePending is not enabled, all elements of pBindingFlags must not include VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingPartiallyBound-03013
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingPartiallyBound is not enabled, all elements of pBindingFlags must not include VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-descriptorBindingVariableDescriptorCount-03014
  If VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingVariableDescriptorCount is not enabled, all elements of pBindingFlags must not include VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-pBindingFlags-03015
  If an element of pBindingFlags includes VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT, that element’s descriptorType must not be VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC

Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_BINDING_FLAGS_CREATE_INFO

- VUID-VkDescriptorSetLayoutBindingFlagsCreateInfo-parameter
  If bindingCount is not 0, pBindingFlags must be a valid pointer to an array of bindingCount valid combinations of VkDescriptorBindingFlagBits values

Bits which can be set in each element of VkDescriptorSetLayoutBindingFlagsCreateInfo::*pBindingFlags, specifying options for the corresponding descriptor set layout binding, are:

```c
// Provided by VK_VERSION_1_2
typedef enum VkDescriptorBindingFlagBits {
  VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT = 0x00000001,
  VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT = 0x00000002,
  VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT = 0x00000004,
  VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT = 0x00000008,
} VkDescriptorBindingFlagBits;
```

// Provided by VK_EXT_descriptor_indexing
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT,
// Provided by VK_EXT_descriptor_indexing
VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT_EXT =
VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT,
// Provided by VK_EXT_descriptor_indexing
VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT_EXT =
VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT,
// Provided by VK_EXT_descriptor_indexing
VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT_EXT =
VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT,
} VkDescriptorBindingFlagBits;

or the equivalent

// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorBindingFlagBits VkDescriptorBindingFlagBitsEXT;

• **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT** indicates that if descriptors in this binding are updated between when the descriptor set is bound in a command buffer and when that command buffer is submitted to a queue, then the submission will use the most recently set descriptors for this binding and the updates do not invalidate the command buffer. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in `vkUpdateDescriptorSetWithTemplateKHR` and `vkUpdateDescriptorSets`. Multiple descriptors with this flag set can be updated concurrently in different threads, though the same descriptor must not be updated concurrently by two threads. Descriptors with this flag set can be updated concurrently with the set being bound to a command buffer in another thread, but not concurrently with the set being reset or freed.

• **VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT** indicates that descriptors in this binding that are not dynamically used need not contain valid descriptors at the time the descriptors are consumed. A descriptor is dynamically used if any shader invocation executes an instruction that performs any memory access using the descriptor. If a descriptor is not dynamically used, any resource referenced by the descriptor is not considered to be referenced during command execution.

• **VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT** indicates that descriptors in this binding can be updated after a command buffer has bound this descriptor set, or while a command buffer that uses this descriptor set is pending execution, as long as the descriptors that are updated are not used by those command buffers. Descriptor bindings created with this flag are also partially exempt from the external synchronization requirement in `vkUpdateDescriptorSetWithTemplateKHR` and `vkUpdateDescriptorSets` in the same way as for **VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT**. If **VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT** is also set, then descriptors can be updated as long as they are not dynamically used by any shader invocations. If **VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT** is not set, then descriptors can be updated as long as they are not statically used by any shader invocations.

• **VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT** indicates that this is a *variable-sized descriptor binding* whose size will be specified when a descriptor set is allocated using **1240**
layout. The value of descriptorCount is treated as an upper bound on the size of the binding. This must only be used for the last binding in the descriptor set layout (i.e. the binding with the largest value of binding). For the purposes of counting against limits such as maxDescriptorSet* and maxPerStageDescriptor*, the full value of descriptorCount is counted, except for descriptor bindings with a descriptor type of Vk_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, when VkDescriptorsetLayoutCreateInfo::flags does not contain VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT. In this case, descriptorCount specifies the upper bound on the byte size of the binding; thus it counts against the maxInlineUniformBlockSize and maxInlineUniformTotalSize limits instead.

Note
Note that while VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT and VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT both involve updates to descriptor sets after they are bound, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT is a weaker requirement since it is only about descriptors that are not used, whereas VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT requires the implementation to observe updates to descriptors that are used.

// Provided by VK_VERSION_1_2
typedef VkFlags VkDescriptorBindingFlags;

or the equivalent

// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorBindingFlags VkDescriptorBindingFlagsEXT;

VkDescriptorBindingFlags is a bitmask type for setting a mask of zero or more VkDescriptorBindingFlagBits.

To query information about whether a descriptor set layout can be created, call:

// Provided by VK_VERSION_1_1
void vkGetDescriptorSetLayoutSupport(
    VkDevice device,
    const VkDescriptorsetLayoutCreateInfo* pCreateInfo,
    VkDescriptorSetLayoutSupport* pSupport);

or the equivalent command

// Provided by VK_KHR_maintenance3
void vkGetDescriptorSetLayoutSupportKHR(
    VkDevice device,
    const VkDescriptorsetLayoutCreateInfo* pCreateInfo,
• `device` is the logical device that would create the descriptor set layout.

• `pCreateInfo` is a pointer to a `VkDescriptorSetLayoutCreateInfo` structure specifying the state of the descriptor set layout object.

• `pSupport` is a pointer to a `VkDescriptorSetLayoutSupport` structure, in which information about support for the descriptor set layout object is returned.

Some implementations have limitations on what fits in a descriptor set which are not easily expressible in terms of existing limits like `maxDescriptorSet*`, for example if all descriptor types share a limited space in memory but each descriptor is a different size or alignment. This command returns information about whether a descriptor set satisfies this limit. If the descriptor set layout satisfies the `VkPhysicalDeviceMaintenance3Properties::maxPerSetDescriptors` limit, this command is guaranteed to return `VK_TRUE` in `VkDescriptorSetLayoutSupport::supported`. If the descriptor set layout exceeds the `VkPhysicalDeviceMaintenance3Properties::maxPerSetDescriptors` limit, whether the descriptor set layout is supported is implementation-dependent and `may` depend on whether the descriptor sizes and alignments cause the layout to exceed an internal limit.

This command does not consider other limits such as `maxPerStageDescriptor*`, and so a descriptor set layout that is supported according to this command `must` still satisfy the pipeline layout limits such as `maxPerStageDescriptor*` in order to be used in a pipeline layout.

**Note**
This is a `VkDevice` query rather than `VkPhysicalDevice` because the answer `may` depend on enabled features.

### Valid Usage (Implicit)

- **VUID-vkGetDescriptorSetLayoutSupport-device-parameter**
  `device` `must` be a valid `VkDevice` handle

- **VUID-vkGetDescriptorSetLayoutSupport-pCreateInfo-parameter**
  `pCreateInfo` `must` be a valid pointer to a valid `VkDescriptorSetLayoutCreateInfo` structure

- **VUID-vkGetDescriptorSetLayoutSupport-pSupport-parameter**
  `pSupport` `must` be a valid pointer to a `VkDescriptorSetLayoutSupport` structure

Information about support for the descriptor set layout is returned in a `VkDescriptorSetLayoutSupport` structure:

```c
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorSetLayoutSupport {
    VkStructureType       sType;
    void*                 pNext;
    VkBool32              supported;
} VkDescriptorSetLayoutSupport;
```

1242
or the equivalent

```c
// Provided by VK_KHR_maintenance3
typedef VkDescriptorSetLayoutSupport VkDescriptorSetLayoutSupportKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supported` specifies whether the descriptor set layout can be created.

`supported` is set to `VK_TRUE` if the descriptor set can be created, or else is set to `VK_FALSE`.

### Valid Usage (Implicit)

- VUID-VkDescriptorSetLayoutSupport-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_SUPPORT`

- VUID-VkDescriptorSetLayoutSupport-pNext-pNext
  
  `pNext` must be `NULL` or a pointer to a valid instance of `VkDescriptorSetVariableDescriptorCountLayoutSupport`

- VUID-VkDescriptorSetLayoutSupport-sType-unique
  
  The `sType` value of each struct in the `pNext` chain must be unique

If the `pNext` chain of a `VkDescriptorSetLayoutSupport` structure includes a `VkDescriptorSetVariableDescriptorCountLayoutSupport` structure, then that structure returns additional information about whether the descriptor set layout is supported.

```c
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountLayoutSupport {
    VkStructureType sType;
    void* pNext;
    uint32_t maxVariableDescriptorCount;
} Vk DescriptorSetVariableDescriptorCountLayoutSupport;
```

or the equivalent

```c
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorSetVariableDescriptorCountLayoutSupport VkDescriptorSetVariableDescriptorCountLayoutSupportEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxVariableDescriptorCount` indicates the maximum number of descriptors supported in the highest numbered binding of the layout, if that binding is variable-sized. If the highest numbered binding of the layout has a descriptor type of
VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then maxVariableDescriptorCount indicates the maximum byte size supported for the binding, if that binding is variable-sized.

If the VkDescriptorSetLayoutCreateInfo structure specified in vkGetDescriptorSetLayoutSupport::pCreateInfo includes a variable-sized descriptor, then supported is determined assuming the requested size of the variable-sized descriptor, and maxVariableDescriptorCount is set to the maximum size of that descriptor that can be successfully created (which is greater than or equal to the requested size passed in). If the VkDescriptorSetLayoutCreateInfo structure does not include a variable-sized descriptor, or if the VkPhysicalDeviceDescriptorIndexingFeatures::descriptorBindingVariableDescriptorCount feature is not enabled, then maxVariableDescriptorCount is set to zero. For the purposes of this command, a variable-sized descriptor binding with a descriptorCount of zero is treated as having a descriptorCount of four if descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, or one otherwise, and thus the binding is not ignored and the maximum descriptor count will be returned. If the layout is not supported, then the value written to maxVariableDescriptorCount is undefined.

Valid Usage (Implicit)

• VUID-VkDescriptorSetVariableDescriptorCountLayoutSupport-sType-sType sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_LAYOUT_SUPPORT

The following examples show a shader snippet using two descriptor sets, and application code that creates corresponding descriptor set layouts.

GLSL example

```glsl
// // binding to a single sampled image descriptor in set 0
// layout (set=0, binding=0) uniform texture2D mySampledImage;

// // binding to an array of sampled image descriptors in set 0
// layout (set=0, binding=1) uniform texture2D myArrayOfSampledImages[12];

// // binding to a single uniform buffer descriptor in set 1
// layout (set=1, binding=0) uniform myUniformBuffer
// {
//   vec4 myElement[32];
// };
```

SPIR-V example

```glsl
...
```
%1 = OpExtInstImport "GLSL.std.450"
...
OpName %9 "mySampledImage"
OpName %14 "myArrayOfSampledImages"
OpName %18 "myUniformBuffer"
OpMemberName %18 0 "myElement"
OpName %20 ""
OpDecorate %9 DescriptorSet 0
OpDecorate %9 Binding 0
OpDecorate %14 DescriptorSet 0
OpDecorate %14 Binding 1
OpDecorate %17 ArrayStride 16
OpMemberDecorate %18 0 Offset 0
OpDecorate %18 Block
OpDecorate %20 DescriptorSet 1
OpDecorate %20 Binding 0
%2 = OpTypeVoid
%3 = OpTypeFunction %2
%6 = OpTypeFloat 32
%7 = OpTypeImage %6 2D 0 0 0 1 Unknown
%8 = OpTypePointer UniformConstant %7
%9 = OpVariable %8 UniformConstant
%10 = OpTypeInt 32 0
%11 = OpConstant %10 12
%12 = OpTypeArray %7 %11
%13 = OpTypePointer UniformConstant %12
%14 = OpVariable %13 UniformConstant
%15 = OpTypeVector %6 4
%16 = OpConstant %10 32
%17 = OpTypeArray %15 %16
%18 = OpTypeStruct %17
%19 = OpTypePointer Uniform %18
%20 = OpVariable %19 Uniform
...

API example

VkResult myResult;

const VkDescriptorSetLayoutBinding myDescriptorSetLayoutBinding[] =
{
    // binding to a single image descriptor
    {
        .binding = 0,
        .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
        .descriptorCount = 1,
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .pImmutableSamplers = NULL
    },
...
// binding to an array of image descriptors
{
    .binding = 1,
    .descriptorType = VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
    .descriptorCount = 12,
    .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
    .pImmutableSamplers = NULL
},

// binding to a single uniform buffer descriptor
{
    .binding = 0,
    .descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
    .descriptorCount = 1,
    .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
    .pImmutableSamplers = NULL
}
}

const VkDescriptorSetLayoutCreateInfo myDescriptorSetLayoutCreateInfo[] =
{
    // Information for first descriptor set with two descriptor bindings
    { 
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 2,
        .pBindings = &myDescriptorSetLayoutBinding[0]
    },

    // Information for second descriptor set with one descriptor binding
    { 
        .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_CREATE_INFO,
        .pNext = NULL,
        .flags = 0,
        .bindingCount = 1,
        .pBindings = &myDescriptorSetLayoutBinding[2]
    }
};

VkDescriptorSetLayout myDescriptorSetLayout[2];

// // Create first descriptor set layout
// //
myResult = vkCreateDescriptorSetLayout( 
    myDevice,
    &myDescriptorSetLayoutCreateInfo[0],
    NULL,
    &myDescriptorSetLayout[0]);
Create second descriptor set layout

```c
myResult = vkCreateDescriptorsetLayout(
    myDevice,
    &myDescriptorSetLayoutCreateInfo[1],
    NULL,
    &myDescriptorSetLayout[1]);
```

To destroy a descriptor set layout, call:

```c
void vkDestroyDescriptorsetLayout(
    VkDevice device,
    VkDescriptorSetLayout descriptorSetLayout,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the descriptor set layout.
- `descriptorSetLayout` is the descriptor set layout to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

**Valid Usage**

- VUID-vkDestroyDescriptorsetLayout-descriptorSetLayout-00284
  If `VkAllocationCallbacks` were provided when `descriptorSetLayout` was created, a compatible set of callbacks must be provided here.

- VUID-vkDestroyDescriptorsetLayout-descriptorSetLayout-00285
  If no `VkAllocationCallbacks` were provided when `descriptorSetLayout` was created, `pAllocator` must be NULL.

**Valid Usage (Implicit)**

- VUID-vkDestroyDescriptorsetLayout-device-parameter
  `device` must be a valid `VkDevice` handle.

- VUID-vkDestroyDescriptorsetLayout-descriptorSetLayout-parameter
  If `descriptorSetLayout` is not `VK_NULL_HANDLE`, `descriptorSetLayout` must be a valid `VkDescriptorSetLayout` handle.

- VUID-vkDestroyDescriptorsetLayout-pAllocator-parameter
  If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure.

- VUID-vkDestroyDescriptorsetLayout-descriptorSetLayout-parent
  If `descriptorSetLayout` is a valid handle, it must have been created, allocated, or retrieved from `device`.
Host Synchronization

- Host access to descriptorSetLayout must be externally synchronized

14.2.2. Pipeline Layouts

Access to descriptor sets from a pipeline is accomplished through a pipeline layout. Zero or more descriptor set layouts and zero or more push constant ranges are combined to form a pipeline layout object describing the complete set of resources that can be accessed by a pipeline. The pipeline layout represents a sequence of descriptor sets with each having a specific layout. This sequence of layouts is used to determine the interface between shader stages and shader resources. Each pipeline is created using a pipeline layout.

Pipeline layout objects are represented by VkPipelineLayout handles:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkPipelineLayout)
```

To create a pipeline layout, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkCreatePipelineLayout(  
    VkDevice device,  
    const VkPipelineLayoutCreateInfo* pCreateInfo,  
    const VkAllocationCallbacks* pAllocator,  
    VkPipelineLayout* pPipelineLayout);
```

- `device` is the logical device that creates the pipeline layout.
- `pCreateInfo` is a pointer to a VkPipelineLayoutCreateInfo structure specifying the state of the pipeline layout object.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pPipelineLayout` is a pointer to a VkPipelineLayout handle in which the resulting pipeline layout object is returned.

Valid Usage (Implicit)

- VUID-vkCreatePipelineLayout-device-parameter
  `device` must be a valid VkDevice handle
- VUID-vkCreatePipelineLayout-pCreateInfo-parameter
  `pCreateInfo` must be a valid pointer to a valid VkPipelineLayoutCreateInfo structure
- VUID-vkCreatePipelineLayout-pAllocator-parameter
  If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid VkAllocationCallbacks structure
• VUID-vkCreatePipelineLayout-pPipelineLayout-parameter
  pPipelineLayout must be a valid pointer to a VkPipelineLayout handle

### Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The VkPipelineLayoutCreateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkPipelineLayoutCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkPipelineLayoutCreateFlags flags;
    uint32_tsetLayoutCount;
    const VkDescriptorSetLayout* pSetLayouts;
    uint32_tpushConstantRangeCount;
    const VkPushConstantRange* pPushConstantRanges;
} VkPipelineLayoutCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkPipelineLayoutCreateFlagBits specifying options for pipeline layout creation.
- `setLayoutCount` is the number of descriptor sets included in the pipeline layout.
- `pSetLayouts` is a pointer to an array of VkDescriptorSetLayout objects.
- `pushConstantRangeCount` is the number of push constant ranges included in the pipeline layout.
- `pPushConstantRanges` is a pointer to an array of VkPushConstantRange structures defining a set of push constant ranges for use in a single pipeline layout. In addition to descriptor set layouts, a pipeline layout also describes how many push constants can be accessed by each stage of the pipeline.

**Note**

Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.
Valid Usage

- **VUID-VkPipelineLayoutCreateInfo-setLayoutCount-00286**
  
  `setLayoutCount` must be less than or equal to `VkPhysicalDeviceLimits::maxBoundDescriptorSets`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03016**
  
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSamplers`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03017**
  
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorUniformBuffers`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03018**
  
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorStorageBuffers`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-06939**
  
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorSampledImages`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03020**
  
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorStorageImages`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03021**
  
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceLimits::maxPerStageDescriptorInputAttachments`

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-02214**
  
  1250
The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set and with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible to any given shader stage across all elements of `pSetLayouts`, **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorInlineUniformBlocks`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03022**
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSamplers`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03023**
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` and `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindUniformBuffers`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03024**
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` and `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageBuffers`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03025**
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindSampledImages`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03026**
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindStorageImages`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-03027**
The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible to any given shader stage across all elements of `pSetLayouts` **must** be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxPerStageDescriptorUpdateAfterBindInputAttachments`.

- **VUID-VkPipelineLayoutCreateInfo-descriptorType-02215**
The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible to any given shader stage across all elements of `pSetLayouts`, **must** be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorInlineUniformBlocks`. 
elements of pSetLayouts must be less than or equal to VkPhysicalDeviceInlineUniformBlockProperties::maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03028
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER accessible across all shader stages and across all elements of pSetLayouts must be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetSamplers

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03029
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER accessible across all shader stages and across all elements of pSetLayouts must be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffers

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03030
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts must be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetUniformBuffersDynamic

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03031
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER accessible across all shader stages and across all elements of pSetLayouts must be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffers

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03032
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC accessible across all shader stages and across all elements of pSetLayouts must be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetStorageBuffersDynamic

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03033
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER accessible across all shader stages and across all elements of pSetLayouts must be less than or equal to VkPhysicalDeviceLimits::maxDescriptorSetSampledImages

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03034
  The total number of descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set with a descriptorType of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER accessible across all shader stages and across all elements of pSetLayouts must be less
than or equal to \(\text{VkPhysicalDeviceLimits}::\text{maxDescriptorSetStorageImages}\)

- **VID-VkPipelineLayoutCreateInfo-descriptorType-03035**
  The total number of descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceLimits}::\text{maxDescriptorSetInputAttachments}\)

- **VID-VkPipelineLayoutCreateInfo-descriptorType-02216**
  The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceInlineUniformBlockProperties}::\text{maxDescriptorSetInlineUniformBlocks}\)

- **VID-VkPipelineLayoutCreateInfo-pSetLayouts-03036**
  The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_SAMPLER` and `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceDescriptorIndexingProperties}::\text{maxDescriptorSetUpdateAfterBindSamplers}\)

- **VID-VkPipelineLayoutCreateInfo-pSetLayouts-03037**
  The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceDescriptorIndexingProperties}::\text{maxDescriptorSetUpdateAfterBindUniformBuffers}\)

- **VID-VkPipelineLayoutCreateInfo-pSetLayouts-03038**
  The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceDescriptorIndexingProperties}::\text{maxDescriptorSetUpdateAfterBindUniformBuffersDynamic}\)

- **VID-VkPipelineLayoutCreateInfo-pSetLayouts-03039**
  The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceDescriptorIndexingProperties}::\text{maxDescriptorSetUpdateAfterBindStorageBuffers}\)

- **VID-VkPipelineLayoutCreateInfo-pSetLayouts-03040**
  The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceDescriptorIndexingProperties}::\text{maxDescriptorSetUpdateAfterBindStorageBuffersDynamic}\)

- **VID-VkPipelineLayoutCreateInfo-pSetLayouts-03041**
  The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to \(\text{VkPhysicalDeviceDescriptorIndexingProperties}::\text{maxDescriptorSetUpdateAfterBindSampledImages}\)
The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindStorageImages`.

The total number of descriptors of the type `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceDescriptorIndexingProperties::maxDescriptorSetUpdateAfterBindInputAttachments`.

The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceInlineUniformBlockProperties::maxDescriptorSetUpdateAfterBindInlineUniformBlocks`.

The total number of descriptors with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorAccelerationStructures`.

Any two elements of `pPushConstantRanges` must not include the same stage in `stageFlags`.

`pSetLayouts` must not contain more than one descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR` set.

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorAccelerationStructures`.

The total number of bindings with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible to any given shader stage across all elements of `pSetLayouts` must be less than or equal to `VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxPerStageDescriptorUpdateAfterBindAccelerationStructures`.

The total number of bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set with a `descriptorType` of `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` accessible across all shader stages and across all elements of `pSetLayouts` must be less than or equal to `1254`.
 VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetAccelerationStructures

- VUID-VkPipelineLayoutCreateInfo-descriptorType-03574
  The total number of bindings with a descriptorType of
  VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR accessible across all shader stages and
  across all elements of pSetLayouts must be less than or equal to
  VkPhysicalDeviceAccelerationStructurePropertiesKHR::maxDescriptorSetUpdateAfterBindA
  ccelerationStructures

- VUID-VkPipelineLayoutCreateInfo-descriptorType-02381
  The total number of bindings with a descriptorType of
  VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV accessible across all shader stages and
  across all elements of pSetLayouts must be less than or equal to
  VkPhysicalDeviceRayTracingPropertiesNV::maxDescriptorSetAccelerationStructures

- VUID-VkPipelineLayoutCreateInfo-pImmutableSamplers-03566
  The total number of pImmutableSamplers created with flags containing
  VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT or
  VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT across all shader stages and
  across all elements of pSetLayouts must be less than or equal to
  VkPhysicalDeviceFragmentDensityMap2PropertiesEXT::maxDescriptorSetSubsampledSamplers

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-04606
  Any element of pSetLayouts must not have been created with the
  VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT bit set

- VUID-VkPipelineLayoutCreateInfo-graphicsPipelineLibrary-06753
  If graphicsPipelineLibrary is not enabled, elements of pSetLayouts must be valid
  VkDescriptorSetLayout objects

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-08008
  If any element of pSetLayouts was created with the
  VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set, all elements of
  pSetLayouts must have been created with the
  VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT bit set

Valid Usage (Implicit)

- VUID-VkPipelineLayoutCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO

- VUID-VkPipelineLayoutCreateInfo-flags-parameter
  flags must be a valid combination of VkPipelineLayoutCreateFlagBits values

- VUID-VkPipelineLayoutCreateInfo-pSetLayouts-parameter
  If setlayoutCount is not 0, pSetLayouts must be a valid pointer to an array of
  setLayoutCount valid or VK_NULL_HANDLE VkDescriptorSetLayout handles

- VUID-VkPipelineLayoutCreateInfo-pPushConstantRanges-parameter
  If pushConstantRangeCount is not 0, pPushConstantRanges must be a valid pointer to an array of
  pushConstantRangeCount valid VkPushConstantRange structures
typedef enum VkPipelineLayoutCreateFlagBits {
    VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT = 0x00000002,
} VkPipelineLayoutCreateFlagBits;

- `VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT` specifies that implementations must ensure that the properties and/or absence of a particular descriptor set do not influence any other properties of the pipeline layout. This allows pipelines libraries linked without `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` to be created with a subset of the total descriptor sets.

typedef VkFlags VkPipelineLayoutCreateFlags;

`VkPipelineLayoutCreateFlags` is a bitmask type for setting a mask of `VkPipelineLayoutCreateFlagBits`.

The `VkPushConstantRange` structure is defined as:

typedef struct VkPushConstantRange {
    VkShaderStageFlags stageFlags;
    uint32_t offset;
    uint32_t size;
} VkPushConstantRange;

- `stageFlags` is a set of stage flags describing the shader stages that will access a range of push constants. If a particular stage is not included in the range, then accessing members of that range of push constants from the corresponding shader stage will return undefined values.
- `offset` and `size` are the start offset and size, respectively, consumed by the range. Both `offset` and `size` are in units of bytes and must be a multiple of 4. The layout of the push constant variables is specified in the shader.

Valid Usage

- VUID-VkPushConstantRange-offset-00294
  `offset` must be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`
- VUID-VkPushConstantRange-offset-00295
  `offset` must be a multiple of 4
- VUID-VkPushConstantRange-size-00296
  `size` must be greater than 0
- VUID-VkPushConstantRange-size-00297
  `size` must be a multiple of 4
size must be less than or equal to VkPhysicalDeviceLimits::maxPushConstantsSize minus offset

Valid Usage (Implicit)

- VUID-VkPushConstantRange-stageFlags-parameter
  
  stageFlags must be a valid combination of VkShaderStageFlagBits values

- VUID-VkPushConstantRange-stageFlags-requiredbitsetmask
  
  stageFlags must not be 0

Once created, pipeline layouts are used as part of pipeline creation (see Pipelines), as part of binding descriptor sets (see Descriptor Set Binding), and as part of setting push constants (see Push Constant Updates). Pipeline creation accepts a pipeline layout as input, and the layout may be used to map (set, binding, arrayElement) tuples to implementation resources or memory locations within a descriptor set. The assignment of implementation resources depends only on the bindings defined in the descriptor sets that comprise the pipeline layout, and not on any shader source.

All resource variables statically used in all shaders in a pipeline must be declared with a (set, binding, arrayElement) that exists in the corresponding descriptor set layout and is of an appropriate descriptor type and includes the set of shader stages it is used by in stageFlags. The pipeline layout can include entries that are not used by a particular pipeline. The pipeline layout allows the application to provide a consistent set of bindings across multiple pipeline compiles, which enables those pipelines to be compiled in a way that the implementation may cheaply switch pipelines without reprogramming the bindings.

Similarly, the push constant block declared in each shader (if present) must only place variables at offsets that are each included in a push constant range with stageFlags including the bit corresponding to the shader stage that uses it. The pipeline layout can include ranges or portions of ranges that are not used by a particular pipeline.

There is a limit on the total number of resources of each type that can be included in bindings in all descriptor set layouts in a pipeline layout as shown in Pipeline Layout Resource Limits. The “Total Resources Available” column gives the limit on the number of each type of resource that can be included in bindings in all descriptor sets in the pipeline layout. Some resource types count against multiple limits. Additionally, there are limits on the total number of each type of resource that can be used in any pipeline stage as described in Shader Resource Limits.

Table 18. Pipeline Layout Resource Limits

<table>
<thead>
<tr>
<th>Total Resources Available</th>
<th>Resource Types</th>
</tr>
</thead>
<tbody>
<tr>
<td>maxDescriptorSetSamplers</td>
<td>sampler</td>
</tr>
<tr>
<td>maxDescriptorSetUpdateAfterBindSamplers</td>
<td>combined image sampler</td>
</tr>
</tbody>
</table>
To destroy a pipeline layout, call:

```c
// Provided by VK_VERSION_1_0
void vkDestroyPipelineLayout(
    VkDevice device,
    VkPipelineLayout pipelineLayout,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the pipeline layout.
- `pipelineLayout` is the pipeline layout to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

**Valid Usage**

- VUID-vkDestroyPipelineLayout-pipelineLayout-00299
  If `VkAllocationCallbacks` were provided when `pipelineLayout` was created, a compatible
set of callbacks must be provided here

- VUID-vkDestroyPipelineLayout-pipelineLayout-00300
  If no VkAllocationCallbacks were provided when pipelineLayout was created, pAllocator must be NULL

- VUID-vkDestroyPipelineLayout-pipelineLayout-02004
  pipelineLayout must not have been passed to any vkCmd* command for any command buffers that are still in the recording state when vkDestroyPipelineLayout is called

Valid Usage (Implicit)

- VUID-vkDestroyPipelineLayout-device-parameter
device must be a valid VkDevice handle

- VUID-vkDestroyPipelineLayout-pipelineLayout-parameter
  If pipelineLayout is not VK_NULL_HANDLE, pipelineLayout must be a valid VkPipelineLayout handle

- VUID-vkDestroyPipelineLayout-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkDestroyPipelineLayout-pipelineLayout-parent
  If pipelineLayout is a valid handle, it must have been created, allocated, or retrieved from device

Host Synchronization

- Host access to pipelineLayout must be externally synchronized

Pipeline Layout Compatibility

Two pipeline layouts are defined to be “compatible for push constants” if they were created with identical push constant ranges. Two pipeline layouts are defined to be “compatible for set N” if they were created with identically defined descriptor set layouts for sets zero through N, if both of them either were or were not created with VK_PIPELINE_LAYOUT_CREATE_INDEPENDENT_SETS_BIT_EXT, and if they were created with identical push constant ranges.

When binding a descriptor set (see Descriptor Set Binding) to set number N, a previously bound descriptor set bound with lower index M than N is disturbed if the pipeline layouts for set M and N are not compatible for set M. Otherwise, the bound descriptor set in M is not disturbed.

If, additionally, the previously bound descriptor set for set N was bound using a pipeline layout not compatible for set N, then all bindings in sets numbered greater than N are disturbed.

When binding a pipeline, the pipeline can correctly access any previously bound descriptor set N if it was bound with compatible pipeline layout for set N, and it was not disturbed.
Layout compatibility means that descriptor sets can be bound to a command buffer for use by any pipeline created with a compatible pipeline layout, and without having bound a particular pipeline first. It also means that descriptor sets can remain valid across a pipeline change, and the same resources will be accessible to the newly bound pipeline.

When a descriptor set is disturbed by binding descriptor sets, the disturbed set is considered to contain undefined descriptors bound with the same pipeline layout as the disturbing descriptor set.

Implementor’s Note

A consequence of layout compatibility is that when the implementation compiles a pipeline layout and maps pipeline resources to implementation resources, the mechanism for set N should only be a function of sets [0..N].

Note

Place the least frequently changing descriptor sets near the start of the pipeline layout, and place the descriptor sets representing the most frequently changing resources near the end. When pipelines are switched, only the descriptor set bindings that have been invalidated will need to be updated and the remainder of the descriptor set bindings will remain in place.

The maximum number of descriptor sets that can be bound to a pipeline layout is queried from physical device properties (see maxBoundDescriptorSets in Limits).

API example

```c
const VkDescriptorSetLayout layouts[] = { layout1, layout2 }

const VkPushConstantRange ranges[] =
{
    {
        .stageFlags = VK_SHADER_STAGE_VERTEX_BIT,
        .offset = 0,
        .size = 4
    },
    {
        .stageFlags = VK_SHADER_STAGE_FRAGMENT_BIT,
        .offset = 4,
        .size = 4
    }
};

const VkPipelineLayoutCreateInfo createInfo =
{
    .sType = VK_STRUCTURE_TYPE_PIPELINE_LAYOUT_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .setLayoutCount = 2,
};
```
14.2.3. Allocation of Descriptor Sets

A descriptor pool maintains a pool of descriptors, from which descriptor sets are allocated. Descriptor pools are externally synchronized, meaning that the application must not allocate and/or free descriptor sets from the same pool in multiple threads simultaneously.

Descriptor pools are represented by VkDescriptorPool handles:

```c
// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorPool)
```

To create a descriptor pool object, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkCreateDescriptorPool(
    VkDevice device,
    const VkDescriptorPoolCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDescriptorPool* pDescriptorPool);
```

- **device** is the logical device that creates the descriptor pool.
- **pCreateInfo** is a pointer to a VkDescriptorPoolCreateInfo structure specifying the state of the descriptor pool object.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.
- **pDescriptorPool** is a pointer to a VkDescriptorPool handle in which the resulting descriptor pool object is returned.

The created descriptor pool is returned in pDescriptorPool.

Valid Usage (Implicit)

- VUID-vkCreateDescriptorPool-device-parameter
device must be a valid VkDevice handle
• VUID-vkCreateDescriptorPool-pCreateInfo-parameter
  
  `pCreateInfo` must be a valid pointer to a valid `VkDescriptorPoolCreateInfo` structure.

• VUID-vkCreateDescriptorPool-pAllocator-parameter
  
  If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure.

• VUID-vkCreateDescriptorPool-pDescriptorPool-parameter
  
  `pDescriptorPool` must be a valid pointer to a `VkDescriptorPool` handle.

### Return Codes

**Success**

- VK_SUCCESS

**Failure**

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_FRAGMENTATION_EXT

Additional information about the pool is passed in a `VkDescriptorPoolCreateInfo` structure:

```c
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorPoolCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkDescriptorPoolCreateFlags flags;
    uint32_t maxSets;
    uint32_t poolSizeCount;
    const VkDescriptorPoolSize* pPoolSizes;
} VkDescriptorPoolCreateInfo;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkDescriptorPoolCreateFlagBits` specifying certain supported operations on the pool.
- `maxSets` is the maximum number of descriptor sets that can be allocated from the pool.
- `poolSizeCount` is the number of elements in `pPoolSizes`.
- `pPoolSizes` is a pointer to an array of `VkDescriptorPoolSize` structures, each containing a descriptor type and number of descriptors of that type to be allocated in the pool.

If multiple `VkDescriptorPoolSize` structures containing the same descriptor type appear in the `pPoolSizes` array then the pool will be created with enough storage for the total number of descriptors of each type.
Fragmentation of a descriptor pool is possible and may lead to descriptor set allocation failures. A failure due to fragmentation is defined as failing a descriptor set allocation despite the sum of all outstanding descriptor set allocations from the pool plus the requested allocation requiring no more than the total number of descriptors requested at pool creation. Implementations provide certain guarantees of when fragmentation must not cause allocation failure, as described below.

If a descriptor pool has not had any descriptor sets freed since it was created or most recently reset then fragmentation must not cause an allocation failure (note that this is always the case for a pool created without the VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT bit set). Additionally, if all sets allocated from the pool since it was created or most recently reset use the same number of descriptors (of each type) and the requested allocation also uses that same number of descriptors (of each type), then fragmentation must not cause an allocation failure.

If an allocation failure occurs due to fragmentation, an application can create an additional descriptor pool to perform further descriptor set allocations.

If flags has the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT bit set, descriptor pool creation may fail with the error VK_ERROR_FRAGMENTATION if the total number of descriptors across all pools (including this one) created with this bit set exceeds maxUpdateAfterBindDescriptorsInAllPools, or if fragmentation of the underlying hardware resources occurs.

If a pPoolSizes[i]::type is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, a VkMutableDescriptorTypeCreateInfoEXT struct in the pNext chain can be used to specify which mutable descriptor types can be allocated from the pool. If included in the pNext chain, VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i] specifies which kind of VK_DESCRIPTOR_TYPE_MUTABLE_EXT descriptors can be allocated from this pool entry. If VkMutableDescriptorTypeCreateInfoEXT does not exist in the pNext chain, or VkMutableDescriptorTypeCreateInfoEXT::pMutableDescriptorTypeLists[i] is out of range, the descriptor pool allocates enough memory to be able to allocate a VK_DESCRIPTOR_TYPE_MUTABLE_EXT descriptor with any supported VkDescriptorType as a mutable descriptor. A mutable descriptor can be allocated from a pool entry if the type list in VkDescriptorSetLayoutCreateInfo is a subset of the type list declared in the descriptor pool, or if the pool entry is created without a descriptor type list. Multiple pPoolSizes entries with VK_DESCRIPTOR_TYPE_MUTABLE_EXT can be declared. When multiple such pool entries are present in pPoolSizes, they specify sets of supported descriptor types which either fully overlap, partially overlap, or are disjoint. Two sets fully overlap if the sets of supported descriptor types are equal. If the sets are not disjoint they partially overlap. A pool entry without a VkMutableDescriptorTypeListEXT assigned to it is considered to partially overlap any other pool entry which has a VkMutableDescriptorTypeListEXT assigned to it. The application must ensure that partial overlap does not exist in pPoolSizes.

Note

The requirement of no partial overlap is intended to resolve ambiguity for validation as there is no confusion which pPoolSizes entries will be allocated from. An implementation is not expected to depend on this requirement.

Valid Usage

• VUID-VkDescriptorPoolCreateInfo-descriptorPoolOverallocation-09227
If the descriptorPoolOverallocation feature is not enabled, or flags does not have VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV set, maxSets must be greater than 0

- VUID-VkDescriptorPoolCreateInfo-flags-09228
  If flags has the VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV or VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV bits set, then descriptorPoolOverallocation must be enabled

- VUID-VkDescriptorPoolCreateInfo-flags-04607
  If flags has the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT bit set, then the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT bit must not be set

- VUID-VkDescriptorPoolCreateInfo-mutableDescriptorType-04608
  If VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType is not enabled, pPoolSizes must not contain a descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT

- VUID-VkDescriptorPoolCreateInfo-flags-04609
  If flags has the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT bit set, VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT::mutableDescriptorType must be enabled

- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-04787
  If pPoolSizes contains a descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT, any other VK_DESCRIPTOR_TYPE_MUTABLE_EXT element in pPoolSizes must not have sets of supported descriptor types which partially overlap

- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-09424
  If pPoolSizes contains a descriptorType of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, the pNext chain must include a VkDescriptorPoolInlineUniformBlockCreateInfo structure whose maxInlineUniformBlockBindings member is not zero

### Valid Usage (Implicit)

- VUID-VkDescriptorPoolCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_CREATE_INFO

- VUID-VkDescriptorPoolCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkDescriptorPoolInlineUniformBlockCreateInfo or VkMutableDescriptorTypeCreateInfoEXT

- VUID-VkDescriptorPoolCreateInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkDescriptorPoolCreateInfo-flags-parameter
  flags must be a valid combination of VkDescriptorPoolCreateFlagBits values

- VUID-VkDescriptorPoolCreateInfo-pPoolSizes-parameter
  If poolSizeCount is not 0, pPoolSizes must be a valid pointer to an array of poolSizeCount valid VkDescriptorPoolSize structures
In order to be able to allocate descriptor sets having **inline uniform block** bindings the descriptor pool **must** be created with specifying the inline uniform block binding capacity of the descriptor pool, in addition to the total inline uniform data capacity in bytes which is specified through a `VkDescriptorPoolSize` structure with a `descriptorType` value of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`. This can be done by adding a `VkDescriptorPoolInlineUniformBlockCreateInfo` structure to the `pNext` chain of `VkDescriptorPoolCreateInfo`.

The `VkDescriptorPoolInlineUniformBlockCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkDescriptorPoolInlineUniformBlockCreateInfo {
    VkStructureType sType;
    const void* pNext;
    uint32_t maxInlineUniformBlockBindings;
} VkDescriptorPoolInlineUniformBlockCreateInfo;
```

or the equivalent

```c
// Provided by VK_EXT_inline_uniform_block
typedef VkDescriptorPoolInlineUniformBlockCreateInfoEXT
VkDescriptorPoolInlineUniformBlockCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInlineUniformBlockBindings` is the number of inline uniform block bindings to allocate.

### Valid Usage (Implicit)

- VUID-VkDescriptorPoolInlineUniformBlockCreateInfo-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_INLINE_UNIFORM_BLOCK_CREATE_INFO`

Bits which **can** be set in `VkDescriptorPoolCreateInfo::flags`, enabling operations on a descriptor pool, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorPoolCreateFlagBits {
    VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT = 0x00000001,
    // Provided by VK_VERSION_1_2
    VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT = 0x00000002,
    // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT = 0x00000004,
    // Provided by VK_NV_descriptor_pool_overallocation
    VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV = 0x00000008,
} VkDescriptorPoolCreateFlagBits;
```
VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT specifies that descriptor sets can return their individual allocations to the pool, i.e. all of vkAllocateDescriptorSets, vkFreeDescriptorSets, and vkResetDescriptorPool are allowed. Otherwise, descriptor sets allocated from the pool must not be individually freed back to the pool, i.e. only vkAllocateDescriptorSets and vkResetDescriptorPool are allowed.

VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT specifies that descriptor sets allocated from this pool can include bindings with the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit set. It is valid to allocate descriptor sets that have bindings that do not set the VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT bit from a pool that has VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT set.

VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT specifies that this descriptor pool and the descriptor sets allocated from it reside entirely in host memory and cannot be bound. Similar to descriptor sets allocated without this flag, applications can copy-from and copy-to descriptors sets allocated from this descriptor pool. Descriptor sets allocated from this pool are partially exempt from the external synchronization requirement in vkUpdateDescriptorSetWithTemplateKHR and vkUpdateDescriptorSets. Descriptor sets and their descriptors can be updated concurrently in different threads, though the same descriptor must not be updated concurrently by two threads.

VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV specifies that the implementation should allow the application to allocate more than VkDescriptorPoolCreateInfo::maxSets descriptor set objects from the descriptor pool as available resources allow. The implementation may use the maxSets value to allocate the initial available sets, but using zero is permitted.

VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV specifies that the implementation should allow the application to allocate more descriptors from the pool than was specified by the VkDescriptorPoolSize::descriptorCount for any descriptor type as specified by VkDescriptorPoolCreateInfo::poolSizeCount and VkDescriptorPoolCreateInfo::pPoolSizes, as available resources allow. The implementation may use the descriptorCount for each descriptor type to allocate the initial pool, but the application is allowed to set the poolSizeCount to zero, or any of the descriptorCount values in the pPoolSizes array to zero.

// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolCreateFlags;

VkDescriptorPoolCreateFlags is a bitmask type for setting a mask of zero or more VkDescriptorPoolCreateFlagBits.

The VkDescriptorPoolSize structure is defined as:
typedef struct VkDescriptorPoolSize {
    VkDescriptorType     type;
    uint32_t            descriptorCount;
} VkDescriptorPoolSize;

• type is the type of descriptor.
• descriptorCount is the number of descriptors of that type to allocate. If type is
  VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then descriptorCount is the number of bytes to allocate
  for descriptors of this type.

Note
When creating a descriptor pool that will contain descriptors for combined image
samplers of multi-planar formats, an application needs to account for non-trivial
descriptor consumption when choosing the descriptorCount value, as indicated by
VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount.

For simplicity the application can use the
VkPhysicalDeviceMaintenance6PropertiesKHR::maxCombinedImageSamplerDescriptorCount
property, which is sized to accommodate any and all formats that require a
sampler Y’C_aC_b conversion supported by the implementation.

Valid Usage
• VUID-VkDescriptorPoolSize-descriptorCount-00302
descriptorCount must be greater than 0
• VUID-VkDescriptorPoolSize-type-02218
  If type is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then descriptorCount must be a
  multiple of 4

Valid Usage (Implicit)
• VUID-VkDescriptorPoolSize-type-parameter
type must be a valid VkDescriptorType value

To destroy a descriptor pool, call:

 void vkDestroyDescriptorPool(
    VkDevice device,
    VkDescriptorPool descriptorPool,
    const VkAllocationCallbacks* pAllocator);
• **device** is the logical device that destroys the descriptor pool.
• **descriptorPool** is the descriptor pool to destroy.
• **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

When a pool is destroyed, all descriptor sets allocated from the pool are implicitly freed and become invalid. Descriptor sets allocated from a given pool do not need to be freed before destroying that descriptor pool.

Valid Usage

- VUID-vkDestroyDescriptorPool-descriptorPool-00303
  All submitted commands that refer to **descriptorPool** (via any allocated descriptor sets) **must** have completed execution

- VUID-vkDestroyDescriptorPool-descriptorPool-00304
  If **VkAllocationCallbacks** were provided when **descriptorPool** was created, a compatible set of callbacks **must** be provided here

- VUID-vkDestroyDescriptorPool-descriptorPool-00305
  If no **VkAllocationCallbacks** were provided when **descriptorPool** was created, **pAllocator must** be **NULL**

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorPool-device-parameter
  **device must** be a valid **VkDevice** handle

- VUID-vkDestroyDescriptorPool-descriptorPool-parameter
  If **descriptorPool** is not **VK_NULL_HANDLE**, **descriptorPool must** be a valid **VkDescriptorPool** handle

- VUID-vkDestroyDescriptorPool-pAllocator-parameter
  If **pAllocator** is not NULL, **pAllocator must** be a valid pointer to a valid **VkAllocationCallbacks** structure

- VUID-vkDestroyDescriptorPool-descriptorPool-parent
  If **descriptorPool** is a valid handle, it **must** have been created, allocated, or retrieved from **device**

Host Synchronization

- Host access to **descriptorPool** **must** be externally synchronized

Descriptor sets are allocated from descriptor pool objects, and are represented by **VkDescriptorSet handles**:

```cpp
// Provided by VK_VERSION_1_0
```
To allocate descriptor sets from a descriptor pool, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkAllocateDescriptorSets(
    VkDevice device,
    const VkDescriptorSetAllocateInfo* pAllocateInfo,
    VkDescriptorSet* pDescriptorSets);
```

- `device` is the logical device that owns the descriptor pool.
- `pAllocateInfo` is a pointer to a `VkDescriptorSetAllocateInfo` structure describing parameters of the allocation.
- `pDescriptorSets` is a pointer to an array of `VkDescriptorSet` handles in which the resulting descriptor set objects are returned.

The allocated descriptor sets are returned in `pDescriptorSets`.

When a descriptor set is allocated, the initial state is largely uninitialized and all descriptors are undefined, with the exception that samplers with a non-null `pImmutableSamplers` are initialized on allocation. Descriptors also become undefined if the underlying resource or view object is destroyed. Descriptor sets containing undefined descriptors can still be bound and used, subject to the following conditions:

- For descriptor set bindings created with the `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` bit set, all descriptors in that binding that are dynamically used must have been populated before the descriptor set is consumed.
- For descriptor set bindings created without the `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` bit set, all descriptors in that binding that are statically used must have been populated before the descriptor set is consumed.
- Descriptor bindings with descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` can be undefined when the descriptor set is consumed; though values in that block will be undefined.
- Entries that are not used by a pipeline can have undefined descriptors.

If a call to `vkAllocateDescriptorSets` would cause the total number of descriptor sets allocated from the pool to exceed the value of `VkDescriptorPoolCreateInfo::maxSets` used to create `pAllocateInfo->descriptorPool`, then the allocation may fail due to lack of space in the descriptor pool. Similarly, the allocation may fail due to lack of space if the call to `vkAllocateDescriptorSets` would cause the number of any given descriptor type to exceed the sum of all the `descriptorCount` members of each element of `VkDescriptorPoolCreateInfo::pPoolSizes` with a `type` equal to that type.

Additionally, the allocation may also fail if a call to `vkAllocateDescriptorSets` would cause the total number of inline uniform block bindings allocated from the pool to exceed the value of `VkDescriptorPoolInlineUniformBlockCreateInfo::maxInlineUniformBlockBindings` used to create the descriptor pool.
If the allocation fails due to no more space in the descriptor pool, and not because of system or device memory exhaustion, then `VK_ERROR_OUT_OF_POOL_MEMORY` must be returned.

`vkAllocateDescriptorSets` can be used to create multiple descriptor sets. If the creation of any of those descriptor sets fails, then the implementation must destroy all successfully created descriptor set objects from this command, set all entries of the `pDescriptorSets` array to `VK_NULL_HANDLE` and return the error.

### Valid Usage (Implicit)

- **VUID-vkAllocateDescriptorSets-device-parameter**
  
  `device` must be a valid `VkDevice` handle

- **VUID-vkAllocateDescriptorSets-pAllocateInfo-parameter**
  
  `pAllocateInfo` must be a valid pointer to a valid `VkDescriptorSetAllocateInfo` structure

- **VUID-vkAllocateDescriptorSets-pDescriptorSets-parameter**
  
  `pDescriptorSets` must be a valid pointer to an array of `pAllocateInfo->descriptorSetCount` `VkDescriptorSet` handles

- **VUID-vkAllocateDescriptorSets-pAllocateInfo::descriptorSetCount-arraylength**
  
  `pAllocateInfo->descriptorSetCount` must be greater than 0

### Host Synchronization

- Host access to `pAllocateInfo->descriptorPool` must be externally synchronized

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_FRAGMENTED_POOL`
- `VK_ERROR_OUT_OF_POOL_MEMORY`

The `VkDescriptorSetAllocateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorSetAllocateInfo {
    VkStructureType sType;
    const void* pNext;
    VkDescriptorPool descriptorPool;
    uint32_t descriptorSetCount;
} VkDescriptorSetAllocateInfo;
```
const VkDescriptorSetLayout* pSetLayouts;
} VkDescriptorSetAllocateInfo;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **descriptorPool** is the pool which the sets will be allocated from.
- **descriptorSetCount** determines the number of descriptor sets to be allocated from the pool.
- **pSetLayouts** is a pointer to an array of descriptor set layouts, with each member specifying how the corresponding descriptor set is allocated.

### Valid Usage

- **VUID-VkDescriptorSetAllocateInfo-apiVersion-07895**
  If the `VK_KHR_maintenance1` extension is not enabled and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, **descriptorSetCount** must not be greater than the number of sets that are currently available for allocation in **descriptorPool**

- **VUID-VkDescriptorSetAllocateInfo-apiVersion-07896**
  If the `VK_KHR_maintenance1` extension is not enabled and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, **descriptorPool** must have enough free descriptor capacity remaining to allocate the descriptor sets of the specified layouts

- **VUID-VkDescriptorSetAllocateInfo-pSetLayouts-00308**
  Each element of **pSetLayouts** must not have been created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR` set

- **VUID-VkDescriptorSetAllocateInfo-pSetLayouts-03044**
  If any element of **pSetLayouts** was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set, **descriptorPool** must have been created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` flag set

- **VUID-VkDescriptorSetAllocateInfo-pSetLayouts-09380**
  If **pSetLayouts[i]** was created with an element of **pBindingFlags** that includes `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, and `VkDescriptorSetVariableDescriptorCountAllocateInfo` is included in the **pNext** chain, and `VkDescriptorSetVariableDescriptorCountAllocateInfo::descriptorSetCount` is not zero, then `VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts[i]` must be less than or equal to `VkDescriptorSetLayoutBinding::descriptorCount` for the corresponding binding used to create **pSetLayouts[i]**

- **VUID-VkDescriptorSetAllocateInfo-pSetLayouts-04610**
  If any element of **pSetLayouts** was created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT` bit set, **descriptorPool** must have been created with the `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT` flag set

- **VUID-VkDescriptorSetAllocateInfo-pSetLayouts-08009**
  Each element of **pSetLayouts** must not have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set
Valid Usage (Implicit)

- VUID-VkDescriptorSetAllocateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_ALLOCATE_INFO

- VUID-VkDescriptorSetAllocateInfo-pNext-pNext
  pNext must be NULL or a pointer to a valid instance of VkDescriptorSetVariableDescriptorCountAllocateInfo

- VUID-VkDescriptorSetAllocateInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkDescriptorSetAllocateInfo-descriptorPool-parameter
  descriptorPool must be a valid VkDescriptorPool handle

- VUID-VkDescriptorSetAllocateInfo-pSetLayouts-parameter
  pSetLayouts must be a valid pointer to an array of descriptorSetCount valid VkDescriptorSetLayout handles

- VUID-VkDescriptorSetAllocateInfo-descriptorSetCount-arraylength
  descriptorSetCount must be greater than 0

- VUID-VkDescriptorSetAllocateInfo-commonparent
  Both of descriptorPool, and the elements of pSetLayouts must have been created, allocated, or retrieved from the same VkDevice

If the pNext chain of a VkDescriptorSetAllocateInfo structure includes a VkDescriptorSetVariableDescriptorCountAllocateInfo structure, then that structure includes an array of descriptor counts for variable-sized descriptor bindings, one for each descriptor set being allocated.

The VkDescriptorSetVariableDescriptorCountAllocateInfo structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkDescriptorSetVariableDescriptorCountAllocateInfo {
    VkStructureType sType;
    const void* pNext;
    uint32_t descriptorSetCount;
    const uint32_t* pDescriptorCounts;
} VkDescriptorSetVariableDescriptorCountAllocateInfo;
```

or the equivalent

```c
// Provided by VK_EXT_descriptor_indexing
typedef VkDescriptorSetVariableDescriptorCountAllocateInfo
VkDescriptorSetVariableDescriptorCountAllocateInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
• descriptorSetCount is zero or the number of elements in pDescriptorCounts.

• pDescriptorCounts is a pointer to an array of descriptor counts, with each member specifying the number of descriptors in a variable-sized descriptor binding in the corresponding descriptor set being allocated.

If descriptorSetCount is zero or this structure is not included in the pNext chain, then the variable lengths are considered to be zero. Otherwise, pDescriptorCounts[i] is the number of descriptors in the variable-sized descriptor binding in the corresponding descriptor set layout. If the variable-sized descriptor binding in the corresponding descriptor set layout has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then pDescriptorCounts[i] specifies the binding’s capacity in bytes. If VkDescriptorSetAllocateInfo::pSetLayouts[i] does not include a variable-sized descriptor binding, then pDescriptorCounts[i] is ignored.

Valid Usage

• VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-descriptorSetCount-03045
  If descriptorSetCount is not zero, descriptorSetCount must equal VkDescriptorSetAllocateInfo::descriptorSetCount

• VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-pSetLayouts-03046
  If VkDescriptorSetAllocateInfo::pSetLayouts[i] has a variable-sized descriptor binding, then pDescriptorCounts[i] must be less than or equal to the descriptor count specified for that binding when the descriptor set layout was created

Valid Usage (Implicit)

• VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_ALLOCATE_INFO

• VUID-VkDescriptorSetVariableDescriptorCountAllocateInfo-pDescriptorCounts-parameter
  If descriptorSetCount is not 0, pDescriptorCounts must be a valid pointer to an array of descriptorSetCount uint32_t values

To free allocated descriptor sets, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkFreeDescriptorSets(
    VkDevice device,
    VkDescriptorPool descriptorPool,
    uint32_t descriptorSetCount,
    const VkDescriptorSet* pDescriptorSets);
```

• device is the logical device that owns the descriptor pool.

• descriptorPool is the descriptor pool from which the descriptor sets were allocated.
• \texttt{descriptorSetCount} is the number of elements in the \texttt{pDescriptorSets} array.
• \texttt{pDescriptorSets} is a pointer to an array of handles to \texttt{VkDescriptorSet} objects.

After calling \texttt{vkFreeDescriptorSets}, all descriptor sets in \texttt{pDescriptorSets} are invalid.

**Valid Usage**

- VUID-vkFreeDescriptorSets-pDescriptorSets-00309
  All submitted commands that refer to any element of \texttt{pDescriptorSets} must have completed execution

- VUID-vkFreeDescriptorSets-pDescriptorSets-00310
  \texttt{pDescriptorSets} must be a valid pointer to an array of \texttt{descriptorSetCount} \texttt{VkDescriptorSet} handles, each element of which must either be a valid handle or \texttt{VK_NULL_HANDLE}

- VUID-vkFreeDescriptorSets-descriptorPool-00312
  \texttt{descriptorPool} must have been created with the \texttt{VK_DESCRIPTOR_POOL_CREATE_FREE_DESCRIPTOR_SET_BIT} flag

**Valid Usage (Implicit)**

- VUID-vkFreeDescriptorSets-device-parameter
  
  \texttt{device} must be a valid \texttt{VkDevice} handle

- VUID-vkFreeDescriptorSets-descriptorPool-parameter
  
  \texttt{descriptorPool} must be a valid \texttt{VkDescriptorPool} handle

- VUID-vkFreeDescriptorSets-descriptorSetCount-arraylength
  
  \texttt{descriptorSetCount} must be greater than 0

- VUID-vkFreeDescriptorSets-descriptorPool-parent
  
  \texttt{descriptorPool} must have been created, allocated, or retrieved from \texttt{device}

- VUID-vkFreeDescriptorSets-pDescriptorSets-parent
  
  Each element of \texttt{pDescriptorSets} that is a valid handle must have been created, allocated, or retrieved from \texttt{descriptorPool}

**Host Synchronization**

- Host access to \texttt{descriptorPool} must be externally synchronized
- Host access to each member of \texttt{pDescriptorSets} must be externally synchronized

**Return Codes**

**Success**
- \texttt{VK_SUCCESS}
To return all descriptor sets allocated from a given pool to the pool, rather than freeing individual descriptor sets, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkResetDescriptorPool(
    VkDevice device,  // Provided by VK_VERSION_1_0
    VkDescriptorPool descriptorPool,  // Provided by VK_VERSION_1_0
    VkDescriptorPoolResetFlags flags);
```

- `device` is the logical device that owns the descriptor pool.
- `descriptorPool` is the descriptor pool to be reset.
- `flags` is reserved for future use.

Resetting a descriptor pool recycles all of the resources from all of the descriptor sets allocated from the descriptor pool back to the descriptor pool, and the descriptor sets are implicitly freed.

### Valid Usage

- VUID-vkResetDescriptorPool-descriptorPool-00313
  All uses of `descriptorPool` (via any allocated descriptor sets) **must** have completed execution

### Valid Usage (Implicit)

- VUID-vkResetDescriptorPool-device-parameter
  `device` **must** be a valid `VkDevice` handle
- VUID-vkResetDescriptorPool-descriptorPool-parameter
  `descriptorPool` **must** be a valid `VkDescriptorPool` handle
- VUID-vkResetDescriptorPool-flags-zerobitmask
  `flags` **must** be 0
- VUID-vkResetDescriptorPool-descriptorPool-parent
  `descriptorPool` **must** have been created, allocated, or retrieved from `device`

### Host Synchronization

- Host access to `descriptorPool` **must** be externally synchronized
- Host access to any `VkDescriptorSet` objects allocated from `descriptorPool` **must** be externally synchronized
Return Codes

**Success**
- VK_SUCCESS

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkDescriptorPoolResetFlags;
```

**VkDescriptorPoolResetFlags** is a bitmask type for setting a mask, but is currently reserved for future use.

### 14.2.4. Descriptor Set Updates

Once allocated, descriptor sets can be updated with a combination of write and copy operations. To update descriptor sets, call:

```c
// Provided by VK_VERSION_1_0
void vkUpdateDescriptorSets(
    VkDevice device,               // Logical device updating the descriptor sets.
    uint32_t descriptorWriteCount, // Number of elements in the pDescriptorWrites array.
    const VkWriteDescriptorSet* pDescriptorWrites, // Pointer to an array of VkWriteDescriptorSet structures describing the descriptor sets to write to.
    uint32_t descriptorCopyCount,   // Number of elements in the pDescriptorCopies array.
    const VkCopyDescriptorSet* pDescriptorCopies // Pointer to an array of VkCopyDescriptorSet structures describing the descriptor sets to copy between.
);
```

- **device** is the logical device that updates the descriptor sets.
- **descriptorWriteCount** is the number of elements in the **pDescriptorWrites** array.
- **pDescriptorWrites** is a pointer to an array of **VkWriteDescriptorSet** structures describing the descriptor sets to write to.
- **descriptorCopyCount** is the number of elements in the **pDescriptorCopies** array.
- **pDescriptorCopies** is a pointer to an array of **VkCopyDescriptorSet** structures describing the descriptor sets to copy between.

The operations described by **pDescriptorWrites** are performed first, followed by the operations described by **pDescriptorCopies**. Within each array, the operations are performed in the order they appear in the array.

Each element in the **pDescriptorWrites** array describes an operation updating the descriptor set using descriptors for resources specified in the structure.

Each element in the **pDescriptorCopies** array is a **VkCopyDescriptorSet** structure describing an operation copying descriptors between sets.

If the **dstSet** member of any element of **pDescriptorWrites** or **pDescriptorCopies** is bound, accessed, or modified by any command that was recorded to a command buffer which is currently in the
recording or executable state, and any of the descriptor bindings that are updated were not created with the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` or `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` bits set, that command buffer becomes invalid.

## Valid Usage

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06236**
  For each element \(i\) where \(p\text{DescriptorWrites}[i].\text{descriptorType}\) is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, elements of the `pTexelBufferView` member of `p\text{DescriptorWrites}[i]` must have been created on device.

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06237**
  For each element \(i\) where `p\text{DescriptorWrites}[i].\text{descriptorType}` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `buffer` member of any element of the `p\text{BufferInfo}` member of `p\text{DescriptorWrites}[i]` must have been created on device.

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06238**
  For each element \(i\) where `p\text{DescriptorWrites}[i].\text{descriptorType}` is `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and `dst\text{Set}` was not allocated with a layout that included immutable samplers for `\text{descriptorType}` with `\text{dstBinding}` the `\text{_sampler}` member of any element of the `\text{p\text{ImageInfo}}` member of `p\text{DescriptorWrites}[i]` must have been created on device.

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06239**
  For each element \(i\) where `p\text{DescriptorWrites}[i].\text{descriptorType}` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `\text{imageView}` member of any element of `p\text{DescriptorWrites}[i]` must have been created on device.

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06240**
  For each element \(i\) where `p\text{DescriptorWrites}[i].\text{descriptorType}` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, elements of the `\text{p\text{AccelerationStructures}}` member of a `VkWriteDescriptorSet\text{AccelerationStructureKHR}` structure in the `\text{pNext}` chain of `p\text{DescriptorWrites}[i]` must have been created on device.

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06241**
  For each element \(i\) where `p\text{DescriptorWrites}[i].\text{descriptorType}` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, elements of the `\text{p\text{AccelerationStructures}}` member of a `VkWriteDescriptorSet\text{AccelerationStructureNV}` structure in the `\text{pNext}` chain of `p\text{DescriptorWrites}[i]` must have been created on device.

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-06940**
  For each element \(i\) where `p\text{DescriptorWrites}[i].\text{descriptorType}` is `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM` or `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, the `\text{imageView}` member of any element of `p\text{DescriptorWrites}[i]` must have been created on device.
For each element $i$ where \texttt{pDescriptorWrites[i].descriptorType} is
\texttt{VK_DESCRIPTOR_TYPE_SAMPLER}, \texttt{VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER},
\texttt{VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE}, \texttt{VK_DESCRIPTOR_TYPE_STORAGE_IMAGE}, or
\texttt{VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT}, \texttt{pDescriptorWrites[i].pImageInfo must be a valid}
pointer to an array of \texttt{pDescriptorWrites[i].descriptorCount} valid \texttt{VkDescriptorImageInfo}
structures.

For each element $i$ where \texttt{pDescriptorWrites[i].descriptorType} is
\texttt{VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM} or
\texttt{VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM}, \texttt{pDescriptorWrites[i].pImageInfo must be a valid}
pointer to an array of \texttt{pDescriptorWrites[i].descriptorCount} valid \texttt{VkDescriptorImageInfo}
structures.

The \texttt{dstSet} member of each element of \texttt{pDescriptorWrites} or \texttt{pDescriptorCopies} for
bindings which were created without the \texttt{VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT} or
\texttt{VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT} bits set must not be used by any
command that was recorded to a command buffer which is in the pending state.

Host access to \texttt{pDescriptorWrites[i].dstSet} and \texttt{pDescriptorCopies[i].dstSet} must be externally synchronized unless explicitly denoted otherwise for specific flags.

### Valid Usage (Implicit)

- **VUID-vkUpdateDescriptorSets-device-parameter**
  \texttt{device must be a valid \texttt{VkDevice} handle.}

- **VUID-vkUpdateDescriptorSets-pDescriptorWrites-parameter**
  \texttt{If descriptorWriteCount is not 0, pDescriptorWrites must be a valid pointer to an array of}
  \texttt{descriptorWriteCount} valid \texttt{VkWriteDescriptorSet} structures.

- **VUID-vkUpdateDescriptorSets-pDescriptorCopies-parameter**
  \texttt{If descriptorCopyCount is not 0, pDescriptorCopies must be a valid pointer to an array of}
  \texttt{descriptorCopyCount} valid \texttt{VkCopyDescriptorSet} structures.

The \texttt{VkWriteDescriptorSet} structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkWriteDescriptorSet {
  VkStructureType sType;
  const void* pNext;
  VkDescriptorSet dstSet;
  uint32_t dstBinding;
  uint32_t dstArrayElement;
  uint32_t descriptorCount;
  VkDescriptorType descriptorType;
} VkWriteDescriptorSet;
```
const VkDescriptorImageInfo* pImageInfo;
const VkDescriptorBufferInfo* pBufferInfo;
const VkBufferView* pTexelBufferView;
} VkWriteDescriptorSet;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• dstSet is the destination descriptor set to update.
• dstBinding is the descriptor binding within that set.
• dstArrayElement is the starting element in that array. If the descriptor binding identified by dstSet and dstBinding has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then dstArrayElement specifies the starting byte offset within the binding.
• descriptorCount is the number of descriptors to update. If the descriptor binding identified by dstSet and dstBinding has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, then descriptorCount specifies the number of bytes to update. Otherwise, descriptorCount is one of:
  ◦ the number of elements in pImageInfo
  ◦ the number of elements in pBufferInfo
  ◦ the number of elements in pTexelBufferView
  ◦ a value matching the dataSize member of a VkWriteDescriptorSetInlineUniformBlock structure in the pNext chain
  ◦ a value matching the accelerationStructureCount of a VkWriteDescriptorSetAccelerationStructureKHR structure in the pNext chain
• descriptorType is a VkDescriptorType specifying the type of each descriptor in pImageInfo, pBufferInfo, or pTexelBufferView, as described below. If VkDescriptorSetLayoutBinding for dstSet at dstBinding is not equal to VK_DESCRIPTOR_TYPE_MUTABLE_EXT, descriptorType must be the same type as the(descriptorType specified in VkDescriptorSetLayoutBinding for dstSet at dstBinding. The type of the descriptor also controls which array the descriptors are taken from.
• pImageInfo is a pointer to an array of VkDescriptorImageInfo structures or is ignored, as described below.
• pBufferInfo is a pointer to an array of VkDescriptorBufferInfo structures or is ignored, as described below.
• pTexelBufferView is a pointer to an array of VkBufferView handles as described in the Buffer Views section or is ignored, as described below.

Only one of pImageInfo, pBufferInfo, or pTexelBufferView members is used according to the descriptor type specified in the descriptorType member of the containing VkWriteDescriptorSet structure, or none of them in case descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, in which case the source data for the descriptor writes is taken from the VkWriteDescriptorSetInlineUniformBlock structure included in the pNext chain of VkWriteDescriptorSet, or if descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR, in which case the source data for the descriptor writes is taken from the VkWriteDescriptorSetAccelerationStructureKHR structure in the pNext chain of.
VkWriteDescriptorSet, or if descriptorType is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV, in which case the source data for the descriptor writes is taken from the VkWriteDescriptorSetAccelerationStructureNV structure in the pNext chain of VkWriteDescriptorSet, as specified below.

If the nullDescriptor feature is enabled, the buffer, acceleration structure, imageView, or bufferView can be VK_NULL_HANDLE. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded. A null acceleration structure descriptor results in the miss shader being invoked.

If the destination descriptor is a mutable descriptor, the active descriptor type for the destination descriptor becomes descriptorType.

If the dstBinding has fewer than descriptorCount array elements remaining starting from dstArrayElement, then the remainder will be used to update the subsequent binding - dstBinding+1 starting at array element zero. If a binding has a descriptorCount of zero, it is skipped. This behavior applies recursively, with the update affecting consecutive bindings as needed to update all descriptorCount descriptors. Consecutive bindings must have identical VkDescriptorType, VkShaderStageFlags, VkDescriptorBindingFlagBits, and immutable samplers references. In addition, if the VkDescriptorType is VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the supported descriptor types in VkMutableDescriptorTypeCreateInfoEXT must be equally defined.

Note
The same behavior applies to bindings with a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK where descriptorCount specifies the number of bytes to update while dstArrayElement specifies the starting byte offset, thus in this case if the dstBinding has a smaller byte size than the sum of dstArrayElement and descriptorCount, then the remainder will be used to update the subsequent binding - dstBinding+1 starting at offset zero. This falls out as a special case of the above rule.

Valid Usage

- VUID-VkWriteDescriptorSet-dstBinding-00315
dstBinding must be less than or equal to the maximum value of binding of all VkDescriptorSetLayoutBinding structures specified when dstSet's descriptor set layout was created

- VUID-VkWriteDescriptorSet-dstBinding-00316
dstBinding must be a binding with a non-zero descriptorCount

- VUID-VkWriteDescriptorSet-descriptorCount-00317
All consecutive bindings updated via a single VkWriteDescriptorSet structure, except those with a descriptorCount of zero, must have identical descriptorType and stageFlags

- VUID-VkWriteDescriptorSet-descriptorCount-00318
All consecutive bindings updated via a single VkWriteDescriptorSet structure, except those with a descriptorCount of zero, must all either use immutable samplers or must all not use immutable samplers
• VUID-VkWriteDescriptorSet-descriptorType-00319
descriptorType must match the type of dstBinding within dstSet

• VUID-VkWriteDescriptorSet-dstSet-00320
dstSet must be a valid VkDescriptorSet handle

• VUID-VkWriteDescriptorSet-dstArrayElement-00321
The sum of dstArrayElement and descriptorCount must be less than or equal to the number of array elements in the descriptor set binding specified by dstBinding, and all applicable consecutive bindings, as described by consecutive binding updates

• VUID-VkWriteDescriptorSet-descriptorType-02219
If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, dstArrayElement must be an integer multiple of 4

• VUID-VkWriteDescriptorSet-descriptorType-02220
If descriptorType is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, descriptorCount must be an integer multiple of 4

• VUID-VkWriteDescriptorSet-descriptorType-02994
If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, each element of pTexelBufferView must be either a valid VkBufferView handle or VK_NULL_HANDLE

• VUID-VkWriteDescriptorSet-descriptorType-02995
If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER and the nullDescriptor feature is not enabled, each element of pTexelBufferView must not be VK_NULL_HANDLE

• VUID-VkWriteDescriptorSet-descriptorType-00324
If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, pBufferInfo must be a valid pointer to an array of descriptorCount valid VkDescriptorBufferInfo structures

• VUID-VkWriteDescriptorSet-descriptorType-00325
If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and dstSet was not allocated with a layout that included immutable samplers for dstBinding with descriptorType, the sampler member of each element of pImageInfo must be a valid VkSampler object

• VUID-VkWriteDescriptorSet-descriptorType-02996
If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, the imageView member of each element of pImageInfo must be either a valid VkImageView handle or VK_NULL_HANDLE

• VUID-VkWriteDescriptorSet-descriptorType-02997
If descriptorType is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and the nullDescriptor feature is not enabled, the imageView member of each element of pImageInfo must not be VK_NULL_HANDLE

• VUID-VkWriteDescriptorSet-descriptorType-07683
If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `imageView` member of each element of `pImageInfo` must not be `VK_NULL_HANDLE`.

- **VUID-VkWriteDescriptorSet-descriptorType-02221**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, the `pNext` chain must include a `VkWriteDescriptorSetInlineUniformBlock` structure whose `dataSize` member equals `descriptorCount`.

- **VUID-VkWriteDescriptorSet-descriptorType-02382**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR`, the `pNext` chain must include a `VkWriteDescriptorSetAccelerationStructureKHR` structure whose `accelerationStructureCount` member equals `descriptorCount`.

- **VUID-VkWriteDescriptorSet-descriptorType-03817**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV`, the `pNext` chain must include a `VkWriteDescriptorSetAccelerationStructureNV` structure whose `accelerationStructureCount` member equals `descriptorCount`.

- **VUID-VkWriteDescriptorSet-descriptorType-01946**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, then the `imageView` member of each `pImageInfo` element must have been created without a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain.

- **VUID-VkWriteDescriptorSet-descriptorType-02738**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and if any element of `pImageInfo` has an `imageView` member that was created with a `VkSamplerYcbcrConversionInfo` structure in its `pNext` chain, then `dstSet` must have been allocated with a layout that includes immutable samplers for `dstBinding`, and the corresponding immutable sampler must have been created with an *identically defined* `VkSamplerYcbcrConversionInfo` object.

- **VUID-VkWriteDescriptorSet-descriptorType-01948**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` must be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`.

- **VUID-VkWriteDescriptorSet-descriptorType-00327**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` must be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`.

- **VUID-VkWriteDescriptorSet-descriptorType-00328**
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC`, the `offset` member of each element of `pBufferInfo` must be a multiple of `VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment`.
If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, and the buffer member of any element of pBufferInfo is the handle of a non-sparse buffer, then that buffer must be bound completely and contiguously to a single VkDeviceMemory object.

If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, the buffer member of each element of pBufferInfo must have been created with VK_BUFFER_USAGE_UNIFORM_BUFFER_BIT set.

If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, the buffer member of each element of pBufferInfo must have been created with VK_BUFFER_USAGE_STORAGE_BUFFER_BIT set.

If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC, the range member of each element of pBufferInfo, or the effective range if range is VK_WHOLE_SIZE, must be less than or equal to VkPhysicalDeviceLimits::maxUniformBufferRange.

If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, the range member of each element of pBufferInfo, or the effective range if range is VK_WHOLE_SIZE, must be less than or equal to VkPhysicalDeviceLimits::maxStorageBufferRange.

If descriptorType is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, the pTexelBufferView buffer view usage must include VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT.

If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, the pTexelBufferView buffer view usage must include VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT.

If descriptorType is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the imageView member of each element of pImageInfo must have been created with the identity swizzle.

If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the imageView member of each element of pImageInfo must have been created with VK_IMAGE_USAGE_SAMPLED_BIT set.

If descriptorType is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, the imageLayout member of each element of pImageInfo must be a member of the list given in Sampled Image.
If `descriptorType` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in **Combined Image Sampler**

- VUID-VkWriteDescriptorSet-descriptorType-04151
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in **Input Attachment**

- VUID-VkWriteDescriptorSet-descriptorType-04152
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` the `imageLayout` member of each element of `pImageInfo` **must** be a member of the list given in **Storage Image**

- VUID-VkWriteDescriptorSet-descriptorType-00338
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `imageView` member of each element of `pImageInfo` **must** have been created with `VK_IMAGE_USAGE_INPUT_ATTACHMENT_BIT` set

- VUID-VkWriteDescriptorSet-descriptorType-00339
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, the `imageView` member of each element of `pImageInfo` **must** have been created with `VK_IMAGE_USAGE_STORAGE_BIT` set

- VUID-VkWriteDescriptorSet-descriptorType-02752
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLER`, then `dstSet` **must** not have been allocated with a layout that included immutable samplers for `dstBinding`

- VUID-VkWriteDescriptorSet-descriptorType-06450
  If the `VkDescriptorSetLayoutBinding` for `dstSet` at `dstBinding` is `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, the new active descriptor type `descriptorType` **must** exist in the corresponding `pMutableDescriptorTypeLists` list for `dstBinding`

- VUID-VkWriteDescriptorSet-descriptorType-06942
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`, the `imageView` member of each element of `pImageInfo` **must** have been created with a view created with an image created with `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`

- VUID-VkWriteDescriptorSet-descriptorType-06943
  If `descriptorType` is `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`, the `imageView` member of each element of `pImageInfo` **must** have been created with a view created with an image created with `VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM`

---

**Valid Usage (Implicit)**

- VUID-VkWriteDescriptorSet-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET`

- VUID-VkWriteDescriptorSet-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either
**NULL** or a pointer to a valid instance of `VkWriteDescriptorSetAccelerationStructureKHR`, `VkWriteDescriptorSetAccelerationStructureNV`, or `VkWriteDescriptorSetInlineUniformBlock`.

- **VUID-VkWriteDescriptorSet-sType-unique**
  The `sType` value of each struct in the `pNext` chain **must** be unique.

- **VUID-VkWriteDescriptorSet-descriptorType-parameter**
  The `descriptorType` **must** be a valid `VkDescriptorType` value.

- **VUID-VkWriteDescriptorSet-descriptorCount-arraylength**
  The `descriptorCount` **must** be greater than 0.

- **VUID-VkWriteDescriptorSet-commonparent**
  Both of `dstSet`, and the elements of `pTexelBufferView` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`.

The type of descriptors in a descriptor set is specified by `VkWriteDescriptorSet::descriptorType,` which **must** be one of the values:

```c
// Provided by VK_VERSION_1_0
typedef enum VkDescriptorType {
    VK_DESCRIPTOR_TYPE_SAMPLER = 0,
    VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER = 1,
    VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE = 2,
    VK_DESCRIPTOR_TYPE_STORAGE_IMAGE = 3,
    VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER = 4,
    VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER = 5,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER = 6,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER = 7,
    VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC = 8,
    VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC = 9,
    VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT = 10,
    // Provided by VK_VERSION_1_3
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK = 1000138000,
    // Provided by VK_KHR_acceleration_structure
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR = 1000150000,
    // Provided by VK_NV_ray_tracing
    VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV = 1000165000,
    // Provided by VK_QCOM_image_processing
    VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM = 1000440000,
    // Provided by VK_QCOM_image_processing
    VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM = 1000440001,
    // Provided by VK_EXT_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_EXT = 1000351000,
    // Provided by VK_EXT_inline_uniform_block
    VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK_EXT = VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK,
    // Provided by VK_VALVE_mutable_descriptor_type
    VK_DESCRIPTOR_TYPE_MUTABLE_VALVE = VK_DESCRIPTOR_TYPE_MUTABLE_EXT,
} VkDescriptorType;
```
• **VK_DESCRIPTOR_TYPE_SAMPLER** specifies a **sampler descriptor**.
• **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER** specifies a **combined image sampler descriptor**.
• **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE** specifies a **sampled image descriptor**.
• **VK_DESCRIPTOR_TYPE_STORAGE_IMAGE** specifies a **storage image descriptor**.
• **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER** specifies a **uniform texel buffer descriptor**.
• **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** specifies a **storage texel buffer descriptor**.
• **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER** specifies a **uniform buffer descriptor**.
• **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER** specifies a **storage buffer descriptor**.
• **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC** specifies a **dynamic uniform buffer descriptor**.
• **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC** specifies a **dynamic storage buffer descriptor**.
• **VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT** specifies an **input attachment descriptor**.
• **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** specifies an **inline uniform block**.
• **VK_DESCRIPTOR_TYPE_MUTABLE_EXT** specifies a **descriptor of mutable type**.
• **VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM** specifies a **sampled weight image descriptor**.
• **VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM** specifies a **block matching image descriptor**.

When a descriptor set is updated via elements of `VkWriteDescriptorSet`, members of `pImageInfo`, `pBufferInfo` and `pTexelBufferView` are only accessed by the implementation when they correspond to descriptor type being defined - otherwise they are ignored. The members accessed are as follows for each descriptor type:

• For **VK_DESCRIPTOR_TYPE_SAMPLER**, only the `sampler` member of each element of `VkWriteDescriptorSet::pImageInfo` is accessed.
• For **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE**, **VK_DESCRIPTOR_TYPE_STORAGE_IMAGE**, or **VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT**, only the `imageView` and `imageLayout` members of each element of `VkWriteDescriptorSet::pImageInfo` are accessed.
• For **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**, all members of each element of `VkWriteDescriptorSet::pImageInfo` are accessed.
• For **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER**, **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER**, **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC**, or **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC**, all members of each element of `VkWriteDescriptorSet::pBufferInfo` are accessed.
• For **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER** or **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER**, each element of `VkWriteDescriptorSet::pTexelBufferView` is accessed.

When updating descriptors with a `descriptorType` of **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**, none of the `pImageInfo`, `pBufferInfo`, or `pTexelBufferView` members are accessed, instead the source data of the descriptor update operation is taken from the `VkWriteDescriptorSetInlineUniformBlock` structure in the `pNext` chain of `VkWriteDescriptorSet`. When updating descriptors with a `descriptorType` of **VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR**, none of the `pImageInfo`,...
pBufferInfo, or pTexelBufferView members are accessed, instead the source data of the descriptor update operation is taken from the VkWriteDescriptorSetAccelerationStructureKHR structure in the pNext chain of VkWriteDescriptorSet. When updating descriptors with a descriptorType of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV, none of the pImageInfo, pBufferInfo, or pTexelBufferView members are accessed, instead the source data of the descriptor update operation is taken from the VkWriteDescriptorSetAccelerationStructureNV structure in the pNext chain of VkWriteDescriptorSet.

The VkDescriptorBufferInfo structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorBufferInfo {
   VkBuffer buffer;
    VkDeviceSize offset;
    VkDeviceSize range;
} VkDescriptorBufferInfo;
```

- buffer is VK_NULL_HANDLE or the buffer resource.
- offset is the offset in bytes from the start of buffer. Access to buffer memory via this descriptor uses addressing that is relative to this starting offset.
- range is the size in bytes that is used for this descriptor update, or VK_WHOLE_SIZE to use the range from offset to the end of the buffer.

**Note**

When setting range to VK_WHOLE_SIZE, the effective range must not be larger than the maximum range for the descriptor type (maxUniformBufferRange or maxStorageBufferRange). This means that VK_WHOLE_SIZE is not typically useful in the common case where uniform buffer descriptors are suballocated from a buffer that is much larger than maxUniformBufferRange.

For VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC and VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC descriptor types, offset is the base offset from which the dynamic offset is applied and range is the static size used for all dynamic offsets.

When range is VK_WHOLE_SIZE the effective range is calculated at vkUpdateDescriptorSets is by taking the size of buffer minus the offset.

**Valid Usage**

- VUID-VkDescriptorBufferInfo-offset-00340
  offset must be less than the size of buffer
- VUID-VkDescriptorBufferInfo-range-00341
  If range is not equal to VK_WHOLE_SIZE, range must be greater than 0
- VUID-VkDescriptorBufferInfo-range-00342
  If range is not equal to VK_WHOLE_SIZE, range must be less than or equal to the size of buffer
minus offset

- VUID-VkDescriptorBufferInfo-buffer-02998
  If the nullDescriptor feature is not enabled, buffer must not be VK_NULL_HANDLE

- VUID-VkDescriptorBufferInfo-buffer-02999
  If buffer is VK_NULL_HANDLE, offset must be zero and range must be VK_WHOLE_SIZE

Valid Usage (Implicit)

- VUID-VkDescriptorBufferInfo-buffer-parameter
  If buffer is not VK_NULL_HANDLE, buffer must be a valid VkBuffer handle

The VkDescriptorImageInfo structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkDescriptorImageInfo {
  VkSampler sampler;
  VkImageView imageView;
  VkImageLayout imageLayout;
} VkDescriptorImageInfo;
```

- sampler is a sampler handle, and is used in descriptor updates for types VK_DESCRIPTOR_TYPE_SAMPLER and VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER if the binding being updated does not use immutable samplers.

- imageView is VK_NULL_HANDLE or an image view handle, and is used in descriptor updates for types VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT.

- imageLayout is the layout that the image subresources accessible from imageView will be in at the time this descriptor is accessed. imageLayout is used in descriptor updates for types VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, and VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT.

Members of VkDescriptorImageInfo that are not used in an update (as described above) are ignored.

Valid Usage

- VUID-VkDescriptorImageInfo-imageView-06712
  imageView must not be a 2D array image view created from a 3D image

- VUID-VkDescriptorImageInfo-imageView-07795
  If imageView is a 2D view created from a 3D image, then descriptorType must be VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER

- VUID-VkDescriptorImageInfo-imageView-07796
  If imageView is a 2D view created from a 3D image, then the image must have been created
with VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT set

• VUID-VkDescriptorImageInfo-descriptorType-06713
If the image2DViewOf3D feature is not enabled or descriptorType is not VK_DESCRIPTOR_TYPE_STORAGE_IMAGE then imageView must not be a 2D view created from a 3D image

• VUID-VkDescriptorImageInfo-descriptorType-06714
If the sampler2DViewOf3D feature is not enabled or descriptorType is not VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER then imageView must not be a 2D view created from a 3D image

• VUID-VkDescriptorImageInfo-imageView-01976
If imageView is created from a depth/stencil image, the aspectMask used to create the imageView must include either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT but not both

• VUID-VkDescriptorImageInfo-imageView-09425
If imageView is created from a depth/stencil image, the aspectMask used to create imageView must not include either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT

• VUID-VkDescriptorImageInfo-imageView-09426
If imageLayout is VK_IMAGE_LAYOUT_COLOR_ATTACHMENT_OPTIMAL, then the aspectMask used to create imageView must not include either VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT

• VUID-VkDescriptorImageInfo-imageLayout-00344
imageLayout must match the actual VkImageLayout of each subresource accessible from imageView at the time this descriptor is accessed as defined by the image layout matching rules

• VUID-VkDescriptorImageInfo-sampler-01564
If sampler is used and the VkFormat of the image is a multi-planar format, the image must have been created with VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT, and the aspectMask of the imageView must be a valid multi-planar aspect mask bit

• VUID-VkDescriptorImageInfo-mutableComparisonSamplers-04450
If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::mutableComparisonSamplers is VK_FALSE, then sampler must have been created with VkSamplerCreateInfo::compareEnable set to VK_FALSE

Valid Usage (Implicit)

• VUID-VkDescriptorImageInfo-commonparent
Both of imageView, and sampler that are valid handles of non-ignored parameters must
If the descriptorType member of VkWriteDescriptorSet is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then the data to write to the descriptor set is specified through a VkWriteDescriptorSetInlineUniformBlock structure included in the pNext chain of VkWriteDescriptorSet.

The VkWriteDescriptorSetInlineUniformBlock structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkWriteDescriptorSetInlineUniformBlock {
    VkStructureType sType;
    const void* pNext;
    uint32_t dataSize;
    const void* pData;
} VkWriteDescriptorSetInlineUniformBlock;
```

or the equivalent

```c
// Provided by VK_EXT_inline_uniform_block
typedef VkWriteDescriptorSetInlineUniformBlock
VkWriteDescriptorSetInlineUniformBlockEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **dataSize** is the number of bytes of inline uniform block data pointed to by pData.
- **pData** is a pointer to dataSize number of bytes of data to write to the inline uniform block.

### Valid Usage

- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-02222
  dataSize must be an integer multiple of 4

### Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetInlineUniformBlock-sType-sType
  sType must be VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_INLINE_UNIFORM_BLOCK
- VUID-VkWriteDescriptorSetInlineUniformBlock-pData-parameter
  pData must be a valid pointer to an array of dataSize bytes
- VUID-VkWriteDescriptorSetInlineUniformBlock-dataSize-arraylength
  dataSize must be greater than 0
The **VkWriteDescriptorSetAccelerationStructureKHR** structure is defined as:

```c
// Provided by VK_KHR_acceleration_structure
typedef struct VkWriteDescriptorSetAccelerationStructureKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t accelerationStructureCount;
    const VkAccelerationStructureKHR* pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **accelerationStructureCount** is the number of elements in **pAccelerationStructures**.
- **pAccelerationStructures** is a pointer to an array of **VkAccelerationStructureKHR** structures specifying the acceleration structures to update.

### Valid Usage

- **VUID-VkWriteDescriptorSetAccelerationStructureKHR-accelerationStructureCount-02236** accelerationStructureCount **must** be equal to descriptorCount in the extended structure
- **VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03579** Each acceleration structure in **pAccelerationStructures** **must** have been created with a type of **VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR** or **VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR**
- **VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-03580** If the nullDescriptor feature is not enabled, each element of **pAccelerationStructures** **must** not be **VK_NULL_HANDLE**

### Valid Usage (Implicit)

- **VUID-VkWriteDescriptorSetAccelerationStructureKHR-sType-sType** **sType** **must** be **VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_KHR**
- **VUID-VkWriteDescriptorSetAccelerationStructureKHR-pAccelerationStructures-parameter** **pAccelerationStructures** **must** be a valid pointer to an array of accelerationStructureCount valid or **VK_NULL_HANDLE** VkAccelerationStructureKHR handles
- **VUID-VkWriteDescriptorSetAccelerationStructureKHR-accelerationStructureCount-arraylength** accelerationStructureCount **must** be greater than 0

The **VkWriteDescriptorSetAccelerationStructureNV** structure is defined as:
typedef struct VkWriteDescriptorSetAccelerationStructureNV {
    VkStructureType sType;
    const void* pNext;
    uint32_t accelerationStructureCount;
    const VkAccelerationStructureNV* pAccelerationStructures;
} VkWriteDescriptorSetAccelerationStructureNV;

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure.
• **accelerationStructureCount** is the number of elements in **pAccelerationStructures**.
• **pAccelerationStructures** is a pointer to an array of **VkAccelerationStructureNV** structures specifying the acceleration structures to update.

### Valid Usage

- VUID-VkWriteDescriptorSetAccelerationStructureNV-accelerationStructureCount-03747
  accelerationStructureCount must be equal to descriptorCount in the extended structure

- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-03748
  Each acceleration structure in **pAccelerationStructures** must have been created with VK_ACCELERATION_STRUCTURE_TYPE_TOP_LEVEL_KHR

- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-03749
  If the nullDescriptor feature is not enabled, each member of **pAccelerationStructures** must not be VK_NULL_HANDLE

### Valid Usage (Implicit)

- VUID-VkWriteDescriptorSetAccelerationStructureNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_ACCELERATION_STRUCTURE_NV

- VUID-VkWriteDescriptorSetAccelerationStructureNV-pAccelerationStructures-parameter
  pAccelerationStructures must be a valid pointer to an array of accelerationStructureCount valid or VK_NULL_HANDLE VkAccelerationStructureNV handles

- VUID-VkWriteDescriptorSetAccelerationStructureNV-accelerationStructureCount-arraylength
  accelerationStructureCount must be greater than 0

The **VkCopyDescriptorSet** structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkCopyDescriptorSet {
    VkStructureType sType;
    const void* pNext;
    VkCopyDescriptorSetFlags flags;
    const VkDescriptorSetCopy* pNextCopySet;
    const VkImageCopy* pNextImageCopy;
} VkCopyDescriptorSet;
```
VkCopyDescriptorSet

VkDescriptorSet srcSet;
uint32_t srcBinding;
uint32_t srcArrayElement;
VkDescriptorSet dstSet;
uint32_t dstBinding;
uint32_t dstArrayElement;
uint32_t descriptorCount;
}

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• srcSet, srcBinding, and srcArrayElement are the source set, binding, and array element, respectively. If the descriptor binding identified by srcSet and srcBinding has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then srcArrayElement specifies the starting byte offset within the binding to copy from.
• dstSet, dstBinding, and dstArrayElement are the destination set, binding, and array element, respectively. If the descriptor binding identified by dstSet and dstBinding has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then dstArrayElement specifies the starting byte offset within the binding to copy to.
• descriptorCount is the number of descriptors to copy from the source to destination. If descriptorCount is greater than the number of remaining array elements in the source or destination binding, those affect consecutive bindings in a manner similar to VkWriteDescriptorSet above. If the descriptor binding identified by srcSet and srcBinding has a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK then descriptorCount specifies the number of bytes to copy and the remaining array elements in the source or destination binding refer to the remaining number of bytes in those.

If the VkDescriptorSetLayoutBinding for dstBinding is VK_DESCRIPTOR_TYPE_MUTABLE_EXT and srcBinding is not VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the new active descriptor type becomes the descriptor type of srcBinding. If both VkDescriptorSetLayoutBinding for srcBinding and dstBinding are VK_DESCRIPTOR_TYPE_MUTABLE_EXT, the active descriptor type in each source descriptor is copied into the corresponding destination descriptor. The active descriptor type can be different for each source descriptor.

Note
The intention is that copies to and from mutable descriptors is a simple memcpy. Copies between non-mutable and mutable descriptors are expected to require one memcpy per descriptor to handle the difference in size, but this use case with more than one descriptorCount is considered rare.

Valid Usage
• VUID-VkCopyDescriptorSet-srcBinding-00345
  srcBinding must be a valid binding within srcSet
• VUID-VkCopyDescriptorSet-srcArrayElement-00346
The sum of srcArrayElement and descriptorCount must be less than or equal to the number of array elements in the descriptor set binding specified by srcBinding, and all applicable consecutive bindings, as described by consecutive binding updates.

- **VUID-VkCopyDescriptorSet-dstBinding-00347**
  dstBinding must be a valid binding within dstSet

- **VUID-VkCopyDescriptorSet-dstArrayElement-00348**
  The sum of dstArrayElement and descriptorCount must be less than or equal to the number of array elements in the descriptor set binding specified by dstBinding, and all applicable consecutive bindings, as described by consecutive binding updates.

- **VUID-VkCopyDescriptorSet-dstBinding-02632**
  The type of dstBinding within dstSet must be equal to the type of srcBinding within srcSet

- **VUID-VkCopyDescriptorSet-srcSet-00349**
  If srcSet is equal to dstSet, then the source and destination ranges of descriptors must not overlap, where the ranges may include array elements from consecutive bindings as described by consecutive binding updates.

- **VUID-VkCopyDescriptorSet-srcBinding-02223**
  If the descriptor type of the descriptor set binding specified by srcBinding is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, srcArrayElement must be an integer multiple of 4.

- **VUID-VkCopyDescriptorSet-dstBinding-02224**
  If the descriptor type of the descriptor set binding specified by dstBinding is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, dstArrayElement must be an integer multiple of 4.

- **VUID-VkCopyDescriptorSet-srcBinding-02225**
  If the descriptor type of the descriptor set binding specified by either srcBinding or dstBinding is VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK, descriptorCount must be an integer multiple of 4.

- **VUID-VkCopyDescriptorSet-srcSet-01918**
  If srcSet’s layout was created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set, then dstSet’s layout must also have been created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set.

- **VUID-VkCopyDescriptorSet-srcSet-04885**
  If srcSet’s layout was created without either the VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT flag or the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set, then dstSet’s layout must have been created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT flag set.

- **VUID-VkCopyDescriptorSet-srcSet-01920**
  If the descriptor pool from which srcSet was allocated was created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set, then the descriptor pool from which dstSet was allocated must also have been created with the VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT flag set.
If the descriptor pool from which \texttt{srcSet} was allocated was created without either the \texttt{VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT} flag or the \texttt{VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT} flag set, then the descriptor pool from which \texttt{dstSet} was allocated must have been created without the \texttt{VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT} flag set.

If the descriptor type of the descriptor set binding specified by \texttt{dstBinding} is \texttt{VK_DESCRIPTOR_TYPE_SAMPLER}, then \texttt{dstSet} must not have been allocated with a layout that included immutable samplers for \texttt{dstBinding}.

If \texttt{VkDescriptorSetLayoutBinding} for \texttt{srcSet} at \texttt{srcBinding} is \texttt{VK_DESCRIPTOR_TYPE_MUTABLE_EXT} and the \texttt{VkDescriptorSetLayoutBinding} for \texttt{dstSet} at \texttt{dstBinding} is not \texttt{VK_DESCRIPTOR_TYPE_MUTABLE_EXT}, the active descriptor type for the source descriptor must match the descriptor type of \texttt{dstBinding}.

If \texttt{VkDescriptorSetLayoutBinding} for \texttt{dstSet} at \texttt{dstBinding} is \texttt{VK_DESCRIPTOR_TYPE_MUTABLE_EXT}, and the new active descriptor type is \texttt{VK_DESCRIPTOR_TYPE_MUTABLE_EXT}, the \texttt{pMutableDescriptorTypeLists} for \texttt{srcBinding} and \texttt{dstBinding} must match exactly.

**Valid Usage (Implicit)**

- \texttt{VkCopyDescriptorSet-sType-sType}
  - \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_COPY_DESCRIPTOR_SET}

- \texttt{VkCopyDescriptorSet-pNext-pNext}
  - \texttt{pNext} must be \texttt{NULL}

- \texttt{VkCopyDescriptorSet-srcSet-parameter}
  - \texttt{srcSet} must be a valid \texttt{VkDescriptorSet} handle

- \texttt{VkCopyDescriptorSet-dstSet-parameter}
  - \texttt{dstSet} must be a valid \texttt{VkDescriptorSet} handle

- \texttt{VkCopyDescriptorSet-commonparent}
  - Both of \texttt{dstSet}, and \texttt{srcSet} must have been created, allocated, or retrieved from the same \texttt{VkDevice}

### 14.2.5. Descriptor Update Templates

A descriptor update template specifies a mapping from descriptor update information in host memory to descriptors in a descriptor set. It is designed to avoid passing redundant information to
the driver when frequently updating the same set of descriptors in descriptor sets.

Descriptor update template objects are represented by `VkDescriptorUpdateTemplate` handles:

```c
// Provided by VK_VERSION_1_1
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDescriptorUpdateTemplate)
```

or the equivalent

```c
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplate VkDescriptorUpdateTemplateKHR;
```

### 14.2.6. Descriptor Set Updates With Templates

Updating a large `VkDescriptorSet` array can be an expensive operation since an application must specify one `VkWriteDescriptorSet` structure for each descriptor or descriptor array to update, each of which re-specifies the same state when updating the same descriptor in multiple descriptor sets. For cases when an application wishes to update the same set of descriptors in multiple descriptor sets allocated using the same `VkDescriptorSetLayout`, `vkUpdateDescriptorSetWithTemplate` can be used as a replacement for `vkUpdateDescriptorSets`.

`VkDescriptorUpdateTemplate` allows implementations to convert a set of descriptor update operations on a single descriptor set to an internal format that, in conjunction with `vkUpdateDescriptorSetWithTemplate` or `vkCmdPushDescriptorSetWithTemplateKHR`, can be more efficient compared to calling `vkUpdateDescriptorSets` or `vkCmdPushDescriptorSetKHR`. The descriptors themselves are not specified in the `VkDescriptorUpdateTemplate`, rather, offsets into an application provided pointer to host memory are specified, which are combined with a pointer passed to `vkUpdateDescriptorSetWithTemplate` or `vkCmdPushDescriptorSetWithTemplateKHR`. This allows large batches of updates to be executed without having to convert application data structures into a strictly-defined Vulkan data structure.

To create a descriptor update template, call:

```c
// Provided by VK_VERSION_1_1
VkResult vkCreateDescriptorUpdateTemplate(
    VkDevice device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDescriptorUpdateTemplate* pDescriptorUpdateTemplate);
```

or the equivalent command

```c
// Provided by VK_KHR_descriptor_update_template
VkResult vkCreateDescriptorUpdateTemplateKHR(
    VkDevice device,
    const VkDescriptorUpdateTemplateCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDescriptorUpdateTemplateKHR* pDescriptorUpdateTemplate);
```

```c
const VkAllocationCallbacks* pAllocator,
VkDescriptorUpdateTemplate* pDescriptorUpdateTemplate);
```

- `device` is the logical device that creates the descriptor update template.
- `pCreateInfo` is a pointer to a `VkDescriptorUpdateTemplateCreateInfo` structure specifying the set of descriptors to update with a single call to `vkCmdPushDescriptorSetWithTemplateKHR` or `vkUpdateDescriptorSetWithTemplate`.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pDescriptorUpdateTemplate` is a pointer to a `VkDescriptorUpdateTemplate` handle in which the resulting descriptor update template object is returned.

### Valid Usage (Implicit)

- VUID-vkCreateDescriptorUpdateTemplate-device-parameter `device` must be a valid `VkDevice` handle
- VUID-vkCreateDescriptorUpdateTemplate-pCreateInfo-parameter `pCreateInfo` must be a valid pointer to a valid `VkDescriptorUpdateTemplateCreateInfo` structure
- VUID-vkCreateDescriptorUpdateTemplate-pAllocator-parameter If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDescriptorUpdateTemplate-pDescriptorUpdateTemplate-parameter `pDescriptorUpdateTemplate` must be a valid pointer to a `VkDescriptorUpdateTemplate` handle

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkDescriptorUpdateTemplateCreateInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkDescriptorUpdateTemplateCreateFlags flags;
    uint32_t descriptorUpdateEntryCount;
    const VkDescriptorUpdateTemplateEntry* pDescriptorUpdateEntries;
};
```
VkDescriptorUpdateTemplateType  
VkDescriptorSetLayout  
VkPipelineBindPoint  
VkPipelineLayout  
uint32_t  
} VkDescriptorUpdateTemplateCreateInfo;

or the equivalent

// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateCreateInfo VkDescriptorUpdateTemplateCreateInfoKHR;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- descriptorUpdateEntryCount is the number of elements in the pDescriptorUpdateEntries array.
- pDescriptorUpdateEntries is a pointer to an array of VkDescriptorUpdateTemplateEntry structures describing the descriptors to be updated by the descriptor update template.
- templateType Specifies the type of the descriptor update template. If set to VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET it can only be used to update descriptor sets with a fixed descriptorSetLayout. If set to VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR it can only be used to push descriptor sets using the provided pipelineBindPoint, pipelineLayout, and set number.
- descriptorSetLayout is the descriptor set layout used to build the descriptor update template. All descriptor sets which are going to be updated through the newly created descriptor update template must be created with a layout that matches (is the same as, or defined identically to) this layout. This parameter is ignored if templateType is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET.
- pipelineBindPoint is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors. This parameter is ignored if templateType is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR
- pipelineLayout is a VkPipelineLayout object used to program the bindings. This parameter is ignored if templateType is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR
- set is the set number of the descriptor set in the pipeline layout that will be updated. This parameter is ignored if templateType is not VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR

Valid Usage

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00350
  If templateType is VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET, descriptorSetLayout must be a valid VkDescriptorSetLayout handle
- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00351

1298
If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR`, `pipelineBindPoint` must be a valid `VkPipelineBindPoint` value

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00352
  If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR`, `pipelineLayout` must be a valid `VkPipelineLayout` handle

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-00353
  If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR`, `set` must be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-04615
  If `templateType` is `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET`, `descriptorSetLayout` must not contain a binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`

**Valid Usage (Implicit)**

- VUID-VkDescriptorUpdateTemplateCreateInfo-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO`

- VUID-VkDescriptorUpdateTemplateCreateInfo-pNext-pNext
  `pNext` must be `NULL`

- VUID-VkDescriptorUpdateTemplateCreateInfo-flags-zerobitmask
  `flags` must be `0`

- VUID-VkDescriptorUpdateTemplateCreateInfo-pDescriptorUpdateEntries-parameter
  `pDescriptorUpdateEntries` must be a valid pointer to an array of `descriptorUpdateEntryCount` valid `VkDescriptorUpdateTemplateEntry` structures

- VUID-VkDescriptorUpdateTemplateCreateInfo-templateType-parameter
  `templateType` must be a valid `VkDescriptorUpdateTemplateType` value

- VUID-VkDescriptorUpdateTemplateCreateInfo-descriptorUpdateEntryCount-arraylength
  `descriptorUpdateEntryCount` must be greater than `0`

- VUID-VkDescriptorUpdateTemplateCreateInfo-commonparent
  Both of `descriptorSetLayout`, and `pipelineLayout` that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same `VkDevice`

```c
// Provided by VK_VERSION_1_1
typedef VkFlags VkDescriptorUpdateTemplateCreateFlags;
```

or the equivalent

```c
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateCreateFlags VkDescriptorUpdateTemplateCreateFlagsKHR;
```
VkDescriptorUpdateTemplateCreateFlags is a bitmask type for setting a mask, but is currently reserved for future use.

The descriptor update template type is determined by the VkDescriptorUpdateTemplateCreateInfo::templateType property, which takes the following values:

```
// Provided by VK_VERSION_1_1
typedef enum VkDescriptorUpdateTemplateType {
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET = 0,
    // Provided by VK_VERSION_1_1 with VK_KHR_push_descriptor, VK_KHR_descriptor_update_template with VK_KHR_push_descriptor
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR = 1,
    // Provided by VK_KHR_descriptor_update_template
    VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET_KHR = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET,
} VkDescriptorUpdateTemplateType;
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateType VkDescriptorUpdateTemplateTypeKHR;
```

- `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET` specifies that the descriptor update template will be used for descriptor set updates only.
- `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR` specifies that the descriptor update template will be used for push descriptor updates only.

The VkDescriptorUpdateTemplateEntry structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkDescriptorUpdateTemplateEntry {
    uint32_t dstBinding;
    uint32_t dstArrayElement;
    uint32_t descriptorCount;
    VkDescriptorType descriptorType;
    size_t offset;
    size_t stride;
} VkDescriptorUpdateTemplateEntry;
```

or the equivalent

```
// Provided by VK_KHR_descriptor_update_template
typedef VkDescriptorUpdateTemplateEntry VkDescriptorUpdateTemplateEntryKHR;
```

- `dstBinding` is the descriptor binding to update when using this descriptor update template.
• **dstArrayElement** is the starting element in the array belonging to **dstBinding**. If the descriptor binding identified by **dstBinding** has a descriptor type of **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** then **dstArrayElement** specifies the starting byte offset to update.

• **descriptorCount** is the number of descriptors to update. If **descriptorCount** is greater than the number of remaining array elements in the destination binding, those affect consecutive bindings in a manner similar to **VkWriteDescriptorSet** above. If the descriptor binding identified by **dstBinding** has a descriptor type of **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** then **descriptorCount** specifies the number of bytes to update and the remaining array elements in the destination binding refer to the remaining number of bytes in it.

• **descriptorType** is a **VkDescriptorType** specifying the type of the descriptor.

• **offset** is the offset in bytes of the first binding in the raw data structure.

• **stride** is the stride in bytes between two consecutive array elements of the descriptor update information in the raw data structure. The actual pointer **ptr** for each array element **j** of update entry **i** is computed using the following formula:

\[
\text{const char }*\text{ptr} = (\text{const char }*)\text{pData} + \text{pDescriptorUpdateEntries[i].offset + j} * \text{pDescriptorUpdateEntries[i].stride}
\]

The stride is useful in case the bindings are stored in structs along with other data. If **descriptorType** is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK** then the value of **stride** is ignored and the stride is assumed to be 1, i.e. the descriptor update information for them is always specified as a contiguous range.

---

**Valid Usage**

• **VUID-VkDescriptorUpdateTemplateEntry-dstBinding-00354**
  **dstBinding** must be a valid binding in the descriptor set layout implicitly specified when using a descriptor update template to update descriptors.

• **VUID-VkDescriptorUpdateTemplateEntry-dstArrayElement-00355**
  **dstArrayElement** and **descriptorCount** must be less than or equal to the number of array elements in the descriptor set binding implicitly specified when using a descriptor update template to update descriptors, and all applicable consecutive bindings, as described by consecutive binding updates.

• **VUID-VkDescriptorUpdateTemplateEntry-descriptor-02226**
  If **descriptor** type is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**, **dstArrayElement** must be an integer multiple of 4.

• **VUID-VkDescriptorUpdateTemplateEntry-descriptor-02227**
  If **descriptor** type is **VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK**, **descriptorCount** must be an integer multiple of 4.
Valid Usage (Implicit)

- VUID-VkDescriptorUpdateTemplateEntry-descriptorType-parameter
descriptorType **must** be a valid **VkDescriptorType** value

To destroy a descriptor update template, call:

```c
// Provided by VK_VERSION_1_1
void vkDestroyDescriptorUpdateTemplate(
    VkDevice device,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const VkAllocationCallbacks* pAllocator);
```

or the equivalent command

```c
// Provided by VK_KHR_descriptor_update_template
void vkDestroyDescriptorUpdateTemplateKHR(
    VkDevice device,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const VkAllocationCallbacks* pAllocator);
```

- **device** is the logical device that has been used to create the descriptor update template
- **descriptorUpdateTemplate** is the descriptor update template to destroy.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

Valid Usage

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00356
  If **VkAllocationCallbacks** were provided when **descriptorUpdateTemplate** was created, a compatible set of callbacks **must** be provided here

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorSetLayout-00357
  If no **VkAllocationCallbacks** were provided when **descriptorUpdateTemplate** was created, **pAllocator** **must** be NULL

Valid Usage (Implicit)

- VUID-vkDestroyDescriptorUpdateTemplate-device-parameter
device **must** be a valid **VkDevice** handle

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parameter
  If **descriptorUpdateTemplate** is not **VK_NULL_HANDLE**, **descriptorUpdateTemplate** **must** be a valid **VkDescriptorUpdateTemplate** handle

- VUID-vkDestroyDescriptorUpdateTemplate-pAllocator-parameter
If \texttt{pAllocator} is not \texttt{NULL}, \texttt{pAllocator} must be a valid pointer to a valid \texttt{VkAllocationCallbacks} structure

- VUID-vkDestroyDescriptorUpdateTemplate-descriptorUpdateTemplate-parent

If \texttt{descriptorUpdateTemplate} is a valid handle, it must have been created, allocated, or retrieved from \texttt{device}

### Host Synchronization

- Host access to \texttt{descriptorUpdateTemplate} must be externally synchronized

Once a \texttt{VkDescriptorUpdateTemplate} has been created, descriptor sets can be updated by calling:

```c
// Provided by VK_VERSION_1_1
void vkUpdateDescriptorSetWithTemplate(
    VkDevice device,
    VkDescriptorSet descriptorSet,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const void* pData);
```

or the equivalent command

```c
// Provided by VK_KHR_descriptor_update_template
void vkUpdateDescriptorSetWithTemplateKHR(
    VkDevice device,
    VkDescriptorSet descriptorSet,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    const void* pData);
```

- \texttt{device} is the logical device that updates the descriptor set.
- \texttt{descriptorSet} is the descriptor set to update
- \texttt{descriptorUpdateTemplate} is a \texttt{VkDescriptorUpdateTemplate} object specifying the update mapping between \texttt{pData} and the descriptor set to update.
- \texttt{pData} is a pointer to memory containing one or more \texttt{VkDescriptorImageInfo}, \texttt{VkDescriptorBufferInfo}, or \texttt{VkBufferView} structures or \texttt{VkAccelerationStructureKHR} or \texttt{VkAccelerationStructureNV} handles used to write the descriptors.

### Valid Usage

- VUID-vkUpdateDescriptorSetWithTemplate-pData-01685

\texttt{pData} must be a valid pointer to a memory containing one or more valid instances of \texttt{VkDescriptorImageInfo}, \texttt{VkDescriptorBufferInfo}, or \texttt{VkBufferView} in a layout defined by \texttt{descriptorUpdateTemplate} when it was created with \texttt{vkCreateDescriptorUpdateTemplate}

- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-06995
Host access to descriptorSet must be externally synchronized unless explicitly denoted otherwise for specific flags.

Valid Usage (Implicit)

- VUID-vkUpdateDescriptorSetWithTemplate-device-parameter
device must be a valid VkDevice handle

- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parameter
descriptorSet must be a valid VkDescriptorSet handle

- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parameter
descriptorUpdateTemplate must be a valid VkDescriptorUpdateTemplate handle

- VUID-vkUpdateDescriptorSetWithTemplate-descriptorSet-parent
descriptorSet must have been created, allocated, or retrieved from device

- VUID-vkUpdateDescriptorSetWithTemplate-descriptorUpdateTemplate-parent
descriptorUpdateTemplate must have been created, allocated, or retrieved from device

API example

```c
struct AppBufferView {
    VkBufferView bufferView;
    uint32_t applicationRelatedInformation;
};

struct AppDataStructure {
    VkDescriptorImageInfo imageInfo; // a single image info
    VkDescriptorBufferInfo bufferInfoArray[3]; // 3 buffer infos in an array
    AppBufferView bufferView[2]; // An application defined structure containing a bufferView
    // ... some more application related data
};

const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] = {
    // binding to a single image descriptor
    {
        .binding = 0,
        .dstArrayElement = 0,
        .descriptorCount = 1,
        .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
        .offset = offsetof(AppDataStructure, imageInfo),
        .stride = 0 // stride not required if descriptorCount is 1
    },

    // binding to an array of buffer descriptors
    {
```
binding = 1, dstArrayElement = 0, descriptorCount = 3, descriptorType = VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER, offset = offsetof(AppDataStructure, bufferInfoArray), stride = sizeof(VkDescriptorBufferInfo)  // descriptor buffer infos are compact },

// binding to an array of buffer views {
  .binding = 2, dstArrayElement = 0, descriptorCount = 2, descriptorType = VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, offset = offsetof(AppDataStructure, bufferView) + offsetof(AppBufferView, bufferView), stride = sizeof(AppBufferView)  // bufferViews do not have to be compact
},

// create a descriptor update template for descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo = {
  .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO, .pNext = NULL, .flags = 0, descriptorUpdateEntryCount = 3, pDescriptorUpdateEntries = descriptorUpdateTemplateEntries, .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_DESCRIPTOR_SET, descriptorSetLayout = myLayout, .pipelineBindPoint = 0,  // ignored by given templateType .pipelineLayout = 0,  // ignored by given templateType .set = 0,  // ignored by given templateType
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate; 
myResult = vkCreateDescriptorUpdateTemplate(
  myDevice, &createInfo, NULL, &myDescriptorUpdateTemplate);

AppDataStructure appData;

// fill appData here or cache it in your engine
vkUpdateDescriptorSetWithTemplate(myDevice, myDescriptorSet, myDescriptorUpdateTemplate, &appData);
14.2.7. Descriptor Set Binding

To bind one or more descriptor sets to a command buffer, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdBindDescriptorSets(
    VkCommandBuffer commandBuffer,
    VkPipelineBindPoint pipelineBindPoint,
    VkPipelineLayout layout,
    uint32_t firstSet,
    uint32_t descriptorSetCount,
    const VkDescriptorSet* pDescriptorSets,
    uint32_t dynamicOffsetCount,
    const uint32_t* pDynamicOffsets);
```

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the descriptors. There is a separate set of bind points for each pipeline type, so binding one does not disturb the others.
- `layout` is a `VkPipelineLayout` object used to program the bindings.
- `firstSet` is the set number of the first descriptor set to be bound.
- `descriptorSetCount` is the number of elements in the `pDescriptorSets` array.
- `pDescriptorSets` is a pointer to an array of handles to `VkDescriptorSet` objects describing the descriptor sets to bind to.
- `dynamicOffsetCount` is the number of dynamic offsets in the `pDynamicOffsets` array.
- `pDynamicOffsets` is a pointer to an array of `uint32_t` values specifying dynamic offsets.

`vkCmdBindDescriptorSets` binds descriptor sets `pDescriptorSets[0..descriptorSetCount-1]` to set numbers `[firstSet..firstSet+descriptorSetCount-1]` for subsequent bound pipeline commands set by `pipelineBindPoint`. Any bindings that were previously applied via these sets, or calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`, are no longer valid.

Once bound, a descriptor set affects rendering of subsequent commands that interact with the given pipeline type in the command buffer until either a different set is bound to the same set number, or the set is disturbed as described in Pipeline Layout Compatibility.

A compatible descriptor set **must** be bound for all set numbers that any shaders in a pipeline access, at the time that a drawing or dispatching command is recorded to execute using that pipeline. However, if none of the shaders in a pipeline statically use any bindings with a particular set number, then no descriptor set need be bound for that set number, even if the pipeline layout includes a non-trivial descriptor set layout for that set number.

When consuming a descriptor, a descriptor is considered valid if the descriptor is not undefined as described by descriptor set allocation. If the `nullDescriptor` feature is enabled, a null descriptor is also considered valid. A descriptor that was disturbed by Pipeline Layout Compatibility, or was
never bound by `vkCmdBindDescriptorSets` is not considered valid. If a pipeline accesses a descriptor either statically or dynamically depending on the `VkDescriptorBindingFlagBits`, the consuming descriptor type in the pipeline **must** match the `VkDescriptorType` in `VkDescriptorSetLayoutCreateInfo` for the descriptor to be considered valid. If a descriptor is a mutable descriptor, the consuming descriptor type in the pipeline **must** match the active descriptor type for the descriptor to be considered valid.

**Note**

Further validation may be carried out beyond validation for descriptor types, e.g. Texel Input Validation.

If any of the sets being bound include dynamic uniform or storage buffers, then `pDynamicOffsets` includes one element for each array element in each dynamic descriptor type binding in each set. Values are taken from `pDynamicOffsets` in an order such that all entries for set N come before set N+1; within a set, entries are ordered by the binding numbers in the descriptor set layouts; and within a binding array, elements are in order. `dynamicOffsetCount` **must** equal the total number of dynamic descriptors in the sets being bound.

The effective offset used for dynamic uniform and storage buffer bindings is the sum of the relative offset taken from `pDynamicOffsets`, and the base address of the buffer plus base offset in the descriptor set. The range of the dynamic uniform and storage buffer bindings is the buffer range as specified in the descriptor set.

Each of the `pDescriptorSets` **must** be compatible with the pipeline layout specified by `layout`. The layout used to program the bindings **must** also be compatible with the pipeline used in subsequent **bound pipeline commands** with that pipeline type, as defined in the Pipeline Layout Compatibility section.

The descriptor set contents bound by a call to `vkCmdBindDescriptorSets` **may** be consumed at the following times:

- For descriptor bindings created with the `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` bit set, the contents **may** be consumed when the command buffer is submitted to a queue, or during shader execution of the resulting draws and dispatches, or any time in between. Otherwise,
- during host execution of the command, or during shader execution of the resulting draws and dispatches, or any time in between.

Thus, the contents of a descriptor set binding **must** not be altered (overwritten by an update command, or freed) between the first point in time that it **may** be consumed, and when the command completes executing on the queue.

The contents of `pDynamicOffsets` are consumed immediately during execution of `vkCmdBindDescriptorSets`. Once all pending uses have completed, it is legal to update and reuse a descriptor set.

**Valid Usage**

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-00358
Each element of \texttt{pDescriptorSets} must have been allocated with a \texttt{VkDescriptorSetLayout} that matches (is the same as, or identically defined as) the \texttt{VkDescriptorSetLayout} at set \texttt{n} in \texttt{layout}, where \texttt{n} is the sum of \texttt{firstSet} and the index into \texttt{pDescriptorSets}.

- VUID-vkCmdBindDescriptorSets-dynamicOffsetCount-00359
dynamicOffsetCount must be equal to the total number of dynamic descriptors in \texttt{pDescriptorSets}.

- VUID-vkCmdBindDescriptorSets-firstSet-00360
The sum of \texttt{firstSet} and \texttt{descriptorSetCount} must be less than or equal to \texttt{VkPipelineLayoutCreateInfo::setLayoutCount} provided when \texttt{layout} was created.

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01971
Each element of \texttt{pDynamicOffsets} which corresponds to a descriptor binding with type \texttt{VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC} must be a multiple of \texttt{VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment}.

- VUID-vkCmdBindDescriptorSets-pDynamicOffsets-01972
Each element of \texttt{pDynamicOffsets} which corresponds to a descriptor binding with type \texttt{VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC} must be a multiple of \texttt{VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment}.

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-01979
For each dynamic uniform or storage buffer binding in \texttt{pDescriptorSets}, the sum of the effective offset and the range of the binding must be less than or equal to the size of the buffer.

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06715
For each dynamic uniform or storage buffer binding in \texttt{pDescriptorSets}, if the range was set with \texttt{VK_WHOLE_SIZE} then \texttt{pDynamicOffsets} which corresponds to the descriptor binding must be 0.

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-04616
Each element of \texttt{pDescriptorSets} must not have been allocated from a \texttt{VkDescriptorPool} with the \texttt{VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT} flag set.

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-06563
If \texttt{graphicsPipelineLibrary} is not enabled, each element of \texttt{pDescriptorSets} must be a valid \texttt{VkDescriptorSet}.

- VUID-vkCmdBindDescriptorSets-pDescriptorSets-08010
Each element of \texttt{pDescriptorSets} must have been allocated with a \texttt{VkDescriptorSetLayout} which was not created with \texttt{VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT}.

- VUID-vkCmdBindDescriptorSets-pipelineBindPoint-00361
\texttt{pipelineBindPoint} must be supported by the commandBuffer’s parent \texttt{VkCommandPool}’s queue family.

### Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets-commandBuffer-parameter
\texttt{commandBuffer} must be a valid \texttt{VkCommandBuffer} handle.
• VUID-vkCmdBindDescriptorSets-pipelineBindPoint-parameter
  pipelineBindPoint must be a valid VkPipelineBindPoint value
• VUID-vkCmdBindDescriptorSets-layout-parameter
  layout must be a valid VkPipelineLayout handle
• VUID-vkCmdBindDescriptorSets-pDescriptorSets-parameter
  pDescriptorSets must be a valid pointer to an array of descriptorSetCount valid or
  VK_NULL_HANDLE VkDescriptorSet handles
• VUID-vkCmdBindDescriptorSets-pDynamicOffsets-parameter
  If dynamicOffsetCount is not 0, pDynamicOffsets must be a valid pointer to an array of
dynamicOffsetCount uint32_t values
• VUID-vkCmdBindDescriptorSets-commandBuffer-recording
  commandBuffer must be in the recording state
• VUID-vkCmdBindDescriptorSets-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or
  compute operations
• VUID-vkCmdBindDescriptorSets-videocoding
  This command must only be called outside of a video coding scope
• VUID-vkCmdBindDescriptorSets-descriptorSetCount-arraylength
  descriptorSetCount must be greater than 0
• VUID-vkCmdBindDescriptorSets-commonparent
  Each of commandBuffer, layout, and the elements of pDescriptorSets that are valid handles
  of non-ignored parameters must have been created, allocated, or retrieved from the same
  VkDevice

Host Synchronization

• Host access to commandBuffer must be externally synchronized
• Host access to the VkCommandPool that commandBuffer was allocated from must be externally
  synchronized

Command Properties

</tr>
</tbody>
</table>

Alternatively, to bind one or more descriptor sets to a command buffer, call:

// Provided by VK_KHR_maintenance6
void vkCmdBindDescriptorSets2KHR(  
  VkCommandBuffer commandBuffer,  
  const VkBindDescriptorSetsInfoKHR* pBindDescriptorSetsInfo);  

- `commandBuffer` is the command buffer that the descriptor sets will be bound to.  
- `pBindDescriptorSetsInfo` is a pointer to a `VkBindDescriptorSetsInfoKHR` structure.

### Valid Usage

- VUID-vkCmdBindDescriptorSets2KHR-pBindDescriptorSetsInfo-09467  
  Each bit in `pBindDescriptorSetsInfo->stageFlags` must be a stage supported by the `commandBuffer`’s parent `VkCommandPool`’s queue family

### Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorSets2KHR-commandBuffer-parameter  
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdBindDescriptorSets2KHR-pBindDescriptorSetsInfo-parameter  
  `pBindDescriptorSetsInfo` must be a valid pointer to a valid `VkBindDescriptorSetsInfoKHR` structure

- VUID-vkCmdBindDescriptorSets2KHR-commandBuffer-recording  
  `commandBuffer` must be in the recording state

- VUID-vkCmdBindDescriptorSets2KHR-commandBuffer-cmdpool  
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- VUID-vkCmdBindDescriptorSets2KHR-videoencoding  
  This command must only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>

1310
The `VkBindDescriptorSetsInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_maintenance6
typedef struct VkBindDescriptorSetsInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkShaderStageFlags stageFlags;
    VkPipelineLayout layout;
    uint32_t firstSet;
    uint32_t descriptorSetCount;
    const VkDescriptorSet* pDescriptorSets;
    uint32_t dynamicOffsetCount;
    const uint32_t* pDynamicOffsets;
} VkBindDescriptorSetsInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **stageFlags** is a bitmask of `VkShaderStageFlagBits` specifying the shader stages the descriptor sets will be bound to.
- **layout** is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, `layout` can be `VK_NULL_HANDLE` and the layout must be specified by chaining the `VkPipelineLayoutCreateInfo` structure off the `pNext`.
- **firstSet** is the set number of the first descriptor set to be bound.
- **descriptorSetCount** is the number of elements in the `pDescriptorSets` array.
- **pDescriptorSets** is a pointer to an array of handles to `VkDescriptorSet` objects describing the descriptor sets to bind to.
- **dynamicOffsetCount** is the number of dynamic offsets in the `pDynamicOffsets` array.
- **pDynamicOffsets** is a pointer to an array of `uint32_t` values specifying dynamic offsets.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`.

### Valid Usage

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-00358
  Each element of `pDescriptorSets` must have been allocated with a `VkDescriptorSetLayout` that matches (is the same as, or identically defined as) the `VkDescriptorSetLayout` at set `n` in `layout`, where `n` is the sum of `firstSet` and the index into `pDescriptorSets`.
- VUID-VkBindDescriptorSetsInfoKHR-dynamicOffsetCount-00359
dynamicOffsetCount must be equal to the total number of dynamic descriptors in pDescriptorSets

- VUID-VkBindDescriptorSetsInfoKHR-firstSet-00360
  The sum of firstSet and descriptorSetCount must be less than or equal to VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created

- VUID-VkBindDescriptorSetsInfoKHR-pDynamicOffsets-01971
  Each element of pDynamicOffsets which corresponds to a descriptor binding with type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC must be a multiple of VkPhysicalDeviceLimits::minUniformBufferOffsetAlignment

- VUID-VkBindDescriptorSetsInfoKHR-pDynamicOffsets-01972
  Each element of pDynamicOffsets which corresponds to a descriptor binding with type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC must be a multiple of VkPhysicalDeviceLimits::minStorageBufferOffsetAlignment

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-01979
  For each dynamic uniform or storage buffer binding in pDescriptorSets, the sum of the effective offset and the range of the binding must be less than or equal to the size of the buffer

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-06715
  For each dynamic uniform or storage buffer binding in pDescriptorSets, if the range was set with VK_WHOLE_SIZE then pDynamicOffsets which corresponds to the descriptor binding must be 0

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-04616
  Each element of pDescriptorSets must not have been allocated from a VkDescriptorPool with the VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT flag set

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-06563
  If graphicsPipelineLibrary is not enabled, each element of pDescriptorSets must be a valid VkDescriptorSet

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-08010
  Each element of pDescriptorSets must have been allocated with a VkDescriptorSetLayout which was not created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

- VUID-VkBindDescriptorSetsInfoKHR-None-09495
  If the dynamicPipelineLayout feature is not enabled, layout must be a valid VkPipelineLayout handle

- VUID-VkBindDescriptorSetsInfoKHR-layout-09496
  If layout is VK_NULL_HANDLE, the pNext chain must include a valid VkPipelineLayoutCreateInfo structure

Valid Usage (Implicit)

- VUID-VkBindDescriptorSetsInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_SETS_INFO_KHR

- VUID-VkBindDescriptorSetsInfoKHR-pNext-pNext
pNext must be NULL or a pointer to a valid instance of VkPipelineLayoutCreateInfo

- VUID-VkBindDescriptorSetsInfoKHR-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkBindDescriptorSetsInfoKHR-stageFlags-parameter
  stageFlags must be a valid combination of VkShaderStageFlagBits values

- VUID-VkBindDescriptorSetsInfoKHR-stageFlags-requiredbitmask
  stageFlags must not be 0

- VUID-VkBindDescriptorSetsInfoKHR-layout-parameter
  If layout is not VK_NULL_HANDLE, layout must be a valid VkPipelineLayout handle

- VUID-VkBindDescriptorSetsInfoKHR-pDescriptorSets-parameter
  pDescriptorSets must be a valid pointer to an array of descriptorSetCount valid VkDescriptorSet handles

- VUID-VkBindDescriptorSetsInfoKHR-pDynamicOffsets-parameter
  If dynamicOffsetCount is not 0, and pDynamicOffsets is not NULL, pDynamicOffsets must be a valid pointer to an array of dynamicOffsetCount or VK_NULL_HANDLE uint32_t values

- VUID-VkBindDescriptorSetsInfoKHR-descriptorSetCount-arraylength
  descriptorSetCount must be greater than 0

- VUID-VkBindDescriptorSetsInfoKHR-commonparent
  Both of layout, and the elements of pDescriptorSets that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same VkDevice

### 14.2.8. Push Descriptor Updates

In addition to allocating descriptor sets and binding them to a command buffer, an application can record descriptor updates into the command buffer.

To push descriptor updates into a command buffer, call:

```c
// Provided by VK_KHR_push_descriptor
void vkCmdPushDescriptorSetKHR(
    VkCommandBuffer commandBuffer,
    VkPipelineBindPoint pipelineBindPoint,
    VkPipelineLayout layout,
    uint32_t set,
    uint32_t descriptorWriteCount,
    const VkWriteDescriptorSet* pDescriptorWrites);
```

- commandBuffer is the command buffer that the descriptors will be recorded in.
- pipelineBindPoint is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors. There is a separate set of push descriptor bindings for each pipeline type, so binding one does not disturb the others.
- layout is a VkPipelineLayout object used to program the bindings.
- set is the set number of the descriptor set in the pipeline layout that will be updated.
• descriptorWriteCount is the number of elements in the pDescriptorWrites array.

• pDescriptorWrites is a pointer to an array of VkWriteDescriptorSet structures describing the descriptors to be updated.

Push descriptors are a small bank of descriptors whose storage is internally managed by the command buffer rather than being written into a descriptor set and later bound to a command buffer. Push descriptors allow for incremental updates of descriptors without managing the lifetime of descriptor sets.

When a command buffer begins recording, all push descriptors are undefined. Push descriptors can be updated incrementally and cause shaders to use the updated descriptors for subsequent bound pipeline commands with the pipeline type set by pipelineBindPoint until the descriptor is overwritten, or else until the set is disturbed as described in Pipeline Layout Compatibility. When the set is disturbed or push descriptors with a different descriptor set layout are set, all push descriptors are undefined.

Push descriptors that are statically used by a pipeline must not be undefined at the time that a drawing or dispatching command is recorded to execute using that pipeline. This includes immutable sampler descriptors, which must be pushed before they are accessed by a pipeline (the immutable samplers are pushed, rather than the samplers in pDescriptorWrites). Push descriptors that are not statically used can remain undefined.

Push descriptors do not use dynamic offsets. Instead, the corresponding non-dynamic descriptor types can be used and the offset member of VkDescriptorBufferInfo can be changed each time the descriptor is written.

Each element of pDescriptorWrites is interpreted as in VkWriteDescriptorSet, except the dstSet member is ignored.

To push an immutable sampler, use a VkWriteDescriptorSet with dstBinding and dstArrayElement selecting the immutable sampler's binding. If the descriptor type is VK_DESCRIPTOR_TYPE_SAMPLER, the pImageInfo parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout. If the descriptor type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the sampler member of the pImageInfo parameter is ignored and the immutable sampler is taken from the push descriptor set layout in the pipeline layout.

Valid Usage

• VUID-vkCmdPushDescriptorSetKHR-set-00364
  set must be less than VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created

• VUID-vkCmdPushDescriptorSetKHR-set-00365
  set must be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR

• VUID-vkCmdPushDescriptorSetKHR-pDescriptorWrites-06494
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER,
  VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
  VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or
VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, pDescriptorWrites[i].pImageInfo must be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid VkDescriptorImageInfo structures

- VUID-vkCmdPushDescriptorSetKHR-pipelineBindPoint-00363
  pipelineBindPoint must be supported by the commandBuffer’s parent VkCommandPool’s queue family

Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetKHR-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdPushDescriptorSetKHR-pipelineBindPoint-parameter
  pipelineBindPoint must be a valid VkPipelineBindPoint value

- VUID-vkCmdPushDescriptorSetKHR-layout-parameter
  layout must be a valid VkPipelineLayout handle

- VUID-vkCmdPushDescriptorSetKHR-pDescriptorWrites-parameter
  pDescriptorWrites must be a valid pointer to an array of descriptorWriteCount valid VkWriteDescriptorSet structures

- VUID-vkCmdPushDescriptorSetKHR-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdPushDescriptorSetKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or compute operations

- VUID-vkCmdPushDescriptorSetKHR-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdPushDescriptorSetKHR-descriptorWriteCount-arraylength
  descriptorWriteCount must be greater than 0

- VUID-vkCmdPushDescriptorSetKHR-commonparent
  Both of commandBuffer, and layout must have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer must be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized
Alternatively, to push descriptor updates into a command buffer, call:

```c
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
void vkCmdPushDescriptorSet2KHR(
    VkCommandBuffer commandBuffer,
    const VkPushDescriptorSetInfoKHR* pPushDescriptorSetInfo);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `pPushDescriptorSetInfo` is a pointer to a `VkPushDescriptorSetInfoKHR` structure.

### Valid Usage

- **VUID-vkCmdPushDescriptorSet2KHR-pPushDescriptorSetInfo-09468**
  - Each bit in `pPushDescriptorSetInfo->stageFlags` must be a stage supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family

### Valid Usage (Implicit)

- **VUID-vkCmdPushDescriptorSet2KHR-commandBuffer-parameter**
  - `commandBuffer` must be a valid `VkCommandBuffer` handle
- **VUID-vkCmdPushDescriptorSet2KHR-pPushDescriptorSetInfo-parameter**
  - `pPushDescriptorSetInfo` must be a valid pointer to a valid `VkPushDescriptorSetInfoKHR` structure
- **VUID-vkCmdPushDescriptorSet2KHR-commandBuffer-recording**
  - `commandBuffer` must be in the recording state
- **VUID-vkCmdPushDescriptorSet2KHR-commandBuffer-cmdpool**
  - The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations
- **VUID-vkCmdPushDescriptorSet2KHR-videocoding**
  - This command must only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

The `VkPushDescriptorSetInfoKHR` structure is defined as:

```c
typedef struct VkPushDescriptorSetInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkShaderStageFlags stageFlags;
    VkPipelineLayout layout;
    uint32_t set;
    uint32_t descriptorWriteCount;
    const VkWriteDescriptorSet* pDescriptorWrites;
} VkPushDescriptorSetInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **stageFlags** is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the descriptors.
- **layout** is a `VkPipelineLayout` object used to program the bindings. If the `dynamicPipelineLayout` feature is enabled, **layout can be VK_NULL_HANDLE** and the layout must be specified by chaining `VkPipelineLayoutCreateInfo` structure off the **pNext**.
- **set** is the set number of the descriptor set in the pipeline layout that will be updated.
- **descriptorWriteCount** is the number of elements in the **pDescriptorWrites** array.
- **pDescriptorWrites** is a pointer to an array of `VkWriteDescriptorSet` structures describing the descriptors to be updated.

If `stageFlags` specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a `stageFlags` value of `VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT` is equivalent to calling the original version of this command once with `VK_PIPELINE_BIND_POINT_GRAPHICS` and once with `VK_PIPELINE_BIND_POINT_COMPUTE`. 
Valid Usage

- VUID-VkPushDescriptorSetInfoKHR-set-00364
  set must be less than VkPipelineLayoutCreateInfo::setLayoutCount provided when layout was created

- VUID-VkPushDescriptorSetInfoKHR-set-00365
  set must be the unique set number in the pipeline layout that uses a descriptor set layout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR

- VUID-VkPushDescriptorSetInfoKHR-pDescriptorWrites-06494
  For each element i where pDescriptorWrites[i].descriptorType is VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, pDescriptorWrites[i].pImageInfo must be a valid pointer to an array of pDescriptorWrites[i].descriptorCount valid VkDescriptorImageInfo structures

- VUID-VkPushDescriptorSetInfoKHR-None-09495
  If the dynamicPipelineLayout feature is not enabled, layout must be a valid VkPipelineLayout handle

- VUID-VkPushDescriptorSetInfoKHR-layout-09496
  If layout is VK_NULL_HANDLE, the pNext chain must include a valid VkPipelineLayoutCreateInfo structure

Valid Usage (Implicit)

- VUID-VkPushDescriptorSetInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PUSH_DESCRIPTOR_SET_INFO_KHR

- VUID-VkPushDescriptorSetInfoKHR-pNext-pNext
  pNext must be NULL or a pointer to a valid instance of VkPipelineLayoutCreateInfo

- VUID-VkPushDescriptorSetInfoKHR-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkPushDescriptorSetInfoKHR-stageFlags-parameter
  stageFlags must be a valid combination of VkShaderStageFlagBits values

- VUID-VkPushDescriptorSetInfoKHR-stageFlags-requiredbitmask
  stageFlags must not be 0

- VUID-VkPushDescriptorSetInfoKHR-layout-parameter
  If layout is not VK_NULL_HANDLE, layout must be a valid VkPipelineLayout handle

- VUID-VkPushDescriptorSetInfoKHR-pDescriptorWrites-parameter
  pDescriptorWrites must be a valid pointer to an array of descriptorWriteCount valid VkWriteDescriptorSet structures

- VUID-VkPushDescriptorSetInfoKHR-descriptorWriteCount-arraylength
  descriptorWriteCount must be greater than 0
14.2.9. Push Descriptor Updates With Descriptor Update Templates

It is also possible to use a descriptor update template to specify the push descriptors to update. To do so, call:

```c
void vkCmdPushDescriptorSetWithTemplateKHR(
    VkCommandBuffer commandBuffer,
    VkDescriptorUpdateTemplate descriptorUpdateTemplate,
    VkPipelineLayout layout,
    uint32_t set,
    const void* pData);
```

- `commandBuffer` is the command buffer that the descriptors will be recorded in.
- `descriptorUpdateTemplate` is a descriptor update template defining how to interpret the descriptor information in `pData`.
- `layout` is a `VkPipelineLayout` object used to program the bindings. It must be compatible with the layout used to create the `descriptorUpdateTemplate` handle.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This must be the same number used to create the `descriptorUpdateTemplate` handle.
- `pData` is a pointer to memory containing descriptors for the templated update.

### Valid Usage

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-00366**
  The pipelineBindPoint specified during the creation of the descriptor update template must be supported by the commandBuffer's parent `VkCommandPool`'s queue family

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-pData-01686**
  `pData` must be a valid pointer to a memory containing one or more valid instances of `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-layout-07993**
  `layout` must be compatible with the layout used to create `descriptorUpdateTemplate`

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-descriptorUpdateTemplate-07994**
  `descriptorUpdateTemplate` must have been created with a `templateType` of `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPATORS_KHR`

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-set-07995**
  `set` must be the same value used to create `descriptorUpdateTemplate`

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-set-07304**
  `set` must be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-set-07305**
  -
**Valid Usage (Implicit)**

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-parameter**
  - `commandBuffer` **must** be a valid `VkCommandBuffer` handle

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-descriptorUpdateTemplate-parameter**
  - `descriptorUpdateTemplate` **must** be a valid `VkDescriptorUpdateTemplate` handle

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-layout-parameter**
  - `layout` **must** be a valid `VkPipelineLayout` handle

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-recording**
  - `commandBuffer` **must** be in the recording state

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-commandBuffer-cmdpool**
  - The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-videocoding**
  - This command **must** only be called outside of a video coding scope

- **VUID-vkCmdPushDescriptorSetWithTemplateKHR-commonparent**
  - Each of `commandBuffer`, `descriptorUpdateTemplate`, and `layout` **must** have been created, allocated, or retrieved from the same `VkDevice`

**Host Synchronization**

- Host access to `commandBuffer` **must** be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**API example**

```c
struct AppDataStructure
{
    VkDescriptorImageInfo imageInfo;    // a single image info
    // ... some more application related data
};
```
const VkDescriptorUpdateTemplateEntry descriptorUpdateTemplateEntries[] = {
    // binding to a single image descriptor
    .binding = 0,
    .dstArrayElement = 0,
    .descriptorCount = 1,
    .descriptorType = VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER,
    .offset = offsetof(AppDataStructure, imageInfo),
    .stride = 0  // not required if descriptorCount is 1
};

// create a descriptor update template for push descriptor set updates
const VkDescriptorUpdateTemplateCreateInfo createInfo = {
    .sType = VK_STRUCTURE_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_CREATE_INFO,
    .pNext = NULL,
    .flags = 0,
    .descriptorUpdateEntryCount = 1,
    .pDescriptorUpdateEntries = descriptorUpdateTemplateEntries,
    .templateType = VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR,
    .descriptorSetLayout = 0,  // ignored by given templateType
    .pipelineBindPoint = VK_PIPELINE_BIND_POINT_GRAPHICS,
    .pipelineLayout = myPipelineLayout,
    .set = 0,
};

VkDescriptorUpdateTemplate myDescriptorUpdateTemplate;
myResult = vkCreateDescriptorUpdateTemplate(
    myDevice,
    &createInfo,
    NULL,
    &myDescriptorUpdateTemplate);

AppDataStructure appData;
// fill appData here or cache it in your engine
vkCmdPushDescriptorSetWithTemplateKHR(
    myCmdBuffer, myDescriptorUpdateTemplate, myPipelineLayout, 0, &appData);

Alternatively, to use a descriptor update template to specify the push descriptors to update, call:

// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
void vkCmdPushDescriptorSetWithTemplate2KHR(
    VkCommandBuffer commandBuffer,
    const VkPushDescriptorSetWithTemplateInfoKHR* pPushDescriptorSetWithTemplateInfo);
• **commandBuffer** is the command buffer that the descriptors will be recorded in.

• **pPushDescriptorSetWithTemplateInfo** is a pointer to a `VkPushDescriptorSetWithTemplateInfoKHR` structure.

---

### Valid Usage (Implicit)

- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-commandBuffer-parameter
  commandBuffer **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-pPushDescriptorSetWithTemplateInfo-parameter
  pPushDescriptorSetWithTemplateInfo **must** be a valid pointer to a valid `VkPushDescriptorSetWithTemplateInfoKHR` structure

- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-commandBuffer-recording
  commandBuffer **must** be in the recording state

- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-commandBuffer-cmdpool
  The `VkCommandPool` that commandBuffer was allocated from **must** support graphics, or compute operations

- VUID-vkCmdPushDescriptorSetWithTemplate2KHR-videocoding
  This command **must** only be called outside of a video coding scope

---

### Host Synchronization

- Host access to commandBuffer **must** be externally synchronized

- Host access to the `VkCommandPool` that commandBuffer was allocated from **must** be externally synchronized

---

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The `VkPushDescriptorSetWithTemplateInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_maintenance6 with VK_KHR_push_descriptor
typedef struct VkPushDescriptorSetWithTemplateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkDescriptorUpdateTemplate descriptorUpdateTemplate;
    VkPipelineLayout layout;
    uint32_t set;
} VkPushDescriptorSetWithTemplateInfoKHR;
```
const void* pData;

VkPushDescriptorSetWithTemplateInfoKHR;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `descriptorUpdateTemplate` is a descriptor update template defining how to interpret the descriptor information in `pData`.
- `layout` is a `VkPipelineLayout` object used to program the bindings. It must be compatible with the layout used to create the `descriptorUpdateTemplate` handle. If the `dynamicPipelineLayout` feature is enabled, `layout` can be `VK_NULL_HANDLE` and the layout must be specified by chaining `VkPipelineLayoutCreateInfo` structure off the `pNext`.
- `set` is the set number of the descriptor set in the pipeline layout that will be updated. This must be the same number used to create the `descriptorUpdateTemplate` handle.
- `pData` is a pointer to memory containing descriptors for the templated update.

### Valid Usage

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-commandBuffer-00366**
  The `pipelineBindPoint` specified during the creation of the descriptor update template must be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-pData-01686**
  `pData` must be a valid pointer to a memory containing one or more valid instances of `VkDescriptorImageInfo`, `VkDescriptorBufferInfo`, or `VkBufferView` in a layout defined by `descriptorUpdateTemplate` when it was created with `vkCreateDescriptorUpdateTemplate`.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-layout-07993**
  `layout` must be compatible with the layout used to create `descriptorUpdateTemplate`.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-descriptorUpdateTemplate-07994**
  `descriptorUpdateTemplate` must have been created with a `templateType` of `VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR`.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-set-07995**
  `set` must be the same value used to create `descriptorUpdateTemplate`.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-set-07304**
  `set` must be less than `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-set-07305**
  `set` must be the unique set number in the pipeline layout that uses a descriptor set layout that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-None-09495**
  If the `dynamicPipelineLayout` feature is not enabled, `layout` must be a valid `VkPipelineLayout` handle.

- **VUID-VkPushDescriptorSetWithTemplateInfoKHR-layout-09496**
  If `layout` is `VK_NULL_HANDLE`, the `pNext` chain must include a valid.
14.2.10. Push Constant Updates

As described above in section Pipeline Layouts, the pipeline layout defines shader push constants which are updated via Vulkan commands rather than via writes to memory or copy commands.

Note

Push constants represent a high speed path to modify constant data in pipelines that is expected to outperform memory-backed resource updates.

To update push constants, call:

```cpp
// Provided by VK_VERSION_1_0
void vkCmdPushConstants(
    VkCommandBuffer commandBuffer,
    VkPipelineLayout layout,
    VkShaderStageFlags stageFlags,
    uint32_t offset,
    uint32_t size,
    const void* pValues);
```

- `commandBuffer` is the command buffer in which the push constant update will be recorded.
- `layout` is the pipeline layout used to program the push constant updates.
• `stageFlags` is a bitmask of `VkShaderStageFlagBits` specifying the shader stages that will use the push constants in the updated range.

• `offset` is the start offset of the push constant range to update, in units of bytes.

• `size` is the size of the push constant range to update, in units of bytes.

• `pValues` is a pointer to an array of `size` bytes containing the new push constant values.

When a command buffer begins recording, all push constant values are undefined. Reads of undefined push constant values by the executing shader return undefined values.

Push constant values can be updated incrementally, causing shader stages in `stageFlags` to read the new data from `pValues` for push constants modified by this command, while still reading the previous data for push constants not modified by this command. When a bound pipeline command is issued, the bound pipeline's layout must be compatible with the layouts used to set the values of all push constants in the pipeline layout's push constant ranges, as described in Pipeline Layout Compatibility. Binding a pipeline with a layout that is not compatible with the push constant layout does not disturb the push constant values.

**Note**

As `stageFlags` needs to include all flags the relevant push constant ranges were created with, any flags that are not supported by the queue family that the `VkCommandPool` used to allocate `commandBuffer` was created on are ignored.

**Valid Usage**

• VUID-vkCmdPushConstants-offset-01795
  For each byte in the range specified by `offset` and `size` and for each shader stage in `stageFlags`, there must be a push constant range in `layout` that includes that byte and that stage.

• VUID-vkCmdPushConstants-offset-01796
  For each byte in the range specified by `offset` and `size` and for each push constant range that overlaps that byte, `stageFlags` must include all stages in that push constant range's `VkPushConstantRange::stageFlags`.

• VUID-vkCmdPushConstants-offset-00368
  `offset` must be a multiple of 4.

• VUID-vkCmdPushConstants-size-00369
  `size` must be a multiple of 4.

• VUID-vkCmdPushConstants-offset-00370
  `offset` must be less than `VkPhysicalDeviceLimits::maxPushConstantsSize`.

• VUID-vkCmdPushConstants-size-00371
  `size` must be less than or equal to `VkPhysicalDeviceLimits::maxPushConstantsSize` minus `offset`. 
Valid Usage (Implicit)

- VUID-vkCmdPushConstants-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdPushConstants-layout-parameter
  `layout` must be a valid `VkPipelineLayout` handle

- VUID-vkCmdPushConstants-stageFlags-parameter
  `stageFlags` must be a valid combination of `VkShaderStageFlagBits` values

- VUID-vkCmdPushConstants-stageFlags-required bitmask
  `stageFlags` must not be 0

- VUID-vkCmdPushConstants-pValues-parameter
  `pValues` must be a valid pointer to an array of `size` bytes

- VUID-vkCmdPushConstants-commandBuffer-recording
  `commandBuffer` must be in the recording state

- VUID-vkCmdPushConstants-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- VUID-vkCmdPushConstants-video-coding
  This command must only be called outside of a video coding scope

- VUID-vkCmdPushConstants-size-arraylength
  `size` must be greater than 0

- VUID-vkCmdPushConstants-commonparent
  Both of `commandBuffer`, and `layout` must have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics Compute</td>
<td>State</td>
</tr>
<tr>

<td></td>
<td></td>
</tr>
</tbody>
</table>

Alternatively, to update push constants, call:
void vkCmdPushConstants2KHR(
    VkCommandBuffer commandBuffer,
    const VkPushConstantsInfoKHR* pPushConstantsInfo);

- commandBuffer is the command buffer in which the push constant update will be recorded.
- pPushConstantsInfo is a pointer to a VkPushConstantsInfoKHR structure.

**Valid Usage (Implicit)**

- VUID-vkCmdPushConstants2KHR-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle
- VUID-vkCmdPushConstants2KHR-pPushConstantsInfo-parameter
  pPushConstantsInfo must be a valid pointer to a valid VkPushConstantsInfoKHR structure
- VUID-vkCmdPushConstants2KHR-commandBuffer-recording
  commandBuffer must be in the recording state
- VUID-vkCmdPushConstants2KHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or compute operations
- VUID-vkCmdPushConstants2KHR-videocoding
  This command must only be called outside of a video coding scope

**Host Synchronization**

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The VkPushConstantsInfoKHR structure is defined as:

```c
// Provided by VK_KHR_maintenance6
typedef struct VkPushConstantsInfoKHR {
    VkStructureType sType;
};
```
const void* pNext;
VkPipelineLayout layout;
VkShaderStageFlags stageFlags;
uint32_t offset;
uint32_t size;
const void* pValues;
If `layout` is `VK_NULL_HANDLE`, the `pNext` chain must include a valid `VkPipelineLayoutCreateInfo` structure.

### Valid Usage (Implicit)

- **VUID-VkPushConstantsInfoKHR-sType-sType**  
  `sType` must be `VK_STRUCTURE_TYPE_PUSH_CONSTANTS_INFO_KHR`  

- **VUID-VkPushConstantsInfoKHR-pNext-pNext**  
  `pNext` must be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`  

- **VUID-VkPushConstantsInfoKHR-sType-unique**  
  The `sType` value of each struct in the `pNext` chain must be unique  

- **VUID-VkPushConstantsInfoKHR-layout-parameter**  
  If `layout` is not `VK_NULL_HANDLE`, `layout` must be a valid `VkPipelineLayout` handle  

- **VUID-VkPushConstantsInfoKHR-stageFlags-parameter**  
  `stageFlags` must be a valid combination of `VkShaderStageFlagBits` values  

- **VUID-VkPushConstantsInfoKHR-stageFlags-requiredbitmask**  
  `stageFlags` must not be 0  

- **VUID-VkPushConstantsInfoKHR-pValues-parameter**  
  `pValues` must be a valid pointer to an array of `size` bytes  

- **VUID-VkPushConstantsInfoKHR-size-arraylength**  
  `size` must be greater than 0  

### 14.3. Physical Storage Buffer Access

To query a 64-bit buffer device address value through which buffer memory can be accessed in a shader, call:

```c
// Provided by VK_VERSION_1_2
VkDeviceAddress vkGetBufferDeviceAddress(VkDevice device,  
const VkBufferDeviceAddressInfo* pInfo);
```

or the equivalent command

```c
// Provided by VK_KHR_buffer_device_address
VkDeviceAddress vkGetBufferDeviceAddressKHR(VkDevice device,  
const VkBufferDeviceAddressInfo* pInfo);
```

or the equivalent command
VkDeviceAddress vkGetBufferDeviceAddressEXT(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);

- **device** is the logical device that the buffer was created on.
- **pInfo** is a pointer to a VkBufferDeviceAddressInfo structure specifying the buffer to retrieve an address for.

The 64-bit return value is an address of the start of pInfo->buffer. The address range starting at this value and whose size is the size of the buffer can be used in a shader to access the memory bound to that buffer, using the SPV_KHR_physical_storage_buffer extension or the equivalent SPV_EXT_physical_storage_buffer extension and the PhysicalStorageBuffer storage class. For example, this value can be stored in a uniform buffer, and the shader can read the value from the uniform buffer and use it to do a dependent read/write to this buffer. A value of zero is reserved as a “null” pointer and must not be returned as a valid buffer device address. All loads, stores, and atomics in a shader through PhysicalStorageBuffer pointers must access addresses in the address range of some buffer.

If the buffer was created with a non-zero value of VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress or VkBufferDeviceAddressCreateInfoEXT::deviceAddress, the return value will be the same address that was returned at capture time.

The returned address must satisfy the alignment requirement specified by VkMemoryRequirements::alignment for the buffer in VkBufferDeviceAddressInfo::buffer.

If multiple VkBuffer objects are bound to overlapping ranges of VkDeviceMemory, implementations may return address ranges which overlap. In this case, it is ambiguous which VkBuffer is associated with any given device address. For purposes of valid usage, if multiple VkBuffer objects can be attributed to a device address, a VkBuffer is selected such that valid usage passes, if it exists.

### Valid Usage

- VUID-vkGetBufferDeviceAddress-bufferDeviceAddress-03324
  The bufferDeviceAddress or VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddress feature must be enabled

- VUID-vkGetBufferDeviceAddress-device-03325
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice or VkPhysicalDeviceBufferDeviceAddressFeaturesEXT::bufferDeviceAddressMultiDevice feature must be enabled

### Valid Usage (Implicit)

- VUID-vkGetBufferDeviceAddress-device-parameter
device must be a valid VkDevice handle

- VUID-vkGetBufferDeviceAddress-pInfo-parameter
  pInfo must be a valid pointer to a valid VkBufferDeviceAddressInfo structure

The VkBufferDeviceAddressInfo structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkBufferDeviceAddressInfo {
    VkStructureType sType;
    const void* pNext;
    VkBuffer buffer;
} VkBufferDeviceAddressInfo;
```

or the equivalent

```c
// Provided by VK_KHR_buffer_device_address
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoKHR;
```

or the equivalent

```c
// Provided by VK_EXT_buffer_device_address
typedef VkBufferDeviceAddressInfo VkBufferDeviceAddressInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- buffer specifies the buffer whose address is being queried.

Valid Usage

- VUID-VkBufferDeviceAddressInfo-buffer-02600
  If buffer is non-sparse and was not created with the VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT flag, then it must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkBufferDeviceAddressInfo-buffer-02601
  buffer must have been created with VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT

Valid Usage (Implicit)

- VUID-VkBufferDeviceAddressInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_BUFFER_DEVICE_ADDRESS_INFO

- VUID-VkBufferDeviceAddressInfo-pNext-pNext
  pNext must be NULL
To query a 64-bit buffer opaque capture address, call:

```c
// Provided by VK_VERSION_1_2
uint64_t vkGetBufferOpaqueCaptureAddress(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

or the equivalent command

```c
// Provided by VK_KHR_buffer_device_address
uint64_t vkGetBufferOpaqueCaptureAddressKHR(
    VkDevice device,
    const VkBufferDeviceAddressInfo* pInfo);
```

- `device` is the logical device that the buffer was created on.
- `pInfo` is a pointer to a `VkBufferDeviceAddressInfo` structure specifying the buffer to retrieve an address for.

The 64-bit return value is an opaque capture address of the start of `pInfo->buffer`.

If the buffer was created with a non-zero value of `VkBufferOpaqueCaptureAddressCreateInfo::opaqueCaptureAddress` the return value **must** be the same address.

### Valid Usage

- VUID-vkGetBufferOpaqueCaptureAddress-None-03326
  The `bufferDeviceAddress` feature **must** be enabled
- VUID-vkGetBufferOpaqueCaptureAddress-device-03327
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

### Valid Usage (Implicit)

- VUID-vkGetBufferOpaqueCaptureAddress-device-parameter
  `device` **must** be a valid `VkDevice` handle
- VUID-vkGetBufferOpaqueCaptureAddress-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid `VkBufferDeviceAddressInfo` structure
14.4. Descriptor Buffers

If the descriptorBuffer feature is enabled, an alternative way to specify descriptor sets is via buffers, rather than descriptor set objects.

14.4.1. Putting Descriptors in Memory

Commands are provided to retrieve descriptor data, and also to locate where in memory that data must be written to match the given descriptor set layout.

To determine the amount of memory needed to store all descriptors with a given layout, call:

```c
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutSizeEXT(
  VkDevice            device,
  VkDescriptorSetLayout layout,
  VkDeviceSize*       pLayoutSizeInBytes);
```

- `device` is the logical device that gets the size.
- `layout` is the descriptor set layout being queried.
- `pLayoutSizeInBytes` is a pointer to `VkDeviceSize` where the size in bytes will be written.

The size of a descriptor set layout will be at least as large as the sum total of the size of all descriptors in the layout, and may be larger. This size represents the amount of memory that will be required to store all of the descriptors for this layout in memory, when placed according to the layout’s offsets as obtained by `vkGetDescriptorSetLayoutBindingOffsetEXT`.

If any binding in `layout` is `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, the returned size includes space for the maximum `descriptorCount` descriptors as declared for that binding. To compute the required size of a descriptor set with a `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`:

\[
\text{size} = \text{offset} + \text{descriptorSize} \times \text{variableDescriptorCount}
\]

where offset is obtained by `vkGetDescriptorSetLayoutBindingOffsetEXT` and descriptorSize is the size of the relevant descriptor as obtained from `VkPhysicalDeviceDescriptorBufferPropertiesEXT`, and `variableDescriptorCount` is the equivalent of `VkDescriptorSetVariableDescriptorCountAllocateInfo::pDescriptorCounts`. For `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`, `variableDescriptorCount` is the size in bytes for the inline uniform block, and `descriptorSize` is 1.

If `VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray` is `VK_FALSE` and the variable descriptor type is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `variableDescriptorCount` is always considered to be the upper bound.
Valid Usage

- VUID-vkGetDescriptorSetLayoutSizeEXT-None-08011
  The descriptorBuffer feature **must** be enabled

- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-08012
  layout **must** have been created with the
  VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT flag set

Valid Usage (Implicit)

- VUID-vkGetDescriptorSetLayoutSizeEXT-device-parameter
  device **must** be a valid VkDevice handle

- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parameter
  layout **must** be a valid VkDescriptorSetLayout handle

- VUID-vkGetDescriptorSetLayoutSizeEXT-pLayoutSizeInBytes-parameter
  pLayoutSizeInBytes **must** be a valid pointer to a VkDeviceSize value

- VUID-vkGetDescriptorSetLayoutSizeEXT-layout-parent
  layout **must** have been created, allocated, or retrieved from device

To get the offset of a binding within a descriptor set layout in memory, call:

```c
// Provided by VK_EXT_descriptor_buffer
void vkGetDescriptorSetLayoutBindingOffsetEXT(
    VkDevice device, // device
    VkDescriptorSetLayout layout, // layout
    uint32_t binding, // binding
    VkDeviceSize* pOffset); // pOffset
```

- **device** is the logical device that gets the offset.
- **layout** is the descriptor set layout being queried.
- **binding** is the binding number being queried.
- **pOffset** is a pointer to VkDeviceSize where the byte offset of the binding will be written.

Each binding in a descriptor set layout is assigned an offset in memory by the implementation. When a shader accesses a resource with that binding, it will access the bound descriptor buffer from that offset to look for its descriptor. This command provides an application with that offset, so that descriptors can be placed in the correct locations. The precise location accessed by a shader for a given descriptor is as follows:

```
location = bufferAddress + setOffset + descriptorOffset + (arrayElement × descriptorSize)
```

where bufferAddress and setOffset are the base address and offset for the identified descriptor set
as specified by `vkCmdBindDescriptorBuffersEXT` and `vkCmdSetDescriptorBufferOffsetsEXT`, descriptorOffset is the offset for the binding returned by this command, arrayElement is the index into the array specified in the shader, and descriptorSize is the size of the relevant descriptor as obtained from `VkPhysicalDeviceDescriptorBufferPropertiesEXT`. Applications are responsible for placing valid descriptors at the expected location in order for a shader to access it. The overall offset added to bufferAddress to calculate location must be less than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange` for samplers and `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange` for resources.

If any binding in layout is `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, that binding must have the largest offset of any binding.

A descriptor binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_VALUE` can be used. Any potential types in `VkMutableDescriptorTypeCreateInfoVALVE::pDescriptorTypes` for binding share the same offset. If the size of the mutable descriptor is larger than the size of a concrete descriptor type being accessed, the padding area is ignored by the implementation.

### Valid Usage

- **VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-None-08013**
The descriptorBuffer feature must be enabled

- **VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-08014**
layout must have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` flag set

### Valid Usage (Implicit)

- **VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-device-parameter**
device must be a valid `VkDevice` handle

- **VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parameter**
layout must be a valid `VkDescriptorSetLayout` handle

- **VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-pOffset-parameter**
pOffset must be a valid pointer to a `VkDeviceSize` value

- **VUID-vkGetDescriptorSetLayoutBindingOffsetEXT-layout-parent**
layout must have been created, allocated, or retrieved from device

To get descriptor data to place in a buffer, call:

```c
// Provided by VK_EXT_descriptor_buffer

void vkGetDescriptorEXT(
    VkDevice device,
    const VkDescriptorGetInfoEXT* pDescriptorInfo,
    size_t dataSize,

    void vkGetDescriptorEXT(
    VkDevice device,
    const VkDescriptorGetInfoEXT* pDescriptorInfo,
    size_t dataSize,
```
void *pDescriptor);

- device is the logical device that gets the descriptor.
- pDescriptorInfo is a pointer to a VkDescriptorGetInfoEXT structure specifying the parameters of the descriptor to get.
- dataSize is the amount of the descriptor data to get in bytes.
- pDescriptor is a pointer to a user-allocated buffer where the descriptor will be written.

The size of the data for each descriptor type is determined by the value in VkPhysicalDeviceDescriptorBufferPropertiesEXT. This value also defines the stride in bytes for arrays of that descriptor type.

If the VkPhysicalDeviceDescriptorBufferPropertiesEXT::combinedImageSamplerDescriptorSingleArray property is VK_FALSE the implementation requires an array of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors. Applications must write the first VkPhysicalDeviceDescriptorBufferPropertiesEXT::sampledImageDescriptorSize bytes of the data returned through pDescriptor to the first array, and the remaining VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerDescriptorSize bytes of the data to the second array. For variable-sized descriptor bindings of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptors, the two arrays each have a size equal to the upper bound descriptorCount of that binding.

A descriptor obtained by this command references the underlying VkImageView or VkSampler, and these objects must not be destroyed before the last time a descriptor is dynamically accessed. For descriptor types which consume an address instead of an object, the underlying VkBuffer is referenced instead.

Valid Usage

- VUID-vkGetDescriptorEXT-None-08015
  The descriptorBuffer feature must be enabled

- VUID-vkGetDescriptorEXT-dataSize-08125
  If pDescriptorInfo->type is not VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER or pDescriptorInfo->data.pCombinedImageSampler has a imageView member that was not created with a VkSamplerYcbcrConversionInfo structure in its pNext chain, dataSize must equal the size of a descriptor of type VkDescriptorGetInfoEXT::type determined by the value in VkPhysicalDeviceDescriptorBufferPropertiesEXT, or determined by VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT::combinedImageSamplerDensityMapDescriptorSize if pDescriptorInfo specifies a VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER whose VkSampler was created with VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT set

- VUID-vkGetDescriptorEXT-descriptorType-09469
  If pDescriptorInfo->type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER and pDescriptorInfo->data.pCombinedImageSampler has a imageView member that was created with a VkSamplerYcbcrConversionInfo structure in its pNext chain, dataSize must equal the
size of \( \text{VkPhysicalDeviceDescriptorBufferPropertiesEXT} :: \text{combinedImageSamplerDescriptorSize} \) times \( \text{VkSamplerYcbcrConversionImageFormatProperties} :: \text{combinedImageSamplerDescriptorCount} \)

- **VUID-vkGetDescriptorEXT-pDescriptor-08016**
  
  \( p\text{Descriptor} \) must be a valid pointer to an array of at least \( \text{dataSize} \) bytes

- **VUID-vkGetDescriptorEXT-pDescriptorInfo-09507**
  
  If \( p\text{DescriptorInfo-} > \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER} \) and \( p\text{DescriptorInfo-} > \text{data.pCombinedImageSampler} \) is NULL or it has a \( \text{imageView} \) that is \( \text{VK_NULL_HANDLE} \) then \( \text{dataSize} \) must be equal to the size of \( \text{VkPhysicalDeviceDescriptorBufferPropertiesEXT} :: \text{combinedImageSamplerDescriptorSize} \)

### Valid Usage (Implicit)

- **VUID-vkGetDescriptorEXT-device-parameter**
  
  \( \text{device} \) must be a valid \( \text{VkDevice} \) handle

- **VUID-vkGetDescriptorEXT-pDescriptorInfo-parameter**
  
  \( p\text{DescriptorInfo} \) must be a valid pointer to a valid \( \text{VkDescriptorGetInfoEXT} \) structure

- **VUID-vkGetDescriptorEXT-pDescriptor-parameter**
  
  \( p\text{Descriptor} \) must be a valid pointer to an array of \( \text{dataSize} \) bytes

- **VUID-vkGetDescriptorEXT-dataSize-arraylength**
  
  \( \text{dataSize} \) must be greater than 0

Information about the descriptor to get is passed in a \( \text{VkDescriptorGetInfoEXT} \) structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorGetInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDescriptorType type;
    VkDescriptorDataEXT data;
} VkDescriptorGetInfoEXT;
```

- **\( \text{sType} \)** is a \( \text{VkStructureType} \) value identifying this structure.
- **\( \text{pNext} \)** is NULL or a pointer to a structure extending this structure.
- **\( \text{type} \)** is the type of descriptor to get.
- **\( \text{data} \)** is a structure containing the information needed to get the descriptor.

### Valid Usage

- **VUID-VkDescriptorGetInfoEXT-type-08018**
  
  \( \text{type} \) must not be \( \text{VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC}, \text{VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC} \) or \( \text{VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK} \)
If `type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `pCombinedImageSampler->sampler` member of `data` must be a `VkSampler` created on `device`.

If `type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, the `pCombinedImageSampler->imageView` member of `data` must be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`.

If `type` is `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT`, the `pInputAttachmentImage->imageView` member of `data` must be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`.

If `type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and if `pSampledImage` is not `NULL`, the `pSampledImage->imageView` member of `data` must be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`.

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and if `pStorageImage` is not `NULL`, the `pStorageImage->imageView` member of `data` must be a `VkImageView` created on `device`, or `VK_NULL_HANDLE`.

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `pUniformTexelBuffer` is not `NULL` and `pUniformTexelBuffer->address` is not zero, `pUniformTexelBuffer->address` must be an address within a `VkBuffer` created on `device`.

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `pStorageTexelBuffer` is not `NULL` and `pStorageTexelBuffer->address` is not zero, `pStorageTexelBuffer->address` must be an address within a `VkBuffer` created on `device`.

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `pUniformBuffer` is not `NULL` and `pUniformBuffer->address` is not zero, `pUniformBuffer->address` must be an address within a `VkBuffer` created on `device`.

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, `pStorageBuffer` is not `NULL` and `pStorageBuffer->address` is not zero, `pStorageBuffer->address` must be an address within a `VkBuffer` created on `device`.

If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `pUniformBuffer` is not `NULL`, the number of texel buffer elements given by \( \left\lfloor \frac{pUniformBuffer->range}{(\text{texel block size})} \right\rfloor \times (\text{texels per block}) \) where texel block size and texels per block are as defined in the `Compatible Formats` table for `pUniformBuffer->format`, must be less than or equal to `VkPhysicalDeviceLimits::maxTexelBufferElements`.

If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `pStorageBuffer` is not `NULL`, the number of texel buffer elements given by \( \left\lfloor \frac{pStorageBuffer->range}{(\text{texel block size})} \right\rfloor \times (\text{texels per block}) \) where texel block size and texels per block are as defined in the `Compatible Formats` table for `pStorageBuffer->format`, must be less than or equal to `VkPhysicalDeviceLimits::maxTexelBufferElements`.
Formats  table for pStorageBuffer->format, must be less than or equal to
VkPhysicalDeviceLimits::maxTexelBufferElements

• VUID-VkDescriptorGetInfoEXT-type-08028
  If type is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR and accelerationStructure is not
  0, accelerationStructure must contain the address of a VkAccelerationStructureKHR
  created on device

• VUID-VkDescriptorGetInfoEXT-type-08029
  If type is VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV and accelerationStructure is not
  0, accelerationStructure must contain the handle of a VkAccelerationStructureNV created
  on device, returned by vkGetAccelerationStructureHandleNV

Valid Usage (Implicit)

• VUID-VkDescriptorGetInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_GET_INFO_EXT

• VUID-VkDescriptorGetInfoEXT-pNext-pNext
  pNext must be NULL

• VUID-VkDescriptorGetInfoEXT-type-parameter
  type must be a valid VkDescriptorType value

• VUID-VkDescriptorGetInfoEXT-pSampler-parameter
  If type is VK_DESCRIPTOR_TYPE_SAMPLER, the pSampler member of data must be a valid pointer
to a valid VkSampler handle

• VUID-VkDescriptorGetInfoEXT-pCombinedImageSampler-parameter
  If type is VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, the pCombinedImageSampler member
  of data must be a valid pointer to a valid VkDescriptorImageInfo structure

• VUID-VkDescriptorGetInfoEXT-pInputAttachmentImage-parameter
  If type is VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT, the pInputAttachmentImage member of data
  must be a valid pointer to a valid VkDescriptorImageInfo structure

• VUID-VkDescriptorGetInfoEXT-pSampledImage-parameter
  If type is VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, and if pSampledImage is not NULL, the
  pSampledImage member of data must be a valid pointer to a valid VkDescriptorImageInfo
  structure

• VUID-VkDescriptorGetInfoEXT-pStorageImage-parameter
  If type is VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, and if pStorageImage is not NULL, the
  pStorageImage member of data must be a valid pointer to a valid VkDescriptorImageInfo
  structure

• VUID-VkDescriptorGetInfoEXT-pUniformTexelBuffer-parameter
  If type is VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER, and if pUniformTexelBuffer is not NULL,
  the pUniformTexelBuffer member of data must be a valid pointer to a valid
  VkDescriptorAddressInfoEXT structure

• VUID-VkDescriptorGetInfoEXT-pStorageTexelBuffer-parameter
  If type is VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER, and if pStorageTexelBuffer is not NULL,
the `pStorageTexelBuffer` member of `data` must be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure.

- **VUID-VkDescriptorGetInfoEXT-pUniformBuffer-parameter**
  If `type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, and if `pUniformBuffer` is not `NULL`, the `pUniformBuffer` member of `data` must be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure.

- **VUID-VkDescriptorGetInfoEXT-pStorageBuffer-parameter**
  If `type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and if `pStorageBuffer` is not `NULL`, the `pStorageBuffer` member of `data` must be a valid pointer to a valid `VkDescriptorAddressInfoEXT` structure.

Data describing the descriptor is passed in a `VkDescriptorDataEXT` structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef union VkDescriptorDataEXT {
    const VkSampler* pSampler;
    const VkDescriptorImageInfo* pCombinedImageSampler;
    const VkDescriptorImageInfo* pInputAttachmentImage;
    const VkDescriptorImageInfo* pSampledImage;
    const VkDescriptorImageInfo* pStorageImage;
    const VkDescriptorAddressInfoEXT* pUniformTexelBuffer;
    const VkDescriptorAddressInfoEXT* pStorageTexelBuffer;
    const VkDescriptorAddressInfoEXT* pUniformBuffer;
    const VkDescriptorAddressInfoEXT* pStorageBuffer;
    VkDeviceAddress accelerationStructure;
} VkDescriptorDataEXT;
```

- `pSampler` is a pointer to a `VkSampler` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor.

- `pCombinedImageSampler` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor.

- `pInputAttachmentImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` descriptor.

- `pSampledImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` descriptor.

- `pStorageImage` is a pointer to a `VkDescriptorImageInfo` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` descriptor.

- `pUniformTexelBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.

- `pStorageTexelBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.

- `pUniformBuffer` is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor.
• **pStorageBuffer** is a pointer to a `VkDescriptorAddressInfoEXT` structure specifying the parameters of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor.

• **accelerationStructure** is the address of a `VkAccelerationStructureKHR` specifying the parameters of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` descriptor, or a `VkAccelerationStructureNV` handle specifying the parameters of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` descriptor.

If the **nullDescriptor** feature is enabled, `pSampledImage`, `pStorageImage`, `pUniformTexelBuffer`, `pStorageTexelBuffer`, `pUniformBuffer`, and `pStorageBuffer` can each be **NULL**. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

If the **nullDescriptor** feature is enabled, `accelerationStructure` can be **0**. A null acceleration structure descriptor results in the miss shader being invoked.

---

**Valid Usage**

• **VUID-VkDescriptorDataEXT-type-08030**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, and `pUniformBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object.

• **VUID-VkDescriptorDataEXT-type-08031**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, and `pStorageBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object.

• **VUID-VkDescriptorDataEXT-type-08032**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, and `pUniformTexelBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object.

• **VUID-VkDescriptorDataEXT-type-08033**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, and `pStorageTexelBuffer->address` is the address of a non-sparse buffer, then that buffer **must** be bound completely and contiguously to a single `VkDeviceMemory` object.

• **VUID-VkDescriptorDataEXT-type-08034**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, and the **nullDescriptor** feature is not enabled, `pCombinedImageSampler->imageView` **must** not be `VK_NULL_HANDLE`.

• **VUID-VkDescriptorDataEXT-type-08035**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, and the **nullDescriptor** feature is not enabled, `pSampledImage` **must** not be **NULL** and `pSampledImage->imageView` **must** not be `VK_NULL_HANDLE`.

• **VUID-VkDescriptorDataEXT-type-08036**
  If `VkDescriptorGetInfoEXT:type` is `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, and the **nullDescriptor** feature is not enabled, `pStorageImage` **must** not be **NULL** and `pStorageImage->imageView` **must** not be `VK_NULL_HANDLE`.

• **VUID-VkDescriptorDataEXT-type-08037**
If \( \text{VkDescriptorGetInfoEXT: } \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER} \), and the nullDescriptor feature is not enabled, \( \text{pUniformTexelBuffer} \) must not be NULL.

- VUID-VkDescriptorDataEXT-type-08038
  If \( \text{VkDescriptorGetInfoEXT: } \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER} \), and the nullDescriptor feature is not enabled, \( \text{pStorageTexelBuffer} \) must not be NULL.

- VUID-VkDescriptorDataEXT-type-08039
  If \( \text{VkDescriptorGetInfoEXT: } \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER} \), and the nullDescriptor feature is not enabled, \( \text{pUniformBuffer} \) must not be NULL.

- VUID-VkDescriptorDataEXT-type-08040
  If \( \text{VkDescriptorGetInfoEXT: } \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_ARRAY_BUFFER} \), and the nullDescriptor feature is not enabled, \( \text{pStorageBuffer} \) must not be NULL.

- VUID-VkDescriptorDataEXT-type-08041
  If \( \text{VkDescriptorGetInfoEXT: } \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR} \), and the nullDescriptor feature is not enabled, \( \text{accelerationStructure} \) must not be 0.

- VUID-VkDescriptorDataEXT-type-08042
  If \( \text{VkDescriptorGetInfoEXT: } \text{type} \) is \( \text{VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV} \), and the nullDescriptor feature is not enabled, \( \text{accelerationStructure} \) must not be 0.

Data describing a \( \text{VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER} \), \( \text{VK_DESCRIPTOR_TYPE_STORAGE_BUFFER} \), \( \text{VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER} \), or \( \text{VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER} \) descriptor is passed in a \text{VkDescriptorAddressInfoEXT} structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorAddressInfoEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceAddress address;
    VkDeviceSize range;
    VkFormat format;
} VkDescriptorAddressInfoEXT;
```

- \( \text{sType} \) is a \text{VkStructureType} value identifying this structure.
- \( \text{pNext} \) is NULL or a pointer to a structure extending this structure.
- \( \text{address} \) is either 0 or a device address at an offset in a buffer, where the base address can be queried from \text{vkGetBufferDeviceAddress}.
- \( \text{range} \) is the size in bytes of the buffer or buffer view used by the descriptor.
- \( \text{format} \) is the format of the data elements in the buffer view and is ignored for buffers.

**Valid Usage**

- VUID-VkDescriptorAddressInfoEXT-None-09508
  If \( \text{address} \) is not zero, and the descriptor is of type \( \text{VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER} \) or \( \text{VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER} \),
If the nullDescriptor feature is enabled, address can be zero. Loads from a null descriptor return zero values and stores and atomics to a null descriptor are discarded.

Immutable samplers specified in a descriptor set layout through pImmutableSamplers must be provided by applications when obtaining descriptor data. Immutable samplers written in a descriptor buffer must have identical parameters to the immutable samplers in the descriptor set layout that consumes the sampler.

**Valid Usage (Implicit)**

- VUID-VkDescriptorAddressInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_ADDRESS_INFO_EXT
- VUID-VkDescriptorAddressInfoEXT-pNext-pNext
  pNext must be NULL
- VUID-VkDescriptorAddressInfoEXT-format-parameter
  format must be a valid VkFormat value

Note

If the descriptor set layout was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, there is no buffer backing for the immutable sampler, so this requirement does not exist. The implementation handles allocation of these descriptors internally.

Note

As descriptors are now in regular memory, drivers cannot hide copies of immutable samplers that end up in descriptor sets from the application. As such,
14.4.2. Binding Descriptor Buffers

Descriptor buffers have their own separate binding point on the command buffer, with buffers bound using `vkCmdBindDescriptorBuffersEXT`. `vkCmdSetDescriptorBufferOffsetsEXT` assigns pairs of buffer binding indices and buffer offsets to the same binding point on the command buffer as `vkCmdBindDescriptorSets`, allowing subsequent bound pipeline commands to use the specified descriptor buffers. Bindings applied via `vkCmdBindDescriptorSets` cannot exist simultaneously with those applied via calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`, as calls to `vkCmdSetDescriptorBufferOffsetsEXT` or `vkCmdBindDescriptorBufferEmbeddedSamplersEXT` invalidate any bindings by previous calls to `vkCmdBindDescriptorSets` and vice-versa.

To bind descriptor buffers to a command buffer, call:

```c
// Provided by VK_EXT_descriptor_buffer
void vkCmdBindDescriptorBuffersEXT(
    VkCommandBuffer commandBuffer,
    uint32_t bufferCount,
    const VkDescriptorBufferBindingInfoEXT* pBindingInfos);
```

- `commandBuffer` is the command buffer that the descriptor buffers will be bound to.
- `bufferCount` is the number of elements in the `pBindingInfos` array.
- `pBindingInfos` is a pointer to an array of `VkDescriptorBufferBindingInfoEXT` structures.

`vkCmdBindDescriptorBuffersEXT` causes any offsets previously set by `vkCmdSetDescriptorBufferOffsetsEXT` that use the bindings numbered [0..bufferCount-1] to be no longer valid for subsequent bound pipeline commands. Any previously bound buffers at binding points greater than or equal to `bufferCount` are unbound.

**Valid Usage**

- VUID-vkCmdBindDescriptorBuffersEXT-None-08047
  The `descriptorBuffer` feature must be enabled

- VUID-vkCmdBindDescriptorBuffersEXT-maxSamplerDescriptorBufferBindings-08048
  There must be no more than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferBindings` descriptor buffers containing sampler descriptor data bound

- VUID-vkCmdBindDescriptorBuffersEXT-maxResourceDescriptorBufferBindings-08049
  There must be no more than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferBindings` descriptor buffers containing resource descriptor data bound

- VUID-vkCmdBindDescriptorBuffersEXT-None-08050
There **must** be no more than 1 descriptor buffer bound that was created with the `VK_BUFFER_USAGE_PUSH_DESCRIPTOR_BUFFER_BIT_EXT` bit set.

- **VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-08051**
  
  `bufferCount` **must** be less than or equal to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings`.

- **VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08052**
  
  For any element of `pBindingInfos`, if the buffer from which `address` was queried is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object.

- **VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08053**
  
  For any element of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` bit set if it contains sampler descriptor data.

- **VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08054**
  
  For any element of `pBindingInfos`, the buffer from which `address` was queried **must** have been created with the `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT` bit set if it contains resource descriptor data.

- **VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-08055**
  
  For any element of `pBindingInfos`, usage **must** match the buffer from which `address` was queried.

**Valid Usage (Implicit)**

- **VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-parameter**
  
  `commandBuffer` **must** be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdBindDescriptorBuffersEXT-pBindingInfos-parameter**
  
  `pBindingInfos` **must** be a valid pointer to an array of `bufferCount` valid `VkDescriptorBufferBindingInfoEXT` structures.

- **VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-recording**
  
  `commandBuffer` **must** be in the recording state.

- **VUID-vkCmdBindDescriptorBuffersEXT-commandBuffer-cmdpool**
  
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations.

- **VUID-vkCmdBindDescriptorBuffersEXT-videocoding**
  
  This command **must** only be called outside of a video coding scope.

- **VUID-vkCmdBindDescriptorBuffersEXT-bufferCount-arraylength**
  
  `bufferCount` **must** be greater than 0.

**Host Synchronization**

- Host access to `commandBuffer` **must** be externally synchronized.
Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized.

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>

<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

Data describing a descriptor buffer binding is passed in a VkDescriptorBufferBindingInfoEXT structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingInfoEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceAddress address;
    VkBufferUsageFlags usage;
} VkDescriptorBufferBindingInfoEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **address** is a VkDeviceAddress specifying the device address defining the descriptor buffer to be bound.
- **usage** is a bitmask of VkBufferUsageFlagBits specifying the VkBufferCreateInfo::usage for the buffer from which address was queried.

If a VkBufferUsageFlags2CreateInfoKHR structure is present in the pNext chain, VkBufferUsageFlags2CreateInfoKHR::usage from that structure is used instead of usage from this structure.

### Valid Usage

- **VUID-VkDescriptorBufferBindingInfoEXT-None-09499**
  If the pNext chain does not include a VkBufferUsageFlags2CreateInfoKHR structure, **usage** must be a valid combination of VkBufferUsageFlagBits values.

- **VUID-VkDescriptorBufferBindingInfoEXT-None-09500**
  If the pNext chain does not include a VkBufferUsageFlags2CreateInfoKHR structure, **usage** must not be 0.

- **VUID-VkDescriptorBufferBindingInfoEXT-bufferlessPushDescriptors-08056**
  If VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors is VK_FALSE, and **usage** contains VK_BUFFER_USAGE_PUSH_DESCRIPTOR_DESCRIPTOR_BUFFER_BIT_EXT, then the
pNext chain must include a VkDescriptorBufferBindingPushDescriptorBufferHandleEXT structure

- **VUID-VkDescriptorBufferBindingInfoEXT-address-08057**
  address must be aligned to VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment

- **VUID-VkDescriptorBufferBindingInfoEXT-usage-08122**
  If usage includes VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT, address must be an address within a valid buffer that was created with VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT

- **VUID-VkDescriptorBufferBindingInfoEXT-usage-08123**
  If usage includes VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT, address must be an address within a valid buffer that was created with VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT

- **VUID-VkDescriptorBufferBindingInfoEXT-usage-08124**
  If usage includes VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT, address must be an address within a valid buffer that was created with VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT

**Valid Usage (Implicit)**

- **VUID-VkDescriptorBufferBindingInfoEXT-sType-sType**
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_INFO_EXT

- **VUID-VkDescriptorBufferBindingInfoEXT-pNext-pNext**
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkBufferUsageFlags2CreateInfoKHR or VkDescriptorBufferBindingPushDescriptorBufferHandleEXT

- **VUID-VkDescriptorBufferBindingInfoEXT-sType-unique**
  The sType value of each struct in the pNext chain must be unique

When the VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors property is VK_FALSE, the VkBuffer handle of the buffer for push descriptors is passed in a VkDescriptorBufferBindingPushDescriptorBufferHandleEXT structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkDescriptorBufferBindingPushDescriptorBufferHandleEXT {
    VkStructureType sType;
    void* pNext;        // NULL or a pointer to a valid instance of VkBufferUsageFlags2CreateInfoKHR or VkDescriptorBufferBindingPushDescriptorBufferHandleEXT
    VkBuffer buffer;
} VkDescriptorBufferBindingPushDescriptorBufferHandleEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
• **buffer** is the VkBuffer handle of the buffer for push descriptors.

### Valid Usage

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-bufferlessPushDescriptors-08059
  
  VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors must be VK_FALSE

### Valid Usage (Implicit)

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-sType-sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_PUSH_DESCRIPTOR_BUFFER_HANDLE_EXT

- VUID-VkDescriptorBufferBindingPushDescriptorBufferHandleEXT-buffer-parameter buffer must be a valid VkBuffer handle

To set descriptor buffer offsets in a command buffer, call:

```c
// Provided by VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsetsEXT(
    VkCommandBuffer commandBuffer,
    VkPipelineBindPoint pipelineBindPoint,
    VkPipelineLayout layout,
    uint32_t firstSet,
    uint32_t setCount,
    const uint32_t* pBufferIndices,
    const VkDeviceSize* pOffsets);
```

- **commandBuffer** is the command buffer in which the descriptor buffer offsets will be set.
- **pipelineBindPoint** is a VkPipelineBindPoint indicating the type of the pipeline that will use the descriptors.
- **layout** is a VkPipelineLayout object used to program the bindings.
- **firstSet** is the number of the first set to be bound.
- **setCount** is the number of elements in the pBufferIndices and pOffsets arrays.
- **pBufferIndices** is a pointer to an array of indices into the descriptor buffer binding points set by vkCmdBindDescriptorBuffersEXT.
- **pOffsets** is a pointer to an array of VkDeviceSize offsets to apply to the bound descriptor buffers.

vkCmdSetDescriptorBufferOffsetsEXT binds setCount pairs of descriptor buffers, specified by indices into the binding points bound using vkCmdBindDescriptorBuffersEXT, and buffer offsets to set numbers [firstSet..firstSet+descriptorSetCount-1] for subsequent bound pipeline commands set
by `pipelineBindPoint`. Set \([\text{firstSet} + i]\) is bound to the descriptor buffer at binding \(\text{pBufferIndices}[i]\) at an offset of \(\text{pOffsets}[i]\). Any bindings that were previously applied via these sets, or calls to `vkCmdBindDescriptorSets`, are no longer valid. Other sets will also be invalidated upon calling this command if \text{layout} differs from the pipeline layout used to bind those other sets, as described in Pipeline Layout Compatibility.

After binding descriptors, applications \textbf{can} modify descriptor memory either by performing writes on the host or with device commands. When descriptor memory is updated with device commands, visibility for the shader stage accessing a descriptor is ensured with the `VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT` access flag. Implementations \textbf{must} not access resources referenced by these descriptors unless they are dynamically accessed by shaders. Descriptors bound with this call \textbf{can} be undefined if they are not dynamically accessed by shaders.

Implementations \textbf{may} read descriptor data for any statically accessed descriptor if the \text{binding} in \text{layout} is not declared with the `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` flag. If the \text{binding} in \text{layout} is declared with `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT`, implementations \textbf{must} not read descriptor data that is not dynamically accessed.

Applications \textbf{must} ensure that any descriptor which the implementation \textbf{may} read \textbf{must} be in-bounds of the underlying descriptor buffer binding.

\begin{quote}
\textbf{Note}

Applications can freely decide how large a variable descriptor buffer binding is, so it may not be safe to read such descriptor payloads statically. The intention of these rules is to allow implementations to speculatively prefetch descriptor payloads where feasible.
\end{quote}

Dynamically accessing a resource through descriptor data from an unbound region of a \textit{sparse partially-resident buffer} will result in invalid descriptor data being read, and therefore undefined behavior.

\begin{quote}
\textbf{Note}

For descriptors written by the host, visibility is implied through the automatic visibility operation on queue submit, and there is no need to consider `VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT`. Explicit synchronization for descriptors is only required when descriptors are updated on the device.
\end{quote}

\begin{quote}
\textbf{Note}

The requirements above imply that all descriptor bindings have been defined with the equivalent of `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT`, and `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT`, but enabling those features is not required to get this behavior.
\end{quote}

\begin{table}[h]
\centering
\begin{tabular}{|l|}
\hline
\textbf{Valid Usage} \\
\hline
• VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08061 \\
\hline
\end{tabular}
\end{table}
The offsets in `pOffsets` must be aligned to `VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment`.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08063
  The offsets in `pOffsets` must be small enough such that any descriptor binding referenced by `layout` without the `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` flag computes a valid address inside the underlying `VkBuffer`.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08126
  The offsets in `pOffsets` must be small enough such that any location accessed by a shader as a sampler descriptor must be within `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxSamplerDescriptorBufferRange` of the sampler descriptor buffer binding.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-08127
  The offsets in `pOffsets` must be small enough such that any location accessed by a shader as a resource descriptor must be within `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange` of the resource descriptor buffer binding.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08064
  Each element of `pBufferIndices` must be less than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings`.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-08065
  Each element of `pBufferIndices` must reference a valid descriptor buffer binding set by a previous call to `vkCmdBindDescriptorBuffersEXT` in `commandBuffer`.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-08066
  The sum of `firstSet` and `setCount` must be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-firstSet-09006
  The `VkDescriptorSetLayout` for each set from `firstSet` to `firstSet + setCount` when `layout` was created must have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-None-08060
  The `descriptorBuffer` feature must be enabled.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-08067
  `pipelineBindPoint` must be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family.

**Valid Usage (Implicit)**

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-pipelineBindPoint-parameter
  `pipelineBindPoint` must be a valid `VkPipelineBindPoint` value.

- VUID-vkCmdSetDescriptorBufferOffsetsEXT-layout-parameter
  `layout` must be a valid `VkPipelineLayout` handle.
• VUID-vkCmdSetDescriptorBufferOffsetsEXT-pBufferIndices-parameter
  pBufferIndices must be a valid pointer to an array of setCount uint32_t values

• VUID-vkCmdSetDescriptorBufferOffsetsEXT-pOffsets-parameter
  pOffsets must be a valid pointer to an array of setCount VkDeviceSize values

• VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-recording
  commandBuffer must be in the recording state

• VUID-vkCmdSetDescriptorBufferOffsetsEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or compute operations

• VUID-vkCmdSetDescriptorBufferOffsetsEXT-vidcoding
  This command must only be called outside of a video coding scope

• VUID-vkCmdSetDescriptorBufferOffsetsEXT-setCount-arraylength
  setCount must be greater than 0

• VUID-vkCmdSetDescriptorBufferOffsetsEXT-commonparent
  Both of commandBuffer, and layout must have been created, allocated, or retrieved from the same VkDevice

---

Host Synchronization

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

---

Command Properties

Alternatively, to set descriptor buffer offsets in a command buffer, call:

```c
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
void vkCmdSetDescriptorBufferOffsets2EXT(
  VkCommandBuffer commandBuffer,
  const VkSetDescriptorBufferOffsetsInfoEXT* pSetDescriptorBufferOffsetsInfo);
```

- commandBuffer is the command buffer in which the descriptor buffer offsets will be set.
- pSetDescriptorBufferOffsetsInfo is a pointer to a VkSetDescriptorBufferOffsetsInfoEXT structure.
Valid Usage

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-descriptorBuffer-09470
  The descriptorBuffer feature must be enabled

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-09471
  Each bit in pSetDescriptorBufferOffsetsInfo->stageFlags must be a stage supported by the
  commandBuffer's parent VkCommandPool's queue family

Valid Usage (Implicit)

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-pSetDescriptorBufferOffsetsInfo-parameter
  pSetDescriptorBufferOffsetsInfo must be a valid pointer to a valid
  VkSetDescriptorBufferOffsetsInfoEXT structure

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-recording
  commandBuffer must be in the recording state

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or
  compute operations

• VUID-vkCmdSetDescriptorBufferOffsets2EXT-videocoding
  This command must only be called outside of a video coding scope

Host Synchronization

• Host access to commandBuffer must be externally synchronized

• Host access to the VkCommandPool that commandBuffer was allocated from must be externally
  synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

The VkSetDescriptorBufferOffsetsInfoEXT structure is defined as:

```
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkSetDescriptorBufferOffsetsInfoEXT {
```
VkStructureType sType;
const void* pNext;
VkShaderStageFlags stageFlags;
VkPipelineLayout layout;
uint32_t firstSet;
uint32_t setCount;
const uint32_t* pBufferIndices;
const VkDeviceSize* pOffsets;
} VkSetDescriptorBufferOffsetsInfoEXT;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- stageFlags is a bitmask of VkShaderStageFlagBits specifying the shader stages the descriptor sets will be bound to.
- layout is a VkPipelineLayout object used to program the bindings. If the dynamicPipelineLayout feature is enabled, layout can be VK_NULL_HANDLE and the layout must be specified by chaining VkPipelineLayoutCreateInfo structure off the pNext.
- firstSet is the number of the first set to be bound.
- setCount is the number of elements in the pBufferIndices and pOffsets arrays.
- pBufferIndices is a pointer to an array of indices into the descriptor buffer binding points set by vkCmdBindDescriptorBuffersEXT.
- pOffsets is a pointer to an array of VkDeviceSize offsets to apply to the bound descriptor buffers.

If stageFlags specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a stageFlags value of VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT is equivalent to calling the original version of this command once with VK_PIPELINE_BIND_POINT_GRAPHICS and once with VK_PIPELINE_BIND_POINT_COMPUTE.

**Valid Usage**

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08061
  The offsets in pOffsets must be aligned to VkPhysicalDeviceDescriptorBufferPropertiesEXT::descriptorBufferOffsetAlignment.

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08063
  The offsets in pOffsets must be small enough such that any descriptor binding referenced by layout without the VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT flag computes a valid address inside the underlying VkBuffer.

- VUID-VkSetDescriptorBufferOffsetsInfoEXT-pOffsets-08126
  The offsets in pOffsets must be small enough such that any location accessed by a shader as a sampler descriptor must be within VkPhysicalDeviceDescriptorBufferPropertiesEXT.
The offsets in `pOffsets` must be small enough such that any location accessed by a shader as a resource descriptor must be within `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxResourceDescriptorBufferRange` of the resource descriptor buffer binding.

Each element of `pBufferIndices` must be less than `VkPhysicalDeviceDescriptorBufferPropertiesEXT::maxDescriptorBufferBindings`

Each element of `pBufferIndices` reference a valid descriptor buffer binding set by a previous call to `vkCmdBindDescriptorBuffersEXT` in `commandBuffer`

The sum of `firstSet` and `setCount` must be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created.

The `VkDescriptorSetLayout` for each set from `firstSet` to `firstSet + setCount` when `layout` was created must have been created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT` bit set.

If the `dynamicPipelineLayout` feature is not enabled, `layout` must be a valid `VkPipelineLayout` handle.

If `layout` is `VK_NULL_HANDLE`, the `pNext` chain must include a valid `VkPipelineLayoutCreateInfo` structure.

### Valid Usage (Implicit)

- **sType** must be `VK_STRUCTURE_TYPE_SET_DESCRIPTOR_BUFFER_OFFSETS_INFO_EXT`
- `pNext` must be `NULL` or a pointer to a valid instance of `VkPipelineLayoutCreateInfo`
- The `sType` value of each struct in the `pNext` chain must be unique
- `stageFlags` must be a valid combination of `VkShaderStageFlagBits` values
- `stageFlags` must not be `0`
- If `layout` is not `VK_NULL_HANDLE`, `layout` must be a valid `VkPipelineLayout` handle
The Vulkan specification requires that certain parameters must be valid:

- `pBufferIndices` must be a valid pointer to an array of `setCount uint32_t` values.
- `pOffsets` must be a valid pointer to an array of `setCount VkDeviceSize` values.
- `setCount` must be greater than 0.

To bind an embedded immutable sampler set to a command buffer, call:

```c
void vkCmdBindDescriptorBufferEmbeddedSamplersEXT(
    VkCommandBuffer commandBuffer, 
    VkPipelineBindPoint pipelineBindPoint, 
    VkPipelineLayout layout, 
    uint32_t set);
```

- `commandBuffer` is the command buffer that the embedded immutable samplers will be bound to.
- `pipelineBindPoint` is a `VkPipelineBindPoint` indicating the type of the pipeline that will use the embedded immutable samplers.
- `layout` is a `VkPipelineLayout` object used to program the bindings.
- `set` is the number of the set to be bound.

`vkCmdBindDescriptorBufferEmbeddedSamplersEXT` binds the embedded immutable samplers in `set` of `layout` to `set` for the command buffer for subsequent bound pipeline commands set by `pipelineBindPoint`. Any previous binding to this set by `vkCmdSetDescriptorBufferOffsets` or this command is overwritten. Any sets that were last bound by a call to `vkCmdBindDescriptorSets` are invalidated upon calling this command. Other sets will also be invalidated upon calling this command if `layout` differs from the pipeline layout used to bind those other sets, as described in Pipeline Layout Compatibility.

### Valid Usage

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08070
  The `VkDescriptorSetLayout` at index `set` when `layout` was created must have been created with the `VK_DESCRIPTOR_SET_LAYOUT>Create_Embedded_Immutable_Samplers_BIT_EXT` bit set.

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-set-08071
  `set` must be less than or equal to `VkPipelineLayoutCreateInfo::setLayoutCount` provided when `layout` was created.

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-None-08068
  The `descriptorBuffer` feature must be enabled.

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-08069
  `pipelineBindPoint` must be supported by the `commandBuffer`'s parent `VkCommandPool`'s queue family.
Valid Usage (Implicit)

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-pipelineBindPoint-parameter
  `pipelineBindPoint` must be a valid `VkPipelineBindPoint` value

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-layout-parameter
  `layout` must be a valid `VkPipelineLayout` handle

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-recording
  `commandBuffer` must be in the recording state

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdBindDescriptorBufferEmbeddedSamplersEXT-commonparent
  Both of `commandBuffer`, and `layout` must have been created, allocated, or retrieved from the same `VkDevice`

Host Synchronization

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

Command Properties

The **VkBindDescriptorBufferEmbeddedSamplersInfoEXT** structure is defined as:

```c
// Provided by VK_KHR_maintenance6 with VK_EXT_descriptor_buffer
typedef struct VkBindDescriptorBufferEmbeddedSamplersInfoEXT {
    VkStructureType       sType;
    const void*           pNext;
    VkShaderStageFlags    stageFlags;
    VkPipelineLayout      layout;
    uint32_t              set;
} VkBindDescriptorBufferEmbeddedSamplersInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **stageFlags** is a bitmask of **VkShaderStageFlagBits** specifying the shader stages that will use the embedded immutable samplers.
- **layout** is a **VkPipelineLayout** object used to program the bindings. If the **dynamicPipelineLayout** feature is enabled, **layout** can be **VK_NULL_HANDLE** and the layout must be specified by chaining **VkPipelineLayoutCreateInfo** structure off the **pNext**
- **set** is the number of the set to be bound.

If **stageFlags** specifies a subset of all stages corresponding to one or more pipeline bind points, the binding operation still affects all stages corresponding to the given pipeline bind point(s) as if the equivalent original version of this command had been called with the same parameters. For example, specifying a **stageFlags** value of **VK_SHADER_STAGE_VERTEX_BIT | VK_SHADER_STAGE_FRAGMENT_BIT | VK_SHADER_STAGE_COMPUTE_BIT** is equivalent to calling the original version of this command once with **VK_PIPELINE_BIND_POINT_GRAPHICS** and once with **VK_PIPELINE_BIND_POINT_COMPUTE**.

**Valid Usage**

- **VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08070**
  The **VkDescriptorSetLayout** at index **set** when **layout** was created must have been created with the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT** bit set

- **VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-set-08071**
  **set** must be less than or equal to **VkPipelineLayoutCreateInfo::setLayoutCount** provided when **layout** was created

- **VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-None-09495**
  If the **dynamicPipelineLayout** feature is not enabled, **layout** must be a valid **VkPipelineLayout** handle

- **VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-09496**
  If **layout** is **VK_NULL_HANDLE**, the **pNext** chain must include a valid **VkPipelineLayoutCreateInfo** structure
Valid Usage (Implicit)

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_BIND_DESCRIPTOR_BUFFER_EMBEDDED_SAMPLERS_INFO_EXT

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-pNext-pNext
  pNext must be NULL or a pointer to a valid instance of VkPipelineLayoutCreateInfo

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-parameter
  stageFlags must be a valid combination of VkShaderStageFlagBits values

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-stageFlags-requiredbitmask
  stageFlags must not be 0

- VUID-VkBindDescriptorBufferEmbeddedSamplersInfoEXT-layout-parameter
  If layout is not VK_NULL_HANDLE, layout must be a valid VkPipelineLayout handle

14.4.3. Updating Descriptor Buffers

Updates to descriptor data in buffers can be performed by any operation on either the host or device that can access memory.

Descriptor buffer reads can be synchronized using VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT in the relevant shader stage.

14.4.4. Push Descriptors With Descriptor Buffers

If the descriptorBufferPushDescriptors feature is enabled, push descriptors can be used with descriptor buffers in the same way as with descriptor sets.

The VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferlessPushDescriptors property indicates whether the implementation requires a buffer to back push descriptors. If the property is VK_FALSE then before recording any push descriptors the application must bind exactly 1 descriptor buffer that was created with the VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT bit set. When this buffer is bound any previously recorded push descriptors that are required for a subsequent command must be recorded again.

14.4.5. Capture and Replay

In a similar way to bufferDeviceAddressCaptureReplay, the descriptorBufferCaptureReplay feature allows the creation of opaque handles for objects at capture time that can be passed into object creation calls in a future replay, causing descriptors to be created with the same data. The opaque memory address for any memory used by these resources must have been captured using vkGetDeviceMemoryOpaqueCaptureAddress and be replayed using VkMemoryOpaqueCaptureAddressAllocateInfo.

To get the opaque descriptor data for a buffer, call:
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetBufferOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkBufferCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);

• device is the logical device that gets the data.
• pInfo is a pointer to a VkBufferCaptureDescriptorDataInfoEXT structure specifying the buffer.
• pData is a pointer to a user-allocated buffer where the data will be written.

Valid Usage

• VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-None-08072
  The descriptorBufferCaptureReplay feature must be enabled

• VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-08073
  pData must point to a buffer that is at least
  VkPhysicalDeviceDescriptorBufferPropertiesEXT::bufferCaptureReplayDescriptorDataSize
  bytes in size

• VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-08074
  If device was created with multiple physical devices, then the
  bufferDeviceAddressMultiDevice feature must be enabled

Valid Usage (Implicit)

• VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-device-parameter
  device must be a valid VkDevice handle

• VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  pInfo must be a valid pointer to a valid VkBufferCaptureDescriptorDataInfoEXT structure

• VUID-vkGetBufferOpaqueCaptureDescriptorDataEXT-pData-parameter
  pData must be a pointer value

Return Codes

Success
• VK_SUCCESS

Failure
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_OUT_OF_DEVICE_MEMORY

Information about the buffer to get descriptor buffer capture data for is passed in a
VkBufferCaptureDescriptorDataInfoEXT structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkBufferCaptureDescriptorDataInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBuffer buffer;
} VkBufferCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `buffer` is the `VkBuffer` handle of the buffer to get opaque capture data for.

**Valid Usage**

- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-08075
  `buffer` must have been created with `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkBufferCreateInfo`::flags

**Valid Usage (Implicit)**

- VUID-VkBufferCaptureDescriptorDataInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_BUFFER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`

- VUID-VkBufferCaptureDescriptorDataInfoEXT-pNext-pNext
  `pNext` must be `NULL`

- VUID-VkBufferCaptureDescriptorDataInfoEXT-buffer-parameter
  `buffer` must be a valid `VkBuffer` handle

To get the opaque capture descriptor data for an image, call:

```c
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkImageCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkImageCaptureDescriptorDataInfoEXT` structure specifying the image.
- `pData` is a pointer to a user-allocated buffer where the data will be written.
Valid Usage

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-None-08076
  - The descriptorBufferCaptureReplay feature must be enabled
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-08077
  - pData must point to a buffer that is at least
  - VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageCaptureReplayDescriptorDataSize bytes in size
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-08078
  - If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature must be enabled

Valid Usage (Implicit)

- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-device-parameter
  - device must be a valid VkDevice handle
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  - pInfo must be a valid pointer to a valid VkImageCaptureDescriptorDataInfoEXT structure
- VUID-vkGetImageOpaqueCaptureDescriptorDataEXT-pData-parameter
  - pData must be a pointer value

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OFDEVICE_MEMORY

Information about the image to get descriptor buffer capture data for is passed in a VkImageCaptureDescriptorDataInfoEXT structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageCaptureDescriptorDataInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkImage image;
} VkImageCaptureDescriptorDataInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
• **image** is the VkImage handle of the image to get opaque capture data for.

## Valid Usage

- VUID-VkImageCaptureDescriptorDataInfoEXT-image-08079
  
  ```
  image must have been created with VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT set in VkImageCreateInfo
  ```

## Valid Usage (Implicit)

- VUID-VkImageCaptureDescriptorDataInfoEXT-sType-sType
  
  ```
  sType must be VK_STRUCTURE_TYPE_IMAGE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT
  ```

- VUID-VkImageCaptureDescriptorDataInfoEXT-pNext-pNext
  
  ```
  pNext must be NULL
  ```

- VUID-VkImageCaptureDescriptorDataInfoEXT-image-parameter
  
  ```
  image must be a valid VkImage handle
  ```

To get the opaque capture descriptor data for an image view, call:

```c
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetImageViewOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkImageViewCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- **device** is the logical device that gets the data.
- **pInfo** is a pointer to a VkImageViewCaptureDescriptorDataInfoEXT structure specifying the image view.
- **pData** is a pointer to a user-allocated buffer where the data will be written.

## Valid Usage

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-None-08080
  
  The descriptorBufferCaptureReplay feature must be enabled

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-08081
  
  ```
  pData must point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::imageViewCaptureReplayDescriptorDataSize bytes in size
  ```

- VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-08082
  
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature must be enabled
Valid Usage (Implicit)

- **VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-device-parameter**
  
  `device` **must** be a valid `VkDevice` handle

- **VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pInfo-parameter**
  
  `pInfo` **must** be a valid pointer to a valid `VkImageViewCaptureDescriptorDataInfoEXT` structure

- **VUID-vkGetImageViewOpaqueCaptureDescriptorDataEXT-pData-parameter**
  
  `pData` **must** be a pointer value

Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

Information about the image view to get descriptor buffer capture data for is passed in a `VkImageViewCaptureDescriptorDataInfoEXT` structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkImageViewCaptureDescriptorDataInfoEXT {
    VkStructureType sType;
    const void*pNext;
    VkImageView imageView;
} VkImageViewCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageView` is the `VkImageView` handle of the image view to get opaque capture data for.

Valid Usage

- **VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-08083**
  
  `imageView` **must** have been created with `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkImageViewCreateInfo::flags`
Valid Usage (Implicit)

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_VIEW_CAPTURE_DESCRIPTOR_DATA_INFO_EXT

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-pNext-pNext
  pNext must be NULL

- VUID-VkImageViewCaptureDescriptorDataInfoEXT-imageView-parameter
  imageView must be a valid VkImageView handle

To get the opaque capture descriptor data for a sampler, call:

```c
// Provided by VK_EXT_descriptor_buffer
VkResult vkGetSamplerOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkSamplerCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- device is the logical device that gets the data.
- pInfo is a pointer to a VkSamplerCaptureDescriptorDataInfoEXT structure specifying the sampler.
- pData is a pointer to a user-allocated buffer where the data will be written.

Valid Usage

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-None-08084
  The descriptorBufferCaptureReplay feature must be enabled

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pData-08085
  pData must point to a buffer that is at least VkPhysicalDeviceDescriptorBufferPropertiesEXT::samplerCaptureReplayDescriptorDataSize bytes in size

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-08086
  If device was created with multiple physical devices, then the bufferDeviceAddressMultiDevice feature must be enabled

Valid Usage (Implicit)

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetSamplerOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  pInfo must be a valid pointer to a valid VkSamplerCaptureDescriptorDataInfoEXT structure
Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

Information about the sampler to get descriptor buffer capture data for is passed in a `VkSamplerCaptureDescriptorDataInfoEXT` structure:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkSamplerCaptureDescriptorDataInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkSampler sampler;
} VkSamplerCaptureDescriptorDataInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampler` is the `VkSampler` handle of the sampler to get opaque capture data for.

**Valid Usage**

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-08087
  `sampler` must have been created with `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkSamplerCreateInfo`::flags

**Valid Usage (Implicit)**

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_SAMPLER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-pNext-pNext
  `pNext` must be `NULL`

- VUID-VkSamplerCaptureDescriptorDataInfoEXT-sampler-parameter
  `sampler` must be a valid `VkSampler` handle
To get the opaque capture descriptor data for an acceleration structure, call:

```c
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or
// VK_NV_ray_tracing
VkResult vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT(
    VkDevice device,
    const VkAccelerationStructureCaptureDescriptorDataInfoEXT* pInfo,
    void* pData);
```

- `device` is the logical device that gets the data.
- `pInfo` is a pointer to a `VkAccelerationStructureCaptureDescriptorDataInfoEXT` structure specifying the acceleration structure.
- `pData` is a pointer to a user-allocated buffer where the data will be written.

**Valid Usage**

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-None-08088
  The `descriptorBufferCaptureReplay` feature **must** be enabled

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-08089
  `pData` **must** point to a buffer that is at least `VkPhysicalDeviceDescriptorBufferPropertiesEXT::accelerationStructureCaptureReplayDescriptionDataSize` bytes in size

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-08090
  If `device` was created with multiple physical devices, then the `bufferDeviceAddressMultiDevice` feature **must** be enabled

**Valid Usage (Implicit)**

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-device-parameter
  `device` **must** be a valid `VkDevice` handle

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid `VkAccelerationStructureCaptureDescriptorDataInfoEXT` structure

- VUID-vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT-pData-parameter
  `pData` **must** be a pointer value

**Return Codes**

**Success**

- `VK_SUCCESS`
Failure

• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_OUT_OF_DEVICE_MEMORY

Information about the acceleration structure to get descriptor buffer capture data for is passed in a VkAccelerationStructureCaptureDescriptorDataInfoEXT structure:

```
// Provided by VK_EXT_descriptor_buffer with VK_KHR_acceleration_structure or VK_NV_ray_tracing
typedef struct VkAccelerationStructureCaptureDescriptorDataInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkAccelerationStructureKHR accelerationStructure;
    VkAccelerationStructureNV accelerationStructureNV;
} VkAccelerationStructureCaptureDescriptorDataInfoEXT;
```

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.
• `accelerationStructure` is the `VkAccelerationStructureKHR` handle of the acceleration structure to get opaque capture data for.
• `accelerationStructureNV` is the `VkAccelerationStructureNV` handle of the acceleration structure to get opaque capture data for.

Valid Usage

• VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08091
  If `accelerationStructure` is not `VK_NULL_HANDLE` then `accelerationStructure` must have been created with `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkAccelerationStructureCreateInfoKHR::createFlags`

• VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08092
  If `accelerationStructureNV` is not `VK_NULL_HANDLE` then `accelerationStructureNV` must have been created with `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` set in `VkAccelerationStructureCreateInfoNV::info.flags`

• VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-08093
  If `accelerationStructure` is not `VK_NULL_HANDLE` then `accelerationStructureNV` must be `VK_NULL_HANDLE`

• VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-08094
If \( \text{accelerationStructureNV} \) is not \( \text{VK_NULL_HANDLE} \) then \( \text{accelerationStructure} \) must be \( \text{VK_NULL_HANDLE} \).

### Valid Usage (Implicit)

- \( \text{VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-sType-sType} \) must be \( \text{VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT} \)
- \( \text{VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-pNext-pNext} \) must be \( \text{NULL} \)
- \( \text{VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructure-parameter} \)
  If \( \text{accelerationStructure} \) is not \( \text{VK_NULL_HANDLE} \), \( \text{accelerationStructure} \) must be a valid \( \text{VkAccelerationStructureKHR} \) handle
- \( \text{VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-accelerationStructureNV-parameter} \)
  If \( \text{accelerationStructureNV} \) is not \( \text{VK_NULL_HANDLE} \), \( \text{accelerationStructureNV} \) must be a valid \( \text{VkAccelerationStructureNV} \) handle
- \( \text{VUID-VkAccelerationStructureCaptureDescriptorDataInfoEXT-commonparent} \)
  Both of \( \text{accelerationStructure} \), and \( \text{accelerationStructureNV} \) that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same \( \text{VkDevice} \)

The \( \text{VkOpaqueCaptureDescriptorDataCreateInfoEXT} \) structure is defined as:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkOpaqueCaptureDescriptorDataCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    const void* opaqueCaptureDescriptorData;
} VkOpaqueCaptureDescriptorDataCreateInfoEXT;
```

- \( \text{sType} \) is a \( \text{VkStructureType} \) value identifying this structure.
- \( \text{pNext} \) is \( \text{NULL} \) or a pointer to a structure extending this structure.
- \( \text{opaqueCaptureDescriptorData} \) is a pointer to a user-allocated buffer containing opaque capture data retrieved using \( \text{vkGetBufferOpaqueCaptureDescriptorDataEXT} \), \( \text{vkGetImageOpaqueCaptureDescriptorDataEXT} \), \( \text{vkGetImageViewOpaqueCaptureDescriptorDataEXT} \), \( \text{vkGetSamplerOpaqueCaptureDescriptorDataEXT} \), or \( \text{vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT} \).

During replay, opaque descriptor capture data can be specified by adding a \( \text{VkOpaqueCaptureDescriptorDataCreateInfoEXT} \) structure to the relevant \( \text{pNext} \) chain of a
VkBufferCreateInfo, VkImageCreateInfo, VkImageViewCreateInfo, VkSamplerCreateInfo, VkAccelerationStructureCreateInfoNV or VkAccelerationStructureCreateInfoKHR structure.

**Valid Usage (Implicit)**

- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-sType-sType
  
  sType **must** be **VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DESCRIPTOR_DATA_CREATE_INFO_EXT**

- VUID-VkOpaqueCaptureDescriptorDataCreateInfoEXT-opaqueCaptureDescriptorData-parameter
  
  opaqueCaptureDescriptorData **must** be a pointer value
Chapter 15. Shader Interfaces

When a pipeline is created, the set of shaders specified in the corresponding VkPipelineCreateInfo structure are implicitly linked at a number of different interfaces.

- Shader Input and Output Interface
- Vertex Input Interface
- Fragment Output Interface
- Fragment Tile Image Interface
- Fragment Input Attachment Interface
- Ray Tracing Pipeline Interface
- Shader Resource Interface
- Geometry Shader Passthrough

This chapter describes valid uses for a set of SPIR-V decorations. Any other use of one of these decorations is invalid, with the exception that, when using SPIR-V versions 1.4 and earlier: Block, BufferBlock, Offset, ArrayStride, and MatrixStride can also decorate types and type members used by variables in the Private and Function storage classes.

Note

In this chapter, there are references to SPIR-V terms such as the MeshNV execution model. These terms will appear even in a build of the specification which does not support any extensions. This is as intended, since these terms appear in the unified SPIR-V specification without such qualifiers.

15.1. Shader Input and Output Interfaces

When multiple stages are present in a pipeline, the outputs of one stage form an interface with the inputs of the next stage. When such an interface involves a shader, shader outputs are matched against the inputs of the next stage, and shader inputs are matched against the outputs of the previous stage.

All the variables forming the shader input and output interfaces are listed as operands to the OpEntryPoint instruction and are declared with the Input or Output storage classes, respectively, in the SPIR-V module. These generally form the interfaces between consecutive shader stages, regardless of any non-shader stages between the consecutive shader stages.

There are two classes of variables that can be matched between shader stages, built-in variables and user-defined variables. Each class has a different set of matching criteria.

Output variables of a shader stage have undefined values until the shader writes to them or uses theInitializer operand when declaring the variable.
15.1.1. Built-in Interface Block

Shader **built-in** variables meeting the following requirements define the **built-in interface block**. They **must**

- be explicitly declared (there are no implicit built-ins),
- be identified with a **BuiltIn** decoration,
- form object types as described in the **Built-in Variables** section, and
- be declared in a block whose top-level members are the built-ins.

There **must** be no more than one built-in interface block per shader per interface, except for the mesh output interface where there **must** be at most one built-in interface block decorated with the **PerPrimitiveEXT** decoration and at most one built-in interface block without this decoration.

Built-ins **must** not have any **Location** or **Component** decorations.

15.1.2. User-defined Variable Interface

The non-built-in variables listed by **OpEntryPoint** with the **Input** or **Output** storage class form the **user-defined variable interface**. These **must** have **numeric type** or, recursively, composite types of such types. If an implementation supports **storageInputOutput16**, components **can** have a width of 16 bits. These variables **must** be identified with a **Location** decoration and **can** also be identified with a **Component** decoration.

15.1.3. Interface Matching

An output variable, block, or structure member in a given shader stage has an interface match with an input variable, block, or structure member in a subsequent shader stage if they both adhere to the following conditions:

- They have equivalent decorations, other than:
  - **XfbBuffer**, **XfbStride**, **Offset**, and **Stream**
  - one is not decorated with **Component** and the other is declared with a **Component** of 0
  - **Interpolation decorations**
  - **RelaxedPrecision** if one is an input variable and the other an output variable

- Their types match as follows:
  - if the input is declared in a tessellation control or geometry shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType** declaration of the output, and neither is a structure member; or
  - if the **maintenance4** feature is enabled, they are declared as **OpTypeVector** variables, and the output has a **Component Count** value higher than that of the input but the same **Component Type**; or
  - if the output is declared in a mesh shader as an **OpTypeArray** with an **Element Type** equivalent to the **OpType** declaration of the input, and neither is a structure member; or
• if the input is decorated with 
  `PerVertexKHR`
  , and is declared in a fragment shader as a `OpTypeArray`
  with an `ElementType`
  equivalent to the `OpType*`
  declaration of the output, and
  neither the input nor the output is a structure member; or

• if in any other case they are declared with an equivalent `OpType*`
  declaration.

• If both are structures and every member has an interface match.

Note

The word “structure” above refers to both variables that have an `OpTypeStruct`
and interface blocks (which are also declared as `OpTypeStruct`).

If the pipeline is compiled as separate graphics pipeline libraries and the
`graphicsPipelineLibraryIndependentInterpolationDecoration`
limit is not supported, matches are not found if the interpolation decorations
 differ between the last pre-rasterization shader stage and the
fragment shader stage.

All input variables and blocks must have an interface match in the preceding shader stage, except
for built-in variables in fragment shaders. Shaders can declare and write to output variables that
are not declared or read by the subsequent stage.

Matching rules for passthrough geometry shaders are slightly different and are described in the
Passthrough Interface Matching section.

The value of an input variable is undefined if the preceding stage does not write to a matching
output variable, as described above.

15.1.4. Location Assignment

This section describes `Location` assignments for user-defined variables and how many `Location`
slots are consumed by a given user-variable type. As mentioned above, some inputs and outputs have an
additional level of arrayness relative to other shader inputs and outputs. This outer array level is
removed from the type before considering how many `Location` slots the type consumes.

The `Location` value specifies an interface slot comprised of a 32-bit four-component vector
conveyed between stages. The `Component` specifies word components within these vector `Location`
slots. Only types with widths of 16, 32 or 64 are supported in shader interfaces.

Inputs and outputs of the following types consume a single interface `Location`:

• 16-bit scalar and vector types, and

• 32-bit scalar and vector types, and

• 64-bit scalar and 2-component vector types.

64-bit three- and four-component vectors consume two consecutive `Location` slots.

If a declared input or output is an array of size `n`
  and each element takes `m`
  `Location`
  slots, it will be assigned `m × n`
  consecutive `Location`
  slots starting with the specified `Location`.

If the declared input or output is an `n × m` 16-, 32- or 64-bit matrix, it will be assigned multiple
Location slots starting with the specified Location. The number of Location slots assigned for each matrix will be the same as for an n-element array of m-component vectors.

An OpVariable with a structure type that is not a block must be decorated with a Location.

When an OpVariable with a structure type (either block or non-block) is decorated with a Location, the members in the structure type must not be decorated with a Location. The OpVariable’s members are assigned consecutive Location slots in declaration order, starting from the first member, which is assigned the Location decoration from the OpVariable.

When a block-type OpVariable is declared without a Location decoration, each member in its structure type must be decorated with a Location. Types nested deeper than the top-level members must not have Location decorations.

The Location slots consumed by block and structure members are determined by applying the rules above in a depth-first traversal of the instantiated members as though the structure or block member were declared as an input or output variable of the same type.

Any two inputs listed as operands on the same OpEntryPoint must not be assigned the same Location slot and Component word, either explicitly or implicitly. Any two outputs listed as operands on the same OpEntryPoint must not be assigned the same Location slot and Component word, either explicitly or implicitly.

The number of input and output Location slots available for a shader input or output interface is limited, and dependent on the shader stage as described in Shader Input and Output Locations. All variables in both the built-in interface block and the user-defined variable interface count against these limits. Each effective Location must have a value less than the number of Location slots available for the given interface, as specified in the “Locations Available” column in Shader Input and Output Locations.

Table 19. Shader Input and Output Locations

### 15.1.5. Component Assignment

The *Component* decoration allows the *Location* to be more finely specified for scalars and vectors, down to the individual *Component* word within a *Location* slot that are consumed. The *Component* word within a *Location* are 0, 1, 2, and 3. A variable or block member starting at *Component* N will consume *Component* words N, N+1, N+2, ... up through its size. For 16-, and 32-bit types, it is invalid if this sequence of *Component* words gets larger than 3. A scalar 64-bit type will consume two of these *Component* words in sequence, and a two-component 64-bit vector type will consume all four *Component* words available within a *Location*. A three- or four-component 64-bit vector type must not specify a non-zero *Component* decoration. A three-component 64-bit vector type will consume all four *Component* words of the first *Location* and *Component* 0 and 1 of the second *Location*. This leaves *Component* 2 and 3 available for other component-qualified declarations.

A scalar or two-component 64-bit data type must not specify a *Component* decoration of 1 or 3. A *Component* decoration must not be specified for any type that is not a scalar or vector.

A four-component 64-bit data type will consume all four *Component* words of the first *Location* and all four *Component* words of the second *Location*.

### 15.2. Vertex Input Interface

When the vertex stage is present in a pipeline, the vertex shader input variables form an interface with the vertex input attributes. The vertex shader input variables are matched by the *Location* and *Component* decorations to the vertex input attributes specified in the *pVertexInputState* member of the *VkGraphicsPipelineCreateInfo* structure.

The vertex shader input variables listed by *OpEntryPoint* with the *Input* storage class form the *vertex input interface*. These variables must be identified with a *Location* decoration and can also be identified with a *Component* decoration.

For the purposes of interface matching: variables declared without a *Component* decoration are considered to have a *Component* decoration of zero. The number of available vertex input *Location* slots is given by the *maxVertexInputAttributes* member of the *VkPhysicalDeviceLimits* structure.

See *Attribute Location and Component Assignment* for details.

All vertex shader inputs declared as above must have a corresponding attribute and binding in the pipeline.

### 15.3. Fragment Output Interface

When the fragment stage is present in a pipeline, the fragment shader outputs form an interface with the output attachments defined by a *render pass instance*. The fragment shader output
variables are matched by the **Location** and **Component** decorations to specified color attachments.

The fragment shader output variables listed by **OpEntryPoint** with the **Output** storage class form the *fragment output interface*. These variables **must** be identified with a **Location** decoration. They **can** also be identified with a **Component** decoration and/or an **Index** decoration. For the purposes of interface matching: variables declared without a **Component** decoration are considered to have a **Component** decoration of zero, and variables declared without an **Index** decoration are considered to have an **Index** decoration of zero.

A fragment shader output variable identified with a **Location** decoration of *i* is associated with the color attachment indicated by `VkRenderingInfo::pColorAttachments[i]`. When using render pass objects, it is associated with the color attachment indicated by `VkSubpassDescription::pColorAttachments[i]`. Values are written to those attachments after passing through the blending unit as described in **Blending**, if enabled. Locations are consumed as described in **Location Assignment**. The number of available fragment output **Location** slots is given by the `maxFragmentOutputAttachments` member of the `VkPhysicalDeviceLimits` structure.

If the **dynamicRenderingLocalRead** feature is supported, fragment output locations **can** be remapped when using dynamic rendering.

To set the fragment output location mappings during rendering, call:

```c
// Provided by VK_KHR_dynamic_rendering_local_read
void vkCmdSetRenderingAttachmentLocationsKHR(
    VkCommandBuffer commandBuffer,
    const VkRenderingAttachmentLocationInfoKHR* pLocationInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pLocationInfo** is a `VkRenderingAttachmentLocationInfoKHR` structure indicating the new mappings.

This command sets the attachment location mappings for subsequent drawing commands, and **must** match the mappings provided to the currently bound pipeline, if one is bound, which **can** be set by chaining `VkRenderingAttachmentLocationInfoKHR` to `VkGraphicsPipelineCreateInfo`.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in `vkCmdBeginRendering` having a location equal to its index in `VkRenderingInfo::pColorAttachments`. This state is reset whenever `vkCmdBeginRendering` is called.

---

**Valid Usage**

- VUID-vkCmdSetRenderingAttachmentLocationsKHR-dynamicRenderingLocalRead-09509 **dynamicRenderingLocalRead** **must** be enabled
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-pLocationInfo-09510 `pLocationInfo->colorAttachmentCount` **must** be equal to the value of `VkRenderingInfo::colorAttachmentCount` used to begin the current render pass instance
- VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-09511

1376
The current render pass instance **must** have been started or resumed by `vkCmdBeginRendering` in this `commandBuffer`.

**Valid Usage (Implicit)**

- **VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-parameter** `commandBuffer` **must** be a valid `VkCommandBuffer` handle.
- **VUID-vkCmdSetRenderingAttachmentLocationsKHR-pLocationInfo-parameter** `pLocationInfo` **must** be a valid pointer to a valid `VkRenderingAttachmentLocationInfoKHR` structure.
- **VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-recording** `commandBuffer` **must** be in the recording state.
- **VUID-vkCmdSetRenderingAttachmentLocationsKHR-commandBuffer-cmdpool** The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations.
- **VUID-vkCmdSetRenderingAttachmentLocationsKHR-renderpass** This command **must** only be called inside of a render pass instance.
- **VUID-vkCmdSetRenderingAttachmentLocationsKHR-videocoding** This command **must** only be called outside of a video coding scope.

**Host Synchronization**

- Host access to `commandBuffer` **must** be externally synchronized.
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized.

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Inside</td>
<td>Outside</td>
<td>Graphics</td>
<td>State</td>
</tr>
</tbody>
</table>

The `VkRenderingAttachmentLocationInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_dynamic_rendering_local_read
typedef struct VkRenderingAttachmentLocationInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t colorAttachmentCount;
    const uint32_t* pColorAttachmentLocations;
};
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **colorAttachmentCount** is the number of elements in `pColorAttachmentLocations`.

• **pColorAttachmentLocations** is a pointer to an array of `colorAttachmentCount` `uint32_t` values defining remapped locations for color attachments.

This structure allows applications to remap the locations of color attachments to different fragment shader output locations.

Each element of `pColorAttachmentLocations` set to `VK_ATTACHMENT_UNUSED` will be inaccessible to this pipeline as a color attachment; no location will map to it. Each element of `pColorAttachmentLocations` set to any other value will map the specified location value to the color attachment specified in the render pass at the corresponding index in the `pColorAttachmentLocations` array. If `pColorAttachmentLocations` is `NULL`, it is equivalent to setting each element to its index within the array. Any writes to a fragment output location that is not mapped to an attachment must be discarded.

This structure **can** be included in the `pNext` chain of a `VkGraphicsPipelineCreateInfo` structure to set this state for a pipeline. This structure **can** be included in the `pNext` chain of a `VkCommandBufferInheritanceInfo` structure to specify inherited state from the primary command buffer. If this structure is not included in the `pNext` chain of `VkGraphicsPipelineCreateInfo` or `VkCommandBufferInheritanceInfo`, it is equivalent to specifying this structure with the following properties:

• **colorAttachmentCount** set to `VkPipelineRenderingCreateInfo::colorAttachmentCount`

• **pColorAttachmentLocations** set to `NULL`.

### Valid Usage

- **VUID-VkRenderingAttachmentLocationInfoKHR-dynamicRenderingLocalRead-09512**
  If the `dynamicRenderingLocalRead` feature is not enabled, and `pColorAttachmentLocations` is not `NULL`, each element must be set to the value of its index within the array.

- **VUID-VkRenderingAttachmentLocationInfoKHR-pColorAttachmentLocations-09513**
  Elements of `pColorAttachmentLocations` that are not `VK_ATTACHMENT_UNUSED` must each be unique.

- **VUID-VkRenderingAttachmentLocationInfoKHR-colorAttachmentCount-09514**
  `colorAttachmentCount` must be less than or equal to `maxColorAttachments`.

- **VUID-VkRenderingAttachmentLocationInfoKHR-pColorAttachmentLocations-09515**
  Each element of `pColorAttachmentLocations` must be less than or equal to `maxColorAttachments`.
Valid Usage (Implicit)

- VUID-VkRenderingAttachmentLocationInfoKHR-sType-sType

sType must be VK_STRUCTURE_TYPE_RENDERING_ATTACHMENT_LOCATION_INFO_KHR

When an active fragment shader invocation finishes, the values of all fragment shader outputs are copied out and used as blend inputs or color attachments writes. If the invocation does not set a value for them, the input values to those blending or color attachment writes are undefined.

Components of the output variables are assigned as described in Component Assignment. Output Component words identified as 0, 1, 2, and 3 will be directed to the R, G, B, and A inputs to the blending unit, respectively, or to the output attachment if blending is disabled. If two variables are placed within the same Location, they must have the same underlying type (floating-point or integer). Component words which do not correspond to any fragment shader output will also result in undefined values for blending or color attachment writes.

Fragment outputs identified with an Index of zero are directed to the first input of the blending unit associated with the corresponding Location. Outputs identified with an Index of one are directed to the second input of the corresponding blending unit.

There must be no output variable which has the same Location, Component, and Index as any other, either explicitly declared or implied.

Output values written by a fragment shader must be declared with either OpTypeFloat or OpTypeInt, and a Width of 32. If storageInputOutput16 is supported, output values written by a fragment shader can be also declared with either OpTypeFloat or OpTypeInt and a Width of 16. Composites of these types are also permitted. If the color attachment has a signed or unsigned normalized fixed-point format, color values are assumed to be floating-point and are converted to fixed-point as described in Conversion From Floating-Point to Normalized Fixed-Point; If the color attachment has an integer format, color values are assumed to be integers and converted to the bit-depth of the target. Any value that cannot be represented in the attachment’s format is undefined. For any other attachment format no conversion is performed. If the type of the values written by the fragment shader do not match the format of the corresponding color attachment, the resulting values are undefined for those components.

15.4. Legacy Dithering

The application can enable dithering to be applied to the color output of a subpass, by using the VK_SUBPASS_DESCRIPTION_ENABLE_LEGACY_DITHERING_BIT_EXT or the VK_RENDERING_ENABLE_LEGACY_DITHERING_BIT_EXT flags.

When dithering is enabled, the implementation may modify the output color value c by one ULP. This modification must only depend on the framebuffer coordinates (x_f,y_f) of the sample, as well as on the value of c.

The exact details of the dithering algorithm are unspecified, including the algorithm itself, the formats dithering is applied to, and the stage in which it is applied.
This extension is intended only for use by OpenGL emulation layers, and as such the dithering algorithm applied to the subpass should be equivalent to the vendor’s OpenGL implementation, if any.

15.5. Fragment Tile Image Interface

When a fragment stage is present in a pipeline, the fragment shader tile image variables decorated with Location form an interface with the color attachments defined by the render pass instance. The fragment shader tile image variables are matched by Location decorations to the color attachments specified in the pColorAttachments array of the VkRenderingInfoKHR structure describing the render pass instance the fragment shader is executed in.

The fragment shader variables listed by OpEntryPoint with the TileImageEXT storage class and a decoration of Location form the fragment tile image interface. These variables must be declared with a type of OpTypeImage, and a Dim operand of TileImageDataEXT. The Component decoration is not supported for these variables.

Reading from a tile image variable with a Location decoration of i reads from the color attachment identified by the element of VkRenderingInfoKHR::pColorAttachments with a location equal to i. If the tile image variable is declared as an array of size N, it consumes N consecutive tile image locations, starting with the index specified. There must not be more than one tile image variable with the same Location whether explicitly declared or implied by an array declaration. The number of available tile image locations is the same as the number of available fragment output locations as given by the maxFragmentOutputAttachments member of the VkPhysicalDeviceLimits structure.

The basic data type (floating-point, integer, unsigned integer) of the tile image variable must match the basic format of the corresponding color attachment, or the values read from the tile image variables are undefined.

15.6. Fragment Input Attachment Interface

When a fragment stage is present in a pipeline, the fragment shader subpass inputs form an interface with the input attachments of the current subpass. The fragment shader subpass input variables are matched by InputAttachmentIndex decorations to the input attachments specified in the pInputAttachments array of the VkSubpassDescription structure describing the subpass that the fragment shader is executed in.

The fragment shader subpass input variables with the UniformConstant storage class and a decoration of InputAttachmentIndex that are statically used by OpEntryPoint form the fragment input attachment interface. These variables must be declared with a type of OpTypeImage, a Dim operand of SubpassData, an Arrayed operand of 0, and a Sampled operand of 2. The MS operand of the OpTypeImage must be 0 if the samples field of the corresponding VkAttachmentDescription is VK_SAMPLE_COUNT_1_BIT and multisampled-render-to-single-sampled is not enabled, and 1 otherwise.

A subpass input variable identified with an InputAttachmentIndex decoration of i reads from the input attachment indicated by pInputAttachments[i] member of VkSubpassDescription. If the subpass
input variable is declared as an array of size N, it consumes N consecutive input attachments, starting with the index specified. There must not be more than one input variable with the same InputAttachmentIndex whether explicitly declared or implied by an array declaration per image aspect. A multi-aspect image (e.g. a depth/stencil format) can use the same input variable. The number of available input attachment indices is given by the maxPerStageDescriptorInputAttachments member of the VkPhysicalDeviceLimits structure.

When using dynamic rendering with the dynamicRenderingLocalRead feature enabled, a subpass input variable with a InputAttachmentIndex decoration of i can be mapped to a color, depth, or stencil attachment.

To set the input attachment index mappings during dynamic rendering, call:

```cpp
// Provided by VK_KHR_dynamic_rendering_local_read
void vkCmdSetRenderingInputAttachmentIndicesKHR(
    VkCommandBuffer commandBuffer, 
    const VkRenderingInputAttachmentIndexInfoKHR* pLocationInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pInputAttachmentIndexInfo` is a `VkRenderingInputAttachmentIndexInfoKHR` structure indicating the new mappings.

This command sets the input attachment index mappings for subsequent drawing commands, and must match the mappings provided to the currently bound pipeline, if one is bound, which can be set by chaining `VkRenderingInputAttachmentIndexInfoKHR` to `VkGraphicsPipelineCreateInfo`.

Until this command is called, mappings in the command buffer state are treated as each color attachment specified in `vkCmdBeginRendering` mapping to subpass inputs with a InputAttachmentIndex equal to its index in `VkRenderingInfo::pColorAttachments`, and depth/stencil attachments mapping to input attachments without these decorations. This state is reset whenever `vkCmdBeginRendering` is called.

**Valid Usage**

- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-dynamicRenderingLocalRead-09516
dynamicRenderingLocalRead must be enabled

- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-pInputAttachmentIndexInfo-09517
  pInputAttachmentIndexInfo->colorAttachmentCount must be equal to the value of `VkRenderingInfo::colorAttachmentCount` used to begin the current render pass instance

- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-09518
  The current render pass instance must have been started or resumed by `vkCmdBeginRendering` in this commandBuffer
Valid Usage (Implicit)

- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-pLocationInfo-parameter
  pLocationInfo must be a valid pointer to a valid
  VkRenderingInputAttachmentIndexInfoKHR structure
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-recording
  commandBuffer must be in the recording state
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics
  operations
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-renderpass
  This command must only be called inside of a render pass instance
- VUID-vkCmdSetRenderingInputAttachmentIndicesKHR-videocoding
  This command must only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally
  synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Inside</td>
<td>Outside</td>
<td>Graphics</td>
<td>State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The VkRenderingInputAttachmentIndexInfoKHR structure is defined as:

```c
// Provided by VK_KHR_dynamic_rendering_local_read
typedef struct VkRenderingInputAttachmentIndexInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t colorAttachmentCount;
    const uint32_t* pColorAttachmentInputIndices;
    const uint32_t* pDepthInputAttachmentIndex;
    const uint32_t* pStencilInputAttachmentIndex;
} VkRenderingInputAttachmentIndexInfoKHR;
```
sType is a VkStructureType value identifying this structure.

pNext is NULL or a pointer to a structure extending this structure.

colorAttachmentCount is the number of elements in pColorAttachmentInputIndices.

pColorAttachmentInputIndices is a pointer to an array of colorAttachmentCount uint32_t values defining indices for color attachments to be used as input attachments.

pDepthInputAttachmentIndex is either NULL, or a pointer to a uint32_t value defining the index for the depth attachment to be used an an input attachment.

pStencilInputAttachmentIndex is either NULL, or a pointer to a uint32_t value defining the index for the stencil attachment to be used an an input attachment.

This structure allows applications to remap attachments to different input attachment indices.

Each element of pColorAttachmentInputIndices set to a value of VK_ATTACHMENT_UNUSED indicates that the corresponding attachment will not be used as an input attachment in this pipeline. Any other value in each of those elements will map the corresponding attachment to a InputAttachmentIndex value defined in shader code. If pColorAttachmentInputIndices is NULL, it is equivalent to setting each element to its index within the array.

If pDepthInputAttachmentIndex or pStencilInputAttachmentIndex are set to NULL, they map to input attachments without a InputAttachmentIndex decoration. If they point to a value of VK_ATTACHMENT_UNUSED, it indicates that the corresponding attachment will not be used as an input attachment in this pipeline. If they point to any other value it maps the corresponding attachment to a InputAttachmentIndex value defined in shader code.

This structure can be included in the pNext chain of a VkGraphicsPipelineCreateInfo structure to set this state for a pipeline. This structure can be included in the pNext chain of a VkCommandBufferInheritanceInfo structure to specify inherited state from the primary command buffer. If this structure is not included in the pNext chain of VkGraphicsPipelineCreateInfo or VkCommandBufferInheritanceInfo, it is equivalent to specifying this structure with the following properties:

- colorAttachmentCount set to VkPipelineRenderingCreateInfo::colorAttachmentCount.
- pColorAttachmentInputIndices set to NULL.
- pDepthInputAttachmentIndex set to NULL.
- pStencilInputAttachmentIndex set to NULL.

Valid Usage

- VUID-VkRenderingInputAttachmentIndexInfoKHR-dynamicRenderingLocalRead-09519
  If the dynamicRenderingLocalRead feature is not enabled, and pColorAttachmentInputIndices is not NULL, each element must be set to VK_ATTACHMENT_UNUSED

- VUID-VkRenderingInputAttachmentIndexInfoKHR-dynamicRenderingLocalRead-09520
  If the dynamicRenderingLocalRead feature is not enabled, pDepthInputAttachmentIndex must be a valid pointer to a value of VK_ATTACHMENT_UNUSED

- VUID-VkRenderingInputAttachmentIndexInfoKHR-dynamicRenderingLocalRead-09521
If the dynamicRenderingLocalRead feature is not enabled, `pStencilInputAttachmentIndex` must be a valid pointer to a value of `VK_ATTACHMENT_UNUSED`

- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-09522 Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` must each be unique
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-09523 Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` must not take the same value as the content of `pDepthInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-09524 Elements of `pColorAttachmentInputIndices` that are not `VK_ATTACHMENT_UNUSED` must not take the same value as the content of `pStencilInputAttachmentIndex`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-colorAttachmentCount-09525 `colorAttachmentCount` must be less than or equal to `maxColorAttachments`

**Valid Usage (Implicit)**

- VUID-VkRenderingInputAttachmentIndexInfoKHR-sType-sType `sType` must be `VK_STRUCTURE_TYPE_RENDERING_INPUT_ATTACHMENT_INDEX_INFO_KHR`
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pColorAttachmentInputIndices-parameter If `colorAttachmentCount` is not 0, and `pColorAttachmentInputIndices` is not NULL, `pColorAttachmentInputIndices` must be a valid pointer to an array of `colorAttachmentCount` `uint32_t` values
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pDepthInputAttachmentIndex-parameter If `pDepthInputAttachmentIndex` is not NULL, `pDepthInputAttachmentIndex` must be a valid pointer to a valid `uint32_t` value
- VUID-VkRenderingInputAttachmentIndexInfoKHR-pStencilInputAttachmentIndex-parameter If `pStencilInputAttachmentIndex` is not NULL, `pStencilInputAttachmentIndex` must be a valid pointer to a valid `uint32_t` value

Variables identified with the `InputAttachmentIndex` must only be used by a fragment stage. The numeric format of the subpass input must match the format of the corresponding input attachment, or the values of subpass loads from these variables are undefined. If the framebuffer attachment contains both depth and stencil aspects, the numeric format of the subpass input determines if depth or stencil aspect is accessed by the shader.

See Input Attachment for more details.

**15.6.1. Fragment Input Attachment Compatibility**

An input attachment that is statically accessed by a fragment shader must be backed by a descriptor that is equivalent to the `VkImageView` in the `VkFramebuffer`, except for
The `aspectMask` must be equal to the aspect accessed by the shader.

## 15.7. Ray Tracing Pipeline Interface

Ray tracing pipelines may have more stages than other pipelines with multiple instances of each stage and more dynamic interactions between the stages, but still have interface structures that obey the same general rules as interfaces between shader stages in other pipelines. The three types of inter-stage interface variables for ray tracing pipelines are:

- Ray payloads containing data tracked for the entire lifetime of the ray.
- Hit attributes containing data about a specific hit for the duration of its processing.
- Callable data for passing data into and out of a callable shader.

Ray payloads and callable data are used in explicit shader call instructions, so they have an incoming variant to distinguish the parameter passed to the invocation from any other payloads or data being used by subsequent shader call instructions.

An interface structure used between stages must match between the stages using it. Specifically:

- The hit attribute structure read in an any-hit or closest hit shader must be the same structure as the hit attribute structure written in the corresponding intersection shader in the same hit group.
- The incoming callable data for a callable shader must be the same structure as the callable data referenced by the execute callable instruction in the calling shader.
- The ray payload for a shader invoked by a ray tracing command must be the same structure for all shader stages using the payload for that ray.

Any shader with an incoming ray payload, incoming callable data, or hit attribute must only declare one variable of that type.

15.8. Shader Resource Interface

When a shader stage accesses buffer or image resources, as described in the Resource Descriptors section, the shader resource variables must be matched with the pipeline layout that is provided at pipeline creation time.

The set of shader variables that form the shader resource interface for a stage are the variables statically used by that stage’s OpEntryPoint with a storage class of Uniform, UniformConstant, StorageBuffer, or PushConstant. For the fragment shader, this includes the fragment input attachment interface.

The shader resource interface consists of two sub-interfaces: the push constant interface and the descriptor set interface.

15.8.1. Push Constant Interface

The shader variables defined with a storage class of PushConstant that are statically used by the shader entry points for the pipeline define the push constant interface. They must be:

- typed as OpTypeStruct,
- identified with a Block decoration, and
- laid out explicitly using the Offset, ArrayStride, and MatrixStride decorations as specified in Offset and Stride Assignment.

There must be no more than one push constant block statically used per shader entry point.

Each statically used member of a push constant block must be placed at an Offset such that the entire member is entirely contained within the VkPushConstantRange for each OpEntryPoint that uses it, and the stageFlags for that range must specify the appropriate VkShaderStageFlagBits for that stage. The Offset decoration for any member of a push constant block must not cause the space required for that member to extend outside the range [0, maxPushConstantsSize).

Any member of a push constant block that is declared as an array must only be accessed with dynamically uniform indices.

15.8.2. Descriptor Set Interface

The descriptor set interface is comprised of the shader variables with the storage class of StorageBuffer, Uniform or UniformConstant (including the variables in the fragment input attachment interface) that are statically used by the shader entry points for the pipeline.

These variables must have DescriptorSet and Binding decorations specified, which are assigned and matched with the VkDescriptorSetLayout objects in the pipeline layout as described in DescriptorSet and Binding Assignment.

The Image Format of an OpTypeImage declaration must not be Unknown, for variables which are used for OpImageRead, OpImageSparseRead, or OpImageWrite operations, except under the following conditions:
• For `OpImageWrite`, if the image format is listed in the `storage without format` list and if the `shaderStorageImageWriteWithoutFormat` feature is enabled and the shader module declares the `StorageImageWriteWithoutFormat` capability.

• For `OpImageWrite`, if the image format supports `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT` and the shader module declares the `StorageImageWriteWithoutFormat` capability.

• For `OpImageRead` or `OpImageSparseRead`, if the image format is listed in the `storage without format` list and if the `shaderStorageImageReadWithoutFormat` feature is enabled and the shader module declares the `StorageImageReadWithoutFormat` capability.

• For `OpImageRead` or `OpImageSparseRead`, if the image format supports `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT` and the shader module declares the `StorageImageReadWithoutFormat` capability.

• For `OpImageRead`, if `Dim` is `SubpassData` (indicating a read from an input attachment).

The `Image Format` of an `OpTypeImage` declaration must not be `Unknown`, for variables which are used for `OpAtomic*` operations.

Variables identified with the `Uniform` storage class are used to access transparent buffer backed resources. Such variables must be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` or `BufferBlock` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in Offset and Stride Assignment.

Variables identified with the `StorageBuffer` storage class are used to access transparent buffer backed resources. Such variables must be:

- typed as `OpTypeStruct`, or an array of this type,
- identified with a `Block` decoration, and
- laid out explicitly using the `Offset`, `ArrayStride`, and `MatrixStride` decorations as specified in Offset and Stride Assignment.

The `Offset` decoration for any member of a `Block`-decorated variable in the `Uniform` storage class must not cause the space required for that variable to extend outside the range `[0, maxUniformBufferRange)`. The `Offset` decoration for any member of a `Block`-decorated variable in the `StorageBuffer` storage class must not cause the space required for that variable to extend outside the range `[0, maxStorageBufferRange]`.

Variables identified with the `Uniform` storage class can also be used to access transparent descriptor set backed resources when the variable is assigned to a descriptor set layout binding with a `descriptorType` of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`. In this case the variable must be typed as `OpTypeStruct` and cannot be aggregated into arrays of that type. Further, the `Offset` decoration for any member of such a variable must not cause the space required for that variable to extend outside the range `[0, maxInlineUniformBlockSize)`.
Variables identified with a storage class of UniformConstant and a decoration of InputAttachmentIndex must be declared as described in Fragment Input Attachment Interface.

SPIR-V variables decorated with a descriptor set and binding that identify a combined image sampler descriptor can have a type of OpTypeImage, OpTypeSampler (Sampled=1), or OpTypeSampledImage.

Arrays of any of these types can be indexed with constant integral expressions. The following features must be enabled and capabilities must be declared in order to index such arrays with dynamically uniform or non-uniform indices:

- Storage images (except storage texel buffers and input attachments):
  - Dynamically uniform: shaderStorageImageArrayDynamicIndexing and StorageImageArrayDynamicIndexing
  - Non-uniform: shaderStorageImageArrayNonUniformIndexing and StorageImageArrayNonUniformIndexing

- Storage texel buffers:
  - Dynamically uniform: shaderStorageTexelBufferArrayDynamicIndexing and StorageTexelBufferArrayDynamicIndexing
  - Non-uniform: shaderStorageTexelBufferArrayNonUniformIndexing and StorageTexelBufferArrayNonUniformIndexing

- Input attachments:
  - Dynamically uniform: shaderInputAttachmentArrayDynamicIndexing and InputAttachmentArrayDynamicIndexing
  - Non-uniform: shaderInputAttachmentArrayNonUniformIndexing and InputAttachmentArrayNonUniformIndexing

- Sampled images (except uniform texel buffers), samplers and combined image samplers:
  - Dynamically uniform: shaderSampledImageArrayDynamicIndexing and SampledImageArrayDynamicIndexing
  - Non-uniform: shaderSampledImageArrayNonUniformIndexing and SampledImageArrayNonUniformIndexing

- Uniform texel buffers:
  - Dynamically uniform: shaderUniformTexelBufferArrayDynamicIndexing and UniformTexelBufferArrayDynamicIndexing
  - Non-uniform: shaderUniformTexelBufferArrayNonUniformIndexing and UniformTexelBufferArrayNonUniformIndexing

- Uniform buffers:
  - Dynamically uniform: shaderUniformBufferArrayDynamicIndexing and UniformBufferArrayDynamicIndexing
  - Non-uniform: shaderUniformBufferArrayNonUniformIndexing and UniformBufferArrayNonUniformIndexing

- Storage buffers:
• Dynamically uniform: 
  shaderStorageBufferArrayDynamicIndexing and StorageBufferArrayDynamicIndexing

• Non-uniform: 
  shaderStorageBufferArrayNonUniformIndexing and StorageBufferArrayNonUniformIndexing

• Acceleration structures:
  ◦ Dynamically uniform: Always supported.
  ◦ Non-uniform: Always supported.

• weight image:
  ◦ Dynamically uniform: Always supported.
  ◦ Non-uniform: Never supported.

• Block matching image:
  ◦ Dynamically uniform: Always supported.
  ◦ Non-uniform: Never supported.

If an instruction loads from or stores to a resource (including atomics and image instructions) and the resource descriptor being accessed is not dynamically uniform, then the corresponding non-uniform indexing feature must be enabled and the capability must be declared. If an instruction loads from or stores to a resource (including atomics and image instructions) and the resource descriptor being accessed is loaded from an array element with a non-constant index, then the corresponding dynamic or non-uniform indexing feature must be enabled and the capability must be declared.

If the combined image sampler enables sampler Y’C_bC_r conversion or samples a subsampled image, it must be indexed only by constant integral expressions when aggregated into arrays in shader code, irrespective of the shaderSampledImageArrayDynamicIndexing feature.

</table>
Where `OpTypeImage` is referenced, the `Dim` values `Buffer` and `Subpassdata` are only accepted where they are specifically referenced. They do not correspond to resource types where a generic `OpTypeImage` is specified.

In addition to `DescriptorSet` and `Binding`.

### 15.8.3. `DescriptorSet` and `Binding` Assignment

A variable decorated with a `DescriptorSet` decoration of `s` and a `Binding` decoration of `b` indicates that this variable is associated with the `VkDescriptorSetLayoutBinding` that has a `binding` equal to `b` in `pSetLayouts[s]` that was specified in `VkPipelineLayoutCreateInfo`.

`DescriptorSet` decoration values **must** be between zero and `maxBoundDescriptorSets` minus one, inclusive. `Binding` decoration values **can** be any 32-bit unsigned integer value, as described in `Descriptor Set Layout`. Each descriptor set has its own binding name space.

If the `Binding` decoration is used with an array, the entire array is assigned that binding value. The array **must** be a single-dimensional array and size of the array **must** be no larger than the number of descriptors in the binding. If the array is runtime-sized, then array elements greater than or equal to that binding in the bound descriptor set **must** not be used. If the array is runtime-sized, the `runtimeDescriptorArray` feature **must** be enabled and the `RuntimeDescriptorArray` capability **must** be declared. The index of each element of the array is referred to as the `arrayElement`. For the purposes of interface matching and descriptor set operations, if a resource variable is not an array, it is treated as if it has an `arrayElement` of zero.

There is a limit on the number of resources of each type that **can** be accessed by a pipeline stage as shown in `Shader Resource Limits`. The “Resources Per Stage” column gives the limit on the number each type of resource that **can** be statically used for an entry point in any given stage in a pipeline. The “Resource Types” column lists which resource types are counted against the limit. Some resource types count against multiple limits. The `VK_DESCRIPTOR_TYPE_MUTABLE_EXT` descriptor type counts as one individual resource and one for every unique resource limit per descriptor set type that is present in the associated binding’s `VkMutableDescriptorTypeListEXT`. If multiple descriptor types in `VkMutableDescriptorTypeListEXT` map to the same resource limit, only one descriptor is consumed for purposes of computing resource limits.

The pipeline layout **may** include descriptor sets and bindings which are not referenced by any variables statically used by the entry points for the shader stages in the binding’s `stageFlags`.

However, if a variable assigned to a given `DescriptorSet` and `Binding` is statically used by the entry point for a shader stage, the pipeline layout **must** contain a descriptor set layout binding in that descriptor set layout and for that binding number, and that binding’s `stageFlags` **must** include the appropriate `VkShaderStageFlagBits` for that stage. The variable **must** be of a valid resource type determined by its SPIR-V type and storage class, as defined in `Shader Resource and Storage Class Correspondence`. The descriptor set layout binding **must** be of a corresponding descriptor type, as defined in `Shader Resource and Descriptor Type Correspondence`.

---

**Note**
There are no limits on the number of shader variables that can have overlapping set and binding values in a shader; but which resources are statically used has an impact. If any shader variable identifying a resource is statically used in a shader, then the underlying descriptor bound at the declared set and binding must support the declared type in the shader when the shader executes.

If multiple shader variables are declared with the same set and binding values, and with the same underlying descriptor type, they can all be statically used within the same shader. However, accesses are not automatically synchronized, and Aliased decorations should be used to avoid data hazards (see section 2.18.2 Aliasing in the SPIR-V specification).

If multiple shader variables with the same set and binding values are declared in a single shader, but with different declared types, where any of those are not supported by the relevant bound descriptor, that shader can only be executed if the variables with the unsupported type are not statically used.

A noteworthy example of using multiple statically-used shader variables sharing the same descriptor set and binding values is a descriptor of type `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` that has multiple corresponding shader variables in the `UniformConstant` storage class, where some could be `OpTypeImage (Sampled=1)`, some could be `OpTypeSampler`, and some could be `OpTypeSampledImage`.

### 15.8.4. Offset and Stride Assignment

Certain objects must be explicitly laid out using the Offset, ArrayStride, and MatrixStride, as described in SPIR-V explicit layout validation rules. All such layouts also must conform to the following requirements.

- The numeric order of Offset decorations does not need to follow member declaration order.

### Alignment Requirements

There are different alignment requirements depending on the specific resources and on the features enabled on the device.

Matrix types are defined in terms of arrays as follows:

- A column-major matrix with C columns and R rows is equivalent to a C element array of vectors with R components.
- A row-major matrix with C columns and R rows is equivalent to an R element array of vectors with C components.

The scalar alignment of the type of an OpTypeStruct member is defined recursively as follows:

- A scalar of size N has a scalar alignment of N.
- A vector type has a scalar alignment equal to that of its component type.
- An array type has a scalar alignment equal to that of its element type.
- A structure has a scalar alignment equal to the largest scalar alignment of any of its members.
- A matrix type inherits scalar alignment from the equivalent array declaration.

The base alignment of the type of an OpTypeStruct member is defined recursively as follows:

- A scalar has a base alignment equal to its scalar alignment.
A two-component vector has a base alignment equal to twice its scalar alignment.
A three- or four-component vector has a base alignment equal to four times its scalar alignment.
An array has a base alignment equal to the base alignment of its element type.
A structure has a base alignment equal to the largest base alignment of any of its members. An empty structure has a base alignment equal to the size of the smallest scalar type permitted by the capabilities declared in the SPIR-V module. (e.g., for a 1 byte aligned empty struct in the StorageBuffer storage class, StorageBuffer8BitAccess or UniformAndStorageBuffer8BitAccess must be declared in the SPIR-V module.)
A matrix type inherits base alignment from the equivalent array declaration.

The extended alignment of the type of an OpTypeStruct member is similarly defined as follows:

- A scalar or vector type has an extended alignment equal to its base alignment.
- An array or structure type has an extended alignment equal to the largest extended alignment of any of its members, rounded up to a multiple of 16.
- A matrix type inherits extended alignment from the equivalent array declaration.

A member is defined to improperly straddle if either of the following are true:

- It is a vector with total size less than or equal to 16 bytes, and has Offset decorations placing its first byte at F and its last byte at L, where floor(F / 16) != floor(L / 16).
- It is a vector with total size greater than 16 bytes and has its Offset decorations placing its first byte at a non-integer multiple of 16.

**Standard Buffer Layout**

Every member of an OpTypeStruct that is required to be explicitly laid out must be aligned according to the first matching rule as follows. If the struct is contained in pointer types of multiple storage classes, it must satisfy the requirements for every storage class used to reference it.

1. If the scalarBlockLayout feature is enabled on the device and the storage class is Uniform, StorageBuffer, PhysicalStorageBuffer, ShaderRecordBufferKHR, or PushConstant then every member must be aligned according to its scalar alignment.
2. If the工作组MemoryExplicitLayoutScalarBlockLayout feature is enabled on the device and the storage class is Workgroup then every member must be aligned according to its scalar alignment.
3. All vectors must be aligned according to their scalar alignment.
4. If the uniformBufferStandardLayout feature is not enabled on the device, then any member of an OpTypeStruct with a storage class of Uniform and a decoration of Block must be aligned according to its extended alignment.
5. Every other member must be aligned according to its base alignment.

**Note**

Even if scalar alignment is supported, it is generally more performant to use the base alignment.
The memory layout must obey the following rules:

- The Offset decoration of any member must be a multiple of its alignment.
- Any ArrayStride or MatrixStride decoration must be a multiple of the alignment of the array or matrix as defined above.

If one of the conditions below applies

- The storage class is Uniform, StorageBuffer, PhysicalStorageBuffer, ShaderRecordBufferKHR, or PushConstant, and the scalarBlockLayout feature is not enabled on the device.
- The storage class is Workgroup, and either the struct member is not part of a Block or the workgroupMemoryExplicitLayoutScalarBlockLayout feature is not enabled on the device.
- The storage class is any other storage class.

the memory layout must also obey the following rules:

- Vectors must not improperly straddle, as defined above.
- The Offset decoration of a member must not place it between the end of a structure, an array or a matrix and the next multiple of the alignment of that structure, array or matrix.

Note

The std430 layout in GLSL satisfies these rules for types using the base alignment. The std140 layout satisfies the rules for types using the extended alignment.

15.9. Built-In Variables

Built-in variables are accessed in shaders by declaring a variable decorated with a BuiltIn SPIR-V decoration. The meaning of each BuiltIn decoration is as follows. In the remainder of this section, the name of a built-in is used interchangeably with a term equivalent to a variable decorated with that particular built-in. Built-ins that represent integer values can be declared as either signed or unsigned 32-bit integers.

As mentioned above, some inputs and outputs have an additional level of arrayness relative to other shader inputs and outputs. This level of arrayness is not included in the type descriptions below, but must be included when declaring the built-in.

BaryCoordKHR

The BaryCoordKHR decoration can be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using perspective interpolation.

Valid Usage

- VUID-BaryCoordKHR-BaryCoordKHR-04154
  The BaryCoordKHR decoration must be used only within theFragment Execution Model
The variable decorated with `BaryCoordKHR` must be declared using the *Input Storage Class*

The variable decorated with `BaryCoordKHR` must be declared as a three-component vector of 32-bit floating-point values

**BaryCoordNoPerspAMD**

The `BaryCoordNoPerspAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the \((I,J)\) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at the fragment’s center. The \(K\) coordinate of the barycentric coordinates can be derived given the identity \(I + J + K = 1.0\).

**Valid Usage**

- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04157
  The `BaryCoordNoPerspAMD` decoration must be used only within the *Fragment Execution Model*

- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04158
  The variable decorated with `BaryCoordNoPerspAMD` must be declared using the *Input Storage Class*

- VUID-BaryCoordNoPerspAMD-BaryCoordNoPerspAMD-04159
  The variable decorated with `BaryCoordNoPerspAMD` must be declared as a two-component vector of 32-bit floating-point values

**BaryCoordNoPerspKHR**

The `BaryCoordNoPerspKHR` decoration can be used to decorate a fragment shader input variable. This variable will contain a three-component floating-point vector with barycentric weights that indicate the location of the fragment relative to the screen-space locations of vertices of its primitive, obtained using linear interpolation.

**Valid Usage**

- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04160
  The `BaryCoordNoPerspKHR` decoration must be used only within the *Fragment Execution Model*

- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04161
  The variable decorated with `BaryCoordNoPerspKHR` must be declared using the *Input Storage Class*

- VUID-BaryCoordNoPerspKHR-BaryCoordNoPerspKHR-04162
  The variable decorated with `BaryCoordNoPerspKHR` must be declared as a three-component vector of 32-bit floating-point values

**BaryCoordNoPerspCentroidAMD**

The `BaryCoordNoPerspCentroidAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the \((I,J)\) pair of the barycentric coordinates corresponding to...
the fragment evaluated using linear interpolation at the centroid. The K coordinate of the barycentric coordinates can be derived given the identity I + J + K = 1.0.

### Valid Usage

- **VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04163**
  The `BaryCoordNoPerspCentroidAMD` decoration must be used only within the Fragment Execution Model.

- **VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04164**
  The variable decorated with `BaryCoordNoPerspCentroidAMD` must be declared using the Input Storage Class.

- **VUID-BaryCoordNoPerspCentroidAMD-BaryCoordNoPerspCentroidAMD-04165**
  The variable decorated with `BaryCoordNoPerspCentroidAMD` must be declared as a three-component vector of 32-bit floating-point values.

### BaryCoordNoPerspSampleAMD

The `BaryCoordNoPerspSampleAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using linear interpolation at each covered sample. The K coordinate of the barycentric coordinates can be derived given the identity I + J + K = 1.0.

### Valid Usage

- **VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04166**
  The `BaryCoordNoPerspSampleAMD` decoration must be used only within the Fragment Execution Model.

- **VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04167**
  The variable decorated with `BaryCoordNoPerspSampleAMD` must be declared using the Input Storage Class.

- **VUID-BaryCoordNoPerspSampleAMD-BaryCoordNoPerspSampleAMD-04168**
  The variable decorated with `BaryCoordNoPerspSampleAMD` must be declared as a two-component vector of 32-bit floating-point values.

### BaryCoordPullModelAMD

The `BaryCoordPullModelAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain (1/W, 1/I, 1/J) evaluated at the fragment center and can be used to calculate gradients and then interpolate I, J, and W at any desired sample location.

### Valid Usage

- **VUID-BaryCoordPullModelAMD-BaryCoordPullModelAMD-04169**
  The `BaryCoordPullModelAMD` decoration must be used only within the Fragment Execution Model.
The variable decorated with `BaryCoordPullModelAMD` must be declared using the Input Storage Class.

The variable decorated with `BaryCoordPullModelAMD` must be declared as a three-component vector of 32-bit floating-point values.

**BaryCoordSmoothAMD**

The `BaryCoordSmoothAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the fragment’s center. The K coordinate of the barycentric coordinates can be derived given the identity \( I + J + K = 1.0 \).

**Valid Usage**

- The `BaryCoordSmoothAMD` decoration must be used only within the Fragment Execution Model.

**BaryCoordSmoothCentroidAMD**

The `BaryCoordSmoothCentroidAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the centroid. The K coordinate of the barycentric coordinates can be derived given the identity \( I + J + K = 1.0 \).

**Valid Usage**

- The `BaryCoordSmoothCentroidAMD` decoration must be used only within the Fragment Execution Model.

**Notes**

- The variable decorated with `BaryCoordPullModelAMD` must be declared using the Input Storage Class.
- The variable decorated with `BaryCoordPullModelAMD` must be declared as a three-component vector of 32-bit floating-point values.
- The `BaryCoordSmoothAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the fragment’s center. The K coordinate of the barycentric coordinates can be derived given the identity \( I + J + K = 1.0 \).
- The `BaryCoordSmoothCentroidAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at the centroid. The K coordinate of the barycentric coordinates can be derived given the identity \( I + J + K = 1.0 \).
The `BaryCoordSmoothSampleAMD` decoration can be used to decorate a fragment shader input variable. This variable will contain the (I,J) pair of the barycentric coordinates corresponding to the fragment evaluated using perspective interpolation at each covered sample. The K coordinate of the barycentric coordinates can be derived given the identity \( I + J + K = 1.0 \).

**Valid Usage**

- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04178
  The `BaryCoordSmoothSampleAMD` decoration must be used only within the Fragment Execution Model

- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04179
  The variable decorated with `BaryCoordSmoothSampleAMD` must be declared using the Input Storage Class

- VUID-BaryCoordSmoothSampleAMD-BaryCoordSmoothSampleAMD-04180
  The variable decorated with `BaryCoordSmoothSampleAMD` must be declared as a two-component vector of 32-bit floating-point values

---

**BaseInstance**

Decorating a variable with the `BaseInstance` built-in will make that variable contain the integer value corresponding to the first instance that was passed to the command that invoked the current vertex shader invocation. `BaseInstance` is the `firstInstance` parameter to a direct drawing command or the `firstInstance` member of a structure consumed by an indirect drawing command.

**Valid Usage**

- VUID-BaseInstance-BaseInstance-04181
  The `BaseInstance` decoration must be used only within the Vertex Execution Model

- VUID-BaseInstance-BaseInstance-04182
  The variable decorated with `BaseInstance` must be declared using the Input Storage Class

- VUID-BaseInstance-BaseInstance-04183
  The variable decorated with `BaseInstance` must be declared as a scalar 32-bit integer value

---

**BaseVertex**

Decorating a variable with the `BaseVertex` built-in will make that variable contain the integer value corresponding to the first vertex or vertex offset that was passed to the command that invoked the current vertex shader invocation. For non-indexed drawing commands, this variable is the `firstVertex` parameter to a direct drawing command or the `firstVertex` member of the structure consumed by an indirect drawing command. For indexed drawing commands, this variable is the `vertexOffset` parameter to a direct drawing command or the `vertexOffset` member of the structure consumed by an indirect drawing command.
Valid Usage

• VUID-BaseVertex-BaseVertex-04184
  The BaseVertex decoration must be used only within the Vertex Execution Model

• VUID-BaseVertex-BaseVertex-04185
  The variable decorated with BaseVertex must be declared using the Input Storage Class

• VUID-BaseVertex-BaseVertex-04186
  The variable decorated with BaseVertex must be declared as a scalar 32-bit integer value

ClipDistance

Decorating a variable with the ClipDistance built-in decoration will make that variable contain the mechanism for controlling user clipping. ClipDistance is an array such that the i\textsuperscript{th} element of the array specifies the clip distance for plane i. A clip distance of 0 means the vertex is on the plane, a positive distance means the vertex is inside the clip half-space, and a negative distance means the vertex is outside the clip half-space.

\begin{itemize}
  \item \textbf{Note} The array variable decorated with ClipDistance is explicitly sized by the shader.
  \item \textbf{Note} In the last pre-rasterization shader stage, these values will be linearly interpolated across the primitive and the portion of the primitive with interpolated distances less than 0 will be considered outside the clip volume. If ClipDistance is then used by a fragment shader, ClipDistance contains these linearly interpolated values.
\end{itemize}

Valid Usage

• VUID-ClipDistance-ClipDistance-04187
  The ClipDistance decoration must be used only within the MeshEXT, MeshNV, Vertex, Fragment, TessellationControl, TessellationEvaluation, or Geometry Execution Model

• VUID-ClipDistance-ClipDistance-04188
  The variable decorated with ClipDistance within the MeshEXT, MeshNV, or Vertex Execution Model must be declared using the Output Storage Class

• VUID-ClipDistance-ClipDistance-04189
  The variable decorated with ClipDistance within the Fragment Execution Model must be declared using the Input Storage Class

• VUID-ClipDistance-ClipDistance-04190
  The variable decorated with ClipDistance within the TessellationControl, TessellationEvaluation, or Geometry Execution Model must not be declared in a Storage Class other than Input or Output

• VUID-ClipDistance-ClipDistance-04191
  The variable decorated with ClipDistance must be declared as an array of 32-bit floating-point values
ClipDistancePerViewNV

Decorating a variable with the ClipDistancePerViewNV built-in decoration will make that variable contain the per-view clip distances. The per-view clip distances have the same semantics as ClipDistance.

Valid Usage

- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04192
  The ClipDistancePerViewNV decoration must be used only within the MeshNV Execution Model

- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04193
  The variable decorated with ClipDistancePerViewNV must be declared using the Output Storage Class

- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04194
  The variable decorated with ClipDistancePerViewNV must also be decorated with the PerViewNV decoration

- VUID-ClipDistancePerViewNV-ClipDistancePerViewNV-04195
  The variable decorated with ClipDistancePerViewNV must be declared as a two-dimensional array of 32-bit floating-point values

ClusterIDHUAWEI

The ClusterIDHUAWEI decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the id of cluster being rendered by this drawing command. When Cluster Culling Shader enable, ClusterIDHUAWEI will replace gl_DrawID pass to vertex shader for cluster-related information fetching.

Valid Usage

- VUID-ClusterIDHUAWEI-ClusterIDHUAWEI-07797
  The ClusterIDHUAWEI decoration must be used only within the ClusterCullingHUAWEI Execution Model

- VUID-ClusterIDHUAWEI-ClusterIDHUAWEI-07798
  The variable decorated with ClusterIDHUAWEI must be declared as a scalar 32-bit integer value

ClusterShadingRateHUAWEI

The ClusterShadingRateHUAWEI decoration can be used to decorate a cluster culling shader output variable. This variable will contain an integer value specifying the shading rate of a rendering cluster.

Valid Usage

- VUID-ClusterShadingRateHUAWEI-ClusterShadingRateHUAWEI-09448
  The ClusterShadingRateHUAWEI decoration must be used only within the
ClusterCullingHUAWEI Execution Model

- VUID-ClusterShadingRateHUAWEI-ClusterShadingRateHUAWEI-09449
  The variable decorated with ClusterShadingRateHUAWEI must be declared as a scalar 32-bit integer value

CullDistance

Decorating a variable with the CullDistance built-in decoration will make that variable contain the mechanism for controlling user culling. If any member of this array is assigned a negative value for all vertices belonging to a primitive, then the primitive is discarded before rasterization.

Note

In fragment shaders, the values of the CullDistance array are linearly interpolated across each primitive.

Note

If CullDistance decorates an input variable, that variable will contain the corresponding value from the CullDistance decorated output variable from the previous shader stage.

Valid Usage

- VUID-CullDistance-CullDistance-04196
  The CullDistance decoration must be used only within the MeshEXT, MeshNV, Vertex, Fragment, TessellationControl, TessellationEvaluation, or Geometry Execution Model

- VUID-CullDistance-CullDistance-04197
  The variable decorated with CullDistance within the MeshEXT, MeshNV or Vertex Execution Model must be declared using the Output Storage Class

- VUID-CullDistance-CullDistance-04198
  The variable decorated with CullDistance within the Fragment Execution Model must be declared using the Input Storage Class

- VUID-CullDistance-CullDistance-04199
  The variable decorated with CullDistance within the TessellationControl, TessellationEvaluation, or Geometry Execution Model must not be declared using a Storage Class other than Input or Output

- VUID-CullDistance-CullDistance-04200
  The variable decorated with CullDistance must be declared as an array of 32-bit floating-point values

CullDistancePerViewNV

Decorating a variable with the CullDistancePerViewNV built-in decoration will make that variable contain the per-view cull distances. The per-view cull distances have the same semantics as CullDistance.
Valid Usage

• VUID-CullDistancePerViewNV-CullDistancePerViewNV-04201
  The \texttt{CullDistancePerViewNV} decoration \textbf{must} be used only within the \texttt{MeshNV Execution Model}

• VUID-CullDistancePerViewNV-CullDistancePerViewNV-04202
  The variable decorated with \texttt{CullDistancePerViewNV} \textbf{must} be declared using the \texttt{Output Storage Class}

• VUID-CullDistancePerViewNV-CullDistancePerViewNV-04203
  The variable decorated with \texttt{CullDistancePerViewNV} \textbf{must} also be decorated with the \texttt{PerViewNV} decoration

• VUID-CullDistancePerViewNV-CullDistancePerViewNV-04204
  The variable decorated with \texttt{CullDistancePerViewNV} \textbf{must} be declared as a two-dimensional array of 32-bit floating-point values

\textbf{CullPrimitiveEXT}

Decorating a variable with the \texttt{CullPrimitiveEXT} built-in decoration will make that variable contain the culling state of output primitives. If the per-primitive boolean value is \texttt{true}, the primitive will be culled, if it is \texttt{false} it will not be culled.

Valid Usage

• VUID-CullPrimitiveEXT-CullPrimitiveEXT-07034
  The \texttt{CullPrimitiveEXT} decoration \textbf{must} be used only within the \texttt{MeshEXT Execution Model}

• VUID-CullPrimitiveEXT-CullPrimitiveEXT-07035
  The variable decorated with \texttt{CullPrimitiveEXT} \textbf{must} be declared using the \texttt{Output Storage Class}

• VUID-CullPrimitiveEXT-CullPrimitiveEXT-07036
  The variable decorated with \texttt{CullPrimitiveEXT} \textbf{must} be declared as an array of boolean values

• VUID-CullPrimitiveEXT-CullPrimitiveEXT-07037
  The size of the array decorated with \texttt{CullPrimitiveEXT} \textbf{must} match the value specified by \texttt{OutputPrimitivesEXT}

• VUID-CullPrimitiveEXT-CullPrimitiveEXT-07038
  The variable decorated with \texttt{CullPrimitiveEXT} within the \texttt{MeshEXT Execution Model} \textbf{must} also be decorated with the \texttt{PerPrimitiveEXT} decoration

\textbf{CullMaskKHR}

A variable decorated with the \texttt{CullMaskKHR} decoration will specify the cull mask of the ray being processed. The value is given by the \texttt{Cull Mask} parameter passed into one of the \texttt{OpTrace*} instructions.
Valid Usage

• VUID-CullMaskKHR-CullMaskKHR-06735
  The CullMaskKHR decoration **must** be used only within the IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model

• VUID-CullMaskKHR-CullMaskKHR-06736
  The variable decorated with CullMaskKHR **must** be declared using the Input Storage Class

• VUID-CullMaskKHR-CullMaskKHR-06737
  The variable decorated with CullMaskKHR **must** be declared as a scalar 32-bit integer value

**CurrentRayTimeNV**

A variable decorated with the CurrentRayTimeNV decoration contains the time value passed in to OpTraceRayMotionNV which called this shader.

Valid Usage

• VUID-CurrentRayTimeNV-CurrentRayTimeNV-04942
  The CurrentRayTimeNV decoration **must** be used only within the IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model

• VUID-CurrentRayTimeNV-CurrentRayTimeNV-04943
  The variable decorated with CurrentRayTimeNV **must** be declared using the Input Storage Class

• VUID-CurrentRayTimeNV-CurrentRayTimeNV-04944
  The variable decorated with CurrentRayTimeNV **must** be declared as a scalar 32-bit floating-point value

**DeviceIndex**

The DeviceIndex decoration **can** be applied to a shader input which will be filled with the device index of the physical device that is executing the current shader invocation. This value will be in the range \(0, \text{max}(1, \text{physicalDeviceCount})\), where physicalDeviceCount is the physicalDeviceCount member of VkDeviceGroupDeviceCreateInfo.

Valid Usage

• VUID-DeviceIndex-DeviceIndex-04205
  The variable decorated with DeviceIndex **must** be declared using the Input Storage Class

• VUID-DeviceIndex-DeviceIndex-04206
  The variable decorated with DeviceIndex **must** be declared as a scalar 32-bit integer value

**DrawIndex**

Decorating a variable with the DrawIndex built-in will make that variable contain the integer value corresponding to the zero-based index of the draw that invoked the current task, mesh, or
vertex shader invocation. For *indirect drawing commands*, DrawIndex begins at zero and increments by one for each draw executed. The number of draws is given by the drawCount parameter. For *direct drawing commands*, if `vkCmdDrawMultiEXT` or `vkCmdDrawMultiIndexedEXT` is used, this variable contains the integer value corresponding to the zero-based index of the draw. Otherwise DrawIndex is always zero. DrawIndex is dynamically uniform.

When task or mesh shaders are used, only the first active stage will have proper access to the variable. The value read by other stages is undefined.

---

### Valid Usage

- **VUID-DrawIndex-DrawIndex-04207**
  The DrawIndex decoration must be used only within the Vertex, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model

- **VUID-DrawIndex-DrawIndex-04208**
  The variable decorated with DrawIndex must be declared using the Input Storage Class

- **VUID-DrawIndex-DrawIndex-04209**
  The variable decorated with DrawIndex must be declared as a scalar 32-bit integer value

---

### FirstIndexHUAWEI

The FirstIndexHUAWEI decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies the base index within the index buffer corresponding to a cluster.

---

### Valid Usage

- **VUID-FirstIndexHUAWEI-FirstIndexHUAWEI-07799**
  The FirstIndexHUAWEI decoration must be used only within the ClusterCullingHUAWEI Execution Model

- **VUID-FirstIndexHUAWEI-FirstIndexHUAWEI-07800**
  The variable decorated with FirstIndexHUAWEI must be declared as a scalar 32-bit integer value

---

### FragCoord

Decorating a variable with the FragCoord built-in decoration will make that variable contain the framebuffer coordinate \((x, y)\) of the fragment being processed. The \((0,0)\) coordinate is the upper left corner of the upper left pixel in the framebuffer.

When **Sample Shading** is enabled, the \(x\) and \(y\) components of FragCoord reflect the location of one of the samples corresponding to the shader invocation.

Otherwise, the \(x\) and \(y\) components of FragCoord reflect the location of the center of the fragment.
The z component of \texttt{FragCoord} is the interpolated depth value of the primitive.

The w component is the interpolated \( \frac{1}{w} \).

The \texttt{Centroid} interpolation decoration is ignored, but allowed, on \texttt{FragCoord}.

### Valid Usage

- **VUID-FragCoord-FragCoord-04210**
  - The \texttt{FragCoord} decoration \textbf{must} be used only within the \texttt{Fragment Execution Model}

- **VUID-FragCoord-FragCoord-04211**
  - The variable decorated with \texttt{FragCoord} \textbf{must} be declared using the \texttt{Input Storage Class}

- **VUID-FragCoord-FragCoord-04212**
  - The variable decorated with \texttt{FragCoord} \textbf{must} be declared as a four-component vector of 32-bit floating-point values

### \texttt{FragDepth}

To have a shader supply a fragment-depth value, the shader \textbf{must} declare the \texttt{DepthReplacing} execution mode. Such a shader's fragment-depth value will come from the variable decorated with the \texttt{FragDepth} built-in decoration.

This value will be used for any subsequent depth testing performed by the implementation or writes to the depth attachment. See \texttt{fragment shader depth replacement} for details.

### Valid Usage

- **VUID-FragDepth-FragDepth-04213**
  - The \texttt{FragDepth} decoration \textbf{must} be used only within the \texttt{Fragment Execution Model}

- **VUID-FragDepth-FragDepth-04214**
  - The variable decorated with \texttt{FragDepth} \textbf{must} be declared using the \texttt{Output Storage Class}

- **VUID-FragDepth-FragDepth-04215**
  - The variable decorated with \texttt{FragDepth} \textbf{must} be declared as a scalar 32-bit floating-point value

- **VUID-FragDepth-FragDepth-04216**
  - If the shader dynamically writes to the variable decorated with \texttt{FragDepth}, the \texttt{DepthReplacing Execution Mode} \textbf{must} be declared

### \texttt{FirstInstanceHUawei}

The \texttt{FirstInstanceHUawei} decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the instance ID of the first instance to draw.
Valid Usage

- VUID-FirstInstanceHUAWEI-FirstInstanceHUAWEI-07801
  The FirstInstanceHUAWEI decoration **must** be used only within the ClusterCullingHUAWEI Execution Model

- VUID-FirstInstanceHUAWEI-FirstInstanceHUAWEI-07802
  The variable decorated with FirstInstanceHUAWEI **must** be declared as a scalar 32-bit integer value

**FirstVertexHUAWEI**

The FirstVertexHUAWEI decoration can be used to decorate a cluster culling shader output variable, this non-indexed mode specific variable will contain an integer value that specifies the index of the first vertex in a cluster to draw.

Valid Usage

- VUID-FirstVertexHUAWEI-FirstVertexHUAWEI-07803
  The FirstVertexHUAWEI decoration **must** be used only within the FirstVertexHUAWEI Execution Model

- VUID-FirstVertexHUAWEI-FirstVertexHUAWEI-07804
  The variable decorated with FirstVertexHUAWEI **must** be declared as a scalar 32-bit integer value

**FragInvocationCountEXT**

Decorating a variable with the FragInvocationCountEXT built-in decoration will make that variable contain the maximum number of fragment shader invocations for the fragment, as determined by minSampleShading.

If Sample Shading is not enabled, FragInvocationCountEXT will be filled with a value of 1.

Valid Usage

- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04217
  The FragInvocationCountEXT decoration **must** be used only within the Fragment Execution Model

- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04218
  The variable decorated with FragInvocationCountEXT **must** be declared using the Input Storage Class

- VUID-FragInvocationCountEXT-FragInvocationCountEXT-04219
  The variable decorated with FragInvocationCountEXT **must** be declared as a scalar 32-bit integer value
FragSizeEXT

Decorating a variable with the FragSizeEXT built-in decoration will make that variable contain the dimensions in pixels of the area that the fragment covers for that invocation.

If fragment density map is not enabled, FragSizeEXT will be filled with a value of (1,1).

Valid Usage

• VUID-FragSizeEXT-FragSizeEXT-04220
  The FragSizeEXT decoration must be used only within the Fragment Execution Model

• VUID-FragSizeEXT-FragSizeEXT-04221
  The variable decorated with FragSizeEXT must be declared using the Input Storage Class

• VUID-FragSizeEXT-FragSizeEXT-04222
  The variable decorated with FragSizeEXT must be declared as a two-component vector of 32-bit integer values

FragStencilRefEXT

Decorating a variable with the FragStencilRefEXT built-in decoration will make that variable contain the new stencil reference value for all samples covered by the fragment. This value will be used as the stencil reference value used in stencil testing.

To write to FragStencilRefEXT, a shader must declare the StencilRefReplacingEXT execution mode. If a shader declares the StencilRefReplacingEXT execution mode and there is an execution path through the shader that does not set FragStencilRefEXT, then the fragment’s stencil reference value is undefined for executions of the shader that take that path.

Only the least significant s bits of the integer value of the variable decorated with FragStencilRefEXT are considered for stencil testing, where s is the number of bits in the stencil framebuffer attachment, and higher order bits are discarded.

See fragment shader stencil reference replacement for more details.

Valid Usage

• VUID-FragStencilRefEXT-FragStencilRefEXT-04223
  The FragStencilRefEXT decoration must be used only within the Fragment Execution Model

• VUID-FragStencilRefEXT-FragStencilRefEXT-04224
  The variable decorated with FragStencilRefEXT must be declared using the Output Storage Class

• VUID-FragStencilRefEXT-FragStencilRefEXT-04225
  The variable decorated with FragStencilRefEXT must be declared as a scalar integer value

FragmentSizeNV

Decorating a variable with the FragmentSizeNV built-in decoration will make that variable contain the width and height of the fragment.
Valid Usage

• VUID-FragmentSizeNV-FragmentSizeNV-04226
  The FragmentSizeNV decoration must be used only within the Fragment Execution Model

• VUID-FragmentSizeNV-FragmentSizeNV-04227
  The variable decorated with FragmentSizeNV must be declared using the Input Storage Class

• VUID-FragmentSizeNV-FragmentSizeNV-04228
  The variable decorated with FragmentSizeNV must be declared as a two-component vector of 32-bit integer values

FrontFacing

Decorating a variable with the FrontFacing built-in decoration will make that variable contain whether the fragment is front or back facing. This variable is non-zero if the current fragment is considered to be part of a front-facing polygon primitive or of a non-polygon primitive and is zero if the fragment is considered to be part of a back-facing polygon primitive.

Valid Usage

• VUID-FrontFacing-FrontFacing-04229
  The FrontFacing decoration must be used only within the Fragment Execution Model

• VUID-FrontFacing-FrontFacing-04230
  The variable decorated with FrontFacing must be declared using the Input Storage Class

• VUID-FrontFacing-FrontFacing-04231
  The variable decorated with FrontFacing must be declared as a boolean value

FullyCoveredEXT

Decorating a variable with the FullyCoveredEXT built-in decoration will make that variable indicate whether the fragment area is fully covered by the generating primitive. This variable is non-zero if conservative rasterization is enabled and the current fragment area is fully covered by the generating primitive, and is zero if the fragment is not covered or partially covered, or conservative rasterization is disabled.

Valid Usage

• VUID-FullyCoveredEXT-FullyCoveredEXT-04232
  The FullyCoveredEXT decoration must be used only within the Fragment Execution Model

• VUID-FullyCoveredEXT-FullyCoveredEXT-04233
  The variable decorated with FullyCoveredEXT must be declared using the Input Storage Class

• VUID-FullyCoveredEXT-FullyCoveredEXT-04234
  The variable decorated with FullyCoveredEXT must be declared as a boolean value
If `VkPhysicalDeviceConservativeRasterizationPropertiesEXT`::`conservativeRasterizationPostDepthCoverage` is not supported the PostDepthCoverage Execution Mode must not be declared, when a variable with the FullyCoveredEXT decoration is declared.

### GlobalInvocationId

Decorating a variable with the `GlobalInvocationId` built-in decoration will make that variable contain the location of the current invocation within the global workgroup. Each component is equal to the index of the local workgroup multiplied by the size of the local workgroup plus `LocalInvocationId`.

#### Valid Usage

- VUID-GlobalInvocationId-GlobalInvocationId-04236
  The `GlobalInvocationId` decoration must be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model
- VUID-GlobalInvocationId-GlobalInvocationId-04237
  The variable decorated with `GlobalInvocationId` must be declared using the Input Storage Class
- VUID-GlobalInvocationId-GlobalInvocationId-04238
  The variable decorated with `GlobalInvocationId` must be declared as a three-component vector of 32-bit integer values

### HelperInvocation

Decorating a variable with the `HelperInvocation` built-in decoration will make that variable contain whether the current invocation is a helper invocation. This variable is non-zero if the current fragment being shaded is a helper invocation and zero otherwise. A helper invocation is an invocation of the shader that is produced to satisfy internal requirements such as the generation of derivatives.

#### Note

It is very likely that a helper invocation will have a value of `SampleMask` fragment shader input value that is zero.

#### Valid Usage

- VUID-HelperInvocation-HelperInvocation-04239
  The `HelperInvocation` decoration must be used only within the Fragment Execution Model
- VUID-HelperInvocation-HelperInvocation-04240
  The variable decorated with `HelperInvocation` must be declared using the Input Storage Class
- VUID-HelperInvocation-HelperInvocation-04241
The variable decorated with **HelperInvocation** **must** be declared as a boolean value

**HitKindKHR**

A variable decorated with the **HitKindKHR** decoration will describe the intersection that triggered the execution of the current shader. The values are determined by the intersection shader. For user-defined intersection shaders this is the value that was passed to the “Hit Kind” operand of **OpReportIntersectionKHR**. For triangle intersection candidates, this will be one of **HitKindFrontFacingTriangleKHR** or **HitKindBackFacingTriangleKHR**.

**Valid Usage**

- VUID-HitKindKHR-HitKindKHR-04242
  The **HitKindKHR** decoration **must** be used only within the **AnyHitKHR** or **ClosestHitKHR** **Execution Model**
- VUID-HitKindKHR-HitKindKHR-04243
  The variable decorated with **HitKindKHR** **must** be declared using the **Input Storage Class**
- VUID-HitKindKHR-HitKindKHR-04244
  The variable decorated with **HitKindKHR** **must** be declared as a scalar 32-bit integer value

**HitTNV**

A variable decorated with the **HitTNV** decoration is equivalent to a variable decorated with the **RayTmaxKHR** decoration.

**Valid Usage**

- VUID-HitTNV-HitTNV-04245
  The **HitTNV** decoration **must** be used only within the **AnyHitNV** or **ClosestHitNV** **Execution Model**
- VUID-HitTNV-HitTNV-04246
  The variable decorated with **HitTNV** **must** be declared using the **Input Storage Class**
- VUID-HitTNV-HitTNV-04247
  The variable decorated with **HitTNV** **must** be declared as a scalar 32-bit floating-point value

**HitTriangleVertexPositionsKHR**

A variable decorated with the **HitTriangleVertexPositionsKHR** decoration will specify the object space vertices of the triangle at the current intersection in application-provided order. The positions returned are transformed by the geometry transform, which is performed at standard floating point precision, but without a specifically defined order of floating point operations to perform the matrix multiplication.
Valid Usage

- **VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08747**
  The `HitTriangleVertexPositionsKHR` decoration **must** be used only within the `AnyHitKHR` or `ClosestHitKHR` Execution Model.

- **VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08748**
  The variable decorated with `HitTriangleVertexPositionsKHR` **must** be declared using the `Input Storage Class`.

- **VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08749**
  The variable decorated with `HitTriangleVertexPositionsKHR` **must** be declared as an array of three vectors of three 32-bit float values.

- **VUID-HitTriangleVertexPositionsKHR-HitTriangleVertexPositionsKHR-08750**
  The variable decorated with `HitTriangleVertexPositionsKHR` **must** be used only if the value of `HitKindKHR` is `HitKindFrontFacingTriangleKHR` or `HitKindBackFacingTriangleKHR`.

- **VUID-HitTriangleVertexPositionsKHR-None-08751**
  The acceleration structure corresponding to the current intersection **must** have been built with `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR`.

### IncomingRayFlagsKHR

A variable with the `IncomingRayFlagsKHR` decoration will contain the ray flags passed in to the trace call that invoked this particular shader. Setting pipeline flags on the raytracing pipeline **must** not cause any corresponding flags to be set in variables with this decoration.

Valid Usage

- **VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04248**
  The `IncomingRayFlagsKHR` decoration **must** be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR` Execution Model.

- **VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04249**
  The variable decorated with `IncomingRayFlagsKHR` **must** be declared using the `Input Storage Class`.

- **VUID-IncomingRayFlagsKHR-IncomingRayFlagsKHR-04250**
  The variable decorated with `IncomingRayFlagsKHR` **must** be declared as a scalar 32-bit integer value.

### IndexCountHUAWEI

The `IndexCountHUAWEI` decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies the number of indexed vertices in a cluster to draw.

Valid Usage

- **VUID-IndexCountHUAWEI-IndexCountHUAWEI-07805**
The **IndexCountHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**

- VUID-IndexCountHUAWEI-IndexCountHUAWEI-07806
  The variable decorated with **IndexCountHUAWEI** **must** be declared as a scalar 32-bit integer value

**InstanceCountHUAWEI**

The **InstanceCountHUAWEI** decoration can be used to decorate a cluster culling shader output variable, this variable will contain an integer value that specifies the number of instance to draw in a cluster.

**Valid Usage**

- VUID-InstanceCountHUAWEI-InstanceCountHUAWEI-07807
  The **InstanceCountHUAWEI** decoration **must** be used only within the **ClusterCullingHUAWEI Execution Model**

- VUID-InstanceCountHUAWEI-InstanceCountHUAWEI-07808
  The variable decorated with **InstanceCountHUAWEI** **must** be declared as a scalar 32-bit integer value

**InstanceCustomIndexKHR**

A variable decorated with the **InstanceCustomIndexKHR** decoration will contain the application-defined value of the instance that intersects the current ray. This variable contains the value that was specified in `VkAccelerationStructureInstanceKHR::instanceCustomIndex` for the current acceleration structure instance in the lower 24 bits and the upper 8 bits will be zero.

**Valid Usage**

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04251
  The **InstanceCustomIndexKHR** decoration **must** be used only within the **IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model**

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04252
  The variable decorated with **InstanceCustomIndexKHR** **must** be declared using the **Input Storage Class**

- VUID-InstanceCustomIndexKHR-InstanceCustomIndexKHR-04253
  The variable decorated with **InstanceCustomIndexKHR** **must** be declared as a scalar 32-bit integer value

**InstanceId**

Decorating a variable in an intersection, any-hit, or closest hit shader with the **InstanceId** decoration will make that variable contain the index of the instance that intersects the current ray.
Valid Usage

- VUID-InstanceId-InstanceId-04254
  The *InstanceId* decoration **must** be used only within the *IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model*

- VUID-InstanceId-InstanceId-04255
  The variable decorated with *InstanceId* **must** be declared using the *Input Storage Class*

- VUID-InstanceId-InstanceId-04256
  The variable decorated with *InstanceId* **must** be declared as a scalar 32-bit integer value

**InstanceId**

Decorating a variable with the *InstanceId* built-in decoration will make that variable contain the index of the current shader invocation in a geometry shader, or the index of the output patch vertex in a tessellation control shader.

In a geometry shader, the index of the current shader invocation ranges from zero to the number of *instances* declared in the shader minus one. If the instance count of the geometry shader is one or is not specified, then *InstanceId* will be zero.

Valid Usage

- VUID-InvocationId-InvocationId-04257
  The *InvocationId* decoration **must** be used only within the *TessellationControl or Geometry Execution Model*

- VUID-InvocationId-InvocationId-04258
  The variable decorated with *InvocationId* **must** be declared using the *Input Storage Class*

- VUID-InvocationId-InvocationId-04259
  The variable decorated with *InvocationId* **must** be declared as a scalar 32-bit integer value

**InvocationsPerPixelNV**

Decorating a variable with the *InvocationsPerPixelNV* built-in decoration will make that variable contain the maximum number of fragment shader invocations per pixel, as derived from the effective shading rate for the fragment. If a primitive does not fully cover a pixel, the number of fragment shader invocations for that pixel **may** be less than the value of *InvocationsPerPixelNV*. If the shading rate indicates a fragment covering multiple pixels, then *InvocationsPerPixelNV* will be one.

Valid Usage

- VUID-InvocationsPerPixelNV-InvocationsPerPixelNV-04260
  The *InvocationsPerPixelNV* decoration **must** be used only within the *Fragment Execution Model*
• VUID-InvocationsPerPixelNV-04261
  The variable decorated with InvocationsPerPixelNV must be declared using the Input Storage Class

• VUID-InvocationsPerPixelNV-04262
  The variable decorated with InvocationsPerPixelNV must be declared as a scalar 32-bit integer value

**InstanceIndex**

Decorating a variable in a vertex shader with the InstanceIndex built-in decoration will make that variable contain the index of the instance that is being processed by the current vertex shader invocation. InstanceIndex begins at the firstInstance parameter to vkCmdDraw or vkCmdDrawIndexed or at the firstInstance member of a structure consumed by vkCmdDrawIndirect or vkCmdDrawIndexedIndirect.

**Valid Usage**

• VUID-InstanceIndex-04263
  The InstanceIndex decoration must be used only within the Vertex Execution Model

• VUID-InstanceIndex-04264
  The variable decorated with InstanceIndex must be declared using the Input Storage Class

• VUID-InstanceIndex-04265
  The variable decorated with InstanceIndex must be declared as a scalar 32-bit integer value

**LaunchIdKHR**

A variable decorated with the LaunchIdKHR decoration will specify the index of the work item being processed. One work item is generated for each of the width × height × depth items dispatched by a vkCmdTraceRaysKHR command. All shader invocations inherit the same value for variables decorated with LaunchIdKHR.

**Valid Usage**

• VUID-LaunchIdKHR-04266
  The LaunchIdKHR decoration must be used only within the RayGenerationKHR, IntersectionKHR, AnyHitKHR, ClosestHitKHR, MissKHR, or CallableKHR Execution Model

• VUID-LaunchIdKHR-04267
  The variable decorated with LaunchIdKHR must be declared using the Input Storage Class

• VUID-LaunchIdKHR-04268
  The variable decorated with LaunchIdKHR must be declared as a three-component vector of 32-bit integer values

**LaunchSizeKHR**

A variable decorated with the LaunchSizeKHR decoration will contain the width, height, and depth
dimensions passed to the `vkCmdTraceRaysKHR` command that initiated this shader execution. The **width** is in the first component, the **height** is in the second component, and the **depth** is in the third component.

### Valid Usage

- **VUID-LaunchSizeKHR-LaunchSizeKHR-04269**
  
  The `LaunchSizeKHR` decoration **must** be used only within the `RayGenerationKHR`, `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, `MissKHR`, or `CallableKHR` Execution Model

- **VUID-LaunchSizeKHR-LaunchSizeKHR-04270**
  
  The variable decorated with `LaunchSizeKHR` **must** be declared using the `Input Storage Class`

- **VUID-LaunchSizeKHR-LaunchSizeKHR-04271**
  
  The variable decorated with `LaunchSizeKHR` **must** be declared as a three-component vector of 32-bit integer values

### Layer

Decorating a variable with the **Layer** built-in decoration will make that variable contain the select layer of a multi-layer framebuffer attachment.

In a mesh, vertex, tessellation evaluation, or geometry shader, any variable decorated with **Layer** can be written with the framebuffer layer index to which the primitive produced by that shader will be directed.

The last active **pre-rasterization shader stage** (in pipeline order) controls the **Layer** that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the **Layer**.

If the last active **pre-rasterization shader stage** shader entry point’s interface does not include a variable decorated with **Layer**, then the first layer is used. If a **pre-rasterization shader stage** shader entry point’s interface includes a variable decorated with **Layer**, it **must** write the same value to **Layer** for all output vertices of a given primitive. If the **Layer** value is less than 0 or greater than or equal to the number of layers in the framebuffer, then primitives **may** still be rasterized, fragment shaders **may** be executed, and the framebuffer values for all layers are undefined. In a mesh shader this also applies when the **Layer** value is greater than or equal to the `maxMeshOutputLayers` limit.

If a variable with the **Layer** decoration is also decorated with `ViewportRelativeNV`, then the **ViewportIndex** is added to the layer that is used for rendering and that is made available in the fragment shader.

If the shader writes to a variable decorated `ViewportMaskNV`, then the layer selected has a different value for each viewport a primitive is rendered to.

In a fragment shader, a variable decorated with **Layer** contains the layer index of the primitive that the fragment invocation belongs to.
**Valid Usage**

- **VUID-Layer-Layer-04272**  
  The Layer decoration must be used only within the MeshEXT, MeshNV, Vertex, TessellationEvaluation, Geometry, or Fragment Execution Model.

- **VUID-Layer-Layer-04273**  
  If the shaderOutputLayer feature is not enabled then the Layer decoration must be used only within the Geometry or Fragment Execution Model.

- **VUID-Layer-Layer-04274**  
  The variable decorated with Layer within the MeshEXT, MeshNV, Vertex, TessellationEvaluation, or Geometry Execution Model must be declared using the Output Storage Class.

- **VUID-Layer-Layer-04275**  
  The variable decorated with Layer within the Fragment Execution Model must be declared using the Input Storage Class.

- **VUID-Layer-Layer-04276**  
  The variable decorated with Layer must be declared as a scalar 32-bit integer value.

- **VUID-Layer-Layer-07039**  
  The variable decorated with Layer within the MeshEXT Execution Model must also be decorated with the PerPrimitiveEXT decoration.

**LayerPerViewNV**

Decorating a variable with the LayerPerViewNV built-in decoration will make that variable contain the per-view layer information. The per-view layer has the same semantics as Layer, for each view.

**Valid Usage**

- **VUID-LayerPerViewNV-LayerPerViewNV-04277**  
  The LayerPerViewNV decoration must be used only within the MeshNV Execution Model.

- **VUID-LayerPerViewNV-LayerPerViewNV-04278**  
  The variable decorated with LayerPerViewNV must be declared using the Output Storage Class.

- **VUID-LayerPerViewNV-LayerPerViewNV-04279**  
  The variable decorated with LayerPerViewNV must also be decorated with the PerViewNV decoration.

- **VUID-LayerPerViewNV-LayerPerViewNV-04280**  
  The variable decorated with LayerPerViewNV must be declared as an array of scalar 32-bit integer values.

**LocalInvocationId**

Decorating a variable with the LocalInvocationId built-in decoration will make that variable...
contain the location of the current cluster cullling, task, mesh, or compute shader invocation within the local workgroup. Each component ranges from zero through to the size of the workgroup in that dimension minus one.

**Note**

If the size of the workgroup in a particular dimension is one, then the `LocalInvocationId` in that dimension will be zero. If the workgroup is effectively two-dimensional, then `LocalInvocationId.z` will be zero. If the workgroup is effectively one-dimensional, then both `LocalInvocationId.y` and `LocalInvocationId.z` will be zero.

### Valid Usage

- **VUID-LocalInvocationId-LocalInvocationId-04281**
  The `LocalInvocationId` decoration **must** be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model.

- **VUID-LocalInvocationId-LocalInvocationId-04282**
  The variable decorated with `LocalInvocationId` **must** be declared using the Input Storage Class.

- **VUID-LocalInvocationId-LocalInvocationId-04283**
  The variable decorated with `LocalInvocationId` **must** be declared as a three-component vector of 32-bit integer values.

---

**LocalInvocationIndex**

Decorating a variable with the `LocalInvocationIndex` built-in decoration will make that variable contain a one-dimensional representation of `LocalInvocationId`. This is computed as:

\[
\text{LocalInvocationIndex} = \text{LocalInvocationId.z} \times \text{WorkgroupSize.x} \times \text{WorkgroupSize.y} + \\
\text{LocalInvocationId.y} \times \text{WorkgroupSize.x} + \\
\text{LocalInvocationId.x};
\]

### Valid Usage

- **VUID-LocalInvocationIndex-LocalInvocationIndex-04284**
  The `LocalInvocationIndex` decoration **must** be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model.

- **VUID-LocalInvocationIndex-LocalInvocationIndex-04285**
  The variable decorated with `LocalInvocationIndex` **must** be declared using the Input Storage Class.

- **VUID-LocalInvocationIndex-LocalInvocationIndex-04286**
  The variable decorated with `LocalInvocationIndex` **must** be declared as a scalar 32-bit integer value.
MeshViewCountNV

Decorating a variable with the MeshViewCountNV built-in decoration will make that variable contain the number of views processed by the current mesh or task shader invocations.

**Valid Usage**

- VUID-MeshViewCountNV-MeshViewCountNV-04287
  The MeshViewCountNV decoration **must** be used only within the MeshNV or TaskNV Execution Model
- VUID-MeshViewCountNV-MeshViewCountNV-04288
  The variable decorated with MeshViewCountNV **must** be declared using the Input Storage Class
- VUID-MeshViewCountNV-MeshViewCountNV-04289
  The variable decorated with MeshViewCountNV **must** be declared as a scalar 32-bit integer value

MeshViewIndicesNV

Decorating a variable with the MeshViewIndicesNV built-in decoration will make that variable contain the mesh view indices. The mesh view indices is an array of values where each element holds the view number of one of the views being processed by the current mesh or task shader invocations. The values of array elements with indices greater than or equal to MeshViewCountNV are undefined. If the value of MeshViewIndicesNV[i] is j, then any outputs decorated with PerViewNV will take on the value of array element i when processing primitives for view index j.

**Valid Usage**

- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04290
  The MeshViewIndicesNV decoration **must** be used only within the MeshNV or TaskNV Execution Model
- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04291
  The variable decorated with MeshViewIndicesNV **must** be declared using the Input Storage Class
- VUID-MeshViewIndicesNV-MeshViewIndicesNV-04292
  The variable decorated with MeshViewIndicesNV **must** be declared as an array of scalar 32-bit integer values

NumSubgroups

Decorating a variable with the NumSubgroups built-in decoration will make that variable contain the number of subgroups in the local workgroup.

**Valid Usage**

- VUID-NumSubgroups-NumSubgroups-04293
The NumSubgroups decoration must be used only within the GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model.

- VUID-NumSubgroups-NumSubgroups-04294
  The variable decorated with NumSubgroups must be declared using the Input Storage Class.

- VUID-NumSubgroups-NumSubgroups-04295
  The variable decorated with NumSubgroups must be declared as a scalar 32-bit integer value.

**NumWorkgroups**

Decorating a variable with the NumWorkgroups built-in decoration will make that variable contain the number of local workgroups that are part of the dispatch that the invocation belongs to. Each component is equal to the values of the workgroup count parameters passed into the dispatching commands.

### Valid Usage

- VUID-NumWorkgroups-NumWorkgroups-04296
  The NumWorkgroups decoration must be used only within the GLCompute, MeshEXT, or TaskEXT Execution Model.

- VUID-NumWorkgroups-NumWorkgroups-04297
  The variable decorated with NumWorkgroups must be declared using the Input Storage Class.

- VUID-NumWorkgroups-NumWorkgroups-04298
  The variable decorated with NumWorkgroups must be declared as a three-component vector of 32-bit integer values.

**ObjectRayDirectionKHR**

A variable decorated with the ObjectRayDirectionKHR decoration will specify the direction of the ray being processed, in object space.

### Valid Usage

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04299
  The ObjectRayDirectionKHR decoration must be used only within the IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model.

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04300
  The variable decorated with ObjectRayDirectionKHR must be declared using the Input Storage Class.

- VUID-ObjectRayDirectionKHR-ObjectRayDirectionKHR-04301
  The variable decorated with ObjectRayDirectionKHR must be declared as a three-component vector of 32-bit floating-point values.
ObjectRayOriginKHR

A variable decorated with the `ObjectRayOriginKHR` decoration will specify the origin of the ray being processed, in object space.

**Valid Usage**

- **VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04302**
  The `ObjectRayOriginKHR` decoration must be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` Execution Model

- **VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04303**
  The variable decorated with `ObjectRayOriginKHR` must be declared using the `Input Storage Class`

- **VUID-ObjectRayOriginKHR-ObjectRayOriginKHR-04304**
  The variable decorated with `ObjectRayOriginKHR` must be declared as a three-component vector of 32-bit floating-point values

ObjectToWorldKHR

A variable decorated with the `ObjectToWorldKHR` decoration will contain the current object-to-world transformation matrix, which is determined by the instance of the current intersection.

**Valid Usage**

- **VUID-ObjectToWorldKHR-ObjectToWorldKHR-04305**
  The `ObjectToWorldKHR` decoration must be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` Execution Model

- **VUID-ObjectToWorldKHR-ObjectToWorldKHR-04306**
  The variable decorated with `ObjectToWorldKHR` must be declared using the `Input Storage Class`

- **VUID-ObjectToWorldKHR-ObjectToWorldKHR-04307**
  The variable decorated with `ObjectToWorldKHR` must be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values

PatchVertices

Decorating a variable with the `PatchVertices` built-in decoration will make that variable contain the number of vertices in the input patch being processed by the shader. In a Tessellation Control Shader, this is the same as the name:`patchControlPoints` member of `VkPipelineTessellationStateCreateInfo`. In a Tessellation Evaluation Shader, `PatchVertices` is equal to the tessellation control output patch size. When the same shader is used in different pipelines where the patch sizes are configured differently, the value of the `PatchVertices` variable will also differ.

**Valid Usage**
The \texttt{PatchVertices} decoration \textbf{must} be used only within the \texttt{TessellationControl} or \texttt{TessellationEvaluation Execution Model}.

The variable decorated with \texttt{PatchVertices} \textbf{must} be declared using the \texttt{Input Storage Class}.

The variable decorated with \texttt{PatchVertices} \textbf{must} be declared as a scalar 32-bit integer value.

\textit{PointCoord}

Decorating a variable with the \texttt{PointCoord} built-in decoration will make that variable contain the coordinate of the current fragment within the point being rasterized, normalized to the size of the point with origin in the upper left corner of the point, as described in \textit{Basic Point Rasterization}. If the primitive the fragment shader invocation belongs to is not a point, then the variable decorated with \texttt{PointCoord} contains an undefined value.

\begin{itemize}
  \item \texttt{PointCoord} may never reach (0,0) or (1,1).
\end{itemize}

\textit{Valid Usage}

The \texttt{PointCoord} decoration \textbf{must} be used only within the \texttt{Fragment Execution Model}.

The variable decorated with \texttt{PointCoord} \textbf{must} be declared using the \texttt{Input Storage Class}.

The variable decorated with \texttt{PointCoord} \textbf{must} be declared as a two-component vector of 32-bit floating-point values.

\textit{PointSize}

Decorating a variable with the \texttt{PointSize} built-in decoration will make that variable contain the size of point primitives or the final rasterization of polygons if \texttt{polygon mode} is \texttt{VK_POLYGON_MODE_POINT} when \texttt{VkPhysicalDeviceMaintenance5PropertiesKHR::polygonModePointSize} is set to \texttt{VK_TRUE}. The value written to the variable decorated with \texttt{PointSize} by the last \texttt{pre-rasterization shader stage} in the pipeline is used as the framebuffer-space size of points produced by rasterization. If \texttt{maintenance5} is enabled and a value is not written to a variable decorated with \texttt{PointSize}, a value of 1.0 is used as the size of points.

\begin{itemize}
  \item When \texttt{PointSize} decorates a variable in the \texttt{Input Storage Class}, it contains the data written to the output variable decorated with \texttt{PointSize} from the previous shader stage.
\end{itemize}
Valid Usage

- VUID-PointSize-PointSize-04314
  The PointSize decoration must be used only within the MeshEXT, MeshNV, Vertex, TessellationControl, TessellationEvaluation, or Geometry Execution Model

- VUID-PointSize-PointSize-04315
  The variable decorated with PointSize within the MeshEXT, MeshNV, or Vertex Execution Model must be declared using the Output Storage Class

- VUID-PointSize-PointSize-04316
  The variable decorated with PointSize within the TessellationControl, TessellationEvaluation, or Geometry Execution Model must not be declared using a Storage Class other than Input or Output

- VUID-PointSize-PointSize-04317
  The variable decorated with PointSize must be declared as a scalar 32-bit floating-point value

Position

Decorating a variable with the Position built-in decoration will make that variable contain the position of the current vertex. In the last pre-rasterization shader stage, the value of the variable decorated with Position is used in subsequent primitive assembly, clipping, and rasterization operations.

Note

When Position decorates a variable in the Input Storage Class, it contains the data written to the output variable decorated with Position from the previous shader stage.

Valid Usage

- VUID-Position-Position-04318
  The Position decoration must be used only within the MeshEXT, MeshNV, Vertex, TessellationControl, TessellationEvaluation, or Geometry Execution Model

- VUID-Position-Position-04319
  The variable decorated with Position within the MeshEXT, MeshNV, or Vertex Execution Model must be declared using the Output Storage Class

- VUID-Position-Position-04320
  The variable decorated with Position within the TessellationControl, TessellationEvaluation, or Geometry Execution Model must not be declared using a Storage Class other than Input or Output

- VUID-Position-Position-04321
  The variable decorated with Position must be declared as a four-component vector of 32-bit floating-point values
Decorating a variable with the `PositionPerViewNV` built-in decoration will make that variable contain the position of the current vertex, for each view.

Elements of the array correspond to views in a multiview subpass, and those elements corresponding to views in the view mask of the subpass the shader is compiled against will be used as the position value for those views. For the final pre-rasterization shader stage in the pipeline, values written to an output variable decorated with `PositionPerViewNV` are used in subsequent primitive assembly, clipping, and rasterization operations, as with `Position`. `PositionPerViewNV` output in an earlier pre-rasterization shader stage is available as an input in the subsequent pre-rasterization shader stage.

If a shader is compiled against a subpass that has the `VK_SUBPASS_DESCRIPTION_PER_VIEW_POSITION_X_ONLY_BIT_NVX` bit set, then the position values for each view must not differ in any component other than the X component. If the values do differ, one will be chosen in an implementation-dependent manner.

### Valid Usage

- **VUID-PositionPerViewNV-PositionPerViewNV-04322**
  The `PositionPerViewNV` decoration must be used only within the MeshNV, Vertex, TessellationControl, TessellationEvaluation, or Geometry Execution Model.

- **VUID-PositionPerViewNV-PositionPerViewNV-04323**
  The variable decorated with `PositionPerViewNV` within the Vertex, or MeshNV Execution Model must be declared using the Output Storage Class.

- **VUID-PositionPerViewNV-PositionPerViewNV-04324**
  The variable decorated with `PositionPerViewNV` within the TessellationControl, TessellationEvaluation, or Geometry Execution Model must not be declared using a Storage Class other than Input or Output.

- **VUID-PositionPerViewNV-PositionPerViewNV-04325**
  The variable decorated with `PositionPerViewNV` must be declared as an array of four-component vector of 32-bit floating-point values with at least as many elements as the maximum view in the subpass's view mask plus one.

- **VUID-PositionPerViewNV-PositionPerViewNV-04326**
  The array variable decorated with `PositionPerViewNV` must only be indexed by a constant or specialization constant.

### PrimitiveCountNV

Decorating a variable with the `PrimitiveCountNV` decoration will make that variable contain the primitive count. The primitive count specifies the number of primitives in the output mesh produced by the mesh shader that will be processed by subsequent pipeline stages.

### Valid Usage

- **VUID-PrimitiveCountNV-PrimitiveCountNV-04327**
The `PrimitiveCountNV` decoration must be used only within the MeshNV Execution Model.

- **VUID-PrimitiveCountNV-PrimitiveCountNV-04328**
  - The variable decorated with `PrimitiveCountNV` must be declared using the Output Storage Class.

- **VUID-PrimitiveCountNV-PrimitiveCountNV-04329**
  - The variable decorated with `PrimitiveCountNV` must be declared as a scalar 32-bit integer value.

---

**PrimitiveId**

Decorating a variable with the `PrimitiveId` built-in decoration will make that variable contain the index of the current primitive.

The index of the first primitive generated by a drawing command is zero, and the index is incremented after every individual point, line, or triangle primitive is processed.

For triangles drawn as points or line segments (see Polygon Mode), the primitive index is incremented only once, even if multiple points or lines are eventually drawn.

Variables decorated with `PrimitiveId` are reset to zero between each instance drawn.

Restarting a primitive topology using primitive restart has no effect on the value of variables decorated with `PrimitiveId`.

In tessellation control and tessellation evaluation shaders, it will contain the index of the patch within the current set of rendering primitives that corresponds to the shader invocation.

In a geometry shader, it will contain the number of primitives presented as input to the shader since the current set of rendering primitives was started.

In a fragment shader, it will contain the primitive index written by the mesh shader if a mesh shader is present, or the primitive index written by the geometry shader if a geometry shader is present, or with the value that would have been presented as input to the geometry shader had it been present.

In an intersection, any-hit, or closest hit shader, it will contain the index within the geometry of the triangle or bounding box being processed.

---

**Note**

When the `PrimitiveId` decoration is applied to an output variable in the mesh shader or geometry shader, the resulting value is seen through the `PrimitiveId` decorated input variable in the fragment shader.

The fragment shader using `PrimitiveId` will need to declare either the `MeshShadingNV`, `MeshShadingEXT`, `Geometry` or `Tessellation` capability to satisfy the requirement SPIR-V has to use `PrimitiveId`.
Valid Usage

• VUID-PrimitiveId-PrimitiveId-04330
  The PrimitiveId decoration must be used only within the MeshEXT, MeshNV, IntersectionKHR, AnyHitKHR, ClosestHitKHR, TessellationControl, TessellationEvaluation, Geometry, or Fragment Execution Model

• VUID-PrimitiveId-Fragment-04331
  If pipeline contains both the Fragment and Geometry Execution Model and a variable decorated with PrimitiveId is read from Fragment shader, then the Geometry shader must write to the output variables decorated with PrimitiveId in all execution paths

• VUID-PrimitiveId-Fragment-04332
  If pipeline contains both the Fragment and MeshEXT or MeshNV Execution Model and a variable decorated with PrimitiveId is read from Fragment shader, then the MeshEXT or MeshNV shader must write to the output variables decorated with PrimitiveId in all execution paths

• VUID-PrimitiveId-Fragment-04333
  If Fragment Execution Model contains a variable decorated with PrimitiveId, then either the MeshShadingEXT, MeshShadingNV, Geometry or Tessellation capability must also be declared

• VUID-PrimitiveId-PrimitiveId-04334
  The variable decorated with PrimitiveId within the TessellationControl, TessellationEvaluation, Fragment, IntersectionKHR, AnyHitKHR, or ClosestHitKHR Execution Model must be declared using the Input Storage Class

• VUID-PrimitiveId-PrimitiveId-04335
  The variable decorated with PrimitiveId within the Geometry Execution Model must be declared using the Input or Output Storage Class

• VUID-PrimitiveId-PrimitiveId-04336
  The variable decorated with PrimitiveId within the MeshEXT or MeshNV Execution Model must be declared using the Output Storage Class

• VUID-PrimitiveId-PrimitiveId-04337
  The variable decorated with PrimitiveId must be declared as a scalar 32-bit integer value

• VUID-PrimitiveId-PrimitiveId-07040
  The variable decorated with PrimitiveId within the MeshEXT Execution Model must also be decorated with the PerPrimitiveEXT decoration

PrimitiveIndicesNV

Decorating a variable with the PrimitiveIndicesNV decoration will make that variable contain the output array of vertex index values. Depending on the output primitive type declared using the execution mode, the indices are split into groups of one (OutputPoints), two (OutputLinesNV), or three (OutputTrianglesNV) indices and each group generates a primitive.

Valid Usage

• VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04338
The **PrimitiveIndicesNV** decoration **must** be used only within the **MeshNV Execution Model**

- **VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04339**
  The variable decorated with **PrimitiveIndicesNV** **must** be declared using the **Output Storage Class**

- **VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04340**
  The variable decorated with **PrimitiveIndicesNV** **must** be declared as an array of scalar 32-bit integer values

- **VUID-PrimitiveIndicesNV-PrimitiveIndicesNV-04341**
  All index values of the array decorated with **PrimitiveIndicesNV** **must** be in the range [0, N-1], where N is the value specified by the **OutputVertices Execution Mode**

- **VUID-PrimitiveIndicesNV-OutputPoints-04342**
  If the **Execution Mode** is **OutputPoints**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of the value specified by **OutputPrimitivesNV**

- **VUID-PrimitiveIndicesNV-OutputLinesNV-04343**
  If the **Execution Mode** is **OutputLinesNV**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of two times the value specified by **OutputPrimitivesNV**

- **VUID-PrimitiveIndicesNV-OutputTrianglesNV-04344**
  If the **Execution Mode** is **OutputTrianglesNV**, then the array decorated with **PrimitiveIndicesNV** **must** be the size of three times the value specified by **OutputPrimitivesNV**

---

**PrimitivePointIndicesEXT**

Decorating a variable with the **PrimitivePointIndicesEXT** decoration will make that variable contain the output array of vertex index values for point primitives.

---

**Valid Usage**

- **VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07041**
  The **PrimitivePointIndicesEXT** decoration **must** be used only within the **MeshEXT Execution Model**

- **VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07042**
  The **PrimitivePointIndicesEXT** decoration **must** be used with the **OutputPoints Execution Mode**

- **VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07043**
  The variable decorated with **PrimitivePointIndicesEXT** **must** be declared using the **Output Storage Class**

- **VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07044**
  The variable decorated with **PrimitivePointIndicesEXT** **must** be declared as an array of scalar 32-bit integer values

- **VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07045**
  All index values of the array decorated with **PrimitivePointIndicesEXT** **must** be in the range [0, N-1], where N is the value specified by the **OutputVertices Execution Mode**
**PrimitivePointIndicesEXT**

Decorating a variable with the *PrimitivePointIndicesEXT* decoration will make that variable contain the output array of vertex index values for line primitives.

**Valid Usage**

- VUID-PrimitivePointIndicesEXT-PrimitivePointIndicesEXT-07046
  The size of the array decorated with *PrimitivePointIndicesEXT* must match the value specified by *OutputPrimitivesEXT*

**PrimitiveLineIndicesEXT**

Decorating a variable with the *PrimitiveLineIndicesEXT* decoration will make that variable contain the output array of vertex index values for line primitives.

**Valid Usage**

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07047
  The *PrimitiveLineIndicesEXT* decoration must be used only within the *MeshEXT Execution Model*

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07048
  The *PrimitiveLineIndicesEXT* decoration must be used with the *OutputLinesEXT Execution Mode*

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07049
  The variable decorated with *PrimitiveLineIndicesEXT* must be declared using the *Output Storage Class*

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07050
  The variable decorated with *PrimitiveLineIndicesEXT* must be declared as an array of two component vector 32-bit integer values

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07051
  All index values of the array decorated with *PrimitiveLineIndicesEXT* must be in the range [0, N-1], where N is the value specified by the *OutputVertices Execution Mode*

- VUID-PrimitiveLineIndicesEXT-PrimitiveLineIndicesEXT-07052
  The size of the array decorated with *PrimitiveLineIndicesEXT* must match the value specified by *OutputPrimitivesEXT*

**PrimitiveTriangleIndicesEXT**

Decorating a variable with the *PrimitiveTriangleIndicesEXT* decoration will make that variable contain the output array of vertex index values for triangle primitives.

**Valid Usage**

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07053
  The *PrimitiveTriangleIndicesEXT* decoration must be used only within the *MeshEXT Execution Model*

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07054
  The *PrimitiveTriangleIndicesEXT* decoration must be used with the *OutputTrianglesEXT Execution Mode*

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07055
  The variable decorated with *PrimitiveTriangleIndicesEXT* must be declared using the
Output Storage Class

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07056
  The variable decorated with `PrimitiveTriangleIndicesEXT` must be declared as an array of three component vector 32-bit integer values.

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07057
  All index values of the array decorated with `PrimitiveTriangleIndicesEXT` must be in the range [0, N-1], where N is the value specified by the `OutputVertices Execution Mode`.

- VUID-PrimitiveTriangleIndicesEXT-PrimitiveTriangleIndicesEXT-07058
  The size of the array decorated with `PrimitiveTriangleIndicesEXT` must match the value specified by `OutputPrimitivesEXT`.

**PrimitiveShadingRateKHR**

Decorating a variable with the `PrimitiveShadingRateKHR` built-in decoration will make that variable contain the primitive fragment shading rate.

The value written to the variable decorated with `PrimitiveShadingRateKHR` by the last pre-rasterization shader stage in the pipeline is used as the primitive fragment shading rate. Outputs in previous shader stages are ignored.

If the last active pre-rasterization shader stage shader entry point's interface does not include a variable decorated with `PrimitiveShadingRateKHR`, then it is as if the shader specified a fragment shading rate value of 0, indicating a horizontal and vertical rate of 1 pixel.

If a shader has `PrimitiveShadingRateKHR` in the output interface and there is an execution path through the shader that does not write to it, its value is undefined for executions of the shader that take that path.

Valid Usage

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04484
  The `PrimitiveShadingRateKHR` decoration must be used only within the `MeshEXT`, `MeshNV`, `Vertex`, or `Geometry Execution Model`.

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04485
  The variable decorated with `PrimitiveShadingRateKHR` must be declared using the `Output Storage Class`.

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04486
  The variable decorated with `PrimitiveShadingRateKHR` must be declared as a scalar 32-bit integer value.

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04487
  The value written to `PrimitiveShadingRateKHR` must include no more than one of `Vertical2Pixels` and `Vertical4Pixels`.

- VUID-PrimitiveShadingRateKHR-PrimitiveShadingRateKHR-04488
  The value written to `PrimitiveShadingRateKHR` must include no more than one of `Horizontal2Pixels` and `Horizontal4Pixels`.
The value written to `PrimitiveShadingRateKHR` must not have any bits set other than those defined by **Fragment Shading Rate Flags** enumerants in the SPIR-V specification.

The variable decorated with `PrimitiveShadingRateKHR` within the **MeshEXT Execution Model** must also be decorated with the `PerPrimitiveEXT` decoration.

**RayGeometryIndexKHR**

A variable decorated with the `RayGeometryIndexKHR` decoration will contain the geometry index for the acceleration structure geometry currently being shaded.

**Valid Usage**

- **VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04345**
  The `RayGeometryIndexKHR` decoration must be used only within the **IntersectionKHR**, **AnyHitKHR**, or **ClosestHitKHR** Execution Model.

- **VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04346**
  The variable decorated with `RayGeometryIndexKHR` must be declared using the **Input Storage Class**.

- **VUID-RayGeometryIndexKHR-RayGeometryIndexKHR-04347**
  The variable decorated with `RayGeometryIndexKHR` must be declared as a scalar 32-bit integer value.

**RayTmaxKHR**

A variable decorated with the `RayTmaxKHR` decoration will contain the parametric \( t_{\text{max}} \) value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is initialized to the parameter passed into the **pipeline trace ray** instruction.

The \( t_{\text{max}} \) value changes throughout the lifetime of the ray that produced the intersection. In the closest hit shader, the value reflects the closest distance to the intersected primitive. In the any-hit shader, it reflects the distance to the primitive currently being intersected. In the intersection shader, it reflects the distance to the closest primitive intersected so far or the initial value. The value can change in the intersection shader after calling **OpReportIntersectionKHR** if the corresponding any-hit shader does not ignore the intersection. In a miss shader, the value is identical to the parameter passed into the **pipeline trace ray** instruction.

**Valid Usage**

- **VUID-RayTmaxKHR-RayTmaxKHR-04348**
  The `RayTmaxKHR` decoration must be used only within the **IntersectionKHR**, **AnyHitKHR**, **ClosestHitKHR**, or **MissKHR** Execution Model.

- **VUID-RayTmaxKHR-RayTmaxKHR-04349**
  The variable decorated with `RayTmaxKHR` must be declared using the **Input Storage Class**.

- **VUID-RayTmaxKHR-RayTmaxKHR-04350**
  The variable decorated with `RayTmaxKHR` must be declared as a scalar 32-bit integer value.
The variable decorated with `RayTmaxKHR` must be declared as a scalar 32-bit floating-point value.

**RayTminKHR**

A variable decorated with the `RayTminKHR` decoration will contain the parametric \( t_{\text{min}} \) value of the ray being processed. The value is independent of the space in which the ray origin and direction exist. The value is the parameter passed into the pipeline trace ray instruction.

The \( t_{\text{min}} \) value remains constant for the duration of the ray query.

### Valid Usage

- VUID-RayTminKHR-RayTminKHR-04351
  The `RayTminKHR` decoration must be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR` Execution Model.
- VUID-RayTminKHR-RayTminKHR-04352
  The variable decorated with `RayTminKHR` must be declared using the Input Storage Class.
- VUID-RayTminKHR-RayTminKHR-04353
  The variable decorated with `RayTminKHR` must be declared as a scalar 32-bit floating-point value.

**SampleId**

Decorating a variable with the `SampleId` built-in decoration will make that variable contain the coverage index for the current fragment shader invocation. `SampleId` ranges from zero to the number of samples in the framebuffer minus one. If a fragment shader entry point's interface includes an input variable decorated with `SampleId`, Sample Shading is considered enabled with a `minSampleShading` value of 1.0.

### Valid Usage

- VUID-SampleId-SampleId-04354
  The `SampleId` decoration must be used only within the Fragment Execution Model.
- VUID-SampleId-SampleId-04355
  The variable decorated with `SampleId` must be declared using the Input Storage Class.
- VUID-SampleId-SampleId-04356
  The variable decorated with `SampleId` must be declared as a scalar 32-bit integer value.

**SampleMask**

Decorating a variable with the `SampleMask` built-in decoration will make any variable contain the sample mask for the current fragment shader invocation.

A variable in the Input storage class decorated with `SampleMask` will contain a bitmask of the set of samples covered by the primitive generating the fragment during rasterization. It has a sample bit set if and only if the sample is considered covered for this fragment shader.
SampleMask[] is an array of integers. Bits are mapped to samples in a manner where bit B of mask M (SampleMask[M]) corresponds to sample $32 \times M + B$.

A variable in the Output storage class decorated with SampleMask is an array of integers forming a bit array in a manner similar to an input variable decorated with SampleMask, but where each bit represents coverage as computed by the shader. This computed SampleMask is combined with the generated coverage mask in the multisample coverage operation.

Variables decorated with SampleMask must be either an unsized array, or explicitly sized to be no larger than the implementation-dependent maximum sample-mask (as an array of 32-bit elements), determined by the maximum number of samples.

If a fragment shader entry point’s interface includes an output variable decorated with SampleMask, the sample mask will be undefined for any array elements of any fragment shader invocations that fail to assign a value. If a fragment shader entry point’s interface does not include an output variable decorated with SampleMask, the sample mask has no effect on the processing of a fragment.

### Valid Usage

- VUID-SampleMask-SampleMask-04357
  - The SampleMask decoration must be used only within the Fragment Execution Model
- VUID-SampleMask-SampleMask-04358
  - The variable decorated with SampleMask must be declared using the Input or Output Storage Class
- VUID-SampleMask-SampleMask-04359
  - The variable decorated with SampleMask must be declared as an array of 32-bit integer values

### SamplePosition

Decorating a variable with the SamplePosition built-in decoration will make that variable contain the sub-pixel position of the sample being shaded. The top left of the pixel is considered to be at coordinate (0,0) and the bottom right of the pixel is considered to be at coordinate (1,1).

If the render pass has a fragment density map attachment, the variable will instead contain the sub-fragment position of the sample being shaded. The top left of the fragment is considered to be at coordinate (0,0) and the bottom right of the fragment is considered to be at coordinate (1,1) for any fragment area.

If a fragment shader entry point’s interface includes an input variable decorated with SamplePosition, Sample Shading is considered enabled with a minSampleShading value of 1.0.

If the current pipeline uses custom sample locations the value of any variable decorated with the SamplePosition built-in decoration is undefined.
Valid Usage

- VUID-SamplePosition-SamplePosition-04360
  The SamplePosition decoration **must** be used only within the Fragment Execution Model
- VUID-SamplePosition-SamplePosition-04361
  The variable decorated with SamplePosition **must** be declared using the Input Storage Class
- VUID-SamplePosition-SamplePosition-04362
  The variable decorated with SamplePosition **must** be declared as a two-component vector of 32-bit floating-point values

ShadingRateKHR

Decorating a variable with the ShadingRateKHR built-in decoration will make that variable contain the fragment shading rate for the current fragment invocation.

Valid Usage

- VUID-ShadingRateKHR-ShadingRateKHR-04490
  The ShadingRateKHR decoration **must** be used only within the Fragment Execution Model
- VUID-ShadingRateKHR-ShadingRateKHR-04491
  The variable decorated with ShadingRateKHR **must** be declared using the Input Storage Class
- VUID-ShadingRateKHR-ShadingRateKHR-04492
  The variable decorated with ShadingRateKHR **must** be declared as a scalar 32-bit integer value

SMCountNV

Decorating a variable with the SMCountNV built-in decoration will make that variable contain the number of SMs on the device.

Valid Usage

- VUID-SMCountNV-SMCountNV-04363
  The variable decorated with SMCountNV **must** be declared using the Input Storage Class
- VUID-SMCountNV-SMCountNV-04364
  The variable decorated with SMCountNV **must** be declared as a scalar 32-bit integer value

SMIDNV

Decorating a variable with the SMIDNV built-in decoration will make that variable contain the ID of the SM on which the current shader invocation is running. This variable is in the range [0, SMCountNV-1].
**Valid Usage**

- VUID-SMIDNV-SMIDNV-04365
  The variable decorated with `SMIDNV` must be declared using the **Input Storage Class**
- VUID-SMIDNV-SMIDNV-04366
  The variable decorated with `SMIDNV` must be declared as a scalar 32-bit integer value

**SubgroupId**

Decorating a variable with the `SubgroupId` built-in decoration will make that variable contain the index of the subgroup within the local workgroup. This variable is in range `[0, NumSubgroups-1]`.

**Valid Usage**

- VUID-SubgroupId-SubgroupId-04367
  The `SubgroupId` decoration must be used only within the `GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model`
- VUID-SubgroupId-SubgroupId-04368
  The variable decorated with `SubgroupId` must be declared using the **Input Storage Class**
- VUID-SubgroupId-SubgroupId-04369
  The variable decorated with `SubgroupId` must be declared as a scalar 32-bit integer value

**SubgroupEqMask**

Decorating a variable with the `SubgroupEqMask` builtin decoration will make that variable contain the **subgroup mask** of the current subgroup invocation. The bit corresponding to the `SubgroupLocalInvocationId` is set in the variable decorated with `SubgroupEqMask`. All other bits are set to zero.

`SubgroupEqMaskKHR` is an alias of `SubgroupEqMask`.

**Valid Usage**

- VUID-SubgroupEqMask-SubgroupEqMask-04370
  The variable decorated with `SubgroupEqMask` must be declared using the **Input Storage Class**
- VUID-SubgroupEqMask-SubgroupEqMask-04371
  The variable decorated with `SubgroupEqMask` must be declared as a four-component vector of 32-bit integer values

**SubgroupGeMask**

Decorating a variable with the `SubgroupGeMask` builtin decoration will make that variable contain the **subgroup mask** of the current subgroup invocation. The bits corresponding to the invocations greater than or equal to `SubgroupLocalInvocationId` through `SubgroupSize-1` are set in the variable decorated with `SubgroupGeMask`. All other bits are set to zero.
SubgroupGeMaskKHR is an alias of SubgroupGeMask.

### Valid Usage

- **VUID-SubgroupGeMask-SubgroupGeMask-04372**
  The variable decorated with `SubgroupGeMask` **must** be declared using the **Input Storage Class**

- **VUID-SubgroupGeMask-SubgroupGeMask-04373**
  The variable decorated with `SubgroupGeMask` **must** be declared as a four-component vector of 32-bit integer values

SubgroupGtMask

Decorating a variable with the `SubgroupGtMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations greater than `SubgroupLocalInvocationId` through `SubgroupSize-1` are set in the variable decorated with `SubgroupGtMask`. All other bits are set to zero.

SubgroupGtMaskKHR is an alias of SubgroupGtMask.

### Valid Usage

- **VUID-SubgroupGtMask-SubgroupGtMask-04374**
  The variable decorated with `SubgroupGtMask` **must** be declared using the **Input Storage Class**

- **VUID-SubgroupGtMask-SubgroupGtMask-04375**
  The variable decorated with `SubgroupGtMask` **must** be declared as a four-component vector of 32-bit integer values

SubgroupLeMask

Decorating a variable with the `SubgroupLeMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than or equal to `SubgroupLocalInvocationId` are set in the variable decorated with `SubgroupLeMask`. All other bits are set to zero.

SubgroupLeMaskKHR is an alias of SubgroupLeMask.

### Valid Usage

- **VUID-SubgroupLeMask-SubgroupLeMask-04376**
  The variable decorated with `SubgroupLeMask` **must** be declared using the **Input Storage Class**

- **VUID-SubgroupLeMask-SubgroupLeMask-04377**
  The variable decorated with `SubgroupLeMask` **must** be declared as a four-component vector of 32-bit integer values
SubgroupLtMask

Decorating a variable with the `SubgroupLtMask` builtin decoration will make that variable contain the *subgroup mask* of the current subgroup invocation. The bits corresponding to the invocations less than `SubgroupLocalInvocationId` are set in the variable decorated with `SubgroupLtMask`. All other bits are set to zero.

`SubgroupLtMaskKHR` is an alias of `SubgroupLtMask`.

### Valid Usage

- **VUID-SubgroupLtMask-SubgroupLtMask-04378**
  The variable decorated with `SubgroupLtMask` must be declared using the *Input Storage Class*

- **VUID-SubgroupLtMask-SubgroupLtMask-04379**
  The variable decorated with `SubgroupLtMask` must be declared as a four-component vector of 32-bit integer values

SubgroupLocalInvocationId

Decorating a variable with the `SubgroupLocalInvocationId` builtin decoration will make that variable contain the index of the invocation within the subgroup. This variable is in range `[0, SubgroupSize-1].

If `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` is specified, or if the `module` declares SPIR-V version 1.6 or higher, and the local workgroup size in the X dimension of the stage is a multiple of `SubgroupSize`, full subgroups are enabled for that pipeline stage. When full subgroups are enabled, subgroups must be launched with all invocations active, i.e., there is an active invocation with `SubgroupLocalInvocationId` for each value in range `[0, SubgroupSize-1].

#### Note

There is no direct relationship between `SubgroupLocalInvocationId` and `LocalInvocationId` or `LocalInvocationIndex`. If the pipeline or shader object was created with full subgroups applications can compute their own local invocation index to serve the same purpose:

\[
\text{index} = \text{SubgroupLocalInvocationId} + \text{SubgroupId} \times \text{SubgroupSize}
\]

If full subgroups are not enabled, some subgroups may be dispatched with inactive invocations that do not correspond to a local workgroup invocation, making the value of index unreliable.

#### Note

`VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` and `VK_SHADER_CREATE_REQUIRE_FULL_SUBGROUPS_BIT_EXT` are effectively deprecated when compiling SPIR-V 1.6 shaders, as this behavior is the default for Vulkan with SPIR-V 1.6. This is more aligned with developer expectations, and avoids applications unexpectedly breaking in the future.
Valid Usage

- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04380
  The variable decorated with `SubgroupLocalInvocationId` must be declared using the `Input Storage Class`

- VUID-SubgroupLocalInvocationId-SubgroupLocalInvocationId-04381
  The variable decorated with `SubgroupLocalInvocationId` must be declared as a scalar 32-bit integer value

SubgroupSize

Decorating a variable with the `SubgroupSize` builtin decoration will make that variable contain the implementation-dependent number of invocations in a subgroup. This value must be a power-of-two integer.

If the pipeline was created with the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag set, or the shader object was created with the `VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT` flag set, or the SPIR-V module is at least version 1.6, the `SubgroupSize` decorated variable will contain the subgroup size for each subgroup that gets dispatched. This value must be between `minSubgroupSize` and `maxSubgroupSize` and must be uniform with subgroup scope. The value may vary across a single draw call, and for fragment shaders may vary across a single primitive. In compute dispatches, `SubgroupSize` must be uniform with command scope.

If the pipeline was created with a chained `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure, or the shader object was created with a chained `VkShaderRequiredSubgroupSizeCreateInfoEXT` structure, the `SubgroupSize` decorated variable will match `requiredSubgroupSize`.

If SPIR-V module is less than version 1.6 and the pipeline was not created with the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag set and no `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure was chained, and the shader was not created with the `VK_SHADER_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT_EXT` flag set and no `VkShaderRequiredSubgroupSizeCreateInfoEXT` structure was chained, the variable decorated with `SubgroupSize` will match `subgroupSize`.

The maximum number of invocations that an implementation can support per subgroup is 128.

Note

The old behavior for `SubgroupSize` is considered deprecated as certain compute algorithms cannot be easily implemented without the guarantees of `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` and `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT`.

Valid Usage

- VUID-SubgroupSize-SubgroupSize-04382
The variable decorated with SubgroupSize must be declared using the Input Storage Class.

- VUID-SubgroupSize-SubgroupSize-04383
  The variable decorated with SubgroupSize must be declared as a scalar 32-bit integer value.

**TaskCountNV**

Decorating a variable with the TaskCountNV decoration will make that variable contain the task count. The task count specifies the number of subsequent mesh shader workgroups that get generated upon completion of the task shader.

**Valid Usage**

- VUID-TaskCountNV-TaskCountNV-04384
  The TaskCountNV decoration must be used only within the TaskNV Execution Model.
- VUID-TaskCountNV-TaskCountNV-04385
  The variable decorated with TaskCountNV must be declared using the Output Storage Class.
- VUID-TaskCountNV-TaskCountNV-04386
  The variable decorated with TaskCountNV must be declared as a scalar 32-bit integer value.

**TessCoord**

Decorating a variable with the TessCoord built-in decoration will make that variable contain the three-dimensional \((u,v,w)\) barycentric coordinate of the tessellated vertex within the patch. \(u\), \(v\), and \(w\) are in the range \([0,1]\) and vary linearly across the primitive being subdivided. For the tessellation modes of Quads or Isolines, the third component is always zero.

**Valid Usage**

- VUID-TessCoord-TessCoord-04387
  The TessCoord decoration must be used only within the TessellationEvaluation Execution Model.
- VUID-TessCoord-TessCoord-04388
  The variable decorated with TessCoord must be declared using the Input Storage Class.
- VUID-TessCoord-TessCoord-04389
  The variable decorated with TessCoord must be declared as a three-component vector of 32-bit floating-point values.

**TessLevelOuter**

Decorating a variable with the TessLevelOuter built-in decoration will make that variable contain the outer tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with TessLevelOuter can be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and can be read by tessellation evaluation shaders.
In tessellation evaluation shaders, the variable decorated with `TessLevelOuter` can read the values written by the tessellation control shader.

### Valid Usage

- **VUID-TessLevelOuter-TessLevelOuter-04390**
  The `TessLevelOuter` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` Execution Model.

- **VUID-TessLevelOuter-TessLevelOuter-04391**
  The variable decorated with `TessLevelOuter` within the `TessellationControl` Execution Model **must** be declared using the `Output Storage Class`.

- **VUID-TessLevelOuter-TessLevelOuter-04392**
  The variable decorated with `TessLevelOuter` within the `TessellationEvaluation` Execution Model **must** be declared using the `Input Storage Class`.

- **VUID-TessLevelOuter-TessLevelOuter-04393**
  The variable decorated with `TessLevelOuter` must be declared as an array of size four, containing 32-bit floating-point values.

---

**TessLevelInner**

Decorating a variable with the `TessLevelInner` built-in decoration will make that variable contain the inner tessellation levels for the current patch.

In tessellation control shaders, the variable decorated with `TessLevelInner` can be written to, controlling the tessellation factors for the resulting patch. These values are used by the tessellator to control primitive tessellation and can be read by tessellation evaluation shaders.

In tessellation evaluation shaders, the variable decorated with `TessLevelInner` can read the values written by the tessellation control shader.

### Valid Usage

- **VUID-TessLevelInner-TessLevelInner-04394**
  The `TessLevelInner` decoration **must** be used only within the `TessellationControl` or `TessellationEvaluation` Execution Model.

- **VUID-TessLevelInner-TessLevelInner-04395**
  The variable decorated with `TessLevelInner` within the `TessellationControl` Execution Model **must** be declared using the `Output Storage Class`.

- **VUID-TessLevelInner-TessLevelInner-04396**
  The variable decorated with `TessLevelInner` within the `TessellationEvaluation` Execution Model **must** be declared using the `Input Storage Class`.

- **VUID-TessLevelInner-TessLevelInner-04397**
  The variable decorated with `TessLevelInner` must be declared as an array of size two, containing 32-bit floating-point values.
VertexCountHUAWEI

The VertexCountHUAWEI decoration can be used to decorate a cluster culling shader output variable, this non-indexed mode specific variable will contain an integer value that specifies the number of vertices in a cluster to draw.

Valid Usage

- VUID-VertexCountHUAWEI-VertexCountHUAWEI-07809
  The VertexCountHUAWEI decoration must be used only within the ClusterCullingHUAWEI Execution Model
- VUID-VertexCountHUAWEI-VertexCountHUAWEI-07810
  The variable decorated with VertexCountHUAWEI must be declared as a scalar 32-bit integer value

VertexIndex

Decorating a variable with the VertexIndex built-in decoration will make that variable contain the index of the vertex that is being processed by the current vertex shader invocation. For non-indexed draws, this variable begins at the firstVertex parameter to vkCmdDraw or the firstVertex member of a structure consumed by vkCmdDrawIndirect and increments by one for each vertex in the draw. For indexed draws, its value is the content of the index buffer for the vertex plus the vertexOffset parameter to vkCmdDrawIndexed or the vertexOffset member of the structure consumed by vkCmdDrawIndexedIndirect.

Note

VertexIndex starts at the same starting value for each instance.

Valid Usage

- VUID-VertexIndex-VertexIndex-04398
  The VertexIndex decoration must be used only within the Vertex Execution Model
- VUID-VertexIndex-VertexIndex-04399
  The variable decorated with VertexIndex must be declared using the Input Storage Class
- VUID-VertexIndex-VertexIndex-04400
  The variable decorated with VertexIndex must be declared as a scalar 32-bit integer value

VertexOffsetHUAWEI

The VertexOffsetHUAWEI decoration can be used to decorate a cluster culling shader output variable, this indexed mode specific variable will contain an integer value that specifies a offset value added to the vertex index of a cluster before indexing into the vertex buffer.

Valid Usage

- VUID-VertexOffsetHUAWEI-VertexOffsetHUAWEI-07811
The VertexOffset decoration must be used only within the ClusterCulling Execution Model

- VUID-VertexOffset-VertexOffset-07812
  The variable decorated with VertexOffset must be declared as a scalar 32-bit integer value

ViewIndex

The ViewIndex decoration can be applied to a shader input which will be filled with the index of the view that is being processed by the current shader invocation.

If multiview is enabled in the render pass, this value will be one of the bits set in the view mask of the subpass the pipeline is compiled against. If multiview is not enabled in the render pass, this value will be zero.

Valid Usage

- VUID-ViewIndex-ViewIndex-04401
  The ViewIndex decoration must be used only within the MeshEXT, Vertex, Geometry, TessellationControl, TessellationEvaluation or Fragment Execution Model

- VUID-ViewIndex-ViewIndex-04402
  The variable decorated with ViewIndex must be declared using the Input Storage Class

- VUID-ViewIndex-ViewIndex-04403
  The variable decorated with ViewIndex must be declared as a scalar 32-bit integer value

ViewportIndex

Decorating a variable with the ViewportIndex built-in decoration will make that variable contain the index of the viewport.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with ViewportIndex can be written to with the viewport index to which the primitive produced by that shader will be directed.

The selected viewport index is used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle.

The last active pre-rasterization shader stage (in pipeline order) controls the ViewportIndex that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the ViewportIndex.

If the last active pre-rasterization shader stage shader entry point’s interface does not include a variable decorated with ViewportIndex, and if multiviewPerViewViewports is not enabled, then the first viewport is used. If a pre-rasterization shader stage shader entry point’s interface includes a variable decorated with ViewportIndex, it must write the same value to ViewportIndex for all output vertices of a given primitive.

In a fragment shader, the variable decorated with ViewportIndex contains the viewport index of
the primitive that the fragment invocation belongs to.

If multiviewPerViewViewports is enabled, and if the last active pre-rasterization shader stage shader entry point’s interface does not include a variable decorated with ViewportIndex, then the value of ViewIndex is used as an index to select the viewport transform and scissor rectangle, and the value of ViewportIndex in the fragment shader is undefined:

Valid Usage

- VUID-ViewportIndex-ViewportIndex-04404
  The ViewportIndex decoration must be used only within the MeshEXT, MeshNV, Vertex, TessellationEvaluation, Geometry, or Fragment Execution Model

- VUID-ViewportIndex-ViewportIndex-04405
  If the shaderOutputViewportIndex feature is not enabled then the ViewportIndex decoration must be used only within the Geometry or Fragment Execution Model

- VUID-ViewportIndex-ViewportIndex-04406
  The variable decorated with ViewportIndex within the MeshEXT, MeshNV, Vertex, TessellationEvaluation, or Geometry Execution Model must be declared using the Output Storage Class

- VUID-ViewportIndex-ViewportIndex-04407
  The variable decorated with ViewportIndex within the Fragment Execution Model must be declared using the Input Storage Class

- VUID-ViewportIndex-ViewportIndex-04408
  The variable decorated with ViewportIndex must be declared as a scalar 32-bit integer value

- VUID-ViewportIndex-ViewportIndex-07060
  The variable decorated with ViewportIndex within the MeshEXT Execution Model must also be decorated with the PerPrimitiveEXT decoration

ViewportMaskNV

Decorating a variable with the ViewportMaskNV built-in decoration will make that variable contain the viewport mask.

In a mesh, vertex, tessellation evaluation, or geometry shader, the variable decorated with ViewportMaskNV can be written to with the mask of which viewports the primitive produced by that shader will directed.

The ViewportMaskNV variable must be an array that has \( \lceil \frac{\text{VkPhysicalDeviceLimits::maxViewports}}{32} \rceil \) elements. When a shader writes to this variable, bit B of element M controls whether a primitive is emitted to viewport \( 32 \times M + B \). The viewports indicated by the mask are used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle that a primitive will be transformed by.

The last active pre-rasterization shader stage (in pipeline order) controls the ViewportMaskNV that is used. Outputs in previous shader stages are not used, even if the last stage fails to write the ViewportMaskNV. When ViewportMaskNV is written by the final pre-rasterization shader stage, any
variable decorated with `ViewportIndex` in the fragment shader will have the index of the viewport that was used in generating that fragment.

If a pre-rasterization shader stage shader entry point's interface includes a variable decorated with `ViewportMaskNV`, it must write the same value to `ViewportMaskNV` for all output vertices of a given primitive.

### Valid Usage

- **VUID-ViewportMaskNV-ViewportMaskNV-04409**
  The `ViewportMaskNV` decoration must be used only within the `Vertex`, `MeshNV`, `TessellationEvaluation`, or `Geometry Execution Model`.

- **VUID-ViewportMaskNV-ViewportMaskNV-04410**
  The variable decorated with `ViewportMaskNV` must be declared using the `Output Storage Class`.

- **VUID-ViewportMaskNV-ViewportMaskNV-04411**
  The variable decorated with `ViewportMaskNV` must be declared as an array of 32-bit integer values.

### ViewportMaskPerViewNV

Decorating a variable with the `ViewportMaskPerViewNV` built-in decoration will make that variable contain the mask of viewports primitives are broadcast to, for each view.

The value written to an element of `ViewportMaskPerViewNV` in the last pre-rasterization shader stage is a bitmask indicating which viewports the primitive will be directed to. The primitive will be broadcast to the viewport corresponding to each non-zero bit of the bitmask, and that viewport index is used to select the viewport transform, scissor rectangle, and exclusive scissor rectangle, for each view. The same values must be written to all vertices in a given primitive, or else the set of viewports used for that primitive is undefined.

Elements of the array correspond to views in a multiview subpass, and those elements corresponding to views in the view mask of the subpass the shader is compiled against will be used as the viewport mask value for those views. `ViewportMaskPerViewNV` output in an earlier pre-rasterization shader stage is not available as an input in the subsequent pre-rasterization shader stage.

Although `ViewportMaskNV` is an array, `ViewportMaskPerViewNV` is not a two-dimensional array. Instead, `ViewportMaskPerViewNV` is limited to 32 viewports.

### Valid Usage

- **VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04412**
  The `ViewportMaskPerViewNV` decoration must be used only within the `Vertex`, `MeshNV`, `TessellationControl`, `TessellationEvaluation`, or `Geometry Execution Model`.

- **VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04413**
  The variable decorated with `ViewportMaskPerViewNV` must be declared using the `Output` class.
### Storage Class

- **VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04414**
  The variable decorated with `ViewportMaskPerViewNV` must be declared as an array of 32-bit integer values

- **VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04415**
  The array decorated with `ViewportMaskPerViewNV` must be a size less than or equal to 32

- **VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04416**
  The array decorated with `ViewportMaskPerViewNV` must be a size greater than the maximum view in the subpass's view mask

- **VUID-ViewportMaskPerViewNV-ViewportMaskPerViewNV-04417**
  The array variable decorated with `ViewportMaskPerViewNV` must only be indexed by a constant or specialization constant

### WarpsPerSMNV

Decorating a variable with the `WarpsPerSMNV` built-in decoration will make that variable contain the maximum number of warps executing on a SM.

#### Valid Usage

- **VUID-WarpsPerSMNV-WarpsPerSMNV-04418**
  The variable decorated with `WarpsPerSMNV` must be declared using the Input Storage Class

- **VUID-WarpsPerSMNV-WarpsPerSMNV-04419**
  The variable decorated with `WarpsPerSMNV` must be declared as a scalar 32-bit integer value

### WarpIDNV

Decorating a variable with the `WarpIDNV` built-in decoration will make that variable contain the ID of the warp on a SM on which the current shader invocation is running. This variable is in the range \([0, \text{WarpsPerSMNV}-1]\).

#### Valid Usage

- **VUID-WarpIDNV-WarpIDNV-04420**
  The variable decorated with `WarpIDNV` must be declared using the Input Storage Class

- **VUID-WarpIDNV-WarpIDNV-04421**
  The variable decorated with `WarpIDNV` must be declared as a scalar 32-bit integer value

### WorkgroupId

Decorating a variable with the `WorkgroupId` built-in decoration will make that variable contain the global workgroup that the current invocation is a member of. Each component ranges from a base value to a base + count value, based on the parameters passed into the dispatching commands.
Valid Usage

- VUID-WorkgroupId-WorkgroupId-04422
  The \texttt{WorkgroupId} decoration \textbf{must} be used only within the \texttt{GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model}

- VUID-WorkgroupId-WorkgroupId-04423
  The variable decorated with \texttt{WorkgroupId} \textbf{must} be declared using the \texttt{Input Storage Class}

- VUID-WorkgroupId-WorkgroupId-04424
  The variable decorated with \texttt{WorkgroupId} \textbf{must} be declared as a three-component vector of 32-bit integer values

\textbf{WorkgroupSize}

\textit{Note}

SPIR-V 1.6 deprecated \texttt{WorkgroupSize} in favor of using the \texttt{LocalSizeId} Execution Mode instead. Support for \texttt{LocalSizeId} was added with \texttt{VK_KHR_maintenance4} and promoted to core in Version 1.3.

Decorating an object with the \texttt{WorkgroupSize} built-in decoration will make that object contain the dimensions of a local workgroup. If an object is decorated with the \texttt{WorkgroupSize} decoration, this takes precedence over any \texttt{LocalSize} or \texttt{LocalSizeId} execution mode.

Valid Usage

- VUID-WorkgroupSize-WorkgroupSize-04425
  The \texttt{WorkgroupSize} decoration \textbf{must} be used only within the \texttt{GLCompute, MeshEXT, TaskEXT, MeshNV, or TaskNV Execution Model}

- VUID-WorkgroupSize-WorkgroupSize-04426
  The variable decorated with \texttt{WorkgroupSize} \textbf{must} be a specialization constant or a constant

- VUID-WorkgroupSize-WorkgroupSize-04427
  The variable decorated with \texttt{WorkgroupSize} \textbf{must} be declared as a three-component vector of 32-bit integer values

\textbf{WorldRayDirectionKHR}

A variable decorated with the \texttt{WorldRayDirectionKHR} decoration will specify the direction of the ray being processed, in world space. The value is the parameter passed into the pipeline trace \texttt{ray} instruction.

Valid Usage

- VUID-WorldRayDirectionKHR-WorldRayDirectionKHR-04428
  The \texttt{WorldRayDirectionKHR} decoration \textbf{must} be used only within the \texttt{IntersectionKHR, AnyHitKHR, ClosestHitKHR, or MissKHR Execution Model}
The variable decorated with `WorldRayDirectionKHR` must be declared using the `Input Storage Class`.

The variable decorated with `WorldRayDirectionKHR` must be declared as a three-component vector of 32-bit floating-point values.

**WorldRayOriginKHR**

A variable decorated with the `WorldRayOriginKHR` decoration will specify the origin of the ray being processed, in world space. The value is the parameter passed into the pipeline trace ray instruction.

**Valid Usage**

- The `WorldRayOriginKHR` decoration must be used only within the `IntersectionKHR`, `AnyHitKHR`, `ClosestHitKHR`, or `MissKHR` Execution Model.
- The variable decorated with `WorldRayOriginKHR` must be declared using the `Input Storage Class`.
- The variable decorated with `WorldRayOriginKHR` must be declared as a three-component vector of 32-bit floating-point values.

**WorldToObjectKHR**

A variable decorated with the `WorldToObjectKHR` decoration will contain the current world-to-object transformation matrix, which is determined by the instance of the current intersection.

**Valid Usage**

- The `WorldToObjectKHR` decoration must be used only within the `IntersectionKHR`, `AnyHitKHR`, or `ClosestHitKHR` Execution Model.
- The variable decorated with `WorldToObjectKHR` must be declared using the `Input Storage Class`.
- The variable decorated with `WorldToObjectKHR` must be declared as a matrix with four columns of three-component vectors of 32-bit floating-point values.

**CoreCountARM**

Decorating a variable with the `CoreCountARM` built-in decoration will make that variable contain the number of cores on the device.
Valid Usage

- VUID-CoreCountARM-CoreCountARM-07595
  The variable decorated with `CoreCountARM` must be declared using the Input Storage Class
- VUID-CoreCountARM-CoreCountARM-07596
  The variable decorated with `CoreCountARM` must be declared as a scalar 32-bit integer value

CoreMaxIDARM

Decorating a variable with the `CoreMaxIDARM` built-in decoration will make that variable contain the max ID of any shader core on the device on which the current shader invocation is running.

Valid Usage

- VUID-CoreMaxIDARM-CoreMaxIDARM-07597
  The variable decorated with `CoreMaxIDARM` must be declared using the Input Storage Class
- VUID-CoreMaxIDARM-CoreMaxIDARM-07598
  The variable decorated with `CoreMaxIDARM` must be declared as a scalar 32-bit integer value

CoreIDARM

Decorating a variable with the `CoreIDARM` built-in decoration will make that variable contain the ID of the core on which the current shader invocation is running. This variable is in the range \([0, \text{CoreMaxIDARM}]\).

Valid Usage

- VUID-CoreIDARM-CoreIDARM-07599
  The variable decorated with `CoreIDARM` must be declared using the Input Storage Class
- VUID-CoreIDARM-CoreIDARM-07600
  The variable decorated with `CoreIDARM` must be declared as a scalar 32-bit integer value

WarpMaxIDARM

Decorating a variable with the `WarpMaxIDARM` built-in decoration will make that variable contain the maximum warp ID for the core on which the current invocation is running.

Valid Usage

- VUID-WarpMaxIDARM-WarpMaxIDARM-07601
  The variable decorated with `WarpMaxIDARM` must be declared using the Input Storage Class
- VUID-WarpMaxIDARM-WarpMaxIDARM-07602
  The variable decorated with `WarpMaxIDARM` must be declared as a scalar 32-bit integer value
WarpIDARM
Decorating a variable with the \texttt{WarpIDARM} built-in decoration will make that variable contain the ID of the warp on a core on which the current shader invocation is running. This variable is in the range \([0, \text{WarpMaxIDARM}]\).

\textbf{Valid Usage}

- VUID-WarpIDARM-WarpIDARM-07603
  The variable decorated with \texttt{WarpIDARM} \textbf{must} be declared using the \texttt{Input Storage Class}
- VUID-WarpIDARM-WarpIDARM-07604
  The variable decorated with \texttt{WarpIDARM} \textbf{must} be declared as a scalar 32-bit integer value

CoalescedInputCountAMDX
Decorating a variable with the \texttt{CoalescedInputCountAMDX} built-in decoration will make that variable contain the number of node dispatches that the implementation coalesced into the input for the current shader. This variable will take a value in the range \([1, \text{arraySize})\), where \texttt{arraySize} is the maximum size of the input payload array for the shader.

\textbf{Valid Usage}

- VUID-CoalescedInputCountAMDX-CoalescedInputCountAMDX-09172
  The variable decorated with \texttt{CoalescedInputCountAMDX} \textbf{must} be declared using the \texttt{Input Storage Class}
- VUID-CoalescedInputCountAMDX-CoalescedInputCountAMDX-09173
  If a variable is decorated with \texttt{CoalescedInputCountAMDX}, the \texttt{CoalescingAMDX} execution mode \textbf{must} be declared
- VUID-CoalescedInputCountAMDX-CoalescedInputCountAMDX-09174
  The variable decorated with \texttt{CoalescedInputCountAMDX} \textbf{must} be declared as a scalar 32-bit integer value

ShaderIndexAMDX
Decorating a variable with the \texttt{ShaderIndexAMDX} built-in decoration will make that variable contain the index of the shader specified when it was compiled, either via \texttt{VkPipelineShaderStageNodeCreateInfoAMDX::index} or by the \texttt{ShaderIndexAMDX} execution mode.

\textbf{Valid Usage}

- VUID-ShaderIndexAMDX-ShaderIndexAMDX-09175
  The variable decorated with \texttt{ShaderIndexAMDX} \textbf{must} be declared using the \texttt{Input Storage Class}
- VUID-ShaderIndexAMDX-ShaderIndexAMDX-09176
The variable decorated with `ShaderIndexAMDX` must be declared as a scalar 32-bit integer value.
Chapter 16. Image Operations

16.1. Image Operations Overview

Vulkan Image Operations are operations performed by those SPIR-V Image Instructions which take an OpTypeImage (representing a VkImageView) or OpTypeSampledImage (representing a (VkImageView, VkSampler) pair). Read, write, and atomic operations also take texel coordinates as operands, and return a value based on a neighborhood of texture elements (texels) within the image. Query operations return properties of the bound image or of the lookup itself. The “Depth” operand of OpTypeImage is ignored.

**Note**

Texel is a term which is a combination of the words texture and element. Early interactive computer graphics supported texture operations on textures, a small subset of the image operations on images described here. The discrete samples remain essentially equivalent, however, so we retain the historical term texel to refer to them.

Image Operations include the functionality of the following SPIR-V Image Instructions:

- **OpImageSample** and OpImageSparseSample read one or more neighboring texels of the image, and filter the texel values based on the state of the sampler.
  - Instructions with ImplicitLod in the name determine the LOD used in the sampling operation based on the coordinates used in neighboring fragments.
  - Instructions with ExplicitLod in the name determine the LOD used in the sampling operation based on additional coordinates.
  - Instructions with Proj in the name apply homogeneous projection to the coordinates.
- **OpImageFetch** and OpImageSparseFetch return a single texel of the image. No sampler is used.
- **OpImage** and **OpImageSparse** read neighboring texels and return a single component of each.
- **OpImageRead** (and OpImageSparseRead) and **OpImageWrite** read and write, respectively, a texel in the image. No sampler is used.
- **OpImageSampleFootprintNV** identifies and returns information about the set of texels in the image that would be accessed by an equivalent OpImageSample instruction.
- **OpImageDref** instructions apply depth comparison on the texel values.
- **OpImageSparse** instructions additionally return a sparse residency code.
- **OpImageQueryLod** returns the LOD parameters that would be used in a sample operation. The actual operation is not performed.
- **OpImageWeightedSampleQCOM** reads a 2D neighborhood of texels and computes a weighted average using weight values from a separate weight texture.
• **opImageBlockMatchSADQCOM** and **opTextureBlockMatchSSD** compare 2D neighborhoods of texels from two textures.

• **OpImageBoxFilterQCOM** reads a 2D neighborhood of texels and computes a weighted average of the texels.

• **opImageBlockMatchWindowSADQCOM** and **opImageBlockMatchWindowSSDQCOM** compare 2D neighborhoods of texels from two textures with the comparison repeated across a window region in the target texture.

• **opImageBlockMatchGatherSADQCOM** and **opImageBlockMatchWindowSSDQCOM** compares four 2D neighborhoods of texels from a target texture with a single 2D neighborhood in the reference texture. The R component of each comparison is gathered and returned in the output.

### 16.1.1. Texel Coordinate Systems

Images are addressed by *texel coordinates*. There are three *texel coordinate systems*:

- normalized texel coordinates \([0.0, 1.0]\)
- unnormalized texel coordinates \([0.0, \text{width} / \text{height} / \text{depth}]\)
- integer texel coordinates \([0, \text{width} / \text{height} / \text{depth}]\)

Other image instructions can use either normalized or unnormalized texel coordinates (selected by the `unnormalizedCoordinates` state of the sampler used in the instruction), but there are limitations on what operations, image state, and sampler state is supported. Normalized coordinates are logically converted to unnormalized as part of image operations, and certain steps are only performed on normalized coordinates. The array layer coordinate is always treated as unnormalized even when other coordinates are normalized.

Normalized texel coordinates are referred to as \((s,t,r,q,a)\), with the coordinates having the following meanings:

- \(s\): Coordinate in the first dimension of an image.
- \(t\): Coordinate in the second dimension of an image.
- \(r\): Coordinate in the third dimension of an image.
  - \((s,t,r)\) are interpreted as a direction vector for Cube images.
- \(q\): Fourth coordinate, for homogeneous (projective) coordinates.
- \(a\): Coordinate for array layer.

The coordinates are extracted from the SPIR-V operand based on the dimensionality of the image variable and type of instruction. For Proj instructions, the components are in order \((s, [t] [r] q)\), with \(t\) and \(r\) being conditionally present based on the Dim of the image. For non-Proj instructions, the coordinates are \((s [,t] [,r] [,a])\), with \(t\) and \(r\) being conditionally present based on the Dim of the image and \(a\) being conditionally present based on the Arrayed property of the image. Projective
Unnormalized texel coordinates are referred to as \((u,v,w,a)\), with the coordinates having the following meanings:

- **u**: Coordinate in the first dimension of an image.
- **v**: Coordinate in the second dimension of an image.
- **w**: Coordinate in the third dimension of an image.
- **a**: Coordinate for array layer.

Only the \(u\) and \(v\) coordinates are directly extracted from the SPIR-V operand, because only 1D and 2D (non-Arrayed) dimensionalities support unnormalized coordinates. The components are in order \((u[,v])\), with \(v\) being conditionally present when the dimensionality is 2D. When normalized coordinates are converted to unnormalized coordinates, all four coordinates are used.

Integer texel coordinates are referred to as \((i,j,k,l,n)\), with the coordinates having the following meanings:

- **i**: Coordinate in the first dimension of an image.
- **j**: Coordinate in the second dimension of an image.
- **k**: Coordinate in the third dimension of an image.
- **l**: Coordinate for array layer.
- **n**: Index of the sample within the texel.

They are extracted from the SPIR-V operand in order \((i[,j[,k[,l[,n]]]])\), with \(j\) and \(k\) conditionally present based on the \texttt{Dim} of the image, and \(l\) conditionally present based on the \texttt{Arrayed} property of the image. \(n\) is conditionally present and is taken from the \texttt{Sample} image operand.

If an accessed image was created from a view using \texttt{VkImageViewSlicedCreateInfoEXT} and accessed through a \texttt{VK_DESCRIPTOR_TYPE_STORAGE_IMAGE} descriptor, then the value of \(k\) is incremented by \texttt{VkImageViewSlicedCreateInfoEXT::sliceOffset}, giving \(k \leftarrow \text{sliceOffset} + k\). The image's accessible range in the third dimension is \(k < \text{sliceOffset} + \text{sliceCount}\). If \texttt{VkImageViewSlicedCreateInfoEXT::sliceCount} is \texttt{VK_REMAINING_3D_SLICES_EXT}, the range is inherited from the image's depth extent as specified by \texttt{Image Mip Level Sizing}.

For all coordinate types, unused coordinates are assigned a value of zero.
The Texel Coordinate Systems - For the example shown of an 8×4 texel two dimensional image.

- Normalized texel coordinates:
  - The s coordinate goes from 0.0 to 1.0.
  - The t coordinate goes from 0.0 to 1.0.

- Unnormalized texel coordinates:
  - The u coordinate within the range 0.0 to 8.0 is within the image, otherwise it is outside the image.
  - The v coordinate within the range 0.0 to 4.0 is within the image, otherwise it is outside the image.

- Integer texel coordinates:
  - The i coordinate within the range 0 to 7 addresses texels within the image, otherwise it is outside the image.
  - The j coordinate within the range 0 to 3 addresses texels within the image, otherwise it is outside the image.

- Also shown for linear filtering:
  - Given the unnormalized coordinates (u,v), the four texels selected are i₀j₀, i₁j₀, i₀j₁, and i₁j₁.
  - The fractions α and β.
  - Given the offset Δ_i and Δ_j, the four texels selected by the offset are i₀j₀', i₁j₀', i₀j₁', and i₁j₁'.

Note
For formats with reduced-resolution components, Δ_i and Δ_j are relative to the resolution of the highest-resolution component, and therefore may be divided by two relative to the unnormalized coordinate space of the lower-resolution component.
The Texel Coordinate Systems - For the example shown of an $8 \times 4$ texel two dimensional image.

- Texel coordinates as above. Also shown for nearest filtering:
  - Given the unnormalized coordinates $(u,v)$, the texel selected is $ij$.
  - Given the offset $\Delta i$ and $\Delta j$, the texel selected by the offset is $ij'$.

For corner-sampled images, the texel samples are located at the grid intersections instead of the texel centers.
16.2. Conversion Formulas

16.2.1. RGB to Shared Exponent Conversion

An RGB color (red, green, blue) is transformed to a shared exponent color \((\text{red}_{\text{shared}}, \text{green}_{\text{shared}}, \text{blue}_{\text{shared}}, \text{exp}_{\text{shared}})\) as follows:

First, the components (red, green, blue) are clamped to \((\text{red}_{\text{clamped}}, \text{green}_{\text{clamped}}, \text{blue}_{\text{clamped}})\) as:

\[
\text{red}_{\text{clamped}} = \max(0, \min(\text{sharedexp}_{\text{max}}, \text{red}))
\]

\[
\text{green}_{\text{clamped}} = \max(0, \min(\text{sharedexp}_{\text{max}}, \text{green}))
\]

\[
\text{blue}_{\text{clamped}} = \max(0, \min(\text{sharedexp}_{\text{max}}, \text{blue}))
\]

where:

\[
N = 9
\]

\[
B = 15
\]

\[
E_{\text{max}} = 31
\]

\[
\text{sharedexp}_{\text{max}} = \frac{(2^N - 1)}{2^N} \times 2^{(E_{\text{max}} - B)}
\]

\[\text{NaN}, \text{if supported, is handled as in}\]
IEEE 754-2008 \texttt{minNum()} and \texttt{maxNum()}. This results in any NaN being mapped to zero.

The largest clamped component, max\textsubscript{clamped} is determined:

\[
\text{max}_\text{clamped} = \max(\text{red}_\text{clamped}, \text{green}_\text{clamped}, \text{blue}_\text{clamped})
\]

A preliminary shared exponent exp\textsuperscript{'} is computed:

\[
\text{exp}' = \begin{cases} 
\lfloor \log_2(\max\text{clamped}) \rfloor + (B + 1) & \text{for max}_{\text{clamped}} > 2^{-(B + 1)} \\
0 & \text{for max}_{\text{clamped}} \leq 2^{-(B + 1)}
\end{cases}
\]

The shared exponent exp\textsubscript{shared} is computed:

\[
\text{max}_{\text{shared}} = \left\lfloor \frac{\text{max}_{\text{clamped}}}{2^\text{exp'} - B - N} + \frac{1}{2} \right\rfloor
\]

\[
\text{exp}_{\text{shared}} = \begin{cases} 
\text{exp}' & \text{for } 0 \leq \text{max}_{\text{shared}} < 2^N \\
\text{exp}' + 1 & \text{for } \text{max}_{\text{shared}} = 2^N
\end{cases}
\]

Finally, three integer values in the range 0 to \(2^N\) are computed:

\[
\text{red}_{\text{shared}} = \left\lfloor \frac{\text{red}_{\text{clamped}}}{2^\text{exp}_{\text{shared}} - B - N} + \frac{1}{2} \right\rfloor
\]

\[
\text{green}_{\text{shared}} = \left\lfloor \frac{\text{green}_{\text{clamped}}}{2^\text{exp}_{\text{shared}} - B - N} + \frac{1}{2} \right\rfloor
\]

\[
\text{blue}_{\text{shared}} = \left\lfloor \frac{\text{blue}_{\text{clamped}}}{2^\text{exp}_{\text{shared}} - B - N} + \frac{1}{2} \right\rfloor
\]

### 16.2.2. Shared Exponent to RGB

A shared exponent color \((\text{red}_{\text{shared}}, \text{green}_{\text{shared}}, \text{blue}_{\text{shared}}, \text{exp}_{\text{shared}})\) is transformed to an RGB color \((\text{red}, \text{green}, \text{blue})\) as follows:

\[
\text{red} = \text{red}_{\text{shared}} \times 2^{\text{exp}_{\text{shared}} - B - N}
\]

\[
\text{green} = \text{green}_{\text{shared}} \times 2^{\text{exp}_{\text{shared}} - B - N}
\]

\[
\text{blue} = \text{blue}_{\text{shared}} \times 2^{\text{exp}_{\text{shared}} - B - N}
\]

where:
N = 9 (number of mantissa bits per component)

B = 15 (exponent bias)

16.3. Texel Input Operations

*Texel input instructions* are SPIR-V image instructions that read from an image. *Texel input operations* are a set of steps that are performed on state, coordinates, and texel values while processing a texel input instruction, and which are common to some or all texel input instructions. They include the following steps, which are performed in the listed order:

- Validation operations
  - Instruction/Sampler/Image validation
  - Coordinate validation
  - Sparse validation
  - Layout validation
- Format conversion
- Texel replacement
- Depth comparison
- Conversion to RGBA
- Component swizzle
- Chroma reconstruction
- Y'CbCr conversion

For texel input instructions involving multiple texels (for sampling or gathering), these steps are applied for each texel that is used in the instruction. Depending on the type of image instruction, other steps are conditionally performed between these steps or involving multiple coordinate or texel values.

If *Chroma Reconstruction* is implicit, *Texel Filtering* instead takes place during chroma reconstruction, before sampler Y'CbCr conversion occurs.

The operations described in block matching and weight image sampling are performed before Conversion to RGBA and Component swizzle.

16.3.1. Texel Input Validation Operations

*Texel input validation operations* inspect instruction/image/sampler state or coordinates, and in certain circumstances cause the texel value to be replaced or become undefined. There are a series of validations that the texel undergoes.
Instruction/Sampler/Image View Validation

There are a number of cases where a SPIR-V instruction can mismatch with the sampler, the image view, or both, and a number of further cases where the sampler can mismatch with the image view. In such cases the value of the texel returned is undefined.

These cases include:

- The sampler `borderColor` is an integer type and the image view format is not one of the `VkFormat` integer types or a stencil component of a depth/stencil format.
- The sampler `borderColor` is a float type and the image view format is not one of the `VkFormat` float types or a depth component of a depth/stencil format.
- The sampler `borderColor` is one of the opaque black colors (`VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK` or `VK_BORDER_COLOR_INT_OPAQUE_BLACK`) and the image view `VkComponentSwizzle` for any of the `VkComponentMapping` components is not the identity swizzle, and `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage` feature is not enabled, and `VkSamplerBorderColorComponentMappingCreateInfoEXT` is not specified.
- `VkSamplerBorderColorComponentMappingCreateInfoEXT::components`, if specified, has a component swizzle that does not match the component swizzle of the image view, and either component swizzle is not a form of identity swizzle.
- `VkSamplerBorderColorComponentMappingCreateInfoEXT::srgb`, if specified, does not match the sRGB encoding of the image view.
- The sampler `borderColor` is a custom color (`VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`) and the supplied `VkSamplerCustomBorderColorCreateInfoEXT::customBorderColor` is outside the bounds of the values representable in the image view's format.
- The sampler `borderColor` is a custom color (`VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT`) and the image view `VkComponentSwizzle` for any of the `VkComponentMapping` components is not the identity swizzle, and `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT::borderColorSwizzleFromImage` feature is not enabled, and `VkSamplerBorderColorComponentMappingCreateInfoEXT` is not specified.
- The `VkImageLayout` of any subresource in the image view does not match the `VkDescriptorImageInfo::imageLayout` used to write the image descriptor.
- The SPIR-V Image Format is not compatible with the image view's format.
- The sampler `unnormalizedCoordinates` is `VK_TRUE` and any of the limitations of unnormalized coordinates are violated.
- The sampler was created with flags containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and the image was not created with flags containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- The sampler was not created with flags containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and the image was created with flags containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
- The sampler was created with flags containing `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` and is used with a function that is not `OpImageSampleImplicitLod` or `OpImageSampleExplicitLod`, or is used with operands `Offset` or `ConstOffsets`.
- The SPIR-V instruction is one of the `OpImage*Dref*` instructions and the sampler `compareEnable` is
The SPIR-V instruction is not one of the OpImage*Dref* instructions and the sampler compareEnable is VK_TRUE.

The SPIR-V instruction is one of the OpImage*Dref* instructions, the image view format is one of the depth/stencil formats, and the image view aspect is not VK_IMAGE_ASPECT_DEPTH_BIT.

The SPIR-V instruction’s image variable’s properties are not compatible with the image view:

- Rules for viewType:
  - VK_IMAGE_VIEW_TYPE_1D must have Dim = 1D, Arrayed = 0, MS = 0.
  - VK_IMAGE_VIEW_TYPE_2D must have Dim = 2D, Arrayed = 0.
  - VK_IMAGE_VIEW_TYPE_3D must have Dim = 3D, Arrayed = 0, MS = 0.
  - VK_IMAGE_VIEW_TYPE_CUBE must have Dim = Cube, Arrayed = 0, MS = 0.
  - VK_IMAGE_VIEW_TYPE_1D_ARRAY must have Dim = 1D, Arrayed = 1, MS = 0.
  - VK_IMAGE_VIEW_TYPE_2D_ARRAY must have Dim = 2D, Arrayed = 1.
  - VK_IMAGE_VIEW_TYPE_CUBE_ARRAY must have Dim = Cube, Arrayed = 1, MS = 0.

- If the image was created with VkImageCreateInfo::samples equal to VK_SAMPLE_COUNT_1_BIT, the instruction must have MS = 0.
- If the image was created with VkImageCreateInfo::samples not equal to VK_SAMPLE_COUNT_1_BIT, the instruction must have MS = 1.
- If the Sampled Type of the OpTypeImage does not match the SPIR-V Type.
- If the signedness of any read or sample operation does not match the signedness of the image's format.

- If the image was created with VkImageCreateInfo::flags containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV, the sampler addressing modes must only use a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE.

- The SPIR-V instruction is OpImageSampleFootprintNV with Dim = 2D and addressModeU or addressModeV in the sampler is not VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE.

- The SPIR-V instruction is OpImageSampleFootprintNV with Dim = 3D and addressModeU, addressModeV, or addressModeW in the sampler is not VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE.

- The sampler was created with a specified VkSamplerCustomBorderColorCreateInfoEXT::format which does not match the VkFormat of the image view(s) it is sampling.

- The sampler is sampling an image view of VK_FORMAT_B4G4R4A4_UNORM_PACK16, VK_FORMAT_B5G6R5_UNORM_PACK16, or VK_FORMAT_B5G5R5A1_UNORM_PACK16 format without a specified VkSamplerCustomBorderColorCreateInfoEXT::format.

Only OpImageSample* and OpImageSparseSample* can be used with a sampler or image view that enables sampler Y’CbCr conversion.

OpImageFetch, OpImageSparseFetch, OpImage*Gather, and OpImageSparse*Gather must not be used with a sampler or image view that enables sampler Y’CbCr conversion.

The ConstOffset and Offset operands must not be used with a sampler or image view that enables
sampler \( Y'\mathcal{C}_b\mathcal{C}_r \) conversion.

**Integer Texel Coordinate Validation**

Integer texel coordinates are validated against the size of the image level, and the number of layers and number of samples in the image. For SPIR-V instructions that use integer texel coordinates, this is performed directly on the integer coordinates. For instructions that use normalized or unnormalized texel coordinates, this is performed on the coordinates that result after conversion to integer texel coordinates.

If the integer texel coordinates do not satisfy all of the conditions

\[
0 \leq i < w_s \\
0 \leq j < h_s \\
0 \leq k < d_s \\
0 \leq l < \text{layers} \\
0 \leq n < \text{samples}
\]

where:

\[
w_s = \text{width of the image level} \\
h_s = \text{height of the image level} \\
d_s = \text{depth of the image level} \\
\text{layers} = \text{number of layers in the image} \\
\text{samples} = \text{number of samples per texel in the image}
\]

then the texel fails integer texel coordinate validation.

There are four cases to consider:

1. Valid Texel Coordinates
If the texel coordinates pass validation (that is, the coordinates lie within the image), then the texel value comes from the value in image memory.

2. Border Texel
   - If the texel coordinates fail validation, and
   - If the read is the result of an image sample instruction or image gather instruction, and
   - If the image is not a cube image, or if a sampler created with `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT` is used,
     then the texel is a border texel and **texel replacement** is performed.

3. Invalid Texel
   - If the texel coordinates fail validation, and
   - If the read is the result of an image fetch instruction, image read instruction, or atomic instruction,
     then the texel is an invalid texel and **texel replacement** is performed.

4. Cube Map Edge or Corner
   Otherwise the texel coordinates lie beyond the edges or corners of the selected cube map face, and **Cube map edge handling** is performed.

**Cube Map Edge Handling**

If the texel coordinates lie beyond the edges or corners of the selected cube map face (as described in the prior section), the following steps are performed. Note that this does not occur when using `VK_FILTER_NEAREST` filtering within a mip level, since `VK_FILTER_NEAREST` is treated as using `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

- Cube Map Edge Texel
  - If the texel lies beyond the selected cube map face in either only i or only j, then the coordinates (i,j) and the array layer l are transformed to select the adjacent texel from the appropriate neighboring face.

- Cube Map Corner Texel
  - If the texel lies beyond the selected cube map face in both i and j, then there is no unique neighboring face from which to read that texel. The texel **should** be replaced by the average of the three values of the adjacent texels in each incident face. However, implementations **may** replace the cube map corner texel by other methods. The methods are subject to the constraint that for linear filtering if the three available texels have the same value, the resulting filtered texel **must** have that value, and for cubic filtering if the twelve available samples have the same value, the resulting filtered texel **must** have that value.

**Sparse Validation**

If the texel reads from an unbound region of a sparse image, the texel is a **sparse unbound texel**, and processing continues with **texel replacement**.
Layout Validation

If all planes of a disjoint multi-planar image are not in the same image layout, the image must not be sampled with sampler Y’C_aC_b conversion enabled.

16.3.2. Format Conversion

Texels undergo a format conversion from the VkFormat of the image view to a vector of either floating point or signed or unsigned integer components, with the number of components based on the number of components present in the format.

- Color formats have one, two, three, or four components, according to the format.
- Depth/stencil formats are one component. The depth or stencil component is selected by the aspectMask of the image view.

Each component is converted based on its type and size (as defined in the Format Definition section for each VkFormat), using the appropriate equations in 16-Bit Floating-Point Numbers, Unsigned 11-Bit Floating-Point Numbers, Unsigned 10-Bit Floating-Point Numbers, Fixed-Point Data Conversion, and Shared Exponent to RGB. Signed integer components smaller than 32 bits are sign-extended.

If the image view format is sRGB, the color components are first converted as if they are UNORM, and then sRGB to linear conversion is applied to the R, G, and B components as described in the “sRGB EOTF” section of the Khronos Data Format Specification. The A component, if present, is unchanged.

If VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableYDegamma is equal to VK_TRUE, then sRGB to linear conversion is applied to the G component as described in the “sRGB EOTF” section of the Khronos Data Format Specification. If VkSamplerYcbcrConversionYcbcrDegammaCreateInfoQCOM::enableCbCrDegamma is equal to VK_TRUE, then sRGB to linear conversion is applied to the R and B components as described in the “sRGB EOTF” section of the Khronos Data Format Specification. The A component, if present, is unchanged.

If the image view format is block-compressed, then the texel value is first decoded, then converted based on the type and number of components defined by the compressed format.

16.3.3. Texel Replacement

A texel is replaced if it is one (and only one) of:

- a border texel,
- an invalid texel, or
- a sparse unbound texel.

Border texels are replaced with a value based on the image format and the borderColor of the sampler. The border color is:

Table 24. Border Color B, Custom Border Color VkSamplerCustomBorderColorCreateInfoEXT
The custom border color (U) may be rounded by implementations prior to texel replacement, but the error introduced by such a rounding must not exceed one ULP of the image’s format.

The names `VK_BORDER_COLOR_*_TRANSPARENT_BLACK`, `VK_BORDER_COLOR_*_OPAQUE_BLACK`, and `VK_BORDER_COLOR_*_OPAQUE_WHITE` are meant to describe which components are zeros and ones in the vocabulary of compositing, and are not meant to imply that the numerical value of `VK_BORDER_COLOR_INT_OPAQUE_WHITE` is a saturating value for integers.

This is substituted for the texel value by replacing the number of components in the image format.

<table>
<thead>
<tr>
<th>Texel Aspect or Format</th>
<th>Component Assignment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depth aspect</td>
<td>D = B_r</td>
</tr>
<tr>
<td>Stencil aspect</td>
<td>S = B_g†</td>
</tr>
<tr>
<td>One component color format</td>
<td>Color_r, b = B_r</td>
</tr>
<tr>
<td>Two component color format</td>
<td>[Color_r,g, b, a] = [B_r, B_g, B_b]</td>
</tr>
<tr>
<td>Three component color format</td>
<td>[Color_r,g,b, Color_b, a] = [B_r, B_g, B_b, B_a]</td>
</tr>
<tr>
<td>Four component color format</td>
<td>[Color_r,g,b, Color_b,a, Color_a] = [B_r, B_g, B_b, B_a, B_a]</td>
</tr>
<tr>
<td>Single component alpha format</td>
<td>[Color_r,g,b, Color_b,a, Color_a] = [0,0,0,B_a]</td>
</tr>
</tbody>
</table>

† S = B_g may be substituted as the replacement method by the implementation when `VkSamplerCreateInfo::borderColor` is `VK_BORDER_COLOR_INT_CUSTOM_EXT` and `VkSamplerCustomBorderColorCreateInfoEXT::format` is `VK_FORMAT_UNDEFINED`. Implementations should use S = B_r as the replacement method.

The value returned by a read of an invalid texel is undefined, unless that read operation is from a buffer resource and the `robustBufferAccess` feature is enabled. In that case, an invalid texel is replaced as described by the `robustBufferAccess` feature. If the access is to an image resource and...
the x, y, z, or layer coordinate validation fails and the robustImageAccess feature is enabled, then zero must be returned for the R, G, and B components, if present. Either zero or one must be returned for the A component, if present. If the robustImageAccess2 feature is enabled, zero values must be returned. If only the sample index was invalid, the values returned are undefined.

Additionally, if the robustImageAccess feature is enabled, but the robustImageAccess2 feature is not, any invalid texels may be expanded to four components prior to texel replacement. This means that components not present in the image format may be replaced with 0 or may undergo conversion to RGBA as normal.

Loads from a null descriptor return a four component color value of all zeros. However, for storage images and storage texel buffers using an explicit SPIR-V Image Format, loads from a null descriptor may return an alpha value of 1 (float or integer, depending on format) if the format does not include alpha.

If the VkPhysicalDeviceSparseProperties::residencyNonResidentStrict property is VK_TRUE, a sparse unbound texel is replaced with 0 or 0.0 values for integer and floating-point components of the image format, respectively.

If residencyNonResidentStrict is VK_FALSE, the value of the sparse unbound texel is undefined.

16.3.4. Depth Compare Operation

If the image view has a depth/stencil format, the depth component is selected by the aspectMask, and the operation is an OpImage*Dref* instruction, a depth comparison is performed. The result is 1.0 if the comparison evaluates to true, and 0.0 otherwise. This value replaces the depth component D.

The compare operation is selected by the VkCompareOp value set by VkSamplerCreateInfo::compareOp. The reference value from the SPIR-V operand Dref and the texel depth value Dtex are used as the reference and test values, respectively, in that operation.

If the image being sampled has an unsigned normalized fixed-point format, then Dref is clamped to [0,1] before the compare operation.

16.3.5. Conversion to RGBA

The texel is expanded from one, two, or three components to four components based on the image base color:

<table>
<thead>
<tr>
<th>Texel Aspect or Format</th>
<th>RGBA Color</th>
</tr>
</thead>
<tbody>
<tr>
<td>Depth aspect</td>
<td>[Color_r,Color_g,Color_b, Color_a] = [D,0,0,one]</td>
</tr>
<tr>
<td>Stencil aspect</td>
<td>[Color_r,Color_g,Color_b, Color_a] = [S,0,0,one]</td>
</tr>
<tr>
<td>One component color format</td>
<td>[Color_r,Color_g,Color_b, Color_a] = [Color_r,0,0,one]</td>
</tr>
<tr>
<td>Two component color format</td>
<td>[Color_r,Color_g,Color_b, Color_a] = [Color_r,Color_g,0,one]</td>
</tr>
<tr>
<td>Three component color format</td>
<td>[Color_r,Color_g,Color_b, Color_a] = [Color_r,Color_g,Color_b,one]</td>
</tr>
<tr>
<td>Four component color format</td>
<td>[Color_r,Color_g,Color_b, Color_a] = [Color_r,Color_g,Color_b,Color_a]</td>
</tr>
</tbody>
</table>
Texel Aspect or Format | RGBA Color
--- | ---
One alpha component color format | [Color_r, Color_g, Color_b, Color_a] = [0, 0, 0, Color_a]

where one = 1.0f for floating-point formats and depth aspects, and one = 1 for integer formats and stencil aspects.

### 16.3.6. Component Swizzle

All texel input instructions apply a *swizzle* based on:

- the `VkComponentSwizzle` enums in the `components` member of the `VkImageViewCreateInfo` structure for the image being read if sampler Y'CbCr conversion is not enabled, and
- the `VkComponentSwizzle` enums in the `components` member of the `VkSamplerYcbcrConversionCreateInfo` structure for the sampler Y'CbCr conversion if sampler Y'CbCr conversion is enabled.

The swizzle can rearrange the components of the texel, or substitute zero or one for any components. It is defined as follows for each color component:

\[
\text{Color}'\_\text{component} = \begin{cases} 
\text{Color}_r & \text{for RED swizzle} \\
\text{Color}_g & \text{for GREEN swizzle} \\
\text{Color}_b & \text{for BLUE swizzle} \\
\text{Color}_a & \text{for ALPHA swizzle} \\
0 & \text{for ZERO swizzle} \\
\text{one} & \text{for ONE swizzle} \\
\text{identity} & \text{for IDENTITY swizzle} 
\end{cases}
\]

where:

\[
\text{one} = \begin{cases} 
1.0f & \text{for floating point components} \\
1 & \text{for integer components} 
\end{cases}
\]

\[
\text{identity} = \begin{cases} 
\text{Color}_r & \text{for component} = r \\
\text{Color}_g & \text{for component} = g \\
\text{Color}_b & \text{for component} = b \\
\text{Color}_a & \text{for component} = a 
\end{cases}
\]

If the border color is one of the `VK_BORDER_COLOR_*_OPAQUE_BLACK` enums and the `VkComponentSwizzle` is not the *identity swizzle* for all components, the value of the texel after swizzle is undefined.

If the image view has a depth/stencil format and the `VkComponentSwizzle` is `VK_COMPONENT_SWIZZLE_ONE`, and `VkPhysicalDeviceMaintenance5PropertiesKHR::depthStencilSwizzleOneSupport` is not set to `VK_TRUE`, the value of the texel after swizzle is undefined.
16.3.7. Sparse Residency

*OpImageSparse* instructions return a structure which includes a *residency code* indicating whether any texels accessed by the instruction are sparse unbound texels. This code can be interpreted by the *OpImageSparseTexelsResident* instruction which converts the residency code to a boolean value.

16.3.8. Chroma Reconstruction

In some color models, the color representation is defined in terms of monochromatic light intensity (often called “luma”) and color differences relative to this intensity, often called “chroma”. It is common for color models other than RGB to represent the chroma components at lower spatial resolution than the luma component. This approach is used to take advantage of the eye’s lower spatial sensitivity to color compared with its sensitivity to brightness. Less commonly, the same approach is used with additive color, since the green component dominates the eye’s sensitivity to light intensity and the spatial sensitivity to color introduced by red and blue is lower.

Lower-resolution components are “downsampled” by resizing them to a lower spatial resolution than the component representing luminance. This process is also commonly known as “chroma subsampling”. There is one luminance sample in each texture texel, but each chrominance sample may be shared among several texels in one or both texture dimensions.

- “.444” formats do not spatially downsample chroma values compared with luma: there are unique chroma samples for each texel.
- “.422” formats have downsampling in the x dimension (corresponding to \(u\) or \(s\) coordinates): they are sampled at half the resolution of luma in that dimension.
- “.420” formats have downsampling in the x dimension (corresponding to \(u\) or \(s\) coordinates) and the y dimension (corresponding to \(v\) or \(t\) coordinates): they are sampled at half the resolution of luma in both dimensions.

The process of reconstructing a full color value for texture access involves accessing both chroma and luma values at the same location. To generate the color accurately, the values of the lower-resolution components at the location of the luma samples must be reconstructed from the lower-resolution sample locations, an operation known here as “chroma reconstruction” irrespective of the actual color model.

The location of the chroma samples relative to the luma coordinates is determined by the \(x\)ChromaOffset and \(y\)ChromaOffset members of the *VkSamplerYcbcrConversionCreateInfo* structure used to create the sampler Y’C\(_b\)C\(_b\) conversion.

The following diagrams show the relationship between unnormalized \((u,v)\) coordinates and \((i,j)\) integer texel positions in the luma component (shown in black, with circles showing integer sample positions) and the texel coordinates of reduced-resolution chroma components, shown as crosses in red.

**Note**

If the chroma values are reconstructed at the locations of the luma samples by means of interpolation, chroma samples from outside the image bounds are needed; these are determined according to *Wrapping Operation*. These diagrams
represent this by showing the bounds of the “chroma texel” extending beyond the image bounds, and including additional chroma sample positions where required for interpolation. The limits of a sample for NEAREST sampling is shown as a grid.

Figure 6. 422 downsampling, xChromaOffset=COSITED_EVEN

Figure 7. 422 downsampling, xChromaOffset=MIDPOINT
Figure 8. 420 downsampling, xChromaOffset=COSITED_EVEN, yChromaOffset=COSITED_EVEN

Figure 9. 420 downsampling, xChromaOffset=MIDPOINT, yChromaOffset=COSITED_EVEN
Reconstruction is implemented in one of two ways:

If the format of the image that is to be sampled sets `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT`, or the `VkSamplerYcbcrConversionCreateInfo`'s `forceExplicitReconstruction` is set to `VK_TRUE`, reconstruction is performed as an explicit step independent of filtering, described in the Explicit Reconstruction section.

If the format of the image that is to be sampled does not set `VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT` and if the
VkSamplerYcbcrConversionCreateInfo’s `forceExplicitReconstruction` is set to VK_FALSE, reconstruction is performed as an implicit part of filtering prior to color model conversion, with no separate post-conversion texel filtering step, as described in the Implicit Reconstruction section.

### Explicit Reconstruction

- If the `chromaFilter` member of the `VkSamplerYcbcrConversionCreateInfo` structure is VK_FILTER_NEAREST:
  - If the format’s R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a “_422” format), the \( \tau_{ij|\text{level}} \) values accessed by texel filtering are reconstructed as follows:
    \[
    \begin{align*}
    \tau_R'(i, j) &= \tau_R([i \times 0.5], j|\text{level}) \\
    \tau_B'(i, j) &= \tau_B([i \times 0.5], j|\text{level})
    \end{align*}
    \]
  - If the format’s R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a “_420” format), a similar relationship applies.

  **Note**
  
  `xChromaOffset` and `yChromaOffset` have no effect if `chromaFilter` is VK_FILTER_NEAREST for explicit reconstruction.

- If the `chromaFilter` member of the `VkSamplerYcbcrConversionCreateInfo` structure is VK_FILTER_LINEAR:
  - If the format’s R and B components are reduced in resolution in just width by a factor of two relative to the G component (i.e. this is a “_422” format):
    - If `xChromaOffset` is VK_CHROMA_LOCATION_COSITED_EVEN:
      \[
      \tau_{RB}'(i, j) = \begin{cases} 
      \tau_{RB}([i \times 0.5], j|\text{level}), & 0.5 \times i = [0.5 \times i] \\
      0.5 \times \tau_{RB}([i \times 0.5], j|\text{level}) + \\
      0.5 \times \tau_{RB}([i \times 0.5] + 1, j|\text{level}), & 0.5 \times i \neq [0.5 \times i]
      \end{cases}
      \]
    - If `xChromaOffset` is VK_CHROMA_LOCATION_MIDPOINT:
      \[
      \tau_{RB}'(i, j) = \begin{cases} 
      0.25 \times \tau_{RB}([i \times 0.5] - 1, j|\text{level}) + \\
      0.75 \times \tau_{RB}([i \times 0.5], j|\text{level}), & 0.5 \times i = [0.5 \times i] \\
      0.75 \times \tau_{RB}([i \times 0.5], j|\text{level}) + \\
      0.25 \times \tau_{RB}([i \times 0.5] + 1, j|\text{level}), & 0.5 \times i \neq [0.5 \times i]
      \end{cases}
      \]
  - If the format’s R and B components are reduced in resolution in width and height by a factor of two relative to the G component (i.e. this is a “_420” format), a similar relationship applies.

Due to the number of options, these formulae are expressed more concisely as follows:
\[
\begin{align*}
    i_{RB} &= \begin{cases} 
        0.5 \times (i), & \text{xChromaOffset=} \text{COSITED\_EVEN} \\
        0.5 \times (i - 0.5), & \text{xChromaOffset=} \text{MIDPOINT}
    \end{cases} \\
    j_{RB} &= \begin{cases} 
        0.5 \times (j), & \text{yChromaOffset=} \text{COSITED\_EVEN} \\
        0.5 \times (j - 0.5), & \text{yChromaOffset=} \text{MIDPOINT}
    \end{cases}
\end{align*}
\]

\[
\begin{align*}
    i_{floor} &= \lfloor i_{RB} \rfloor \\
    j_{floor} &= \lfloor j_{RB} \rfloor \\
    i_{frac} &= i_{RB} - i_{floor} \\
    j_{frac} &= j_{RB} - j_{floor}
\end{align*}
\]

\[
\begin{align*}
    \tau_{RB}^\prime(i, j) &= \tau_{RB}(i_{floor}, j_{floor})[\text{level}] \times (1 - i_{frac}) \times (1 - j_{frac}) + \\
    \tau_{RB}(1 + i_{floor}, j_{floor})[\text{level}] \times i_{frac} \times (1 - j_{frac}) + \\
    \tau_{RB}(i_{floor}, 1 + j_{floor})[\text{level}] \times (1 - i_{frac}) \times j_{frac} + \\
    \tau_{RB}(1 + i_{floor}, 1 + j_{floor})[\text{level}] \times i_{frac} \times j_{frac}
\end{align*}
\]

**Note**

In the case where the texture itself is bilinearly interpolated as described in [Texel Filtering](#), thus requiring four full-color samples for the filtering operation, and where the reconstruction of these samples uses bilinear interpolation in the chroma components due to \text{chromaFilter=} \text{VK\_FILTER\_LINEAR}, up to nine chroma samples may be required, depending on the sample location.

**Implicit Reconstruction**

Implicit reconstruction takes place by the samples being interpolated, as required by the filter settings of the sampler, except that \text{chromaFilter} takes precedence for the chroma samples.

If \text{chromaFilter} is \text{VK\_FILTER\_NEAREST}, an implementation may behave as if \text{xChromaOffset} and \text{yChromaOffset} were both \text{VK\_CHROMA\_LOCATION\_MIDPOINT}, irrespective of the values set.

**Note**

This will not have any visible effect if the locations of the luma samples coincide with the location of the samples used for rasterization.

The sample coordinates are adjusted by the downsample factor of the component (such that, for example, the sample coordinates are divided by two if the component has a downsample factor of two relative to the luma component):

\[
\begin{align*}
    u_{RB}^\prime(422/420) &= \begin{cases} 
        0.5 \times (u + 0.5), & \text{xChromaOffset=} \text{COSITED\_EVEN} \\
        0.5 \times u, & \text{xChromaOffset=} \text{MIDPOINT}
    \end{cases} \\
    v_{RB}^\prime(420) &= \begin{cases} 
        0.5 \times (v + 0.5), & \text{yChromaOffset=} \text{COSITED\_EVEN} \\
        0.5 \times v, & \text{yChromaOffset=} \text{MIDPOINT}
    \end{cases}
\end{align*}
\]
16.3.9. Sampler Y'CbCr Conversion

Sampler Y'CbCr conversion performs the following operations, which an implementation may combine into a single mathematical operation:

- Sampler Y'CbCr Range Expansion
- Sampler Y'CbCr Model Conversion

Sampler Y'CbCr Range Expansion

Sampler Y'CbCr range expansion is applied to color component values after all texel input operations which are not specific to sampler Y'CbCr conversion. For example, the input values to this stage have been converted using the normal format conversion rules.

The input values to this stage may have been converted using sRGB to linear conversion if ycbcrDegamma is enabled.

Sampler Y'CbCr range expansion is not applied if ycbcrModel is VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY. That is, the shader receives the vector C'rgba as output by the Component Swizzle stage without further modification.

For other values of ycbcrModel, range expansion is applied to the texel component values output by the Component Swizzle defined by the components member of VkSamplerYcbcrConversionCreateInfo. Range expansion applies independently to each component of the image. For the purposes of range expansion and Y'CbCr model conversion, the R and B components contain color difference (chroma) values and the G component contains luma. The A component is not modified by sampler Y'CbCr range expansion.

The range expansion to be applied is defined by the ycbcrRange member of the VkSamplerYcbcrConversionCreateInfo structure:

- If ycbcrRange is VK_SAMPLER_YCBCR_RANGE_ITU_FULL, the following transformations are applied:

\[
Y' = C'_{rgba} [G] \\
C_B = C'_{rgba} [B] - \frac{2^{(n-1)}}{(2^n) - 1} \\
C_R = C'_{rgba} [R] - \frac{2^{(n-1)}}{(2^n) - 1}
\]

*Note*

These formulae correspond to the “full range” encoding in the “Quantization schemes” chapter of the Khronos Data Format Specification.

Should any future amendments be made to the ITU specifications from which these equations are derived, the formulae used by Vulkan may also be updated to maintain parity.

- If ycbcrRange is VK_SAMPLER_YCBCR_RANGE_ITU_NARROW, the following transformations are applied:
These formulae correspond to the “narrow range” encoding in the “Quantization schemes” chapter of the Khronos Data Format Specification.

\( Y' = \frac{C^{\prime}r_{gba}[G] \times (2^n - 1) - 16 \times 2^n - 8}{219 \times 2^n - 8} \)

\( C_B = \frac{C^{\prime}r_{gba}[B] \times (2^n - 1) - 128 \times 2^n - 8}{224 \times 2^n - 8} \)

\( C_R = \frac{C^{\prime}r_{gba}[R] \times (2^n - 1) - 128 \times 2^n - 8}{224 \times 2^n - 8} \)

- \( n \) is the bit-depth of the components in the format.

The precision of the operations performed during range expansion must be at least that of the source format.

An implementation may clamp the results of these range expansion operations such that \( Y' \) falls in the range [0,1], and/or such that \( C_B \) and \( C_R \) fall in the range [-0.5,0.5].

**Sampler Y'CBCR Model Conversion**

The range-expanded values are converted between color models, according to the color model conversion specified in the `ycbcrModel` member:

**VK_SAMPLER_YCBCR_MODEL_CONVERSION_RGB_IDENTITY**

The color components are not modified by the color model conversion since they are assumed already to represent the desired color model in which the shader is operating; \( Y'C_B C_R \) range expansion is also ignored.

**VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_IDENTITY**

The color components are not modified by the color model conversion and are assumed to be treated as though in \( Y'C_B C_R \) form both in memory and in the shader; \( Y'C_B C_R \) range expansion is applied to the components as for other \( Y'C_B C_R \) models, with the vector \((C_B,Y',C_B,A)\) provided to the shader.

**VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_709**

The color components are transformed from a \( Y'C_B C_R \) representation to an \( R'G'B' \) representation as described in the “BT.709 \( Y'C_B C_R \) conversion” section of the Khronos Data Format Specification.

**VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_601**

The color components are transformed from a \( Y'C_B C_R \) representation to an \( R'G'B' \) representation as described in the “BT.601 \( Y'C_B C_R \) conversion” section of the Khronos Data Format Specification.

**VK_SAMPLER_YCBCR_MODEL_CONVERSION_YCBCR_2020**

The color components are transformed from a \( Y'C_B C_R \) representation to an \( R'G'B' \) representation as described in the “BT.2020 \( Y'C_B C_R \) conversion” section of the Khronos Data Format Specification.
In this operation, each output component is dependent on each input component.

An implementation may clamp the R'G'B' results of these conversions to the range [0,1].

The precision of the operations performed during model conversion must be at least that of the source format.

The alpha component is not modified by these model conversions.

Notes

Sampling operations in a non-linear color space can introduce color and intensity shifts at sharp transition boundaries. To avoid this issue, the technically precise color correction sequence described in the “Introduction to Color Conversions” chapter of the Khronos Data Format Specification may be performed as follows:

- Calculate the unnormalized texel coordinates corresponding to the desired sample position.

- For a minFilter or magFilter of VK_FILTER_NEAREST:
  1. Calculate \((i,j)\) for the sample location as described under the “nearest filtering” formulae in \((u,v,w,a)\) to \((i,j,k,l,n)\) Transformation and Array Layer Selection
  2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
  3. Sample using sampler Y'CbCr conversion at this location.

- For a minFilter or magFilter of VK_FILTER_LINEAR:
  1. Calculate \((i_0, i_1, j_0, j_1)\) for the sample location as described under the “linear filtering” formulae in \((u,v,w,a)\) to \((i,j,k,l,n)\) Transformation and Array Layer Selection
  2. Calculate the normalized texel coordinates corresponding to these integer coordinates.
  3. Sample using sampler Y'CbCr conversion at each of these locations.
  4. Convert the non-linear A'R'G'B' outputs of the Y'CbCr conversions to linear ARGB values as described in the “Transfer Functions” chapter of the Khronos Data Format Specification.
  5. Interpolate the linear ARGB values using the \(\alpha\) and \(\beta\) values described in the “linear filtering” section of \((u,v,w,a)\) to \((i,j,k,l,n)\) Transformation and Array Layer Selection and the equations in Texel Filtering.

The additional calculations and, especially, additional number of sampling operations in the VK_FILTER_LINEAR case can be expected to have a performance impact compared with using the outputs directly. Since the variations from “correct” results are subtle for most content, the application author should determine whether a more costly implementation is strictly necessary.

If chromaFilter, and minFilter or magFilter are both VK_FILTER_NEAREST, these
operations are redundant and sampling using sampler Y'CbCr conversion at the desired sample coordinates will produce the “correct” results without further processing.

16.4. Texel Output Operations

*Texel output instructions* are SPIR-V image instructions that write to an image. *Texel output operations* are a set of steps that are performed on state, coordinates, and texel values while processing a texel output instruction, and which are common to some or all texel output instructions. They include the following steps, which are performed in the listed order:

- Validation operations
  - Format validation
  - Type validation
  - Coordinate validation
  - Sparse validation
- Texel output format conversion

16.4.1. Texel Output Validation Operations

*Texel output validation operations* inspect instruction/image state or coordinates, and in certain circumstances cause the write to have no effect. There are a series of validations that the texel undergoes.

**Texel Format Validation**

If the image format of the `OpTypeImage` is not compatible with the `VkImageView`'s format, the write causes the contents of the image’s memory to become undefined.

**Texel Type Validation**

If the `Sampled Type` of the `OpTypeImage` does not match the SPIR-V Type, the write causes the value of the texel to become undefined. For integer types, if the signedness of the access does not match the signedness of the accessed resource, the write causes the value of the texel to become undefined.

16.4.2. Integer Texel Coordinate Validation

The integer texel coordinates are validated according to the same rules as for texel input coordinate validation.

If the texel fails integer texel coordinate validation, then the write has no effect.

16.4.3. Sparse Texel Operation

If the texel attempts to write to an unbound region of a sparse image, the texel is a sparse unbound texel. In such a case, if the `VkPhysicalDeviceSparseProperties::residencyNonResidentStrict` property is `VK_TRUE`, the sparse unbound texel write has no effect. If `residencyNonResidentStrict` is `VK_FALSE`,...
the write may have a side effect that becomes visible to other accesses to unbound texels in any resource, but will not be visible to any device memory allocated by the application.

16.4.4. Texel Output Format Conversion

If the image format is sRGB, a linear to sRGB conversion is applied to the R, G, and B components as described in the “sRGB EOTF” section of the Khronos Data Format Specification. The A component, if present, is unchanged.

Texels then undergo a format conversion from the floating point, signed, or unsigned integer type of the texel data to the VkFormat of the image view. If the number of components in the texel data is larger than the number of components in the format, additional components are discarded.

Each component is converted based on its type and size (as defined in the Format Definition section for each VkFormat). Floating-point outputs are converted as described in Floating-Point Format Conversions and Fixed-Point Data Conversion. Integer outputs are converted such that their value is preserved. The converted value of any integer that cannot be represented in the target format is undefined.

16.5. Normalized Texel Coordinate Operations

If the image sampler instruction provides normalized texel coordinates, some of the following operations are performed.

16.5.1. Projection Operation

For Proj image operations, the normalized texel coordinates \((s,t,r,q,a)\) and (if present) the \(D_{ref}\) coordinate are transformed as follows:

\[
s = \frac{s}{q} \quad \text{for 1D, 2D, or 3D image}
\]

\[
t = \frac{t}{q} \quad \text{for 2D or 3D image}
\]

\[
r = \frac{r}{q} \quad \text{for 3D image}
\]

\[
D_{ref} = \frac{D_{ref}}{q} \quad \text{if provided}
\]

16.5.2. Derivative Image Operations

Derivatives are used for LOD selection. These derivatives are either implicit (in an ImplicitLod image instruction in a fragment shader) or explicit (provided explicitly by shader to the image instruction in any shader).

For implicit derivatives image instructions, the derivatives of texel coordinates are calculated in the same manner as derivative operations. That is:
Partial derivatives not defined above for certain image dimensionality are set to zero.

For explicit LOD image instructions, if the optional SPIR-V operand \texttt{Grad} is provided, then the operand values are used for the derivatives. The number of components present in each derivative for a given image dimensionality matches the number of partial derivatives computed above.

If the optional SPIR-V operand \texttt{Lod} is provided, then derivatives are set to zero, the cube map derivative transformation is skipped, and the scale factor operation is skipped. Instead, the floating point scalar coordinate is directly assigned to $\lambda_{\text{base}}$ as described in LOD Operation.

If the image or sampler object used by an implicit derivative image instruction is not uniform across the quad and \texttt{quadDivergentImplicitLod} is not supported, then the derivative and LOD values are undefined. Implicit derivatives are well-defined when the image and sampler and control flow are uniform across the quad, even if they diverge between different quads.

If \texttt{quadDivergentImplicitLod} is supported, then derivatives and implicit LOD values are well-defined even if the image or sampler object are not uniform within a quad. The derivatives are computed as specified above, and the implicit LOD calculation proceeds for each shader invocation using its respective image and sampler object.

16.5.3. Cube Map Face Selection and Transformations

For cube map image instructions, the $(s,t,r)$ coordinates are treated as a direction vector $(r_x, r_y, r_z)$. The direction vector is used to select a cube map face. The direction vector is transformed to a per-face texel coordinate system $(s_{\text{face}}, t_{\text{face}})$. The direction vector is also used to transform the derivatives to per-face derivatives.

16.5.4. Cube Map Face Selection

The direction vector selects one of the cube map's faces based on the largest magnitude coordinate direction (the major axis direction). Since two or more coordinates can have identical magnitude, the implementation must have rules to disambiguate this situation.

The rules should have as the first rule that $r_z$ wins over $r_y$ and $r_x$, and the second rule that $r_y$ wins over $r_x$. An implementation may choose other rules, but the rules must be deterministic and depend only on $(r_x, r_y, r_z)$.

The layer number (corresponding to a cube map face), the coordinate selections for $s_c$, $t_c$, $r_c$, and the selection of derivatives, are determined by the major axis direction as specified in the following two tables.

\begin{verbatim}
\texttt{ds}/\texttt{dx} = dPdx(s), \quad \texttt{ds}/\texttt{dy} = dPdy(s), \quad \texttt{for 1D, 2D, Cube, or 3D image}
\texttt{dt}/\texttt{dx} = dPdx(t), \quad \texttt{dt}/\texttt{dy} = dPdy(t), \quad \texttt{for 2D, Cube, or 3D image}
\texttt{dr}/\texttt{dx} = dPdx(r), \quad \texttt{dr}/\texttt{dy} = dPdy(r), \quad \texttt{for Cube or 3D image}
\end{verbatim}

16.5.5. Cube Map Coordinate Transformation

\[
s_{face} = \frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2}
\]

\[
t_{face} = \frac{1}{2} \times \frac{t_c}{|r_c|} + \frac{1}{2}
\]

16.5.6. Cube Map Derivative Transformation

\[
\frac{\partial s_{face}}{\partial x} = \frac{\partial}{\partial x} \left( \frac{1}{2} \times \frac{s_c}{|r_c|} + \frac{1}{2} \right)
\]

\[
\frac{\partial s_{face}}{\partial x} = \frac{1}{2} \times \frac{\partial}{\partial x} \left( \frac{s_c}{|r_c|} \right)
\]

\[
\frac{\partial s_{face}}{\partial x} = \frac{1}{2} \times \left( \frac{|r_c| \times \partial s_c / \partial x - s_c \times \partial r_c / \partial x}{(r_c)^2} \right)
\]
16.5.7. Scale Factor Operation, LOD Operation and Image Level(s) Selection

LOD selection can be either explicit (provided explicitly by the image instruction) or implicit (determined from a scale factor calculated from the derivatives). The LOD must be computed with \texttt{mipmapPrecisionBits} of accuracy.

**Scale Factor Operation**

The magnitude of the derivatives are calculated by:

\[
\begin{align*}
\frac{\partial s_{face}}{\partial y} &= \frac{1}{2} \times \left( \frac{|r_c| \times \partial s_c / \partial y - s_c \times \partial r_c / \partial y}{(r_c)^2} \right) \\
\frac{\partial t_{face}}{\partial x} &= \frac{1}{2} \times \left( \frac{|r_c| \times \partial t_c / \partial x - t_c \times \partial r_c / \partial x}{(r_c)^2} \right) \\
\frac{\partial t_{face}}{\partial y} &= \frac{1}{2} \times \left( \frac{|r_c| \times \partial t_c / \partial y - t_c \times \partial r_c / \partial y}{(r_c)^2} \right)
\end{align*}
\]

where:

\[\frac{\partial t}{\partial x} = \frac{\partial t}{\partial y} = 0 \text{ (for 1D images)}\]

\[\frac{\partial r}{\partial x} = \frac{\partial r}{\partial y} = 0 \text{ (for 1D, 2D or Cube images)}\]

and:

\[w_{\text{base}} = \text{image.w}\]
$h_{\text{base}} = \text{image}.h$

$d_{\text{base}} = \text{image}.d$

(for the baseMipLevel, from the image descriptor).

For corner-sampled images, the $w_{\text{base}}$, $h_{\text{base}}$, and $d_{\text{base}}$ are instead:

$w_{\text{base}} = \text{image}.w - 1$

$h_{\text{base}} = \text{image}.h - 1$

$d_{\text{base}} = \text{image}.d - 1$

A point sampled in screen space has an elliptical footprint in texture space. The minimum and maximum scale factors ($\rho_{\text{min}}$, $\rho_{\text{max}}$) should be the minor and major axes of this ellipse.

The scale factors $\rho_x$ and $\rho_y$, calculated from the magnitude of the derivatives in $x$ and $y$, are used to compute the minimum and maximum scale factors.

$\rho_x$ and $\rho_y$ may be approximated with functions $f_x$ and $f_y$, subject to the following constraints:

- $f_x$ is continuous and monotonically increasing in each of $m_{ux}$, $m_{vx}$, and $m_{wx}$
- $f_y$ is continuous and monotonically increasing in each of $m_{uy}$, $m_{vy}$, and $m_{wy}$

$$\max(|m_{ux}|, |m_{vx}|, |m_{wx}|) \leq f_x \leq \sqrt{2}(|m_{ux}| + |m_{vx}| + |m_{wx}|)$$

$$\max(|m_{uy}|, |m_{vy}|, |m_{wy}|) \leq f_y \leq \sqrt{2}(|m_{uy}| + |m_{vy}| + |m_{wy}|)$$

The minimum and maximum scale factors ($\rho_{\text{min}}$, $\rho_{\text{max}}$) are determined by:

$\rho_{\text{max}} = \max(\rho_x, \rho_y)$

$\rho_{\text{min}} = \min(\rho_x, \rho_y)$

The ratio of anisotropy is determined by:

$$\eta = \min(\rho_{\text{max}}/\rho_{\text{min}}, \text{maxAniso})$$

where:
sampler.maxAniso = maxAnisotropy (from sampler descriptor)

limits.maxAniso = maxSamplerAnisotropy (from physical device limits)

maxAniso = min(sampler.maxAniso, limits.maxAniso)

If \( \rho_{\text{max}} = \rho_{\text{min}} = 0 \), then all the partial derivatives are zero, the fragment's footprint in texel space is a point, and \( \eta \) should be treated as 1. If \( \rho_{\text{max}} \neq 0 \) and \( \rho_{\text{min}} = 0 \) then all partial derivatives along one axis are zero, the fragment's footprint in texel space is a line segment, and \( \eta \) should be treated as \( \text{maxAniso} \). However, anytime the footprint is small in texel space the implementation may use a smaller value of \( \eta \), even when \( \rho_{\text{min}} \) is zero or close to zero. If either \text{VkPhysicalDeviceFeatures}. samplerAnisotropy or \text{VkSamplerCreateInfo}. anisotropyEnable are \text{VK_FALSE}, \text{maxAniso} is set to 1.

If \( \eta = 1 \), sampling is isotropic. If \( \eta > 1 \), sampling is anisotropic.

The sampling rate (N) is derived as:

\[
N = \lceil \eta \rceil
\]

An implementation may round \( N \) up to the nearest supported sampling rate. An implementation may use the value of \( N \) as an approximation of \( \eta \).

LOD Operation

The LOD parameter \( \lambda \) is computed as follows:

\[
\lambda_{\text{base}}(x, y) = \begin{cases} 
\text{shaderOp.Lod} & \text{(from optional SPIR-V operand)} \\
\log_2 \left( \frac{\rho_{\text{max}}}{\eta} \right) & \text{otherwise}
\end{cases}
\]

\[
\lambda'(x, y) = \lambda_{\text{base}} + \text{clamp} \left( \text{sampler.bias} + \text{shaderOp.bias}, -\text{maxSamplerLodBias}, \text{maxSamplerLodBias} \right)
\]

\[
\lambda = \begin{cases} 
\text{lod}_{\text{max}}, & \lambda' > \text{lod}_{\text{max}} \\
\lambda', & \text{lod}_{\text{min}} \leq \lambda' \leq \text{lod}_{\text{max}} \\
\text{lod}_{\text{min}}, & \lambda' < \text{lod}_{\text{min}} \\
\text{undefined}, & \text{lod}_{\text{min}} > \text{lod}_{\text{max}}
\end{cases}
\]

where:

\[
\text{sampler.bias} = \text{mipLodBias}
\]

\[
\text{shaderOp.bias} = \begin{cases} 
\text{Bias} & \text{(from optional SPIR-V operand)} \\
0 & \text{otherwise}
\end{cases}
\]

\[
\text{sampler.lod}_{\text{min}} = \text{minLod}
\]

\[
\text{shaderOp.lod}_{\text{min}} = \begin{cases} 
\text{MinLod} & \text{(from optional SPIR-V operand)} \\
0 & \text{otherwise}
\end{cases}
\]

\[
\text{lod}_{\text{min}} = \max(\text{sampler.lod}_{\text{min}}, \text{shaderOp.lod}_{\text{min}})
\]

\[
\text{lod}_{\text{max}} = \maxLod
\]

and maxSamplerLodBias is the value of the \text{VkPhysicalDeviceLimits} feature maxSamplerLodBias.
Image Level(s) Selection

The image level(s) $d$, $d_{hi}$, and $d_{lo}$, which texels are read from are determined by an image-level parameter $d_l$, which is computed based on the LOD parameter, as follows:

$$d_l = \begin{cases} \text{nearest}(d'), & \text{mipmapMode is VK_SAMPLER_MIPMAP_MODE_NEAREST} \\ d', & \text{otherwise} \end{cases}$$

where:

$$d' = \max(l_{\text{level base}} + \text{clamp}(\lambda, 0, q), \text{minLod}_{\text{imageView}})$$

$$\text{nearest}(d') = \begin{cases} \lfloor d' + 0.5 \rfloor - 1, & \text{preferred} \\ \lfloor d' + 0.5 \rfloor, & \text{alternative} \end{cases}$$

and:

$$\text{minLod}_{\text{imageView}} = \begin{cases} \text{minLodFloat}_{\text{imageView}}, & \text{preferred} \\ \text{minLodInteger}_{\text{imageView}}, & \text{alternative} \end{cases}$$

$$l_{\text{level base}} = \text{baseMipLevel}$$

$$q = \text{levelCount} - 1$$

$\text{baseMipLevel}$ and $\text{levelCount}$ are taken from the subresourceRange of the image view.

$\text{minLod}_{\text{imageView}}$ must be less or equal to $l_{\text{level base}} + q$.

If the sampler’s mipmapMode is VK_SAMPLER_MIPMAP_MODE_NEAREST, then the level selected is $d = d_l$.

If the sampler’s mipmapMode is VK_SAMPLER_MIPMAP_MODE_LINEAR, two neighboring levels are selected:

$$d_{hi} = \lfloor d_l \rfloor$$

$$d_{lo} = \min(d_{hi} + 1, l_{\text{level base}} + q)$$

$$\delta = d_l - d_{hi}$$

$\delta$ is the fractional value, quantized to the number of mipmap precision bits, used for linear filtering between levels.

16.5.8. (s,t,r,q,a) to (u,v,w,a) Transformation

The normalized texel coordinates are scaled by the image level dimensions and the array layer is selected.

This transformation is performed once for each level used in filtering (either $d$, or $d_{hi}$ and $d_{lo}$).
\[ u(x, y) = s(x, y) \times \text{width}_{\text{scale}} + \Delta_i \]

\[ v(x, y) = \begin{cases} 
0 & \text{for 1D images} \\
t(x, y) \times \text{height}_{\text{scale}} + \Delta_j & \text{otherwise} 
\end{cases} \]

\[ w(x, y) = \begin{cases} 
0 & \text{for 2D or Cube images} \\
r(x, y) \times \text{depth}_{\text{scale}} + \Delta_k & \text{otherwise} 
\end{cases} \]

\[ a(x, y) = \begin{cases} 
a(x, y) & \text{for array images} \\
0 & \text{otherwise} 
\end{cases} \]

where:

\[ \text{width}_{\text{scale}} = \text{width}_{\text{level}} \]

\[ \text{height}_{\text{scale}} = \text{height}_{\text{level}} \]

\[ \text{depth}_{\text{scale}} = \text{depth}_{\text{level}} \]

for conventional images, and:

\[ \text{width}_{\text{scale}} = \text{width}_{\text{level}} - 1 \]

\[ \text{height}_{\text{scale}} = \text{height}_{\text{level}} - 1 \]

\[ \text{depth}_{\text{scale}} = \text{depth}_{\text{level}} - 1 \]

for corner-sampled images.

and where \((\Delta_i, \Delta_j, \Delta_k)\) are taken from the image instruction if it includes a ConstOffset or Offset operand, otherwise they are taken to be zero.

Operations then proceed to Unnormalized Texel Coordinate Operations.

### 16.6. Unnormalized Texel Coordinate Operations

#### 16.6.1. \((u,v,w,a)\) to \((i,j,k,l,n)\) Transformation and Array Layer Selection

The unnormalized texel coordinates are transformed to integer texel coordinates relative to the selected mipmap level.

The layer index \(l\) is computed as:
\[ l = \text{clamp}(\text{RNE}(a), 0, \text{layerCount} - 1) + \text{baseArrayLayer} \]

where \text{layerCount} is the number of layers in the image subresource range of the image view, \text{baseArrayLayer} is the first layer from the subresource range, and where:

\[
\text{RNE}(a) = \begin{cases} 
\text{roundTiesToEven}(a) & \text{preferred, from IEEE Std 754-2008 Floating-Point Arithmetic} \\
[a + 0.5] & \text{alternative}
\end{cases}
\]

The sample index \( n \) is assigned the value 0.

Nearest filtering (\text{VK\_FILTER\_NEAREST}) computes the integer texel coordinates that the unnormalized coordinates lie within:

\[
i = \lfloor u + \text{shift} \rfloor \\
j = \lfloor v + \text{shift} \rfloor \\
k = \lfloor w + \text{shift} \rfloor
\]

where:

\[
\text{shift} = 0.0
\]

for conventional images, and:

\[
\text{shift} = 0.5
\]

for corner-sampled images.

Linear filtering (\text{VK\_FILTER\_LINEAR}) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of \( i_0 \) or \( i_1 \), \( j_0 \) or \( j_1 \), \( k_0 \) or \( k_1 \), as well as weights \( \alpha \), \( \beta \), and \( \gamma \).

\[
i_0 = \lfloor u - \text{shift} \rfloor \\
i_1 = i_0 + 1 \\
j_0 = \lfloor v - \text{shift} \rfloor \\
j_1 = j_0 + 1 \\
k_0 = \lfloor w - \text{shift} \rfloor \\
k_1 = k_0 + 1
\]

\[
\alpha = \frac{\text{frac}(u - \text{shift})}{} \\
\beta = \frac{\text{frac}(v - \text{shift})}{} \\
\gamma = \frac{\text{frac}(w - \text{shift})}{}
\]

where:
shift = 0.5
for conventional images, and:

shift = 0.0
for corner-sampled images, and where:

\[ \text{frac}(x) = x - \lfloor x \rfloor \]

where the number of fraction bits retained is specified by VkPhysicalDeviceLimits::subTexelPrecisionBits.

Cubic filtering (VK_FILTER_CUBIC_EXT) computes a set of neighboring coordinates which bound the unnormalized coordinates. The integer texel coordinates are combinations of \(i_0, i_1, i_2\) or \(i_3, j_0, j_1, j_2\) or \(j_3, k_0, k_1, k_2\) or \(k_3\), as well as weights \(\alpha, \beta, \gamma\).

\[
\begin{align*}
  i_0 &= \lfloor u - \frac{3}{2} \rfloor & i_1 &= i_0 + 1 & i_2 &= i_1 + 1 & i_3 &= i_2 + 1 \\
  j_0 &= \lfloor v - \frac{3}{2} \rfloor & j_1 &= j_0 + 1 & j_2 &= j_1 + 1 & j_3 &= j_2 + 1 \\
  k_0 &= \lfloor w - \frac{3}{2} \rfloor & k_1 &= k_0 + 1 & k_2 &= k_1 + 1 & k_3 &= k_2 + 1 \\
  \alpha &= \text{frac}\left(u - \frac{1}{2}\right) \\
  \beta &= \text{frac}\left(v - \frac{1}{2}\right) \\
  \gamma &= \text{frac}\left(w - \frac{1}{2}\right)
\end{align*}
\]

where:

\[ \text{frac}(x) = x - \lfloor x \rfloor \]

where the number of fraction bits retained is specified by VkPhysicalDeviceLimits::subTexelPrecisionBits.

### 16.7. Integer Texel Coordinate Operations

Integer texel coordinate operations may supply a LOD which texels are to be read from or written to using the optional SPIR-V operand Lod. If the Lod is provided then it must be an integer.

The image level selected is:
\[ d = level_{base} + \begin{cases} \text{Lod} & \text{(from optional SPIR-V operand)} \\ 0 & \text{otherwise} \end{cases} \]

If \( d \) does not lie in the range \([\text{baseMipLevel}, \text{baseMipLevel} + \text{levelCount})\) or \( d \) is less than \( \text{minLodInteger}_{\text{imageView}} \), then any values fetched are zero if the \text{robustImageAccess2} feature is enabled, otherwise are undefined, and any writes (if supported) are discarded.

### 16.8. Image Sample Operations

#### 16.8.1. Wrapping Operation

If the used sampler was created without \text{VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT}, Cube images ignore the wrap modes specified in the sampler. Instead, if \text{VK_FILTER_NEAREST} is used within a mip level then \text{VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE} is used, and if \text{VK_FILTER_LINEAR} is used within a mip level then sampling at the edges is performed as described earlier in the Cube map edge handling section.

The first integer texel coordinate \( i \) is transformed based on the \text{addressModeU} parameter of the sampler.

\[
i = \begin{cases} 
  i \mod \text{size} & \text{for repeat} \\
  (\text{size} - 1) - \text{mirror}((i \mod (2 \times \text{size})) - \text{size}) & \text{for mirrored repeat} \\
  \text{clamp}(i, 0, \text{size} - 1) & \text{for clamp to edge} \\
  \text{clamp}(i, -1, \text{size}) & \text{for clamp to border} \\
  \text{clamp}(\text{mirror}(i), 0, \text{size} - 1) & \text{for mirror clamp to edge} 
\end{cases}
\]

where:

\[
\text{mirror}(n) = \begin{cases} 
  n & \text{for } n \geq 0 \\
  -(1 + n) & \text{otherwise} 
\end{cases}
\]

\( j \) (for 2D and Cube image) and \( k \) (for 3D image) are similarly transformed based on the \text{addressModeV} and \text{addressModeW} parameters of the sampler, respectively.

#### 16.8.2. Texel Gathering

SPIR-V instructions with \text{Gather} in the name return a vector derived from 4 texels in the base level of the image view. The rules for the \text{VK_FILTER_LINEAR} minification filter are applied to identify the four selected texels. Each texel is then converted to an RGBA value according to \text{conversion to RGBA} and then \text{swizzled}. A four-component vector is then assembled by taking the component indicated by the \text{Component} value in the instruction from the swizzled color value of the four texels. If the operation does not use the \text{ConstOffsets} image operand then the four texels form the \( 2 \times 2 \) rectangle used for texture filtering:
If the operation does use the `ConstOffsets` image operand then the offsets allow a custom filter to be defined:

\[
\begin{align*}
\tau[R] &= \tau_{i0j0}[\text{level}_{\text{base}}][\text{comp}] + \Delta_0 \text{[level}_{\text{base}}][\text{comp}]
\tau[G] &= \tau_{i0j0}[\text{level}_{\text{base}}][\text{comp}] + \Delta_1 \text{[level}_{\text{base}}][\text{comp}]
\tau[B] &= \tau_{i0j0}[\text{level}_{\text{base}}][\text{comp}] + \Delta_2 \text{[level}_{\text{base}}][\text{comp}]
\tau[A] &= \tau_{i0j0}[\text{level}_{\text{base}}][\text{comp}] + \Delta_3 \text{[level}_{\text{base}}][\text{comp}]
\end{align*}
\]

where:

\[
\tau[\text{level}_{\text{base}}][\text{comp}] = \begin{cases} 
\tau[\text{level}_{\text{base}}][R], & \text{for comp = 0} 
\tau[\text{level}_{\text{base}}][G], & \text{for comp = 1} 
\tau[\text{level}_{\text{base}}][B], & \text{for comp = 2} 
\tau[\text{level}_{\text{base}}][A], & \text{for comp = 3}
\end{cases}
\]

\(\text{comp from SPIR-V operand Component}\)

**OpImage*Gather** must not be used on a sampled image with `sampler YCbCr conversion` enabled.

If \(\text{level}_{\text{base}} < \text{minLodInteger}_{\text{imageView}}\), then any values fetched are zero if `robustImageAccess2` is enabled. Otherwise values are undefined.

### 16.8.3. Texel Filtering

Texel filtering is first performed for each level (either \(d\) or \(d\_hi\) and \(d\_lo\)).

If \(\lambda\) is less than or equal to zero, the texture is said to be *magnified*, and the filter mode within a mip level is selected by the `magFilter` in the sampler. If \(\lambda\) is greater than zero, the texture is said to be *minified*, and the filter mode within a mip level is selected by the `minFilter` in the sampler.

**Texel Nearest Filtering**

Within a mip level, `VK_FILTER_NEAREST` filtering selects a single value using the \((i, j, k)\) texel coordinates, with all texels taken from layer \(l\).

\[
\tau[\text{level}] = \begin{cases} 
\tau_{ijk}[\text{level}], & \text{for 3D image} 
\tau_{ij}[\text{level}], & \text{for 2D or Cube image} 
\tau_{i}[\text{level}], & \text{for 1D image}
\end{cases}
\]

**Texel Linear Filtering**

Within a mip level, `VK_FILTER_LINEAR` filtering combines 8 (for 3D), 4 (for 2D or Cube), or 2 (for 1D)
texel values, together with their linear weights. The linear weights are derived from the fractions computed earlier:

\[
\begin{align*}
  w_{i_0} &= (1 - \alpha) \\
  w_{i_1} &= (\alpha) \\
  w_{j_0} &= (1 - \beta) \\
  w_{j_1} &= (\beta) \\
  w_{k_0} &= (1 - \gamma) \\
  w_{k_1} &= (\gamma)
\end{align*}
\]

The values of multiple texels, together with their weights, are combined to produce a filtered value.

The `VkSamplerReductionModeCreateInfo::reductionMode` can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, a weighted average is computed:

\[
\begin{align*}
  \tau_{3D} &= \sum_{k=0}^{k_1} \sum_{j=0}^{j_1} \sum_{i=0}^{i_1} (w_i)(w_j)(w_k)\tau_{ijk} \\
  \tau_{2D} &= \sum_{j=0}^{j_1} \sum_{i=0}^{i_1} (w_i)(w_j)\tau_{ij} \\
  \tau_{1D} &= \sum_{i=0}^{i_1} (w_i)\tau_i
\end{align*}
\]

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

**Texel Cubic Filtering**

Within a mip level, `VK_FILTER_CUBIC_EXT`, filtering computes a weighted average of 64 (for 3D), 16 (for 2D), or 4 (for 1D) texel values, together with their Catmull-Rom, Zero Tangent Cardinal, B-Spline, or Mitchell-Netravali weights as specified by `VkSamplerCubicWeightsCreateInfoQCOM`.

Catmull-Rom weights specified by `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM` are derived from the fractions computed earlier.
Zero Tangent Cardinal weights specified by `VK_CUBIC_FILTER_WEIGHTS_ZERO_TANGENT_CARDINAL_QCOM` are derived from the fractions computed earlier.

B-Spline weights specified by `VK_CUBIC_FILTER_WEIGHTS_B_SPLINE_QCOM` are derived from the fractions computed earlier.

Mitchell-Netravali weights specified by `VK_CUBIC_FILTER_WEIGHTS_MITCHELL_NETRAVALI_QCOM` are derived from the fractions computed earlier.
The values of multiple texels, together with their weights, are combined to produce a filtered value.

The `VkSamplerReductionModeCreateInfo::reductionMode` can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the `reductionMode` is set (explicitly or implicitly) to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE` or `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`, a weighted average is computed:

$$
\tau_{3D} = \sum_{k=0}^{k_3} \sum_{j=0}^{j_3} \sum_{i=0}^{i_3} \frac{(w_i)(w_j)(w_k)\tau_{ijk}}{18}
$$

$$
\tau_{2D} = \sum_{j=0}^{j_3} \sum_{i=0}^{i_3} \frac{(w_i)(w_j)\tau_{ij}}{18}
$$

$$
\tau_{1D} = \sum_{i=0}^{i_3} \frac{(w_i)\tau_i}{18}
$$

However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above set of multiple texels, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the set of texels with non-zero weights.

**Texel Range Clamp**

When the `reductionMode` is set to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`, the weighted average is clamped to be within the component-wise minimum and maximum of the set of texels with non-zero weights.

**Texel Mipmap Filtering**

`VK_SAMPLER_MIPMAP_MODE_NEAREST` filtering returns the value of a single mipmap level,

$$
\tau = \tau[d].
$$

`VK_SAMPLER_MIPMAP_MODE_LINEAR` filtering combines the values of multiple mipmap levels ($\tau_{hi}$) and
The linear weights are derived from the fraction computed earlier:

\[
    w_{hi} = (1 - \delta) \\
    w_{lo} = (\delta)
\]

The values of multiple mipmap levels, together with their weights, are combined to produce a final filtered value.

The \texttt{VkSamplerReductionModeCreateInfo::reductionMode} can control the process by which multiple texels, together with their weights, are combined to produce a filtered texture value.

When the \texttt{reductionMode} is set (explicitly or implicitly) to \texttt{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE}, a weighted average is computed:

\[
    \tau = (w_{hi})\tau_{hi} + (w_{lo})\tau_{lo}
\]

However, if the reduction mode is \texttt{VK_SAMPLER_REDUCTION_MODE_MIN} or \texttt{VK_SAMPLER_REDUCTION_MODE_MAX}, the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

### Texel Anisotropic Filtering

Anisotropic filtering is enabled by the \texttt{anisotropyEnable} in the sampler. When enabled, the image filtering scheme accounts for a degree of anisotropy.

The particular scheme for anisotropic texture filtering is implementation-dependent. Implementations should consider the \texttt{magFilter}, \texttt{minFilter} and \texttt{mipmapMode} of the sampler to control the specifics of the anisotropic filtering scheme used. In addition, implementations should consider \texttt{minLod} and \texttt{maxLod} of the sampler.

#### Note

For historical reasons, vendor implementations of anisotropic filtering interpret these sampler parameters in different ways, particularly in corner cases such as \texttt{magFilter}, \texttt{minFilter} of \texttt{NEAREST} or \texttt{maxAnisotropy} equal to 1.0. Applications should not expect consistent behavior in such cases, and should use anisotropic filtering only with parameters which are expected to give a quality improvement relative to \texttt{LINEAR} filtering.

The following describes one particular approach to implementing anisotropic filtering for the 2D Image case; implementations may choose other methods:

Given a \texttt{magFilter}, \texttt{minFilter} of \texttt{VK_FILTER_LINEAR} and a \texttt{mipmapMode} of \texttt{VK_SAMPLER_MIPMAP_MODE_NEAREST}:

Instead of a single isotropic sample, \( N \) isotropic samples are sampled within the image footprint of the image level \( d \) to approximate an anisotropic filter. The sum \( \tau_{2D\text{aniso}} \) is defined using the single isotropic \( \tau_{2D}(u,v) \) at level \( d \).
When `VkSamplerReductionModeCreateInfo::reductionMode` is set to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, the above summation is used. However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, together with their weights, computing a component-wise minimum or maximum, respectively, of the components of the values with non-zero weights.

### 16.9. Texel Footprint Evaluation

The SPIR-V instruction `OpImageSampleFootprintNV` evaluates the set of texels from a single mip level that would be accessed during a texel filtering operation. In addition to the inputs that would be accepted by an equivalent `OpImageSample*` instruction, `OpImageSampleFootprintNV` accepts two additional inputs. The `Granularity` input is an integer identifying the size of texel groups used to evaluate the footprint. Each bit in the returned footprint mask corresponds to an aligned block of texels whose size is given by the following table:

<table>
<thead>
<tr>
<th>Granularity</th>
<th>Dim = 2D</th>
<th>Dim = 3D</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>unsupported</td>
<td>unsupported</td>
</tr>
<tr>
<td>1</td>
<td>2x2</td>
<td>2x2x2</td>
</tr>
<tr>
<td>2</td>
<td>4x2</td>
<td>unsupported</td>
</tr>
<tr>
<td>3</td>
<td>4x4</td>
<td>4x4x2</td>
</tr>
<tr>
<td>4</td>

<td>256x128</td>
<td>64x32x32</td>
</tr>
<tr>
<td>15</td>
<td>256x256</td>
<td>unsupported</td>
</tr>
</tbody>
</table>

The `Coarse` input is used to select between the two mip levels that may be accessed during texel
filtering when using a `mipmapMode` of `VK_SAMPLER_MIPMAP_MODE_LINEAR`. When filtering between two mip levels, a `Coarse` value of `true` requests the footprint in the lower-resolution mip level (higher level number), while `false` requests the footprint in the higher-resolution mip level. If texel filtering would access only a single mip level, the footprint in that level would be returned when `Coarse` is set to `false`; an empty footprint would be returned when `Coarse` is set to `true`.

The footprint for `OpImageSampleFootprintNV` is returned in a structure with six members:

- The first member is a boolean value that is true if the texel filtering operation would access only a single mip level.
- The second member is a two- or three-component integer vector holding the footprint anchor location. For two-dimensional images, the returned components are in units of eight texel groups. For three-dimensional images, the returned components are in units of four texel groups.
- The third member is a two- or three-component integer vector holding a footprint offset relative to the anchor. All returned components are in units of texel groups.
- The fourth member is a two-component integer vector mask, which holds a bitfield identifying the set of texel groups in an 8x8 or 4x4x4 neighborhood relative to the anchor and offset.
- The fifth member is an integer identifying the mip level containing the footprint identified by the anchor, offset, and mask.
- The sixth member is an integer identifying the granularity of the returned footprint.

For footprints in two-dimensional images (Dim2D), the mask returned by `OpImageSampleFootprintNV` indicates whether each texel group in a 8x8 local neighborhood of texel groups would have one or more texels accessed during texel filtering. In the mask, the texel group with local group coordinates \((lgx, lgy)\) is considered covered if and only if

\[
0 \neq ( (mask.x + (mask.y<<32))&(1<<(lgy \times 8+lgx)))
\]

where:

- \(0 \leq lgx < 8\) and \(0 \leq lgy < 8\); and
- `mask` is the returned two-component mask.

The local group with coordinates \((lgx, lgy)\) in the mask is considered covered if and only if the texel filtering operation would access one or more texels \(t_{ij}\) in the returned mip level where:

\[
i0 = \begin{cases} 
gran.x \times (8 \times anchor.x + lgx), & \text{if } lgx + offset.x < 8 \\
gran.x \times (8 \times (anchor.x - 1) + lgx), & \text{otherwise}
\end{cases} \\
\]

\[
i1 = i0 + gran.x - 1
\]

\[
j0 = \begin{cases} 
gran.y \times (8 \times anchor.y + lgy), & \text{if } lgy + offset.y < 8 \\
gran.y \times (8 \times (anchor.y - 1) + lgy), & \text{otherwise}
\end{cases} \\
\]

\[
j1 = j0 + gran.y - 1
\]

and
• \( i_0 \leq i \leq i_1 \) and \( j_0 \leq j \leq j_1 \);
• \( \text{gran} \) is a two-component vector holding the width and height of the texel group identified by the granularity;
• \( \text{anchor} \) is the returned two-component anchor vector; and
• \( \text{offset} \) is the returned two-component offset vector.

For footprints in three-dimensional images (Dim3D), the mask returned by \text{OpImageSampleFootprintNV} indicates whether each texel group in a 4x4x4 local neighborhood of texel groups would have one or more texels accessed during texel filtering. In the mask, the texel group with local group coordinates \((lgx, lgy, lgz)\), is considered covered if and only if:

\[
0 \not\equiv ((mask.x + (mask.y<<32))&(1<<(lgz \times 16+lgy \times 4+lgx)))
\]

where:

• \( 0 \leq lgx<4, 0 \leq lgy<4, \) and \( 0 \leq lgz<4; \) and
• \( mask \) is the returned two-component mask.

The local group with coordinates \((lgx, lgy, lgz)\) in the mask is considered covered if and only if the texel filtering operation would access one or more texels \( \tau_{ijkl} \) in the returned mip level where:

\[
i_0 = \begin{cases} \text{gran}.x \times (4 \times \text{anchor}.x + lgx), & \text{if} lgx + \text{offset}.x<4 \\ \text{gran}.x \times (4 \times (\text{anchor}.x - 1) + lgx), & \text{otherwise} \end{cases}
\]

\[
i_1 = i_0 + \text{gran}.x - 1
\]

\[
j_0 = \begin{cases} \text{gran}.y \times (4 \times \text{anchor}.y + lgy), & \text{if} lgy + \text{offset}.y<4 \\ \text{gran}.y \times (4 \times (\text{anchor}.y - 1) + lgy), & \text{otherwise} \end{cases}
\]

\[
j_1 = j_0 + \text{gran}.y - 1
\]

\[
k_0 = \begin{cases} \text{gran}.z \times (4 \times \text{anchor}.z + lgz), & \text{if} lgz + \text{offset}.z<4 \\ \text{gran}.z \times (4 \times (\text{anchor}.z - 1) + lgz), & \text{otherwise} \end{cases}
\]

\[
k_1 = k_0 + \text{gran}.z - 1
\]

and

• \( i_0 \leq i \leq i_1, j_0 \leq j \leq j_1, k_0 \leq k \leq k_1 \);
• \( \text{gran} \) is a three-component vector holding the width, height, and depth of the texel group identified by the granularity;
• \( \text{anchor} \) is the returned three-component anchor vector; and
• \( \text{offset} \) is the returned three-component offset vector.

If the sampler used by \text{OpImageSampleFootprintNV} enables anisotropic texel filtering via \text{anisotropyEnable}, it is possible that the set of texel groups accessed in a mip level may be too large to be expressed using an 8x8 or 4x4x4 mask using the granularity requested in the instruction. In this case, the implementation uses a texel group larger than the requested granularity. When a larger texel group size is used, \text{OpImageSampleFootprintNV} returns an integer granularity value that can be interpreted in the same manner as the granularity value provided to the instruction to
determine the texel group size used. If anisotropic texel filtering is disabled in the sampler, or if an anisotropic footprint can be represented as an 8x8 or 4x4x4 mask with the requested granularity, \texttt{OpImageSampleFootprintNV} will use the requested granularity as-is and return a granularity value of zero.

\texttt{OpImageSampleFootprintNV} supports only two- and three-dimensional image accesses (\texttt{Dim2D} and \texttt{Dim3D}), and the footprint returned is undefined if a sampler uses an addressing mode other than \texttt{VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE}.

### 16.10. Weight Image Sampling

The SPIR-V instruction \texttt{OpImageWeightedSampleQCOM} specifies a texture sampling operation involving two images: the \textit{sampled image} and the \textit{weight image}. It is similar to bilinear filtering except more than 2x2 texels may participate in the filter and the filter weights are user-specified rather than computed by fixed-function hardware. The weight image view defines a 2D kernel weights used during sampling.

The \texttt{OpImageWeightedSampleQCOM} support normalized or unnormalized texel coordinates. In addition to the inputs that would be accepted by an equivalent \texttt{OpImageSample*} instruction, \texttt{OpImageWeightedSampleQCOM} accepts a \texttt{weight} input that specifies the view of a sample weight image.

The input \texttt{weight} must be a view of a 2D or 1D image with \texttt{mipLevels} equal to 1, \texttt{samples} equal to \texttt{VK_SAMPLE_COUNT_1_BIT}, created with an identity swizzle, and created with \texttt{usage} that includes \texttt{VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM}. The \texttt{VkImageViewSampleWeightCreateInfoQCOM} specifies additional parameters of the view: \texttt{filterCenter}, \texttt{filterSize}, and \texttt{numPhases}, described in more detail below.

The \texttt{weight} input must be bound using a \texttt{sample weight image} descriptor type. The \texttt{weight} view defines a filtering kernel that is a region of view’s subresource range. The kernel spans a region from integer texel coordinate (0,0) to \( (\text{filterSize.x-1, filterSize.y-1}) \). It is valid for the view’s subresource to have dimensions larger than the kernel but the texels with integer coordinates greater than \( (\text{filterSize.width-1, filterSize.height-1}) \) are ignored by weight sampling. The value returned by queries \texttt{OpImageQuerySize}, \texttt{OpImageQuerySizeLod}, \texttt{OpImageQueryLevels}, and \texttt{OpImageQuerySamples} return for a weight image is undefined.

\texttt{filterCenter} designates an integer texel coordinate within the filter kernel as being the 'center' of the kernel. The center must be in the range \( (0,0) \) to \( (\text{filterSize.x-1, filterSize.y-1}) \). \texttt{numPhases} describes the number of filter phases used to provide sub-pixel filtering. Both are described in more detail below.

### 16.10.1. Weight Image Layout

The weight image specifies filtering kernel weight values. A 2D image view can be used to specify a 2D matrix of filter weights. For separable filters, a 1D image view can be used to specify the horizontal and vertical weights.

#### 2D Non-Separable Weight Filters

A 2D image view defined with \texttt{VkImageViewSampleWeightCreateInfoQCOM} describes a 2D matrix
(filterSize.width \times filterSize.height) of weight elements with filter's center point at filterCenter. Note that filterSize can be smaller than the view's subresource, but the filter will always be located starting at integer texel coordinate (0,0).

The following figure illustrates a 2D convolution filter having filterSize of (4,3) and filterCenter at (1, 1).

![2D Convolution Filter](image)

*Figure 12. 2D Convolution Filter*

For a 2D weight filter, the phases are stored as layers of a 2D array image. The width and height of the view's subresource range must be less than or equal to VkPhysicalDeviceImageProcessingPropertiesQCOM::maxWeightFilterDimension. The layers are stored in horizontal phase major order. Expressed as a formula, the layer index for each filter phase is computed as:

\[
\text{layerIndex}(\text{horizPhase}, \text{vertPhase}, \text{horizPhaseCount}) = (\text{vertPhase} \times \text{horizPhaseCount}) + \text{horizPhase}
\]

1D Separable Weight Filters

A separable weight filter is a 2D filter that can be specified by two 1D filters in the x and y directions such that their product yields the 2D filter. The following example shows a 2D filter and its associated separable 1D horizontal and vertical filters.
A 1D array image view defined with `VkImageViewSampleWeightCreateInfoQCOM` and with `layerCount` equal to '2' describes a separable weight filter. The horizontal weights are specified in slice '0' and the vertical weights in slice '1'. The `filterSize` and `filterCenter` specify the size and origin of the horizontal and vertical filters. For many use cases, 1D separable filters can offer a performance advantage over 2D filters.

For a 1D separable weight filter, the phases are arranged into a 1D array image with two layers. The horizontal weights are stored in layer 0 and the vertical weights in layer 1. Within each layer of the 1D array image, the weights are arranged into groups of 4, and then arranged by phase. Expressed as a formula, the 1D texel offset for each weight within each layer is computed as:

```
// Let horizontal weights have a weightIndex of [0, filterSize.width - 1]
// Let vertical weights have a weightIndex of [0, filterSize.height - 1]
// Let phaseCount be the number of phases in either the vertical or horizontal direction.

texelOffset(phaseIndex, weightIndex, phaseCount) = (phaseCount * 4 * (weightIndex / 4)) + (phaseIndex * 4) + (weightIndex % 4)
```

### 16.10.2. Weight Sampling Phases

When using weight image sampling, the texture coordinates may not align with a texel center in the sampled image. In this case, the filter weights can be adjusted based on the subpixel location. This is termed “subpixel filtering” to indicate that the origin of the filter lies at a subpixel location other than the texel center. Conceptually, this means that the weight filter is positioned such that filter taps do not align with sampled texels exactly. In such a case, modified filter weights may be needed to adjust for the off-center filter taps. Unlike bilinear filtering where the subpixel weights are computed by the implementation, subpixel weight image sampling requires that the per-phase filter weights are pre-computed by the application and stored in an array where each slice of the array is a “filter phase”. The array is indexed by the implementation based on subpixel positioning. Rather than a single 2D kernel of filter weights, the application provides an array of kernels, one set...
of filter weights per phase.

The number of phases are restricted by following requirements, which apply to both separable and non-separable filters:

- The number of phases in the vertical direction, \( \text{phaseCount}_{\text{vert}} \), must be a power of two (i.e., 1, 2, 4, etc.).
- The number of phases in the horizontal direction \( \text{phaseCount}_{\text{horiz}} \) must equal \( \text{phaseCount}_{\text{vert}} \).
- The total number of phases, \( \text{phaseCount}_{\text{vert}} \times \text{phaseCount}_{\text{horiz}} \), must be less than or equal to \( \text{VkPhysicalDeviceImageProcessingPropertiesQCOM}::\text{maxWeightFilterPhases} \).

16.10.3. Weight Sampler Parameters

Weight sampling requires \( \text{VkSamplerCreateInfo addressModeU} \) and \( \text{addressModeV} \) must be set to \( \text{VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE} \) or \( \text{VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER} \). If \( \text{VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER} \) is used, then the border color must be set to transparent black.

16.10.4. Weight Sampling Operation

The 2D unnormalized texel coordinates \((u, v)\) are transformed by \( \text{filterCenter} \) to specify coordinates \(i_0, j_0\).

\[
i_0 = \lfloor u - \text{filterCenter}_x \rfloor \\
j_0 = \lfloor v - \text{filterCenter}_y \rfloor
\]

where \( \text{filterCenter} \) is specified by \( \text{VkImageViewSampleWeightCreateInfoQCOM}::\text{filterCenter} \).

Two sets of neighboring integer 2D texel coordinates are generated. The first set is used for selecting texels from the sampled image \( \tau \) and the second set used for selecting texels from the weight image \( w \). The first set of neighboring coordinates are combinations of \( i_0 \) to \( i_{\text{filterWidth}} - 1 \) and \( j_0 \) to \( j_{\text{filterHeight}} - 1 \). The second set of neighboring coordinates are combinations of \( k_0 \) to \( k_{\text{filterWidth}} - 1 \) and \( l_0 \) to \( l_{\text{filterHeight}} - 1 \). The first and second sets each contain \( (\text{filterWidth} \times \text{filterHeight}) \) of pairs of \((i, j)\) and \((k, l)\) coordinates respectively.

\[
\begin{align*}
\{i_q\}_q = & \ \text{filterWidth} - 1 = i_0 + q \\
\{j_q\}_q = & \ \text{filterHeight} - 1 = j_0 + q \\
\{k_q\}_q = & \ \text{filterWidth} - 1 = q \\
\{l_q\}_q = & \ \text{filterHeight} - 1 = q
\end{align*}
\]

where \( \text{filterWidth} \) and \( \text{filterHeight} \) are specified by \( \text{VkImageViewSampleWeightCreateInfoQCOM}::\text{filterSize} \).

Each of the generated integer coordinates \((i_q, j_q)\) is transformed by texture wrapping operation,
followed by integer texel coordinate validation. If any coordinate fails coordinate validation, it is a Border Texel and texel replacement is performed.

The phase index $\psi$ is computed from the fraction bits of the unnormalized 2D texel coordinates:

\[ phaseCount_h = phaseCount_v = \sqrt{numPhases} \]

\[ hPhase = \lfloor \text{frac}(u) \times phaseCount_h \rfloor \]

\[ vPhase = \lfloor \text{frac}(v) \times phaseCount_v \rfloor \]

\[ \psi = (vPhase \times phaseCount_h) + hPhase \]

where the number of fraction bits retained is $\log_2(\text{numPhases})$ specified by $\text{VkImageViewSampleWeightCreateInfoQCOM::numPhases}$.

Each pair of texel coordinates $(i, j)$ in the first set selects a single texel value $\tau_{ij}$ from the sampled image. Each pair of texel coordinates $(k, l)$ in the second set, combined with phaseIndex $\psi$, selects a single weight from the weight image $w(k, l, \psi)$.

\[
w(k, l, \psi) = \begin{cases} 
  w_k[\psi] & \text{(as layer index)} \quad \text{for 2D array view (non-separable filter)} \\
  \text{weight}_h \times \text{weight}_v & \text{for 1D array view (separable filter)} 
\end{cases}
\]

If $w$ is a 2D array view, then non-separable filtering is specified, and integer coordinates $(k, l)$ are used to select texels from layer $\psi$ of $w$. If $w$ is a 1D array view, then separable filtering is specified and integer coordinates $(k, l)$ are transformed to $(k_{\text{packed}}, l_{\text{packed}})$, and used to select horizontal weight $(\text{weight}_h)$ and vertical weight $(\text{weight}_v)$ texels from layer 0 and layer 1 of $w$ respectively.

\[ k_{\text{packed}} = (phaseCount_h \times 4 \times [k / 4]) + (hPhase \times 4) + (k \% 4) \]

\[ l_{\text{packed}} = (phaseCount_v \times 4 \times [l / 4]) + (vPhase \times 4) + (l \% 4) \]

\[ \text{weight}_h = w_{k_{\text{packed}}}[0] \quad \text{(horizontal weights packed in layer 0)} \]

\[ \text{weight}_v = w_{l_{\text{packed}}}[1] \quad \text{(vertical weights packed in layer 1)} \]

Where $\%$ refers to the integer modulo operator.

The values of multiple texels, together with their weights, are combined to produce a filtered value.

\[
\tau_{\text{weight Sampling}} = \sum_{j=j_0}^{j_{\text{blockHeight}-1}} \sum_{l=l_0}^{l_{\text{blockHeight}-1}} \sum_{i=i_0}^{i_{\text{blockWidth}-1}} \sum_{k=k_0}^{k_{\text{blockWidth}-1}} w(k, l, \psi) \tau_{ij}
\]

When $\text{VkSamplerReductionModeCreateInfoQCOM::reductionMode}$ is set to $\text{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE}$, the above summation is used. However, if the reduction mode is $\text{VK_SAMPLER_REDUCTION_MODE_MIN}$ or $\text{VK_SAMPLER_REDUCTION_MODE_MAX}$, the process operates on the above values, computing a component-wise minimum or maximum of the texels with non-zero weights. If the reduction mode is $\text{VK_SAMPLER_REDUCTION_MODE_MIN}$ or
VK_SAMPLER_REDUCTION_MODE_MAX, each \( w(k, l, \varphi) \) weight must be equal to 0.0 or 1.0, otherwise the undefined values are returned.

Finally, the operations described in Conversion to RGBA and Component swizzle are performed and the final result is returned to the shader.

### 16.11. Block Matching

The SPIR-V instruction `opImageBlockMatchSAD` and `opImageBlockMatchSSD` specify texture block matching operations where a block or region of texels within a target image is compared with a same-sized region a reference image. The instructions make use of two image views: the target view and the reference view. The target view and reference view can be the same view, allowing block matching of two blocks within a single image.

Similar to an equivalent OpImageFetch instruction, `opImageBlockMatchSAD` and `opImageBlockMatchSSD` specify a image and an integer texel coordinate which which describes the bottom-left texel of the target block. There are three additional inputs. The reference and refCoordinate specifies bottom-left texel of the reference block. The blockSize specifies the integer width and height of the target and reference blocks to be compared, and must not be greater than `VkPhysicalDeviceImageProcessingPropertiesQCOM.maxBlockMatchRegion`.

`opImageBlockMatchWindowSAD` and `opImageBlockMatchWindowSSD` take the same input parameters as the corresponding non-window instructions. The block matching comparison is performed for all pixel values within a 2D window whose dimensions are specified in the sampler.

#### 16.11.1. Block Matching Sampler Parameters

For `opImageBlockMatchSAD` and `opImageBlockMatchSSD`, the input sampler must be created with addressModeU and addressModeV, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`, or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`. The input sampler must be created with unnormalizedCoordinates equal to `VK_TRUE`. The input sampler must be created with components equal to `VK_COMPONENT_SWIZZLE_IDENTITY`.

For `opImageBlockMatchWindowSAD` and `opImageBlockMatchWindowSSD` instructions, the target sampler must have been created with `VkSamplerBlockMatchWindowCreateInfoQCOM` in the pNext chain.

For `opImageBlockMatchWindowSAD`, `opImageBlockMatchWindowSSD`, `opImageBlockMatchGatherSAD`, or `opImageBlockMatchGatherSSD` instructions, the input sampler must be created with addressModeU and addressModeV, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`.

Other sampler states are ignored.

#### 16.11.2. Block Matching Operation

Block matching SPIR-V instructions `opImageBlockMatchSAD` and `opImageBlockMatchSSD` specify two sets of 2D integer texel coordinates: target coordinates \((u, v)\) and reference coordinates \((s, t)\).

The coordinates define the bottom-left texel of the target block \((i_0, j_0)\) and the reference block \((k_0, l_0)\).
For the target block, a set of neighboring integer texel coordinates are generated. The neighboring coordinates are combinations of \( i_0 \) to \( i_{\text{blockWidth} - 1} \) and \( j_0 \) to \( j_{\text{blockHeight} - 1} \). The set is of size \( \text{blockWidth} \times \text{blockHeight} \).

\[
\begin{align*}
\{i_q\}_q &= \text{blockWidth} - 1 \quad = i_0 + q \\
\{j_q\}_q &= \text{blockHeight} - 1 \quad = j_0 + q
\end{align*}
\]

where \( \text{blockWidth} \) and \( \text{blockHeight} \) is specified by the \( \text{blockSize} \) operand.

If any target integer texel coordinate \((i, j)\) in the set fails integer texel coordinate validation, then the texel is an invalid texel and texel replacement is performed.

Similarly for the reference block, a set of neighboring integer texel coordinates are generated.

\[
\begin{align*}
\{k_q\}_q &= \text{blockWidth} - 1 \quad = k_0 + q \\
\{l_q\}_q &= \text{blockHeight} - 1 \quad = l_0 + q
\end{align*}
\]

Each reference texel coordinate \((k, l)\) in the set must not fail integer texel coordinate validation. To avoid undefined behavior, application shader should guarantee that the reference block is fully within the bounds of the reference image.

Each pair of texel coordinates \((i, j)\) in the set selects a single texel value from the target image \( \tau_{ij} \). Each pair of texel coordinates \((k, l)\) in the set selects a single texel value from the reference image \( \nu_{kl} \).

The difference between target and reference texel values is summed to compute a difference metric. The \( \text{opTextureBlockMatchSAD} \) computes the sum of absolute differences.

\[
\tau_{SAD} = \sum_{j = j_0}^{j_{\text{blockHeight} - 1}} \sum_{i = i_0}^{i_{\text{blockWidth} - 1}} |\nu_{kl} - \tau_{ij}|
\]

The \( \text{opImageBlockMatchSSD} \) computes the sum of the squared differences.
When \( \text{VkSamplerReductionModeCreateInfo}::\text{reductionMode} \) is set to \( \text{VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE} \), the above summation is used. However, if the reduction mode is \( \text{VK_SAMPLER_REDUCTION_MODE_MIN} \) or \( \text{VK_SAMPLER_REDUCTION_MODE_MAX} \), the process operates on the above values, computing a component-wise minimum or maximum of \( |v_{kl} - \tau_{ij}| \), respectively. For \( \tau_{\text{SAD}} \), the minimum or maximum difference is computed and for \( \tau_{\text{SSD}} \), the square of the minimum or maximum is computed.

Finally, the operations described in Conversion to RGBA and Component swizzle are performed and the final result is returned to the shader. The component swizzle is specified by the target image descriptor; any swizzle specified by the reference image descriptor is ignored.

### Block Matching Window Operation

Window block matching SPIR-V instructions \text{opImageBlockMatchWindowSAD} and \text{opImageBlockMatchWindowSSD} specify two sets of 2D integer texel coordinates: target coordinates \((u, v)\) and reference coordinates \((s, t)\). The block matching operation is performed repeatedly, for multiple sets of target integer coordinates within the specified window. These instructions effectively search a region or “window” within the target texture and identify the window coordinates where the minimum or maximum error metric is found. These instructions only support single component image formats.

The target coordinates are combinations of coordinates from \((u, v)\) to \((u + \text{windowWidth} - 1, v + \text{windowHeight} - 1)\) where \(\text{windowHeight}\) and \(\text{windowWidth}\) are specified by \text{VkSamplerBlockMatchWindowCreateInfoQCOM}::\text{windowExtent}. At each each target coordinate, a block matching operation is performed, resulting in a difference metric. The reference coordinate \((s, t)\) is fixed. The block matching operation is repeated \(\text{windowWidth} \times \text{windowHeight}\) times.

The resulting minimum or maximum error is returned in the R component of the output. The integer window coordinates \((x, y)\) are returned in the G and B components of the output. The A component is 0. The minimum or maximum behavior is selected by \text{VkSamplerBlockMatchWindowCreateInfoQCOM}::\text{windowCompareMode}.

The following pseudocode describes the operation \text{opImageBlockMatchWindowSAD}. The pseudocode for \text{opImageBlockMatchWindowSSD} follows an identical pattern.

```cpp
vec4 opImageBlockMatchGatherSAD( sampler2D target, 
    uvec2 targetCoord, 
    sampler2D reference, 
    uvec2 refCoord, 
    uvec2 blocksize) {
  // Two parameters are sourced from the VkSampler associated with
  // 'target':
  //   compareMode (which can be either 'MIN' or 'MAX')
}
```
minSAD = INF;
maxSAD = -INF;
ivec2 minCoord;
ivec2 maxCoord;

for (uint x=0; x<window.width; x++) {
    for (uint y=0; y<window.height; y++) {
        float SAD = textureBlockMatchSAD(target, targetCoord + ivec2(x, y), reference, refCoord, blocksize).x;

        if (SAD < minSAD) {
            minSAD = SAD;
            minCoord = ivec2(x, y);
        }

        if (SAD > maxSAD) {
            maxSAD = SAD;
            maxCoord = ivec2(x, y);
        }
    }
}

if (compareMode==MIN) {
    return vec4(minSAD, minCoord.x, minCoord.y, 0.0);
} else {
    return vec4(maxSAD, maxCoord.x, maxCoord.y, 0.0);
}

### Block Matching Gather Operation

Block matching Gather SPIR-V instructions `opImageBlockMatchGatherSAD` and `opImageBlockMatchGatherSSD` specify two sets of 2D integer texel coordinates: target coordinates \((u, v)\) and reference coordinates \((s, t)\).

These instructions perform the block matching operation 4 times, using integer target coordinates \((u, v), (u+1, v), (u+2, v), \) and \((u+3, v)\). The R component from each of those 4 operations is gathered and returned in the R, G, B, and A components of the output respectively. For each block match operation, the reference coordinate is \((s, t)\). For each block match operation, only the R component of the target and reference images are compared. The following pseudocode describes the operation `opImageBlockMatchGatherSAD`. The pseudocode for `opImageBlockMatchGatherSSD` follows an identical pattern.

```cpp
vec4 opImageBlockMatchGatherSAD(sampler2D target,
                                ivec2 targetCoord,
                                sampler2D reference,
                                ivec2 refCoord,
```

```cpp
sampler2D target,
```

```cpp
reference,
```

```cpp
ivec2 targetCoord,
```

```cpp
ivec2 refCoord,
```

```cpp
) {
    float SAD = textureBlockMatchSAD(target, targetCoord + ivec2(x, y), reference, refCoord, blocksize).x;

    if (SAD < minSAD) {
        minSAD = SAD;
        minCoord = ivec2(x, y);
    }

    if (SAD > maxSAD) {
        maxSAD = SAD;
        maxCoord = ivec2(x, y);
    }
```
vec4 out;
for (uint x=0, x<4; x++) {
    float SAD = textureBlockMatchSAD(target, 
        targetCoord + uvec2(x, 0), 
        reference, 
        refCoord, 
        blocksize).x;

    if (x == 0) {
        out.x = SAD;
    }
    if (x == 1) {
        out.y = SAD;
    }
    if (x == 2) {
        out.z = SAD;
    }
    if (x == 3) {
        out.w = SAD;
    }
}
return out;

16.12. Box Filter Sampling

The SPIR-V instruction OpImageBoxFilterQCOM specifies texture box filtering operation where a weighted average of a region of texels is computed, with the weights proportional to the coverage of each of the texels.

In addition to the inputs that would be accepted by an equivalent OpImageSample* instruction, OpImageBoxFilterQCOM accepts one additional input, boxSize which specifies the width and height in texels of the region to be averaged.

The figure below shows an example of using OpImageBoxFilterQCOM to sample from a 8 × 4 texel two-dimensional image, with unnormalized texture coordinates (4.125, 2.625) and boxSize of (2.75, 2.25). The filter will read 12 texel values and compute a weights based portion of of each texel covered by the box.
If `boxSize` has height and width both equal to 1.0, then this instruction will behave as traditional bilinear filtering. The `boxSize` parameter must be greater than or equal to 1.0 and must not be greater than `VkPhysicalDeviceImageProcessingPropertiesQCOM.maxBoxFilterBlockSize`.

### 16.12.1. Box Filter Sampler Parameters

The input sampler must be created with `addressModeU` and `addressModeV`, equal to `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`, or `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` with `VK_BORDER_COLOR_FLOAT_TRANSPARENT_BLACK`.

### 16.12.2. Box Filter Operation

The 2D unnormalized texel coordinates \((u, v)\) are transformed by `boxSize` to specify integer texel coordinates \((i_0, j_0)\) of the bottom left texel for the filter.

\[
    i_0 = \lfloor u - \frac{boxWidth}{2} \rfloor \\
    j_0 = \lfloor v - \frac{boxHeight}{2} \rfloor
\]

where `boxWidth` and `boxHeight` are specified by the code:(x,y) components of the `boxSize` operand.

The filter dimensions \((filterWidth \times filterHeight)\) are computed from the fractional portion of the \((u, v)\) coordinates and the `boxSize`.
where the number of fraction bits retained by \( \text{frac}() \) is specified by \( \text{VkPhysicalDeviceLimits::subTexelPrecisionBits} \).

A set of neighboring integer texel coordinates are generated. The neighboring coordinates are combinations of \( i_0 \) to \( i_{\text{filterWidth} - 1} \) and \( j_0 \) to \( j_{\text{filterHeight} - 1} \), with \( i_0, j_0 \) being the top-left coordinate of this set. The set is of size \((\text{filterWidth} \times \text{filterHeight})\).

\[
\begin{align*}
\{i_q\}_q &= \text{filterWidth} - 1 & i_0 + q \\
\{j_q\}_q &= \text{filterHeight} - 1 & j_0 + q
\end{align*}
\]

Each of the generated integer coordinates \((i_q, j_q)\) is transformed by texture wrapping operation, followed by integer texel coordinate validation. If any coordinate fails coordinate validation, it is a Border Texel and texel replacement is performed.

Horizontal weights \( \text{horizWeight}_i \) to \( \text{horizWeight}_\text{boxWidth} - 1 \) and vertical weights \( \text{vertWeight}_j \) to \( \text{vertWeight}_\text{boxHeight} - 1 \) are computed. Texels that are fully covered by the box will have a horizontal and vertical weight of 1. Texels partially covered by the box will have will have a reduced weights proportional to the coverage.

\[
\text{horizWeight}_i = \begin{cases} 
(1 - \text{startFracU}), & \text{for}(i = 0) \\
(\text{endFracU}), & \text{for}(i = \text{filterWidth} - 1)\text{and}(\text{endFracU}! = 0) \\
(1), & \text{otherwise}
\end{cases}
\]

\[
\text{vertWeight}_j = \begin{cases} 
(1 - \text{startFracV}), & \text{for}(j = 0) \\
(\text{endFracV}), & \text{for}(j = \text{filterHeight} - 1)\text{and}(\text{endFracV}! = 0) \\
(1), & \text{otherwise}
\end{cases}
\]

The values of multiple texels, together with their horizontal and vertical weights, are combined to produce a box filtered value.

\[
\tau_{\text{boxFilter}} = \frac{1}{\text{boxHeight} \times \text{boxWidth}} \sum_{j=j_0}^{j_{\text{filterHeight} - 1}} \sum_{i=i_0}^{i_{\text{filterWidth} - 1}} (\text{horizWeight}_i)(\text{vertWeight}_j)\tau_{ij}
\]
When `VkSamplerReductionModeCreateInfo::reductionMode` is set to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`, the above summation is used. However, if the reduction mode is `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX`, the process operates on the above values, computing a component-wise minimum or maximum of the texels.

### 16.13. Image Operation Steps

Each step described in this chapter is performed by a subset of the image instructions:

- **Texel Input Validation Operations, Format Conversion, Texel Replacement, Conversion to RGBA, and Component Swizzle**: Performed by all instructions except `OpImageWrite`.
- **Depth Comparison**: Performed by `OpImage*Dref` instructions.
- **All Texel output operations**: Performed by `OpImageWrite`.
- **Projection**: Performed by all `OpImage*Proj` instructions.
- **Derivative Image Operations, Cube Map Operations, Scale Factor Operation, LOD Operation and Image Level(s) Selection, and Texel Anisotropic Filtering**: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- **(s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and (u,v,w,a) to (i,j,k,l,n) Transformation And Array Layer Selection**: Performed by all `OpImageSample`, `OpImageSparseSample`, and `OpImage*Gather` instructions.
- **Texel Gathering**: Performed by `OpImage*Gather` instructions.
- **Texel Footprint Evaluation**: Performed by `OpImageSampleFootprint` instructions.
- **Texel Filtering**: Performed by all `OpImageSample*` and `OpImageSparseSample*` instructions.
- **Sparse Residency**: Performed by all `OpImageSparse*` instructions.
- **(s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Weight Image Sampling**: Performed by `OpImageWeightedSample*` instructions.
- **(s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Block Matching**: Performed by `OpImageBlockMatch*` instructions.
- **(s,t,r,q,a) to (u,v,w,a) Transformation, Wrapping, and Box Filter Sampling**: Performed by `OpImageBoxFilter*` instructions.

#### 16.14.1. Image Property Queries

`OpImageQuerySize`, `OpImageQuerySizeLod`, `OpImageQueryLevels`, and `OpImageQuerySamples` query properties of the image descriptor that would be accessed by a shader image operation. They return 0 if the bound descriptor is a null descriptor.

`OpImageQuerySizeLod` returns the size of the image level identified by the `Level of Detail` operand. If that level does not exist in the image, and the descriptor is not null, then the value returned is undefined.
16.14.2. Lod Query

\texttt{OpImageQueryLod} returns the Lod parameters that would be used in an image operation with the given image and coordinates. If the descriptor that would be accessed is a null descriptor then \((0,0)\) is returned. Otherwise, the steps described in this chapter are performed as if for \texttt{OpImageSampleImplicitLod}, up to Scale Factor Operation, LOD Operation and Image Level(s) Selection. The return value is the vector \((\lambda', d)\). These values \textbf{may} be subject to implementation-specific maxima and minima for very large, out-of-range values.
Chapter 17. Fragment Density Map Operations

17.1. Fragment Density Map Operations Overview

When a fragment is generated in a render pass that has a fragment density map attachment, its area is determined by the properties of the local framebuffer region that the fragment occupies. The framebuffer is divided into a uniform grid of these local regions, and their fragment area property is derived from the density map with the following operations:

- Fetch density value
  - Component swizzle
  - Component mapping
- Fragment area conversion
  - Fragment area filter
  - Fragment area clamp

17.2. Fetch Density Value

Each local framebuffer region at center coordinate \((x,y)\) fetches a texel from the fragment density map.

First, the local framebuffer region center coordinate \((x,y)\) is offset by the value specified in `VkSubpassFragmentDensityMapOffsetEndInfoQCOM`. If no offset is specified, then the default offset \((0,0)\) is used. The offsetted coordinate \((x',y')\) is computed as follows:

\[
x' = \text{clamp} (x + p\text{FragmentDensityOffsets}[layer]_x, 0, \text{framebuffer}_\text{width} - 1) \\
y' = \text{clamp} (y + p\text{FragmentDensityOffsets}[layer]_y, 0, \text{framebuffer}_\text{height} - 1)
\]

The offsetted coordinate \((x',y')\) fetches a texel from the fragment density map at integer coordinates:

\[
i = \lfloor \frac{x'}{\text{FragmentDensityTexelSize}_\text{width}} \rfloor \\
j = \lfloor \frac{y'}{\text{FragmentDensityTexelSize}_\text{height}} \rfloor \\
\]

Where the size of each region in the framebuffer is:

\[\text{FragmentDensityTexelSize}_\text{width} = 2^{\left\lceil \log_2 (\frac{\text{framebuffer}_\text{width}}{\text{FragmentDensityMap}_\text{width}}) \right\rceil}\]
This region is subject to the limits in `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` and therefore the final region size is clamped:

\[
\frac{\text{fragmentDensityTexelSize}^\text{height}}{\text{fragmentDensityMapHeight}} = \frac{\text{framebufferHeight}}{\text{framebufferHeight}}
\]

\[
\text{fragmentDensityTexelSize}_{\text{width}} = \text{clamp}(\text{fragmentDensityTexelSize}^\text{width}, \text{minFragmentDensityTexelSize}_{\text{width}}, \text{maxFragmentDensityTexelSize}_{\text{width}})
\]

\[
\text{fragmentDensityTexelSize}_{\text{height}} = \text{clamp}(\text{fragmentDensityTexelSize}^\text{height}, \text{minFragmentDensityTexelSize}_{\text{height}}, \text{maxFragmentDensityTexelSize}_{\text{height}})
\]

When multiview is enabled for the render pass and the fragment density map attachment view was created with `layerCount` greater than 1, the layer used for offsets and for fetching from the fragment density map is:

\[
\text{layer} = \text{baseArrayLayer} + \text{ViewIndex}
\]

Otherwise:

\[
\text{layer} = \text{baseArrayLayer}
\]

The texel fetched from the density map at (i,j,layer) is next converted to density with the following operations.

### 17.2.1. Component Swizzle

The `components` member of `VkImageViewCreateInfo` is applied to the fetched texel as defined in `Image component swizzle`.

### 17.2.2. Component Mapping

The swizzled texel’s components are mapped to a density value:

\[
\text{densityValue}_{xy} = (C^r, C^g)
\]

### 17.3. Fragment Area Conversion

Fragment area for the framebuffer region is undefined if the density fetched is not a normalized floating-point value greater than 0.0. Otherwise, the fetched fragment area for that region is derived as:

\[
\text{fragmentArea}_{wh} = \frac{1.0}{\text{densityValue}_{xy}}
\]
17.3.1. Fragment Area Filter

Optionally, the implementation may fetch additional density map texels in an implementation defined window around \((i,j)\). The texels follow the standard conversion steps up to and including fragment area conversion.

A single fetched fragment area for the framebuffer region is chosen by the implementation and must have an area between the min and max areas of the fetched set.

17.3.2. Fragment Area Clamp

The implementation may clamp the fetched fragment area to one that it supports. The clamped fragment area must have a size less than or equal to the original fetched value. Implementations may vary the supported set of fragment areas per framebuffer region. Fragment area \((1,1)\) must always be in the supported set.

\[\text{Note}\]

For example, if the fetched fragment area is \((1,4)\) but the implementation only supports areas of \{(1,1),(2,2)\}, it could choose to clamp the area to \((2,2)\) since it has the same size as \((1,4)\). While this would produce fragments that have lower quality strictly in the x-axis, the overall density is maintained.

The clamped fragment area is assigned to the corresponding framebuffer region.
Chapter 18. Queries

Queries provide a mechanism to return information about the processing of a sequence of Vulkan commands. Query operations are asynchronous, and as such, their results are not returned immediately. Instead, their results, and their availability status are stored in a Query Pool. The state of these queries can be read back on the host, or copied to a buffer object on the device.

The supported query types are Occlusion Queries, Pipeline Statistics Queries, Result Status Queries, Video Encode Feedback Queries and Timestamp Queries. Performance Queries are supported if the associated extension is available. Transform Feedback Queries are supported if the associated extension is available. Intel Performance Queries are supported if the associated extension is available. Mesh Shader Queries are supported if the associated extension is available.

Several additional queries with specific purposes associated with ray tracing are available if the corresponding extensions are supported, as described for VkQueryType.

18.1. Query Pools

Queries are managed using query pool objects. Each query pool is a collection of a specific number of queries of a particular type.

Query pools are represented by VkQueryPool handles:

```// Provided by VK_VERSION_1_0
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkQueryPool)
```

To create a query pool, call:

```// Provided by VK_VERSION_1_0
VkResult vkCreateQueryPool(
    VkDevice device,
    const VkQueryPoolCreateInfo* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkQueryPool* pQueryPool);
```

• `device` is the logical device that creates the query pool.
• `pCreateInfo` is a pointer to a VkQueryPoolCreateInfo structure containing the number and type of queries to be managed by the pool.
• `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
• `pQueryPool` is a pointer to a VkQueryPool handle in which the resulting query pool object is returned.

Valid Usage (Implicit)

• VUID-vkCreateQueryPool-device-parameter
device must be a valid VkDevice handle

- VUID-vkCreateQueryPool-pCreateInfo-parameter
  pCreateInfo must be a valid pointer to a valid VkQueryPoolCreateInfo structure

- VUID-vkCreateQueryPool-pAllocator-parameter
  If pAllocator is not NULL, pAllocator must be a valid pointer to a valid VkAllocationCallbacks structure

- VUID-vkCreateQueryPool-pQueryPool-parameter
  pQueryPool must be a valid pointer to a VkQueryPool handle

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The VkQueryPoolCreateInfo structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkQueryPoolCreateInfo {
    VkStructureType sType;
    const void*pNext;
    VkQueryPoolCreateFlags flags;
    VkQueryType queryType;
    uint32_t queryCount;
    VkQueryPipelineStatisticFlags pipelineStatistics;
} VkQueryPoolCreateInfo;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is reserved for future use.
- queryType is a VkQueryType value specifying the type of queries managed by the pool.
- queryCount is the number of queries managed by the pool.
- pipelineStatistics is a bitmask of VkQueryPipelineStatisticFlagBits specifying which counters will be returned in queries on the new pool, as described below in Pipeline Statistics Queries.

pipelineStatistics is ignored if queryType is not VK_QUERY_TYPE_PIPELINE_STATISTICS.
Valid Usage

- VUID-VkQueryPoolCreateInfo-queryType-00791
  If the pipelineStatisticsQuery feature is not enabled, queryType must not be VK_QUERY_TYPE_PIPELINE_STATISTICS

- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07068
  If the meshShaderQueries feature is not enabled, queryType must not be VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT

- VUID-VkQueryPoolCreateInfo-meshShaderQueries-07069
  If the meshShaderQueries feature is not enabled, and queryType is VK_QUERY_TYPE_PIPELINE_STATISTICS, pipelineStatistics must not contain VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT or VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT

- VUID-VkQueryPoolCreateInfo-queryType-00792
  If queryType is VK_QUERY_TYPE_PIPELINE_STATISTICS, pipelineStatistics must be a valid combination of VkQueryPipelineStatisticFlagBits values

- VUID-VkQueryPoolCreateInfo-queryType-09534
  If queryType is VK_QUERY_TYPE_PIPELINE_STATISTICS, pipelineStatistics must not be zero

- VUID-VkQueryPoolCreateInfo-queryType-03222
  If queryType is VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the pNext chain must include a VkQueryPoolPerformanceCreateInfoKHR structure

- VUID-VkQueryPoolCreateInfo-queryType-07133
  queryCount must be greater than 0

- VUID-VkQueryPoolCreateInfo-queryType-07906
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, then the pNext chain must include a VkVideoProfileInfoKHR structure with videoCodecOperation specifying an encode operation

- VUID-VkQueryPoolCreateInfo-videoProfile-07907
  If queryType is VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR, and the pNext chain includes a VkVideoProfileInfoKHR structure and a VkQueryPoolVideoEncodeFeedbackCreateInfoKHR structure, then VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags must not contain any bits that are not set in VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags, as returned by vkGetPhysicalDeviceVideoCapabilitiesKHR::supportedEncodeFeedbackFlags, for the video profile described by VkVideoProfileInfoKHR and its pNext chain

Valid Usage (Implicit)

- VUID-VkQueryPoolCreateInfo-sType-sType
sType must be VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO

- VUID-VkQueryPoolCreateInfo-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkQueryPoolPerformanceCreateInfoKHR, VkQueryPoolPerformanceQueryCreateInfoINTEL, VkQueryPoolVideoEncodeFeedbackCreateInfoKHR, VkVideoDecodeH264ProfileInfoKHR, VkVideoDecodeH265ProfileInfoKHR, VkVideoEncodeH264ProfileInfoKHR, VkVideoEncodeH265ProfileInfoKHR, VkVideoEncodeUsageInfoKHR, or VkVideoProfileInfoKHR

- VUID-VkQueryPoolCreateInfo-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkQueryPoolCreateInfo-flags-zerobitmask
  flags must be 0

- VUID-VkQueryPoolCreateInfo-queryType-parameter
  queryType must be a valid VkQueryType value

// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPoolCreateFlags;

VkQueryPoolCreateFlags is a bitmask type for setting a mask, but is currently reserved for future use.

The VkQueryPoolPerformanceCreateInfoKHR structure is defined as:

// Provided by VK_KHR_performance_query
typedef struct VkQueryPoolPerformanceCreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t queueFamilyIndex;
    uint32_t counterIndexCount;
    const uint32_t* pCounterIndices;
} VkQueryPoolPerformanceCreateInfoKHR;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- queueFamilyIndex is the queue family index to create this performance query pool for.
- counterIndexCount is the length of the pCounterIndices array.
- pCounterIndices is a pointer to an array of indices into the vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR::pCounters to enable in this performance query pool.

Valid Usage

- VUID-VkQueryPoolPerformanceCreateInfoKHR-queueFamilyIndex-03236
queueFamilyIndex must be a valid queue family index of the device.

- VUID-VkQueryPoolPerformanceCreateInfoKHR-performanceCounterQueryPools-03237
  The performanceCounterQueryPools feature must be enabled.

- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-03321
  Each element of pCounterIndices must be in the range of counters reported by
  vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR for the queue family
  specified in queueFamilyIndex.

Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceCreateInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR.

- VUID-VkQueryPoolPerformanceCreateInfoKHR-pCounterIndices-parameter
  pCounterIndices must be a valid pointer to an array of counterIndexCount uint32_t values.

- VUID-VkQueryPoolPerformanceCreateInfoKHR-counterIndexCount-arraylength
  counterIndexCount must be greater than 0.

To query the number of passes required to query a performance query pool on a physical device, call:

```c
// Provided by VK_KHR_performance_query
void vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    VkPhysicalDevice physicalDevice,
    const VkQueryPoolPerformanceCreateInfoKHR* pPerformanceQueryCreateInfo,
    uint32_t* pNumPasses);
```

- physicalDevice is the handle to the physical device whose queue family performance query
  counter properties will be queried.

- pPerformanceQueryCreateInfo is a pointer to a VkQueryPoolPerformanceCreateInfoKHR of the
  performance query that is to be created.

- pNumPasses is a pointer to an integer related to the number of passes required to query the
  performance query pool, as described below.

The pPerformanceQueryCreateInfo member VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex
must be a queue family of physicalDevice. The number of passes required to capture the counters
specified in the pPerformanceQueryCreateInfo member VkQueryPoolPerformanceCreateInfoKHR::pCounters
is returned in pNumPasses.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR-physicalDevice-
  parameter
  physicalDevice must be a valid VkPhysicalDevice handle.
To destroy a query pool, call:

```c
void vkDestroyQueryPool(
    VkDevice device,
    VkQueryPool queryPool,
    const VkAllocationCallbacks* pAllocator);
```

- `device` is the logical device that destroys the query pool.
- `queryPool` is the query pool to destroy.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

### Valid Usage

- **VUID-vkDestroyQueryPool-queryPool-00793**
  All submitted commands that refer to `queryPool` must have completed execution

- **VUID-vkDestroyQueryPool-queryPool-00794**
  If `VkAllocationCallbacks` were provided when `queryPool` was created, a compatible set of callbacks must be provided here

- **VUID-vkDestroyQueryPool-queryPool-00795**
  If no `VkAllocationCallbacks` were provided when `queryPool` was created, `pAllocator` must be `NULL`

### Note

Applications can verify that `queryPool` can be destroyed by checking that `vkGetQueryPoolResults()` without the `VK_QUERY_RESULT_PARTIAL_BIT` flag returns `VK_SUCCESS` for all queries that are used in command buffers submitted for execution.

### Valid Usage (Implicit)

- **VUID-vkDestroyQueryPool-device-parameter**
  `device` must be a valid `VkDevice` handle

- **VUID-vkDestroyQueryPool-queryPool-parameter**
If `queryPool` is not `VK_NULL_HANDLE`, `queryPool` must be a valid `VkQueryPool` handle.

- **VUID-vkDestroyQueryPool-pAllocator-parameter**
  If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure.

- **VUID-vkDestroyQueryPool-queryPool-parent**
  If `queryPool` is a valid handle, it must have been created, allocated, or retrieved from `device`.

### Host Synchronization

- Host access to `queryPool` must be externally synchronized.

Possible values of `VkQueryPoolCreateInfo::queryType`, specifying the type of queries managed by the pool, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkQueryType {
    VK_QUERY_TYPE_OCCLUSION = 0,
    VK_QUERY_TYPE_PIPELINE_STATISTICS = 1,
    VK_QUERY_TYPE_TIMESTAMP = 2,
    // Provided by VK_KHR_video_queue
    VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR = 1000023000,
    // Provided by VK_EXT_transform_feedback
    VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT = 1000028004,
    // Provided by VK_KHR_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR = 1000116000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR = 1000150000,
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR = 1000150001,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV = 1000165000,
    // Provided by VK_KHR_performance_query
    VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL = 1000210000,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR = 1000299000,
    // Provided by VK_EXT_mesh_shader
    VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT = 1000328000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV = 1000382000,
    // Provided by VK_KHR_acceleration_structure
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR = 1000386000,
    VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR = 1000386001,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_TYPE_MICROMAP_SERIALIZATION_SIZE_EXT = 1000396000,
} VkQueryType;
```
• **VK_QUERY_TYPE_OCCLUSION** specifies an occlusion query.
• **VK_QUERY_TYPE_PIPELINE_STATISTICS** specifies a pipeline statistics query.
• **VK_QUERY_TYPE_TIMESTAMP** specifies a timestamp query.
• **VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR** specifies a performance query.
• **VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT** specifies a transform feedback query.
• **VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT** specifies a primitives generated query.
• **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR** specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR`.
• **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR** specifies a serialization acceleration structure size query.
• **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR** specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesKHR` or `vkWriteAccelerationStructuresPropertiesKHR`.
• **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR** specifies a serialization acceleration structure pointer count query.
• **VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV** specifies an acceleration structure size query for use with `vkCmdWriteAccelerationStructuresPropertiesNV`.
• **VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL** specifies an Intel performance query.
• **VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR** specifies a result status query.
• **VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR** specifies a video encode feedback query.
• **VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT** specifies a generated mesh primitives query.

## 18.2. Query Operation

The operation of queries is controlled by the commands `vkCmdBeginQuery`, `vkCmdEndQuery`, `vkCmdBeginQueryIndexedEXT`, `vkCmdEndQueryIndexedEXT`, `vkCmdResetQueryPool`, `vkCmdCopyQueryPoolResults`, `vkCmdWriteTimestamp2`, and `vkCmdWriteTimestamp`.

In order for a `VkCommandBuffer` to record query management commands, the queue family for which its `VkCommandPool` was created must support the appropriate type of operations (graphics, compute) suitable for the query type of a given query pool.

Each query in a query pool has a status that is either **unavailable** or **available**, and also has state to store the numerical results of a query operation of the type requested when the query pool was created. Resetting a query via `vkCmdResetQueryPool` or `vkResetQueryPool` sets the status to unavailable and makes the numerical results undefined. A query is made available by the operation of `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`, or
vkCmdWriteTimestamp. Both the availability status and numerical results can be retrieved by calling either vkGetQueryPoolResults or vkCmdCopyQueryPoolResults.

After query pool creation, each query is in an uninitialized state and must be reset before it is used. Queries must also be reset between uses.

If a logical device includes multiple physical devices, then each command that writes a query must execute on a single physical device, and any call to vkCmdBeginQuery must execute the corresponding vkCmdEndQuery command on the same physical device.

To reset a range of queries in a query pool on a queue, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdResetQueryPool(
    VkCommandBuffer commandBuffer, ...
);
```

- **commandBuffer** is the command buffer into which this command will be recorded.
- **queryPool** is the handle of the query pool managing the queries being reset.
- **firstQuery** is the initial query index to reset.
- **queryCount** is the number of queries to reset.

When executed on a queue, this command sets the status of query indices \([firstQuery, firstQuery + queryCount - 1]\) to unavailable.

This command defines an execution dependency between other query commands that reference the same query.

The first synchronization scope includes all commands which reference the queries in queryPool indicated by firstQuery and queryCount that occur earlier in submission order.

The second synchronization scope includes all commands which reference the queries in queryPool indicated by firstQuery and queryCount that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, this command sets the status of query indices \([firstQuery, firstQuery + queryCount - 1]\) to unavailable for each pass of queryPool, as indicated by a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR.

**Note**

Because vkCmdResetQueryPool resets all the passes of the indicated queries, applications must not record a vkCmdResetQueryPool command for a queryPool created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR in a command buffer that needs to be submitted multiple times as indicated by a call to
vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR. Otherwise applications will never be able to complete the recorded queries.

## Valid Usage

- **VUID-vkCmdResetQueryPool-firstQuery-09436**
  
  firstQuery **must** be less than the number of queries in queryPool

- **VUID-vkCmdResetQueryPool-firstQuery-09437**
  
  The sum of firstQuery and queryCount **must** be less than or equal to the number of queries in queryPool

- **VUID-vkCmdResetQueryPool-None-02841**
  
  All queries used by the command **must** not be active

- **VUID-vkCmdResetQueryPool-firstQuery-02862**
  
  If queryPool was created with VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, this command **must** not be recorded in a command buffer that, either directly or through secondary command buffers, also contains begin commands for a query from the set of queries \([firstQuery, firstQuery + queryCount - 1]\)

## Valid Usage (Implicit)

- **VUID-vkCmdResetQueryPool-commandBuffer-parameter**
  
  commandBuffer **must** be a valid VkCommandBuffer handle

- **VUID-vkCmdResetQueryPool-queryPool-parameter**
  
  queryPool **must** be a valid VkQueryPool handle

- **VUID-vkCmdResetQueryPool-commandBuffer-recording**
  
  commandBuffer **must** be in the recording state

- **VUID-vkCmdResetQueryPool-commandBuffer-cmdpool**
  
  The VkCommandPool that commandBuffer was allocated from **must** support graphics, compute, decode, encode, or optical flow operations

- **VUID-vkCmdResetQueryPool-renderpass**
  
  This command **must** only be called outside of a render pass instance

- **VUID-vkCmdResetQueryPool-videocoding**
  
  This command **must** only be called outside of a video coding scope

- **VUID-vkCmdResetQueryPool-commonparent**
  
  Both of commandBuffer, and queryPool **must** have been created, allocated, or retrieved from the same VkDevice

## Host Synchronization

- Host access to commandBuffer **must** be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally
To reset a range of queries in a query pool on the host, call:

```c
// Provided by VK_VERSION_1_2
void vkResetQueryPool(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount);
```

or the equivalent command

```c
// Provided by VK_EXT_host_query_reset
void vkResetQueryPoolEXT(
    VkDevice          device,
    VkQueryPool       queryPool,
    uint32_t          firstQuery,
    uint32_t          queryCount);
```

- `device` is the logical device that owns the query pool.
- `queryPool` is the handle of the query pool managing the queries being reset.
- `firstQuery` is the initial query index to reset.
- `queryCount` is the number of queries to reset.

This command sets the status of query indices \([firstQuery, firstQuery + queryCount - 1]\) to unavailable.

If `queryPool` is `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` this command sets the status of query indices \([firstQuery, firstQuery + queryCount - 1]\) to unavailable for each pass.
Valid Usage

• VUID-vkResetQueryPool-firstQuery-09436
  *firstQuery* must be less than the number of queries in *queryPool*

• VUID-vkResetQueryPool-firstQuery-09437
  The sum of *firstQuery* and *queryCount* must be less than or equal to the number of queries in *queryPool*

• VUID-vkResetQueryPool-None-02665
  The hostQueryReset feature must be enabled

• VUID-vkResetQueryPool-firstQuery-02741
  Submitted commands that refer to the range specified by *firstQuery* and *queryCount* in *queryPool* must have completed execution

• VUID-vkResetQueryPool-firstQuery-02742
  The range of queries specified by *firstQuery* and *queryCount* in *queryPool* must not be in use by calls to *vkGetQueryPoolResults* or *vkResetQueryPool* in other threads

Valid Usage (Implicit)

• VUID-vkResetQueryPool-device-parameter
  *device* must be a valid *VkDevice* handle

• VUID-vkResetQueryPool-queryPool-parameter
  *queryPool* must be a valid *VkQueryPool* handle

• VUID-vkResetQueryPool-queryPool-parent
  *queryPool* must have been created, allocated, or retrieved from *device*

Once queries are reset and ready for use, query commands can be issued to a command buffer. Occlusion queries and pipeline statistics queries count events - drawn samples and pipeline stage invocations, respectively - resulting from commands that are recorded between a *vkCmdBeginQuery* command and a *vkCmdEndQuery* command within a specified command buffer, effectively scoping a set of drawing and/or dispatching commands. Timestamp queries write timestamps to a query pool. Performance queries record performance counters to a query pool. A query must begin and end in the same command buffer, although if it is a primary command buffer, and the inheritedQueries feature is enabled, it can execute secondary command buffers during the query operation. For a secondary command buffer to be executed while a query is active, it must set the occlusionQueryEnable, queryFlags, and/or pipelineStatistics members of VkCommandBufferInheritanceInfo to conservative values, as described in the Command Buffer Recording section. A query must either begin and end inside the same subpass of a render pass instance, or must both begin and end outside of a render pass instance (i.e. contain entire render pass instances).

If queries are used while executing a render pass instance that has multiview enabled, the query uses \( N \) consecutive query indices in the query pool (starting at *query*) where \( N \) is the number of bits
set in the view mask in the subpass the query is used in. How the numerical results of the query are distributed among the queries is implementation-dependent. For example, some implementations may write each view's results to a distinct query, while other implementations may write the total result to the first query and write zero to the other queries. However, the sum of the results in all the queries must accurately reflect the total result of the query summed over all views. Applications can sum the results from all the queries to compute the total result.

Queries used with multiview rendering must not span subpasses, i.e. they must begin and end in the same subpass.

A query must either begin and end inside the same video coding scope, or must both begin and end outside of a video coding scope and must not contain entire video coding scopes.

To begin a query, call:

```c
void vkCmdBeginQuery(
    VkCommandBuffer commandBuffer,  
    VkQueryPool queryPool,           
    uint32_t query,                  
    VkQueryControlFlags flags);    
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that will manage the results of the query.
- `query` is the query index within the query pool that will contain the results.
- `flags` is a bitmask of `VkQueryControlFlagBits` specifying constraints on the types of queries that can be performed.

If the `queryType` of the pool is `VK_QUERY_TYPE_OCCLUSION` and `flags` contains `VK_QUERY_CONTROL_PRECISE_BIT`, an implementation must return a result that matches the actual number of samples passed. This is described in more detail in Occlusion Queries.

Calling `vkCmdBeginQuery` is equivalent to calling `vkCmdBeginQueryIndexedEXT` with the `index` parameter set to zero.

After beginning a query, that query is considered active within the command buffer it was called in until that same query is ended. Queries active in a primary command buffer when secondary command buffers are executed are considered active for those secondary command buffers.

Furthermore, if the query is started within a video coding scope, the following command buffer states are initialized for the query type:

- The `active_query_index` is set to the value specified by `query`.
- The last activatable query index is also set to the value specified by `query`.

Each video coding operation stores a result to the query corresponding to the current active query index, followed by incrementing the active query index. If the active query index gets incremented past the last activatable query index, issuing any further video coding operations results in

1524
undefined behavior.

**Note**

In practice, this means that currently no more than a single video coding operation **must** be issued between a begin and end query pair.

This command defines an execution dependency between other query commands that reference the same query.

The first **synchronization scope** includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in **submission order**.

The second **synchronization scope** includes all commands which reference the queries in `queryPool` indicated by `query` that occur later in **submission order**.

The operation of this command happens after the first scope and happens before the second scope.

---

**Valid Usage**

- **VUID-vkCmdBeginQuery-None-00807**
  All queries used by the command **must** be **unavailable**

- **VUID-vkCmdBeginQuery-queryType-02804**
  The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_TIMESTAMP`

- **VUID-vkCmdBeginQuery-queryType-04728**
  The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR` or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`

- **VUID-vkCmdBeginQuery-queryType-06741**
  The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR` or `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`

- **VUID-vkCmdBeginQuery-queryType-04729**
  The `queryType` used to create `queryPool` **must** not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`

- **VUID-vkCmdBeginQuery-queryType-00800**
  If the `occlusionQueryPrecise` feature is not enabled, or the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_OCCLUSION`, flags **must** not contain `VK_QUERY_CONTROL_PRECISE_BIT`

- **VUID-vkCmdBeginQuery-query-00802**
  `query` **must** be less than the number of queries in `queryPool`

- **VUID-vkCmdBeginQuery-queryType-00803**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any

---

1525
of the `pipelineStatistics` indicate graphics operations, the `VkCommandPool` that `commandBuffer` was allocated from must support graphics operations

- **VUID-vkCmdBeginQuery-queryType-00805**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate compute operations, the `VkCommandPool` that `commandBuffer` was allocated from must support compute operations

- **VUID-vkCmdBeginQuery-commandBuffer-01885**
  `commandBuffer` must not be a protected command buffer

- **VUID-vkCmdBeginQuery-query-00808**
  If called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask must be less than or equal to the number of queries in `queryPool`

- **VUID-vkCmdBeginQuery-queryType-07126**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from must have been created with a queue family index that supports result status queries, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`

- **VUID-vkCmdBeginQuery-None-07127**
  If there is a bound video session, then there must be no active queries

- **VUID-vkCmdBeginQuery-None-08370**
  If there is a bound video session, then it must not have been created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`

- **VUID-vkCmdBeginQuery-queryType-07128**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there must be a bound video session

- **VUID-vkCmdBeginQuery-queryType-07129**
  If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there must be no bound video session

- **VUID-vkCmdBeginQuery-queryType-07130**
  If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there must be no bound video session

- **VUID-vkCmdBeginQuery-queryPool-01922**
  `queryPool` must have been created with a `queryType` that differs from that of any queries that are active within `commandBuffer`
• VUID-vkCmdBeginQuery-queryType-07070
If the \texttt{queryType} used to create \texttt{queryPool} was \texttt{VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT}
the \texttt{VkCommandPool} that \texttt{commandBuffer} was allocated from \textbf{must} support graphics operations

• VUID-vkCmdBeginQuery-queryType-02327
If the \texttt{queryType} used to create \texttt{queryPool} was \texttt{VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT}
the \texttt{VkCommandPool} that \texttt{commandBuffer} was allocated from \textbf{must} support graphics operations

• VUID-vkCmdBeginQuery-queryType-02328
If the \texttt{queryType} used to create \texttt{queryPool} was \texttt{VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT}
then \texttt{VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries} \textbf{must} be supported

• VUID-vkCmdBeginQuery-queryPool-07289
If \texttt{queryPool} was created with a \texttt{queryType} of \texttt{VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR}, then the
\texttt{VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex} \texttt{queryPool} was created with \textbf{must} equal the queue family index of the \texttt{VkCommandPool} that \texttt{commandBuffer} was allocated from

• VUID-vkCmdBeginQuery-queryPool-03223
If \texttt{queryPool} was created with a \texttt{queryType} of \texttt{VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR}, the
\texttt{profiling lock} \textbf{must} have been held before \texttt{vkBeginCommandBuffer} was called on \texttt{commandBuffer}

• VUID-vkCmdBeginQuery-queryPool-03224
If \texttt{queryPool} was created with a \texttt{queryType} of \texttt{VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR} and one
of the counters used to create \texttt{queryPool} was \texttt{VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR}, the query begin \textbf{must} be the first
recorded command in \texttt{commandBuffer}

• VUID-vkCmdBeginQuery-queryPool-03225
If \texttt{queryPool} was created with a \texttt{queryType} of \texttt{VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR} and one
of the counters used to create \texttt{queryPool} was \texttt{VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR}, the begin command \textbf{must} not be recorded
within a render pass instance

• VUID-vkCmdBeginQuery-queryPool-03226
If \texttt{queryPool} was created with a \texttt{queryType} of \texttt{VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR} and another query pool with a \texttt{queryType} \texttt{VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR} has been used
within \texttt{commandBuffer}, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as \texttt{commandBuffer}, the \texttt{performanceCounterMultipleQueryPools} feature \textbf{must} be enabled
If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command must not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query.

### Valid Usage (Implicit)

- **VUID-vkCmdBeginQuery-commandBuffer-parameter**
  
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- **VUID-vkCmdBeginQuery-queryPool-parameter**
  
  `queryPool` must be a valid `VkQueryPool` handle

- **VUID-vkCmdBeginQuery-flags-parameter**
  
  `flags` must be a valid combination of `VkQueryControlFlagBits` values

- **VUID-vkCmdBeginQuery-commandBuffer-recording**
  
  `commandBuffer` must be in the recording state

- **VUID-vkCmdBeginQuery-commandBuffer-cmdpool**
  
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, decode, or encode operations

- **VUID-vkCmdBeginQuery-commonparent**
  
  Both of `commandBuffer`, and `queryPool` must have been created, allocated, or retrieved from the same `VkDevice`

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Both</td>
<td>Both</td>
<td>Graphics Compute Decode Encode</td>
<td>Action State</td>
</tr>
</tbody>
</table>

To begin an indexed query, call:
// Provided by VK_EXT_transform_feedback

```c
void vkCmdBeginQueryIndexedEXT(
    VkCommandBuffer commandBuffer,
    VkQueryPool queryPool,
    uint32_t query,
    VkQueryControlFlags flags,
    uint32_t index);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that will manage the results of the query.
- `query` is the query index within the query pool that will contain the results.
- `flags` is a bitmask of `VkQueryControlFlagBits` specifying constraints on the types of queries that can be performed.
- `index` is the query type specific index. When the query type is `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` or `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, the index represents the vertex stream.

The `vkCmdBeginQueryIndexedEXT` command operates the same as the `vkCmdBeginQuery` command, except that it also accepts a query type specific `index` parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first **synchronization scope** includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur earlier in submission order.

The second **synchronization scope** includes all commands which reference the queries in `queryPool` indicated by `query` and `index` that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

### Valid Usage

- VUID-vkCmdBeginQueryIndexedEXT-None-00807
  All queries used by the command **must be unavailable**

- VUID-vkCmdBeginQueryIndexedEXT-queryType-02804
  The `queryType` used to create `queryPool` **must not be** `VK_QUERY_TYPE_TIMESTAMP`

- VUID-vkCmdBeginQueryIndexedEXT-queryType-04728
  The `queryType` used to create `queryPool` **must not be**
  `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR`
  or
  `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR`

- VUID-vkCmdBeginQueryIndexedEXT-queryType-06741
  The `queryType` used to create `queryPool` **must not be**
  `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`
  or
  `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
• VUID-vkCmdBeginQueryIndexedEXT-queryType-04729
  The `queryType` used to create `queryPool` must not be `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_NV`

• VUID-vkCmdBeginQueryIndexedEXT-queryType-00800
  If the `occlusionQueryPrecise` feature is not enabled, or the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_OCCLUSION`, flags must not contain `VK_QUERY_CONTROL_PRECISE_BIT`

• VUID-vkCmdBeginQueryIndexedEXT-queryType-00802
  `query` must be less than the number of queries in `queryPool`

• VUID-vkCmdBeginQueryIndexedEXT-queryType-00803
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_OCCLUSION`, the `VkCommandPool` that `commandBuffer` was allocated from must support graphics operations

• VUID-vkCmdBeginQueryIndexedEXT-queryType-00804
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate graphics operations, the `VkCommandPool` that `commandBuffer` was allocated from must support graphics operations

• VUID-vkCmdBeginQueryIndexedEXT-queryType-00805
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PIPELINE_STATISTICS` and any of the `pipelineStatistics` indicate compute operations, the `VkCommandPool` that `commandBuffer` was allocated from must support compute operations

• VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-01885
  `commandBuffer` must not be a protected command buffer

• VUID-vkCmdBeginQueryIndexedEXT-None-00808
  If called within a render pass instance, the sum of `query` and the number of bits set in the current subpass's view mask must be less than or equal to the number of queries in `queryPool`

• VUID-vkCmdBeginQueryIndexedEXT-queryType-07126
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR`, then the `VkCommandPool` that `commandBuffer` was allocated from must have been created with a queue family index that supports result status queries, as indicated by `VkQueueFamilyQueryResultStatusPropertiesKHR::queryResultStatusSupport`

• VUID-vkCmdBeginQueryIndexedEXT-None-07127
  If there is a bound video session, then there must be no active queries

• VUID-vkCmdBeginQueryIndexedEXT-None-08370
  If there is a bound video session, then it must not have been created with `VK_VIDEO_SESSION_CREATE_INLINE_QUERIES_BIT_KHR`

• VUID-vkCmdBeginQueryIndexedEXT-queryType-07128
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` and there is a bound video session, then `queryPool` must have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo` identical to the one specified in `VkVideoSessionCreateInfoKHR::pVideoProfile` the bound video session was created with

• VUID-vkCmdBeginQueryIndexedEXT-queryType-07129
If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be a bound video session:

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-07130**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo::pNext` identical to the one specified in `VkVideoSessionCreateInfoKHR::pNext` the bound video session was created with.

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-07131**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` and there is a bound video session, then `queryPool` **must** have been created with a `VkVideoProfileInfoKHR` structure included in the `pNext` chain of `VkQueryPoolCreateInfo::pNext` identical to the one specified in `VkVideoSessionCreateInfoKHR::pNext`.

If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR` or `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR`, then there **must** be no bound video session:

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-04753**
  If the `queryPool` was created with the same `queryType` as that of another active query within `commandBuffer`, then `index` **must** not match the index used for the active query.

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT`, the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations:

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-02338**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations.

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-02339**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` the `index` parameter **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`.

If the `queryType` used to create `queryPool` was not `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` and not `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, the `index` **must** be zero:

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-06689**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` the `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations.

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-06690**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` the `index` parameter **must** be less than `VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams`.

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` and the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled, the `index` parameter **must** be zero:

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-06691**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` and the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled, the `index` parameter **must** be zero.

If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` then `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries` **must** be enabled:

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-06693**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` then `primitivesGeneratedQuery` **must** be enabled.

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-02341**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` then `VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackQueries` **must** be enabled.
supported

- **VUID-vkCmdBeginQueryIndexedEXT-queryType-07071**
  The `queryType` used to create `queryPool` must not be `VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT`.

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-07289**
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, then the `VkQueryPoolPerformanceCreateInfoKHR::queueFamilyIndex` `queryPool` was created with must equal the queue family index of the `VkCommandPool` that `commandBuffer` was allocated from.

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-03223**
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, the profiling lock must have been held before `vkBeginCommandBuffer` was called on `commandBuffer`.

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-03224**
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the query begin must be the first recorded command in `commandBuffer`.

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-03225**
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR`, the begin command must not be recorded within a render pass instance.

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-03226**
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and another query pool with a `queryType` `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` has been used within `commandBuffer`, its parent primary command buffer or secondary command buffer recorded within the same parent primary command buffer as `commandBuffer`, the `performanceCounterMultipleQueryPools` feature must be enabled.

- **VUID-vkCmdBeginQueryIndexedEXT-None-02863**
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, this command must not be recorded in a command buffer that, either directly or through secondary command buffers, also contains a `vkCmdResetQueryPool` command affecting the same query.

### Valid Usage (Implicit)

- **VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdBeginQueryIndexedEXT-queryPool-parameter**
  `queryPool` must be a valid `VkQueryPool` handle.

- **VUID-vkCmdBeginQueryIndexedEXT-flags-parameter**
  `flags` must be a valid combination of `VkQueryControlFlagBits` values.
• VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-recording
  CommandBuffer must be in the recording state

• VUID-vkCmdBeginQueryIndexedEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, compute, decode, or encode operations

• VUID-vkCmdBeginQueryIndexedEXT-videocoding
  This command must only be called outside of a video coding scope

• VUID-vkCmdBeginQueryIndexedEXT-commonparent
  Both of commandBuffer, and queryPool must have been created, allocated, or retrieved from the same VkDevice

---

**Host Synchronization**

• Host access to commandBuffer must be externally synchronized

• Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

---

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics Compute Decode Encode</td>
<td>Action State</td>
</tr>
</tbody>
</table>

Bits which can be set in vkCmdBeginQuery::flags, specifying constraints on the types of queries that can be performed, are:

```cpp
// Provided by VK_VERSION_1_0
typedef enum VkQueryControlFlagBits {
    VK_QUERY_CONTROL_PRECISE_BIT = 0x00000001,
} VkQueryControlFlagBits;
```

• VK_QUERY_CONTROL_PRECISE_BIT specifies the precision of occlusion queries.

```cpp
// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryControlFlags;
```

VkQueryControlFlags is a bitmask type for setting a mask of zero or more VkQueryControlFlagBits.
To end a query after the set of desired drawing or dispatching commands is executed, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdEndQuery(
    VkCommandBuffer commandBuffer,
    VkQueryPool queryPool,
    uint32_t query);
```

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool that is managing the results of the query.
- `query` is the query index within the query pool where the result is stored.

The command completes the query in `queryPool` identified by `query`, and marks it as available.

This command defines an execution dependency between other query commands that reference the same query.

The first **synchronization scope** includes all commands which reference the queries in `queryPool` indicated by `query` that occur earlier in submission order.

The second **synchronization scope** includes only the operation of this command.

Calling `vkCmdEndQuery` is equivalent to calling `vkCmdEndQueryIndexedEXT` with the `index` parameter set to zero.

### Valid Usage

- VUID-vkCmdEndQuery-None-01923
  All queries used by the command **must be active**

- VUID-vkCmdEndQuery-query-00810
  `query` **must be less than the number of queries in** `queryPool`

- VUID-vkCmdEndQuery-commandBuffer-01886
  `commandBuffer` **must not be a protected command buffer**

- VUID-vkCmdEndQuery-query-00812
  If `vkCmdEndQuery` is called within a render pass instance, the sum of `query` and the number of bits set in the current subpass’s view mask **must be less than or equal to the number of queries in** `queryPool`

- VUID-vkCmdEndQuery-queryPool-03227
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one or more of the counters used to create `queryPool` was `VK_PERFORMANCE_COUNTER_SCOPE_COMMAND_BUFFER_KHR`, the `vkCmdEndQuery` **must be the last recorded command in** `commandBuffer`

- VUID-vkCmdEndQuery-queryPool-03228
  If `queryPool` was created with a `queryType` of `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR` and one or more of the counters used to create `queryPool` was
VK_PERFORMANCE_COUNTER_SCOPE_RENDER_PASS_KHR, the `vkCmdEndQuery` must not be recorded within a render pass instance

- VUID-vkCmdEndQuery-None-07007
  If called within a subpass of a render pass instance, the corresponding `vkCmdBeginQuery*` command must have been called previously within the same subpass

**Valid Usage (Implicit)**

- VUID-vkCmdEndQuery-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdEndQuery-queryPool-parameter
  `queryPool` must be a valid `VkQueryPool` handle

- VUID-vkCmdEndQuery-commandBuffer-recording
  `commandBuffer` must be in the recording state

- VUID-vkCmdEndQuery-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, decode, or encode operations

- VUID-vkCmdEndQuery-commonparent
  Both of `commandBuffer`, and `queryPool` must have been created, allocated, or retrieved from the same `VkDevice`

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>

</tr>
</tbody>
</table>

To end an indexed query after the set of desired drawing or dispatching commands is recorded, call:

```c
// Provided by VK_EXT_transform_feedback
```
void vkCmdEndQueryIndexedEXT(
    VkCommandBuffer commandBuffer,
    VkQueryPool queryPool,
    uint32_t query,
    uint32_t index);

- commandBuffer is the command buffer into which this command will be recorded.
- queryPool is the query pool that is managing the results of the query.
- query is the query index within the query pool where the result is stored.
- index is the query type specific index.

The command completes the query in queryPool identified by query and index, and marks it as available.

The vkCmdEndQueryIndexedEXT command operates the same as the vkCmdEndQuery command, except that it also accepts a query type specific index parameter.

This command defines an execution dependency between other query commands that reference the same query index.

The first synchronization scope includes all commands which reference the queries in queryPool indicated by query that occur earlier in submission order.

The second synchronization scope includes only the operation of this command.

Valid Usage

- VUID-vkCmdEndQueryIndexedEXT-None-02342
  All queries used by the command must be active

- VUID-vkCmdEndQueryIndexedEXT-query-02343
  query must be less than the number of queries in queryPool

- VUID-vkCmdEndQueryIndexedEXT-commandBuffer-02344
  commandBuffer must not be a protected command buffer

- VUID-vkCmdEndQueryIndexedEXT-query-02345
  If vkCmdEndQueryIndexedEXT is called within a render pass instance, the sum of query and the number of bits set in the current subpass’s view mask must be less than or equal to the number of queries in queryPool

- VUID-vkCmdEndQueryIndexedEXT-queryType-06694
  If the queryType used to create queryPool was VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT or VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index parameter must be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams

- VUID-vkCmdEndQueryIndexedEXT-queryType-06695
  If the queryType used to create queryPool was not VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT and not VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT, the index must be zero
- **VUID-vkCmdEndQueryIndexedEXT-queryType-06696**
  If the `queryType` used to create `queryPool` was `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT` or `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT`, `index` must equal the `index` used to begin the query.

- **VUID-vkCmdEndQueryIndexedEXT-None-07007**
  If called within a subpass of a render pass instance, the corresponding `vkCmdBeginQuery*` command must have been called previously within the same subpass.

---

**Valid Usage (Implicit)**

- **VUID-vkCmdEndQueryIndexedEXT-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdEndQueryIndexedEXT-queryPool-parameter**
  `queryPool` must be a valid `VkQueryPool` handle.

- **VUID-vkCmdEndQueryIndexedEXT-commandBuffer-recording**
  `commandBuffer` must be in the recording state.

- **VUID-vkCmdEndQueryIndexedEXT-commandBuffer-cmdpool**
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, decode, or encode operations.

- **VUID-vkCmdEndQueryIndexedEXT-videocoding**
  This command must only be called outside of a video coding scope.

- **VUID-vkCmdEndQueryIndexedEXT-commonparent**
  Both of `commandBuffer`, and `queryPool` must have been created, allocated, or retrieved from the same `VkDevice`.

---

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized.

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.

---

<td>Decode, Encode</td>
<td></td>
</tr>
</tbody>
</table>
An application can retrieve results either by requesting they be written into application-provided memory, or by requesting they be copied into a `VkBuffer`. In either case, the layout in memory is defined as follows:

- The first query's result is written starting at the first byte requested by the command, and each subsequent query's result begins `stride` bytes later.

- Occlusion queries, pipeline statistics queries, transform feedback queries, primitives generated queries, mesh shader queries, video encode feedback queries, and timestamp queries store results in a tightly packed array of unsigned integers, either 32- or 64-bits as requested by the command, storing the numerical results and, if requested, the availability status.

- Performance queries store results in a tightly packed array whose type is determined by the `unit` member of the corresponding `VkPerformanceCounterKHR`.

- If `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` is used, the final element of each query's result is an integer indicating whether the query's result is available, with any non-zero value indicating that it is available.

- If `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is used, the final element of each query's result is an integer value indicating that status of the query result. Positive values indicate success, negative values indicate failure, and 0 indicates that the result is not yet available. Specific error codes are encoded in the `VkQueryResultStatusKHR` enumeration.

- Occlusion queries write one integer value - the number of samples passed. Pipeline statistics queries write one integer value for each bit that is enabled in the `pipelineStatistics` when the pool is created, and the statistics values are written in bit order starting from the least significant bit. Timestamp queries write one integer value. Performance queries write one `VkPerformanceCounterResultKHR` value for each `VkPerformanceCounterKHR` in the query. Transform feedback queries write two integers; the first integer is the number of primitives successfully written to the corresponding transform feedback buffer and the second is the number of primitives output to the vertex stream, regardless of whether they were successfully captured or not. In other words, if the transform feedback buffer was sized too small for the number of primitives output by the vertex stream, the first integer represents the number of primitives actually written and the second is the number that would have been written if all the transform feedback buffers associated with that vertex stream were large enough. Primitives generated queries write the number of primitives output to the vertex stream, regardless of whether transform feedback is active or not, or whether they were successfully captured by transform feedback or not. This is identical to the second integer of the transform feedback queries if transform feedback is active. Mesh shader queries write a single integer. Video encode feedback queries write one or more integer values for each bit that is enabled in `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` when the pool is created, and the feedback values are written in bit order starting from the least significant bit, as described here.

- If more than one query is retrieved and `stride` is not at least as large as the size of the array of values corresponding to a single query, the values written to memory are undefined.

To retrieve status and results for a set of queries, call:

```c
// Provided by VK_VERSION_1_0
```
VkResult vkGetQueryPoolResults(
    VkDevice device,
    VkQueryPool queryPool,
    uint32_t firstQuery,
    uint32_t queryCount,
    size_t dataSize,
    void* pData,
    VkDeviceSize stride,
    VkQueryResultFlags flags);

• device is the logical device that owns the query pool.
• queryPool is the query pool managing the queries containing the desired results.
• firstQuery is the initial query index.
• queryCount is the number of queries to read.
• dataSize is the size in bytes of the buffer pointed to by pData.
• pData is a pointer to a user-allocated buffer where the results will be written
• stride is the stride in bytes between results for individual queries within pData.
• flags is a bitmask of VkQueryResultFlagBits specifying how and when results are returned.

Any results written for a query are written according to a layout dependent on the query type.

If no bits are set in flags, and all requested queries are in the available state, results are written as an array of 32-bit unsigned integer values. Behavior when not all queries are available is described below.

If VK_QUERY_RESULT_WITH_AVAILABILITY_BIT is set, results for all queries in queryPool identified by firstQuery and queryCount are copied to pData, along with an extra availability or status value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available. The size of the availability or status values is 64 bits if VK_QUERY_RESULT_64_BIT is set in flags. Otherwise, it is 32 bits.

If VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is set, results for all queries in queryPool identified by firstQuery and queryCount are copied to pData, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

VkQueryResultStatusKHR defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise specified for any of the results of the used query type.

Note
If `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` or `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is set, the layout of data in the buffer is a `{result,availability}` or `{result,status}` pair for each query returned, and `stride` is the stride between each pair.

Results for any available query written by this command are final and represent the final result of the query. If `VK_QUERY_RESULT_PARTIAL_BIT` is set, then for any query that is unavailable, an intermediate result between zero and the final result value is written for that query. Otherwise, any result written by this command is undefined.

If `VK_QUERY_RESULT_64_BIT` is set, results and, if returned, availability or status values for all queries are written as an array of 64-bit values. If the `queryPool` was created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR::storage` for the counter being queried. Otherwise, results and availability or status values are written as an array of 32-bit values. If an unsigned integer query's value overflows the result type, the value may either wrap or saturate. If a signed integer query's value overflows the result type, the value is undefined. If a floating point query's value is not representable as the result type, the value is undefined.

If `VK_QUERY_RESULT_WAIT_BIT` is set, this command defines an execution dependency with any earlier commands that writes one of the identified queries. The first synchronization scope includes all instances of `vkCmdEndQuery`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`, and `vkCmdWriteTimestamp` that reference any query in `queryPool` indicated by `firstQuery` and `queryCount`. The second synchronization scope includes the host operations of this command.

If `VK_QUERY_RESULT_WAIT_BIT` is not set, `vkGetQueryPoolResults` may return `VK_NOT_READY` if there are queries in the unavailable state.

**Note**

Applications must take care to ensure that use of the `VK_QUERY_RESULT_WAIT_BIT` bit has the desired effect.

For example, if a query has been used previously and a command buffer records the commands `vkCmdResetQueryPool`, `vkCmdBeginQuery`, and `vkCmdEndQuery` for that query, then the query will remain in the available state until `vkResetQueryPool` is called or the `vkCmdResetQueryPool` command executes on a queue. Applications can use fences or events to ensure that a query has already been reset before checking for its results or availability status. Otherwise, a stale value could be returned from a previous use of the query.

The above also applies when `VK_QUERY_RESULT_WAIT_BIT` is used in combination with `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT`. In this case, the returned availability status may reflect the result of a previous use of the query unless `vkResetQueryPool` is called or the `vkCmdResetQueryPool` command has been executed since the last use of the query.

A similar situation can arise with the `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` flag.

**Note**
Applications **can** double-buffer query pool usage, with a pool per frame, and reset queries at the end of the frame in which they are read.

### Valid Usage

- **VUID-vkGetQueryPoolResults-firstQuery-09436**
  
  *firstQuery* **must** be less than the number of queries in *queryPool*

- **VUID-vkGetQueryPoolResults-firstQuery-09437**
  
  The sum of *firstQuery* and *queryCount* **must** be less than or equal to the number of queries in *queryPool*

- **VUID-vkGetQueryPoolResults-queryCount-09438**
  
  If *queryCount* is greater than 1, *stride* **must** not be zero

- **VUID-vkGetQueryPoolResults-queryType-09439**
  
  If the *queryType* used to create *queryPool* was *VK_QUERY_TYPE_TIMESTAMP*, *flags* **must** not contain *VK_QUERY_RESULT_PARTIAL_BIT*

- **VUID-vkGetQueryPoolResults-queryType-09440**
  
  If the *queryType* used to create *queryPool* was *VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR*, *flags* **must** not contain *VK_QUERY_RESULT_WITH_AVAILABILITY_BIT*, *VK_QUERY_RESULT_WITH_STATUS_BIT_KHR*, *VK_QUERY_RESULT_PARTIAL_BIT*, or *VK_QUERY_RESULT_64_BIT*

- **VUID-vkGetQueryPoolResults-queryType-09441**
  
  If the *queryType* used to create *queryPool* was *VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR*, the *queryPool* **must** have been recorded once for each pass as retrieved via a call to *vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR*

- **VUID-vkGetQueryPoolResults-queryType-09442**
  
  If the *queryType* used to create *queryPool* was *VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR*, then *flags* **must** include *VK_QUERY_RESULT_WITH_STATUS_BIT_KHR*.

- **VUID-vkGetQueryPoolResults-flags-09443**
  
  If *flags* includes *VK_QUERY_RESULT_WITH_STATUS_BIT_KHR*, then it **must** not include *VK_QUERY_RESULT_WITH_AVAILABILITY_BIT*

- **VUID-vkGetQueryPoolResults-None-09401**
  
  All queries used by the command **must** not be uninitialized

- **VUID-vkGetQueryPoolResults-flags-02828**
  
  If *VK_QUERY_RESULT_64_BIT* is not set in *flags* and the *queryType* used to create *queryPool* was not *VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR*, then *pData* and *stride* **must** be multiples of 4

- **VUID-vkGetQueryPoolResults-flags-00815**
  
  If *VK_QUERY_RESULT_64_BIT* is set in *flags* then *pData* and *stride* **must** be multiples of 8

- **VUID-vkGetQueryPoolResults-stride-08993**
  
  If *VK_QUERY_RESULT_WITH_AVAILABILITY_BIT* is set, *stride* **must** be large enough to contain the unsigned integer representing availability or status in addition to the query result.

- **VUID-vkGetQueryPoolResults-queryType-03229**
  
  If the *queryType* used to create *queryPool* was *VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR*, then
pData and stride must be multiples of the size of VkPerformanceCounterResultKHR

- VUID-vkGetQueryPoolResults-queryType-04519
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, then stride must be large enough to contain the VkQueryPoolPerformanceCreateInfoKHR::counterIndexCount used to create queryPool times the size of VkPerformanceCounterResultKHR

- VUID-vkGetQueryPoolResults-dataSize-00817
dataSize must be large enough to contain the result of each query, as described here

Valid Usage (Implicit)

- VUID-vkGetQueryPoolResults-device-parameter
device must be a valid VkDevice handle

- VUID-vkGetQueryPoolResults-queryPool-parameter
queryPool must be a valid VkQueryPool handle

- VUID-vkGetQueryPoolResults-pData-parameter
pData must be a valid pointer to an array of dataSize bytes

- VUID-vkGetQueryPoolResults-flags-parameter
flags must be a valid combination of VkQueryResultFlagBits values

- VUID-vkGetQueryPoolResults-dataSize-arraylength
dataSize must be greater than 0

- VUID-vkGetQueryPoolResults-queryPool-parent
queryPool must have been created, allocated, or retrieved from device

Return Codes

Success
- VK_SUCCESS
- VK_NOT_READY

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_DEVICE_LOST

Bits which can be set in vkGetQueryPoolResults::flags and vkCmdCopyQueryPoolResults::flags, specifying how and when results are returned, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkQueryResultFlagBits {
    VK_QUERY_RESULT_64_BIT = 0x00000001,
};
```
VK_QUERY_RESULT_WAIT_BIT = 0x00000002,
VK_QUERY_RESULT_WITH_AVAILABILITY_BIT = 0x00000004,
VK_QUERY_RESULT_PARTIAL_BIT = 0x00000008,
// Provided by VK_KHR_video_queue
VK_QUERY_RESULT_WITH_STATUS_BIT_KHR = 0x00000010,
} VkQueryResultFlagBits;

- VK_QUERY_RESULT_64_BIT specifies the results will be written as an array of 64-bit unsigned integer values. If this bit is not set, the results will be written as an array of 32-bit unsigned integer values.
- VK_QUERY_RESULT_WAIT_BIT specifies that Vulkan will wait for each query’s status to become available before retrieving its results.
- VK_QUERY_RESULT_WITH_AVAILABILITY_BIT specifies that the availability status accompanies the results.
- VK_QUERY_RESULT_PARTIAL_BIT specifies that returning partial results is acceptable.
- VK_QUERY_RESULT_WITH_STATUS_BIT_KHR specifies that the last value returned in the query is a VkQueryResultStatusKHR value. See result status query for information on how an application can determine whether the use of this flag bit is supported.

// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryResultFlags;

VkQueryResultFlags is a bitmask type for setting a mask of zero or more VkQueryResultFlagBits.

Specific status codes that can be returned from a query are:

// Provided by VK_KHR_video_queue
typedef enum VkQueryResultStatusKHR {
    VK_QUERY_RESULT_STATUS_ERROR_KHR = -1,
    VK_QUERY_RESULT_STATUS_NOT_READY_KHR = 0,
    VK_QUERY_RESULT_STATUS_COMPLETE_KHR = 1,
    // Provided by VK_KHR_video_encode_queue
    VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR = -1000299000,
} VkQueryResultStatusKHR;

- VK_QUERY_RESULT_STATUS_NOT_READY_KHR indicates that the query result is not yet available.
- VK_QUERY_RESULT_STATUS_ERROR_KHR indicates that operations did not complete successfully.
- VK_QUERY_RESULT_STATUS_COMPLETE_KHR indicates that operations completed successfully and the query result is available.
- VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR indicates that a video encode operation did not complete successfully due to the destination video bitstream buffer range not being sufficiently large to fit the encoded bitstream data.

To copy query statuses and numerical results directly to buffer memory, call:
void vkCmdCopyQueryPoolResults(
  VkCommandBuffer commandBuffer,
  VkQueryPool queryPool,
  uint32_t firstQuery,
  uint32_t queryCount,
  VkBuffer dstBuffer,
  VkDeviceSize dstOffset,
  VkDeviceSize stride,
  VkQueryResultFlags flags);

- `commandBuffer` is the command buffer into which this command will be recorded.
- `queryPool` is the query pool managing the queries containing the desired results.
- `firstQuery` is the initial query index.
- `queryCount` is the number of queries. `firstQuery` and `queryCount` together define a range of queries.
- `dstBuffer` is a `VkBuffer` object that will receive the results of the copy command.
- `dstOffset` is an offset into `dstBuffer`.
- `stride` is the stride in bytes between results for individual queries within `dstBuffer`. The required size of the backing memory for `dstBuffer` is determined as described above for `vkGetQueryPoolResults`.
- `flags` is a bitmask of `VkQueryResultFlagBits` specifying how and when results are returned.

Any results written for a query are written according to a layout dependent on the query type.

Results for any query in `queryPool` identified by `firstQuery` and `queryCount` that is available are copied to `dstBuffer`.

If `VK_QUERY_RESULT_WITH_AVAILABILITY_BIT` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra availability value written directly after the results of each query and interpreted as an unsigned integer. A value of zero indicates that the results are not yet available, otherwise the query is complete and results are available.

If `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR` is set, results for all queries in `queryPool` identified by `firstQuery` and `queryCount` are copied to `dstBuffer`, along with an extra status value written directly after the results of each query and interpreted as a signed integer. A value of zero indicates that the results are not yet available. Positive values indicate that the operations within the query completed successfully, and the query results are valid. Negative values indicate that the operations within the query completed unsuccessfully.

`VkQueryResultStatusKHR` defines specific meaning for values returned here, though implementations are free to return other values.

If the status value written is negative, indicating that the operations within the query completed unsuccessfully, then all other results written by this command are undefined unless otherwise
specified for any of the results of the used query type.

Results for any available query written by this command are final and represent the final result of
the query. If `VK_QUERY_RESULT_PARTIAL_BIT` is set, then for any query that is unavailable, an
intermediate result between zero and the final result value is written for that query. Otherwise, any
result written by this command is undefined.

If `VK_QUERY_RESULT_64_BIT` is set, results and availability or status values for all queries are written
as an array of 64-bit values. If the `queryPool` was created with `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`,
results for each query are written as an array of the type indicated by `VkPerformanceCounterKHR
::storage` for the counter being queried. Otherwise, results and availability or status values are
written as an array of 32-bit values. If an unsigned integer query's value overflows the result type,
the value may either wrap or saturate. If a signed integer query's value overflows the result type,
the value is undefined. If a floating point query's value is not representable as the result type, the
value is undefined.

This command defines an execution dependency between other query commands that reference
the same query.

The first synchronization scope includes all commands which reference the queries in `queryPool`
indicated by `query` that occur earlier in submission order. If `flags` does not include
`VK_QUERY_RESULT_WAIT_BIT`, `vkCmdEndQueryIndexedEXT`, `vkCmdWriteTimestamp2`,
`vkCmdEndQuery`, and `vkCmdWriteTimestamp` are excluded from this scope.

The second synchronization scope includes all commands which reference the queries in `queryPool`
indicated by `query` that occur later in submission order.

The operation of this command happens after the first scope and happens before the second scope.

`vkCmdCopyQueryPoolResults` is considered to be a transfer operation, and its writes to buffer memory
must be synchronized using `VK_PIPELINE_STAGE_TRANSFER_BIT` and `VK_ACCESS_TRANSFER_WRITE_BIT`
before using the results.

### Valid Usage

- VUID-vkCmdCopyQueryPoolResults-firstQuery-09436
  firstQuery must be less than the number of queries in `queryPool`

- VUID-vkCmdCopyQueryPoolResults-firstQuery-09437
  The sum of firstQuery and queryCount must be less than or equal to the number of queries
  in `queryPool`

- VUID-vkCmdCopyQueryPoolResults-queryCount-09438
  If queryCount is greater than 1, stride must not be zero

- VUID-vkCmdCopyQueryPoolResults-queryType-09439
  If the queryType used to create `queryPool` was `VK_QUERY_TYPE_TIMESTAMP`, flags must not
  contain `VK_QUERY_RESULT_PARTIAL_BIT`

- VUID-vkCmdCopyQueryPoolResults-queryType-09440
  If the queryType used to create `queryPool` was `VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR`, flags
must not contain VK_QUERY_RESULT_WITH_AVAILABILITY_BIT,
VK_QUERY_RESULT_WITH_STATUS_BIT_KHR,
VK_QUERY_RESULT_PARTIAL_BIT, or
VK_QUERY_RESULT_64_BIT

• VUID-vkCmdCopyQueryPoolResults-queryType-09441
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, the queryPool must have been recorded once for each pass as retrieved via a call to vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR

• VUID-vkCmdCopyQueryPoolResults-queryType-09442
  If the queryType used to create queryPool was VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR, then flags must include VK_QUERY_RESULT_WITH_STATUS_BIT_KHR

• VUID-vkCmdCopyQueryPoolResults-flags-09443
  If flags includes VK_QUERY_RESULT_WITH_STATUS_BIT_KHR, then it must not include VK_QUERY_RESULT_WITH_AVAILABILITY_BIT

• VUID-vkCmdCopyQueryPoolResults-None-09402
  All queries used by the command must not be uninitialized when the command is executed

• VUID-vkCmdCopyQueryPoolResults-dstOffset-00819
  dstOffset must be less than the size of dstBuffer

• VUID-vkCmdCopyQueryPoolResults-flags-00822
  If VK_QUERY_RESULT_64_BIT is not set in flags then dstOffset and stride must be multiples of 4

• VUID-vkCmdCopyQueryPoolResults-flags-00823
  If VK_QUERY_RESULT_64_BIT is set in flags then dstOffset and stride must be multiples of 8

• VUID-vkCmdCopyQueryPoolResults-dstBuffer-00824
  dstBuffer must have enough storage, from dstOffset, to contain the result of each query, as described here

• VUID-vkCmdCopyQueryPoolResults-dstBuffer-00825
  dstBuffer must have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag

• VUID-vkCmdCopyQueryPoolResults-dstBuffer-00826
  If dstBuffer is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

• VUID-vkCmdCopyQueryPoolResults-queryType-03232
  If the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR, VkPhysicalDevicePerformanceQueryPropertiesKHR::allowCommandBufferQueryCopies must be VK_TRUE

• VUID-vkCmdCopyQueryPoolResults-queryType-02734
  vkCmdCopyQueryPoolResults must not be called if the queryType used to create queryPool was VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL

• VUID-vkCmdCopyQueryPoolResults-None-07429
  All queries used by the command must not be active

• VUID-vkCmdCopyQueryPoolResults-None-08752
  All queries used by the command must have been made available by prior executed
Valid Usage (Implicit)

- VUID-vkCmdCopyQueryPoolResults-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdCopyQueryPoolResults-queryPool-parameter
  queryPool must be a valid VkQueryPool handle

- VUID-vkCmdCopyQueryPoolResults-dstBuffer-parameter
  dstBuffer must be a valid VkBuffer handle

- VUID-vkCmdCopyQueryPoolResults-flags-parameter
  flags must be a valid combination of VkQueryResultFlagBits values

- VUID-vkCmdCopyQueryPoolResults-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdCopyQueryPoolResults-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or compute operations

- VUID-vkCmdCopyQueryPoolResults-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyQueryPoolResults-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdCopyQueryPoolResults-commonparent
  Each of commandBuffer, dstBuffer, and queryPool must have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

Rendering operations such as clears, MSAA resolves, attachment load/store operations, and blits may count towards the results of queries. This behavior is implementation-dependent and may
vary depending on the path used within an implementation. For example, some implementations have several types of clears, some of which may include vertices and some not.

18.3. Occlusion Queries

Occlusion queries track the number of samples that pass the per-fragment tests for a set of drawing commands. As such, occlusion queries are only available on queue families supporting graphics operations. The application can then use these results to inform future rendering decisions. An occlusion query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`, respectively. When an occlusion query begins, the count of passing samples always starts at zero. For each drawing command, the count is incremented as described in Sample Counting. If `flags` does not contain `VK_QUERY_CONTROL_PRECISE_BIT` an implementation may generate any non-zero result value for the query if the count of passing samples is non-zero.

**Note**

Not setting `VK_QUERY_CONTROL_PRECISE_BIT` mode may be more efficient on some implementations, and should be used where it is sufficient to know a boolean result on whether any samples passed the per-fragment tests. In this case, some implementations may only return zero or one, indifferent to the actual number of samples passing the per-fragment tests.

Setting `VK_QUERY_CONTROL_PRECISE_BIT` does not guarantee that different implementations return the same number of samples in an occlusion query. Some implementations may kill fragments in the pre-rasterization shader stage, and these killed fragments do not contribute to the final result of the query. It is possible that some implementations generate a zero result value for the query, while others generate a non-zero value.

When an occlusion query finishes, the result for that query is marked as available. The application can then either copy the result to a buffer (via `vkCmdCopyQueryPoolResults`) or request it be put into host memory (via `vkGetQueryPoolResults`).

**Note**

If occluding geometry is not drawn first, samples can pass the depth test, but still not be visible in a final image.

18.4. Pipeline Statistics Queries

Pipeline statistics queries allow the application to sample a specified set of `VkPipeline` counters. These counters are accumulated by Vulkan for a set of either drawing or dispatching commands while a pipeline statistics query is active. As such, pipeline statistics queries are available on queue families supporting either graphics or compute operations. The availability of pipeline statistics queries is indicated by the `pipelineStatisticsQuery` member of the `VkPhysicalDeviceFeatures` object (see `vkGetPhysicalDeviceFeatures` and `vkCreateDevice` for detecting and requesting this query type on a `VkDevice`).

A pipeline statistics query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`. A pipeline statistics query is begun and ended by calling `vkCmdBeginQuery` and `vkCmdEndQuery`,
respectively. When a pipeline statistics query begins, all statistics counters are set to zero. While the query is active, the pipeline type determines which set of statistics are available, but these **must** be configured on the query pool when it is created. If a statistic counter is issued on a command buffer that does not support the corresponding operation, the value of that counter is undefined after the query has been made available. At least one statistic counter relevant to the operations supported on the recording command buffer **must** be enabled.

Bits which **can** be set in `VkQueryPoolCreateInfo::pipelineStatistics` for query pools and in `VkCommandBufferInheritanceInfo::pipelineStatistics` for secondary command buffers, individually enabling pipeline statistics counters, are:

```c
#define VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT 0x00000001
#define VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT 0x00000002
#define VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT 0x00000004
#define VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT 0x00000008
#define VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT 0x00000010
#define VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT 0x00000020
#define VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT 0x00000040
#define VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT 0x00000080
#define VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT 0x00000100
#define VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT 0x00000200
#define VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT 0x00000400
#define VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT 0x00000800
#define VK_QUERY_PIPELINE_STATISTIC_CLUSTER_CULLING_SHADER_INVOCATIONS_BIT_HUAWEI 0x00001000

• **VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_VERTICES_BIT** specifies that queries managed by the pool will count the number of vertices processed by the *input assembly* stage. Vertices corresponding to incomplete primitives **may** contribute to the count.

• **VK_QUERY_PIPELINE_STATISTIC_INPUT_ASSEMBLY_PRIMITIVES_BIT** specifies that queries managed by the pool will count the number of primitives processed by the *input assembly* stage. If primitive restart is enabled, restarting the primitive topology has no effect on the count. Incomplete primitives **may** be counted.

• **VK_QUERY_PIPELINE_STATISTIC_VERTEX_SHADER_INVOCATIONS_BIT** specifies that queries managed by the pool will count the number of vertex shader invocations. This counter’s value is incremented each time a vertex shader is **invoked**.

• **VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_INVOCATIONS_BIT** specifies that queries managed by the pool will count the number of geometry shader invocations. This counter’s value is incremented each time a geometry shader is **invoked**. In the case of *instanced geometry*
shaders, the geometry shader invocations count is incremented for each separate instanced invocation.

- **VK_QUERY_PIPELINE_STATISTIC_GEOMETRY_SHADER_PRIMITIVES_BIT** specifies that queries managed by the pool will count the number of primitives generated by geometry shader invocations. The counter's value is incremented each time the geometry shader emits a primitive. Restarting primitive topology using the SPIR-V instructions `OpEndPrimitive` or `OpEndStreamPrimitive` has no effect on the geometry shader output primitives count.

- **VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT** specifies that queries managed by the pool will count the number of primitives processed by the Primitive Clipping stage of the pipeline. The counter's value is incremented each time a primitive reaches the primitive clipping stage.

- **VK_QUERY_PIPELINE_STATISTIC_CLIPPING_PRIMITIVES_BIT** specifies that queries managed by the pool will count the number of primitives output by the Primitive Clipping stage of the pipeline. The counter's value is incremented each time a primitive passes the primitive clipping stage. The actual number of primitives output by the primitive clipping stage for a particular input primitive is implementation-dependent but **must** satisfy the following conditions:
  - If at least one vertex of the input primitive lies inside the clipping volume, the counter is incremented by one or more.
  - Otherwise, the counter is incremented by zero or more.

- **VK_QUERY_PIPELINE_STATISTIC_FRAGMENT_SHADER_INVOCATIONS_BIT** specifies that queries managed by the pool will count the number of fragment shader invocations. The counter's value is incremented each time the fragment shader is invoked.

- **VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_CONTROL_SHADER_PATCHES_BIT** specifies that queries managed by the pool will count the number of patches processed by the tessellation control shader. The counter's value is incremented once for each patch for which a tessellation control shader is invoked.

- **VK_QUERY_PIPELINE_STATISTIC_TESSELLATION_EVALUATION_SHADER_INVOCATIONS_BIT** specifies that queries managed by the pool will count the number of invocations of the tessellation evaluation shader. The counter's value is incremented each time the tessellation evaluation shader is invoked.

- **VK_QUERY_PIPELINE_STATISTIC_COMPUTE_SHADER_INVOCATIONS_BIT** specifies that queries managed by the pool will count the number of compute shader invocations. The counter's value is incremented every time the compute shader is invoked. Implementations **may** skip the execution of certain compute shader invocations or execute additional compute shader invocations for implementation-dependent reasons as long as the results of rendering otherwise remain unchanged.

- **VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT** specifies that queries managed by the pool will count the number of task shader invocations. The counter's value is incremented every time the task shader is invoked.

- **VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT** specifies that queries managed by the pool will count the number of mesh shader invocations. The counter's value is incremented every time the mesh shader is invoked.

These values are intended to measure relative statistics on one implementation. Various device
architectures will count these values differently. Any or all counters may be affected by the issues described in Query Operation.

This counting difference is especially true if the pipeline contains mesh or task shaders, which may affect several of the counters in unexpected ways.

Note
For example, tile-based rendering devices may need to replay the scene multiple times, affecting some of the counts.

If a pipeline has rasterizerDiscardEnable enabled, implementations may discard primitives after the final pre-rasterization shader stage. As a result, if rasterizerDiscardEnable is enabled, the clipping input and output primitives counters may not be incremented.

When a pipeline statistics query finishes, the result for that query is marked as available. The application can copy the result to a buffer (via vkCmdCopyQueryPoolResults), or request it be put into host memory (via vkGetQueryPoolResults).

// Provided by VK_VERSION_1_0
typedef VkFlags VkQueryPipelineStatisticFlags;

VkQueryPipelineStatisticFlags is a bitmask type for setting a mask of zero or more VkQueryPipelineStatisticFlagBits.

18.5. Timestamp Queries

Timestamps provide applications with a mechanism for timing the execution of commands. A timestamp is an integer value generated by the VkPhysicalDevice. Unlike other queries, timestamps do not operate over a range, and so do not use vkCmdBeginQuery or vkCmdEndQuery. The mechanism is built around a set of commands that allow the application to tell the VkPhysicalDevice to write timestamp values to a query pool and then either read timestamp values on the host (using vkGetQueryPoolResults) or copy timestamp values to a VkBuffer (using vkCmdCopyQueryPoolResults). The application can then compute differences between timestamps to determine execution time.

The number of valid bits in a timestamp value is determined by the VkQueueFamilyProperties::timestampValidBits property of the queue on which the timestamp is written. Timestamps are supported on any queue which reports a non-zero value for timestampValidBits via vkGetPhysicalDeviceQueueFamilyProperties. If the timestampComputeAndGraphics limit is VK_TRUE, timestamps are supported by every queue family that supports either graphics or compute operations (see VkQueueFamilyProperties).

The number of nanoseconds it takes for a timestamp value to be incremented by 1 can be obtained from VkPhysicalDeviceLimits::timestampPeriod after a call to vkGetPhysicalDeviceProperties.

To request a timestamp and write the value to memory, call:
// Provided by VK_VERSION_1_3

```c
void vkCmdWriteTimestamp2(
    VkCommandBuffer commandBuffer,
    VkPipelineStageFlags2 stage,
    VkQueryPool queryPool,
    uint32_t query);
```

or the equivalent command

// Provided by VK_KHR_synchronization2

```c
void vkCmdWriteTimestamp2KHR(
    VkCommandBuffer commandBuffer,
    VkPipelineStageFlags2 stage,
    VkQueryPool queryPool,
    uint32_t query);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **stage** specifies a stage of the pipeline.
- **queryPool** is the query pool that will manage the timestamp.
- **query** is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp2` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.

The first **synchronization scope** includes all commands that occur earlier in submission order. The synchronization scope is limited to operations on the pipeline stage specified by `stage`.

The second **synchronization scope** includes only the timestamp write operation.

**Note**

Implementations may write the timestamp at any stage that is **logically later** than **stage**.

Any timestamp write that happens-after another timestamp write in the same submission must not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that happens-after another must not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command must be in the `VK_TIME_DOMAIN_DEVICE_KHR` time domain. If an overflow occurs, the timestamp value must wrap back to zero.

**Note**

Comparisons between timestamps should be done between timestamps where they are guaranteed to not decrease. For example, subtracting an older timestamp
from a newer one to determine the execution time of a sequence of commands is only a reliable measurement if the two timestamp writes were performed in the same submission, or if the writes were performed on the same logical device and `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled.

If `vkCmdWriteTimestamp2` is called while executing a render pass instance that has multiview enabled, the timestamp uses N consecutive query indices in the query pool (starting at query) where N is the number of bits set in the view mask of the subpass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the difference between the first query written by each command.

- All N queries are timestamp values. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the sum of the difference between corresponding queries written by each command. The difference between corresponding queries may be the execution time of a single view.

In either case, the application can sum the differences between all N queries to determine the total execution time.

---

**Valid Usage**

- **VUID-vkCmdWriteTimestamp2-stage-03929**
  If the `geometryShader` feature is not enabled, stage must not contain `VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT`

- **VUID-vkCmdWriteTimestamp2-stage-03930**
  If the `tessellationShader` feature is not enabled, stage must not contain `VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT`

- **VUID-vkCmdWriteTimestamp2-stage-03931**
  If the `conditionalRendering` feature is not enabled, stage must not contain `VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT`

- **VUID-vkCmdWriteTimestamp2-stage-03932**
  If the `fragmentDensityMap` feature is not enabled, stage must not contain `VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT`

- **VUID-vkCmdWriteTimestamp2-stage-03933**
  If the `transformFeedback` feature is not enabled, stage must not contain `VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT`

- **VUID-vkCmdWriteTimestamp2-stage-03934**
  If the `meshShader` feature is not enabled, stage must not contain `VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT`

- **VUID-vkCmdWriteTimestamp2-stage-03935**
  If the `taskShader` feature is not enabled, stage must not contain
VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT

- VUID-vkCmdWriteTimestamp2-stage-07316
  If neither the shadingRateImage or attachmentFragmentShadingRate are enabled, stage must not contain VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

- VUID-vkCmdWriteTimestamp2-stage-04957
  If the subpassShading feature is not enabled, stage must not contain VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI

- VUID-vkCmdWriteTimestamp2-stage-04995
  If the invocationMask feature is not enabled, stage must not contain VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI

- VUID-vkCmdWriteTimestamp2-stage-07946
  If neither the VK_NV_ray_tracing extension or rayTracingPipeline feature are enabled, stage must not contain VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR

- VUID-vkCmdWriteTimestamp2-synchronization2-03858
  The synchronization2 feature must be enabled

- VUID-vkCmdWriteTimestamp2-stage-03859
  stage must only include a single pipeline stage

- VUID-vkCmdWriteTimestamp2-stage-03860
  stage must only include stages valid for the queue family that was used to create the command pool that commandBuffer was allocated from

- VUID-vkCmdWriteTimestamp2-queryPool-03861
  queryPool must have been created with a queryType of VK_QUERY_TYPE_TIMESTAMP

- VUID-vkCmdWriteTimestamp2-timestampValidBits-03863
  The command pool's queue family must support a non-zero timestampValidBits

- VUID-vkCmdWriteTimestamp2-query-04903
  query must be less than the number of queries in queryPool

- VUID-vkCmdWriteTimestamp2-None-03864
  All queries used by the command must be unavailable

- VUID-vkCmdWriteTimestamp2-query-03865
  If vkCmdWriteTimestamp2 is called within a render pass instance, the sum of query and the number of bits set in the current subpass's view mask must be less than or equal to the number of queries in queryPool

Valid Usage (Implicit)

- VUID-vkCmdWriteTimestamp2-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdWriteTimestamp2-stage-parameter
  stage must be a valid combination of VkPipelineStageFlagBits2 values

- VUID-vkCmdWriteTimestamp2-queryPool-parameter
  queryPool must be a valid VkQueryPool handle
- VUID-vkCmdWriteTimestamp2-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdWriteTimestamp2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support transfer, graphics, compute, decode, or encode operations

- VUID-vkCmdWriteTimestamp2-commonparent
  Both of commandBuffer, and queryPool must have been created, allocated, or retrieved from the same VkDevice

---

### Host Synchronization

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

---

### Command Properties

<table>
<thead>

---

To request a timestamp and write the value to memory, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdWriteTimestamp(
    VkCommandBuffer commandBuffer,
    VkPipelineStageFlagBits pipelineStage,
    VkQueryPool queryPool,
    uint32_t query);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pipelineStage` is a VkPipelineStageFlagBits value, specifying a stage of the pipeline.
- `queryPool` is the query pool that will manage the timestamp.
- `query` is the query within the query pool that will contain the timestamp.

When `vkCmdWriteTimestamp` is submitted to a queue, it defines an execution dependency on commands that were submitted before it, and writes a timestamp to a query pool.
The first **synchronization scope** includes all commands that occur earlier in **submission order**. The synchronization scope is limited to operations on the pipeline stage specified by `pipelineStage`.

The second **synchronization scope** includes only the timestamp write operation.

**Note**

Implementations may write the timestamp at any stage that is **logically later** than `stage`.

Any timestamp write that **happens-after** another timestamp write in the same submission **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. If `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled, this extends to timestamp writes across all submissions on the same logical device: any timestamp write that **happens-after** another **must** not have a lower value unless its value overflows the maximum supported integer bit width of the query. Timestamps written by this command **must** be in the `VK_TIME_DOMAIN_DEVICE_KHR` time domain. If an overflow occurs, the timestamp value **must** wrap back to zero.

**Note**

Comparisons between timestamps should be done between timestamps where they are guaranteed to not decrease. For example, subtracting an older timestamp from a newer one to determine the execution time of a sequence of commands is only a reliable measurement if the two timestamp writes were performed in the same submission, or if the writes were performed on the same logical device and `VK_KHR_calibrated_timestamps` or `VK_EXT_calibrated_timestamps` is enabled.

If `vkCmdWriteTimestamp` is called while executing a render pass instance that has multiview enabled, the timestamp uses `N` consecutive query indices in the query pool (starting at `query`) where `N` is the number of bits set in the view mask of the subpass the command is executed in. The resulting query values are determined by an implementation-dependent choice of one of the following behaviors:

- The first query is a timestamp value and (if more than one bit is set in the view mask) zero is written to the remaining queries. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the difference between the first query written by each command.

- All `N` queries are timestamp values. If two timestamps are written in the same subpass, the sum of the execution time of all views between those commands is the sum of the difference between corresponding queries written by each command. The difference between corresponding queries **may** be the execution time of a single view.

In either case, the application **can** sum the differences between all `N` queries to determine the total execution time.

**Valid Usage**

- `VUID-vkCmdWriteTimestamp-pipelineStage-04074` `pipelineStage` **must** be a **valid stage** for the queue family that was used to create the
command pool that commandBuffer was allocated from

- VUID-vkCmdWriteTimestamp-pipelineStage-04075
  If the geometryShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT

- VUID-vkCmdWriteTimestamp-pipelineStage-04076
  If the tessellationShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_TESSELLATION_SHADER_BIT

- VUID-vkCmdWriteTimestamp-pipelineStage-04077
  If the conditionalRendering feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT

- VUID-vkCmdWriteTimestamp-pipelineStage-04078
  If the fragmentDensityMap feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT

- VUID-vkCmdWriteTimestamp-pipelineStage-04079
  If the transformFeedback feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT

- VUID-vkCmdWriteTimestamp-pipelineStage-04080
  If the meshShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT

- VUID-vkCmdWriteTimestamp-pipelineStage-07077
  If the taskShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT

- VUID-vkCmdWriteTimestamp-shadingRateImage-07314
  If neither the shadingRateImage or attachmentFragmentShadingRate are enabled, pipelineStage must not be VK_PIPELINE_STAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

- VUID-vkCmdWriteTimestamp-synchronization2-06489
  If the synchronization2 feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_NONE

- VUID-vkCmdWriteTimestamp-rayTracingPipeline-07943
  If neither the VK_NV_ray_tracing extension or rayTracingPipeline feature are enabled, pipelineStage must not be VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR

- VUID-vkCmdWriteTimestamp-queryPool-01416
  queryPool must have been created with a queryType of VK_QUERY_TYPE_TIMESTAMP

- VUID-vkCmdWriteTimestamp-timestampValidBits-00829
  The command pool's queue family must support a non-zero timestampValidBits

- VUID-vkCmdWriteTimestamp-query-04904
  query must be less than the number of queries in queryPool

- VUID-vkCmdWriteTimestamp-None-00830
  All queries used by the command must be unavailable

- VUID-vkCmdWriteTimestamp-query-00831
  If vkCmdWriteTimestamp is called within a render pass instance, the sum of query and the
number of bits set in the current subpass's view mask must be less than or equal to the number of queries in queryPool

**Valid Usage (Implicit)**

- VUID-vkCmdWriteTimestamp-commandBuffer-parameter
  - commandBuffer must be a valid VkCommandBuffer handle
- VUID-vkCmdWriteTimestamp-pipelineStage-parameter
  - pipelineStage must be a valid VkPipelineStageFlagBits value
- VUID-vkCmdWriteTimestamp-queryPool-parameter
  - queryPool must be a valid VkQueryPool handle
- VUID-vkCmdWriteTimestamp-commandBuffer-recording
  - commandBuffer must be in the recording state
- VUID-vkCmdWriteTimestamp-commandBuffer-cmdpool
  - The VkCommandPool that commandBuffer was allocated from must support transfer, graphics, compute, decode, encode, or optical flow operations
- VUID-vkCmdWriteTimestamp-commonparent
  - Both of commandBuffer, and queryPool must have been created, allocated, or retrieved from the same VkDevice

**Host Synchronization**

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

**18.6. Performance Queries**

*Performance queries* provide applications with a mechanism for getting performance counter
information about the execution of command buffers, render passes, and commands.

Each queue family advertises the performance counters that can be queried on a queue of that family via a call to `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR`. Implementations may limit access to performance counters based on platform requirements or only to specialized drivers for development purposes.

**Note**
This may include no performance counters being enumerated, or a reduced set. Please refer to platform-specific documentation for guidance on any such restrictions.

Performance queries use the existing `vkCmdBeginQuery` and `vkCmdEndQuery` to control what command buffers, render passes, or commands to get performance information for.

Implementations may require multiple passes where the command buffer, render passes, or commands being recorded are the same and are executed on the same queue to record performance counter data. This is achieved by submitting the same batch and providing a `VkPerformanceQuerySubmitInfoKHR` structure containing a counter pass index. The number of passes required for a given performance query pool can be queried via a call to `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`.

**Note**
Command buffers created with `VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT` must not be re-submitted. Changing command buffer usage bits may affect performance. To avoid this, the application should re-record any command buffers with the `VK_COMMAND_BUFFER_USAGE_ONE_TIME_SUBMIT_BIT` when multiple counter passes are required.

Performance counter results from a performance query pool can be obtained with the command `vkGetQueryPoolResults`.

The `VkPerformanceCounterResultKHR` union is defined as:

```c
// Provided by VK_KHR_performance_query
typedef union VkPerformanceCounterResultKHR {
    int32_t int32;
    int64_t int64;
    uint32_t uint32;
    uint64_t uint64;
    float float32;
    double float64;
} VkPerformanceCounterResultKHR;
```

- `int32` is a 32-bit signed integer value.
- `int64` is a 64-bit signed integer value.
- `uint32` is a 32-bit unsigned integer value.
• `uint64` is a 64-bit unsigned integer value.
• `float32` is a 32-bit floating-point value.
• `float64` is a 64-bit floating-point value.

Performance query results are returned in an array of `VkPerformanceCounterResultKHR` unions containing the data associated with each counter in the query, stored in the same order as the counters supplied in `pCounterIndices` when creating the performance query. `VkPerformanceCounterKHR::storage` specifies how to parse the counter data.

### 18.6.1. Profiling Lock

To record and submit a command buffer containing a performance query pool the profiling lock **must** be held. The profiling lock **must** be acquired prior to any call to `vkBeginCommandBuffer` that will be using a performance query pool. The profiling lock **must** be held while any command buffer containing a performance query pool is in the **recording**, **executable**, or **pending state**. To acquire the profiling lock, call:

```c
// Provided by VK_KHR_performance_query
VkResult vkAcquireProfilingLockKHR(
    VkDevice device,
    const VkAcquireProfilingLockInfoKHR* pInfo);
```

• `device` is the logical device to profile.
• `pInfo` is a pointer to a `VkAcquireProfilingLockInfoKHR` structure containing information about how the profiling is to be acquired.

Implementations **may** allow multiple actors to hold the profiling lock concurrently.

### Valid Usage (Implicit)

- VUID-vkAcquireProfilingLockKHR-device-parameter
  `device` **must** be a valid `VkDevice` handle
- VUID-vkAcquireProfilingLockKHR-pInfo-parameter
  `pInfo` **must** be a valid pointer to a valid `VkAcquireProfilingLockInfoKHR` structure

### Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_TIMEOUT`
The `VkAcquireProfilingLockInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_performance_query
typedef struct VkAcquireProfilingLockInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkAcquireProfilingLockFlagsKHR flags;
    uint64_t timeout;
} VkAcquireProfilingLockInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `timeout` indicates how long the function waits, in nanoseconds, if the profiling lock is not available.

### Valid Usage (Implicit)

- VUID-VkAcquireProfilingLockInfoKHR-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR`
- VUID-VkAcquireProfilingLockInfoKHR-pNext-pNext
  - `pNext` must be `NULL`
- VUID-VkAcquireProfilingLockInfoKHR-flags-zerobitmask
  - `flags` must be `0`

If `timeout` is `0`, `vkAcquireProfilingLockKHR` will not block while attempting to acquire the profiling lock. If `timeout` is `UINT64_MAX`, the function will not return until the profiling lock was acquired.

```c
// Provided by VK_KHR_performance_query
typedef enum VkAcquireProfilingLockFlagBitsKHR {
} VkAcquireProfilingLockFlagBitsKHR;
```

```c
// Provided by VK_KHR_performance_query
typedef VkFlags VkAcquireProfilingLockFlagsKHR;
```

`VkAcquireProfilingLockFlagsKHR` is a bitmask type for setting a mask, but is currently reserved for future use.

To release the profiling lock, call:

```c
// Provided by VK_KHR_performance_query
void vkReleaseProfilingLockKHR(
```
- device is the logical device to cease profiling on.

**Valid Usage**

- VUID-vkReleaseProfilingLockKHR-device-03235
  The profiling lock of device must have been held via a previous successful call to
  vkAcquireProfilingLockKHR

**Valid Usage (Implicit)**

- VUID-vkReleaseProfilingLockKHR-device-parameter
  device must be a valid VkDevice handle

### 18.7. Transform Feedback Queries

Transform feedback queries track the number of primitives attempted to be written and actually
written, by the vertex stream being captured, to a transform feedback buffer. This query is updated
during drawing commands while transform feedback is active. The number of primitives actually
written will be less than the number attempted to be written if the bound transform feedback
buffer size was too small for the number of primitives actually drawn. Primitives are not written
beyond the bound range of the transform feedback buffer. A transform feedback query is begun
and ended by calling vkCmdBeginQuery and vkCmdEndQuery, respectively to query for vertex stream
zero. vkCmdBeginQueryIndexedEXT and vkCmdEndQueryIndexedEXT can be used to begin and end
transform feedback queries for any supported vertex stream. When a transform feedback query
begins, the count of primitives written and primitives needed starts from zero. For each drawing
command, the count is incremented as vertex attribute outputs are captured to the transform
feedback buffers while transform feedback is active.

When a transform feedback query finishes, the result for that query is marked as available. The
application can then either copy the result to a buffer (via vkCmdCopyQueryPoolResults) or request it
be put into host memory (via vkGetQueryPoolResults).

### 18.8. Primitives Generated Queries

When a generated primitive query for a vertex stream is active, the primitives-generated count is
incremented every time a primitive emitted to that stream reaches the transform feedback stage,
whether or not transform feedback is active. A primitives generated query is begun and ended by
calling vkCmdBeginQuery and vkCmdEndQuery, respectively to query for vertex stream zero.
vkCmdBeginQueryIndexedEXT and vkCmdEndQueryIndexedEXT can be used to begin and end primitives
generated queries for any supported vertex stream. When a primitives generated query begins, the
count of primitives generated starts from zero.

When a primitives generated query finishes, the result for that query is marked as available. The
application can then either copy the result to a buffer (via \texttt{vkCmdCopyQueryPoolResults}) or request it be put into host memory (via \texttt{vkGetQueryPoolResults}).

\begin{quote}
\textbf{Note}

The result of this query is typically identical to \texttt{VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT}, but the primitives generated query is deterministic, i.e. it must be identical to the number of primitives processed. \texttt{VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT} may vary for implementation-dependent reasons, e.g. the same primitive may be processed multiple times for purposes of clipping.
\end{quote}

\section*{18.9. Mesh Shader Queries}

When a generated mesh primitives query is active, the mesh-primitives-generated count is incremented every time a primitive emitted from the mesh shader stage reaches the fragment shader stage. When a generated mesh primitives query begins, the mesh-primitives-generated count starts from zero.

Mesh and task shader pipeline statistics queries function the same way that invocation queries work for other shader stages, counting the number of times the respective shader stage has been run. When the statistics query begins, the invocation counters start from zero.

\section*{18.10. Intel Performance Queries}

Intel performance queries allow an application to capture performance data for a set of commands. Performance queries are used in a similar way than other types of queries. A main difference with existing queries is that the resulting data should be handed over to a library capable to produce human readable results rather than being read directly by an application.

Prior to creating a performance query pool, initialize the device for performance queries with the call:

\begin{verbatim}
// Provided by VK_INTEL_performance_query
VkResult vkInitializePerformanceApiINTEL(VkDevice device, const VkInitializePerformanceApiInfoINTEL* pInitializeInfo);
\end{verbatim}

- \texttt{device} is the logical device used for the queries.
- \texttt{pInitializeInfo} is a pointer to a \texttt{VkInitializePerformanceApiInfoINTEL} structure specifying initialization parameters.

\begin{quote}
\textbf{Valid Usage (Implicit)}
\end{quote}

- \texttt{VUID-vkInitializePerformanceApiINTEL-device-parameter} \texttt{device} must be a valid \texttt{VkDevice} handle
• **VUID-vkInitializePerformanceApiINTEL-pInitializeInfo-parameter**
  
  **pInitializeInfo** **must** be a valid pointer to a valid **VkInitializePerformanceApiInfoINTEL** structure.

---

**Return Codes**

**Success**

• **VK_SUCCESS**

**Failure**

• **VK_ERROR_TOO_MANY_OBJECTS**
• **VK_ERROR_OUT_OF_HOST_MEMORY**

The **VkInitializePerformanceApiInfoINTEL** structure is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef struct VkInitializePerformanceApiInfoINTEL {
    VkStructureType sType;
    const void* pNext;
    void* pUserData;
} VkInitializePerformanceApiInfoINTEL;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **pUserData** is a pointer for application data.

---

**Valid Usage (Implicit)**

• **VUID-VkInitializePerformanceApiInfoINTEL-sType-sType**
  
  **sType** **must** be **VK_STRUCTURE_TYPE_INITIALIZE_PERFORMANCE_API_INFO_INTEL**

• **VUID-VkInitializePerformanceApiInfoINTEL-pNext-pNext**
  
  **pNext** **must** be **NULL**

Once performance query operations have completed, uninitialized the device for performance queries with the call:

```c
// Provided by VK_INTEL_performance_query
void vkUninitializePerformanceApiINTEL(VkDevice device);
```

- **device** is the logical device used for the queries.
Some performance query features of a device can be discovered with the call:

```c
// Provided by VK_INTEL_performance_query
VkResult vkGetPerformanceParameterINTEL(
    VkDevice device,
    VkPerformanceParameterTypeINTEL parameter,
    VkPerformanceValueINTEL* pValue);
```

- `device` is the logical device to query.
- `parameter` is the parameter to query.
- `pValue` is a pointer to a `VkPerformanceValueINTEL` structure in which the type and value of the parameter are returned.

Possible values of `vkGetPerformanceParameterINTEL::parameter`, specifying a performance query feature, are:

```c
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceParameterTypeINTEL {
    VK_PERFORMANCE_PARAMETER_TYPE_HW_COUNTERS_SUPPORTED_INTEL = 0,
    ...
};
```
• **VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL** has a 32 bits integer result which tells how many bits can be written into the `VkPerformanceValue_INTEL` value.

The `VkPerformanceValue_INTEL` structure is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceValue_INTEL {
    VkPerformanceValueType_INTEL type;
    VkPerformanceValueData_INTEL data;
} VkPerformanceValue_INTEL;
```

• **type** is a `VkPerformanceValueType_INTEL` value specifying the type of the returned data.

• **data** is a `VkPerformanceValueData_INTEL` union specifying the value of the returned data.

### Valid Usage (Implicit)

- **VUID-VkPerformanceValue_INTEL-type-parameter**
  - **type must** be a valid `VkPerformanceValueType_INTEL` value
- **VUID-VkPerformanceValue_INTEL-valueString-parameter**
  - If **type** is `VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL`, the **valueString** member of **data** must be a null-terminated UTF-8 string

Possible values of `VkPerformanceValue_INTEL::type`, specifying the type of the data returned in `VkPerformanceValue_INTEL::data`, are:

- **VK_PERFORMANCE_VALUE_TYPE_UINT32_INTEL** specifies that unsigned 32-bit integer data is returned in `data.value32`.
- **VK_PERFORMANCE_VALUE_TYPE_UINT64_INTEL** specifies that unsigned 64-bit integer data is returned in `data.value64`.
- **VK_PERFORMANCE_VALUE_TYPE_FLOAT_INTEL** specifies that floating-point data is returned in `data.valueFloat`.
- **VK_PERFORMANCE_VALUE_TYPE_BOOL_INTEL** specifies that `VkBool32` data is returned in `data.valueBool`.
- **VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL** specifies that a pointer to a null-terminated UTF-8 string is returned in `data.valueString`. The pointer is valid for the lifetime of the device parameter passed to `vkGetPerformanceParameter_INTEL`.

```c
// Provided by VK_INTEL_performance_query
```
typedef enum VkPerformanceValueTypeINTEL {
    VK_PERFORMANCE_VALUE_TYPE_UINT32_INTEL = 0,
    VK_PERFORMANCE_VALUE_TYPE_UINT64_INTEL = 1,
    VK_PERFORMANCE_VALUE_TYPE_FLOAT_INTEL = 2,
    VK_PERFORMANCE_VALUE_TYPE_BOOL_INTEL = 3,
    VK_PERFORMANCE_VALUE_TYPE_STRING_INTEL = 4,
} VkPerformanceValueTypeINTEL;

The VkPerformanceValueDataINTEL union is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef union VkPerformanceValueDataINTEL {
    uint32_t value32;
    uint64_t value64;
    float valueFloat;
    VkBool32 valueBool;
    const char* valueString;
} VkPerformanceValueDataINTEL;
```

- `data.value32` represents 32-bit integer data.
- `data.value64` represents 64-bit integer data.
- `data.valueFloat` represents floating-point data.
- `data.valueBool` represents `VkBool32` data.
- `data.valueString` represents a pointer to a null-terminated UTF-8 string.

The correct member of the union is determined by the associated `VkPerformanceValueTypeINTEL` value.

The `VkQueryPoolPerformanceQueryCreateInfoINTEL` structure is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef struct VkQueryPoolPerformanceQueryCreateInfoINTEL {
    VkStructureType sType;
    const void* pNext;
    VkQueryPoolSamplingModeINTEL performanceCountersSampling;
} VkQueryPoolPerformanceQueryCreateInfoINTEL;
```

To create a pool for Intel performance queries, set `VkQueryPoolCreateInfo::queryType` to `VK_QUERY_TYPE_PERFORMANCE_QUERY_INTEL` and add a `VkQueryPoolPerformanceQueryCreateInfoINTEL` structure to the `pNext` chain of the `VkQueryPoolCreateInfo` structure.

- `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.
• `performanceCountersSampling` describe how performance queries should be captured.

### Valid Usage (Implicit)

- VUID-VkQueryPoolPerformanceQueryCreateInfoINTEL-sType-sType
  *sType* must be `VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_QUERY_CREATE_INFO_INTEL`
- VUID-VkQueryPoolPerformanceQueryCreateInfoINTEL-performanceCountersSampling
  `performanceCountersSampling` must be a valid `VkQueryPoolSamplingModeINTEL` value

Possible values of `VkQueryPoolPerformanceQueryCreateInfoINTEL::performanceCountersSampling` are:

```c
// Provided by VK_INTEL_performance_query
typedef enum VkQueryPoolSamplingModeINTEL {
  VK_QUERY_POOL_SAMPLING_MODE_MANUAL_INTEL = 0,
} VkQueryPoolSamplingModeINTEL;
```

- `VK_QUERY_POOL_SAMPLING_MODE_MANUAL_INTEL` is the default mode in which the application calls `vkCmdBeginQuery` and `vkCmdEndQuery` to record performance data.

To help associate query results with a particular point at which an application emitted commands, markers can be set into the command buffers with the call:

```c
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceMarkerINTEL(
  VkCommandBuffer commandBuffer,
  const VkPerformanceMarkerInfoINTEL* pMarkerInfo);
```

The last marker set onto a command buffer before the end of a query will be part of the query result.

### Valid Usage (Implicit)

- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPerformanceMarkerINTEL-pMarkerInfo-parameter
  `pMarkerInfo` must be a valid pointer to a valid `VkPerformanceMarkerInfoINTEL` structure
- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-recording
  `commandBuffer` must be in the recording state
- VUID-vkCmdSetPerformanceMarkerINTEL-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute,
or transfer operations

- VUID-vkCmdSetPerformanceMarkerINTEL-videocoding
  This command **must** only be called outside of a video coding scope

---

**Host Synchronization**

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

---

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute, Transfer</td>
<td>Action State</td>
</tr>
</tbody>
</table>

---

**Return Codes**

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPerformanceMarkerInfoINTEL` structure is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceMarkerInfoINTEL {
    VkStructureType sType;
    const void* pNext;
    uint64_t marker;
} VkPerformanceMarkerInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `marker` is the marker value that will be recorded into the opaque query results.
When monitoring the behavior of an application within the dataset generated by the entire set of applications running on the system, it is useful to identify draw calls within a potentially huge amount of performance data. To do so, application can generate stream markers that will be used to trace back a particular draw call with a particular performance data item.

```c
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceStreamMarkerINTEL(
    VkCommandBuffer commandBuffer,
    const VkPerformanceStreamMarkerInfoINTEL* pMarkerInfo);
```

**Valid Usage (Implicit)**

- VUID-VkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-VkCmdSetPerformanceStreamMarkerINTEL-pMarkerInfo-parameter
  `pMarkerInfo` must be a valid pointer to a valid `VkPerformanceStreamMarkerInfoINTEL` structure

- VUID-VkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-recording
  `commandBuffer` must be in the recording state

- VUID-VkCmdSetPerformanceStreamMarkerINTEL-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, or transfer operations

- VUID-VkCmdSetPerformanceStreamMarkerINTEL-videocoding
  This command must only be called outside of a video coding scope

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized
The `VkPerformanceStreamMarkerInfoINTEL` structure is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceStreamMarkerInfoINTEL {
    VkStructureType sType;
    const void* pNext;
    uint32_t marker;
} VkPerformanceStreamMarkerInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `marker` is the marker value that will be recorded into the reports consumed by an external application.

**Valid Usage**

- **VUID-VkPerformanceStreamMarkerInfoINTEL-marker-02735**
  The value written by the application into `marker` **must** only used the valid bits as reported by `vkGetPerformanceParameterINTEL` with the `VK_PERFORMANCE_PARAMETER_TYPE_STREAM_MARKER_VALID_BITS_INTEL`.

**Valid Usage (Implicit)**

- **VUID-VkPerformanceStreamMarkerInfoINTEL-sType-sType**
  `sType` **must** be `VK_STRUCTURE_TYPE_PERFORMANCE_STREAM_MARKER_INFO_INTEL`. 
Some applications might want measure the effect of a set of commands with a different settings. It is possible to override a particular settings using:

```c
// Provided by VK_INTEL_performance_query
VkResult vkCmdSetPerformanceOverrideINTEL(
    VkCommandBuffer commandBuffer,
    const VkPerformanceOverrideInfoINTEL* pOverrideInfo);
```

- `commandBuffer` is the command buffer where the override takes place.
- `pOverrideInfo` is a pointer to a `VkPerformanceOverrideInfoINTEL` structure selecting the parameter to override.

### Valid Usage

- **VUID-vkCmdSetPerformanceOverrideINTEL-pOverrideInfo-02736**
  - `pOverrideInfo` must not be used with a `VkPerformanceOverrideTypeINTEL` that is not reported available by `vkGetPerformanceParameterINTEL`

### Valid Usage (Implicit)

- **VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-parameter**
  - `commandBuffer` must be a valid `VkCommandBuffer` handle
- **VUID-vkCmdSetPerformanceOverrideINTEL-pOverrideInfo-parameter**
  - `pOverrideInfo` must be a valid pointer to a valid `VkPerformanceOverrideInfoINTEL` structure
- **VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-recording**
  - `commandBuffer` must be in the `recording state`
- **VUID-vkCmdSetPerformanceOverrideINTEL-commandBuffer-cmdpool**
  - The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, or transfer operations
- **VUID-vkCmdSetPerformanceOverrideINTEL-videocoding**
  - This command must only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized
## Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>State</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>

</tr>
</tbody>
</table>

## Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_TOO_MANY_OBJECTS`
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPerformanceOverrideInfoINTEL` structure is defined as:

```c
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceOverrideInfoINTEL {
    VkStructureType sType;
    const void* pNext;
    VkPerformanceOverrideTypeINTEL type;
    VkBool32 enable;
    uint64_t parameter;
} VkPerformanceOverrideInfoINTEL;
```

- `type` is the particular `VkPerformanceOverrideTypeINTEL` to set.
- `enable` defines whether the override is enabled.
- `parameter` is a potential required parameter for the override.

**Valid Usage (Implicit)**

- `VUID-VkPerformanceOverrideInfoINTEL-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PERFORMANCE_OVERRIDE_INFO_INTEL`

- `VUID-VkPerformanceOverrideInfoINTEL-pNext-pNext`  
  `pNext` must be `NULL`

- `VUID-VkPerformanceOverrideInfoINTEL-type-parameter`  
  `type` must be a valid `VkPerformanceOverrideTypeINTEL` value

Possible values of `VkPerformanceOverrideInfoINTEL::type`, specifying performance override types,
typedef enum VkPerformanceOverrideTypeINTEL {
    VK_PERFORMANCE_OVERRIDE_TYPE_NULL_HARDWARE_INTEL = 0,
    VK_PERFORMANCE_OVERRIDE_TYPE_FLUSH_GPU_CACHES_INTEL = 1,
} VkPerformanceOverrideTypeINTEL;

- **VK_PERFORMANCE_OVERRIDE_TYPE_NULL_HARDWARE_INTEL** turns all rendering operations into no-op.
- **VK_PERFORMANCE_OVERRIDE_TYPE_FLUSH_GPU_CACHES_INTEL** stalls the stream of commands until all previously emitted commands have completed and all caches have been flushed and invalidated.

Before submitting command buffers containing performance queries commands to a device queue, the application must acquire and set a performance query configuration. The configuration can be released once all command buffers containing performance query commands are not in a pending state.

To acquire a device performance configuration, call:

```c
VkResult vkAcquirePerformanceConfigurationINTEL(
    VkDevice device, 
    const VkPerformanceConfigurationAcquireInfoINTEL* pAcquireInfo, 
    VkPerformanceConfigurationINTEL* pConfiguration);
```

- **device** is the logical device that the performance query commands will be submitted to.
- **pAcquireInfo** is a pointer to a `VkPerformanceConfigurationAcquireInfoINTEL` structure, specifying the performance configuration to acquire.
- **pConfiguration** is a pointer to a `VkPerformanceConfigurationINTEL` handle in which the resulting configuration object is returned.

**Valid Usage (Implicit)**

- **VUID-vkAcquirePerformanceConfigurationINTEL-device-parameter**
  
  * `device` must be a valid `VkDevice` handle

- **VUID-vkAcquirePerformanceConfigurationINTEL-pAcquireInfo-parameter**
  
  * `pAcquireInfo` must be a valid pointer to a valid `VkPerformanceConfigurationAcquireInfoINTEL` structure

- **VUID-vkAcquirePerformanceConfigurationINTEL-pConfiguration-parameter**
  
  * `pConfiguration` must be a valid pointer to a `VkPerformanceConfigurationINTEL` handle
Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_OUT_OF_HOST_MEMORY

The VkPerformanceConfigurationAcquireInfoINTEL structure is defined as:

```
// Provided by VK_INTEL_performance_query
typedef struct VkPerformanceConfigurationAcquireInfoINTEL {
    VkStructureType sType;
    const void* pNext;
    VkPerformanceConfigurationTypeINTEL type;
} VkPerformanceConfigurationAcquireInfoINTEL;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `type` is one of the `VkPerformanceConfigurationTypeINTEL` type of performance configuration that will be acquired.

Valid Usage (Implicit)

- VUID-VkPerformanceConfigurationAcquireInfoINTEL-sType-sType sType must be `VK_STRUCTURE_TYPE_PERFORMANCE_CONFIGURATION_ACQUIRE_INFO_INTEL`
- VUID-VkPerformanceConfigurationAcquireInfoINTEL-pNext-pNext pNext must be `NULL`
- VUID-VkPerformanceConfigurationAcquireInfoINTEL-type-parameter type must be a valid `VkPerformanceConfigurationTypeINTEL` value

Possible values of `VkPerformanceConfigurationAcquireInfoINTEL::type`, specifying performance configuration types, are:

```
// Provided by VK_INTEL_performance_query
typedef enum VkPerformanceConfigurationTypeINTEL {
    VK_PERFORMANCE_CONFIGURATION_TYPE_COMMAND_QUEUE_METRICS_DISCOVERY_ACTIVATED_INTEL = 0,
} VkPerformanceConfigurationTypeINTEL;
```

To set a performance configuration, call:
```c
// Provided by VK_INTEL_performance_query
VkResult vkQueueSetPerformanceConfigurationINTEL(
    VkQueue queue,  // queue is the queue on which the configuration will be used.
    VkPerformanceConfigurationINTEL configuration)  // configuration is the configuration to use.
);
```

Valid Usage (Implicit)

- **VUID-vkQueueSetPerformanceConfigurationINTEL-queue-parameter**
  queue must be a valid VkQueue handle
- **VUID-vkQueueSetPerformanceConfigurationINTEL-configuration-parameter**
  configuration must be a valid VkPerformanceConfigurationINTEL handle
- **VUID-vkQueueSetPerformanceConfigurationINTEL-commonparent**
  Both of configuration, and queue must have been created, allocated, or retrieved from the same VkDevice

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>-</td>
<td>-</td>
<td>-</td>
<td>Any</td>
<td>-</td>
</tr>
</tbody>
</table>

Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_OUT_OF_HOST_MEMORY

To release a device performance configuration, call:

```c
// Provided by VK_INTEL_performance_query
VkResult vkReleasePerformanceConfigurationINTEL(
    VkDevice device,  // device is the device associated to the configuration object to release.
    VkPerformanceConfigurationINTEL configuration);
```
configuration is the configuration object to release.

**Valid Usage**

- VUID-vkReleasePerformanceConfigurationINTEL-configuration-02737
  
  configuration must not be released before all command buffers submitted while the configuration was set are in pending state

**Valid Usage (Implicit)**

- VUID-vkReleasePerformanceConfigurationINTEL-device-parameter
  
  device must be a valid VkDevice handle

- VUID-vkReleasePerformanceConfigurationINTEL-configuration-parameter
  
  If configuration is not VK_NULL_HANDLE, configuration must be a valid VkPerformanceConfigurationINTEL handle

- VUID-vkReleasePerformanceConfigurationINTEL-configuration-parent
  
  If configuration is a valid handle, it must have been created, allocated, or retrieved from device

**Host Synchronization**

- Host access to configuration must be externally synchronized

**Return Codes**

**Success**

- VK_SUCCESS

**Failure**

- VK_ERROR_TOO_MANY_OBJECTS
- VK_ERROR_OUT_OF_HOST_MEMORY

18.11. Result Status Queries

Result status queries serve a single purpose: allowing the application to determine whether a set of operations have completed successfully or not, as indicated by the VkQueryResultStatusKHR value written when retrieving the result of a query using the VK_QUERY_RESULT_WITH_STATUS_BIT_KHR flag.

Unlike other query types, result status queries do not track or maintain any other data beyond the completion status, thus no other data is written when retrieving their results.

Support for result status queries is indicated by VkQueueFamilyQueryResultStatusPropertiesKHR
::queryResultStatusSupport, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` for the queue family in question.

### 18.12. Video Encode Feedback Queries

Video encode feedback queries allow the application to capture feedback values generated by video encode operations. As such, video encode feedback queries are available on queue families supporting video encode operations. The availability of individual video encode feedback values is indicated by the bits of `VkVideoEncodeCapabilitiesKHR::supportedEncodeFeedbackFlags`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile the queries are intended to be used with.

The set of enabled video encode feedback values **must** be configured on the query pool when it is created using the `encodeFeedbackFlags` member of the `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` included in the `pNext` chain of `VkQueryPoolCreateInfo`.

The `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkQueryPoolVideoEncodeFeedbackCreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkVideoEncodeFeedbackFlagsKHR encodeFeedbackFlags;
} VkQueryPoolVideoEncodeFeedbackCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `encodeFeedbackFlags` is a bitmask of `VkVideoEncodeFeedbackFlagBitsKHR` values specifying the set of enabled video encode feedback values captured by queries of the new pool.

#### Valid Usage (Implicit)

- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_QUERY_POOL_VIDEO_ENCODE_FEEDBACK_CREATE_INFO_KHR`

- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-parameter
  `encodeFeedbackFlags` must be a valid combination of `VkVideoEncodeFeedbackFlagBitsKHR` values

- VUID-VkQueryPoolVideoEncodeFeedbackCreateInfoKHR-encodeFeedbackFlags-requiredbitmask
  `encodeFeedbackFlags` must not be `0`

Bits which **can** be set in `VkQueryPoolVideoEncodeFeedbackCreateInfoKHR::encodeFeedbackFlags` for video encode feedback query pools are:
typedef enum VkVideoEncodeFeedbackFlagBitsKHR {
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR = 0x00000004,
} VkVideoEncodeFeedbackFlagBitsKHR;

- VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR specifies that queries managed by the pool will capture the byte offset of the bitstream data written by the video encode operation to the bitstream buffer specified in VkVideoEncodeInfoKHR::dstBuffer relative to the offset specified in VkVideoEncodeInfoKHR::dstBufferOffset. For the first video encode operation issued by any video encode command, this value will always be zero, meaning that bitstream data is always written to the buffer specified in VkVideoEncodeInfoKHR::dstBuffer starting from the offset specified in VkVideoEncodeInfoKHR::dstBufferOffset.

- VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR specifies that queries managed by the pool will capture the number of bytes written by the video encode operation to the bitstream buffer specified in VkVideoEncodeInfoKHR::dstBuffer.

- VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR specifies that queries managed by the pool will capture a boolean value indicating that the data written to the bitstream buffer specified in VkVideoEncodeInfoKHR::dstBuffer contains overridden parameters.

When retrieving the results of video encode feedback queries, the values corresponding to each enabled video encode feedback are written in the order of the bits defined above, followed by an optional value indicating availability or result status if VK_QUERY_RESULT_WITH_AVAILABILITY_BIT or VK_QUERY_RESULT_WITH_STATUS_BIT_KHR is specified, respectively.

If the result status of a video encode feedback query is negative, then the results of all enabled video encode feedback values will be undefined.

Note
Thus it is recommended that applications always specify VK_QUERY_RESULT_WITH_STATUS_BIT_KHR when retrieving the results of video encode feedback queries and ignore such undefined video encode feedback values for any unsuccessfully completed video encode operations.

// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFeedbackFlagsKHR;

VkVideoEncodeFeedbackFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeFeedbackFlagBitsKHR.
Chapter 19. Clear Commands

19.1. Clearing Images Outside a Render Pass Instance

Color and depth/stencil images can be cleared outside a render pass instance using `vkCmdClearColorImage` or `vkCmdClearDepthStencilImage`, respectively. These commands are only allowed outside of a render pass instance.

To clear one or more subranges of a color image, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdClearColorImage(  
  VkCommandBuffer commandBuffer,  
  VkImage image,  
  VkImageLayout imageLayout,  
  const VkClearColorValue* pColor,  
  uint32_t rangeCount,  
  const VkImageSubresourceRange* pRanges);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `image` is the image to be cleared.
- `imageLayout` specifies the current layout of the image subresource ranges to be cleared, and must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`.
- `pColor` is a pointer to a `VkClearColorValue` structure containing the values that the image subresource ranges will be cleared to (see Clear Values below).
- `rangeCount` is the number of image subresource range structures in `pRanges`.
- `pRanges` is a pointer to an array of `VkImageSubresourceRange` structures describing a range of mipmap levels, array layers, and aspects to be cleared, as described in Image Views.

Each specified range in `pRanges` is cleared to the value specified by `pColor`.

**Valid Usage**

- VUID-vkCmdClearColorImage-image-01993
  The format features of `image` must contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

- VUID-vkCmdClearColorImage-image-00002
  `image` must have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag

- VUID-vkCmdClearColorImage-image-01545
  `image` must not use any of the formats that require a sampler Y’CbCr conversion

- VUID-vkCmdClearColorImage-image-00003
  If `image` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object
imageLayout must specify the layout of the image subresource ranges of image specified in pRanges at the time this command is executed on a VkDevice.

imageLayout must be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL or VK_IMAGE_LAYOUT_GENERAL.

The VkImageSubresourceRange::aspectMask members of the elements of the pRanges array must each only include VK_IMAGE_ASPECT_COLOR_BIT.

The VkImageSubresourceRange::baseMipLevel members of the elements of the pRanges array must each be less than the mipLevels specified in VkImageCreateInfo when image was created.

For each VkImageSubresourceRange element of pRanges, if the levelCount member is not VK_REMAINING_MIP_LEVELS, then baseMipLevel + levelCount must be less than or equal to the mipLevels specified in VkImageCreateInfo when image was created.

The VkImageSubresourceRange::baseArrayLayer members of the elements of the pRanges array must each be less than the arrayLayers specified in VkImageCreateInfo when image was created.

For each VkImageSubresourceRange element of pRanges, if the layerCount member is not VK_REMAINING_ARRAY_LAYERS, then baseArrayLayer + layerCount must be less than or equal to the arrayLayers specified in VkImageCreateInfo when image was created.

image must not have a compressed or depth/stencil format.

pColor must be a valid pointer to a VkClearColorValue union.

If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, image must not be a protected image.

If commandBuffer is a protected command buffer and protectedNoFault is not supported, must not be an unprotected image.

Valid Usage (Implicit)

commandBuffer must be a valid VkCommandBuffer handle.

image must be a valid VkImage handle.
• VUID-vkCmdClearColorImage-imageLayout-parameter
  `imageLayout` must be a valid `VkImageLayout` value

• VUID-vkCmdClearColorImage-pRanges-parameter
  `pRanges` must be a valid pointer to an array of `rangeCount` valid `VkImageSubresourceRange`
  structures

• VUID-vkCmdClearColorImage-commandBuffer-recording
  `commandBuffer` must be in the recording state

• VUID-vkCmdClearColorImage-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or
  compute operations

• VUID-vkCmdClearColorImage-renderpass
  This command must only be called outside of a render pass instance

• VUID-vkCmdClearColorImage-videocoding
  This command must only be called outside of a video coding scope

• VUID-vkCmdClearColorImage-rangeCount-arraylength
  `rangeCount` must be greater than 0

• VUID-vkCmdClearColorImage-commonparent
  Both of `commandBuffer`, and `image` must have been created, allocated, or retrieved from the
  same `VkDevice`

---

Host Synchronization

• Host access to `commandBuffer` must be externally synchronized

• Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally
  synchronized

---

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Outside</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

To clear one or more subranges of a depth/stencil image, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdClearColorDepthStencilImage(
  VkCommandBuffer commandBuffer,
  VkImage image,
  VkImageLayout imageLayout,
  const VkClearColorDepthStencilValue* pDepthStencil,
);```
uint32_t rangeCount,
const VkImageSubresourceRange* pRanges);

- **commandBuffer** is the command buffer into which the command will be recorded.
- **image** is the image to be cleared.
- **imageLayout** specifies the current layout of the image subresource ranges to be cleared, and
  must be VK_IMAGE_LAYOUT_GENERAL or VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL.
- **pDepthStencil** is a pointer to a VkClearDepthStencilValue structure containing the values that
  the depth and stencil image subresource ranges will be cleared to (see Clear Values below).
- **rangeCount** is the number of image subresource range structures in pRanges.
- **pRanges** is a pointer to an array of VkImageSubresourceRange structures describing a range of
  mipmap levels, array layers, and aspects to be cleared, as described in Image Views.

### Valid Usage

- VUID-vkCmdClearDepthStencilImage-image-01994
  The format features of **image** must contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT

- VUID-vkCmdClearDepthStencilImage-pRanges-02658
  If the aspect member of any element of **pRanges** includes VK_IMAGE_ASPECT_STENCIL_BIT, and
  **image** was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_DST_BIT must have
  been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create **image**

- VUID-vkCmdClearDepthStencilImage-pRanges-02659
  If the aspect member of any element of **pRanges** includes VK_IMAGE_ASPECT_STENCIL_BIT, and
  **image** was not created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_DST_BIT must have
  been included in the VkImageCreateInfo::usage used to create **image**

- VUID-vkCmdClearDepthStencilImage-pRanges-02660
  If the aspect member of any element of **pRanges** includes VK_IMAGE_ASPECT_DEPTH_BIT,
  VK_IMAGE_USAGE_TRANSFER_DST_BIT must have been included in the VkImageCreateInfo
  ::usage used to create **image**

- VUID-vkCmdClearDepthStencilImage-image-00010
  If **image** is non-sparse then it must be bound completely and contiguously to a single
  VkDeviceMemory object

- VUID-vkCmdClearDepthStencilImage-imageLayout-00011
  imageLayout must specify the layout of the image subresource ranges of **image** specified in
  **pRanges** at the time this command is executed on a VkDevice

- VUID-vkCmdClearDepthStencilImage-imageLayout-00012
  imageLayout must be either of VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL or
  VK_IMAGE_LAYOUT_GENERAL

- VUID-vkCmdClearDepthStencilImage-aspectMask-02824
  The VkImageSubresourceRange::aspectMask member of each element of the **pRanges** array
  must not include bits other than VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT
If the image's format does not have a stencil component, then the `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array must not include the `VK_IMAGE_ASPECT_STENCIL_BIT` bit.

If the image's format does not have a depth component, then the `VkImageSubresourceRange::aspectMask` member of each element of the `pRanges` array must not include the `VK_IMAGE_ASPECT_DEPTH_BIT` bit.

The `VkImageSubresourceRange::baseMipLevel` members of the elements of the `pRanges` array must each be less than the `mipLevels` specified in `VkImageCreateInfo` when the image was created.

For each `VkImageSubresourceRange` element of `pRanges`, if the `levelCount` member is not `VK_REMAINING_MIP_LEVELS`, then `baseMipLevel + levelCount` must be less than or equal to the `mipLevels` specified in `VkImageCreateInfo` when the image was created.

The `VkImageSubresourceRange::baseArrayLayer` members of the elements of the `pRanges` array must each be less than the `arrayLayers` specified in `VkImageCreateInfo` when the image was created.

For each `VkImageSubresourceRange` element of `pRanges`, if the `layerCount` member is not `VK_REMAINING_ARRAYLAYERS`, then `baseArrayLayer + layerCount` must be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when the image was created.

The image must have a depth/stencil format.

If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, the image must not be a protected image.

If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, the image must not be an unprotected image.

**Valid Usage (Implicit)**

- `commandBuffer` must be a valid `VkCommandBuffer` handle
- `image` must be a valid `VkImage` handle
- `imageLayout` must be a valid `VkImageLayout` value
- `pDepthStencil` must be a valid `VkImageSubresourceRange::pDepthStencil` value
**19.2. Clearing Images Inside a Render Pass Instance**

To clear one or more regions of color and depth/stencil attachments inside a render pass instance, call:

- **pDepthStencil must** be a valid pointer to a valid `VkClearDepthStencilValue` structure
- **pRanges must** be a valid pointer to an array of `rangeCount` valid `VkImageSubresourceRange` structures
- **commandBuffer must** be in the recording state
- **commandBuffer-cmdpool**
  - The `VkCommandPool` that `commandBuffer` was allocated from must support graphics operations
- **renderpass**
  - This command must only be called outside of a render pass instance
- **videocoding**
  - This command must only be called outside of a video coding scope
- **rangeCount must** be greater than 0
- **commonparent**
  - Both of `commandBuffer`, and `image` must have been created, allocated, or retrieved from the same `VkDevice`
// Provided by VK_VERSION_1_0

```c
void vkCmdClearAttachments(
    VkCommandBuffer commandBuffer,
    uint32_t attachmentCount,
    const VkClearColorAttachment* pAttachments,
    uint32_t rectCount,
    const VkClearRect* pRects);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `attachmentCount` is the number of entries in the `pAttachments` array.
- `pAttachments` is a pointer to an array of `VkClearColorAttachment` structures defining the attachments to clear and the clear values to use.
- `rectCount` is the number of entries in the `pRects` array.
- `pRects` is a pointer to an array of `VkClearRect` structures defining regions within each selected attachment to clear.

If the render pass has a fragment density map attachment, clears follow the operations of fragment density maps as if each clear region was a primitive which generates fragments. The clear color is applied to all pixels inside each fragment's area regardless if the pixels lie outside of the clear region. Clears may have a different set of supported fragment areas than draws.

Unlike other clear commands, `vkCmdClearAttachments` is not a transfer command. It performs its operations in rasterization order. For color attachments, the operations are executed as color attachment writes, by the `VK_PIPELINE_STAGE_COLOR_ATTACHMENT_OUTPUT_BIT` stage. For depth/stencil attachments, the operations are executed as depth writes and stencil writes by the `VK_PIPELINE_STAGE_EARLY_FRAGMENT_TESTS_BIT` and `VK_PIPELINE_STAGE_LATE_FRAGMENT_TESTS_BIT` stages.

`vkCmdClearAttachments` is not affected by the bound pipeline state.

**Note**

It is generally preferable to clear attachments by using the `VK_ATTACHMENT_LOAD_OP_CLEAR` load operation at the start of rendering, as it is more efficient on some implementations.

If any attachment's `aspectMask` to be cleared is not backed by an image view, the clear has no effect on that aspect.

If an attachment being cleared refers to an image view created with an `aspectMask` equal to one of `VK_IMAGE_ASPECT_PLANE_0_BIT`, `VK_IMAGE_ASPECT_PLANE_1_BIT` or `VK_IMAGE_ASPECT_PLANE_2_BIT`, it is considered to be `VK_IMAGE_ASPECT_COLOR_BIT` for purposes of this command, and **must** be cleared with the `VK_IMAGE_ASPECT_COLOR_BIT` aspect as specified by image view creation.

**Valid Usage**

- VUID-vkCmdClearAttachments-aspectMask-07884
  If the current render pass instance does not use dynamic rendering, and the `aspectMask`
If the current render pass instance does not use dynamic rendering, and the aspectMask member of any element of pAttachments contains VK_IMAGE_ASPECT_STENCIL_BIT, the current subpass instance’s depth-stencil attachment must be either VK_ATTACHMENT_UNUSED or the attachment format must contain a depth component.

VUID-vkCmdClearAttachments-aspectMask-07271
If the aspectMask member of any element of pAttachments contains VK_IMAGE_ASPECT_COLOR_BIT, the colorAttachment must be a valid color attachment index in the current render pass instance.

VUID-vkCmdClearAttachments-rect-02682
The rect member of each element of pRects must have an extent.width greater than 0.

VUID-vkCmdClearAttachments-rect-02683
The rect member of each element of pRects must have an extent.height greater than 0.

VUID-vkCmdClearAttachments-pRects-00016
The rectangular region specified by each element of pRects must be contained within the render area of the current render pass instance.

VUID-vkCmdClearAttachments-pRects-06937
The layers specified by each element of pRects must be contained within every attachment that pAttachments refers to, i.e. for each element of pRects, VkClearRect::baseArrayLayer + VkClearRect::layerCount must be less than or equal to the number of layers rendered to in the current render pass instance.

VUID-vkCmdClearAttachments-layerCount-01934
The layerCount member of each element of pRects must not be 0.

VUID-vkCmdClearAttachments-commandBuffer-02504
If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, each attachment to be cleared must not be a protected image.

VUID-vkCmdClearAttachments-commandBuffer-02505
If commandBuffer is a protected command buffer and protectedNoFault is not supported, each attachment to be cleared must not be an unprotected image.

VUID-vkCmdClearAttachments-baseArrayLayer-00018
If the render pass instance this is recorded in uses multiview, then baseArrayLayer must be zero and layerCount must be one.

VUID-vkCmdClearAttachments-colorAttachment-09503
The colorAttachment member of each element of pAttachments must not identify a color attachment that is currently mapped to VK_ATTACHMENT_UNUSED in commandBuffer via VkRenderingAttachmentLocationInfoKHR.

VUID-vkCmdClearAttachments-aspectMask-09298
If the subpass this is recorded in performs an external format resolve, the aspectMask member of any element of pAttachments must not include VK_IMAGE_ASPECT_PLANE_i_BIT for any index i.
Valid Usage (Implicit)

- VUID-vkCmdClearAttachments-commandBuffer-parameter
  \textit{commandBuffer} \textbf{must} be a valid \texttt{VkCommandBuffer} handle

- VUID-vkCmdClearAttachments-pAttachments-parameter
  \textit{pAttachments} \textbf{must} be a valid pointer to an array of \textit{attachmentCount} valid \texttt{VkClearAttachment} structures

- VUID-vkCmdClearAttachments-pRects-parameter
  \textit{pRects} \textbf{must} be a valid pointer to an array of \textit{rectCount} \texttt{VkClearRect} structures

- VUID-vkCmdClearAttachments-commandBuffer-recording
  \textit{commandBuffer} \textbf{must} be in the \textit{recording state}

- VUID-vkCmdClearAttachments-commandBuffer-cmdpool
  The \texttt{VkCommandPool} that \textit{commandBuffer} was allocated from \textbf{must} support graphics operations

- VUID-vkCmdClearAttachments-renderpass
  This command \textbf{must} only be called inside of a render pass instance

- VUID-vkCmdClearAttachments-videocoding
  This command \textbf{must} only be called outside of a video coding scope

- VUID-vkCmdClearAttachments-attachmentCount-arraylength
  \textit{attachmentCount} \textbf{must} be greater than 0

- VUID-vkCmdClearAttachments-rectCount-arraylength
  \textit{rectCount} \textbf{must} be greater than 0

Host Synchronization

- Host access to \textit{commandBuffer} \textbf{must} be externally synchronized

- Host access to the \texttt{VkCommandPool} that \textit{commandBuffer} was allocated from \textbf{must} be externally synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>

<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The \texttt{VkClearRect} structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkClearRect {
```
VkRect2D  rect;
  uint32_t  baseArrayLayer;
  uint32_t  layerCount;
} VkClearRect;

• **rect** is the two-dimensional region to be cleared.

• **baseArrayLayer** is the first layer to be cleared.

• **layerCount** is the number of layers to clear.

The layers \([\text{baseArrayLayer}, \text{baseArrayLayer} + \text{layerCount}]\) counting from the base layer of the attachment image view are cleared.

The **VkClearAttachment** structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkClearAttachment {
  VkImageAspectFlags  aspectMask;
  uint32_t  colorAttachment;
  VkClearValue  clearValue;
} VkClearAttachment;
```

• **aspectMask** is a mask selecting the color, depth and/or stencil aspects of the attachment to be cleared.

• **colorAttachment** is only meaningful if **VK_IMAGE_ASPECT_COLOR_BIT** is set in **aspectMask**, in which case it is an index into the currently bound color attachments.

• **clearValue** is the color or depth/stencil value to clear the attachment to, as described in **Clear Values** below.

### Valid Usage

- **VUID-VkClearAttachment-aspectMask-00019**
  If **aspectMask** includes **VK_IMAGE_ASPECT_COLOR_BIT**, it **must** not include **VK_IMAGE_ASPECT_DEPTH_BIT** or **VK_IMAGE_ASPECT_STENCIL_BIT**

- **VUID-VkClearAttachment-aspectMask-00020**
  **aspectMask** **must** not include **VK_IMAGE_ASPECT_METADATA_BIT**

- **VUID-VkClearAttachment-aspectMask-02246**
  **aspectMask** **must** not include **VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT** for any index \(i\)

### Valid Usage (Implicit)

- **VUID-VkClearAttachment-aspectMask-parameter**
  **aspectMask** **must** be a valid combination of **VkImageAspectFlagBits** values

- **VUID-VkClearAttachment-aspectMask-requiredbitmask**
19.3. Clear Values

The VkClearColorValue structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef union VkClearColorValue {
    float float32[4];
    int32_t int32[4];
    uint32_t uint32[4];
} VkClearColorValue;
```

- `float32` are the color clear values when the format of the image or attachment is one of the numeric formats with a numeric type that is floating-point. Floating point values are automatically converted to the format of the image, with the clear value being treated as linear if the image is sRGB.

- `int32` are the color clear values when the format of the image or attachment has a numeric type that is signed integer (`SINT`). Signed integer values are converted to the format of the image by casting to the smaller type (with negative 32-bit values mapping to negative values in the smaller type). If the integer clear value is not representable in the target type (e.g. would overflow in conversion to that type), the clear value is undefined.

- `uint32` are the color clear values when the format of the image or attachment has a numeric type that is unsigned integer (`UINT`). Unsigned integer values are converted to the format of the image by casting to the integer type with fewer bits.

The four array elements of the clear color map to R, G, B, and A components of image formats, in order.

If the image has more than one sample, the same value is written to all samples for any pixels being cleared.

The VkClearDepthStencilValue structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkClearDepthStencilValue {
    float depth;
    uint32_t stencil;
} VkClearDepthStencilValue;
```

- `depth` is the clear value for the depth aspect of the depth/stencil attachment. It is a floating-point value which is automatically converted to the attachment’s format.

- `stencil` is the clear value for the stencil aspect of the depth/stencil attachment. It is a 32-bit integer value which is converted to the attachment’s format by taking the appropriate number of LSBs.
Valid Usage

- VUID-VkClearDepthStencilValue-depth-00022
  Unless the `VK_EXT_depth_range_unrestricted` extension is enabled, `depth` must be between 0.0 and 1.0, inclusive.

The `VkClearValue` union is defined as:

```c
// Provided by VK_VERSION_1_0
typedef union VkClearValue {
  VkClearColorValue color;
  VkClearDepthStencilValue depthStencil;
} VkClearValue;
```

- `color` specifies the color image clear values to use when clearing a color image or attachment.
- `depthStencil` specifies the depth and stencil clear values to use when clearing a depth/stencil image or attachment.

This union is used where part of the API requires either color or depth/stencil clear values, depending on the attachment, and defines the initial clear values in the `VkRenderPassBeginInfo` structure.

19.4. Filling Buffers

To clear buffer data, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdFillBuffer(
  VkCommandBuffer commandBuffer,
  VkBuffer dstBuffer,
  VkDeviceSize dstOffset,
  VkDeviceSize size,
  uint32_t data);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is the buffer to be filled.
- `dstOffset` is the byte offset into the buffer at which to start filling, and must be a multiple of 4.
- `size` is the number of bytes to fill, and must be either a multiple of 4, or `VK_WHOLE_SIZE` to fill the range from offset to the end of the buffer. If `VK_WHOLE_SIZE` is used and the remaining size of the buffer is not a multiple of 4, then the nearest smaller multiple is used.
- `data` is the 4-byte word written repeatedly to the buffer to fill `size` bytes of data. The data word is written to memory according to the host endianness.

`vkCmdFillBuffer` is treated as a “transfer” operation for the purposes of synchronization barriers.
The **VK_BUFFER_USAGE_TRANSFER_DST_BIT** must be specified in usage of VkBufferCreateInfo in order for the buffer to be compatible with vkCmdFillBuffer.

### Valid Usage

- **VUID-vkCmdFillBuffer-dstOffset-00024**
  
  dstOffset must be less than the size of dstBuffer

- **VUID-vkCmdFillBuffer-dstOffset-00025**
  
  dstOffset must be a multiple of 4

- **VUID-vkCmdFillBuffer-size-00026**
  
  If size is not equal to VK_WHOLE_SIZE, size must be greater than 0

- **VUID-vkCmdFillBuffer-size-00027**
  
  If size is not equal to VK_WHOLE_SIZE, size must be less than or equal to the size of dstBuffer minus dstOffset

- **VUID-vkCmdFillBuffer-size-00028**
  
  If size is not equal to VK_WHOLE_SIZE, size must be a multiple of 4

- **VUID-vkCmdFillBuffer-dstBuffer-00029**
  
  dstBuffer must have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag

- **VUID-vkCmdFillBuffer-apiVersion-07894**
  
  If the VK_KHR_maintenance1 extension is not enabled and VkPhysicalDeviceProperties::apiVersion is less than Vulkan 1.1, the VkCommandPool that commandBuffer was allocated from must support graphics or compute operations

- **VUID-vkCmdFillBuffer-dstBuffer-00031**
  
  If dstBuffer is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- **VUID-vkCmdFillBuffer-commandBuffer-01811**
  
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, dstBuffer must not be a protected buffer

- **VUID-vkCmdFillBuffer-commandBuffer-01812**
  
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, dstBuffer must not be an unprotected buffer

### Valid Usage (Implicit)

- **VUID-vkCmdFillBuffer-commandBuffer-parameter**
  
  commandBuffer must be a valid VkCommandBuffer handle

- **VUID-vkCmdFillBuffer-dstBuffer-parameter**
  
  dstBuffer must be a valid VkBuffer handle

- **VUID-vkCmdFillBuffer-commandBuffer-recording**
  
  commandBuffer must be in the recording state

- **VUID-vkCmdFillBuffer-commandBuffer-cmdpool**
  
  The VkCommandPool that commandBuffer was allocated from must support transfer, graphics
or compute operations

- VUID-vkCmdFillBuffer-renderpass
  This command **must** only be called outside of a render pass instance

- VUID-vkCmdFillBuffer-videocoding
  This command **must** only be called outside of a video coding scope

- VUID-vkCmdFillBuffer-commonparent
  Both of `commandBuffer`, and `dstBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>

<td>Transfer, Graphics, Compute</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### 19.5. Updating Buffers

To update buffer data inline in a command buffer, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdUpdateBuffer(
    VkCommandBuffer commandBuffer,
    VkBuffer dstBuffer,    
    VkDeviceSize dstOffset,    
    VkDeviceSize dataSize,    
    const void* pData);    
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `dstBuffer` is a handle to the buffer to be updated.
- `dstOffset` is the byte offset into the buffer to start updating, and **must** be a multiple of 4.
- `dataSize` is the number of bytes to update, and **must** be a multiple of 4.
- `pData` is a pointer to the source data for the buffer update, and **must** be at least `dataSize` bytes in
dataSize must be less than or equal to 65536 bytes. For larger updates, applications can use buffer to buffer copies.

**Note**

Buffer updates performed with `vkCmdUpdateBuffer` first copy the data into command buffer memory when the command is recorded (which requires additional storage and may incur an additional allocation), and then copy the data from the command buffer into dstBuffer when the command is executed on a device.

The additional cost of this functionality compared to buffer to buffer copies means it is only recommended for very small amounts of data, and is why it is limited to only 65536 bytes.

Applications can work around this by issuing multiple `vkCmdUpdateBuffer` commands to different ranges of the same buffer, but it is strongly recommended that they should not.

The source data is copied from the user pointer to the command buffer when the command is called.

`vkCmdUpdateBuffer` is only allowed outside of a render pass. This command is treated as a “transfer” operation for the purposes of synchronization barriers. The `VK_BUFFER_USAGE_TRANSFER_DST_BIT` must be specified in usage of `VkBufferCreateInfo` in order for the buffer to be compatible with `vkCmdUpdateBuffer`.

### Valid Usage

- **VUID-vkCmdUpdateBuffer-dstOffset-00032**
  
  dstOffset must be less than the size of dstBuffer

- **VUID-vkCmdUpdateBuffer-dataSize-00033**
  
  dataSize must be less than or equal to the size of dstBuffer minus dstOffset

- **VUID-vkCmdUpdateBuffer-dstBuffer-00034**
  
  dstBuffer must have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag

- **VUID-vkCmdUpdateBuffer-dstBuffer-00035**
  
  If dstBuffer is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object

- **VUID-vkCmdUpdateBuffer-dstOffset-00036**
  
  dstOffset must be a multiple of 4

- **VUID-vkCmdUpdateBuffer-dataSize-00037**
  
  dataSize must be less than or equal to 65536

- **VUID-vkCmdUpdateBuffer-dataSize-00038**
  
  dataSize must be a multiple of 4
• VUID-vkCmdUpdateBuffer-commandBuffer-01813
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be a protected buffer

• VUID-vkCmdUpdateBuffer-commandBuffer-01814
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be an unprotected buffer

---

**Valid Usage (Implicit)**

• VUID-vkCmdUpdateBuffer-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

• VUID-vkCmdUpdateBuffer-dstBuffer-parameter
  `dstBuffer` must be a valid `VkBuffer` handle

• VUID-vkCmdUpdateBuffer-pData-parameter
  `pData` must be a valid pointer to an array of `dataSize` bytes

• VUID-vkCmdUpdateBuffer-commandBuffer-recording
  `commandBuffer` must be in the recording state

• VUID-vkCmdUpdateBuffer-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support transfer, graphics, or compute operations

• VUID-vkCmdUpdateBuffer-renderpass
  This command must only be called outside of a render pass instance

• VUID-vkCmdUpdateBuffer-videocoding
  This command must only be called outside of a video coding scope

• VUID-vkCmdUpdateBuffer-dataSize-arraylength
  `dataSize` must be greater than 0

• VUID-vkCmdUpdateBuffer-commonparent
  Both of `commandBuffer`, and `dstBuffer` must have been created, allocated, or retrieved from the same `VkDevice`

---

**Host Synchronization**

• Host access to `commandBuffer` must be externally synchronized

• Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized
### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>

<td>Transfer Graphics</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

**Note**

The `pData` parameter was of type `uint32_t*` instead of `void*` prior to version 1.0.19 of the Specification and `VK_HEADER_VERSION` 19 of the Vulkan Header Files. This was a historical anomaly, as the source data may be of other types.
Chapter 20. Copy Commands

An application can copy buffer and image data using several methods described in this chapter, depending on the type of data transfer.

All copy commands are treated as “transfer” operations for the purposes of synchronization barriers.

All copy commands that have a source format with an X component in its format description read undefined values from those bits.

All copy commands that have a destination format with an X component in its format description write undefined values to those bits.

### 20.1. Copying Data Between Buffers

To copy data between buffer objects, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdCopyBuffer(
    VkCommandBuffer commandBuffer,
    VkBuffer srcBuffer,
    VkBuffer dstBuffer,
    uint32_t regionCount,
    const VkBufferCopy* pRegions);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **srcBuffer** is the source buffer.
- **dstBuffer** is the destination buffer.
- **regionCount** is the number of regions to copy.
- **pRegions** is a pointer to an array of `VkBufferCopy` structures specifying the regions to copy.

Each source region specified by **pRegions** is copied from the source buffer to the destination region of the destination buffer. If any of the specified regions in **srcBuffer** overlaps in memory with any of the specified regions in **dstBuffer**, values read from those overlapping regions are undefined.

**Valid Usage**

- VUID-vkCmdCopyBuffer-commandBuffer-01822
  If **commandBuffer** is an unprotected command buffer and protectedNoFault is not supported, **srcBuffer** must not be a protected buffer

- VUID-vkCmdCopyBuffer-commandBuffer-01823
  If **commandBuffer** is an unprotected command buffer and protectedNoFault is not supported, **dstBuffer** must not be a protected buffer

- VUID-vkCmdCopyBuffer-commandBuffer-01824
If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be an unprotected buffer.

- VUID-vkCmdCopyBuffer-srcOffset-00113
  The `srcOffset` member of each element of `pRegions` must be less than the size of `srcBuffer`.

- VUID-vkCmdCopyBuffer-dstOffset-00114
  The `dstOffset` member of each element of `pRegions` must be less than the size of `dstBuffer`.

- VUID-vkCmdCopyBuffer-size-00115
  The `size` member of each element of `pRegions` must be less than or equal to the size of `srcBuffer` minus `srcOffset`.

- VUID-vkCmdCopyBuffer-size-00116
  The `size` member of each element of `pRegions` must be less than or equal to the size of `dstBuffer` minus `dstOffset`.

- VUID-vkCmdCopyBuffer-pRegions-00117
  The union of the source regions, and the union of the destination regions, specified by the elements of `pRegions`, must not overlap in memory.

- VUID-vkCmdCopyBuffer-srcBuffer-00118
  `srcBuffer` must have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag.

- VUID-vkCmdCopyBuffer-srcBuffer-00119
  If `srcBuffer` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

- VUID-vkCmdCopyBuffer-dstBuffer-00120
  `dstBuffer` must have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag.

- VUID-vkCmdCopyBuffer-dstBuffer-00121
  If `dstBuffer` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

### Valid Usage (Implicit)

- VUID-vkCmdCopyBuffer-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- VUID-vkCmdCopyBuffer-srcBuffer-parameter
  `srcBuffer` must be a valid `VkBuffer` handle.

- VUID-vkCmdCopyBuffer-dstBuffer-parameter
  `dstBuffer` must be a valid `VkBuffer` handle.

- VUID-vkCmdCopyBuffer-pRegions-parameter
  `pRegions` must be a valid pointer to an array of `regionCount` valid `VkBufferCopy` structures.

- VUID-vkCmdCopyBuffer-commandBuffer-recording
  `commandBuffer` must be in the recording state.

- VUID-vkCmdCopyBuffer-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support transfer, graphics, or compute operations.
This command must only be called outside of a render pass instance.

This command must only be called outside of a video coding scope.

regionCount must be greater than 0.

Each of commandBuffer, dstBuffer, and srcBuffer must have been created, allocated, or retrieved from the same VkDevice.

Host Synchronization

Host access to commandBuffer must be externally synchronized.

Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized.

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Outside</td>
<td>Outside</td>
<td>Transfer Graphics Compute</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The VkBufferCopy structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkBufferCopy {
    VkDeviceSize srcOffset;
    VkDeviceSize dstOffset;
    VkDeviceSize size;
} VkBufferCopy;
```

- srcOffset is the starting offset in bytes from the start of srcBuffer.
- dstOffset is the starting offset in bytes from the start of dstBuffer.
- size is the number of bytes to copy.

Valid Usage

- VUID-VkBufferCopy-size-01988
  The size must be greater than 0.
A more extensible version of the copy buffer command is defined below.

To copy data between buffer objects, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdCopyBuffer2(
    VkCommandBuffer commandBuffer,
    const VkCopyBufferInfo2* pCopyBufferInfo);
```

or the equivalent command

```c
// Provided by VK_KHR_copy_commands2
void vkCmdCopyBuffer2KHR(
    VkCommandBuffer commandBuffer,
    const VkCopyBufferInfo2* pCopyBufferInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyBufferInfo` is a pointer to a `VkCopyBufferInfo2` structure describing the copy parameters.

Each source region specified by `pCopyBufferInfo->pRegions` is copied from the source buffer to the destination region of the destination buffer. If any of the specified regions in `pCopyBufferInfo->srcBuffer` overlaps in memory with any of the specified regions in `pCopyBufferInfo->dstBuffer`, values read from those overlapping regions are undefined.

### Valid Usage

- **VUID-vkCmdCopyBuffer2-commandBuffer-01822**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` must not be a protected buffer

- **VUID-vkCmdCopyBuffer2-commandBuffer-01823**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be a protected buffer

- **VUID-vkCmdCopyBuffer2-commandBuffer-01824**
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be an unprotected buffer

### Valid Usage (Implicit)

- **VUID-vkCmdCopyBuffer2-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- **VUID-vkCmdCopyBuffer2-pCopyBufferInfo-parameter**
  `pCopyBufferInfo` must be a valid pointer to a valid `VkCopyBufferInfo2` structure

- **VUID-vkCmdCopyBuffer2-commandBuffer-recording**
**commandBuffer** must be in the recording state

- VUID-vkCmdCopyBuffer2-commandBuffer-cmdpool
  The **VkCommandPool** that **commandBuffer** was allocated from must support transfer, graphics, or compute operations

- VUID-vkCmdCopyBuffer2-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyBuffer2-videocoding
  This command must only be called outside of a video coding scope

---

## Host Synchronization

- Host access to **commandBuffer** must be externally synchronized
- Host access to the **VkCommandPool** that **commandBuffer** was allocated from must be externally synchronized

---

## Command Properties

<table>

The **VkCopyBufferInfo2** structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkBuffer srcBuffer;
    VkBuffer dstBuffer;
    uint32_t regionCount;
    const VkBufferCopy2* pRegions;
} VkCopyBufferInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkCopyBufferInfo2 VkCopyBufferInfo2KHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `srcBuffer` is the source buffer.
• `dstBuffer` is the destination buffer.
• `regionCount` is the number of regions to copy.
• `pRegions` is a pointer to an array of `VkBufferCopy2` structures specifying the regions to copy.

**Valid Usage**

- VUID-VkCopyBufferInfo2-srcOffset-00113
  The `srcOffset` member of each element of `pRegions` must be less than the size of `srcBuffer`.

- VUID-VkCopyBufferInfo2-dstOffset-00114
  The `dstOffset` member of each element of `pRegions` must be less than the size of `dstBuffer`.

- VUID-VkCopyBufferInfo2-size-00115
  The `size` member of each element of `pRegions` must be less than or equal to the size of `srcBuffer` minus `srcOffset`.

- VUID-VkCopyBufferInfo2-size-00116
  The `size` member of each element of `pRegions` must be less than or equal to the size of `dstBuffer` minus `dstOffset`.

- VUID-VkCopyBufferInfo2-pRegions-00117
  The union of the source regions, and the union of the destination regions, specified by the elements of `pRegions`, must not overlap in memory.

- VUID-VkCopyBufferInfo2-srcBuffer-00118
  `srcBuffer` must have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag.

- VUID-VkCopyBufferInfo2-dstBuffer-00119
  If `srcBuffer` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

- VUID-VkCopyBufferInfo2-dstBuffer-00120
  `dstBuffer` must have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag.

- VUID-VkCopyBufferInfo2-dstBuffer-00121
  If `dstBuffer` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

**Valid Usage (Implicit)**

- VUID-VkCopyBufferInfo2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_COPY_BUFFER_INFO_2`.

- VUID-VkCopyBufferInfo2-pNext-pNext
  `pNext` must be `NULL`.

- VUID-VkCopyBufferInfo2-srcBuffer-parameter
  `srcBuffer` must be a valid `VkBuffer` handle.
• **VUID-VkCopyBufferInfo2-dstBuffer-parameter**
  
  *dstBuffer* must be a valid *VkBuffer* handle

• **VUID-VkCopyBufferInfo2-pRegions-parameter**
  
  *pRegions* must be a valid pointer to an array of *regionCount* valid *VkBufferCopy2* structures

• **VUID-VkCopyBufferInfo2-regionCount-arraylength**
  
  *regionCount* must be greater than 0

• **VUID-VkCopyBufferInfo2-commonparent**
  
  Both of *dstBuffer*, and *srcBuffer* must have been created, allocated, or retrieved from the same *VkDevice*

The *VkBufferCopy2* structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkBufferCopy2 {
    VkStructureType sType;
    const void* pNext;
    VkDeviceSize srcOffset;
    VkDeviceSize dstOffset;
    VkDeviceSize size;
} VkBufferCopy2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkBufferCopy2 VkBufferCopy2KHR;
```

• *sType* is a *VkStructureType* value identifying this structure.

• *pNext* is *NULL* or a pointer to a structure extending this structure.

• *srcOffset* is the starting offset in bytes from the start of *srcBuffer*.

• *dstOffset* is the starting offset in bytes from the start of *dstBuffer*.

• *size* is the number of bytes to copy.

### Valid Usage

• **VUID-VkBufferCopy2-size-01988**
  
  The *size* must be greater than 0

### Valid Usage (Implicit)

• **VUID-VkBufferCopy2-sType-sType**
  
  *sType* must be *VK_STRUCTURE_TYPE_BUFFER_COPY_2*
20.2. Copying Data Between Images

To copy data between image objects, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdCopyImage(
    VkCommandBuffer commandBuffer,
    VkImage srcImage,
    VkImageLayout srcImageLayout,
    VkImage dstImage,
    VkImageLayout dstImageLayout,
    uint32_t regionCount,
    const VkImageCopy* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the current layout of the source image subresource.
- `dstImage` is the destination image.
- `dstImageLayout` is the current layout of the destination image subresource.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkImageCopy` structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source image to the destination region of the destination image. If any of the specified regions in `srcImage` overlaps in memory with any of the specified regions in `dstImage`, values read from those overlapping regions are undefined.

Multi-planar images can only be copied on a per-plane basis, and the subresources used in each region when copying to or from such images must specify only one plane, though different regions can specify different planes. When copying planes of multi-planar images, the format considered is the compatible format for that plane, rather than the format of the multi-planar image.

If the format of the destination image has a different block extent than the source image (e.g. one is a compressed format), the offset and extent for each of the regions specified is scaled according to the block extents of each format to match in size. Copy regions for each image must be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents must match the edge of the image.

Image data can be copied between images with different image types. If one image is `VK_IMAGE_TYPE_3D` and the other image is `VK_IMAGE_TYPE_2D` with multiple layers, then each slice is copied to or from a different layer; depth slices in the 3D image correspond to `layerCount` layers in the 2D image, with an effective depth of 1 used for the 2D image. If maintenance is enabled, all other combinations are allowed and function as if 1D images are 2D images with a height of 1. Otherwise,
other combinations of image types are disallowed.

Valid Usage

- **VUID-vkCmdCopyImage-commandBuffer-01825**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` must not be a protected image.

- **VUID-vkCmdCopyImage-commandBuffer-01826**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` must not be a protected image.

- **VUID-vkCmdCopyImage-commandBuffer-01827**
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` must not be an unprotected image.

- **VUID-vkCmdCopyImage-pRegions-00124**
  The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, must not overlap in memory.

- **VUID-vkCmdCopyImage-srcImage-01995**
  The format features of `srcImage` must contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`.

- **VUID-vkCmdCopyImage-srcImageLayout-00128**
  `srcImageLayout` must specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdCopyImage-srcImageLayout-01917**
  `srcImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

- **VUID-vkCmdCopyImage-srcImage-09460**
  If `srcImage` and `dstImage` are the same, and any elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` must be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`.

- **VUID-vkCmdCopyImage-dstImage-01996**
  The format features of `dstImage` must contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`.

- **VUID-vkCmdCopyImage-dstImageLayout-00133**
  `dstImageLayout` must specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdCopyImage-dstImageLayout-01395**
  `dstImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

- **VUID-vkCmdCopyImage-srcImage-01548**
  If the `VkFormat` of each of `srcImage` and `dstImage` is not a multi-planar format, the `VkFormat` of each of `srcImage` and `dstImage` must be size-compatible.

- **VUID-vkCmdCopyImage-None-01549**
  In a copy to or from a plane of a multi-planar image, the `VkFormat` of the image and plane...
must be compatible according to the description of compatible planes for the plane being copied

- VUID-vkCmdCopyImage-srcImage-09247
  If the VkFormat of each of srcImage and dstImage is a compressed image format, the formats must have the same texel block extent

- VUID-vkCmdCopyImage-srcImage-00136
  The sample count of srcImage and dstImage must match

- VUID-vkCmdCopyImage-srcOffset-01783
  The srcOffset and extent members of each element of pRegions must respect the image transfer granularity requirements of commandBuffer’s command pool’s queue family, as described in VkQueueFamilyProperties

- VUID-vkCmdCopyImage-dstOffset-01784
  The dstOffset and extent members of each element of pRegions must respect the image transfer granularity requirements of commandBuffer’s command pool’s queue family, as described in VkQueueFamilyProperties

- VUID-vkCmdCopyImage-srcImage-01551
  If neither srcImage nor dstImage has a multi-planar image format then for each element of pRegions, srcSubresource.aspectMask and dstSubresource.aspectMask must match

- VUID-vkCmdCopyImage-srcImage-01556
  If srcImage has a multi-planar image format and the dstImage does not have a multi-planar image format, then for each element of pRegions, dstSubresource.aspectMask must be VK_IMAGE_ASPECT_COLOR_BIT

- VUID-vkCmdCopyImage-dstImage-01557
  If dstImage has a multi-planar image format and the srcImage does not have a multi-planar image format, then for each element of pRegions, srcSubresource.aspectMask must be VK_IMAGE_ASPECT_COLOR_BIT

- VUID-vkCmdCopyImage-apiVersion-07932
  If the VK_KHR_maintenance1 extension is not enabled, or VkPhysicalDeviceProperties::apiVersion is less than Vulkan 1.1, and either srcImage or dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer and dstSubresource.baseArrayLayer must both be 0, and srcSubresource.layerCount and dstSubresource.layerCount must both be 1

- VUID-vkCmdCopyImage-srcImage-04443
  If srcImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer must be 0 and srcSubresource.layerCount must be 1

- VUID-vkCmdCopyImage-dstImage-04444
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions,
\[ \text{dstSubresource.baseArrayLayer must be } 0 \text{ and dstSubresource.layerCount must be } 1 \]

- VUID-vkCmdCopyImage-aspectMask-00142
  For each element of \( pRegions \), \( \text{srcSubresource.aspectMask} \) must specify aspects present in \( \text{srcImage} \)

- VUID-vkCmdCopyImage-aspectMask-00143
  For each element of \( pRegions \), \( \text{dstSubresource.aspectMask} \) must specify aspects present in \( \text{dstImage} \)

- VUID-vkCmdCopyImage-srcOffset-00144
  For each element of \( pRegions \), \( \text{srcOffset.x} \) and \( (\text{extent.width} + \text{srcOffset.x}) \) must both be greater than or equal to 0 and less than or equal to the width of the specified \( \text{srcSubresource} \) of \( \text{srcImage} \)

- VUID-vkCmdCopyImage-srcOffset-00145
  For each element of \( pRegions \), \( \text{srcOffset.y} \) and \( (\text{extent.height} + \text{srcOffset.y}) \) must both be greater than or equal to 0 and less than or equal to the height of the specified \( \text{srcSubresource} \) of \( \text{srcImage} \)

- VUID-vkCmdCopyImage-srcImage-00146
  If \( \text{srcImage} \) is of type \( \text{VK_IMAGE_TYPE_1D} \), then for each element of \( pRegions \), \( \text{srcOffset.y} \) must be 0 and \( \text{extent.height} \) must be 1

- VUID-vkCmdCopyImage-srcImage-00147
  If \( \text{srcImage} \) is of type \( \text{VK_IMAGE_TYPE_3D} \), then for each element of \( pRegions \), \( \text{srcOffset.z} \) and \( (\text{extent.depth} + \text{srcOffset.z}) \) must both be greater than or equal to 0 and less than or equal to the depth of the specified \( \text{srcSubresource} \) of \( \text{srcImage} \)

- VUID-vkCmdCopyImage-srcImage-01785
  If \( \text{srcImage} \) is of type \( \text{VK_IMAGE_TYPE_1D} \), then for each element of \( pRegions \), \( \text{srcOffset.z} \) must be 0 and \( \text{extent.depth} \) must be 1

- VUID-vkCmdCopyImage-dstImage-01786
  If \( \text{dstImage} \) is of type \( \text{VK_IMAGE_TYPE_1D} \), then for each element of \( pRegions \), \( \text{dstOffset.z} \) must be 0 and \( \text{extent.depth} \) must be 1

- VUID-vkCmdCopyImage-dstImage-01788
  If \( \text{dstImage} \) is of type \( \text{VK_IMAGE_TYPE_2D} \), then for each element of \( pRegions \), \( \text{dstOffset.z} \) must be 0

- VUID-vkCmdCopyImage-apiVersion-07933
  If the \( \text{VK_KHR_maintenance1} \) extension is not enabled, and \( \text{VkPhysicalDeviceProperties::apiVersion} \) is less than Vulkan 1.1, \( \text{srcImage} \) and \( \text{dstImage} \) must have the same \( \text{VkImageType} \)

- VUID-vkCmdCopyImage-apiVersion-08969
  If the \( \text{VK_KHR_maintenance1} \) extension is not enabled, and \( \text{VkPhysicalDeviceProperties::apiVersion} \) is less than Vulkan 1.1, \( \text{srcImage} \) or \( \text{dstImage} \) is of type \( \text{VK_IMAGE_TYPE_2D} \), then for each element of \( pRegions \), \( \text{extent.depth} \) must be 1

- VUID-vkCmdCopyImage-srcImage-07743
  If \( \text{srcImage} \) is of type \( \text{VK_IMAGE_TYPE_2D} \), then for each element of \( pRegions \), \( \text{srcOffset.z} \) must be 0
If `srcImage` and `dstImage` have a different `VkImageType`, and maintenance5 is not enabled, one must be `VK_IMAGE_TYPE_3D` and the other must be `VK_IMAGE_TYPE_2D`

- VUID-vkCmdCopyImage-srcImage-08793
  If `srcImage` and `dstImage` have the same `VkImageType`, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` must match

- VUID-vkCmdCopyImage-srcImage-08794
  If `srcImage` and `dstImage` have the same `VkImageType`, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member must be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

- VUID-vkCmdCopyImage-srcImage-01790
  If `srcImage` and `dstImage` are both of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` must be 1

- VUID-vkCmdCopyImage-srcImage-01791
  If `srcImage` is of type `VK_IMAGE_TYPE_2D`, and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` must equal `srcSubresource.layerCount`

- VUID-vkCmdCopyImage-dstImage-01792
  If `dstImage` is of type `VK_IMAGE_TYPE_2D`, and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` must equal `dstSubresource.layerCount`

- VUID-vkCmdCopyImage-dstOffset-00150
  For each element of `pRegions`, `dstOffset.x` and `(extent.width + dstOffset.x)` must both be greater than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdCopyImage-dstOffset-00151
  For each element of `pRegions`, `dstOffset.y` and `(extent.height + dstOffset.y)` must both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- VUID-vkCmdCopyImage-pRegions-07278
  For each element of `pRegions`, `srcOffset.x` must be a multiple of the texel block extent width of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-pRegions-07279
  For each element of `pRegions`, `srcOffset.y` must be a multiple of the texel block extent height of the `VkFormat` of `srcImage`

- VUID-vkCmdCopyImage-pRegions-07280
For each element of `pRegions`, `srcOffset.z` must be a multiple of the texel block extent depth of the `VkFormat` of `srcImage`.

- VUID-vkCmdCopyImage-pRegions-07281
  For each element of `pRegions`, `dstOffset.x` must be a multiple of the texel block extent width of the `VkFormat` of `dstImage`.

- VUID-vkCmdCopyImage-pRegions-07282
  For each element of `pRegions`, `dstOffset.y` must be a multiple of the texel block extent height of the `VkFormat` of `dstImage`.

- VUID-vkCmdCopyImage-pRegions-07283
  For each element of `pRegions`, `dstOffset.z` must be a multiple of the texel block extent depth of the `VkFormat` of `dstImage`.

- VUID-vkCmdCopyImage-srcImage-01728
  For each element of `pRegions`, if the sum of `srcOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` must be a multiple of the texel block extent width of the `VkFormat` of `srcImage`.

- VUID-vkCmdCopyImage-srcImage-01729
  For each element of `pRegions`, if the sum of `srcOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` must be a multiple of the texel block extent height of the `VkFormat` of `srcImage`.

- VUID-vkCmdCopyImage-srcImage-01730
  For each element of `pRegions`, if the sum of `srcOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` must be a multiple of the texel block extent depth of the `VkFormat` of `srcImage`.

- VUID-vkCmdCopyImage-dstImage-01732
  For each element of `pRegions`, if the sum of `dstOffset.x` and `extent.width` does not equal the width of the subresource specified by `dstSubresource`, `extent.width` must be a multiple of the texel block extent width of the `VkFormat` of `dstImage`.

- VUID-vkCmdCopyImage-dstImage-01733
  For each element of `pRegions`, if the sum of `dstOffset.y` and `extent.height` does not equal the height of the subresource specified by `dstSubresource`, `extent.height` must be a multiple of the texel block extent height of the `VkFormat` of `dstImage`.

- VUID-vkCmdCopyImage-dstImage-01734
  For each element of `pRegions`, if the sum of `dstOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `dstSubresource`, `extent.depth` must be a multiple of the texel block extent depth of the `VkFormat` of `dstImage`.

- VUID-vkCmdCopyImage-aspect-06662
  If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `srcImage` was not created with separate stencil usage, `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` must have been included in the `VkImageCreateInfo` ::`usage` used to create `srcImage`.

- VUID-vkCmdCopyImage-aspect-06663
  If the `aspect` member of any element of `pRegions` includes any flag other than `VK_IMAGE_ASPECT_STENCIL_BIT` or `dstImage` was not created with separate stencil usage,
VK_IMAGE_USAGE_TRANSFER_DST_BIT must have been included in the VkImageCreateInfo::usage used to create dstImage

- VUID-vkCmdCopyImage-aspect-06664
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and srcImage was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_SRC_BIT must have been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create srcImage

- VUID-vkCmdCopyImage-aspect-06665
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and dstImage was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_DST_BIT must have been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create dstImage

- VUID-vkCmdCopyImage-srcImage-07966
  If srcImage is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-vkCmdCopyImage-srcSubresource-07967
  The srcSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-vkCmdCopyImage-srcSubresource-07968
  If srcSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, srcSubresource.baseArrayLayer + srcSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-vkCmdCopyImage-srcImage-07969
  srcImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-vkCmdCopyImage-dstImage-07966
  If dstImage is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-vkCmdCopyImage-dstSubresource-07967
  The dstSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when dstImage was created

- VUID-vkCmdCopyImage-dstSubresource-07968
  If dstSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, dstSubresource.baseArrayLayer + dstSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created

- VUID-vkCmdCopyImage-dstImage-07969
  dstImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
**Valid Usage (Implicit)**

- VUID-vkCmdCopyImage-commandBuffer-parameter  
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyImage-srcImage-parameter  
  `srcImage` must be a valid `VkImage` handle

- VUID-vkCmdCopyImage-srcImageLayout-parameter  
  `srcImageLayout` must be a valid `VkImageLayout` value

- VUID-vkCmdCopyImage-dstImage-parameter  
  `dstImage` must be a valid `VkImage` handle

- VUID-vkCmdCopyImage-dstImageLayout-parameter  
  `dstImageLayout` must be a valid `VkImageLayout` value

- VUID-vkCmdCopyImage-pRegions-parameter  
  `pRegions` must be a valid pointer to an array of `regionCount` valid `VkImageCopy` structures

- VUID-vkCmdCopyImage-commandBuffer-recording  
  `commandBuffer` must be in the `recording state`

- VUID-vkCmdCopyImage-commandBuffer-cmdpool  
  The `VkCommandPool` that `commandBuffer` was allocated from must support transfer, graphics, or compute operations

- VUID-vkCmdCopyImage-renderpass  
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyImage-videocoding  
  This command must only be called outside of a video coding scope

- VUID-vkCmdCopyImage-regionCount-arraylength  
  `regionCount` must be greater than 0

- VUID-vkCmdCopyImage-commonparent  
  Each of `commandBuffer`, `dstImage`, and `srcImage` must have been created, allocated, or retrieved from the same `VkDevice`

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized
The `VkImageCopy` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageCopy {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D dstOffset;
    VkExtent3D extent;
} VkImageCopy;
```

- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively.
- `srcOffset` and `dstOffset` select the initial x, y, and z offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the image to copy in `width`, `height` and `depth`.

**Valid Usage**

- VUID-VkImageCopy-apiVersion-07940
  If the `VK_KHR_sampler_ycbcr_conversion` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `aspectMask` member of `srcSubresource` and `dstSubresource` **must** match

- VUID-VkImageCopy-apiVersion-07941
  If the `VK_KHR_maintenance1` extension is not enabled, and `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.1, the `layerCount` member of `srcSubresource` and `dstSubresource` **must** match

- VUID-VkImageCopy-extent-06668
  `extent.width` **must** not be 0

- VUID-VkImageCopy-extent-06669
  `extent.height` **must** not be 0

- VUID-VkImageCopy-extent-06670
  `extent.depth` **must** not be 0
Valid Usage (Implicit)

- **VUID-VkImageCopy-srcSubresource-parameter**
  
  *srcSubresource* **must** be a valid *VkImageSubresourceLayers* structure

- **VUID-VkImageCopy-dstSubresource-parameter**
  
  *dstSubresource* **must** be a valid *VkImageSubresourceLayers* structure

The *VkImageSubresourceLayers* structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageSubresourceLayers {
    VkImageAspectFlags aspectMask;
    uint32_t mipLevel;
    uint32_t baseArrayLayer;
    uint32_t layerCount;
} VkImageSubresourceLayers;
```

- **aspectMask** is a combination of *VkImageAspectFlagBits*, selecting the color, depth and/or stencil aspects to be copied.
- **mipLevel** is the mipmap level to copy
- **baseArrayLayer** and **layerCount** are the starting layer and number of layers to copy.

Valid Usage

- **VUID-VkImageSubresourceLayers-aspectMask-parameter**
  
  *aspectMask** must be a valid combination of *VkImageAspectFlagBits* values

- **VUID-VkImageSubresourceLayers-aspectMask-requiredbitmask**
  
  1613
A more extensible version of the copy image command is defined below.

To copy data between image objects, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdCopyImage2(
    VkCommandBuffer commandBuffer,
    const VkCopyImageInfo2* pCopyImageInfo);
```

or the equivalent command

```c
// Provided by VK_KHR_copy_commands2
void vkCmdCopyImage2KHR(
    VkCommandBuffer commandBuffer,
    const VkCopyImageInfo2* pCopyImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pCopyImageInfo` is a pointer to a `VkCopyImageInfo2` structure describing the copy parameters.

This command is functionally identical to `vkCmdCopyImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

### Valid Usage

- VUID-vkCmdCopyImage2-commandBuffer-01825
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage must not be a protected image`

- VUID-vkCmdCopyImage2-commandBuffer-01826
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage must not be a protected image`

- VUID-vkCmdCopyImage2-commandBuffer-01827
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage must not be an unprotected image`

### Valid Usage (Implicit)

- VUID-vkCmdCopyImage2-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyImage2-pCopyImageInfo-parameter
  `pCopyImageInfo` must be a valid pointer to a valid `VkCopyImageInfo2` structure

- VUID-vkCmdCopyImage2-commandBuffer-recording

aspectMask must not be 0

"1614"
commandBuffer must be in the recording state

- VUID-vkCmdCopyImage2-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support transfer, graphics, or compute operations

- VUID-vkCmdCopyImage2-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyImage2-videocoding
  This command must only be called outside of a video coding scope

Host Synchronization

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>

The VkCopyImageInfo2 structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkImage srcImage;
    VkImageLayout srcImageLayout;
    VkImage dstImage;
    VkImageLayout dstImageLayout;
    uint32_t regionCount;
    const VkImageCopy2* pRegions;
} VkCopyImageInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkCopyImageInfo2 VkCopyImageInfo2KHR;
```
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **srcImage** is the source image.
• **srcImageLayout** is the current layout of the source image subresource.
• **dstImage** is the destination image.
• **dstImageLayout** is the current layout of the destination image subresource.
• **regionCount** is the number of regions to copy.
• **pRegions** is a pointer to an array of `VkImageCopy2` structures specifying the regions to copy.

### Valid Usage

- **VUID-VkCopyImageInfo2-pRegions-00124**
  The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory.

- **VUID-VkCopyImageInfo2-srcImage-01995**
  The format features of `srcImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`.

- **VUID-VkCopyImageInfo2-srcImageLayout-00128**
  `srcImageLayout` **must** specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-VkCopyImageInfo2-srcImageLayout-01917**
  `srcImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

- **VUID-VkCopyImageInfo2-dstImage-01996**
  The format features of `dstImage` **must** contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`.

- **VUID-VkCopyImageInfo2-dstImageLayout-00133**
  `dstImageLayout` **must** specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-VkCopyImageInfo2-dstImageLayout-01395**
  `dstImageLayout` **must** be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

- **VUID-VkCopyImageInfo2-srcImage-01548**
  If the `VkFormat` of each of `srcImage` and `dstImage` is not a multi-planar format, the `VkFormat` of each of `srcImage` and `dstImage` **must** be size-compatible.

- **VUID-VkCopyImageInfo2-None-01549**
  In a copy to or from a plane of a multi-planar image, the `VkFormat` of the image and plane **must** be compatible according to the description of compatible planes for the plane being...
• VUID-VkCopyImageInfo2-srcImage-09247
  If the VkFormat of each of srcImage and dstImage is a compressed image format, the formats must have the same texel block extent

• VUID-VkCopyImageInfo2-srcImage-00136
  The sample count of srcImage and dstImage must match

• VUID-VkCopyImageInfo2-srcOffset-01783
  The srcOffset and extent members of each element of pRegions must respect the image transfer granularity requirements of commandBuffer’s command pool’s queue family, as described in VkQueueFamilyProperties

• VUID-VkCopyImageInfo2-dstOffset-01784
  The dstOffset and extent members of each element of pRegions must respect the image transfer granularity requirements of commandBuffer’s command pool’s queue family, as described in VkQueueFamilyProperties

• VUID-VkCopyImageInfo2-srcImage-01551
  If neither srcImage nor dstImage has a multi-planar image format then for each element of pRegions, srcSubresource.aspectMask and dstSubresource.aspectMask must match

• VUID-VkCopyImageInfo2-srcImage-08713
  If srcImage has a multi-planar image format, then for each element of pRegions, srcSubresource.aspectMask must be a single valid multi-planar aspect mask bit

• VUID-VkCopyImageInfo2-dstImage-08714
  If dstImage has a multi-planar image format, then for each element of pRegions, dstSubresource.aspectMask must be a single valid multi-planar aspect mask bit

• VUID-VkCopyImageInfo2-srcImage-01556
  If srcImage has a multi-planar image format and the dstImage does not have a multi-planar image format, then for each element of pRegions, dstSubresource.aspectMask must be VK_IMAGE_ASPECT_COLOR_BIT

• VUID-VkCopyImageInfo2-dstImage-01557
  If dstImage has a multi-planar image format and the srcImage does not have a multi-planar image format, then for each element of pRegions, srcSubresource.aspectMask must be VK_IMAGE_ASPECT_COLOR_BIT

• VUID-VkCopyImageInfo2-apiVersion-07932
  If the VK_KHR_maintenance1 extension is not enabled, or VkPhysicalDeviceProperties::apiVersion is less than Vulkan 1.1, and either srcImage or dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer and dstSubresource.baseArrayLayer must both be 0, and srcSubresource.layerCount and dstSubresource.layerCount must both be 1

• VUID-VkCopyImageInfo2-srcImage-04443
  If srcImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer must be 0 and srcSubresource.layerCount must be 1

• VUID-VkCopyImageInfo2-dstImage-04444
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, dstSubresource.baseArrayLayer must be 0 and dstSubresource.layerCount must be 1
For each element of \( pRegions \), \( srcSubresource.aspectMask \) **must** specify aspects present in \( srcImage \).

For each element of \( pRegions \), \( dstSubresource.aspectMask \) **must** specify aspects present in \( dstImage \).

For each element of \( pRegions \), \( srcOffset.x \) and \((extent.width + srcOffset.x)\) **must** both be greater than or equal to 0 and less than or equal to the width of the specified \( srcSubresource \) of \( srcImage \).

For each element of \( pRegions \), \( srcOffset.y \) and \((extent.height + srcOffset.y)\) **must** both be greater than or equal to 0 and less than or equal to the height of the specified \( srcSubresource \) of \( srcImage \).

If \( srcImage \) is of type \( VK_IMAGE_TYPE_1D \), then for each element of \( pRegions \), \( srcOffset.y \) **must** be 0 and \( extent.height \) **must** be 1.

If \( srcImage \) is of type \( VK_IMAGE_TYPE_3D \), then for each element of \( pRegions \), \( srcOffset.z \) and \((extent.depth + srcOffset.z)\) **must** both be greater than or equal to 0 and less than or equal to the depth of the specified \( srcSubresource \) of \( srcImage \).

If \( srcImage \) is of type \( VK_IMAGE_TYPE_1D \), then for each element of \( pRegions \), \( srcOffset.z \) **must** be 0 and \( extent.depth \) **must** be 1.

If \( dstImage \) is of type \( VK_IMAGE_TYPE_1D \), then for each element of \( pRegions \), \( dstOffset.z \) **must** be 0 and \( extent.depth \) **must** be 1.

If \( dstImage \) is of type \( VK_IMAGE_TYPE_2D \), then for each element of \( pRegions \), \( dstOffset.z \) **must** be 0.

If \( dstImage \) is of type \( VK_IMAGE_TYPE_2D \), then for each element of \( pRegions \), \( dstOffset.z \) **must** be 0.

If the \( VK_KHR_maintenance1 \) extension is not enabled, and \( VkPhysicalDeviceProperties::apiVersion \) **must** be less than Vulkan 1.1, \( srcImage \) and \( dstImage \) **must** have the same \( VkImageType \).

If the \( VK_KHR_maintenance1 \) extension is not enabled, and \( VkPhysicalDeviceProperties::apiVersion \) **must** be less than Vulkan 1.1, \( srcImage \) or \( dstImage \) is of type \( VK_IMAGE_TYPE_2D \), then for each element of \( pRegions \), \( extent.depth \) **must** be 1.

If \( srcImage \) and \( dstImage \) have a different \( VkImageType \), and \( maintenance5 \) is not enabled,
one **must** be VK_IMAGE_TYPE_3D and the other **must** be VK_IMAGE_TYPE_2D

- **VID-VkCopyImageInfo2-srcImage-08793**
  If `srcImage` and `dstImage` have the same `VkImageType`, for each element of `pRegions`, if neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` members of `srcSubresource` or `dstSubresource` **must** match

- **VID-VkCopyImageInfo2-srcImage-08794**
  If `srcImage` and `dstImage` have the same `VkImageType`, and one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member **must** be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

- **VID-VkCopyImageInfo2-srcImage-01790**
  If `srcImage` and `dstImage` are both of type `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `extent.depth` **must** be 1

- **VID-VkCopyImageInfo2-srcImage-01791**
  If `srcImage` is of type `VK_IMAGE_TYPE_2D`, and `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `srcSubresource.layerCount`

- **VID-VkCopyImageInfo2-dstImage-01792**
  If `dstImage` is of type `VK_IMAGE_TYPE_2D`, and `srcImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions`, `extent.depth` **must** equal `dstSubresource.layerCount`

- **VID-VkCopyImageInfo2-dstOffset-00150**
  For each element of `pRegions`, `dstOffset.x` and `(extent.width + dstOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `dstSubresource` of `dstImage`

- **VID-VkCopyImageInfo2-dstOffset-00151**
  For each element of `pRegions`, `dstOffset.y` and `(extent.height + dstOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `dstSubresource` of `dstImage`

- **VID-VkCopyImageInfo2-pRegions-07278**
  For each element of `pRegions`, `srcOffset.x` **must** be a multiple of the texel block extent width of the `VkFormat` of `srcImage`

- **VID-VkCopyImageInfo2-pRegions-07279**
  For each element of `pRegions`, `srcOffset.y` **must** be a multiple of the texel block extent height of the `VkFormat` of `srcImage`

- **VID-VkCopyImageInfo2-pRegions-07280**
  For each element of `pRegions`, `srcOffset.z` **must** be a multiple of the texel block extent
depth of the VkFormat of srcImage

- VUID-VkCopyImageInfo2-pRegions-07281
  For each element of pRegions, dstOffset.x must be a multiple of the texel block extent width of the VkFormat of dstImage

- VUID-VkCopyImageInfo2-pRegions-07282
  For each element of pRegions, dstOffset.y must be a multiple of the texel block extent height of the VkFormat of dstImage

- VUID-VkCopyImageInfo2-pRegions-07283
  For each element of pRegions, dstOffset.z must be a multiple of the texel block extent depth of the VkFormat of dstImage

- VUID-VkCopyImageInfo2-srcImage-01728
  For each element of pRegions, if the sum of srcOffset.x and extent.width does not equal the width of the subresource specified by srcSubresource, extent.width must be a multiple of the texel block extent width of the VkFormat of srcImage

- VUID-VkCopyImageInfo2-srcImage-01729
  For each element of pRegions, if the sum of srcOffset.y and extent.height does not equal the height of the subresource specified by srcSubresource, extent.height must be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-VkCopyImageInfo2-srcImage-01730
  For each element of pRegions, if the sum of srcOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth must be a multiple of the texel block extent depth of the VkFormat of srcImage

- VUID-VkCopyImageInfo2-dstImage-01732
  For each element of pRegions, if the sum of dstOffset.x and extent.width does not equal the width of the subresource specified by dstSubresource, extent.width must be a multiple of the texel block extent width of the VkFormat of dstImage

- VUID-VkCopyImageInfo2-dstImage-01733
  For each element of pRegions, if the sum of dstOffset.y and extent.height does not equal the height of the subresource specified by dstSubresource, extent.height must be a multiple of the texel block extent height of the VkFormat of dstImage

- VUID-VkCopyImageInfo2-dstImage-01734
  For each element of pRegions, if the sum of dstOffset.z and extent.depth does not equal the depth of the subresource specified by dstSubresource, extent.depth must be a multiple of the texel block extent depth of the VkFormat of dstImage

- VUID-VkCopyImageInfo2-aspect-06662
  If the aspect member of any element of pRegions includes any flag other than VK_IMAGE_ASPECT_STENCIL_BIT or srcImage was not created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_SRC_BIT must have been included in the VkImageCreateInfo::usage used to create srcImage

- VUID-VkCopyImageInfo2-aspect-06663
  If the aspect member of any element of pRegions includes any flag other than VK_IMAGE_ASPECT_STENCIL_BIT or dstImage was not created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_DST_BIT must have been included in the VkImageCreateInfo...
::usage used to create dstImage

- VUID-VkCopyImageInfo2-aspect-06664
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and srcImage was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_SRC_BIT must have been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create srcImage

- VUID-VkCopyImageInfo2-aspect-06665
  If the aspect member of any element of pRegions includes VK_IMAGE_ASPECT_STENCIL_BIT, and dstImage was created with separate stencil usage, VK_IMAGE_USAGE_TRANSFER_DST_BIT must have been included in the VkImageStencilUsageCreateInfo::stencilUsage used to create dstImage

- VUID-VkCopyImageInfo2-srcImage-07966
  If srcImage is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkCopyImageInfo2-srcSubresource-07967
  The srcSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageInfo2-srcSubresource-07968
  If srcSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, srcSubresource.baseArrayLayer + srcSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageInfo2-srcImage-07969
  srcImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-VkCopyImageInfo2-dstImage-07966
  If dstImage is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkCopyImageInfo2-dstSubresource-07967
  The dstSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when dstImage was created

- VUID-VkCopyImageInfo2-dstSubresource-07968
  If dstSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, dstSubresource.baseArrayLayer + dstSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created

- VUID-VkCopyImageInfo2-dstImage-07969
  dstImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT
Valid Usage (Implicit)

- VUID-VkCopyImageInfo2-sType-sType
  **sType** must be VK_STRUCTURE_TYPE_COPY_IMAGE_INFO_2

- VUID-VkCopyImageInfo2-pNext-pNext
  **pNext** must be NULL

- VUID-VkCopyImageInfo2-srcImage-parameter
  **srcImage** must be a valid VkImage handle

- VUID-VkCopyImageInfo2-srcImageLayout-parameter
  **srcImageLayout** must be a valid VkImageLayout value

- VUID-VkCopyImageInfo2-dstImage-parameter
  **dstImage** must be a valid VkImage handle

- VUID-VkCopyImageInfo2-dstImageLayout-parameter
  **dstImageLayout** must be a valid VkImageLayout value

- VUID-VkCopyImageInfo2-pRegions-parameter
  **pRegions** must be a valid pointer to an array of **regionCount** valid VkImageCopy2 structures

- VUID-VkCopyImageInfo2-regionCount-arraylength
  **regionCount** must be greater than 0

- VUID-VkCopyImageInfo2-commonparent
  Both of **dstImage**, and **srcImage** must have been created, allocated, or retrieved from the same VkDevice

The **VkImageCopy2** structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkImageCopy2 {
    VkStructureType sType;
    const void* pNext;
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D dstOffset;
    VkExtent3D extent;
} VkImageCopy2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkImageCopy2 VkImageCopy2KHR;
```

- **sType** is a VkStructureType value identifying this structure.
• \texttt{pNext} is NULL or a pointer to a structure extending this structure.

• \texttt{srcSubresource} and \texttt{dstSubresource} are \texttt{VkImageSubresourceLayers} structures specifying the image subresources of the images used for the source and destination image data, respectively.

• \texttt{srcOffset} and \texttt{dstOffset} select the initial \(x\), \(y\), and \(z\) offsets in texels of the sub-regions of the source and destination image data.

• \texttt{extent} is the size in texels of the image to copy in \texttt{width}, \texttt{height} and \texttt{depth}.

### Valid Usage

- \textbf{VUID-VkImageCopy2-apiVersion-07940}
  - If the \texttt{VK_KHR_sampler_ycbcr_conversion} extension is not enabled, and \texttt{VkPhysicalDeviceProperties::apiVersion} is less than Vulkan 1.1, the \texttt{aspectMask} member of \texttt{srcSubresource} and \texttt{dstSubresource} must match.

- \textbf{VUID-VkImageCopy2-apiVersion-07941}
  - If the \texttt{VK_KHR_maintenance1} extension is not enabled, and \texttt{VkPhysicalDeviceProperties::apiVersion} is less than Vulkan 1.1, the \texttt{layerCount} member of \texttt{srcSubresource} and \texttt{dstSubresource} must match.

- \textbf{VUID-VkImageCopy2-extent-06668}
  - \texttt{extent.width} must not be 0

- \textbf{VUID-VkImageCopy2-extent-06669}
  - \texttt{extent.height} must not be 0

- \textbf{VUID-VkImageCopy2-extent-06670}
  - \texttt{extent.depth} must not be 0

### Valid Usage (Implicit)

- \textbf{VUID-VkImageCopy2-sType-sType}
  - \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_IMAGE_COPY_2}

- \textbf{VUID-VkImageCopy2-pNext-pNext}
  - \texttt{pNext} must be NULL

- \textbf{VUID-VkImageCopy2-srcSubresource-parameter}
  - \texttt{srcSubresource} must be a valid \texttt{VkImageSubresourceLayers} structure

- \textbf{VUID-VkImageCopy2-dstSubresource-parameter}
  - \texttt{dstSubresource} must be a valid \texttt{VkImageSubresourceLayers} structure

### 20.3. Copying Data Between Buffers and Images

Data can be copied between buffers and images, enabling applications to load and store data between images and user defined offsets in buffer memory.

When copying between a buffer and an image, whole texel blocks are always copied; each texel block in the specified extent in the image to be copied will be written to a region in the buffer,
specified according to the position of the texel block, and the texel block extent and size of the format being copied.

For a set of coordinates \((x, y, z, \text{layer})\), where:

\[
x \text{ is in the range } [\text{imageOffset.x} / \text{blockWidth}, \lceil(\text{imageOffset.x} + \text{imageExtent.width}) / \text{blockWidth}\rceil),
\]

\[
y \text{ is in the range } [\text{imageOffset.y} / \text{blockHeight}, \lceil(\text{imageOffset.y} + \text{imageExtent.height}) / \text{blockHeight}\rceil),
\]

\[
z \text{ is in the range } [\text{imageOffset.z} / \text{blockDepth}, \lceil(\text{imageOffset.z} + \text{imageExtent.depth}) / \text{blockDepth}\rceil),
\]

\[
\text{layer is in the range } [\text{imageSubresource.baseArrayLayer}, \text{imageSubresource.baseArrayLayer} + \text{imageSubresource.layerCount}),
\]

and where blockWidth, blockHeight, and blockDepth are the dimensions of the texel block extent of the image’s format.

For each \((x, y, z, \text{layer})\) coordinate, texels in the image layer selected by \text{layer} are accessed in the following ranges:

\[
[x \times \text{blockWidth}, \max((x \times \text{blockWidth}) + \text{blockWidth}, \text{imageWidth})]
\]

\[
[y \times \text{blockHeight}, \max((y \times \text{blockHeight}) + \text{blockHeight}, \text{imageHeight})]
\]

\[
[z \times \text{blockDepth}, \max((z \times \text{blockDepth}) + \text{blockDepth}, \text{imageDepth})]
\]

where imageWidth, imageHeight, and imageDepth are the dimensions of the image subresource.

For each \((x, y, z, \text{layer})\) coordinate, bytes in the buffer are accessed at offsets in the range \([\text{texelOffset}, \text{texelOffset} + \text{blockSize})\), where:

\[
\text{texelOffset} = \text{bufferOffset} + (x \times \text{blockSize}) + (y \times \text{rowExtent}) + (z \times \text{sliceExtent}) + (\text{layer} \times \text{layerExtent})
\]

\[
\text{blockSize is the size of the block in bytes for the format}
\]

\[
\text{rowExtent} = \max(\text{bufferRowLength}, \lceil\text{imageExtent.width} / \text{blockWidth}\rceil \times \text{blockSize})
\]
sliceExtent = max(bufferImageHeight, imageExtent.height \times rowExtent)

layerExtent = imageExtent.depth \times sliceExtent

If a rotation is specified by VkCopyCommandTransformInfoQCOM, the 2D region of the image being addressed is rotated around the offset, modifying the range of x and y coordinates for the image address according to the specified VkSurfaceTransformFlagBitsKHR:

- If VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR is specified, no rotation is performed:

  \( x' \) is in the same range as \( x \)

  \( y' \) is in the same range as \( y \)

  \( \text{blockWidth}' = \text{blockWidth} \)

  \( \text{blockHeight}' = \text{blockHeight} \)

  \( \text{imageWidth}' = \text{imageWidth} \)

  \( \text{imageHeight}' = \text{imageHeight} \)

- If VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR is specified

  \( x' \) is in the range \([\lceil (imageOffset.x - imageExtent.height) / \text{blockHeight} \rceil, \text{imageOffset.x} - image/\text{blockHeight})\)

  \( y' \) is in the range \([imageOffset.y / \text{blockWidth}, \lceil (imageOffset.y + imageExtent.width) / \text{blockWidth} \rceil)\)

  \( \text{blockWidth}' = \text{blockHeight} \)

  \( \text{blockHeight}' = \text{blockWidth} \)

  \( \text{imageWidth}' = \text{imageHeight} \)
imageHeight' = imageWidth

• If VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR is specified:

  x' is in the range ⌈(imageOffset.x - imageExtent.width) / blockWidth⌉, imageOffset.x / blockWidth),

  y' is in the range ⌈(imageOffset.x + imageExtent.height) / blockHeight⌉, imageOffset.x / blockHeight),

  blockWidth' = blockWidth

  blockHeight' = blockHeight

  imageWidth' = imageWidth

  imageHeight' = imageHeight

• If VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR is specified:

  x is in the range [imageOffset.x / blockHeight, ⌈(imageOffset.x + imageExtent.height) / blockHeight⌉)

  y is in the range ⌈(imageOffset.y - imageExtent.width) / blockWidth⌉, imageOffset.y / blockWidth).

  blockWidth' = blockHeight

  blockHeight' = blockWidth

  imageWidth' = imageHeight

  imageHeight' = imageWidth

When rotation is performed, for each (x,y,z,layer) coordinate, texels in the image layer selected by layer are instead accessed in the following ranges:
Buffer addressing calculations are unaffected by this rotation.

When copying between a buffer and the depth or stencil aspect of an image, data in the buffer is assumed to be laid out as separate planes rather than interleaved. Addressing calculations are thus performed for a different format than the base image, according to the aspect, as described in the following table:

<table>
<thead>
<tr>
<th>Base Format</th>
<th>Depth Aspect Format</th>
<th>Stencil Aspect Format</th>
</tr>
</thead>
<tbody>
<tr>
<td>VK_FORMAT_D16_UNORM</td>
<td>VK_FORMAT_D16_UNORM</td>
<td>-</td>
</tr>
<tr>
<td>VK_FORMAT_X8_D24_UNORM_PACK32</td>
<td>VK_FORMAT_X8_D24_UNORM_PACK32</td>
<td>-</td>
</tr>
<tr>
<td>VK_FORMAT_D32_SFLOAT</td>
<td>VK_FORMAT_D32_SFLOAT</td>
<td>-</td>
</tr>
<tr>
<td>VK_FORMAT_S8_UINT</td>
<td>-</td>
<td>VK_FORMAT_S8_UINT</td>
</tr>
<tr>
<td>VK_FORMAT_D16_UNORM_S8_UINT</td>
<td>VK_FORMAT_D16_UNORM</td>
<td>VK_FORMAT_S8_UINT</td>
</tr>
<tr>
<td>VK_FORMAT_D24_UNORM_S8_UINT</td>
<td>VK_FORMAT_X8_D24_UNORM_PACK32</td>
<td>VK_FORMAT_S8_UINT</td>
</tr>
<tr>
<td>VK_FORMAT_D32_SFLOAT_S8_UINT</td>
<td>VK_FORMAT_D32_SFLOAT</td>
<td>VK_FORMAT_S8_UINT</td>
</tr>
</tbody>
</table>

When copying between a buffer and any plane of a multi-planar image, addressing calculations are performed using the compatible format for that plane, rather than the format of the multi-planar image.

Each texel block is copied from one resource to the other according to the above addressing equations.

To copy data from a buffer object to an image object, call:

```c
void vkCmdCopyBufferToImage(
    VkCommandBuffer commandBuffer,
    VkBuffer srcBuffer,
    VkImage dstImage,
    VkImageLayout dstImageLayout,
    uint32_t regionCount,
    const VkBufferImageCopy* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
• srcBuffer is the source buffer.
• dstImage is the destination image.
• dstImageLayout is the layout of the destination image subresources for the copy.
• regionCount is the number of regions to copy.
• pRegions is a pointer to an array of VkBufferImageCopy structures specifying the regions to copy.

Each source region specified by pRegions is copied from the source buffer to the destination region of the destination image according to the addressing calculations for each resource. If any of the specified regions in srcBuffer overlaps in memory with any of the specified regions in dstImage, values read from those overlapping regions are undefined. If any region accesses a depth aspect in dstImage and the VK_EXT_depth_range_unrestricted extension is not enabled, values copied from srcBuffer outside of the range [0,1] will be written as undefined values to the destination image.

Copy regions for the image must be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents must match the edge of the image.

Valid Usage

• VUID-vkCmdCopyBufferToImage-dstImage-07966
  If dstImage is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single VkDeviceMemory object

• VUID-vkCmdCopyBufferToImage-imageSubresource-07967
  The imageSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when dstImage was created

• VUID-vkCmdCopyBufferToImage-imageSubresource-07968
  If imageSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, imageSubresource.baseArrayLayer + imageSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created

• VUID-vkCmdCopyBufferToImage-dstImage-07969
  dstImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

• VUID-vkCmdCopyBufferToImage-imageSubresource-07970
  The image region specified by each element of pRegions must be contained within the specified imageSubresource of dstImage

• VUID-vkCmdCopyBufferToImage-imageSubresource-07971
  For each element of pRegions, imageOffset.x and (imageExtent.width + imageOffset.x) must both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of dstImage

• VUID-vkCmdCopyBufferToImage-imageSubresource-07972
  For each element of pRegions, imageOffset.y and (imageExtent.height + imageOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of dstImage
• VUID-vkCmdCopyBufferToImage-dstImage-07973
  dstImage must have a sample count equal to VK_SAMPLE_COUNT_1_BIT

• VUID-vkCmdCopyBufferToImage-commandBuffer-01828
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, srcBuffer must not be a protected buffer

• VUID-vkCmdCopyBufferToImage-commandBuffer-01829
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, dstImage must not be a protected image

• VUID-vkCmdCopyBufferToImage-commandBuffer-01830
  If commandBuffer is a protected command buffer and protectedNoFault is not supported, dstImage must not be an unprotected image

• VUID-vkCmdCopyBufferToImage-commandBuffer-07737
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT, the bufferOffset member of any element of pRegions must be a multiple of 4

• VUID-vkCmdCopyBufferToImage-imageOffset-07738
  The imageOffset and imageExtent members of each element of pRegions must respect the image transfer granularity requirements of commandBuffer’s command pool’s queue family, as described in VkQueueFamilyProperties

• VUID-vkCmdCopyBufferToImage-commandBuffer-07739
  If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT, for each element of pRegions, the aspectMask member of imageSubresource must not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT

• VUID-vkCmdCopyBufferToImage-pRegions-00171
  srcBuffer must be large enough to contain all buffer locations that are accessed according to Buffer and Image Addressing, for each element of pRegions

• VUID-vkCmdCopyBufferToImage-pRegions-00173
  The union of all source regions, and the union of all destination regions, specified by the elements of pRegions, must not overlap in memory

• VUID-vkCmdCopyBufferToImage-srcBuffer-00174
  srcBuffer must have been created with VK_BUFFER_USAGE_TRANSFER_SRC_BIT usage flag

• VUID-vkCmdCopyBufferToImage-dstImage-00177
  dstImage must have been created with VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag

• VUID-vkCmdCopyBufferToImage-dstImageLayout-00180
  dstImageLayout must specify the layout of the image subresources of dstImage specified in pRegions at the time this command is executed on a VkDevice
• **VUID-vkCmdCopyBufferToImage-dstImageLayout-01396**
  
  `dstImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

• **VUID-vkCmdCopyBufferToImage-pRegions-07931**
  
  If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` must be in the range [0,1]

• **VUID-vkCmdCopyBufferToImage-dstImage-07979**
  
  If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` must be 0 and `imageExtent.height` must be 1

• **VUID-vkCmdCopyBufferToImage-imageOffset-09104**
  
  For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` must both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-07980**
  
  If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` must be 0 and `imageExtent.depth` must be 1

• **VUID-vkCmdCopyBufferToImage-dstImage-07274**
  
  For each element of `pRegions`, `imageOffset.x` must be a multiple of the texel block extent width of the `VkFormat` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-07275**
  
  For each element of `pRegions`, `imageOffset.y` must be a multiple of the texel block extent height of the `VkFormat` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-07276**
  
  For each element of `pRegions`, `imageOffset.z` must be a multiple of the texel block extent depth of the `VkFormat` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-00207**
  
  For each element of `pRegions`, if the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` must be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-00208**
  
  For each element of `pRegions`, if the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` must be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-00209**
  
  For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` must be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-01396**
  
  `imageSubresource.aspectMask` must specify aspects present in `dstImage`

• **VUID-vkCmdCopyBufferToImage-dstImage-07981**
  
  If `dstImage` has a multi-planar image format, then for each element of `pRegions`, `imageSubresource.aspectMask` must be a single valid multi-planar aspect mask bit
• VUID-vkCmdCopyBufferToImage-dstImage-07983
If \texttt{dstImage} is of type \texttt{VK_IMAGE_TYPE_3D}, for each element of \texttt{pRegions}, \texttt{imageSubresource.baseArrayLayer} must be 0 and \texttt{imageSubresource.layerCount} must be 1.

• VUID-vkCmdCopyBufferToImage-bufferRowLength-09106
For each element of \texttt{pRegions}, \texttt{bufferRowLength} must be a multiple of the texel block extent width of the \texttt{VkFormat} of \texttt{dstImage}.

• VUID-vkCmdCopyBufferToImage-bufferImageHeight-09107
For each element of \texttt{pRegions}, \texttt{bufferImageHeight} must be a multiple of the texel block extent height of the \texttt{VkFormat} of \texttt{dstImage}.

• VUID-vkCmdCopyBufferToImage-bufferRowLength-09108
For each element of \texttt{pRegions}, \texttt{bufferRowLength} divided by the texel block extent width and then multiplied by the texel block size of \texttt{dstImage} must be less than or equal to $2^{31}-1$.

• VUID-vkCmdCopyBufferToImage-dstImage-07975
If \texttt{dstImage} does not have either a depth/stencil format or a multi-planar format, then for each element of \texttt{pRegions}, \texttt{bufferOffset} must be a multiple of the texel block size.

• VUID-vkCmdCopyBufferToImage-dstImage-07976
If \texttt{dstImage} has a multi-planar format, then for each element of \texttt{pRegions}, \texttt{bufferOffset} must be a multiple of the element size of the compatible format for the format and the \texttt{aspectMask} of the \texttt{imageSubresource} as defined in Compatible Formats of Planes of Multi-Planar Formats.

• VUID-vkCmdCopyBufferToImage-dstImage-07978
If \texttt{dstImage} has a depth/stencil format, the \texttt{bufferOffset} member of any element of \texttt{pRegions} must be a multiple of 4.

### Valid Usage (Implicit)

• VUID-vkCmdCopyBufferToImage-commandBuffer-parameter
\texttt{commandBuffer} must be a valid \texttt{VkCommandBuffer} handle.

• VUID-vkCmdCopyBufferToImage-srcBuffer-parameter
\texttt{srcBuffer} must be a valid \texttt{VkBuffer} handle.

• VUID-vkCmdCopyBufferToImage-dstImage-parameter
\texttt{dstImage} must be a valid \texttt{VkImage} handle.

• VUID-vkCmdCopyBufferToImage-dstImageLayout-parameter
\texttt{dstImageLayout} must be a valid \texttt{VkImageLayout} value.

• VUID-vkCmdCopyBufferToImage-pRegions-parameter
\texttt{pRegions} must be a valid pointer to an array of \texttt{regionCount} valid \texttt{VkBufferImageCopy} structures.

• VUID-vkCmdCopyBufferToImage-commandBuffer-recording
\texttt{commandBuffer} must be in the \texttt{recording state}.

• VUID-vkCmdCopyBufferToImage-commandBuffer-cmdpool
The \texttt{VkCommandPool} that \texttt{commandBuffer} was allocated from must support transfer, graphics,
or compute operations

- VUID-vkCmdCopyBufferToImage-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyBufferToImage-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdCopyBufferToImage-regionCount-arraylength
  regionCount must be greater than 0

- VUID-vkCmdCopyBufferToImage-commonparent
  Each of commandBuffer, dstImage, and srcBuffer must have been created, allocated, or retrieved from the same VkDevice

## Host Synchronization

- Host access to commandBuffer must be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

## Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>

</tbody>
</table>

To copy data from an image object to a buffer object, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdCopyImageToBuffer(
    VkCommandBuffer commandBuffer,
    VkImage srcImage,
    VkImageLayout srcImageLayout,
    VkBuffer dstBuffer,
    uint32_t regionCount,
    const VkBufferImageCopy* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstBuffer` is the destination buffer.
• `regionCount` is the number of regions to copy.

• `pRegions` is a pointer to an array of `VkBufferImageCopy` structures specifying the regions to copy.

Each source region specified by `pRegions` is copied from the source image to the destination region of the destination buffer according to the addressing calculations for each resource. If any of the specified regions in `srcImage` overlaps in memory with any of the specified regions in `dstBuffer`, values read from those overlapping regions are undefined.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

---

**Valid Usage**

- **VUID-vkCmdCopyImageToBuffer-srcImage-07966**
  If `srcImage` is non-sparse then the image or the specified disjoint plane **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- **VUID-vkCmdCopyImageToBuffer-imageSubresource-07967**
  The `imageSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created

- **VUID-vkCmdCopyImageToBuffer-imageSubresource-07968**
  If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer + imageSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the arrayLayers specified in `VkImageCreateInfo` when `srcImage` was created

- **VUID-vkCmdCopyImageToBuffer-srcImage-07969**
  `srcImage` **must** not have been created with flags containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- **VUID-vkCmdCopyImageToBuffer-imageSubresource-07970**
  The image region specified by each element of `pRegions` **must** be contained within the specified `imageSubresource` of `srcImage`

- **VUID-vkCmdCopyImageToBuffer-imageSubresource-07971**
  For each element of `pRegions`, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` **must** both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `srcImage`

- **VUID-vkCmdCopyImageToBuffer-imageSubresource-07972**
  For each element of `pRegions`, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` **must** both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `srcImage`

- **VUID-vkCmdCopyImageToBuffer-srcImage-07973**
  `srcImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`

- **VUID-vkCmdCopyImageToBuffer-commandBuffer-01831**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported,
**srcImage must** not be a protected image

- **VUID-vkCmdCopyImageToBuffer-commandBuffer-01832**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer must` not be a protected buffer

- **VUID-vkCmdCopyImageToBuffer-commandBuffer-01833**
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer must` not be an unprotected buffer

- **VUID-vkCmdCopyImageToBuffer-commandBuffer-07746**
  If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pRegions must` be a multiple of 4

- **VUID-vkCmdCopyImageToBuffer-imageOffset-07747**
  The `imageOffset` and `imageExtent` members of each element of `pRegions must` respect the image transfer granularity requirements of `commandBuffer`’s command pool’s queue family, as described in `VkQueueFamilyProperties`

- **VUID-vkCmdCopyImageToBuffer-pRegions-00183**
  `dstBuffer must` be large enough to contain all buffer locations that are accessed according to `Buffer and Image Addressing`, for each element of `pRegions`

- **VUID-vkCmdCopyImageToBuffer-pRegions-00184**
  The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, **must** not overlap in memory

- **VUID-vkCmdCopyImageToBuffer-srcImage-00186**
  **srcImage must** have been created with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag

- **VUID-vkCmdCopyImageToBuffer-srcImage-01998**
  The format features of `srcImage must` contain `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT`

- **VUID-vkCmdCopyImageToBuffer-dstBuffer-00191**
  `dstBuffer must` have been created with `VK_BUFFER_USAGE_TRANSFER_DST_BIT` usage flag

- **VUID-vkCmdCopyImageToBuffer-dstBuffer-00192**
  If `dstBuffer` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object

- **VUID-vkCmdCopyImageToBuffer-srcImageLayout-00189**
  `srcImageLayout must` specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- **VUID-vkCmdCopyImageToBuffer-srcImageLayout-01397**
  `srcImageLayout must` be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- **VUID-vkCmdCopyImageToBuffer-srcImage-07979**
  If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` **must** be 0 and `imageExtent.height` **must** be 1

- **VUID-vkCmdCopyImageToBuffer-imageOffset-09104**
  For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` **must**
both be greater than or equal to 0 and less than or equal to the depth of the specified imageSubresource of srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, imageOffset.z must be 0 and imageExtent.depth must be 1

- VUID-vkCmdCopyImageToBuffer-srcImage-07274
  For each element of pRegions, imageOffset.x must be a multiple of the texel block extent width of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-07275
  For each element of pRegions, imageOffset.y must be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-07276
  For each element of pRegions, imageOffset.z must be a multiple of the texel block extent depth of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-00207
  For each element of pRegions, if the sum of imageOffset.x and extent.width does not equal the width of the subresource specified by srcSubresource, extent.width must be a multiple of the texel block extent width of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-00208
  For each element of pRegions, if the sum of imageOffset.y and extent.height does not equal the height of the subresource specified by srcSubresource, extent.height must be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth must be a multiple of the texel block extent depth of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-imageSubresource-09105
  For each element of pRegions, imageSubresource.aspectMask must specify aspects present in srcImage

- VUID-vkCmdCopyImageToBuffer-srcImage-07981
  If srcImage has a multi-planar image format, then for each element of pRegions, imageSubresource.aspectMask must be a single valid multi-planar aspect mask bit

- VUID-vkCmdCopyImageToBuffer-srcImage-07983
  If srcImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, imageSubresource.baseArrayLayer must be 0 and imageSubresource.layerCount must be 1

- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09106
  For each element of pRegions, bufferRowLength must be a multiple of the texel block extent width of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-bufferImageHeight-09107
  For each element of pRegions, bufferImageHeight must be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-vkCmdCopyImageToBuffer-bufferRowLength-09108
For each element of \( pRegions \), bufferRowLength divided by the texel block extent width and then multiplied by the texel block size of srcImage must be less than or equal to \( 2^{31} - 1 \).

- VUID-vkCmdCopyImageToBuffer-srcImage-07975
  If srcImage does not have either a depth/stencil format or a multi-planar format, then for each element of pRegions, bufferOffset must be a multiple of the texel block size.

- VUID-vkCmdCopyImageToBuffer-srcImage-07976
  If srcImage has a multi-planar format, then for each element of pRegions, bufferOffset must be a multiple of the element size of the compatible format for the format and the aspectMask of the imageSubresource as defined in Compatible Formats of Planes of Multi-Planar Formats.

- VUID-vkCmdCopyImageToBuffer-srcImage-07978
  If srcImage has a depth/stencil format, the bufferOffset member of any element of pRegions must be a multiple of 4.

### Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle.

- VUID-vkCmdCopyImageToBuffer-srcImage-parameter
  srcImage must be a valid VkImage handle.

- VUID-vkCmdCopyImageToBuffer-srcImageLayout-parameter
  srcImageLayout must be a valid VkImageLayout value.

- VUID-vkCmdCopyImageToBuffer-dstBuffer-parameter
  dstBuffer must be a valid VkBuffer handle.

- VUID-vkCmdCopyImageToBuffer-pRegions-parameter
  pRegions must be a valid pointer to an array of regionCount valid VkBufferImageCopy structures.

- VUID-vkCmdCopyImageToBuffer-commandBuffer-recording
  commandBuffer must be in the recording state.

- VUID-vkCmdCopyImageToBuffer-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support transfer, graphics, or compute operations.

- VUID-vkCmdCopyImageToBuffer-renderpass
  This command must only be called outside of a render pass instance.

- VUID-vkCmdCopyImageToBuffer-videocoding
  This command must only be called outside of a video coding scope.

- VUID-vkCmdCopyImageToBuffer-regionCount-arraylength
  regionCount must be greater than 0.

- VUID-vkCmdCopyImageToBuffer-commonparent
  Each of commandBuffer, dstBuffer, and srcImage must have been created, allocated, or retrieved from the same VkDevice.
Host Synchronization

- Host access to `commandBuffer` must be externally synchronized.
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.

Command Properties

For both `vkCmdCopyBufferToImage` and `vkCmdCopyImageToBuffer`, each element of `pRegions` is a structure defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkBufferImageCopy {
    VkDeviceSize bufferOffset;
    uint32_t bufferRowLength;
    uint32_t bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D imageOffset;
    VkExtent3D imageExtent;
} VkBufferImageCopy;
```

- `bufferOffset` is the offset in bytes from the start of the buffer object where the image data is copied from or to.
- `bufferRowLength` and `bufferImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a `VkImageSubresourceLayers` used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial x, y, z offsets in texels of the sub-region of the source or destination image data.
- `imageExtent` is the size in texels of the image to copy in width, height and depth.

Valid Usage

- VUID-VkBufferImageCopy-bufferRowLength-09101
bufferRowLength must be 0, or greater than or equal to the width member of imageExtent
- VUID-VkBufferImageCopy-bufferImageHeight-09102
  bufferImageHeight must be 0, or greater than or equal to the height member of imageExtent
- VUID-VkBufferImageCopy-aspectMask-09103
  The aspectMask member of imageSubresource must only have a single bit set
- VUID-VkBufferImageCopy-imageExtent-06659
  imageExtent.width must not be 0
- VUID-VkBufferImageCopy-imageExtent-06660
  imageExtent.height must not be 0
- VUID-VkBufferImageCopy-imageExtent-06661
  imageExtent.depth must not be 0

Valid Usage (Implicit)
- VUID-VkBufferImageCopy-imageSubresource-parameter
  imageSubresource must be a valid VkImageSubresourceLayers structure

More extensible versions of the commands to copy between buffers and images are defined below.

To copy data from a buffer object to an image object, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdCopyBufferToImage2(
  VkCommandBuffer commandBuffer,
  const VkCopyBufferToImageInfo2* pCopyBufferToImageInfo);
```

or the equivalent command

```c
// Provided by VK_KHR_copy_commands2
void vkCmdCopyBufferToImage2KHR(
  VkCommandBuffer commandBuffer,
  const VkCopyBufferToImageInfo2* pCopyBufferToImageInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- pCopyBufferToImageInfo is a pointer to a VkCopyBufferToImageInfo2 structure describing the copy parameters.

This command is functionally identical to vkCmdCopyBufferToImage, but includes extensible substructures that include sType and pNext parameters, allowing them to be more easily extended.

Valid Usage
- VUID-vkCmdCopyBufferToImage2-commandBuffer-01828
If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcBuffer` must not be a protected buffer

- VUID-vkCmdCopyBufferToImage2-commandBuffer-01829
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` must not be a protected image

- VUID-vkCmdCopyBufferToImage2-commandBuffer-01830
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` must not be an unprotected image

- VUID-vkCmdCopyBufferToImage2-commandBuffer-07737
  If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pCopyBufferToImageInfo->pRegions` must be a multiple of 4

- VUID-vkCmdCopyBufferToImage2-imageOffset-07738
  The `imageOffset` and `imageExtent` members of each element of `pCopyBufferToImageInfo->pRegions` must respect the image transfer granularity requirements of `commandBuffer`’s command pool’s queue family, as described in `VkQueueFamilyProperties`

- VUID-vkCmdCopyBufferToImage2-commandBuffer-07739
  If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT`, for each element of `pCopyBufferToImageInfo->pRegions`, the `aspectMask` member of `imageSubresource` must not be `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT`

---

**Valid Usage (Implicit)**

- VUID-vkCmdCopyBufferToImage2-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyBufferToImage2-pCopyBufferToImageInfo-parameter
  `pCopyBufferToImageInfo` must be a valid pointer to a valid `VkCopyBufferToImageInfo2` structure

- VUID-vkCmdCopyBufferToImage2-commandBuffer-recording
  `commandBuffer` must be in the recording state

- VUID-vkCmdCopyBufferToImage2-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support transfer, graphics, or compute operations

- VUID-vkCmdCopyBufferToImage2-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyBufferToImage2-videocoding
  This command must only be called outside of a video coding scope

---

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized
• Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

The VkCopyBufferToImageInfo2 structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkCopyBufferToImageInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkBuffer srcBuffer;
    VkImage dstImage;
    VkImageLayout dstImageLayout;
    uint32_t regionCount;
    const VkBufferImageCopy2* pRegions;
} VkCopyBufferToImageInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkCopyBufferToImageInfo2 VkCopyBufferToImageInfo2KHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `srcBuffer` is the source buffer.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of VkBufferImageCopy2 structures specifying the regions to copy.

### Valid Usage

- VUID-VkCopyBufferToImageInfo2-pRegions-04565
  The image region specified by each element of `pRegions` that does not contain
**VkCopyCommandTransformInfoQCOM** in its `pNext` chain must be contained within the specified `imageSubresource` of `dstImage`

- **VUID-VkCopyBufferToImageInfo2KHR-pRegions-04554**
  If the image region specified by each element of `pRegions` contains **VkCopyCommandTransformInfoQCOM** in its `pNext` chain, the rotated destination region as described in [copies-buffers-images-rotation-addressing] must be contained within `dstImage`

- **VUID-VkCopyBufferToImageInfo2KHR-pRegions-04555**
  If any element of `pRegions` contains **VkCopyCommandTransformInfoQCOM** in its `pNext` chain, then `dstImage` must have a 1x1x1 texel block extent

- **VUID-VkCopyBufferToImageInfo2KHR-pRegions-06203**
  If any element of `pRegions` contains **VkCopyCommandTransformInfoQCOM** in its `pNext` chain, then `dstImage` must be of type `VK_IMAGE_TYPE_2D`

- **VUID-VkCopyBufferToImageInfo2KHR-pRegions-06204**
  If any element of `pRegions` contains **VkCopyCommandTransformInfoQCOM** in its `pNext` chain, then `dstImage` must not have a multi-planar format

- **VUID-VkCopyBufferToImageInfo2-pRegions-00171**
  `srcBuffer` must be large enough to contain all buffer locations that are accessed according to **Buffer and Image Addressing**, for each element of `pRegions`

- **VUID-VkCopyBufferToImageInfo2-pRegions-00173**
  The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, must not overlap in memory

- **VUID-VkCopyBufferToImageInfo2-srcBuffer-00174**
  `srcBuffer` must have been created with `VK_BUFFER_USAGE_TRANSFER_SRC_BIT` usage flag

- **VUID-VkCopyBufferToImageInfo2-dstImage-01997**
  The **format features** of `dstImage` must contain `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`

- **VUID-VkCopyBufferToImageInfo2-dstImageLayout-00180**
  `dstImageLayout` must specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`

- **VUID-VkCopyBufferToImageInfo2-dstImageLayout-01396**
  `dstImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`

- **VUID-VkCopyBufferToImageInfo2-pRegions-07931**
  If `VK_EXT_depth_range_unrestricted` is not enabled, for each element of `pRegions` whose `imageSubresource` contains a depth aspect, the data in `srcBuffer` must be in the range [0,1]

- **VUID-VkCopyBufferToImageInfo2-dstImage-07966**
If `dstImage` is non-sparse then the image or the specified `disjoint` plane must be bound completely and contiguously to a single `VkDeviceMemory` object

- **VUID-VkCopyBufferToImageInfo2-imageSubresource-07967**
  The `imageSubresource.mipLevel` member of each element of `pRegions` must be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created

- **VUID-VkCopyBufferToImageInfo2-imageSubresource-07968**
  If `imageSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `imageSubresource.baseArrayLayer + imageSubresource.layerCount` of each element of `pRegions` must be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- **VUID-VkCopyBufferToImageInfo2-dstImage-07969**
  `dstImage` must not have been created with flags containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- **VUID-VkCopyBufferToImageInfo2-dstImage-07973**
  `dstImage` must have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`

- **VUID-VkCopyBufferToImageInfo2-dstImage-07979**
  If `dstImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions`, `imageOffset.y` must be 0 and `imageExtent.height` must be 1

- **VUID-VkCopyBufferToImageInfo2-imageOffset-09104**
  For each element of `pRegions`, `imageOffset.z` and `(imageExtent.depth + imageOffset.z)` must both be greater than or equal to 0 and less than or equal to the depth of the specified `imageSubresource` of `dstImage`

- **VUID-VkCopyBufferToImageInfo2-dstImage-07980**
  If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `imageOffset.z` must be 0 and `imageExtent.depth` must be 1

- **VUID-VkCopyBufferToImageInfo2-dstImage-07274**
  For each element of `pRegions`, `imageOffset.x` must be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- **VUID-VkCopyBufferToImageInfo2-dstImage-07275**
  For each element of `pRegions`, `imageOffset.y` must be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`

- **VUID-VkCopyBufferToImageInfo2-dstImage-07276**
  For each element of `pRegions`, `imageOffset.z` must be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`

- **VUID-VkCopyBufferToImageInfo2-dstImage-00207**
  For each element of `pRegions`, if the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` must be a multiple of the `texel block extent width` of the `VkFormat` of `dstImage`

- **VUID-VkCopyBufferToImageInfo2-dstImage-00208**
  For each element of `pRegions`, if the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` must be a multiple of the `texel block extent height` of the `VkFormat` of `dstImage`
For each element of `pRegions`, if the sum of `imageOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` must be a multiple of the texel block extent depth of the `VkFormat` of `dstImage`.

For each element of `pRegions`, `imageSubresource.aspectMask` must specify aspects present in `dstImage`.

If `dstImage` has a multi-planar image format, then for each element of `pRegions`, `imageSubresource.aspectMask` must be a single valid multi-planar aspect mask bit.

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `imageSubresource.baseArrayLayer` must be 0 and `imageSubresource.layerCount` must be 1.

For each element of `pRegions`, `bufferRowLength` must be a multiple of the texel block extent width of the `VkFormat` of `dstImage`.

For each element of `pRegions`, `bufferImageHeight` must be a multiple of the texel block extent height of the `VkFormat` of `dstImage`.

For each element of `pRegions`, `bufferRowLength` divided by the texel block extent width and then multiplied by the texel block size of `dstImage` must be less than or equal to $2^{31}-1$.

If `dstImage` does not have either a depth/stencil format or a multi-planar format, then for each element of `pRegions`, `bufferOffset` must be a multiple of the texel block size.

If `dstImage` has a multi-planar format, then for each element of `pRegions`, `bufferOffset` must be a multiple of the element size of the compatible format for the format and the `aspectMask` of the `imageSubresource` as defined in Compatible Formats of Planes of Multi-Planar Formats.

If `dstImage` has a depth/stencil format, the `bufferOffset` member of any element of `pRegions` must be a multiple of 4.

For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.x` and `(imageExtent.width + imageOffset.x)` must both be greater than or equal to 0 and less than or equal to the width of the specified `imageSubresource` of `dstImage`.

For each element of `pRegions` not containing `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, `imageOffset.y` and `(imageExtent.height + imageOffset.y)` must both be greater than or equal to 0 and less than or equal to the height of the specified `imageSubresource` of `dstImage`. 
Valid Usage (Implicit)

- **VUID-VkCopyBufferToImageInfo2-sType-sType**
  
  The `sType` **must** be `VK_STRUCTURE_TYPE_COPY_BUFFER_TO_IMAGE_INFO_2`.

- **VUID-VkCopyBufferToImageInfo2-pNext-pNext**
  
  The `pNext` **must** be `NULL`.

- **VUID-VkCopyBufferToImageInfo2-srcBuffer-parameter**
  
  The `srcBuffer` **must** be a valid `VkBuffer` handle.

- **VUID-VkCopyBufferToImageInfo2-dstImage-parameter**
  
  The `dstImage` **must** be a valid `VkImage` handle.

- **VUID-VkCopyBufferToImageInfo2-dstImageLayout-parameter**
  
  The `dstImageLayout` **must** be a valid `VkImageLayout` value.

- **VUID-VkCopyBufferToImageInfo2-pRegions-parameter**
  
  The `pRegions` **must** be a valid pointer to an array of `regionCount` valid `VkBufferImageCopy2` structures.

- **VUID-VkCopyBufferToImageInfo2-regionCount-arraylength**
  
  The `regionCount` **must** be greater than 0.

- **VUID-VkCopyBufferToImageInfo2-commonparent**
  
  Both of `dstImage`, and `srcBuffer` **must** have been created, allocated, or retrieved from the same `VkDevice`.

To copy data from an image object to a buffer object, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdCopyImageToBuffer2(
    VkCommandBuffer commandBuffer,
    const VkCopyImageToBufferInfo2* pCopyImageToBufferInfo);
```

or the equivalent command:

```c
// Provided by VK_KHR_copy_commands2
void vkCmdCopyImageToBuffer2KHR(
    VkCommandBuffer commandBuffer,
    const VkCopyImageToBufferInfo2* pCopyImageToBufferInfo);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pCopyImageToBufferInfo** is a pointer to a `VkCopyImageToBufferInfo2` structure describing the copy parameters.

This command is functionally identical to `vkCmdCopyImageToBuffer`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.
Valid Usage

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01831
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` must not be a protected image

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01832
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be a protected buffer

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-01833
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstBuffer` must not be an unprotected buffer

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-07746
  If the queue family used to create the `VkCommandPool` which `commandBuffer` was allocated from does not support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`, the `bufferOffset` member of any element of `pCopyImageToBufferInfo->pRegions` must be a multiple of 4

- VUID-vkCmdCopyImageToBuffer2-imageOffset-07747
  The `imageOffset` and `imageExtent` members of each element of `pCopyImageToBufferInfo->pRegions` must respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`

Valid Usage (Implicit)

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdCopyImageToBuffer2-pCopyImageToBufferInfo-parameter
  `pCopyImageToBufferInfo` must be a valid pointer to a valid `VkCopyImageToBufferInfo2` structure

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-recording
  `commandBuffer` must be in the `recording` state

- VUID-vkCmdCopyImageToBuffer2-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support transfer, graphics, or compute operations

- VUID-vkCmdCopyImageToBuffer2-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdCopyImageToBuffer2-videocoding
  This command must only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally
The `VkCopyImageToBufferInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkCopyImageToBufferInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkImage srcImage;
    VkImageLayout srcImageLayout;
    VkBuffer dstBuffer;
    uint32_t regionCount;
    const VkBufferImageCopy2* pRegions;
} VkCopyImageToBufferInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkCopyImageToBufferInfo2 VkCopyImageToBufferInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstBuffer` is the destination buffer.
- `regionCount` is the number of regions to copy.
- `pRegions` is a pointer to an array of `VkBufferImageCopy2` structures specifying the regions to copy.

**Valid Usage**

- VUID-VkCopyImageToBufferInfo2-pRegions-04566
  The image region specified by each element of `pRegions` that does not contain `VkCopyCommandTransformInfoQCOM` in its `pNext` chain must be contained within the
specified imageSubresource of srcImage

- **VUID-VkCopyImageToBufferInfo2KHR-pRegions-04557**
  If the image region specified by each element of pRegions contains VkCopyCommandTransformInfoQCOM in its pNext chain, the rotated source region as described in [copies-buffers-images-rotation-addressing] must be contained within srcImage

- **VUID-VkCopyImageToBufferInfo2KHR-pRegions-04558**
  If any element of pRegions contains VkCopyCommandTransformInfoQCOM in its pNext chain, then srcImage must have a 1x1x1 texel block extent

- **VUID-VkCopyImageToBufferInfo2KHR-pRegions-06205**
  If any element of pRegions contains VkCopyCommandTransformInfoQCOM in its pNext chain, then srcImage must be of type VK_IMAGE_TYPE_2D

- **VUID-VkCopyImageToBufferInfo2KHR-pRegions-06206**
  If any element of pRegions contains VkCopyCommandTransformInfoQCOM in its pNext chain, then srcImage must not have a multi-planar format

- **VUID-VkCopyImageToBufferInfo2-pRegions-00183**
  dstBuffer must be large enough to contain all buffer locations that are accessed according to Buffer and Image Addressing, for each element of pRegions

- **VUID-VkCopyImageToBufferInfo2-pRegions-00184**
  The union of all source regions, and the union of all destination regions, specified by the elements of pRegions, must not overlap in memory

- **VUID-VkCopyImageToBufferInfo2-srcImage-00186**
  srcImage must have been created with VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag

- **VUID-VkCopyImageToBufferInfo2-srcImage-01998**
  The format features of srcImage must contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT

- **VUID-VkCopyImageToBufferInfo2-dstBuffer-00191**
  dstBuffer must have been created with VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag

- **VUID-VkCopyImageToBufferInfo2-dstBuffer-00192**
  If dstBuffer is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- **VUID-VkCopyImageToBufferInfo2-srcImageLayout-00189**
  srcImageLayout must specify the layout of the image subresources of srcImage specified in pRegions at the time this command is executed on a VkDevice

- **VUID-VkCopyImageToBufferInfo2-srcImageLayout-01397**
  srcImageLayout must be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL, or VK_IMAGE_LAYOUT_GENERAL

- **VUID-VkCopyImageToBufferInfo2-srcImage-07966**
  If srcImage is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single VkDeviceMemory object

- **VUID-VkCopyImageToBufferInfo2-imageSubresource-07967**
  The imageSubresource.mipLevel member of each element of pRegions must be less than the
mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageToBufferInfo2-imageSubresource-07968
  If imageSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, imageSubresource.baseArrayLayer + imageSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageToBufferInfo2-srcImage-07969
  srcImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-VkCopyImageToBufferInfo2-srcImage-07973
  srcImage must have a sample count equal to VK_SAMPLE_COUNT_1_BIT

- VUID-VkCopyImageToBufferInfo2-imageOffset-09104
  For each element of pRegions, imageOffset.z must be 0 and imageExtent.depth must be 1

- VUID-VkCopyImageToBufferInfo2-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y must be 0 and imageExtent.height must be 1

- VUID-VkCopyImageToBufferInfo2-srcImage-07274
  For each element of pRegions, imageOffset.x must be a multiple of the texel block extent width of the VkFormat of srcImage

- VUID-VkCopyImageToBufferInfo2-srcImage-07275
  For each element of pRegions, imageOffset.y must be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-VkCopyImageToBufferInfo2-srcImage-07276
  For each element of pRegions, imageOffset.z must be a multiple of the texel block extent depth of the VkFormat of srcImage

- VUID-VkCopyImageToBufferInfo2-srcImage-00207
  For each element of pRegions, if the sum of imageOffset.x and extent.width does not equal the width of the subresource specified by srcSubresource, extent.width must be a multiple of the texel block extent width of the VkFormat of srcImage

- VUID-VkCopyImageToBufferInfo2-srcImage-00208
  For each element of pRegions, if the sum of imageOffset.y and extent.height does not equal the height of the subresource specified by srcSubresource, extent.height must be a multiple of the texel block extent height of the VkFormat of srcImage

- VUID-VkCopyImageToBufferInfo2-srcImage-00209
  For each element of pRegions, if the sum of imageOffset.z and extent.depth does not equal the depth of the subresource specified by srcSubresource, extent.depth must be a multiple of the texel block extent depth of the VkFormat of srcImage
For each element of pRegions, imageSubresource.aspectMask must specify aspects present in srcImage.

If srcImage has a multi-planar image format, then for each element of pRegions, imageSubresource.aspectMask must be a single valid multi-planar aspect mask bit.

If srcImage is of type VK_IMAGE_TYPE_3D, for each element of pRegions, imageSubresource.baseArrayLayer must be 0 and imageSubresource.layerCount must be 1.

For each element of pRegions, bufferRowLength must be a multiple of the texel block extent width of the VkFormat of srcImage.

For each element of pRegions, bufferImageHeight must be a multiple of the texel block extent height of the VkFormat of srcImage.

For each element of pRegions, bufferRowLength divided by the texel block extent width and then multiplied by the texel block size of srcImage must be less than or equal to 2^{31}-1.

If srcImage does not have either a depth/stencil format or a multi-planar format, then for each element of pRegions, bufferOffset must be a multiple of the texel block size.

If srcImage has a multi-planar format, then for each element of pRegions, bufferOffset must be a multiple of the element size of the compatible format for the format and the aspectMask of the imageSubresource as defined in Compatible Formats of Planes of Multi-Planar Formats.

If srcImage has a depth/stencil format, the bufferOffset member of any element of pRegions must be a multiple of 4.

For each element of pRegions not containing VkCopyCommandTransformInfoQCOM in its pNext chain, imageOffset.x and (imageExtent.width + imageOffset.x) must both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of srcImage.

For each element of pRegions not containing VkCopyCommandTransformInfoQCOM in its pNext chain, imageOffset.y and (imageExtent.height + imageOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of srcImage.

Valid Usage (Implicit)

- VUID-VkCopyImageToBufferInfo2-sType-sType
sType must be VK_STRUCTURE_TYPE_COPY_IMAGE_TO_BUFFER_INFO_2

- VUID-VkCopyImageToBufferInfo2-pNext-pNext
  pNext must be NULL

- VUID-VkCopyImageToBufferInfo2-srcImage-parameter
  srcImage must be a valid VkImage handle

- VUID-VkCopyImageToBufferInfo2-srcImageLayout-parameter
  srcImageLayout must be a valid VkImageLayout value

- VUID-VkCopyImageToBufferInfo2-dstBuffer-parameter
  dstBuffer must be a valid VkBuffer handle

- VUID-VkCopyImageToBufferInfo2-pRegions-parameter
  pRegions must be a valid pointer to an array of regionCount valid VkBufferImageCopy2 structures

- VUID-VkCopyImageToBufferInfo2-regionCount-arraylength
  regionCount must be greater than 0

- VUID-VkCopyImageToBufferInfo2-commonparent
  Both of dstBuffer, and srcImage must have been created, allocated, or retrieved from the same VkDevice

For both vkCmdCopyBufferToImage2 and vkCmdCopyImageToBuffer2, each element of pRegions is a structure defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkBufferImageCopy2 {
    VkStructureType sType;
    const void* pNext;
    VkDeviceSize bufferOffset;
    uint32_t bufferRowLength;
    uint32_t bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D imageOffset;
    VkExtent3D imageExtent;
} VkBufferImageCopy2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkBufferImageCopy2 VkBufferImageCopy2KHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- bufferOffset is the offset in bytes from the start of the buffer object where the image data is copied from or to.
• bufferRowLength and bufferImageHeight specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the imageExtent.

• imageSubresource is a VkImageSubresourceLayers used to specify the specific image subresources of the image used for the source or destination image data.

• imageOffset selects the initial x, y, z offsets in texels of the sub-region of the source or destination image data.

• imageExtent is the size in texels of the image to copy in width, height and depth.

This structure is functionally identical to VkBufferImageCopy, but adds sType and pNext parameters, allowing it to be more easily extended.

### Valid Usage

- **VUID-VkBufferImageCopy2-bufferRowLength-09101**
  bufferRowLength must be 0, or greater than or equal to the width member of imageExtent

- **VUID-VkBufferImageCopy2-bufferImageHeight-09102**
  bufferImageHeight must be 0, or greater than or equal to the height member of imageExtent

- **VUID-VkBufferImageCopy2-aspectMask-09103**
  The aspectMask member of imageSubresource must only have a single bit set

- **VUID-VkBufferImageCopy2-imageExtent-06659**
  imageExtent.width must not be 0

- **VUID-VkBufferImageCopy2-imageExtent-06660**
  imageExtent.height must not be 0

- **VUID-VkBufferImageCopy2-imageExtent-06661**
  imageExtent.depth must not be 0

### Valid Usage (Implicit)

- **VUID-VkBufferImageCopy2-sType-sType**
  sType must be VK_STRUCTURE_TYPE_BUFFER_IMAGE_COPY_2

- **VUID-VkBufferImageCopy2-pNext-pNext**
  pNext must be NULL or a pointer to a valid instance of VkCopyCommandTransformInfoQCOM

- **VUID-VkBufferImageCopy2-sType-unique**
  The sType value of each struct in the pNext chain must be unique

- **VUID-VkBufferImageCopy2-imageSubresource-parameter**
  imageSubresource must be a valid VkImageSubresourceLayers structure

The VkCopyCommandTransformInfoQCOM structure is defined as:

```c
// Provided by VK_QCOM_rotated_copy_commands
typedef struct VkCopyCommandTransformInfoQCOM {
    VkStructureType sType;
    const void* pNext;
    VkSurfaceTransformFlagBitsKHR transform;
} VkCopyCommandTransformInfoQCOM;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **transform** is a `VkSurfaceTransformFlagBitsKHR` value describing the transform to be applied.

Including this structure in the **pNext** chain of `VkBufferImageCopy2` defines a rotation to be performed when copying between an image and a buffer. Including this structure in the **pNext** chain of `VkBlitImageInfo2` defines a rotation to be performed when blitting between two images. If this structure is not specified in either case, the implementation behaves as if it was specified with a **transform** equal to `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`.

Specifying a transform for a copy between an image and a buffer rotates the region accessed in the image around the offset. Specifying a transform for a blit performs a similar transform as described in Image Blits with Scaling and Rotation.

Rotations other than `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR` can only be specified for single-plane 2D images with a 1x1x1 texel block extent.

### Valid Usage

- **VUID-VkCopyCommandTransformInfoQCOM-transform-04560**
  - **transform** must be `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`, `VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR`, or `VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR`.

### Valid Usage (Implicit)

- **VUID-VkCopyCommandTransformInfoQCOM-sType-sType**
  - **sType** must be `VK_STRUCTURE_TYPE_COPY_COMMAND_TRANSFORM_INFO_QCOM`.

The following commands can be used to copy between host memory and images.

To copy data from host memory to an image object, call:

```c
// Provided by VK_EXT_host_image_copy
VkResult vkCopyMemoryToImageEXT(
    VkDevice device,
    const VkCopyMemoryToImageInfoEXT* pCopyMemoryToImageInfo);
```
• `device` is the device which owns `pCopyMemoryToImageInfo->dstImage`.

• `pCopyMemoryToImageInfo` is a pointer to a `VkCopyMemoryToImageInfoEXT` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyBufferToImage2`, except it is executed on the host and reads from host memory instead of a buffer.

### Valid Usage

- VUID-vkCopyMemoryToImageEXT-hostImageCopy-09058
  
The `hostImageCopy` feature must be enabled

### Valid Usage ( Implicit )

- VUID-vkCopyMemoryToImageEXT-device-parameter
  
  `device` must be a valid `VkDevice` handle

- VUID-vkCopyMemoryToImageEXT-pCopyMemoryToImageInfo-parameter
  
  `pCopyMemoryToImageInfo` must be a valid pointer to a valid `VkCopyMemoryToImageInfoEXT` structure

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_MEMORY_MAP_FAILED`

### The `VkCopyMemoryToImageInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_host_image_copy
typedef struct VkCopyMemoryToImageInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkHostImageCopyFlagsEXT flags;
    VkImage dstImage;
    VkImageLayout dstImageLayout;
    uint32_t regionCount;
    const VkMemoryToImageCopyEXT* pRegions;
} VkCopyMemoryToImageInfoEXT;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **flags** is a bitmask of `VkHostImageCopyFlagBitsEXT` values describing additional copy parameters.

• **dstImage** is the destination image.

• **dstImageLayout** is the layout of the destination image subresources for the copy.

• **regionCount** is the number of regions to copy.

• **pRegions** is a pointer to an array of `VkMemoryToImageCopyEXT` structures specifying the regions to copy.

`vkCopyMemoryToImageEXT` does not check whether the device memory associated with `dstImage` is currently in use before performing the copy. The application must guarantee that any previously submitted command that reads from or writes to the copy regions has completed before the host performs the copy.

Copy regions for the image must be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents must match the edge of the image.

### Valid Usage

- **VUID-VkCopyMemoryToImageInfoEXT-dstImage-09109**
  If `dstImage` is sparse then all memory ranges accessed by the copy command must be bound as described in [Binding Resource Memory](#).

- **VUID-VkCopyMemoryToImageInfoEXT-dstImage-09111**
  If the stencil aspect of `dstImage` is accessed, and `dstImage` was not created with separate stencil usage, `dstImage` must have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`.

- **VUID-VkCopyMemoryToImageInfoEXT-dstImage-09112**
  If the stencil aspect of `dstImage` is accessed, and `dstImage` was created with separate stencil usage, `dstImage` must have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageStencilUsageCreateInfo::stencilUsage`.

- **VUID-VkCopyMemoryToImageInfoEXT-dstImage-09113**
  If non-stencil aspects of `dstImage` are accessed, `dstImage` must have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`.

- **VUID-VkCopyMemoryToImageInfoEXT-imageOffset-09114**
  If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `x`, `y`, and `z` members of the `imageOffset` member of each element of `pRegions` must be 0.

- **VUID-VkCopyMemoryToImageInfoEXT-dstImage-09115**
  If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `imageExtent` member of each element of `pRegions` must equal the extents of `dstImage` identified by `imageSubresource`.

- **VUID-VkCopyMemoryToImageInfoEXT-dstImage-07966**
  If `dstImage` is non-sparse then the image or the specified disjoint plane must be bound.
completely and contiguously to a single VkDeviceMemory object

- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07967
  The imageSubresource.mipLevel member of each element of pRegions must be less than the
  mipLevels specified in VkImageCreateInfo when dstImage was created

- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07968
  If imageSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, imageSubresource.baseArrayLayer + imageSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07969
  dstImage must not have been created with flags containing
  VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07970
  The image region specified by each element of pRegions must be contained within the
  specified imageSubresource of dstImage

- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07971
  For each element of pRegions, imageOffset.x and (imageExtent.width + imageOffset.x) must both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of dstImage

- VUID-VkCopyMemoryToImageInfoEXT-imageSubresource-07972
  For each element of pRegions, imageOffset.y and (imageExtent.height + imageOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of dstImage

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07973
  dstImage must have a sample count equal to VK_SAMPLE_COUNT_1_BIT

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07979
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y must be 0 and imageExtent.height must be 1

- VUID-VkCopyMemoryToImageInfoEXT-imageOffset-09104
  For each element of pRegions, imageOffset.z and (imageExtent.depth + imageOffset.z) must both be greater than or equal to 0 and less than or equal to the depth of the specified imageSubresource of dstImage

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07980
  If dstImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, imageOffset.z must be 0 and imageExtent.depth must be 1

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07274
  For each element of pRegions, imageOffset.x must be a multiple of the texel block extent width of the VkFormat of dstImage

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-07275
  For each element of pRegions, imageOffset.y must be a multiple of the texel block extent height of the VkFormat of dstImage
For each element of `pRegions`, `imageOffset.z` must be a multiple of the texel block extent depth of the `VkFormat` of `dstImage`.

For each element of `pRegions`, if the sum of `imageOffset.x` and `extent.width` does not equal the width of the subresource specified by `srcSubresource`, `extent.width` must be a multiple of the texel block extent width of the `VkFormat` of `dstImage`.

For each element of `pRegions`, if the sum of `imageOffset.y` and `extent.height` does not equal the height of the subresource specified by `srcSubresource`, `extent.height` must be a multiple of the texel block extent height of the `VkFormat` of `dstImage`.

For each element of `pRegions`,
- `imageSubresource.aspectMask` must specify aspects present in `dstImage`.
- `imageSubresource.aspectMask` must be a single valid multi-planar aspect mask bit if `dstImage` has a multi-planar image format.
- `imageSubresource.baseArrayLayer` must be 0 and `imageSubresource.layerCount` must be 1 if `dstImage` is of type `VK_IMAGE_TYPE_3D`.
- `memoryRowLength` and `memoryImageHeight` must both be 0.
- `memoryRowLength` must be a multiple of the texel block extent width of the `VkFormat` of `dstImage`.
- `memoryImageHeight` must be a multiple of the texel block extent height of the `VkFormat` of `dstImage`.
- `memoryRowLength` divided by the texel block size of `dstImage` must be less than or equal to $2^{31} - 1$.
- `dstImageLayout` must specify the current layout of the image subresources of `dstImage` specified in `pRegions`.
- `dstImageLayout` must be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyPropertiesEXT::pCopyDstLayouts`.
- If `flags` includes `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, `memoryRowLength` and `memoryImageHeight` must both be 0.
Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_COPY_MEMORY_TO_IMAGE_INFO_EXT

- VUID-VkCopyMemoryToImageInfoEXT-pNext-pNext
  pNext must be NULL

- VUID-VkCopyMemoryToImageInfoEXT-flags-parameter
  flags must be a valid combination of VkHostImageCopyFlagBitsEXT values

- VUID-VkCopyMemoryToImageInfoEXT-dstImage-parameter
  dstImage must be a valid VkImage handle

- VUID-VkCopyMemoryToImageInfoEXT-dstImageLayout-parameter
  dstImageLayout must be a valid VkImageLayout value

- VUID-VkCopyMemoryToImageInfoEXT-pRegions-parameter
  pRegions must be a valid pointer to an array of regionCount valid
  VkMemoryToImageCopyEXT structures

- VUID-VkCopyMemoryToImageInfoEXT-regionCount-arraylength
  regionCount must be greater than 0

Each element of VkCopyMemoryToImageInfoEXT::pRegions is a structure defined as:

```c
// Provided by VK_EXT_host_image_copy
typedef struct VkMemoryToImageCopyEXT {
    VkStructureType sType;
    const void* pNext;
    const void* pHostPointer;
    uint32_t memoryRowLength;
    uint32_t memoryImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D imageOffset;
    VkExtent3D imageExtent;
} VkMemoryToImageCopyEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `pHostPointer` is the host memory address which is the source of the copy.
- `memoryRowLength` and `memoryImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a VkImageSubresourceLayers used to specify the specific image subresources of the image used for the source or destination image data.
- `imageOffset` selects the initial x, y, z offsets in texels of the sub-region of the destination image...
• **imageExtent** is the size in texels of the image to copy in width, height and depth.

This structure is functionally similar to VkBufferImageCopy2, except it defines host memory as the source of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

### Valid Usage

- **VUID-VkMemoryToImageCopyEXT-pHostPointer-09061**
  
  *pHostPointer* must point to memory that is large enough to contain all memory locations that are accessed according to Buffer and Image Addressing, for each element of *pRegions*.

- **VUID-VkMemoryToImageCopyEXT-pRegions-09062**
  
  The union of all source regions, and the union of all destination regions, specified by the elements of *pRegions*, must not overlap in memory.

- **VUID-VkMemoryToImageCopyEXT-memoryRowLength-09101**
  
  *memoryRowLength* must be 0, or greater than or equal to the width member of *imageExtent*.

- **VUID-VkMemoryToImageCopyEXT-memoryImageHeight-09102**
  
  *memoryImageHeight* must be 0, or greater than or equal to the height member of *imageExtent*.

- **VUID-VkMemoryToImageCopyEXT-aspectMask-09103**
  
  The *aspectMask* member of *imageSubresource* must only have a single bit set.

- **VUID-VkMemoryToImageCopyEXT-imageExtent-06659**
  
  *imageExtent.width* must not be 0.

- **VUID-VkMemoryToImageCopyEXT-imageExtent-06660**
  
  *imageExtent.height* must not be 0.

- **VUID-VkMemoryToImageCopyEXT-imageExtent-06661**
  
  *imageExtent.depth* must not be 0.

### Valid Usage (Implicit)

- **VUID-VkMemoryToImageCopyEXT-sType-sType**
  
  *sType* must be VK_STRUCTURE_TYPE_MEMORY_TO_IMAGE_COPY_EXT.

- **VUID-VkMemoryToImageCopyEXT-pNext-pNext**
  
  *pNext* must be NULL.

- **VUID-VkMemoryToImageCopyEXT-pHostPointer-parameter**
  
  *pHostPointer* must be a pointer value.

- **VUID-VkMemoryToImageCopyEXT-imageSubresource-parameter**
  
  *imageSubresource* must be a valid VkImageSubresourceLayers structure.

To copy data from an image object to host memory, call:
VkResult vkCopyImageToMemoryEXT(
    VkDevice device,
    const VkCopyImageToMemoryInfoEXT* pCopyImageToMemoryInfo);

- `device` is the device which owns `pCopyImageToMemoryInfo->srcImage`.
- `pCopyImageToMemoryInfo` is a pointer to a `VkCopyImageToMemoryInfoEXT` structure describing the copy parameters.

This command is functionally similar to `vkCmdCopyImageToBuffer2`, except it is executed on the host and writes to host memory instead of a buffer.

### Valid Usage

- VUID-vkCopyImageToMemoryEXT-hostImageCopy-09063
  The `hostImageCopy` feature must be enabled

### Valid Usage (Implicit)

- VUID-vkCopyImageToMemoryEXT-device-parameter
  `device` must be a valid `VkDevice` handle
- VUID-vkCopyImageToMemoryEXT-pCopyImageToMemoryInfo-parameter
  `pCopyImageToMemoryInfo` must be a valid pointer to a valid `VkCopyImageToMemoryInfoEXT` structure

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_INITIALIZATION_FAILED`
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_MEMORY_MAP_FAILED`

The `VkCopyImageToMemoryInfoEXT` structure is defined as:

```c
typedef struct VkCopyImageToMemoryInfoEXT {
    VkStructureType sType;
    const void* pNext;
} VkCopyImageToMemoryInfoEXT;
```
 VkCopyImageToMemoryInfonEXT

• **sType** is a *VkStructureType* value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **flags** is a bitmask of *VkHostImageCopyFlagBitsEXT* values describing additional copy parameters.

• **srcImage** is the source image.

• **srcImageLayout** is the layout of the source image subresources for the copy.

• **regionCount** is the number of regions to copy.

• **pRegions** is a pointer to an array of *VkImageToMemoryCopyEXT* structures specifying the regions to copy.

vkCopyImageToMemoryExt does not check whether the device memory associated with *srcImage* is currently in use before performing the copy. The application **must** guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

Copy regions for the image **must** be aligned to a multiple of the texel block extent in each dimension, except at the edges of the image, where region extents **must** match the edge of the image.

---

**Valid Usage**

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09109
  If *srcImage* is sparse then all memory ranges accessed by the copy command **must** be bound as described in **Binding Resource Memory**

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09111
  If the stencil aspect of *srcImage* is accessed, and *srcImage* was not created with separate stencil usage, *srcImage** must have been created with VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT set in VkImageCreateInfo::usage

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09112
  If the stencil aspect of *srcImage* is accessed, and *srcImage* was created with separate stencil usage, *srcImage** must have been created with VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT set in VkImageStencilUsageCreateInfo::stencilUsage

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09113
  If non-stencil aspects of *srcImage* are accessed, *srcImage** must have been created with VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT set in VkImageCreateInfo::usage

- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-09114
  If **flags** contains VK_HOST_IMAGE_COPY_MEMCPY_EXT, the *x*, *y*, and *z* members of the
imageOffset member of each element of pRegions must be 0

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-09115
  If flags contains VK_HOST_IMAGE_COPY_MEMCPY_EXT, the imageExtent member of each element of pRegions must equal the extents of srcImage identified by imageSubresource

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07966
  If srcImage is non-sparse then the image or the specified disjoint plane must be bound completely and continguously to a single VkDeviceMemory object

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07967
  The imageSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07968
  If imageSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, imageSubresource.baseArrayLayer + imageSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07969
  srcImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07970
  The image region specified by each element of pRegions must be contained within the specified imageSubresource of srcImage

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07971
  For each element of pRegions, imageOffset.x and (imageExtent.width + imageOffset.x) must both be greater than or equal to 0 and less than or equal to the width of the specified imageSubresource of srcImage

- VUID-VkCopyImageToMemoryInfoEXT-imageSubresource-07972
  For each element of pRegions, imageOffset.y and (imageExtent.height + imageOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified imageSubresource of srcImage

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07973
  srcImage must have a sample count equal to VK_SAMPLE_COUNT_1_BIT

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07979
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, imageOffset.y must be 0 and imageExtent.height must be 1

- VUID-VkCopyImageToMemoryInfoEXT-imageOffset-09104
  For each element of pRegions, imageOffset.z and (imageExtent.depth + imageOffset.z) must both be greater than or equal to 0 and less than or equal to the depth of the specified imageSubresource of srcImage

- VUID-VkCopyImageToMemoryInfoEXT-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, imageOffset.z must be 0 and imageExtent.depth must be 1
For each element of \textit{pRegions}, \textit{imageOffset.x} must be a multiple of the texel block extent width of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, \textit{imageOffset.y} must be a multiple of the texel block extent height of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, \textit{imageOffset.z} must be a multiple of the texel block extent depth of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, if the sum of \textit{imageOffset.x} and \textit{extent.width} does not equal the width of the subresource specified by \textit{srcSubresource}, \textit{extent.width} must be a multiple of the texel block extent width of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, if the sum of \textit{imageOffset.y} and \textit{extent.height} does not equal the height of the subresource specified by \textit{srcSubresource}, \textit{extent.height} must be a multiple of the texel block extent height of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, if the sum of \textit{imageOffset.z} and \textit{extent.depth} does not equal the depth of the subresource specified by \textit{srcSubresource}, \textit{extent.depth} must be a multiple of the texel block extent depth of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, \textit{imageSubresource.aspectMask} must specify aspects present in \textit{srcImage}.

If \textit{srcImage} has a multi-planar image format, then for each element of \textit{pRegions}, \textit{imageSubresource.aspectMask} must be a single valid multi-planar aspect mask bit.

If \textit{srcImage} is of type \textit{VK_IMAGE_TYPE_3D}, for each element of \textit{pRegions}, \textit{imageSubresource.baseArrayLayer} must be 0 and \textit{imageSubresource.layerCount} must be 1.

For each element of \textit{pRegions}, \textit{memoryRowLength} must be a multiple of the texel block extent width of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, \textit{memoryImageHeight} must be a multiple of the texel block extent height of the \textit{VkFormat} of \textit{srcImage}.

For each element of \textit{pRegions}, \textit{memoryRowLength} divided by the texel block extent width and then multiplied by the texel block size of \textit{srcImage} must be less than or equal to $2^{31} - 1$.

\textit{srcImageLayout} must specify the current layout of the image subresources of \textit{srcImage} specified in \textit{pRegions}.
• **VUID-VkCopyImageToMemoryInfoEXT-srcImageLayout-09065**
  
  `srcImageLayout` must be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyPropertiesEXT::pCopySrcLayouts`

• **VUID-VkCopyImageToMemoryInfoEXT-flags-09394**
  
  If `flags` includes `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, for each region in `pRegions`, `memoryRowLength` and `memoryImageHeight` must both be 0

---

### Valid Usage (Implicit)

• **VUID-VkCopyImageToMemoryInfoEXT-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_MEMORY_INFO_EXT`

• **VUID-VkCopyImageToMemoryInfoEXT-pNext-pNext**
  
  `pNext` must be `NULL`

• **VUID-VkCopyImageToMemoryInfoEXT-flags-parameter**
  
  `flags` must be a valid combination of `VkHostImageCopyFlagBitsEXT` values

• **VUID-VkCopyImageToMemoryInfoEXT-srcImage-parameter**
  
  `srcImage` must be a valid `VkImage` handle

• **VUID-VkCopyImageToMemoryInfoEXT-srcImageLayout-parameter**
  
  `srcImageLayout` must be a valid `VkImageLayout` value

• **VUID-VkCopyImageToMemoryInfoEXT-pRegions-parameter**
  
  `pRegions` must be a valid pointer to an array of `regionCount` valid `VkImageToMemoryCopyEXT` structures

• **VUID-VkCopyImageToMemoryInfoEXT-regionCount-arraylength**
  
  `regionCount` must be greater than 0

---

Each element of `VkCopyImageToMemoryInfoEXT::pRegions` is a structure defined as:

```c
// Provided by VK_EXT_host_image_copy
typedef struct VkImageToMemoryCopyEXT {
    VkStructureType sType;        
    const void*     pNext;        
    void*           pHostPointer; 
    uint32_t        memoryRowLength;
    uint32_t        memoryImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D      imageOffset;
    VkExtent3D      imageExtent;
} VkImageToMemoryCopyEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pHostPointer` is the host memory address which is the destination of the copy.
• **memoryRowLength** and **memoryImageHeight** specify in texels a subregion of a larger two- or three-dimensional image in host memory, and control the addressing calculations. If either of these values is zero, that aspect of the host memory is considered to be tightly packed according to the **imageExtent**.

• **imageSubresource** is a **VkImageSubresourceLayers** used to specify the specific image subresources of the image used for the source or destination image data.

• **imageOffset** selects the initial x, y, z offsets in texels of the sub-region of the source image data.

• **imageExtent** is the size in texels of the image to copy in width, height and depth.

This structure is functionally similar to **VkBufferImageCopy2**, except it defines host memory as the target of copy instead of a buffer. In particular, the same data packing rules and restrictions as that structure apply here as well.

### Valid Usage

- **VUID-VkImageToMemoryCopyEXT-pHostPointer-09066**
  pHostPointer **must** point to memory that is large enough to contain all memory locations that are accessed according to **Buffer and Image Addressing**, for each element of **pRegions**

- **VUID-VkImageToMemoryCopyEXT-pRegions-09067**
  The union of all source regions, and the union of all destination regions, specified by the elements of **pRegions**, **must** not overlap in memory

- **VUID-VkImageToMemoryCopyEXT-memoryRowLength-09101**
  memoryRowLength **must** be 0, or greater than or equal to the width member of **imageExtent**

- **VUID-VkImageToMemoryCopyEXT-memoryImageHeight-09102**
  memoryImageHeight **must** be 0, or greater than or equal to the height member of **imageExtent**

- **VUID-VkImageToMemoryCopyEXT-aspectMask-09103**
  The aspectMask member of **imageSubresource** **must** only have a single bit set

- **VUID-VkImageToMemoryCopyEXT-imageExtent-06659**
  imageExtent.width **must** not be 0

- **VUID-VkImageToMemoryCopyEXT-imageExtent-06660**
  imageExtent.height **must** not be 0

- **VUID-VkImageToMemoryCopyEXT-imageExtent-06661**
  imageExtent.depth **must** not be 0

### Valid Usage (Implicit)

- **VUID-VkImageToMemoryCopyEXT-sType-sType**
  sType **must** be **VK_STRUCTURE_TYPE_IMAGE_TO_MEMORY_COPY_EXT**

- **VUID-VkImageToMemoryCopyEXT-pNext-pNext**
  pNext **must** be NULL

- **VUID-VkImageToMemoryCopyEXT-pHostPointer-parameter**
**pHostPointer** must be a pointer value

- **VUID-VkImageToMemoryCopyEXT-imageSubresource-parameter**
  *imageSubresource* must be a valid *VkImageSubresourceLayers* structure

Bits which **can** be set in *VkCopyMemoryToImageInfoEXT::flags*, *VkCopyImageToMemoryInfoEXT::flags*, and *VkCopyImageToImageInfoEXT::flags*, specifying additional copy parameters are:

```c
// Provided by VK_EXT_host_image_copy
typedef enum VkHostImageCopyFlagBitsEXT {
    VK_HOST_IMAGE_COPY_MEMCPY_EXT = 0x00000001,
} VkHostImageCopyFlagBitsEXT;
```

- **VK_HOST_IMAGE_COPY_MEMCPY_EXT** specifies that no memory layout swizzling is to be applied during data copy. For copies between memory and images, this flag indicates that image data in host memory is swizzled in exactly the same way as the image data on the device. Using this flag indicates that the implementations **may** use a simple memory copy to transfer the data between the host memory and the device memory. The format of the swizzled data in host memory is platform dependent and is not defined in this specification.

```c
// Provided by VK_EXT_host_image_copy
typedef VkFlags VkHostImageCopyFlagsEXT;
```

*VkHostImageCopyFlagsEXT* is a bitmask type for setting a mask of zero or more *VkHostImageCopyFlagBitsEXT*.

To copy data from an image object to another image object using the host, call:

```c
// Provided by VK_EXT_host_image_copy
VkResult vkCopyImageToImageEXT(
    VkDevice device,
    const VkCopyImageToImageInfoEXT* pCopyImageToImageInfo);
```

- **device** is the device which owns *pCopyImageToMemoryInfo->srcImage*.
- **pCopyImageToImageInfo** is a pointer to a *VkCopyImageToImageInfoEXT* structure describing the copy parameters.

This command is functionally similar to *vkCmdCopyImage2*, except it is executed on the host.

**Valid Usage**

- **VUID-vkCopyImageToImageEXT-hostImageCopy-09068**
  The **hostImageCopy** feature **must** be enabled
Valid Usage (Implicit)

- VUID-vkCopyImageToImageEXT-device-parameter
  
  device must be a valid VkDevice handle

- VUID-vkCopyImageToImageEXT-pCopyImageToImageInfo-parameter
  
  pCopyImageToImageInfo must be a valid pointer to a valid VkCopyImageToImageInfoEXT structure

Return Codes

Success

- VK_SUCCESS

Failure

- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_MEMORY_MAP_FAILED

The VkCopyImageToImageInfoEXT structure is defined as:

```c
typedef struct VkCopyImageToImageInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkHostImageCopyFlagsEXT flags;
    VkImage srcImage;
    VkImageLayout srcImageLayout;
    VkImage dstImage;
    VkImageLayout dstImageLayout;
    uint32_t regionCount;
    const VkImageCopy2* pRegions;
} VkCopyImageToImageInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `flags` is a bitmask of VkHostImageCopyFlagBitsEXT values describing additional copy parameters.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the copy.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the copy.
• `regionCount` is the number of regions to copy.

• `pRegions` is a pointer to an array of `VkImageCopy2` structures specifying the regions to copy.

`vkCopyImageToImageEXT` does not check whether the device memory associated with `srcImage` or `dstImage` is currently in use before performing the copy. The application must guarantee that any previously submitted command that writes to the copy regions has completed before the host performs the copy.

**Valid Usage**

- VUID-VkCopyImageToImageInfoEXT-srcImage-09069
  `srcImage` and `dstImage` must have been created with identical image creation parameters.

- VUID-VkCopyImageToImageInfoEXT-srcImage-09109
  If `srcImage` is sparse then all memory ranges accessed by the copy command must be bound as described in `Binding Resource Memory`.

- VUID-VkCopyImageToImageInfoEXT-srcImage-09111
  If the stencil aspect of `srcImage` is accessed, and `srcImage` was not created with separate stencil usage, `srcImage` must have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`.

- VUID-VkCopyImageToImageInfoEXT-srcImage-09112
  If the stencil aspect of `srcImage` is accessed, and `srcImage` was created with separate stencil usage, `srcImage` must have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageStencilUsageCreateInfo::stencilUsage`.

- VUID-VkCopyImageToImageInfoEXT-srcImage-09113
  If non-stencil aspects of `srcImage` are accessed, `srcImage` must have been created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` set in `VkImageCreateInfo::usage`.

- VUID-VkCopyImageToImageInfoEXT-srcOffset-09114
  If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `x`, `y`, and `z` members of the `srcOffset` member of each element of `pRegions` must be 0.

- VUID-VkCopyImageToImageInfoEXT-srcImage-09115
  If `flags` contains `VK_HOST_IMAGE_COPY_MEMCPY_EXT`, the `extent` member of each element of `pRegions` must equal the extents of `srcImage` identified by `srcSubresource`.

- VUID-VkCopyImageToImageInfoEXT-srcImage-07966
  If `srcImage` is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single `VkDeviceMemory` object.

- VUID-VkCopyImageToImageInfoEXT-srcSubresource-07967
  The `srcSubresource.mipLevel` member of each element of `pRegions` must be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created.

- VUID-VkCopyImageToImageInfoEXT-srcSubresource-07968
  If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer + srcSubresource.layerCount` of each element of `pRegions` must be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created.
• VUID-VkCopyImageToImageInfoEXT-srcImage-07969
  srcImage must not have been created with flags containing
  VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

• VUID-VkCopyImageToImageInfoEXT-srcSubresource-07970
  The image region specified by each element of pRegions must be contained within the
  specified srcSubresource of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcSubresource-07971
  For each element of pRegions, srcOffset.x and (extent.width + srcOffset.x) must both be
greater than or equal to 0 and less than or equal to the width of the specified
srcSubresource of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcSubresource-07972
  For each element of pRegions, srcOffset.y and (extent.height + srcOffset.y) must both be
greater than or equal to 0 and less than or equal to the height of the specified
srcSubresource of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-07979
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, srcOffset.y
must be 0 and extent.height must be 1

• VUID-VkCopyImageToImageInfoEXT-srcOffset-09104
  For each element of pRegions, srcOffset.z and (extent.depth + srcOffset.z) must both be
greater than or equal to 0 and less than or equal to the depth of the specified
srcSubresource of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-07980
  If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of
pRegions, srcOffset.z must be 0 and extent.depth must be 1

• VUID-VkCopyImageToImageInfoEXT-srcImage-07274
  For each element of pRegions, srcOffset.x must be a multiple of the texel block extent
width of the VkFormat of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-07275
  For each element of pRegions, srcOffset.y must be a multiple of the texel block extent
height of the VkFormat of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-07276
  For each element of pRegions, srcOffset.z must be a multiple of the texel block extent
depth of the VkFormat of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-00207
  For each element of pRegions, if the sum of srcOffset.x and extent.width does not equal
the width of the subresource specified by srcSubresource, extent.width must be a multiple
of the texel block extent width of the VkFormat of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-00208
  For each element of pRegions, if the sum of srcOffset.y and extent.height does not equal
the height of the subresource specified by srcSubresource, extent.height must be a multiple
of the texel block extent height of the VkFormat of srcImage

• VUID-VkCopyImageToImageInfoEXT-srcImage-00209
For each element of \( p\text{Regions} \), if the sum of \( \text{srcOffset.z} \) and \( \text{extent.depth} \) does not equal the depth of the subresource specified by \( \text{srcSubresource} \), \( \text{extent.depth} \) must be a multiple of the \text{texel block extent depth} of the \text{VkFormat} of \( \text{srcImage} \)

- VUID-VkCopyImageToImageInfoEXT-srcSubresource-09105
  For each element of \( p\text{Regions} \), \( \text{srcSubresource.aspectMask} \) must specify aspects present in \( \text{srcImage} \)

- VUID-VkCopyImageToImageInfoEXT-srcImage-07981
  If \( \text{srcImage} \) has a \text{multi-planar image format}, then for each element of \( p\text{Regions} \), \( \text{srcSubresource.aspectMask} \) must be a single valid \text{multi-planar aspect mask} bit

- VUID-VkCopyImageToImageInfoEXT-srcImage-07983
  If \( \text{srcImage} \) is of type \text{VK_IMAGE_TYPE_3D}, for each element of \( p\text{Regions} \), \( \text{srcSubresource.baseArrayLayer} \) must be 0 and \( \text{srcSubresource.layerCount} \) must be 1

- VUID-VkCopyImageToImageInfoEXT-dstImage-09109
  If \( \text{dstImage} \) is sparse then all memory ranges accessed by the copy command must be bound as described in \text{Binding Resource Memory}

- VUID-VkCopyImageToImageInfoEXT-dstImage-09111
  If the stencil aspect of \( \text{dstImage} \) is accessed, and \( \text{dstImage} \) was not created with separate stencil usage, \( \text{dstImage} \) must have been created with \text{VK_IMAGE_USAGE_HOSTTRANSFER_BIT_EXT} set in \text{VkImageCreateInfo::usage}

- VUID-VkCopyImageToImageInfoEXT-dstImage-09112
  If the stencil aspect of \( \text{dstImage} \) is accessed, and \( \text{dstImage} \) was created with separate stencil usage, \( \text{dstImage} \) must have been created with \text{VK_IMAGE_USAGE_HOSTTRANSFER_BIT_EXT} set in \text{VkImageStencilUsageCreateInfo::stencilUsage}

- VUID-VkCopyImageToImageInfoEXT-dstImage-09113
  If non-stencil aspects of \( \text{dstImage} \) are accessed, \( \text{dstImage} \) must have been created with \text{VK_IMAGE_USAGE_HOSTTRANSFER_BIT_EXT} set in \text{VkImageCreateInfo::usage}

- VUID-VkCopyImageToImageInfoEXT-dstOffset-09114
  If \( \text{flags} \) contains \text{VK_HOST_IMAGE_COPY_MEMCPY_EXT}, the x, y, and z members of the \( \text{dstOffset} \) member of each element of \( p\text{Regions} \) must be 0

- VUID-VkCopyImageToImageInfoEXT-dstImage-09115
  If \( \text{flags} \) contains \text{VK_HOST_IMAGE_COPY_MEMCPY_EXT}, the extent member of each element of \( p\text{Regions} \) must equal the extents of \( \text{dstImage} \) identified by \( \text{dstSubresource} \)

- VUID-VkCopyImageToImageInfoEXT-dstImage-07966
  If \( \text{dstImage} \) is non-sparse then the image or the specified disjoint plane must be bound completely and contiguously to a single \text{VkDeviceMemory} object

- VUID-VkCopyImageToImageInfoEXT-dstSubresource-07967
  The \( \text{dstSubresource.mipLevel} \) member of each element of \( p\text{Regions} \) must be less than the \text{mipLevels} specified in \text{VkImageCreateInfo} when \( \text{dstImage} \) was created

- VUID-VkCopyImageToImageInfoEXT-dstSubresource-07968
  If \( \text{dstSubresource.layerCount} \) is not \text{VK_REMAINING_ARRAY LAYERS}, \( \text{dstSubresource.baseArrayLayer} + \text{dstSubresource.layerCount} \) of each element of \( p\text{Regions} \) must be less than or equal to the \text{arrayLayers} specified in \text{VkImageCreateInfo} when
**dstImage** was created

- **VUID-VkCopyImageToImageInfoEXT-dstImage-07969**
  
  *dstImage* must not have been created with *flags* containing *VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT*

- **VUID-VkCopyImageToImageInfoEXT-dstSubresource-07970**
  
  The image region specified by each element of *pRegions* must be contained within the specified *dstSubresource* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstSubresource-07971**
  
  For each element of *pRegions*, *dstOffset.x* and (*extent.width* + *dstOffset.x*) must both be greater than or equal to 0 and less than or equal to the width of the specified *dstSubresource* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstSubresource-07972**
  
  For each element of *pRegions*, *dstOffset.y* and (*extent.height* + *dstOffset.y*) must both be greater than or equal to 0 and less than or equal to the height of the specified *dstSubresource* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstImage-07979**
  
  If *dstImage* is of type *VK_IMAGE_TYPE_1D*, then for each element of *pRegions*, *dstOffset.y* must be 0 and *extent.height* must be 1

- **VUID-VkCopyImageToImageInfoEXT-dstOffset-09104**
  
  For each element of *pRegions*, *dstOffset.z* and (*extent.depth* + *dstOffset.z*) must both be greater than or equal to 0 and less than or equal to the depth of the specified *dstSubresource* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstImage-07980**
  
  If *dstImage* is of type *VK_IMAGE_TYPE_1D* or *VK_IMAGE_TYPE_2D*, then for each element of *pRegions*, *dstOffset.z* must be 0 and *extent.depth* must be 1

- **VUID-VkCopyImageToImageInfoEXT-dstImage-07274**
  
  For each element of *pRegions*, *dstOffset.x* must be a multiple of the texel block extent width of the *VkFormat* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstImage-07275**
  
  For each element of *pRegions*, *dstOffset.y* must be a multiple of the texel block extent height of the *VkFormat* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstImage-07276**
  
  For each element of *pRegions*, *dstOffset.z* must be a multiple of the texel block extent depth of the *VkFormat* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstImage-00207**
  
  For each element of *pRegions*, if the sum of *dstOffset.x* and *extent.width* does not equal the width of the subresource specified by *srcSubresource*, *extent.width* must be a multiple of the texel block extent width of the *VkFormat* of *dstImage*

- **VUID-VkCopyImageToImageInfoEXT-dstImage-00208**
  
  For each element of *pRegions*, if the sum of *dstOffset.y* and *extent.height* does not equal the height of the subresource specified by *srcSubresource*, *extent.height* must be a multiple of the texel block extent height of the *VkFormat* of *dstImage*
For each element of `pRegions`, if the sum of `dstOffset.z` and `extent.depth` does not equal the depth of the subresource specified by `srcSubresource`, `extent.depth` must be a multiple of the `texel block extent depth` of the `VkFormat` of `dstImage`.

For each element of `pRegions`, `dstSubresource.aspectMask` must specify aspects present in `dstImage`.

If `dstImage` has a `multi-planar image format`, then for each element of `pRegions`, `dstSubresource.aspectMask` must be a single valid `multi-planar aspect mask` bit.

If `dstImage` is of type `VK_IMAGE_TYPE_3D`, for each element of `pRegions`, `dstSubresource.baseArrayLayer` must be 0 and `dstSubresource.layerCount` must be 1.

`srcImageLayout` must specify the current layout of the image subresources of `srcImage` specified in `pRegions`.

`dstImageLayout` must specify the current layout of the image subresources of `dstImage` specified in `pRegions`.

`srcImageLayout` must be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyPropertiesEXT::pCopySrcLayouts`.

`dstImageLayout` must be one of the image layouts returned in `VkPhysicalDeviceHostImageCopyPropertiesEXT::pCopyDstLayouts`.

**Valid Usage (Implicit)**

- `sType` must be `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_IMAGE_INFO_EXT`.
- `pNext` must be `NULL`.
- `flags` must be a valid combination of `VkHostImageCopyFlagBitsEXT` values.
- `srcImage` must be a valid `VkImage` handle.
- `srcImageLayout` must be a valid `VkImageLayout` value.
- `dstImage` must be a valid `VkImage` handle.
- `dstImageLayout` must be a valid `VkImageLayout` value.
• VUID-VkCopyImageToImageInfoEXT-pRegions-parameter
  pRegions must be a valid pointer to an array of regionCount valid VkImageCopy2 structures

• VUID-VkCopyImageToImageInfoEXT-regionCount-arraylength
  regionCount must be greater than 0

• VUID-VkCopyImageToImageInfoEXT-commonparent
  Both of dstImage, and srcImage must have been created, allocated, or retrieved from the same VkDevice

20.4. Indirect Copies

An application can use indirect copies when the copy parameters are not known during the command buffer creation time.

To copy data between two memory regions by specifying copy parameters indirectly in a buffer, call:

```c
// Provided by VK_NV_copy_memory_indirect
define void vkCmdCopyMemoryIndirectNV(
    VkCommandBuffer commandBuffer,
    VkDeviceAddress copyBufferAddress,
    uint32_t copyCount,
    uint32_t stride);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `copyBufferAddress` is the buffer address specifying the copy parameters. This buffer is laid out in memory as an array of VkCopyMemoryIndirectCommandNV structures.
- `copyCount` is the number of copies to execute, and can be zero.
- `stride` is the stride in bytes between successive sets of copy parameters.

Each region read from `copyBufferAddress` is copied from the source region to the specified destination region. The results are undefined if any of the source and destination regions overlap in memory.

Valid Usage

- VUID-vkCmdCopyMemoryIndirectNV-None-07653
  The indirectCopy feature must be enabled

- VUID-vkCmdCopyMemoryIndirectNV-copyBufferAddress-07654
  copyBufferAddress must be 4 byte aligned

- VUID-vkCmdCopyMemoryIndirectNV-stride-07655
  stride must be a multiple of 4 and must be greater than or equal to sizeof(VkCopyMemoryIndirectCommandNV)
The **VkCommandPool** that **commandBuffer** was allocated from **must** support at least one of the **VkPhysicalDeviceCopyMemoryIndirectPropertiesNV::supportedQueues**.

### Valid Usage (Implicit)

- **VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-parameter**
  **commandBuffer** **must** be a valid **VkCommandBuffer** handle

- **VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-recording**
  **commandBuffer** **must** be in the **recording state**

- **VUID-vkCmdCopyMemoryIndirectNV-commandBuffer-cmdpool**
  The **VkCommandPool** that **commandBuffer** was allocated from **must** support transfer, graphics, or compute operations

- **VUID-vkCmdCopyMemoryIndirectNV-renderpass**
  This command **must** only be called outside of a render pass instance

- **VUID-vkCmdCopyMemoryIndirectNV-videocoding**
  This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to **commandBuffer** **must** be externally synchronized

- Host access to the **VkCommandPool** that **commandBuffer** was allocated from **must** be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Outside</td>
<td>Outside</td>
<td>Transfer Graphics Compute</td>
<td>Action</td>
</tr>
</tbody>
</table>

The structure describing source and destination memory regions, **VkCopyMemoryIndirectCommandNV** is defined as:

```c
// Provided by VK_NV_copy_memory_indirect
typedef struct VkCopyMemoryIndirectCommandNV {
    VkDeviceAddress srcAddress;
    VkDeviceAddress dstAddress;
    VkDeviceSize size;
} VkCopyMemoryIndirectCommandNV;
```
VkCopyMemoryIndirectCommandNV;

- **srcAddress** is the starting address of the source device memory to copy from.
- **dstAddress** is the starting address of the destination device memory to copy to.
- **size** is the size of the copy in bytes.

**Valid Usage**

- VUID-VkCopyMemoryIndirectCommandNV-srcAddress-07657
  The **srcAddress** must be 4 byte aligned
- VUID-VkCopyMemoryIndirectCommandNV-dstAddress-07658
  The **dstAddress** must be 4 byte aligned
- VUID-VkCopyMemoryIndirectCommandNV-size-07659
  The **size** must be 4 byte aligned

To copy data from a memory region to an image object by specifying copy parameters in a buffer, call:

```c
// Provided by VK_NV_copy_memory_indirect
void vkCmdCopyMemoryToImageIndirectNV(
    VkCommandBuffer commandBuffer,
    VkDeviceAddress copyBufferAddress,
    uint32_t copyCount,
    uint32_t stride,
    VkImage dstImage,
    VkImageLayout dstImageLayout,
    const VkImageSubresourceLayers* pImageSubresources);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **copyBufferAddress** is the buffer address specifying the copy parameters. This buffer is laid out in memory as an array of **VkCopyMemoryToImageIndirectCommandNV** structures.
- **copyCount** is the number of copies to execute, and can be zero.
- **stride** is the byte stride between successive sets of copy parameters.
- **dstImage** is the destination image.
- **dstImageLayout** is the layout of the destination image subresources for the copy.
- **pImageSubresources** is a pointer to an array of size **copyCount** of **VkImageSubresourceLayers** used to specify the specific image subresource of the destination image data for that copy.

Each region in **copyBufferAddress** is copied from the source memory region to an image region in the destination image. If the destination image is of type **VK_IMAGE_TYPE_3D**, the starting slice and number of slices to copy are specified in **pImageSubresources->baseArrayLayer** and **pImageSubresources->layerCount** respectively. The copy **must** be performed on a queue that supports...
indirect copy operations, see `VkPhysicalDeviceCopyMemoryIndirectPropertiesNV`.

### Valid Usage

- **VUID-vkCmdCopyMemoryToImageIndirectNV-None-07660**: The `indirectCopy` feature **must** be enabled.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07661**: `dstImage` **must** not be a protected image.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-aspectMask-07662**: The `aspectMask` member for every subresource in `pImageSubresources` **must** only have a single bit set.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07663**: The image region specified by each element in `copyBufferAddress` **must** be a region that is contained within `dstImage`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07664**: `dstImage` **must** have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07665**: If `dstImage` is non-sparse then it **must** be bound completely and contiguously to a single `VkDeviceMemory` object.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07973**: `dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImageLayout-07667**: `dstImageLayout` **must** specify the layout of the image subresources of `dstImage` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07669**: `dstImage` **must** have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImageLayout-07667**: `dstImageLayout` **must** specify the layout of the image subresources of `dstImage` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-mipLevel-07670**: The specified `mipLevel` of each region **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-layerCount-08764**: If `layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, the specified `baseArrayLayer + layerCount` of each region **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-imageOffset-07672**: The `imageOffset` and `imageExtent` members of each region **must** respect the image transfer granularity requirements of `commandBuffer`'s command pool's queue family, as described in `VkQueueFamilyProperties`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-07673**: `dstImage` **must** not have been created with flags containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.

- **VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-07674**
If the queue family used to create the VkCommandPool which commandBuffer was allocated from does not support VK_QUEUE_GRAPHICS_BIT, for each region, the aspectMask member of pImageSubresources must not be VK_IMAGE_ASPECT_DEPTH_BIT or VK_IMAGE_ASPECT_STENCIL_BIT.

- VUID-vkCmdCopyMemoryToImageIndirectNV-imageOffset-07675
  For each region in copyBufferAddress, imageOffset.y and (imageExtent.height + imageOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified subresource.

- VUID-vkCmdCopyMemoryToImageIndirectNV-offset-07676
  offset must be 4 byte aligned.

- VUID-vkCmdCopyMemoryToImageIndirectNV-stride-07677
  stride must be a multiple of 4 and must be greater than or equal to sizeof(VkCopyMemoryToImageIndirectCommandNV).

Valid Usage (Implicit)

- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle.

- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImage-parameter
  dstImage must be a valid VkImage handle.

- VUID-vkCmdCopyMemoryToImageIndirectNV-dstImageLayout-parameter
  dstImageLayout must be a valid VkImageLayout value.

- VUID-vkCmdCopyMemoryToImageIndirectNV-pImageSubresources-parameter
  pImageSubresources must be a valid pointer to an array of copyCount valid VkImageSubresourceLayers structures.

- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-recording
  commandBuffer must be in the recording state.

- VUID-vkCmdCopyMemoryToImageIndirectNV-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support transfer, graphics, or compute operations.

- VUID-vkCmdCopyMemoryToImageIndirectNV-renderpass
  This command must only be called outside of a render pass instance.

- VUID-vkCmdCopyMemoryToImageIndirectNV-videocoding
  This command must only be called outside of a video coding scope.

- VUID-vkCmdCopyMemoryToImageIndirectNV-copyCount-arraylength
  copyCount must be greater than 0.

- VUID-vkCmdCopyMemoryToImageIndirectNV-commonparent
  Both of commandBuffer, and dstImage must have been created, allocated, or retrieved from the same VkDevice.
Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>

</tbody>
</table>

The `VkCopyMemoryToImageIndirectCommandNV` is defined as:

```c
// Provided by VK_NV_copy_memory_indirect
typedef struct VkCopyMemoryToImageIndirectCommandNV {
    VkDeviceAddress srcAddress;
    uint32_t bufferRowLength;
    uint32_t bufferImageHeight;
    VkImageSubresourceLayers imageSubresource;
    VkOffset3D imageOffset;
    VkExtent3D imageExtent;
} VkCopyMemoryToImageIndirectCommandNV;
```

- `srcAddress` is the starting address of the source device memory to copy from.
- `bufferRowLength` and `bufferImageHeight` specify in texels a subregion of a larger two- or three-dimensional image in buffer memory, and control the addressing calculations. If either of these values is zero, that aspect of the buffer memory is considered to be tightly packed according to the `imageExtent`.
- `imageSubresource` is a `VkImageSubresourceLayers` used to specify the specific image subresources of the image used for the destination image data, which must match the values specified in `pImageSubresources` parameter of `vkCmdCopyMemoryToImageIndirectNV` during command recording.
- `imageOffset` selects the initial x, y, z offsets in texels of the sub-region of the destination image data.
- `imageExtent` is the size in texels of the destination image in width, height and depth.

Valid Usage

- VUID-VkCopyMemoryToImageIndirectCommandNV-srcAddress-07678
The `srcAddress` must be 4 byte aligned

- VUID-VkCopyMemoryToImageIndirectCommandNV-bufferRowLength-07679
  bufferRowLength must be 0, or greater than or equal to the width member of `imageExtent`

- VUID-VkCopyMemoryToImageIndirectCommandNV-bufferImageHeight-07680
  bufferImageHeight must be 0, or greater than or equal to the height member of `imageExtent`

- VUID-VkCopyMemoryToImageIndirectCommandNV-imageOffset-07681
  imageOffset must specify a valid offset in the destination image

- VUID-VkCopyMemoryToImageIndirectCommandNV-imageExtent-07682
  imageExtent must specify a valid region in the destination image and can be 0

Valid Usage (Implicit)

- VUID-VkCopyMemoryToImageIndirectCommandNV-imageSubresource-parameter
  imageSubresource must be a valid `VkImageSubresourceLayers` structure

20.5. Image Copies With Scaling

To copy regions of a source image into a destination image, potentially performing format conversion, arbitrary scaling, and filtering, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdBlitImage(
    VkCommandBuffer commandBuffer, 
    VkImage srcImage, 
    VkImageLayout srcImageLayout, 
    VkImage dstImage, 
    VkImageLayout dstImageLayout, 
    uint32_t regionCount, 
    const VkImageBlit* pRegions, 
    VkFilter filter);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the blit.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the blit.
- `regionCount` is the number of regions to blit.
- `pRegions` is a pointer to an array of `VkImageBlit` structures specifying the regions to blit.
- `filter` is a `VkFilter` specifying the filter to apply if the blits require scaling.

`vkCmdBlitImage` must not be used for multisampled source or destination images. Use
vkCmdResolveImage for this purpose.

As the sizes of the source and destination extents can differ in any dimension, texels in the source extent are scaled and filtered to the destination extent. Scaling occurs via the following operations:

- For each destination texel, the integer coordinate of that texel is converted to an unnormalized texture coordinate, using the effective inverse of the equations described in unnormalized to integer conversion:

  \[
  u_{\text{base}} = i + \frac{1}{2} \\
  v_{\text{base}} = j + \frac{1}{2} \\
  w_{\text{base}} = k + \frac{1}{2}
  \]

- These base coordinates are then offset by the first destination offset:

  \[
  u_{\text{offset}} = u_{\text{base}} - x_{\text{dst}0} \\
  v_{\text{offset}} = v_{\text{base}} - y_{\text{dst}0} \\
  w_{\text{offset}} = w_{\text{base}} - z_{\text{dst}0} \\
  a_{\text{offset}} = a - \text{baseArrayCount}_{\text{dst}}
  \]

- The scale is determined from the source and destination regions, and applied to the offset coordinates:

  \[
  \text{scale}_u = \frac{(x_{\text{src}1} - x_{\text{src}0})}{(x_{\text{dst}1} - x_{\text{dst}0})} \\
  \text{scale}_v = \frac{(y_{\text{src}1} - y_{\text{src}0})}{(y_{\text{dst}1} - y_{\text{dst}0})} \\
  \text{scale}_w = \frac{(z_{\text{src}1} - z_{\text{src}0})}{(z_{\text{dst}1} - z_{\text{dst}0})}
  \]

  \[
  u_{\text{scaled}} = u_{\text{offset}} \times \text{scale}_u \\
  v_{\text{scaled}} = v_{\text{offset}} \times \text{scale}_v
  \]
Finally the source offset is added to the scaled coordinates, to determine the final unnormalized coordinates used to sample from `srcImage`:

\[
\begin{align*}
    u &= u_{\text{scaled}} + x_{\text{src0}} \\
    v &= v_{\text{scaled}} + y_{\text{src0}} \\
    w &= w_{\text{scaled}} + z_{\text{src0}} \\
    q &= \text{mipLevel} \\
    a &= a_{\text{offset}} + \text{baseArrayCount}_{\text{src}}
\end{align*}
\]

These coordinates are used to sample from the source image, as described in Image Operations chapter, with the filter mode equal to that of `filter`, a mipmap mode of `VK_SAMPLER_MIPMAP_MODE_NEAREST` and an address mode of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`. Implementations must clamp at the edge of the source image, and may additionally clamp to the edge of the source region.

**Note**

Due to allowable rounding errors in the generation of the source texture coordinates, it is not always possible to guarantee exactly which source texels will be sampled for a given blit. As rounding errors are implementation-dependent, the exact results of a blitting operation are also implementation-dependent.

Blits are done layer by layer starting with the `baseArrayLayer` member of `srcSubresource` for the source and `dstSubresource` for the destination. `layerCount` layers are blitted to the destination image.

When blitting 3D textures, slices in the destination region bounded by `dstOffsets[0].z` and `dstOffsets[1].z` are sampled from slices in the source region bounded by `srcOffsets[0].z` and `srcOffsets[1].z`. If the `filter` parameter is `VK_FILTER_LINEAR` then the value sampled from the source image is taken by doing linear filtering using the interpolated `z` coordinate represented by `w` in the previous equations. If the `filter` parameter is `VK_FILTER_NEAREST` then the value sampled from the source image is taken from the single nearest slice, with an implementation-dependent arithmetic rounding mode.

The following filtering and conversion rules apply:

- Integer formats **can** only be converted to other integer formats with the same signedness.
- No format conversion is supported between depth/stencil images. The formats **must** match.
• Format conversions on unorm, snorm, scaled and packed float formats of the copied aspect of the image are performed by first converting the pixels to float values.

• For sRGB source formats, nonlinear RGB values are converted to linear representation prior to filtering.

• After filtering, the float values are first clamped and then cast to the destination image format. In case of sRGB destination format, linear RGB values are converted to nonlinear representation before writing the pixel to the image.

Signed and unsigned integers are converted by first clamping to the representable range of the destination format, then casting the value.

### Valid Usage

• VUID-vkCmdBlitImage-commandBuffer-01834
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` must not be a protected image

• VUID-vkCmdBlitImage-commandBuffer-01835
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` must not be a protected image

• VUID-vkCmdBlitImage-commandBuffer-01836
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` must not be an unprotected image

• VUID-vkCmdBlitImage-pRegions-00215
  The source region specified by each element of `pRegions` must be a region that is contained within `srcImage`

• VUID-vkCmdBlitImage-pRegions-00216
  The destination region specified by each element of `pRegions` must be a region that is contained within `dstImage`

• VUID-vkCmdBlitImage-pRegions-00217
  The union of all destination regions, specified by the elements of `pRegions`, must not overlap in memory with any texel that may be sampled during the blit operation

• VUID-vkCmdBlitImage-srcImage-01999
  The format features of `srcImage` must contain `VK_FORMAT_FEATURE_BLIT_SRC_BIT`

• VUID-vkCmdBlitImage-srcImage-06421
  `srcImage` must not use a format that requires a sampler YC0C0 conversion

• VUID-vkCmdBlitImage-srcImage-00219
  `srcImage` must have been created with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag

• VUID-vkCmdBlitImage-srcImageLayout-00220
  If `srcImage` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object

• VUID-vkCmdBlitImage-srcImageLayout-00221
  `srcImageLayout` must specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`
The command `vkCmdBlitImage` is used to transfer pixels from one image to another. The source and destination images must be in specific layouts to ensure the operation can be performed. Here are the key requirements:

1. **`srcImageLayout`** must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

2. If both `srcImage` and `dstImage` are the same, and an element of `pRegions` contains matching `srcSubresource` and `dstSubresource` with a matching `mipLevel` and overlapping array layers, then `srcImageLayout` and `dstImageLayout` must be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`.

3. The format features of `dstImage` must contain `VK_FORMAT_FEATURE_BLIT_DST_BIT`.

4. `dstImage` must not use a format that requires a sampler Y′C_bC_r conversion.

5. `dstImage` must have been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag.

6. If `dstImage` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

7. `dstImageLayout` must specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

8. `dstImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL`, or `VK_IMAGE_LAYOUT_GENERAL`.

9. If either of `srcImage` or `dstImage` was created with a signed integer `VkFormat`, the other must also have been created with a signed integer `VkFormat`.

10. If either of `srcImage` or `dstImage` was created with an unsigned integer `VkFormat`, the other must also have been created with an unsigned integer `VkFormat`.

11. If either of `srcImage` or `dstImage` was created with a depth/stencil format, the other must have exactly the same format.

12. If `srcImage` was created with a depth/stencil format, `filter` must be `VK_FILTER_NEAREST`.

13. `srcImage` must have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`.

14. If `filter` is `VK_FILTER_LINEAR`, then the format features of `srcImage` must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`.

15. If `filter` is `VK_FILTER_LINEAR`, then the format features of `srcImage` must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`.

16. The command must be executed within a `VkDevice` context.
If `filter` is `VK_FILTER_CUBIC_EXT`, then the format features of `srcImage` must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`

- **VUID-vkCmdBlitImage-filter-00237**
  If `filter` is `VK_FILTER_CUBIC_EXT`, `srcImage` must be of type `VK_IMAGE_TYPE_2D`

- **VUID-vkCmdBlitImage-srcSubresource-01705**
  The `srcSubresource.mipLevel` member of each element of `pRegions` must be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created

- **VUID-vkCmdBlitImage-dstSubresource-01706**
  The `dstSubresource.mipLevel` member of each element of `pRegions` must be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created

- **VUID-vkCmdBlitImage-srcSubresource-01707**
  If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer + srcSubresource.layerCount` of each element of `pRegions` must be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created

- **VUID-vkCmdBlitImage-dstSubresource-01708**
  If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer + dstSubresource.layerCount` of each element of `pRegions` must be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created

- **VUID-vkCmdBlitImage-dstImage-02545**
  `dstImage` and `srcImage` must not have been created with flags containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- **VUID-vkCmdBlitImage-srcImage-00240**
  If either `srcImage` or `dstImage` is of type `VK_IMAGE_TYPE_3D`, then for each element of `pRegions, srcSubresource.baseArrayLayer` and `dstSubresource.baseArrayLayer` must each be 0, and `srcSubresource.layerCount` and `dstSubresource.layerCount` must each be 1

- **VUID-vkCmdBlitImage-aspectMask-00241**
  For each element of `pRegions, srcSubresource.aspectMask` must specify aspects present in `srcImage`

- **VUID-vkCmdBlitImage-aspectMask-00242**
  For each element of `pRegions, dstSubresource.aspectMask` must specify aspects present in `dstImage`

- **VUID-vkCmdBlitImage-srcOffset-00243**
  For each element of `pRegions, srcOffsets[0].x` and `srcOffsets[1].x` must both be greater than or equal to 0 and less than or equal to the width of the specified `srcSubresource` of `srcImage`

- **VUID-vkCmdBlitImage-srcOffset-00244**
  For each element of `pRegions, srcOffsets[0].y` and `srcOffsets[1].y` must both be greater than or equal to 0 and less than or equal to the height of the specified `srcSubresource` of `srcImage`

- **VUID-vkCmdBlitImage-srcImage-00245**
  If `srcImage` is of type `VK_IMAGE_TYPE_1D`, then for each element of `pRegions, srcOffsets[0].y`
must be 0 and srcOffsets[1].y must be 1

- **VUID-vkCmdBlitImage-srcOffset-00246**
  For each element of *pRegions*, srcOffsets[0].z and srcOffsets[1].z must both be greater than or equal to 0 and less than or equal to the depth of the specified *srcSubresource* of *srcImage*

- **VUID-vkCmdBlitImage-srcImage-00247**
  If *srcImage* is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of *pRegions*, srcOffsets[0].z must be 0 and srcOffsets[1].z must be 1

- **VUID-vkCmdBlitImage-dstOffset-00248**
  For each element of *pRegions*, dstOffsets[0].x and dstOffsets[1].x must both be greater than or equal to 0 and less than or equal to the width of the specified *dstSubresource* of *dstImage*

- **VUID-vkCmdBlitImage-dstImage-00250**
  If *dstImage* is of type VK_IMAGE_TYPE_1D, then for each element of *pRegions*, dstOffsets[0].y must be 0 and dstOffsets[1].y must be 1

- **VUID-vkCmdBlitImage-dstImage-00251**
  For each element of *pRegions*, dstOffsets[0].z and dstOffsets[1].z must both be greater than or equal to 0 and less than or equal to the depth of the specified *dstSubresource* of *dstImage*

- **VUID-vkCmdBlitImage-dstImage-00252**
  If *dstImage* is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of *pRegions*, dstOffsets[0].z must be 0 and dstOffsets[1].z must be 1

---

**Valid Usage (Implicit)**

- **VUID-vkCmdBlitImage-commandBuffer-parameter**
  commandBuffer must be a valid VkCommandBuffer handle

- **VUID-vkCmdBlitImage-srcImage-parameter**
  srcImage must be a valid VkImage handle

- **VUID-vkCmdBlitImage-srcImageLayout-parameter**
  srcImageLayout must be a valid VkImageLayout value

- **VUID-vkCmdBlitImage-dstImage-parameter**
  dstImage must be a valid VkImage handle

- **VUID-vkCmdBlitImage-dstImageLayout-parameter**
  dstImageLayout must be a valid VkImageLayout value

- **VUID-vkCmdBlitImage-pRegions-parameter**
  pRegions must be a valid pointer to an array of *regionCount* valid VkImageBlit structures

- **VUID-vkCmdBlitImage-filter-parameter**
filter must be a valid VkFilter value

- VUID-vkCmdBlitImage-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdBlitImage-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics operations

- VUID-vkCmdBlitImage-renderpass
  This command must only be called outside of a render pass instance

- VUID-vkCmdBlitImage-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdBlitImage-regionCount-arraylength
  regionCount must be greater than 0

- VUID-vkCmdBlitImage-commonparent
  Each of commandBuffer, dstImage, and srcImage must have been created, allocated, or retrieved from the same VkDevice

### Host Synchronization

- Host access to commandBuffer must be externally synchronized
- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary, Secondary</td>
<td>Outside</td>
<td>Outside</td>

</tr>
</tbody>
</table>

The VkImageBlit structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageBlit {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffsets[2];
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D dstOffsets[2];
} VkImageBlit;
```

- srcSubresource is the subresource to blit from.
- srcOffsets is a pointer to an array of two VkOffset3D structures specifying the bounds of the
source region within srcSubresource.

- dstSubresource is the subresource to blit into.

- dstOffsets is a pointer to an array of two VkOffset3D structures specifying the bounds of the destination region within dstSubresource.

For each element of the pRegions array, a blit operation is performed for the specified source and destination regions.

**Valid Usage**

- VUID-VkImageBlit-aspectMask-00238
  The aspectMask member of srcSubresource and dstSubresource must match

- VUID-VkImageBlit-layerCount-08800
  If neither of the layerCount members of srcSubresource or dstSubresource are VK_REMAINING_ARRAY_LAYERS, the layerCount members of srcSubresource or dstSubresource must match

- VUID-VkImageBlit-layerCount-08801
  If one of the layerCount members of srcSubresource or dstSubresource is VK_REMAINING_ARRAY_LAYERS, the other member must be either VK_REMAINING_ARRAY_LAYERS or equal to the arrayLayers member of the VkImageCreateInfo used to create the image minus baseArrayLayer

**Valid Usage (Implicit)**

- VUID-VkImageBlit-srcSubresource-parameter
  srcSubresource must be a valid VkImageSubresourceLayers structure

- VUID-VkImageBlit-dstSubresource-parameter
  dstSubresource must be a valid VkImageSubresourceLayers structure

A more extensible version of the blit image command is defined below.

To copy regions of a source image into a destination image, potentially performing format conversion, arbitrary scaling, and filtering, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdBlitImage2(
    VkCommandBuffer commandBuffer,
    const VkBlitImageInfo2* pBlitImageInfo);
```

or the equivalent command

```c
// Provided by VK_KHR_copy_commands2
void vkCmdBlitImage2KHR(
```
VkCommandBuffer commandBuffer, const VkBlitImageInfo2* pBlitImageInfo);

• `commandBuffer` is the command buffer into which the command will be recorded.
• `pBlitImageInfo` is a pointer to a `VkBlitImageInfo2` structure describing the blit parameters.

This command is functionally identical to `vkCmdBlitImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

**Valid Usage**

• VUID-vkCmdBlitImage2-commandBuffer-01834
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` must not be a protected image.

• VUID-vkCmdBlitImage2-commandBuffer-01835
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` must not be a protected image.

• VUID-vkCmdBlitImage2-commandBuffer-01836
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` must not be an unprotected image.

**Valid Usage (Implicit)**

• VUID-vkCmdBlitImage2-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

• VUID-vkCmdBlitImage2-pBlitImageInfo-parameter
  `pBlitImageInfo` must be a valid pointer to a valid `VkBlitImageInfo2` structure.

• VUID-vkCmdBlitImage2-commandBuffer-recording
  `commandBuffer` must be in the recording state.

• VUID-vkCmdBlitImage2-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics operations.

• VUID-vkCmdBlitImage2-renderpass
  This command must only be called outside of a render pass instance.

• VUID-vkCmdBlitImage2-videocoding
  This command must only be called outside of a video coding scope.

**Host Synchronization**

• Host access to `commandBuffer` must be externally synchronized.

• Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.
The `VkBlitImageInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkBlitImageInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkImage srcImage;
    VkImageLayout srcImageLayout;
    VkImage dstImage;
    VkImageLayout dstImageLayout;
    uint32_t regionCount;
    const VkImageBlit2* pRegions;
    VkFilter filter;
} VkBlitImageInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkBlitImageInfo2 VkBlitImageInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the blit.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the blit.
- `regionCount` is the number of regions to blit.
- `pRegions` is a pointer to an array of `VkImageBlit2` structures specifying the regions to blit.
- `filter` is a `VkFilter` specifying the filter to apply if the blits require scaling.

### Valid Usage

- `VUID-VkBlitImageInfo2-pRegions-00215`
  The source region specified by each element of `pRegions` must be a region that is
The destination region specified by each element of `pRegions` must be a region that is contained within `dstImage`.

The union of all destination regions, specified by the elements of `pRegions`, must not overlap in memory with any texel that may be sampled during the blit operation.

The format features of `srcImage` must contain `VK_FORMAT_FEATURE_BLIT_SRC_BIT`.

`srcImage` must not use a format that requires a sampler YC_B_C_R conversion.

`srcImage` has been created with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` usage flag.

If `srcImage` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

`srcImageLayout` must specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

`srcImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`.

If `srcImage` and `dstImage` are the same, and an elements of `pRegions` contains the `srcSubresource` and `dstSubresource` with matching `mipLevel` and overlapping array layers, then the `srcImageLayout` and `dstImageLayout` must be `VK_IMAGE_LAYOUT_GENERAL` or `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`.

The format features of `dstImage` must contain `VK_FORMAT_FEATURE_BLIT_DST_BIT`.

`dstImage` must not use a format that requires a sampler YC_B_C_R conversion.

`dstImage` has been created with `VK_IMAGE_USAGE_TRANSFER_DST_BIT` usage flag.

If `dstImage` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

`dstImageLayout` must specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

`dstImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`. 
If either of `srcImage` or `dstImage` was created with a signed integer `VkFormat`, the other **must** also have been created with a signed integer `VkFormat`.

If either of `srcImage` or `dstImage` was created with an unsigned integer `VkFormat`, the other **must** also have been created with an unsigned integer `VkFormat`.

If either of `srcImage` or `dstImage` was created with a depth/stencil format, the other **must** have exactly the same format.

If `srcImage` was created with a depth/stencil format, **filter** **must** be `VK_FILTER_NEAREST`.

`srcImage` **must** have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`.

`dstImage` **must** have been created with a `samples` value of `VK_SAMPLE_COUNT_1_BIT`.

If `filter` is `VK_FILTER_LINEAR`, then the `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`.

If `filter` is `VK_FILTER_CUBIC_EXT`, then the `format features` of `srcImage` **must** contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`.

If `filter` is `VK_FILTER_CUBIC_EXT`, `srcImage` **must** be of type `VK_IMAGE_TYPE_2D`.

The `srcSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `srcImage` was created.

The `dstSubresource.mipLevel` member of each element of `pRegions` **must** be less than the `mipLevels` specified in `VkImageCreateInfo` when `dstImage` was created.

If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `srcSubresource.baseArrayLayer + srcSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `srcImage` was created.

If `srcSubresource.layerCount` is not `VK_REMAINING_ARRAY_LAYERS`, `dstSubresource.baseArrayLayer + dstSubresource.layerCount` of each element of `pRegions` **must** be less than or equal to the `arrayLayers` specified in `VkImageCreateInfo` when `dstImage` was created.

`dstImage` and `srcImage` **must** not have been created with `flags` containing `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`.
If either srcImage or dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.baseArrayLayer and dstSubresource.baseArrayLayer must each be 0, and srcSubresource.layerCount and dstSubresource.layerCount must each be 1.

For each element of pRegions, srcSubresource.aspectMask must specify aspects present in srcImage.

For each element of pRegions, dstSubresource.aspectMask must specify aspects present in dstImage.

For each element of pRegions, srcOffsets[0].x and srcOffsets[1].x must both be greater than or equal to 0 and less than or equal to the width of the specified srcSubresource of srcImage.

For each element of pRegions, srcOffsets[0].y and srcOffsets[1].y must both be greater than or equal to 0 and less than or equal to the height of the specified srcSubresource of srcImage.

If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, srcOffsets[0].y must be 0 and srcOffsets[1].y must be 1.

For each element of pRegions, srcOffsets[0].z and srcOffsets[1].z must both be greater than or equal to 0 and less than or equal to the depth of the specified srcSubresource of srcImage.

If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, srcOffsets[0].z must be 0 and srcOffsets[1].z must be 1.

For each element of pRegions, dstOffsets[0].x and dstOffsets[1].x must both be greater than or equal to 0 and less than or equal to the width of the specified dstSubresource of dstImage.

For each element of pRegions, dstOffsets[0].y and dstOffsets[1].y must both be greater than or equal to 0 and less than or equal to the height of the specified dstSubresource of dstImage.

If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, dstOffsets[0].y must be 0 and dstOffsets[1].y must be 1.

For each element of pRegions, dstOffsets[0].z and dstOffsets[1].z must both be greater than or equal to 0 and less than or equal to the depth of the specified dstSubresource of dstImage.
If `dstImage` is of type `VK_IMAGE_TYPE_1D` or `VK_IMAGE_TYPE_2D`, then for each element of `pRegions`, `dstOffsets[0].z` must be 0 and `dstOffsets[1].z` must be 1.

If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` and `dstImage` must not be block-compressed images.

If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` must be of type `VK_IMAGE_TYPE_2D`.

If any element of `pRegions` contains `VkCopyCommandTransformInfoQCOM` in its `pNext` chain, then `srcImage` must not have a multi-planar format.

If `filter` is `VK_FILTER_CUBIC_EXT` and if the `selectableCubicWeights` feature is not enabled, then the cubic weights must be `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

**Valid Usage (Implicit)**

- **VUID-VkBlitImageInfo2-sType-sType**: `sType` must be `VK_STRUCTURE_TYPE_BLIT_IMAGE_INFO_2`.
- **VUID-VkBlitImageInfo2-pNext-pNext**: `pNext` must be `NULL` or a pointer to a valid instance of `VkBlitImageCubicWeightsInfoQCOM`.
- **VUID-VkBlitImageInfo2-sType-unique**: The `sType` value of each struct in the `pNext` chain must be unique.
- **VUID-VkBlitImageInfo2-srcImage-parameter**: `srcImage` must be a valid `VkImage` handle.
- **VUID-VkBlitImageInfo2-srcImageLayout-parameter**: `srcImageLayout` must be a valid `VkImageLayout` value.
- **VUID-VkBlitImageInfo2-dstImage-parameter**: `dstImage` must be a valid `VkImage` handle.
- **VUID-VkBlitImageInfo2-dstImageLayout-parameter**: `dstImageLayout` must be a valid `VkImageLayout` value.
- **VUID-VkBlitImageInfo2-pRegions-parameter**: `pRegions` must be a valid pointer to an array of `regionCount` valid `VkImageBlit2` structures.
- **VUID-VkBlitImageInfo2-filter-parameter**: `filter` must be a valid `VkFilter` value.
- **VUID-VkBlitImageInfo2-regionCount-arraylength**: `regionCount` must be greater than 0.
- **VUID-VkBlitImageInfo2-commonparent**: Both of `dstImage`, and `srcImage` must have been created, allocated, or retrieved from the same `VkDevice`.
If `filter` is `VK_FILTER_CUBIC_EXT` and if the `pNext` chain of `VkBlitImageInfo2` includes a `VkBlitImageCubicWeightsInfoQCOM` structure, then that structure specifies cubic weights are used in the blit. If that structure is not present, then cubic weights are considered to be `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

The `VkBlitImageCubicWeightsInfoQCOM` structure is defined as:

```c
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkBlitImageCubicWeightsInfoQCOM {
  VkStructureType sType;
  const void* pNext;
  VkCubicFilterWeightsQCOM cubicWeights;
} VkBlitImageCubicWeightsInfoQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cubicWeights` is a `VkCubicFilterWeightsQCOM` value controlling cubic filter weights for the blit.

### Valid Usage (Implicit)

- `VUID-VkBlitImageCubicWeightsInfoQCOM-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_BLIT_IMAGE_CUBIC_WEIGHTS_INFO_QCOM`  

- `VUID-VkBlitImageCubicWeightsInfoQCOM-cubicWeights-parameter`  
  `cubicWeights` must be a valid `VkCubicFilterWeightsQCOM` value

The `VkImageBlit2` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkImageBlit2 {
  VkStructureType sType;
  const void* pNext;
  VkImageSubresourceLayers srcSubresource;
  VkOffset3D srcOffsets[2];
  VkImageSubresourceLayers dstSubresource;
  VkOffset3D dstOffsets[2];
} VkImageBlit2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkImageBlit2 VkImageBlit2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
• **srcSubresource** is the subresource to blit from.
• **srcOffsets** is a pointer to an array of two VkOffset3D structures specifying the bounds of the source region within **srcSubresource**.
• **dstSubresource** is the subresource to blit into.
• **dstOffsets** is a pointer to an array of twoVkOffset3D structures specifying the bounds of the destination region within **dstSubresource**.

For each element of the **pRegions** array, a blit operation is performed for the specified source and destination regions.

### Valid Usage

- **VUID-VkImageBlit2-aspectMask-00238**
  The **aspectMask** member of **srcSubresource** and **dstSubresource** must match.

- **VUID-VkImageBlit2-layerCount-08800**
  If neither of the **layerCount** members of **srcSubresource** or **dstSubresource** are VK_REMAINING_ARRAY_LAYERS, the **layerCount** members of **srcSubresource** or **dstSubresource** must match.

- **VUID-VkImageBlit2-layerCount-08801**
  If one of the **layerCount** members of **srcSubresource** or **dstSubresource** is VK_REMAINING_ARRAY_LAYERS, the other member must be either VK_REMAINING_ARRAY_LAYERS or equal to the **arrayLayers** member of the VkImageCreateInfo used to create the image minus **baseArrayLayer**.

### Valid Usage (Implicit)

- **VUID-VkImageBlit2-sType-sType**
  **sType** must be VK_STRUCTURE_TYPE_IMAGE_BLIT_2.

- **VUID-VkImageBlit2-pNext-pNext**
  **pNext** must be NULL or a pointer to a valid instance of VkCopyCommandTransformInfoQCOM.

- **VUID-VkImageBlit2-sType-unique**
  The **sType** value of each struct in the **pNext** chain must be unique.

- **VUID-VkImageBlit2-srcSubresource-parameter**
  **srcSubresource** must be a valid VkImageSubresourceLayers structure.

- **VUID-VkImageBlit2-dstSubresource-parameter**
  **dstSubresource** must be a valid VkImageSubresourceLayers structure.

For **vkCmdBlitImage2**, each region copied can include a rotation. To specify a rotated region, add VkCopyCommandTransformInfoQCOM to the **pNext** chain of VkImageBlit2. For each region with a rotation specified, Image Blits with Scaling and Rotation specifies how coordinates are rotated prior to sampling from the source image. When rotation is specified, the source and destination images...
must each be 2D images, have a 1x1x1 texel block extent, and only one plane.

20.5.1. Image Blits With Scaling and Rotation

When VkCopyCommandTransformInfoQCOM is in the pNext chain of VkImageBlit2, the specified region is rotated during the blit. The following description of rotated addressing replaces the description in vkCmdBlitImage.

The following code computes rotation of normalized coordinates.

```c
// rotation of normalized coordinates
VkOffset2D RotateNormUV(VkOffset2D in, VkSurfaceTransformFlagBitsKHR flags)
{
    VkOffset2D output;
    switch (flags)
    {
        case VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR:
            out.x = in.x;
            out.y = in.y;
            break;
        case VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR:
            out.x = in.y;
            out.y = 1.0 - in.x;
            break;
        case VK_SURFACE_TRANSFORM_ROTATE_180_BIT_KHR:
            out.x = 1.0 - in.x;
            out.y = 1.0 - in.y;
            break;
        case VK_SURFACE_TRANSFORM_ROTATE_270_BIT_KHR:
            out.x = 1.0 - in.y;
            out.y = in.x;
            break;
    }
    return out;
}
```

- For each destination texel, the integer coordinate of that texel is converted to an unnormalized texture coordinate, using the effective inverse of the equations described in unnormalized to integer conversion:

  \[
  u_{\text{base}} = i + \frac{1}{2} \\
  v_{\text{base}} = j + \frac{1}{2} \\
  w_{\text{base}} = k + \frac{1}{2}
  \]
• These base coordinates are then offset by the first destination offset:

\[
\begin{align*}
    u_{offset} &= u_{base} - x_{dst0} \\
    v_{offset} &= v_{base} - y_{dst0} \\
    w_{offset} &= w_{base} - z_{dst0} \\
    a_{offset} &= a - baseArrayCount_{dst}
\end{align*}
\]

• The UV destination coordinates are scaled by the destination region, rotated, and scaled by the source region.

\[
\begin{align*}
    u_{dest \_scaled} &= \frac{u_{offset}}{(x_{dst1} - x_{dst0})} \\
    v_{dest \_scaled} &= \frac{v_{offset}}{(y_{dst1} - y_{dst0})}
\end{align*}
\]

\[
(u_{src \_scaled}, v_{src \_scaled}) = RotateNormUV(u_{dest \_scaled}, v_{dest \_scaled}, transform)
\]

\[
\begin{align*}
    u_{scaled} &= u_{src \_scaled} \times (x_{Src1} - x_{Src0}) \\
    v_{scaled} &= v_{src \_scaled} \times (y_{Src1} - y_{Src0})
\end{align*}
\]

• The W coordinate is unaffected by rotation. The scale is determined from the ratio of source and destination regions, and applied to the offset coordinate:

\[
scale_w = \frac{(z_{Src1} - z_{Src0})}{(z_{dst1} - z_{dst0})}
\]

\[
w_{scaled} = w_{offset} \times scale_w
\]

• Finally the source offset is added to the scaled source coordinates, to determine the final unnormalized coordinates used to sample from \textit{srcImage}:

\[
\begin{align*}
    u &= u_{scaled} + x_{Src0} \\
    v &= v_{scaled} + y_{Src0}
\end{align*}
\]
These coordinates are used to sample from the source image as described for Image Operations, with the filter mode equal to that of filter; a mipmap mode of VK_SAMPLER_MIPMAP_MODE_NEAREST; and an address mode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE. Implementations must clamp at the edge of the source image, and may additionally clamp to the edge of the source region.

20.6. Resolving Multisample Images

To resolve a multisample color image to a non-multisample color image, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdResolveImage(
    VkCommandBuffer commandBuffer,
    VkImage srcImage,
    VkImageLayout srcImageLayout,
    VkImage dstImage,
    VkImageLayout dstImageLayout,
    uint32_t regionCount,
    const VkImageResolve* pRegions);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the resolve.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the resolve.
- `regionCount` is the number of regions to resolve.
- `pRegions` is a pointer to an array of `VkImageResolve` structures specifying the regions to resolve.

During the resolve the samples corresponding to each pixel location in the source are converted to a single sample before being written to the destination. If the source formats are floating-point or normalized types, the sample values for each pixel are resolved in an implementation-dependent manner. If the source formats are integer types, a single sample's value is selected for each pixel.

`srcOffset` and `dstOffset` select the initial x, y, and z offsets in texels of the sub-regions of the source and destination image data. `extent` is the size in texels of the source image to resolve in width, height and depth. Each element of `pRegions` must be a region that is contained within its corresponding image.
Resolves are done layer by layer starting with `baseArrayLayer` member of `srcSubresource` for the source and `dstSubresource` for the destination. `layerCount` layers are resolved to the destination image.

### Valid Usage

- **VUID-vkCmdResolveImage-commandBuffer-01837**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` must not be a protected image.

- **VUID-vkCmdResolveImage-commandBuffer-01838**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` must not be a protected image.

- **VUID-vkCmdResolveImage-commandBuffer-01839**
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` must not be an unprotected image.

- **VUID-vkCmdResolveImage-pRegions-00255**
  The union of all source regions, and the union of all destination regions, specified by the elements of `pRegions`, must not overlap in memory.

- **VUID-vkCmdResolveImage-srcImage-00256**
  If `srcImage` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

- **VUID-vkCmdResolveImage-srcImage-00257**
  `srcImage` must have a sample count equal to any valid sample count value other than `VK_SAMPLE_COUNT_1_BIT`.

- **VUID-vkCmdResolveImage-dstImage-00258**
  If `dstImage` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object.

- **VUID-vkCmdResolveImage-dstImage-00259**
  `dstImage` must have a sample count equal to `VK_SAMPLE_COUNT_1_BIT`.

- **VUID-vkCmdResolveImage-srcImageLayout-00260**
  `srcImageLayout` must specify the layout of the image subresources of `srcImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdResolveImage-dstImageLayout-00261**
  `dstImageLayout` must specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdResolveImage-dstImageLayout-01400**
  `srcImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`.

- **VUID-vkCmdResolveImage-dstImageLayout-00262**
  `dstImageLayout` must specify the layout of the image subresources of `dstImage` specified in `pRegions` at the time this command is executed on a `VkDevice`.

- **VUID-vkCmdResolveImage-dstImageLayout-01401**
  `dstImageLayout` must be `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`, `VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL` or `VK_IMAGE_LAYOUT_GENERAL`.

- **VUID-vkCmdResolveImage-dstImage-02003**
The format features of dstImage must contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT

- VUID-vkCmdResolveImage-linearColorAttachment-06519
  If the linearColorAttachment feature is enabled and the image is created with VK_IMAGE_TILING_LINEAR, the format features of dstImage must contain VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV

- VUID-vkCmdResolveImage-srcImage-01386
  srcImage and dstImage must have been created with the same image format

- VUID-vkCmdResolveImage-srcSubresource-01709
  The srcSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-vkCmdResolveImage-dstSubresource-01710
  The dstSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when dstImage was created

- VUID-vkCmdResolveImage-srcSubresource-01711
  If srcSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, srcSubresource.baseArrayLayer + srcSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when srcImage was created

- VUID-vkCmdResolveImage-dstSubresource-01712
  If dstSubresource.layerCount is not VK_REMAINING_ARRAY_LAYERS, dstSubresource.baseArrayLayer + dstSubresource.layerCount of each element of pRegions must be less than or equal to the arrayLayers specified in VkImageCreateInfo when dstImage was created

- VUID-vkCmdResolveImage-dstImage-02546
  dstImage and srcImage must not have been created with flags containing VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- VUID-vkCmdResolveImage-srcImage-04446
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, srcSubresource.layerCount must be 1

- VUID-vkCmdResolveImage-dstImage-04447
  If dstImage is of type VK_IMAGE_TYPE_3D, then for each element of pRegions, dstSubresource.baseArrayLayer must be 0 and dstSubresource.layerCount must be 1

- VUID-vkCmdResolveImage-srcOffset-00269
  For each element of pRegions, srcOffset.x and (extent.width + srcOffset.x) must both be greater than or equal to 0 and less than or equal to the width of the specified srcSubresource of srcImage

- VUID-vkCmdResolveImage-srcOffset-00270
  For each element of pRegions, srcOffset.y and (extent.height + srcOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified srcSubresource of srcImage

- VUID-vkCmdResolveImage-srcImage-00271
  If srcImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, srcOffset.y must be 0 and extent.height must be 1
For each element of pRegions, srcOffset.z and (extent.depth + srcOffset.z) must both be greater than or equal to 0 and less than or equal to the depth of the specified srcSubresource of srcImage.

If srcImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, srcOffset.z must be 0 and extent.depth must be 1.

For each element of pRegions, dstOffset.x and (extent.width + dstOffset.x) must both be greater than or equal to 0 and less than or equal to the width of the specified dstSubresource of dstImage.

For each element of pRegions, dstOffset.y and (extent.height + dstOffset.y) must both be greater than or equal to 0 and less than or equal to the height of the specified dstSubresource of dstImage.

If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, dstOffset.y must be 0 and extent.height must be 1.

For each element of pRegions, dstOffset.z and (extent.depth + dstOffset.z) must both be greater than or equal to 0 and less than or equal to the depth of the specified dstSubresource of dstImage.

If dstImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, dstOffset.z must be 0 and extent.depth must be 1.

srcImage must have been created with VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag.

The format features of srcImage must contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT.

dstImage must have been created with VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag.

The format features of dstImage must contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT.

Valid Usage (Implicit)

commandBuffer must be a valid VkCommandBuffer handle.

srcImage must be a valid VkImage handle.

srcImageLayout must be a valid VkImageLayout value.
• VUID-vkCmdResolveImage-dstImage-parameter
dstImage must be a valid VkImage handle
• VUID-vkCmdResolveImage-dstImageLayout-parameter
dstImageLayout must be a valid VkImageLayout value
• VUID-vkCmdResolveImage-pRegions-parameter
pRegions must be a valid pointer to an array of regionCount valid VkImageResolve structures
• VUID-vkCmdResolveImage-commandBuffer-recording
commandBuffer must be in the recording state
• VUID-vkCmdResolveImage-commandBuffer-cmdpool
The VkCommandPool that commandBuffer was allocated from must support graphics operations
• VUID-vkCmdResolveImage-renderpass
This command must only be called outside of a render pass instance
• VUID-vkCmdResolveImage-videocoding
This command must only be called outside of a video coding scope
• VUID-vkCmdResolveImage-regionCount-arraylength
regionCount must be greater than 0
• VUID-vkCmdResolveImage-commonparent
Each of commandBuffer, dstImage, and srcImage must have been created, allocated, or retrieved from the same VkDevice

---

Host Synchronization

• Host access to commandBuffer must be externally synchronized
• Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized

---

The VkImageResolve structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageResolve {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffset;
};
```
```plaintext
typedef struct VkImageResolve {
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D dstOffset;
    VkExtent3D extent;
} VkImageResolve;
```

- `srcSubresource` and `dstSubresource` are `VkImageSubresourceLayers` structures specifying the image subresources of the images used for the source and destination image data, respectively. Resolve of depth/stencil images is not supported.
- `srcOffset` and `dstOffset` select the initial x, y, and z offsets in texels of the sub-regions of the source and destination image data.
- `extent` is the size in texels of the source image to resolve in width, height and depth.

### Valid Usage

- **VUID-VkImageResolve-aspectMask-00266**
The `aspectMask` member of `srcSubresource` and `dstSubresource` must only contain `VK_IMAGE_ASPECT_COLOR_BIT`
- **VUID-VkImageResolve-layerCount-08803**
  If neither of the `layerCount` members of `srcSubresource` or `dstSubresource` are `VK_REMAINING_ARRAY_LAYERS`, the `layerCount` member of `srcSubresource` and `dstSubresource` must match
- **VUID-VkImageResolve-layerCount-08804**
  If one of the `layerCount` members of `srcSubresource` or `dstSubresource` is `VK_REMAINING_ARRAY_LAYERS`, the other member must be either `VK_REMAINING_ARRAY_LAYERS` or equal to the `arrayLayers` member of the `VkImageCreateInfo` used to create the image minus `baseArrayLayer`

### Valid Usage (Implicit)

- **VUID-VkImageResolve-srcSubresource-parameter**
  `srcSubresource` must be a valid `VkImageSubresourceLayers` structure
- **VUID-VkImageResolve-dstSubresource-parameter**
  `dstSubresource` must be a valid `VkImageSubresourceLayers` structure

A more extensible version of the resolve image command is defined below.

To resolve a multisample image to a non-multisample image, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdResolveImage2(
    VkCommandBuffer commandBuffer,  // Command buffer
    const VkResolveImageInfo2* pResolveImageInfo);  // Resolve image info
```

---

1702
or the equivalent command

```c
void vkCmdResolveImage2KHR(
    VkCommandBuffer commandBuffer,
    const VkResolveImageInfo2* pResolveImageInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `pResolveImageInfo` is a pointer to a `VkResolveImageInfo2` structure describing the resolve parameters.

This command is functionally identical to `vkCmdResolveImage`, but includes extensible sub-structures that include `sType` and `pNext` parameters, allowing them to be more easily extended.

### Valid Usage

- VUID-vkCmdResolveImage2-commandBuffer-01837
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `srcImage` must not be a protected image
- VUID-vkCmdResolveImage2-commandBuffer-01838
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, `dstImage` must not be a protected image
- VUID-vkCmdResolveImage2-commandBuffer-01839
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, `dstImage` must not be an unprotected image

### Valid Usage (Implicit)

- VUID-vkCmdResolveImage2-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdResolveImage2-pResolveImageInfo-parameter
  `pResolveImageInfo` must be a valid pointer to a valid `VkResolveImageInfo2` structure
- VUID-vkCmdResolveImage2-commandBuffer-recording
  `commandBuffer` must be in the recording state
- VUID-vkCmdResolveImage2-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics operations
- VUID-vkCmdResolveImage2-renderpass
  This command must only be called outside of a render pass instance
- VUID-vkCmdResolveImage2-videocoding
  This command must only be called outside of a video coding scope
**Host Synchronization**

- Host access to `commandBuffer` **must** be externally synchronized.
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized.

**Command Properties**

<table>
<thead>

The `VkResolveImageInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkResolveImageInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkImage srcImage;
    VkImageLayout srcImageLayout;
    VkImage dstImage;
    VkImageLayout dstImageLayout;
    uint32_t regionCount;
    const VkImageResolve2* pRegions;
} VkResolveImageInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkResolveImageInfo2 VkResolveImageInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `srcImage` is the source image.
- `srcImageLayout` is the layout of the source image subresources for the resolve.
- `dstImage` is the destination image.
- `dstImageLayout` is the layout of the destination image subresources for the resolve.
- `regionCount` is the number of regions to resolve.
- `pRegions` is a pointer to an array of `VkImageResolve2` structures specifying the regions to resolve.
Valid Usage

- VUID-VkResolveImageInfo2-pRegions-00255
  The union of all source regions, and the union of all destination regions, specified by the elements of pRegions, must not overlap in memory

- VUID-VkResolveImageInfo2-srcImage-00256
  If srcImage is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkResolveImageInfo2-srcImage-00257
  srcImage must have a sample count equal to any valid sample count value other than VK_SAMPLE_COUNT_1_BIT

- VUID-VkResolveImageInfo2-dstImage-00258
  If dstImage is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-VkResolveImageInfo2-dstImage-00259
  dstImage must have a sample count equal to VK_SAMPLE_COUNT_1_BIT

- VUID-VkResolveImageInfo2-srcImageLayout-00260
  srcImageLayout must specify the layout of the image subresources of srcImage specified in pRegions at the time this command is executed on a VkDevice

- VUID-VkResolveImageInfo2-srcImageLayout-01400
  srcImageLayout must be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_SRC_OPTIMAL or VK_IMAGE_LAYOUT_GENERAL

- VUID-VkResolveImageInfo2-dstImageLayout-00262
  dstImageLayout must specify the layout of the image subresources of dstImage specified in pRegions at the time this command is executed on a VkDevice

- VUID-VkResolveImageInfo2-dstImageLayout-01401
  dstImageLayout must be VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR, VK_IMAGE_LAYOUT_TRANSFER_DST_OPTIMAL or VK_IMAGE_LAYOUT_GENERAL

- VUID-VkResolveImageInfo2-dstImage-02003
  The format features of dstImage must contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT

- VUID-VkResolveImageInfo2-linearColorAttachment-06519
  If the linearColorAttachment feature is enabled and the image is created with VK_IMAGE_TILING_LINEAR, the format features of dstImage must contain VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV

- VUID-VkResolveImageInfo2-srcImage-01386
  srcImage and dstImage must have been created with the same image format

- VUID-VkResolveImageInfo2-srcSubresource-01709
  The srcSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when srcImage was created

- VUID-VkResolveImageInfo2-dstSubresource-01710
  The dstSubresource.mipLevel member of each element of pRegions must be less than the mipLevels specified in VkImageCreateInfo when dstImage was created
If \( \text{srcSubresource.layerCount} \) is not \( \text{VK_REMAINING_ARRAY_LAYERS} \), \( \text{srcSubresource.baseArrayLayer} + \text{srcSubresource.layerCount} \) of each element of \( \text{pRegions} \) must be less than or equal to the \( \text{arrayLayers} \) specified in \( \text{VkImageCreateInfo} \) when \( \text{srcImage} \) was created.

If \( \text{dstSubresource.layerCount} \) is not \( \text{VK_REMAINING_ARRAY_LAYERS} \), \( \text{dstSubresource.baseArrayLayer} + \text{dstSubresource.layerCount} \) of each element of \( \text{pRegions} \) must be less than or equal to the \( \text{arrayLayers} \) specified in \( \text{VkImageCreateInfo} \) when \( \text{dstImage} \) was created.

\( \text{VkImageCreateInfo} \) when \( \text{srcImage} \) was created.

\( \text{VkImageCreateInfo} \) when \( \text{dstImage} \) was created.

\( \text{srcImage} \) must not have been created with flags containing \( \text{VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT} \).

If \( \text{dstImage} \) is of type \( \text{VK_IMAGE_TYPE_3D} \), then for each element of \( \text{pRegions} \), \( \text{srcSubresource.layerCount} \) must be 1.

If \( \text{dstImage} \) is of type \( \text{VK_IMAGE_TYPE_3D} \), then for each element of \( \text{pRegions} \), \( \text{dstSubresource.baseArrayLayer} \) must be 0 and \( \text{dstSubresource.layerCount} \) must be 1.

For each element of \( \text{pRegions} \), \( \text{srcOffset.x} \) and \( \text{srcOffset.y} \) must both be greater than or equal to 0 and less than or equal to the width of the specified \( \text{srcSubresource} \) of \( \text{srcImage} \).

For each element of \( \text{pRegions} \), \( \text{srcOffset.x} \) and \( \text{srcOffset.y} \) must both be greater than or equal to 0 and less than or equal to the height of the specified \( \text{srcSubresource} \) of \( \text{srcImage} \).

If \( \text{srcImage} \) is of type \( \text{VK_IMAGE_TYPE_1D} \), then for each element of \( \text{pRegions} \), \( \text{srcOffset.y} \) must be 0 and \( \text{extent.height} \) must be 1.

For each element of \( \text{pRegions} \), \( \text{srcOffset.x} \) and \( \text{srcOffset.y} \) must both be greater than or equal to 0 and less than or equal to the depth of the specified \( \text{srcSubresource} \) of \( \text{srcImage} \).

If \( \text{srcImage} \) is of type \( \text{VK_IMAGE_TYPE_1D} \) or \( \text{VK_IMAGE_TYPE_2D} \), then for each element of \( \text{pRegions} \), \( \text{srcOffset.z} \) must be 0 and \( \text{extent.depth} \) must be 1.

For each element of \( \text{pRegions} \), \( \text{dstOffset.x} \) and \( \text{dstOffset.y} \) must both be greater than or equal to 0 and less than or equal to the width of the specified \( \text{dstSubresource} \) of \( \text{dstImage} \).

For each element of \( \text{pRegions} \), \( \text{dstOffset.x} \) and \( \text{dstOffset.y} \) must both be greater than or equal to 0 and less than or equal to the height of the specified \( \text{dstSubresource} \) of \( \text{dstImage} \).

For each element of \( \text{pRegions} \), \( \text{dstOffset.y} \) and \( \text{extent.height} \) must both be greater than or equal to 0 and less than or equal to the height of the specified \( \text{dstSubresource} \) of \( \text{dstImage} \).
greater than or equal to 0 and less than or equal to the height of the specified dstSubresource of dstImage

- VUID-VkResolveImageInfo2-dstImage-00276
  If dstImage is of type VK_IMAGE_TYPE_1D, then for each element of pRegions, dstOffset.y must be 0 and extent.height must be 1

- VUID-VkResolveImageInfo2-dstOffset-00277
  For each element of pRegions, dstOffset.z and (extent.depth + dstOffset.z) must both be greater than or equal to 0 and less than or equal to the depth of the specified dstSubresource of dstImage

- VUID-VkResolveImageInfo2-dstImage-00278
  If dstImage is of type VK_IMAGE_TYPE_1D or VK_IMAGE_TYPE_2D, then for each element of pRegions, dstOffset.z must be 0 and extent.depth must be 1

- VUID-VkResolveImageInfo2-srcImage-06762
  srcImage must have been created with VK_IMAGE_USAGE_TRANSFER_SRC_BIT usage flag

- VUID-VkResolveImageInfo2-srcImage-06763
  The format features of srcImage must contain VK_FORMAT_FEATURE_TRANSFER_SRC_BIT

- VUID-VkResolveImageInfo2-dstImage-06764
  dstImage must have been created with VK_IMAGE_USAGE_TRANSFER_DST_BIT usage flag

- VUID-VkResolveImageInfo2-dstImage-06765
  The format features of dstImage must contain VK_FORMAT_FEATURE_TRANSFER_DST_BIT

Valid Usage (Implicit)

- VUID-VkResolveImageInfo2-sType-sType
  sType must be VK_STRUCTURE_TYPE_RESOLVE_IMAGE_INFO_2

- VUID-VkResolveImageInfo2-pNext-pNext
  pNext must be NULL

- VUID-VkResolveImageInfo2-srcImage-parameter
  srcImage must be a valid VkImage handle

- VUID-VkResolveImageInfo2-srcImageLayout-parameter
  srcImageLayout must be a valid VkImageLayout value

- VUID-VkResolveImageInfo2-dstImage-parameter
  dstImage must be a valid VkImage handle

- VUID-VkResolveImageInfo2-dstImageLayout-parameter
  dstImageLayout must be a valid VkImageLayout value

- VUID-VkResolveImageInfo2-pRegions-parameter
  pRegions must be a valid pointer to an array of regionCount valid VkImageResolve2 structures

- VUID-VkResolveImageInfo2-regionCount-arraylength
  regionCount must be greater than 0

- VUID-VkResolveImageInfo2-commonparent
Both of dstImage, and srcImage must have been created, allocated, or retrieved from the same VkDevice.

The VkImageResolve2 structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkImageResolve2 {
    VkStructureType sType;
    const void* pNext;
    VkImageSubresourceLayers srcSubresource;
    VkOffset3D srcOffset;
    VkImageSubresourceLayers dstSubresource;
    VkOffset3D dstOffset;
    VkExtent3D extent;
} VkImageResolve2;
```

or the equivalent

```c
// Provided by VK_KHR_copy_commands2
typedef VkImageResolve2 VkImageResolve2KHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **srcSubresource** and **dstSubresource** are VkImageSubresourceLayers structures specifying the image subresources of the images used for the source and destination image data, respectively. Resolve of depth/stencil images is not supported.
- **srcOffset** and **dstOffset** select the initial x, y, and z offsets in texels of the sub-regions of the source and destination image data.
- **extent** is the size in texels of the source image to resolve in width, height and depth.

### Valid Usage

- **VUID-VkImageResolve2-aspectMask-00266**
  The aspectMask member of srcSubresource and dstSubresource must only contain VK_IMAGE_ASPECT_COLOR_BIT.

- **VUID-VkImageResolve2-layerCount-08803**
  If neither of the layerCount members of srcSubresource or dstSubresource are VK_REMAINING_ARRAY_LAYERS, the layerCount member of srcSubresource and dstSubresource must match.

- **VUID-VkImageResolve2-layerCount-08804**
  If one of the layerCount members of srcSubresource or dstSubresource is VK_REMAINING_ARRAY_LAYERS, the other member must be either VK_REMAINING_ARRAY_LAYERS or equal to the arrayLayers member of the VkImageCreateInfo used to create the image.
Valid Usage (Implicit)

- VUID-VkImageResolve2-sType-sType
  sType must be VK_STRUCTURE_TYPE_IMAGE_RESOLVE_2

- VUID-VkImageResolve2-pNext-pNext
  pNext must be NULL

- VUID-VkImageResolve2-srcSubresource-parameter
  srcSubresource must be a valid VkImageSubresourceLayers structure

- VUID-VkImageResolve2-dstSubresource-parameter
  dstSubresource must be a valid VkImageSubresourceLayers structure

20.7. Buffer Markers

To write a 32-bit marker value into a buffer as a pipelined operation, call:

```c
// Provided by VK_KHR_synchronization2 with VK_AMD_buffer_marker
void vkCmdWriteBufferMarker2AMD(
    VkCommandBuffer commandBuffer,  
    VkPipelineStageFlags2 stage,    
    VkBuffer dstBuffer,             
    VkDeviceSize dstOffset,         
    uint32_t marker);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `stage` specifies the pipeline stage whose completion triggers the marker write.
- `dstBuffer` is the buffer where the marker will be written.
- `dstOffset` is the byte offset into the buffer where the marker will be written.
- `marker` is the 32-bit value of the marker.

The command will write the 32-bit marker value into the buffer only after all preceding commands have finished executing up to at least the specified pipeline stage. This includes the completion of other preceding `vkCmdWriteBufferMarker2AMD` commands so long as their specified pipeline stages occur either at the same time or earlier than this command’s specified `stage`.

While consecutive buffer marker writes with the same `stage` parameter implicitly complete in submission order, memory and execution dependencies between buffer marker writes and other operations must still be explicitly ordered using synchronization commands. The access scope for buffer marker writes falls under the `VK_ACCESS_TRANSFER_WRITE_BIT`, and the pipeline stages for identifying the synchronization scope must include both `stage` and `VK_PIPELINE_STAGE_TRANSFER_BIT`.

**Note**
Similar to `vkCmdWriteTimestamp2`, if an implementation is unable to write a marker at any specific pipeline stage, it **may** instead do so at any logically later stage.

**Note**
Implementations **may** only support a limited number of pipelined marker write operations in flight at a given time. Thus an excessive number of marker write operations **may** degrade command execution performance.

---

**Valid Usage**

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03929**
  If the `geometryShader` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_GEOMETRY_SHADER_BIT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03930**
  If the `tessellationShader` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_TESSELLATION_CONTROL_SHADER_BIT` or `VK_PIPELINE_STAGE_2_TESSELLATION_EVALUATION_SHADER_BIT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03931**
  If the `conditionalRendering` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_CONDITIONAL_RENDERING_BIT_EXT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03932**
  If the `fragmentDensityMap` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_FRAGMENT_DENSITY_PROCESS_BIT_EXT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03933**
  If the `transformFeedback` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_TRANSFORM_FEEDBACK_BIT_EXT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03934**
  If the `meshShader` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_EXT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-03935**
  If the `taskShader` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_EXT`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-07316**
  If neither the `shadingRateImage` or `attachmentFragmentShadingRate` are enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-04957**
  If the `subpassShading` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-04995**
  If the `invocationMask` feature is not enabled, **stage must not contain** `VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI`

- **VUID-vkCmdWriteBufferMarker2AMD-stage-07946**
  If neither the `VK_NV_ray_tracing` extension or `rayTracingPipeline` feature are enabled,
stage must not contain VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR

- VUID-vkCmdWriteBufferMarker2AMD-synchronization2-03893
  The synchronization2 feature must be enabled

- VUID-vkCmdWriteBufferMarker2AMD-stage-03894
  stage must include only a single pipeline stage

- VUID-vkCmdWriteBufferMarker2AMD-stage-03895
  stage must include only stages that are valid for the queue family that was used to create
  the command pool that commandBuffer was allocated from

- VUID-vkCmdWriteBufferMarker2AMD-dstOffset-03896
  dstOffset must be less than or equal to the size of dstBuffer minus 4

- VUID-vkCmdWriteBufferMarker2AMD-dstBuffer-03897
  dstBuffer must have been created with the VK_BUFFER_USAGE_TRANSFER_DST_BIT usage flag

- VUID-vkCmdWriteBufferMarker2AMD-dstBuffer-03898
  If dstBuffer is non-sparse then it must be bound completely and contiguously to a single
  VkDeviceMemory object

- VUID-vkCmdWriteBufferMarker2AMD-dstOffset-03899
  dstOffset must be a multiple of 4

---

**Valid Usage (Implicit)**

- VUID-vkCmdWriteBufferMarker2AMD-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdWriteBufferMarker2AMD-stage-parameter
  stage must be a valid combination of VkPipelineStageFlagBits2 values

- VUID-vkCmdWriteBufferMarker2AMD-dstBuffer-parameter
  dstBuffer must be a valid VkBuffer handle

- VUID-vkCmdWriteBufferMarker2AMD-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdWriteBufferMarker2AMD-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support transfer, graphics,
  or compute operations

- VUID-vkCmdWriteBufferMarker2AMD-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdWriteBufferMarker2AMD-commonparent
  Both of commandBuffer, and dstBuffer must have been created, allocated, or retrieved from
  the same VkDevice

---

**Host Synchronization**

- Host access to commandBuffer must be externally synchronized
Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized.

### Command Properties

<table>
<thead>

#### Example

```c
// Provided by VK_AMD_buffer_marker
void vkCmdWriteBufferMarkerAMD(
    VkCommandBuffer commandBuffer,
    VkPipelineStageFlagBits pipelineStage,
    VkBuffer dstBuffer,
    VkDeviceSize dstOffset,
    uint32_t marker);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **pipelineStage** is a VkPipelineStageFlagBits value specifying the pipeline stage whose completion triggers the marker write.
- **dstBuffer** is the buffer where the marker will be written to.
- **dstOffset** is the byte offset into the buffer where the marker will be written to.
- **marker** is the 32-bit value of the marker.

The command will write the 32-bit marker value into the buffer only after all preceding commands have finished executing up to at least the specified pipeline stage. This includes the completion of other preceding vkCmdWriteBufferMarkerAMD commands so long as their specified pipeline stages occur either at the same time or earlier than this command’s specified pipelineStage.

While consecutive buffer marker writes with the same pipelineStage parameter are implicitly complete in submission order, memory and execution dependencies between buffer marker writes and other operations must still be explicitly ordered using synchronization commands. The access scope for buffer marker writes falls under the VK_ACCESS_TRANSFER_WRITE_BIT, and the pipeline stages for identifying the synchronization scope must include both pipelineStage and VK_PIPELINE_STAGE_TRANSFER_BIT.

**Note**

Similar to vkCmdWriteTimestamp, if an implementation is unable to write a marker at any specific pipeline stage, it may instead do so at any logically later stage.
Implementations may only support a limited number of pipelined marker write operations in flight at a given time, thus excessive number of marker write operations may degrade command execution performance.

Valid Usage

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04074
  pipelineStage must be a valid stage for the queue family that was used to create the command pool that commandBuffer was allocated from.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04075
  If the geometryShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04076
  If the tessellationShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT or VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04077
  If the conditionalRendering feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04078
  If the fragmentDensityMap feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04079
  If the transformFeedback feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-04080
  If the meshShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-07077
  If the taskShader feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT.

- VUID-vkCmdWriteBufferMarkerAMD-shadingRateImage-07314
  If neither the shadingRateImage or attachmentFragmentShadingRate are enabled, pipelineStage must not be VK_PIPELINE_STAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR.

- VUID-vkCmdWriteBufferMarkerAMD-synchronization2-06489
  If the synchronization2 feature is not enabled, pipelineStage must not be VK_PIPELINE_STAGE_NONE.

- VUID-vkCmdWriteBufferMarkerAMD-rayTracingPipeline-07943
  If neither the VK_NV_ray_tracing extension or rayTracingPipeline feature are enabled, pipelineStage must not be VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR.

- VUID-vkCmdWriteBufferMarkerAMD-dstOffset-01798
**Valid Usage (Implicit)**

- VUID-vkCmdWriteBufferMarkerAMD-commandBuffer-parameter
  
  The `commandBuffer` must be a valid `VkCommandBuffer` handle.

- VUID-vkCmdWriteBufferMarkerAMD-pipelineStage-parameter
  
  If `pipelineStage` is not 0, `pipelineStage` must be a valid `VkPipelineStageFlagBits` value.

- VUID-vkCmdWriteBufferMarkerAMD-dstBuffer-parameter
  
  The `dstBuffer` must be a valid `VkBuffer` handle.

- VUID-vkCmdWriteBufferMarkerAMD-commandBuffer-recording
  
  The `commandBuffer` must be in the recording state.

- VUID-vkCmdWriteBufferMarkerAMD-videocoding
  
  This command must only be called outside of a video coding scope.

- VUID-vkCmdWriteBufferMarkerAMD-commonparent
  
  Both of `commandBuffer`, and `dstBuffer` must have been created, allocated, or retrieved from the same `VkDevice`.

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized.

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.
## Command Properties

<table>
<thead>

Chapter 21. Drawing Commands

Drawing commands (commands with Draw in the name) provoke work in a graphics pipeline. Drawing commands are recorded into a command buffer and when executed by a queue, will produce work which executes according to the bound graphics pipeline, or if the shaderObject feature is enabled, any shader objects bound to graphics stages. A graphics pipeline or a combination of one or more graphics shader objects must be bound to a command buffer before any drawing commands are recorded in that command buffer.

Drawing can be achieved in two modes:

- **Programmable Mesh Shading**, the mesh shader assembles primitives, or
- **Programmable Primitive Shading**, the input primitives are assembled as follows.

Each draw is made up of zero or more vertices and zero or more instances, which are processed by the device and result in the assembly of primitives. Primitives are assembled according to the pInputAssemblyState member of the VkGraphicsPipelineCreateInfo structure, which is of type VkPipelineInputAssemblyStateCreateInfo:

```c
// Provided by VK_VERSION_1_0
typedef struct VkPipelineInputAssemblyStateCreateInfo {
    VkStructureType sType;
    const void* pNext;
    VkPipelineInputAssemblyStateCreateFlags flags;
    VkPrimitiveTopology topology;
    VkBool32 primitiveRestartEnable;
} VkPipelineInputAssemblyStateCreateInfo;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `flags` is reserved for future use.
- `topology` is a VkPrimitiveTopology defining the primitive topology, as described below.
- `primitiveRestartEnable` controls whether a special vertex index value is treated as restarting the assembly of primitives. This enable only applies to indexed draws (vkCmdDrawIndexed, vkCmdDrawMultiIndexedEXT, and vkCmdDrawIndexedIndirect), and the special index value is either 0xFFFFFFFF when the indexType parameter of vkCmdBindIndexBuffer2KHR or vkCmdBindIndexBuffer is equal to VK_INDEX_TYPE_UINT32, 0xFF when indexType is equal to VK_INDEX_TYPE_UINT8_KHR, or 0xFFFF when indexType is equal to VK_INDEX_TYPE_UINT16. Primitive restart is not allowed for “list” topologies, unless one of the features primitiveTopologyPatchListRestart (for VK_PRIMITIVE_TOPOLOGY_PATCH_LIST) or primitiveTopologyListRestart (for all other list topologies) is enabled.

Restarting the assembly of primitives discards the most recent index values if those elements formed an incomplete primitive, and restarts the primitive assembly using the subsequent indices, but only assembling the immediately following element through the end of the originally specified elements. The primitive restart index value comparison is performed before adding the
vertexOffset value to the index value.

Valid Usage

• VUID-VkPipelineInputAssemblyStateCreateInfo-topology-06252
  If the primitiveTopologyListRestart feature is not enabled, and topology is
  VK_PRIMITIVE_TOPOLOGY_POINT_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST,
  VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST, VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY, or
  VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY, primitiveRestartEnable must be
  VK_FALSE

• VUID-VkPipelineInputAssemblyStateCreateInfo-topology-06253
  If the primitiveTopologyPatchListRestart feature is not enabled, and topology is
  VK_PRIMITIVE_TOPOLOGY_PATCH_LIST, primitiveRestartEnable must be VK_FALSE

• VUID-VkPipelineInputAssemblyStateCreateInfo-topology-00429
  If the geometryShader feature is not enabled, topology must not be any of
  VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY, VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY, VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY, or
  VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY

• VUID-VkPipelineInputAssemblyStateCreateInfo-topology-00430
  If the tessellationShader feature is not enabled, topology must not be
  VK_PRIMITIVE_TOPOLOGY_PATCH_LIST

• VUID-VkPipelineInputAssemblyStateCreateInfo-triangleFans-04452
  If the VK_KHR_portability_subset extension is enabled, and
  VkPhysicalDevicePortabilitySubsetFeaturesKHR::triangleFans is VK_FALSE, topology must
  not be VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN

Valid Usage (Implicit)

• VUID-VkPipelineInputAssemblyStateCreateInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_PIPELINE_INPUT_ASSEMBLY_STATE_CREATE_INFO

• VUID-VkPipelineInputAssemblyStateCreateInfo-pNext-pNext
  pNext must be NULL

• VUID-VkPipelineInputAssemblyStateCreateInfo-flags-zerobitmask
  flags must be 0

• VUID-VkPipelineInputAssemblyStateCreateInfo-topology-parameter
  topology must be a valid VkPrimitiveTopology value

// Provided by VK_VERSION_1_0
typedef VkFlags VkPipelineInputAssemblyStateCreateFlags;

VkPipelineInputAssemblyStateCreateFlags is a bitmask type for setting a mask, but is currently
To **dynamically control** whether a special vertex index value is treated as restarting the assembly of primitives, call:

```c
// Provided by VK_VERSION_1_3
void vkCmdSetPrimitiveRestartEnable(  
    VkCommandBuffer commandBuffer,  
    VkBool32 primitiveRestartEnable);
```

or the equivalent command

```c
// Provided by VK_EXT_extended_dynamic_state2, VK_EXT_shader_object
void vkCmdSetPrimitiveRestartEnableEXT(  
    VkCommandBuffer commandBuffer,  
    VkBool32 primitiveRestartEnable);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `primitiveRestartEnable` controls whether a special vertex index value is treated as restarting the assembly of primitives. It behaves in the same way as `VkPipelineInputAssemblyStateCreateInfo::primitiveRestartEnable`.

This command sets the primitive restart enable for subsequent drawing commands when drawing using **shader objects**, or when the graphics pipeline is created with `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`. Otherwise, this state is specified by the `VkPipelineInputAssemblyStateCreateInfo::primitiveRestartEnable` value used to create the currently active pipeline.

### Valid Usage

- **VUID-vkCmdSetPrimitiveRestartEnable-None-08970**
  At least one of the following **must** be true:
  - the `extendedDynamicState2` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of `VkApplicationInfo::apiVersion` used to create the `VkInstance` parent of `commandBuffer` is greater than or equal to Version 1.3

### Valid Usage (Implicit)

- **VUID-vkCmdSetPrimitiveRestartEnable-commandBuffer-parameter**
  `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- **VUID-vkCmdSetPrimitiveRestartEnable-commandBuffer-recording**
  `commandBuffer` **must** be in the recording state
21.1. Primitive Topologies

Primitive topology determines how consecutive vertices are organized into primitives, and determines the type of primitive that is used at the beginning of the graphics pipeline. The effective topology for later stages of the pipeline is altered by tessellation or geometry shading (if either is in use) and depends on the execution modes of those shaders. In the case of mesh shading the only effective topology is defined by the execution mode of the mesh shader.

The primitive topologies defined by `VkPrimitiveTopology` are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkPrimitiveTopology {
    VK_PRIMITIVE_TOPOLOGY_POINT_LIST = 0,
    VK_PRIMITIVE_TOPOLOGY_LINE_LIST = 1,
    VK_PRIMITIVE_TOPOLOGY_LINE_STRIP = 2,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST = 3,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP = 4,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN = 5,
    VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY = 6,
    VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY = 7,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY = 8,
    VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY = 9,
    VK_PRIMITIVE_TOPOLOGY_PATCH_LIST = 10,
} VkPrimitiveTopology;
```
• **VK_PRIMITIVE_TOPOLOGY_POINT_LIST** specifies a series of separate point primitives.

• **VK_PRIMITIVE_TOPOLOGY_LINE_LIST** specifies a series of separate line primitives.

• **VK_PRIMITIVE_TOPOLOGY_LINE_STRIP** specifies a series of connected line primitives with consecutive lines sharing a vertex.

• **VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST** specifies a series of separate triangle primitives.

• **VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP** specifies a series of connected triangle primitives with consecutive triangles sharing an edge.

• **VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN** specifies a series of connected triangle primitives with all triangles sharing a common vertex. If the **VK_KHR_portability_subset** extension is enabled, and **VkPhysicalDevicePortabilitySubsetFeaturesKHR::triangleFans** is **VK_FALSE**, then triangle fans are not supported by the implementation, and **VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN** must not be used.

• **VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY** specifies a series of separate line primitives with adjacency.

• **VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY** specifies a series of connected line primitives with adjacency, with consecutive primitives sharing three vertices.

• **VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY** specifies a series of separate triangle primitives with adjacency.

• **VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY** specifies connected triangle primitives with adjacency, with consecutive triangles sharing an edge.

• **VK_PRIMITIVE_TOPOLOGY_PATCH_LIST** specifies separate patch primitives.

Each primitive topology, and its construction from a list of vertices, is described in detail below with a supporting diagram, according to the following key:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>•</td>
<td>Vertex</td>
</tr>
<tr>
<td>5</td>
<td>Vertex Number</td>
</tr>
<tr>
<td>🟥</td>
<td>Provoking Vertex</td>
</tr>
<tr>
<td>———</td>
<td>Primitive Edge</td>
</tr>
<tr>
<td>————</td>
<td>Adjacency Edge</td>
</tr>
<tr>
<td>△</td>
<td>Winding Order</td>
</tr>
</tbody>
</table>

A point in 3-dimensional space. Positions chosen within the diagrams are arbitrary and for illustration only.

Sequence position of a vertex within the provided vertex data.

Provoking vertex within the main primitive. The tail is angled towards the relevant primitive. Used in flat shading.

An edge connecting the points of a main primitive.

Points connected by these lines do not contribute to a main primitive, and are only accessible in a geometry shader.

The relative order in which vertices are defined within a primitive, used in the facing determination. This ordering has no specific start or end point.

The diagrams are supported with mathematical definitions where the vertices (v) and primitives (p) are numbered starting from 0; v₀ is the first vertex in the provided data and p₀ is the first primitive in the set of primitives defined by the vertices and topology.

To dynamically set primitive topology, call:
```c
// Provided by VK_VERSION_1_3
void vkCmdSetPrimitiveTopology(
    VkCommandBuffer commandBuffer,
    VkPrimitiveTopology primitiveTopology);
```

or the equivalent command

```c
// Provided by VK_EXT_extended_dynamic_state, VK_EXT_shader_object
void vkCmdSetPrimitiveTopologyEXT(
    VkCommandBuffer commandBuffer,
    VkPrimitiveTopology primitiveTopology);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `primitiveTopology` specifies the primitive topology to use for drawing.

This command sets the primitive topology for subsequent drawing commands when drawing using shader objects, or when the graphics pipeline is created with `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`. Otherwise, this state is specified by the `VkPipelineInputAssemblyStateCreateInfo::topology` value used to create the currently active pipeline.

### Valid Usage

- VUID-vkCmdSetPrimitiveTopology-None-08971
  At least one of the following **must** be true:
  - the `extendedDynamicState` feature is enabled
  - the `shaderObject` feature is enabled
  - the value of `VkApplicationInfo::apiVersion` used to create the `VkInstance` parent of `commandBuffer` is greater than or equal to Version 1.3

### Valid Usage (Implicit)

- VUID-vkCmdSetPrimitiveTopology-commandBuffer-parameter
  `commandBuffer` **must** be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetPrimitiveTopology-primitiveTopology-parameter
  `primitiveTopology` **must** be a valid `VkPrimitiveTopology` value
- VUID-vkCmdSetPrimitiveTopology-commandBuffer-recording
  `commandBuffer` **must** be in the recording state
- VUID-vkCmdSetPrimitiveTopology-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics operations
- VUID-vkCmdSetPrimitiveTopology-videocoding
This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

### Command Properties

<table>

### 21.1.1. Topology Class

The primitive topologies are grouped into the following topology classes:

#### Table 31. Topology classes

<table>
<thead>
<tr>
<th>Topology Class</th>
<th>Primitive Topology</th>
</tr>
</thead>
<tbody>
<tr>
<td>Point</td>
<td><code>VK_PRIMITIVE_TOPOLOGY_POINT_LIST</code></td>
</tr>
<tr>

</tr>
<tr>
<td>Patch</td>
<td><code>VK_PRIMITIVE_TOPOLOGY_PATCH_LIST</code></td>
</tr>
</tbody>
</table>

#### 21.1.2. Point Lists

When the topology is `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, each consecutive vertex defines a single point primitive, according to the equation:

\[ p_i = \{ v_i \} \]
As there is only one vertex, that vertex is the provoking vertex. The number of primitives generated is equal to $\text{vertexCount}$.

![Diagram](image)

21.1.3. Line Lists

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, each consecutive pair of vertices defines a single line primitive, according to the equation:

$$p_i = \{v_{2i}, v_{2i+1}\}$$

The number of primitives generated is equal to $\lfloor \text{vertexCount}/2 \rfloor$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for $p_i$ is $v_{2i}$.

![Diagram](image)

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for $p_i$ is $v_{2i+1}$.

![Diagram](image)

21.1.4. Line Strips

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_LINE_STRIP`, one line primitive is defined by each vertex and the following vertex, according to the equation:
\[ p_i = \{v_i, v_{i+1}\} \]

The number of primitives generated is equal to \( \max(0, \text{vertexCount} - 1) \).

When the \text{provokingVertexMode} is \text{VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT}, the provoking vertex for \( p_i \) is \( v_i \).

When the \text{provokingVertexMode} is \text{VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT}, the provoking vertex for \( p_i \) is \( v_{i+1} \).

21.1.5. Triangle Lists

When the primitive topology is \text{VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST}, each consecutive set of three vertices defines a single triangle primitive, according to the equation:

\[ p_i = \{v_{3i}, v_{3i+1}, v_{3i+2}\} \]

The number of primitives generated is equal to \( \lfloor \text{vertexCount}/3 \rfloor \).

When the \text{provokingVertexMode} is \text{VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT}, the provoking vertex for \( p_i \) is \( v_{3i} \).

When the \text{provokingVertexMode} is \text{VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT}, the provoking vertex for \( p_i \) is \( v_{3i+2} \).
21.1.6. Triangle Strips

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP`, one triangle primitive is defined by each vertex and the two vertices that follow it, according to the equation:

\[ p_i = \{v_i, v_{i+(1-i \% 2)}, v_{i+(2-i \% 2)}\} \]

The number of primitives generated is equal to \(\max(0, \text{vertexCount}-2)\).

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for \(p_i\) is \(v_i\).

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for \(p_i\) is \(v_{i+2}\).

\[\begin{align*}
1 & \quad 3 \\
0 & \quad 2 & \quad 4
\end{align*}\]

**Note**

The ordering of the vertices in each successive triangle is reversed, so that the winding order is consistent throughout the strip.

21.1.7. Triangle Fans

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN`, triangle primitives are defined around a shared common vertex, according to the equation:

\[ p_i = \{v_{i+1}, v_{i+2}, v_0\} \]

The number of primitives generated is equal to \(\max(0, \text{vertexCount}-2)\).

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for \(p_i\) is \(v_{i+1}\).
When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for \( p_i \) is \( v_{i+2} \).

Note

If the `VK_KHR_portability_subset` extension is enabled, and `VkPhysicalDevicePortabilitySubsetFeaturesKHR::triangleFans` is `VK_FALSE`, then triangle fans are not supported by the implementation, and `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_FAN` must not be used.

21.1.8. Line Lists With Adjacency

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY`, each consecutive set of four vertices defines a single line primitive with adjacency, according to the equation:

\[
p_i = \{v_{4i}, v_{4i+1}, v_{4i+2}, v_{4i+3}\}
\]

A line primitive is described by the second and third vertices of the total primitive, with the remaining two vertices only accessible in a geometry shader.

The number of primitives generated is equal to \( \lfloor \text{vertexCount}/4 \rfloor \).

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for \( p_i \) is \( v_{4i+1} \).
for $p_i$ is $v_{4i+2}$.

21.1.9. Line Strips With Adjacency

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_LINE_STRIP_WITH_ADJACENCY`, one line primitive with adjacency is defined by each vertex and the following vertex, according to the equation:

$$p_i = \{v_i, v_{i+1}, v_{i+2}, v_{i+3}\}$$

A line primitive is described by the second and third vertices of the total primitive, with the remaining two vertices only accessible in a geometry shader.

The number of primitives generated is equal to max(0, $\text{vertexCount}$-3).

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex for $p_i$ is $v_{i+1}$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for $p_i$ is $v_{i+2}$.

21.1.10. Triangle Lists With Adjacency

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, each consecutive set of six vertices defines a single triangle primitive with adjacency, according to the equations:

$$p_i = \{v_{6i}, v_{6i+1}, v_{6i+2}, v_{6i+3}, v_{6i+4}, v_{6i+5}\}$$

A triangle primitive is described by the first, third, and fifth vertices of the total primitive, with the remaining three vertices only accessible in a geometry shader.

The number of primitives generated is equal to $\lfloor \text{vertexCount}/6 \rfloor$.

When the `provokingVertexMode` is `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT`, the provoking vertex
When the *provokingVertexMode* is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, the provoking vertex for \( p_i \) is \( v_{6i+4} \).

### 21.1.11. Triangle Strips With Adjacency

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_STRIP_WITH_ADJACENCY`, one triangle primitive with adjacency is defined by each vertex and the following 5 vertices.

The number of primitives generated, \( n \), is equal to \( \lceil \max(0, \text{vertexCount} - 4)/2 \rceil \).

If \( n=1 \), the primitive is defined as:

\[
p = \{v_0, v_1, v_2, v_5, v_4, v_3\}
\]

If \( n>1 \), the total primitive consists of different vertices according to where it is in the strip:

\[
p_i = \{v_{2i}, v_{2i+1}, v_{2i+2}, v_{2i+6}, v_{2i+4}, v_{2i+3}\} \text{ when } i=0
\]

\[
p_i = \{v_{2i}, v_{2i+3}, v_{2i+4}, v_{2i+6}, v_{2i+2}, v_{2i+1}\} \text{ when } i>0, i<n-1, \text{ and } i\%2=1
\]
\[ p_i = \{v_{2i}, v_{2i+2}, v_{2i+5}, v_{2i+4}, v_{2i+3}\} \text{ when } i>0, \ i<n-1, \text{ and } i\%2=0 \]

\[ p_i = \{v_{2i}, v_{2i+3}, v_{2i+5}, v_{2i+4}, v_{2i+2}\} \text{ when } i=n-1 \text{ and } i\%2=1 \]

\[ p_i = \{v_{2i}, v_{2i+2}, v_{2i+5}, v_{2i+4}, v_{2i+3}\} \text{ when } i=n-1 \text{ and } i\%2=0 \]

A triangle primitive is described by the first, third, and fifth vertices of the total primitive in all cases, with the remaining three vertices only accessible in a \textit{geometry shader}.

\textbf{Note}

The ordering of the vertices in each successive triangle is altered so that the winding order is consistent throughout the strip.

When the \texttt{provokingVertexMode} is \texttt{VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT}, the provoking vertex for \( p_i \) is always \( v_{2i} \).

When the \texttt{provokingVertexMode} is \texttt{VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT}, the provoking vertex for \( p_i \) is always \( v_{2i+4} \).
21.1.12. Patch Lists

When the primitive topology is `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, each consecutive set of \( m \) vertices defines a single patch primitive, according to the equation:

\[
p_i = \{v_{mi}, v_{mi+1}, \ldots, v_{mi+(m-2)}, v_{mi+(m-1)}\}
\]

where \( m \) is equal to `VkPipelineTessellationStateCreateInfo::patchControlPoints`.

Patch lists are never passed to vertex post-processing, and as such no provoking vertex is defined for patch primitives. The number of primitives generated is equal to \( \lceil \text{vertexCount}/m \rceil \).

The vertices comprising a patch have no implied geometry, and are used as inputs to tessellation shaders and the fixed-function tessellator to generate new point, line, or triangle primitives.

21.2. Primitive Order

Primitives generated by drawing commands progress through the stages of the graphics pipeline in primitive order. Primitive order is initially determined in the following way:

1. Submission order determines the initial ordering
2. For indirect drawing commands, the order in which accessed instances of the

`VkDrawIndirectCommand` are stored in `buffer`, from lower indirect buffer addresses to higher addresses.

3. If a drawing command includes multiple instances, the order in which instances are executed, from lower numbered instances to higher.

4. The order in which primitives are specified by a drawing command:
   - For non-indexed draws, from vertices with a lower numbered `vertexIndex` to a higher numbered `vertexIndex`.
   - For indexed draws, vertices sourced from a lower index buffer addresses to higher addresses.
   - For draws using mesh shaders, the order is provided by `mesh shading`.
   - For draws using cluster culling shaders, the order is provided by `cluster culling shading`.

Within this order implementations further sort primitives:

5. If tessellation shading is active, by an implementation-dependent order of new primitives generated by `tessellation`.
6. If geometry shading is active, by the order new primitives are generated by `geometry shading`.
7. If the `polygon mode` is not `VK_POLYGON_MODE_FILL`, or `VK_POLYGON_MODE_FILL_RECTANGLE_NV`, by an implementation-dependent ordering of the new primitives generated within the original primitive.

Primitive order is later used to define `rasterization order`, which determines the order in which fragments output results to a framebuffer.

21.3. Programmable Primitive Shading

Once primitives are assembled, they proceed to the vertex shading stage of the pipeline. If the draw includes multiple instances, then the set of primitives is sent to the vertex shading stage multiple times, once for each instance.

It is implementation-dependent whether vertex shading occurs on vertices that are discarded as part of incomplete primitives, but if it does occur then it operates as if they were vertices in complete primitives and such invocations can have side effects.

Vertex shading receives two per-vertex inputs from the primitive assembly stage - the `vertexIndex` and the `instanceIndex`. How these values are generated is defined below, with each command.

Drawing commands fall roughly into two categories:

- Non-indexed drawing commands present a sequential `vertexIndex` to the vertex shader. The sequential index is generated automatically by the device (see Fixed-Function Vertex Processing for details on both specifying the vertex attributes indexed by `vertexIndex`, as well as binding vertex buffers containing those attributes to a command buffer). These commands are:
  - `vkCmdDraw`
  - `vkCmdDrawIndirect`
• `vkCmdDrawIndirectCount`
• `vkCmdDrawIndirectCountKHR`
• `vkCmdDrawIndirectCountAMD`
• `vkCmdDrawMultiEXT`

- Indexed drawing commands read index values from an *index buffer* and use this to compute the *vertexIndex* value for the vertex shader. These commands are:
  • `vkCmdDrawIndexed`
  • `vkCmdDrawIndexedIndirect`
  • `vkCmdDrawIndexedIndirectCount`
  • `vkCmdDrawIndexedIndirectCountKHR`
  • `vkCmdDrawIndexedIndirectCountAMD`
  • `vkCmdDrawMultiIndexedEXT`

To bind an index buffer to a command buffer, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdBindIndexBuffer(
    VkCommandBuffer commandBuffer,
    VkBuffer buffer,
    VkDeviceSize offset,
    VkIndexType indexType);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `buffer` is the buffer being bound.
- `offset` is the starting offset in bytes within `buffer` used in index buffer address calculations.
- `indexType` is a `VkIndexType` value specifying the size of the indices.

If the `maintenance6` feature is enabled, `buffer` can be `VK_NULL_HANDLE`. If `buffer` is `VK_NULL_HANDLE` and the `nullDescriptor` feature is enabled, every index fetched results in a value of zero.

**Valid Usage**

- VUID-vkCmdBindIndexBuffer-offset-08782
  `offset` must be less than the size of `buffer`

- VUID-vkCmdBindIndexBuffer-offset-08783
  The sum of `offset` and the base address of the range of `VkDeviceMemory` object that is backing `buffer`, must be a multiple of the size of the type indicated by `indexType`

- VUID-vkCmdBindIndexBuffer-buffer-08784
  `buffer` must have been created with the `VK_BUFFER_USAGE_INDEX_BUFFER_BIT` flag

- VUID-vkCmdBindIndexBuffer-buffer-08785
If buffer is non-sparse then it must be bound completely and contiguously to a single VkDeviceMemory object

- VUID-vkCmdBindIndexBuffer-indexType-08786
  indexType must not be VK_INDEX_TYPE_NONE_KHR

- VUID-vkCmdBindIndexBuffer-indexType-08787
  If indexType is VK_INDEX_TYPE_UINT8_KHR, the indexTypeUint8 feature must be enabled

- VUID-vkCmdBindIndexBuffer-None-09493
  If maintenance is not enabled, buffer must not be VK_NULL_HANDLE

- VUID-vkCmdBindIndexBuffer-buffer-09494
  If buffer is VK_NULL_HANDLE, offset must be zero

Valid Usage (Implicit)

- VUID-vkCmdBindIndexBuffer-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdBindIndexBuffer-buffer-parameter
  If buffer is not VK_NULL_HANDLE, buffer must be a valid VkBuffer handle

- VUID-vkCmdBindIndexBuffer-indexType-parameter
  indexType must be a valid VkIndexType value

- VUID-vkCmdBindIndexBuffer-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdBindIndexBuffer-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics operations

- VUID-vkCmdBindIndexBuffer-videocoding
  This command must only be called outside of a video coding scope

- VUID-vkCmdBindIndexBuffer-commonparent
  Both of buffer, and commandBuffer that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same VkDevice

Host Synchronization

- Host access to commandBuffer must be externally synchronized

- Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized
To bind an index buffer, along with its size, to a command buffer, call:

```c
// Provided by VK_KHR_maintenance5
void vkCmdBindIndexBuffer2KHR(
    VkCommandBuffer commandBuffer,
    VkBuffer buffer,
    VkDeviceSize offset,
    VkDeviceSize size,
    VkIndexType indexType);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `buffer` is the buffer being bound.
- `offset` is the starting offset in bytes within `buffer` used in index buffer address calculations.
- `size` is the size in bytes of index data bound from `buffer`.
- `indexType` is a `VkIndexType` value specifying the size of the indices.

`size` specifies the bound size of the index buffer starting from `offset`. If `size` is `VK_WHOLE_SIZE` then the bound size is from `offset` to the end of the `buffer`.

If the `maintenance6` feature is enabled, `buffer` can be `VK_NULL_HANDLE`. If `buffer` is `VK_NULL_HANDLE` and the `nullDescriptor` feature is enabled, every index fetched results in a value of zero.

### Valid Usage

- **VUID-vkCmdBindIndexBuffer2KHR-offset-08782**
  `offset` must be less than the size of `buffer`

- **VUID-vkCmdBindIndexBuffer2KHR-offset-08783**
  The sum of `offset` and the base address of the range of `VkDeviceMemory` object that is backing `buffer`, must be a multiple of the size of the type indicated by `indexType`

- **VUID-vkCmdBindIndexBuffer2KHR-buffer-08784**
  `buffer` must have been created with the `VK_BUFFER_USAGE_INDEX_BUFFER_BIT` flag

- **VUID-vkCmdBindIndexBuffer2KHR-buffer-08785**
  If `buffer` is non-sparse then it must be bound completely and contiguously to a single `VkDeviceMemory` object
• VUID-vkCmdBindIndexBuffer2KHR-indexType-08786
  indexType must not be VK_INDEX_TYPE_NONE_KHR

• VUID-vkCmdBindIndexBuffer2KHR-indexType-08787
  If indexType is VK_INDEX_TYPE_UINT8_KHR, the indexTypeUint8 feature must be enabled

• VUID-vkCmdBindIndexBuffer2KHR-None-09493
  If maintenance is not enabled, buffer must not be VK_NULL_HANDLE

• VUID-vkCmdBindIndexBuffer2KHR-buffer-09494
  If buffer is VK_NULL_HANDLE, offset must be zero

• VUID-vkCmdBindIndexBuffer2KHR-size-08767
  If size is not VK_WHOLE_SIZE, size must be a multiple of the size of the type indicated by indexType

• VUID-vkCmdBindIndexBuffer2KHR-size-08768
  If size is not VK_WHOLE_SIZE, the sum of offset and size must be less than or equal to the size of buffer

**Valid Usage (Implicit)**

• VUID-vkCmdBindIndexBuffer2KHR-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

• VUID-vkCmdBindIndexBuffer2KHR-buffer-parameter
  If buffer is not VK_NULL_HANDLE, buffer must be a valid VkBuffer handle

• VUID-vkCmdBindIndexBuffer2KHR-indexType-parameter
  indexType must be a valid VkIndexType value

• VUID-vkCmdBindIndexBuffer2KHR-commandBuffer-recording
  commandBuffer must be in the recording state

• VUID-vkCmdBindIndexBuffer2KHR-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics operations

• VUID-vkCmdBindIndexBuffer2KHR-videocoding
  This command must only be called outside of a video coding scope

• VUID-vkCmdBindIndexBuffer2KHR-commonparent
  Both of buffer, and commandBuffer that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same VkDevice

**Host Synchronization**

• Host access to commandBuffer must be externally synchronized

• Host access to the VkCommandPool that commandBuffer was allocated from must be externally synchronized
Possible values of `vkCmdBindIndexBuffer2KHR::indexType` and `vkCmdBindIndexBuffer::indexType`, specifying the size of indices, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkIndexType {
    VK_INDEX_TYPE_UINT16 = 0,
    VK_INDEX_TYPE_UINT32 = 1,
    // Provided by VK_KHR_acceleration_structure
    VK_INDEX_TYPE_NONE_KHR = 1000165000,
    // Provided by VK_KHR_index_type_uint8
    VK_INDEX_TYPE_UINT8_KHR = 1000265000,
    // Provided by VK_NV_ray_tracing
    VK_INDEX_TYPE_NONE_NV = VK_INDEX_TYPE_NONE_KHR,
    // Provided by VK_EXT_index_type_uint8
    VK_INDEX_TYPE_UINT8_EXT = VK_INDEX_TYPE_UINT8_KHR,
} VkIndexType;
```

- **VK_INDEX_TYPE_UINT16** specifies that indices are 16-bit unsigned integer values.
- **VK_INDEX_TYPE_UINT32** specifies that indices are 32-bit unsigned integer values.
- **VK_INDEX_TYPE_NONE_KHR** specifies that no indices are provided.
- **VK_INDEX_TYPE_UINT8_KHR** specifies that indices are 8-bit unsigned integer values.

The parameters for each drawing command are specified directly in the command or read from buffer memory, depending on the command. Drawing commands that source their parameters from buffer memory are known as *indirect* drawing commands.

All drawing commands interact with the `robustBufferAccess` feature.

To record a non-indexed draw, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdDraw(VkCommandBuffer commandBuffer,
               uint32_t vertexCount,
               uint32_t instanceCount,
               uint32_t firstVertex,
               uint32_t firstInstance);
```
• **commandBuffer** is the command buffer into which the command is recorded.

• **vertexCount** is the number of vertices to draw.

• **instanceCount** is the number of instances to draw.

• **firstVertex** is the index of the first vertex to draw.

• **firstInstance** is the instance ID of the first instance to draw.

When the command is executed, primitives are assembled using the current primitive topology and **vertexCount** consecutive vertex indices with the first **vertexIndex** value equal to **firstVertex**. The primitives are drawn **instanceCount** times with **instanceIndex** starting with **firstInstance** and increasing sequentially for each instance. The assembled primitives execute the bound graphics pipeline.

---

**Valid Usage**

- **VUID-vkCmdDraw-magFilter-04553**
  - If a **VkSampler** created with **magFilter** or **minFilter** equal to **VK_FILTER_LINEAR** and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's format features **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**

- **VUID-vkCmdDraw-mipmapMode-04770**
  - If a **VkSampler** created with **mipmapMode** equal to **VK_SAMPLER_MIPMAP_MODE_LINEAR** and **compareEnable** equal to **VK_FALSE** is used to sample a **VkImageView** as a result of this command, then the image view's format features **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT**

- **VUID-vkCmdDraw-None-06479**
  - If a **VkImageView** is sampled with **depth comparison**, the image view's format features **must** contain **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT**

- **VUID-vkCmdDraw-None-02691**
  - If a **VkImageView** is accessed using atomic operations as a result of this command, then the image view's format features **must** contain **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT**

- **VUID-vkCmdDraw-None-07888**
  - If a **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT**

- **VUID-vkCmdDraw-None-02692**
  - If a **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, then the image view's format features **must** contain **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT**

- **VUID-vkCmdDraw-None-02693**
  - If the **VK_EXT_filter_cubic** extension is not enabled and any **VkImageView** is sampled with **VK_FILTER_CUBIC_EXT** as a result of this command, it **must** not have a **VkImageViewType** of **VK_IMAGE_VIEW_TYPE_3D**, **VK_IMAGE_VIEW_TYPE_CUBE**, or **VK_IMAGE_VIEW_TYPE_CUBE_ARRAY**
Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` must have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`.

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` must have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`.

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` must not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`.

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command must sample with `VK_FILTER_CUBIC_EXT`.

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` must have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command must only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features must contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`.

For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's format features must contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`.

For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's buffer features must contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`.

Any `VkBufferView` being read as a storage texel buffer where the image format field of
the **OpTypeImage** is **Unknown** then the view’s buffer features must contain **VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT**

**• VUID-vkCmdDraw-None-08600**
For each set $n$ that is statically used by a bound shader, a descriptor set must have been bound to $n$ at the same pipeline bind point, with a **VkPipelineLayout** that is compatible for set $n$, with the **VkPipelineLayout** used to create the current **VkPipeline** or the **VkDescriptorsetLayout** array used to create the current **VkShaderEXT**, as described in **Pipeline Layout Compatibility**

**• VUID-vkCmdDraw-None-08601**
For each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a **VkPipelineLayout** that is compatible for push constants, with the **VkPipelineLayout** used to create the current **VkPipeline** or the **VkDescriptorsetLayout** array used to create the current **VkShaderEXT**, as described in **Pipeline Layout Compatibility**

**• VUID-vkCmdDraw-maintenance4-08602**
If the **maintenance4** feature is not enabled, then for each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a **VkPipelineLayout** that is compatible for push constants, with the **VkPipelineLayout** used to create the current **VkPipeline** or the **VkDescriptorsetLayout** and **VkPushConstantRange** arrays used to create the current **VkShaderEXT**, as described in **Pipeline Layout Compatibility**

**• VUID-vkCmdDraw-None-08114**
Descriptors in each bound descriptor set, specified via **vkCmdBindDescriptorSets**, must be valid as described by **descriptor validity** if they are statically used by the **VkPipeline** bound to the pipeline bind point used by this command and the bound **VkPipeline** was not created with **VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT**

**• VUID-vkCmdDraw-None-08115**
If the descriptors used by the **VkPipeline** bound to the pipeline bind point were specified via **vkCmdBindDescriptorSets**, the bound **VkPipeline** must have been created without **VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT**

**• VUID-vkCmdDraw-None-08116**
Descriptors in bound descriptor buffers, specified via **vkCmdSetDescriptorBufferOffsetsEXT**, must be valid if they are dynamically used by the **VkPipeline** bound to the pipeline bind point used by this command and the bound **VkPipeline** was created with **VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT**

**• VUID-vkCmdDraw-None-08604**
Descriptors in bound descriptor buffers, specified via **vkCmdSetDescriptorBufferOffsetsEXT**, must be valid if they are dynamically used by any **VkShaderEXT** bound to a stage corresponding to the pipeline bind point used by this command

**• VUID-vkCmdDraw-None-08117**
If the descriptors used by the **VkPipeline** bound to the pipeline bind point were specified via **vkCmdSetDescriptorBufferOffsetsEXT**, the bound **VkPipeline** must have been created with **VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT**
• VUID-vkCmdDraw-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident.

• VUID-vkCmdDraw-None-08605
  If a descriptor is dynamically used with a VkShaderEXT created with a VkDescriptorSetLayout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident.

• VUID-vkCmdDraw-None-08606
  If the shaderObject feature is not enabled, a valid pipeline must be bound to the pipeline bind point used by this command.

• VUID-vkCmdDraw-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there must not have been any calls to dynamic state setting commands for any state not specified as dynamic in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound.

• VUID-vkCmdDraw-None-08609
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used to sample from any VkImage with a VkImageView of the type VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, VK_IMAGE_VIEW_TYPE_1D_ARRAY, VK_IMAGE_VIEW_TYPE_2D_ARRAY or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY, in any shader stage.

• VUID-vkCmdDraw-None-08610
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name, in any shader stage.

• VUID-vkCmdDraw-None-08611
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values, in any shader stage.

• VUID-vkCmdDraw-None-08607
  If the shaderObject feature is enabled, either a valid pipeline must be bound to the pipeline bind point used by this command, or a valid combination of valid and VK_NULL_HANDLE shader objects must be bound to every supported shader stage corresponding to the pipeline bind point used by this command.

• VUID-vkCmdDraw-uniformBuffers-06935
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT for uniformBuffers.
and the `robustBufferAccess` feature is not enabled, that stage must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDraw-None-08612**
  If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDraw-storageBuffers-06936**
  If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDraw-None-08613**
  If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDraw-commandBuffer-02707**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders must` not be a protected resource

- **VUID-vkCmdDraw-None-06550**
  If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler YC gC r` conversion, that object must only be used with `OpImageSample*` or `OpImageSparseSample*` instructions

- **VUID-vkCmdDraw-ConstOffset-06551**
  If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler YC gC r` conversion, that object must not use the `ConstOffset` and `Offset` operands

- **VUID-vkCmdDraw-viewType-07752**
  If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` must match the `Dim` operand of the `OpTypeImage` as described in `Instruction/Sampler/Image View Validation`

- **VUID-vkCmdDraw-format-07753**
  If a `VkImageView` is accessed as a result of this command, then the numeric type of the image view's `format` and the `Sampled Type` operand of the `OpTypeImage` must match

- **VUID-vkCmdDraw-OpImageWrite-08795**
  If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction must have at least as many components as the image view's `format`

- **VUID-vkCmdDraw-OpImageWrite-08796**
  If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM_KHR` is accessed using
OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have four components.

- **VUID-vkCmdDraw-OpImageWrite-04469**
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have at least as many components as the buffer view’s format.

- **VUID-vkCmdDraw-SampledType-04470**
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64.

- **VUID-vkCmdDraw-SampledType-04471**
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32.

- **VUID-vkCmdDraw-SampledType-04472**
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64.

- **VUID-vkCmdDraw-SampledType-04473**
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32.

- **VUID-vkCmdDraw-sparseImageInt64Atomics-04474**
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command.

- **VUID-vkCmdDraw-sparseImageInt64Atomics-04475**
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command.

- **VUID-vkCmdDraw-OpImageWeightedSampleQCOM-06971**
  If OpImageWeightedSampleQCOM is used to sample a VkImageView as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM.

- **VUID-vkCmdDraw-OpImageWeightedSampleQCOM-06972**
  If OpImageWeightedSampleQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM.

- **VUID-vkCmdDraw-OpImageBoxFilterQCOM-06973**
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM.

- **VUID-vkCmdDraw-OpImageBlockMatchSSDQCOM-06974**
If \texttt{OpImageBlockMatchSSDQCOM} is used to read from a \texttt{VkImageView} as a result of this command, then the image view’s format features must contain \texttt{VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM}.

- \texttt{VUID-vkCmdDraw-OpImageBlockMatchSADQCOM-06975}
  If \texttt{OpImageBlockMatchSADQCOM} is used to read from a \texttt{VkImageView} as a result of this command, then the image view’s format features must contain \texttt{VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM}.

- \texttt{VUID-vkCmdDraw-OpImageBlockMatchSADQCOM-06976}
  If \texttt{OpImageBlockMatchSADQCOM} or \texttt{OpImageBlockMatchSSDQCOM} is used to read from a reference image as result of this command, then the specified reference coordinates must not fail integer texel coordinate validation.

- \texttt{VUID-vkCmdDraw-OpImageWeightedSampleQCOM-06977}
  If \texttt{OpImageWeightedSampleQCOM}, \texttt{OpImageBoxFilterQCOM}, \texttt{OpImageBlockMatchWindowSSDQCOM}, \texttt{OpImageBlockMatchWindowSADQCOM}, \texttt{OpImageBlockMatchGatherSSDQCOM}, \texttt{OpImageBlockMatchGatherSADQCOM}, \texttt{OpImageBlockMatchSSDQCOM}, or \texttt{OpImageBlockMatchSADQCOM} uses a \texttt{VkSampler} as a result of this command, then the sampler must have been created with \texttt{VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM}.

- \texttt{VUID-vkCmdDraw-OpImageWeightedSampleQCOM-06978}
  If any command other than \texttt{OpImageWeightedSampleQCOM}, \texttt{OpImageBoxFilterQCOM}, \texttt{OpImageBlockMatchWindowSSDQCOM}, \texttt{OpImageBlockMatchWindowSADQCOM}, \texttt{OpImageBlockMatchGatherSSDQCOM}, \texttt{OpImageBlockMatchGatherSADQCOM}, \texttt{OpImageBlockMatchSSDQCOM}, or \texttt{OpImageBlockMatchSADQCOM} uses a \texttt{VkSampler} as a result of this command, then the sampler must not have been created with \texttt{VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM}.

- \texttt{VUID-vkCmdDraw-OpImageBlockMatchWindow-09215}
  If a \texttt{OpImageBlockMatchWindow*QCOM} or \texttt{OpImageBlockMatchGather*QCOM} instruction is used to read from a \texttt{VkImageView} as a result of this command, then the image view’s format features must contain \texttt{VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM}.

- \texttt{VUID-vkCmdDraw-OpImageBlockMatchWindow-09216}
  If a \texttt{OpImageBlockMatchWindow*QCOM} or \texttt{OpImageBlockMatchGather*QCOM} instruction is used to read from a \texttt{VkImageView} as a result of this command, then the image view’s format must be a single-component format.

- \texttt{VUID-vkCmdDraw-OpImageBlockMatchWindow-09217}
  If a \texttt{OpImageBlockMatchWindow*QCOM} or \texttt{OpImageBlockMatchGather*QCOM} read from a reference image as result of this command, then the specified reference coordinates must not fail integer texel coordinate validation.

- \texttt{VUID-vkCmdDraw-None-07288}
  Any shader invocation executed by this command must terminate.

- \texttt{VUID-vkCmdDraw-renderPass-02684}
  The current render pass must be compatible with the \texttt{renderPass} member of the \texttt{VkGraphicsPipelineCreateInfo} structure specified when creating the \texttt{VkPipeline} bound to \texttt{VK_PIPELINE_BIND_POINT_GRAPHICS}.

- \texttt{VUID-vkCmdDraw-subpass-02685}
  The subpass index of the current render pass must be equal to the \texttt{subpass} member of the
**VkGraphicsPipelineCreateInfo** structure specified when creating the **VkPipeline** bound to **VK_PIPELINE_BIND_POINT_GRAPHICS**

- **VUID-vkCmdDraw-None-07748**
  If any shader statically accesses an input attachment, a valid descriptor **must** be bound to the pipeline via a descriptor set

- **VUID-vkCmdDraw-OpTypeImage-07468**
  If any shader executed by this pipeline accesses an **OpTypeImage** variable with a **Dim** operand of **SubpassData**, it **must** be decorated with an **InputAttachmentIndex** that corresponds to a valid input attachment in the current subpass

- **VUID-vkCmdDraw-None-07469**
  Input attachment views accessed in a subpass **must** be created with the same **VkFormat** as the corresponding subpass definition, and be created with a **VkImageView** that is compatible with the attachment referenced by the subpass' **pInputAttachments[InputAttachmentIndex]** in the currently bound **VkFramebuffer** as specified by Fragment Input Attachment Compatibility

- **VUID-vkCmdDraw-None-06537**
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command

- **VUID-vkCmdDraw-None-09000**
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it is not in the **VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT** image layout, and either:
  - the **VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT** is set on the currently bound pipeline or
  - the last call to **vkCmdSetAttachmentFeedbackLoopEnableEXT** included **VK_IMAGE_ASPECT_COLOR_BIT** and
    - there is no currently bound graphics pipeline or
    - the currently bound graphics pipeline was created with **VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT** it **must** not be accessed in any way other than as an attachment by this command

- **VUID-vkCmdDraw-None-09001**
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it is not in the **VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT** image layout, and either:
  - the **VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT** is set on the currently bound pipeline or
  - the last call to **vkCmdSetAttachmentFeedbackLoopEnableEXT** included **VK_IMAGE_ASPECT_DEPTH_BIT** and
    - there is no currently bound graphics pipeline or
    - the currently bound graphics pipeline was created with **VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT** it **must** not be accessed in any way other than as an attachment by this command
If a stencil attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it is not in the \texttt{VK\_IMAGE\_LAYOUT\_ATTACHMENT\_FEEDBACK\_LOOP\_OPTIMAL\_EXT} image layout, and either:

- the \texttt{VK\_PIPELINE\_CREATE\_DEPTH\_STENCIL\_ATTACHMENT\_FEEDBACK\_LOOP\_BIT\_EXT} is set on the currently bound pipeline or
- the last call to \texttt{vkCmdSetAttachmentFeedbackLoopEnableEXT} included \texttt{VK\_IMAGE\_ASPECT\_STENCIL\_BIT} and
  - there is no currently bound graphics pipeline or
  - the currently bound graphics pipeline was created with \texttt{VK\_DYNAMIC\_STATE\_ATTACHMENT\_FEEDBACK\_LOOP\_ENABLE\_EXT} it must not be accessed in any way other than as an attachment by this command

If an attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it must not be accessed in any way other than as an attachment, storage image, or sampled image by this command

If any previously recorded command in the current subpass accessed an image subresource used as an attachment in this subpass in any way other than as an attachment, this command must not write to that image subresource as an attachment

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the depth aspect, depth writes must be disabled

If the current render pass instance uses a depth/stencil attachment with a read-only layout for the stencil aspect, both front and back writeMask are not zero, and stencil test is enabled, all stencil ops must be \texttt{VK\_STENCIL\_OP\_KEEP}

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_VIEWPORT} dynamic state enabled then \texttt{vkCmdSetViewport} must have been called in the current command buffer prior to this drawing command

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_SCISSOR} dynamic state enabled then \texttt{vkCmdSetScissor} must have been called in the current command buffer prior to this drawing command

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_LINE\_WIDTH} dynamic state enabled then \texttt{vkCmdSetLineWidth} must have been called in the current command buffer prior to this drawing command

If a shader object is bound to any graphics stage, and the most recent call to \texttt{vkCmdSetRasterizerDiscardEnable} in the current command buffer set \texttt{rasterizerDiscardEnable} to \texttt{VK\_FALSE}, and the most recent call to
vkCmdSetPolygonModeEXT in the current command buffer set polygonMode to VK_POLYGON_MODE_LINE, `vkCmdSetLineWidth` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08618**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the most recent call to `vkCmdSetPrimitiveTopology` in the current command buffer set primitiveTopology to any line topology, `vkCmdSetLineWidth` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08619**
  If a shader object that outputs line primitives is bound to the VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT or VK_SHADER_STAGE_GEOMETRY_BIT stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set rasterizerDiscardEnable to VK_FALSE, `vkCmdSetLineWidth` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07834**
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_DEPTH_BIAS dynamic state enabled then `vkCmdSetDepthBias` or `vkCmdSetDepthBias2EXT` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08620**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the most recent call to `vkCmdSetDepthBiasEnable` in the current command buffer set depthBiasEnable to VK_TRUE, `vkCmdSetDepthBias` or `vkCmdSetDepthBias2EXT` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07835**
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_BLEND_CONSTANTS dynamic state enabled then `vkCmdSetBlendConstants` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08621**
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the most recent call to `vkCmdSetColorBlendEnableEXT` in the current command buffer set any element of pColorBlendEnables to VK_TRUE, and the most recent call to `vkCmdSetColorBlendEquationEXT` in the current command buffer set the same element of pColorBlendEquations to a VkColorBlendEquationEXT structure with any VkBlendFactor member with a value of VK_BLEND_FACTOR_CONSTANT_COLOR, VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_COLOR, VK_BLEND_FACTOR_CONSTANT_ALPHA, or VK_BLEND_FACTOR_ONE_MINUS_CONSTANT_ALPHA, `vkCmdSetBlendConstants` **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07836**
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_DEPTH_BOUNDS
dynamic state enabled, and if the current `depthBoundsTestEnable` state is `VK_TRUE`, then `vkCmdSetDepthBounds` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08622**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetDepthBoundsTestEnable` in the current command buffer set `depthBoundsTestEnable` to `VK_TRUE`, then `vkCmdSetDepthBounds` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07837**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_STENCIL_COMPARE_MASK` dynamic state enabled, and if the current `stencilTestEnable` state is `VK_TRUE`, then `vkCmdSetStencilCompareMask` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08623**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetStencilTestEnable` in the current command buffer set `stencilTestEnable` to `VK_TRUE`, `vkCmdSetStencilCompareMask` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07838**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` dynamic state enabled, and if the current `stencilTestEnable` state is `VK_TRUE`, then `vkCmdSetStencilWriteMask` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08624**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetStencilTestEnable` in the current command buffer set `stencilTestEnable` to `VK_TRUE`, `vkCmdSetStencilWriteMask` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07839**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_STENCIL_REFERENCE` dynamic state enabled, and if the current `stencilTestEnable` state is `VK_TRUE`, then `vkCmdSetStencilReference` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08625**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetStencilTestEnable` in the current command buffer set `stencilTestEnable` to `VK_TRUE`, `vkCmdSetStencilReference` must have been called in the current command buffer
prior to this drawing command

- VUID-vkCmdDraw-maxMultiviewInstanceIndex-02688
  If the draw is recorded in a render pass instance with multiview enabled, the maximum instance index must be less than or equal to VkPhysicalDeviceMultiviewProperties::maxMultiviewInstanceIndex

- VUID-vkCmdDraw-sampleLocationsEnable-02689
  If the bound graphics pipeline was created with VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable set to VK_TRUE and the current subpass has a depth/stencil attachment, then that attachment must have been created with the VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set

- VUID-vkCmdDraw-None-06666
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT dynamic state enabled then vkCmdSetSampleLocationsEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08626
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the most recent call to vkCmdSetSampleLocationsEnableEXT in the current command buffer set sampleLocationsEnable to VK_TRUE, then vkCmdSetSampleLocationsEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07840
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_CULL_MODE dynamic state enabled then vkCmdSetCullMode must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08627
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetCullMode must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07841
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_FRONT_FACE dynamic state enabled then vkCmdSetFrontFace must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08628
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetFrontFace must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07843
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE dynamic state enabled then vkCmdSetDepthTestEnable must have been called in the current command buffer prior to
• VUID-vkCmdDraw-None-08629
If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetDepthTestEnable` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07844
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` dynamic state enabled then `vkCmdSetDepthWriteEnable` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08630
If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetDepthWriteEnable` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07845
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP` dynamic state enabled then `vkCmdSetDepthCompareOp` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08631
If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetDepthTestEnable` in the current command buffer set `depthTestEnable` to `VK_TRUE`, then `vkCmdSetDepthCompareOp` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07846
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE` dynamic state enabled then `vkCmdSetDepthBoundsTestEnable` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08632
If a shader object is bound to any graphics stage, and the `depthBounds` feature is enabled, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then the `vkCmdSetDepthBoundsTestEnable` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07847
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE` dynamic state enabled then `vkCmdSetStencilTestEnable` must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08633
If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetStencilTestEnable` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-07848**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_STENCIL_OP` dynamic state enabled then `vkCmdSetStencilOp` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-08634**
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetStencilTestEnable` in the current command buffer set `stencilTestEnable` to `VK_TRUE`, then `vkCmdSetStencilOp` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-viewportCount-03417**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, then `vkCmdSetViewportWithCount` must have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` must match the `VkPipelineViewportStateCreateInfo::scissorCount` of the pipeline.

- **VUID-vkCmdDraw-scissorCount-03418**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, then `vkCmdSetScissorWithCount` must have been called in the current command buffer prior to this drawing command, and the `scissorCount` parameter of `vkCmdSetScissorWithCount` must match the `VkPipelineViewportStateCreateInfo::viewportCount` of the pipeline.

- **VUID-vkCmdDraw-viewportCount-03419**
  If the bound graphics pipeline state was created with both the `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic states enabled then both `vkCmdSetViewportWithCount` and `vkCmdSetScissorWithCount` must have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` must match the `scissorCount` parameter of `vkCmdSetScissorWithCount`.

- **VUID-vkCmdDraw-None-08635**
  If a shader object is bound to any graphics stage, then both `vkCmdSetViewportWithCount` and `vkCmdSetScissorWithCount` must have been called in the current command buffer prior to this drawing command, and the `viewportCount` parameter of `vkCmdSetViewportWithCount` must match the `scissorCount` parameter of `vkCmdSetScissorWithCount`.

- **VUID-vkCmdDraw-viewportCount-04137**
  If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the
VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportWScalingStateCreateInfoNV ::viewportCount greater or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- **VUID-vkCmdDraw-viewportCount-04138**
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV dynamic states enabled then the viewportCount parameter in the last call to vkCmdSetViewportWScalingNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- **VUID-vkCmdDraw-viewportCount-04139**
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT dynamic state enabled, but not the VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic state enabled, then the bound graphics pipeline **must** have been created with VkPipelineViewportShadingRateImageStateCreateInfoNV ::viewportCount greater or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- **VUID-vkCmdDraw-viewportCount-04140**
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT and VK_DYNAMIC_STATE_VIEWPORT_SHADING_RATE_PALETTE_NV dynamic states enabled then the viewportCount parameter in the last call to vkCmdSetViewportShadingRatePaletteNV **must** be greater than or equal to the viewportCount parameter in the last call to vkCmdSetViewportWithCount

- **VUID-vkCmdDraw-shadingRateImage-09233**
  If the shadingRateImage feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetCoarseSampleOrderNV **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-shadingRateImage-09234**
  If the shadingRateImage feature is enabled, and a shader object is bound to any graphics
stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetShadingRateImageEnableNV` in the current command buffer set `shadingRateImageEnable` to `VK_TRUE`, then `vkCmdSetViewportShadingRatePaletteNV` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08637
  If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetShadingRateImageEnableNV` in the current command buffer set `shadingRateImageEnable` to `VK_TRUE`, then the `viewportCount` parameter in the last call to `vkCmdSetViewportShadingRatePaletteNV` must be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

• VUID-vkCmdDraw-VkPipelineViewportCreateInfo-04141
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportSwizzleStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline must have been created with `VkPipelineViewportSwizzleStateCreateInfoNV::viewportCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

• VUID-vkCmdDraw-VkPipelineViewportCreateInfo-04142
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled and a `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure chained from `VkPipelineViewportStateCreateInfo`, then the bound graphics pipeline must have been created with `VkPipelineViewportExclusiveScissorStateCreateInfoNV::exclusiveScissorCount` greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

• VUID-vkCmdDraw-None-07878
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` dynamic state enabled then `vkCmdSetExclusiveScissorEnableNV` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07879
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV` dynamic state enabled then `vkCmdSetExclusiveScissorNV` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-exclusiveScissor-09235
  If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage, then `vkCmdSetExclusiveScissorEnableNV` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08638
  If the `exclusiveScissor` feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetExclusiveScissorEnableNV` in the current
command buffer set any element of $p_{ExclusiveScissorEnables}$ to $VK_TRUE$, then $vkCmdSetExclusiveScissorNV$ must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-04876**
  If the bound graphics pipeline state was created with the $VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE$ dynamic state enabled then $vkCmdSetRasterizerDiscardEnable$ must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-08639**
  If a shader object is bound to any graphics stage, then $vkCmdSetRasterizerDiscardEnable$ must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-04877**
  If the bound graphics pipeline state was created with the $VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE$ dynamic state enabled then $vkCmdSetDepthBiasEnable$ must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-08640**
  If a shader object is bound to any graphics stage, and the most recent call to $vkCmdSetRasterizerDiscardEnable$ in the current command buffer set $rasterizerDiscardEnable$ to $VK_FALSE$, then $vkCmdSetDepthBiasEnable$ must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-logicOp-04878**
  If the bound graphics pipeline state was created with the $VK_DYNAMIC_STATE_LOGIC_OP_EXT$ dynamic state enabled then $vkCmdSetLogicOpEXT$ must have been called in the current command buffer prior to this drawing command and the $logicOp$ must be a valid $VkLogicOp$ value.

- **VUID-vkCmdDraw-None-08641**
  If a shader object is bound to the $VK_SHADER_STAGE_FRAGMENT_BIT$ stage, and the most recent call to $vkCmdSetRasterizerDiscardEnable$ in the current command buffer set $rasterizerDiscardEnable$ to $VK_FALSE$, and the most recent call to $vkCmdSetLogicOpEnableEXT$ set $logicOpEnable$ to $VK_TRUE$, then $vkCmdSetLogicOpEXT$ must have been called in the current command buffer prior to this drawing command and the $logicOp$ must be a valid $VkLogicOp$ value.

- **VUID-vkCmdDraw-primitiveFragmentShadingRateWithMultipleViewports-04552**
  If the $primitiveFragmentShadingRateWithMultipleViewports$ limit is not supported, the bound graphics pipeline was created with the $VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT$ dynamic state enabled, and any of the shader stages of the bound graphics pipeline write to the $PrimitiveShadingRateKHR$ built-in, then $vkCmdSetViewportWithCount$ must have been called in the current command buffer prior to this drawing command, and the $viewportCount$ parameter of $vkCmdSetViewportWithCount$ must be 1.

- **VUID-vkCmdDraw-primitiveFragmentShadingRateWithMultipleViewports-08642**
  If the $primitiveFragmentShadingRateWithMultipleViewports$ limit is not supported, and any shader object bound to a graphics stage writes to the $PrimitiveShadingRateKHR$ built-in, then $vkCmdSetViewportWithCount$ must have been called in the current command buffer prior to this drawing command, and the $viewportCount$ parameter of
vkCmdSetViewportWithCount must be 1

- VUID-vkCmdDraw-blendEnable-04727
  If rasterization is not disabled in the bound graphics pipeline, then for each color attachment in the subpass, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the blendEnable member of the corresponding element of the pAttachments member of pColorBlendState must be VK_FALSE

- VUID-vkCmdDraw-none-08643
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then for each color attachment in the render pass, if the corresponding image view's format features do not contain VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT, then the corresponding member of pColorBlendEnables in the most recent call to vkCmdSetColorBlendEnableEXT in the current command buffer that affected that attachment index must have been VK_FALSE

- VUID-vkCmdDraw-multisampledRenderToSingleSampled-07284
  If rasterization is not disabled in the bound graphics pipeline, and none of the following is enabled:
  - the VK_AMD_mixed_attachment_samples extension
  - the VK_NV_framebuffer_mixed_samples extension
  - the multisampledRenderToSingleSampled feature
  then rasterizationSamples for the currently bound graphics pipeline must be the same as the current subpass color and/or depth/stencil attachments

- VUID-vkCmdDraw-none-08644
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and none of the following is enabled:
  - the VK_AMD_mixed_attachment_samples extension
  - the VK_NV_framebuffer_mixed_samples extension
  - the multisampledRenderToSingleSampled feature
  then the most recent call to vkCmdSetRasterizationSamplesEXT in the current command buffer must have set rasterizationSamples to be the same as the number of samples for the current render pass color and/or depth/stencil attachments

- VUID-vkCmdDraw-none-08876
  If a shader object is bound to any graphics stage, the current render pass instance must have been begun with vkCmdBeginRendering

- VUID-vkCmdDraw-imageView-06172
  If the current render pass instance was begun with vkCmdBeginRendering, the imageView member of pDepthAttachment is not VK_NULL_HANDLE, and the layout member of pDepthAttachment is VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL, this command must not write any values to the depth attachment
If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL`, this command **must** not write any values to the depth attachment

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pDepthAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pDepthAttachment` is `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, this command **must** not write any values to the depth attachment

If the current render pass instance was begun with `vkCmdBeginRendering`, the `imageView` member of `pStencilAttachment` is not `VK_NULL_HANDLE`, and the `layout` member of `pStencilAttachment` is `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL`, this command **must** not write any values to the stencil attachment

If the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo` ::`viewMask` equal to `VkRenderingInfo` ::`viewMask`

If the `dynamicRenderingUnusedAttachments` feature is not enabled and the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound graphics pipeline **must** have been created with a `VkPipelineRenderingCreateInfo` ::`colorAttachmentCount` equal to `VkRenderingInfo` ::`colorAttachmentCount`

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo` ::`colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo` ::`pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` **must** have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo` ::`pColorAttachmentFormats` used to create the currently bound graphics pipeline

If the `dynamicRenderingUnusedAttachments` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo`
If the `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` equal to `VK_NULL_HANDLE` must have the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the currently bound pipeline equal to `VK_FORMAT_UNDEFINED`.

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08911**
  If the `dynamicRenderingUnusedAttachments` feature is enabled, and the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingInfo::colorAttachmentCount` greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` equal to `VK_NULL_HANDLE` must have been created with a `VkFormat` equal to the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the currently bound graphics pipeline, or the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats`, if it exists, must be `VK_FORMAT_UNDEFINED`.

- **VUID-vkCmdDraw-colorAttachmentCount-09362**
  If the current render pass instance was begun with `vkCmdBeginRendering`, with a `VkRenderingInfo::colorAttachmentCount` equal to 1, there is no shader object bound to any graphics stage, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `resolveImageView` not equal to `VK_NULL_HANDLE` must have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the currently bound graphics pipeline.

- **VUID-vkCmdDraw-None-09363**
  If there is no shader object bound to any graphics stage, the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, and a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID`, each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` must have been created with an image created with a `VkExternalFormatANDROID::externalFormat` value equal to the `VkExternalFormatANDROID::externalFormat` value used to create the currently bound graphics pipeline.

- **VUID-vkCmdDraw-None-09364**
  If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the currently bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` dynamic state enabled, then `vkCmdSetColorBlendEnableEXT` must have set the blend enable to `VK_FALSE` prior to this drawing command.

- **VUID-vkCmdDraw-None-09365**
  If the current render pass instance was begun with `vkCmdBeginRendering`, there is no shader object bound to any graphics stage, and the currently bound graphics pipeline was created with a non-zero `VkExternalFormatANDROID::externalFormat` value and with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled, then
vkCmdSetRasterizationSamplesEXT must have set rasterizationSamples to VK_SAMPLE_COUNT_1_BIT prior to this drawing command

• VUID-vkCmdDraw-None-09366
  If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID resolve mode, then vkCmdSetColorBlendEnableEXT must have set blend enable to VK_FALSE prior to this drawing command

• VUID-vkCmdDraw-rasterizationSamples-09367
  If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID resolve mode, then vkCmdSetRasterizationSamplesEXT must have set rasterizationSamples to VK_SAMPLE_COUNT_1_BIT prior to this drawing command

• VUID-vkCmdDraw-None-09368
  If the current render pass instance was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, and the currently bound graphics pipeline was created with a non-zero VkExternalFormatANDROID::externalFormat value and with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, then vkCmdSetFragmentShadingRateKHR must have set pFragmentSize->width to 1 prior to this drawing command

• VUID-vkCmdDraw-None-09369
  If the current render pass instance was begun with vkCmdBeginRendering, there is no shader object bound to any graphics stage, and the currently bound graphics pipeline was created with a non-zero VkExternalFormatANDROID::externalFormat value and with the VK_DYNAMIC_STATE_FRAGMENT_SHADING_RATE_KHR dynamic state enabled, then vkCmdSetFragmentShadingRateKHR must have set pFragmentSize->height to 1 prior to this drawing command

• VUID-vkCmdDraw-pFragmentSize-09370
  If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID resolve mode, then vkCmdSetFragmentShadingRateKHR must have set pFragmentSize->width to 1 prior to this drawing command

• VUID-vkCmdDraw-pFragmentSize-09371
  If there is a shader object bound to any graphics stage, and the current render pass includes a color attachment that uses the VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID resolve mode, then vkCmdSetFragmentShadingRateKHR must have set pFragmentSize->height to 1 prior to this drawing command

• VUID-vkCmdDraw-None-07749
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT dynamic state enabled then vkCmdSetColorWriteEnableEXT must have been called in the current command buffer prior to this drawing command
If the `colorWriteEnable` feature is enabled on the device, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetColorWriteEnableEXT` must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT` dynamic state enabled then the `attachmentCount` parameter of `vkCmdSetColorWriteEnableEXT` must be greater than or equal to the `VkPipelineColorBlendStateCreateInfo::attachmentCount` of the currently bound graphics pipeline.

If the `colorWriteEnable` feature is enabled on the device, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then the `attachmentCount` parameter of most recent call to `vkCmdSetColorWriteEnableEXT` in the current command buffer must be greater than or equal to the number of color attachments in the current render pass instance.

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT` dynamic state enabled then `vkCmdSetDiscardRectangleEXT` must have been called in the current command buffer prior to this drawing command for each discard rectangle in `VkPipelineDiscardRectangleStateCreateInfoEXT::discardRectangleCount`.

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT` dynamic state enabled then `vkCmdSetDiscardRectangleEnableEXT` must have been called in the current command buffer prior to this drawing command.

If the `VK_EXT_discard_rectangles` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetDiscardRectangleEnableEXT` in the current command buffer set `discardRectangleEnable` to `VK_TRUE`, then `vkCmdSetDiscardRectangleEXT` must have been called in the current command buffer prior to this drawing command.

If the `VK_EXT_discard_rectangles` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetDiscardRectangleEnableEXT` must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the
**VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT**
dynamic state enabled then

*C**omm*and* **B**uffer* 

vkCmdSetDiscardRectangleModeEXT *must* have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08649**
  If the **VK_EXT_discard_rectangles** extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetDiscardRectangleEnableEXT` in the current command buffer set `discardRectangleEnable` to `VK_TRUE`, then `vkCmdSetDiscardRectangleModeEXT` *must* have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08913**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the currently bound graphics pipeline *must* be equal to `VK_FORMAT_UNDEFINED`

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08914**
  If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the currently bound graphics pipeline *must* be equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08915**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is enabled, `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, and the value of `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the currently bound graphics pipeline was not equal to the `VkFormat` used to create `VkRenderingInfo::pDepthAttachment->imageView`, the value of the format *must* be `VK_FORMAT_UNDEFINED`

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08916**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the currently bound graphics pipeline *must* be equal to `VK_FORMAT_UNDEFINED`

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08917**
  If current render pass instance was begun with `vkCmdBeginRendering`, the `dynamicRenderingUnusedAttachments` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the currently bound graphics pipeline *must* be equal to the `VkFormat` used to create `VkRenderingInfo::pStencilAttachment->imageView`

- **VUID-vkCmdDraw-dynamicRenderingUnusedAttachments-08918**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the
If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the currently bound graphics pipeline must have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`.

- **VUID-vkCmdDraw-colorAttachmentCount-06185**
  If the currently bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` must have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the currently bound graphics pipeline.

- **VUID-vkCmdDraw-pDepthAttachment-06186**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the currently bound graphics pipeline must be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`.

- **VUID-vkCmdDraw-pStencilAttachment-06187**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the currently bound graphics pipeline must be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`.

- **VUID-vkCmdDraw-multisampledRenderToSingleSampled-07285**
  If the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::pMultisampledRenderToSingleSampledAttachments->imageView` was not `VK_NULL_HANDLE`, and the value of the `VkFormat` used to create `VkRenderingInfo::pMultisampledRenderToSingleSampledAttachments->imageView`, the value of the format must be `VK_FORMAT_UNDEFINED`.

- **VUID-vkCmdDraw-imageView-06183**
  If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentShadingRateAttachmentInfoKHR::imageView` was not `VK_NULL_HANDLE`, the currently bound graphics pipeline must have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`.

- **VUID-vkCmdDraw-imageView-06184**
  If the current render pass instance was begun with `vkCmdBeginRendering` and `VkRenderingFragmentDensityMapAttachmentInfoEXT::imageView` was not `VK_NULL_HANDLE`, the currently bound graphics pipeline must have been created with `VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`.

- **VUID-vkCmdDraw-colorAttachmentCount-06185**
  If the currently bound pipeline was created with a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::colorAttachmentCount` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` must have been created with a sample count equal to the corresponding element of the `pColorAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the currently bound graphics pipeline.

- **VUID-vkCmdDraw-pDepthAttachment-06186**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the currently bound graphics pipeline must be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`.

- **VUID-vkCmdDraw-pStencilAttachment-06187**
  If the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of the `depthStencilAttachmentSamples` member of `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` used to create the currently bound graphics pipeline must be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`.

- **VUID-vkCmdDraw-multisampledRenderToSingleSampled-07285**
  If the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and the current render pass instance was begun with `vkCmdBeginRendering` with a `VkRenderingInfo::pMultisampledRenderToSingleSampledAttachments->imageView` was not `VK_NULL_HANDLE`, and the value of the `VkFormat` used to create `VkRenderingInfo::pMultisampledRenderToSingleSampledAttachments->imageView`, the value of the format must be `VK_FORMAT_UNDEFINED`.
If the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the currently bound graphics pipeline must be equal to the sample count used to create `VkRenderingInfo::pDepthAttachment->imageView`

• VUID-vkCmdDraw-multisampledRenderToSingleSampled-07287
If the currently bound pipeline was created without a `VkAttachmentSampleCountInfoAMD` or `VkAttachmentSampleCountInfoNV` structure, and the `multisampledRenderToSingleSampled` feature is not enabled, and `VkRenderingInfo::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, the value of `rasterizationSamples` for the currently bound graphics pipeline must be equal to the sample count used to create `VkRenderingInfo::pStencilAttachment->imageView`

• VUID-vkCmdDraw-pNext-07935
If this command has been called inside a render pass instance started with `vkCmdBeginRendering`, and the `pNext` chain of `VkRenderingInfo` includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the value of `rasterizationSamples` for the currently bound graphics pipeline must be equal to `VkMultisampledRenderToSingleSampledInfoEXT::rasterizationSamples`

• VUID-vkCmdDraw-renderPass-06198
If the current render pass instance was begun with `vkCmdBeginRendering`, the currently bound pipeline must have been created with a `VkGraphicsPipelineCreateInfo::renderPass` equal to `VK_NULL_HANDLE`

• VUID-vkCmdDraw-pColorAttachments-08963
If the current render pass instance was begun with `vkCmdBeginRendering`, there is a graphics pipeline bound with a fragment shader that statically writes to a color attachment, the color write mask is not zero, color writes are enabled, and the corresponding element of the `VkRenderingInfo::pColorAttachments->imageView` was not `VK_NULL_HANDLE`, then the corresponding element of `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` used to create the pipeline must not be `VK_FORMAT_UNDEFINED`

• VUID-vkCmdDraw-pDepthAttachment-08964
If the current render pass instance was begun with `vkCmdBeginRendering`, there is a graphics pipeline bound, depth test is enabled, depth write is enabled, and the `VkRenderingInfo::pDepthAttachment->imageView` was not `VK_NULL_HANDLE`, then the `VkPipelineRenderingCreateInfo::depthAttachmentFormat` used to create the pipeline must not be `VK_FORMAT_UNDEFINED`

• VUID-vkCmdDraw-pStencilAttachment-08965
If the current render pass instance was begun with `vkCmdBeginRendering`, there is a graphics pipeline bound, stencil test is enabled and the `VkRenderingInfo` parameter greater than 0, then each element of the `VkRenderingInfo::pColorAttachments` array with a `imageView` not equal to `VK_NULL_HANDLE` must have been created with a sample count equal to the value of `rasterizationSamples` for the currently bound graphics pipeline
If the `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` used to create the pipeline must not be `VK_FORMAT_UNDEFINED`, then the `::pStencilAttachment->imageView` was not `VK_NULL_HANDLE`, then the

• VUID-vkCmdDraw-primitivesGeneratedQueryWithRasterizerDiscard-06708
  If the `primitivesGeneratedQueryWithRasterizerDiscard` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, rasterization discard must not be enabled

• VUID-vkCmdDraw-primitivesGeneratedQueryWithNonZeroStreams-06709
  If the `primitivesGeneratedQueryWithNonZeroStreams` feature is not enabled and the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query is active, the bound graphics pipeline must not have been created with a non-zero value in `VkPipelineRasterizationStateStreamCreateInfoEXT::rasterizationStream`

• VUID-vkCmdDraw-None-07619
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT` dynamic state enabled then `vkCmdSetTessellationDomainOriginEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07620
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT` dynamic state enabled then `vkCmdSetDepthClampEnableEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-09237
  If a shader object is bound to the `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` stage, then `vkCmdSetTessellationDomainOriginEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08650
  If the `depthClamp` feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetDepthClampEnableEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07621
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_POLYGON_MODE_EXT` dynamic state enabled then `vkCmdSetPolygonModeEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08651
  If a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetPolygonModeEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07622
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` dynamic state enabled then...
vkCmdSetRasterizationSamplesEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08652
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetRasterizationSamplesEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07623
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_MASK_EXT dynamic state enabled then vkCmdSetSampleMaskEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08653
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetSampleMaskEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-07624
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled then vkCmdSetAlphaToCoverageEnableEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-alphaToCoverageEnable-08919
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT dynamic state enabled, and alphaToCoverageEnable was VK_TRUE in the last call to vkCmdSetAlphaToCoverageEnableEXT, then the Fragment Output Interface must contain a variable for the alpha Component word in Location 0 at Index 0

- VUID-vkCmdDraw-None-08654
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetAlphaToCoverageEnableEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-alphaToCoverageEnable-08920
  If a shader object is bound to any graphics stage, and the most recent call to vkCmdSetAlphaToCoverageEnableEXT in the current command buffer set alphaToCoverageEnable to VK_TRUE, then the Fragment Output Interface must contain a variable for the alpha Component word in Location 0 at Index 0

- VUID-vkCmdDraw-None-07625
  If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT dynamic state enabled then vkCmdSetAlphaToOneEnableEXT must have been called in the current command buffer prior to this drawing command

- VUID-vkCmdDraw-None-08655
  If the alphaToOne feature is enabled, and a shader object is bound to any graphics stage,
and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetAlphaToOneEnableEXT` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-07626**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT` dynamic state enabled then `vkCmdSetLogicOpEnableEXT` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-08656**
  If the `logicOp` feature is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetLogicOpEnableEXT` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-None-07627**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COLOR_BL/img_end
called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07630
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT` dynamic state enabled then `vkCmdSetRasterizationStreamEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08660
  If the `geometryStreams` feature is enabled, and a shader object is bound to the `VK_SHADER_STAGE_GEOMETRY_BIT` stage, then `vkCmdSetRasterizationStreamEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07631
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` dynamic state enabled then `vkCmdSetConservativeRasterizationModeEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08661
  If the `VK_EXT_conservative_rasterization` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetConservativeRasterizationModeEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07632
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT` dynamic state enabled then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08662
  If the `VK_EXT_conservative_rasterization` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetConservativeRasterizationModeEXT` in the current command buffer set `conservativeRasterizationMode` to `VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT`, then `vkCmdSetExtraPrimitiveOverestimationSizeEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-07633
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT` dynamic state enabled then `vkCmdSetDepthClipEnableEXT` must have been called in the current command buffer prior to this drawing command

• VUID-vkCmdDraw-None-08663
  If the `depthClipEnable` feature is enabled, and a shader object is bound to any graphics stage, then `vkCmdSetDepthClipEnableEXT` must have been called in the current command buffer prior to this drawing command
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` dynamic state enabled then `vkCmdSetSampleLocationsEnableEXT` must have been called in the current command buffer prior to this drawing command.

If the `VK_EXT_sample_locations` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetSampleLocationsEnableEXT` must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT` dynamic state enabled then `vkCmdSetColorBlendAdvancedEXT` must have been called in the current command buffer prior to this drawing command.

If the `VK_EXT_blend_operation_advanced` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then at least one of `vkCmdSetColorBlendEquationEXT` and `vkCmdSetColorBlendAdvancedEXT` must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT` dynamic state enabled then `vkCmdSetProvokingVertexModeEXT` must have been called in the current command buffer prior to this drawing command.

If the `VK_EXT_provoking_vertex` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetProvokingVertexModeEXT` must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic state enabled then `vkCmdSetLineRasterizationModeEXT` must have been called in the current command buffer prior to this drawing command.

If the `VK_KHR_line_rasterization` or `VK_EXT_line_rasterization` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetPolygonModeEXT` in the current command buffer set `polygonMode` to
**VK_POLYGON_MODE_LINE**, then **vkCmdSetLineRasterizationModeEXT** **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08667**
  If the **VK_KHR_line_rasterization** or **VK_EXT_line_rasterization** extension is enabled, and a shader object is bound to the **VK_SHADER_STAGE_VERTEX_BIT** stage, and the most recent call to **vkCmdSetRasterizerDiscardEnable** in the current command buffer set **rasterizerDiscardEnable** to **VK_FALSE**, and the most recent call to **vkCmdSetPrimitiveTopology** in the current command buffer set **primitiveTopology** to any line topology, then **vkCmdSetLineRasterizationModeEXT** **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08668**
  If the **VK_KHR_line_rasterization** or **VK_EXT_line_rasterization** extension is enabled, and a shader object that outputs line primitives is bound to the **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT** or **VK_SHADER_STAGE_GEOMETRY_BIT** stage, and the most recent call to **vkCmdSetRasterizerDiscardEnable** in the current command buffer set **rasterizerDiscardEnable** to **VK_FALSE**, then **vkCmdSetLineRasterizationModeEXT** **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-07638**
  If the bound graphics pipeline state was created with the **VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT** dynamic state enabled then **vkCmdSetLineStippleEnableEXT** **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08669**
  If the **VK_KHR_line_rasterization** or **VK_EXT_line_rasterization** extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to **vkCmdSetRasterizerDiscardEnable** in the current command buffer set **rasterizerDiscardEnable** to **VK_FALSE**, and the most recent call to **vkCmdSetPolygonModeEXT** in the current command buffer set **polygonMode** to **VK_POLYGON_MODE_LINE**, then **vkCmdSetLineStippleEnableEXT** **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08670**
  If the **VK_KHR_line_rasterization** or **VK_EXT_line_rasterization** extension is enabled, and a shader object is bound to the **VK_SHADER_STAGE_VERTEX_BIT** stage, and the most recent call to **vkCmdSetRasterizerDiscardEnable** in the current command buffer set **rasterizerDiscardEnable** to **VK_FALSE**, and the most recent call to **vkCmdSetPrimitiveTopology** in the current command buffer set **primitiveTopology** to any line topology, then **vkCmdSetLineStippleEnableEXT** **must** have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-None-08671**
  If the **VK_KHR_line_rasterization** or **VK_EXT_line_rasterization** extension is enabled, and a shader object that outputs line primitives is bound to the **VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT** or **VK_SHADER_STAGE_GEOMETRY_BIT** stage, and the most recent call to **vkCmdSetRasterizerDiscardEnable** in the current command buffer set **rasterizerDiscardEnable** to **VK_FALSE**, then **vkCmdSetLineStippleEnableEXT** **must** have been called in the current command buffer prior to this drawing command
If the bound graphics pipeline state was created with the 
\texttt{VK\_DYNAMIC\_STATE\_LINE\_STIPPLE\_KHR} dynamic state enabled then \texttt{vkCmdSetLineStippleKHR} must have been called in the current command buffer prior to this drawing command.

If the \texttt{VK\_KHR\_line\_rasterization} or \texttt{VK\_EXT\_line\_rasterization} extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to \texttt{vkCmdSetRasterizerDiscardEnable} in the current command buffer set \texttt{rasterizerDiscardEnable} to \texttt{VK\_FALSE}, and the most recent call to \texttt{vkCmdSetLineStippleEnableEXT} in the current command buffer set \texttt{stippledLineEnable} to \texttt{VK\_TRUE}, then \texttt{vkCmdSetLineStippleEXT} must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_DEPTH\_CLIP\_NEGATIVE\_ONE\_TO\_ONE\_EXT} dynamic state enabled then \texttt{vkCmdSetDepthClipNegativeOneToOneEXT} must have been called in the current command buffer prior to this drawing command.

If the \texttt{depthClipControl} feature is enabled, and a shader object is bound to any graphics stage, then \texttt{vkCmdSetDepthClipNegativeOneToOneEXT} must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_VIEWPORT\_W\_SCALING\_ENABLE\_NV} dynamic state enabled then \texttt{vkCmdSetViewportWScalingEnableNV} must have been called in the current command buffer prior to this drawing command.

If the \texttt{VK\_NV\_clip\_space\_w\_scaling} extension is enabled, and a shader object is bound to any graphics stage, then \texttt{vkCmdSetViewportWScalingEnableNV} must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_VIEWPORT\_SWIZZLE\_NV} dynamic state enabled then \texttt{vkCmdSetViewportSwizzleNV} must have been called in the current command buffer prior to this drawing command.

If the \texttt{VK\_NV\_viewport\_swizzle} extension is enabled, and a shader object is bound to any graphics stage, then \texttt{vkCmdSetViewportSwizzleNV} must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state was created with the \texttt{VK\_DYNAMIC\_STATE\_COVERAGE\_TO\_COLOR\_ENABLE\_NV} dynamic state enabled then \texttt{vkCmdSetCoverageToColorEnableNV} must have been called in the current command buffer prior to this drawing command.
• VUID-vkCmdDraw-None-08676
If the VK_NV_fragment_coverage_to_color extension is enabled, and a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetCoverageToColorEnableNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07643
If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV dynamic state enabled then vkCmdSetCoverageToColorLocationNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08677
If the VK_NV_fragment_coverage_to_color extension is enabled, and a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the most recent call to vkCmdSetCoverageToColorEnableNV in the current command buffer set coverageToColorEnable to VK_TRUE, then vkCmdSetCoverageToColorLocationNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07644
If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV dynamic state enabled then vkCmdSetCoverageModulationModeNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08678
If the VK_NV_framebuffer_mixed_samples extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, then vkCmdSetCoverageModulationModeNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07645
If the bound graphics pipeline state was created with the VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV dynamic state enabled then vkCmdSetCoverageModulationTableEnableNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-08679
If the VK_NV_framebuffer_mixed_samples extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to vkCmdSetRasterizerDiscardEnable in the current command buffer set rasterizerDiscardEnable to VK_FALSE, and the most recent call to vkCmdSetCoverageModulationModeNV in the current command buffer set coverageModulationMode to any value other than VK_COVERAGE_MODULATION_MODE_NONE_NV, then vkCmdSetCoverageModulationTableEnableNV must have been called in the current command buffer prior to this drawing command.

• VUID-vkCmdDraw-None-07646
If the bound graphics pipeline state was created with the
If the VK_NV_framebuffer_mixed_samples extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetCoverageModulationTableEnableNV` in the current command buffer set `coverageModulationTableEnable` to `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-None-08680
  If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the most recent call to `vkCmdSetCoverageModulationTableEnableNV` in the current command buffer set `coverageModulationTableEnable` to `VK_TRUE`, then `vkCmdSetCoverageModulationTableNV` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-pipelineFragmentShadingRate-09238
  If the `pipelineFragmentShadingRate` feature is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetFragmentShadingRateKHR` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-None-07647
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV` dynamic state enabled then `vkCmdSetShadingRateImageEnableNV` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-None-08681
  If the `shadingRateImage` feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetShadingRateImageEnableNV` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-None-08682
  If the `coverageReductionMode` feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-None-07648
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV` dynamic state enabled then `vkCmdSetCoverageReductionModeNV` must have been called in the current command buffer prior to this drawing command.

- VUID-vkCmdDraw-None-08683
  If the `coverageReductionMode` feature is enabled, and a shader object is bound to any graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` must have been called in the current command buffer prior to this drawing command.
graphics stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetCoverageReductionModeNV` must have been called in the current command buffer prior to this drawing command.

- **VUID-vkCmdDraw-pColorBlendEnables-07470**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT` state enabled and the last call to `vkCmdSetColorBlendEnableEXT` set `pColorBlendEnables` for any attachment to `VK_TRUE`, then for those attachments in the subpass the corresponding image view’s format features must contain `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT`.

- **VUID-vkCmdDraw-rasterizationSamples-07471**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and the current subpass does not use any color and/or depth/stencil attachments, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` must follow the rules for a zero-attachment subpass.

- **VUID-vkCmdDraw-samples-07472**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state enabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state disabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` must be greater or equal to the `VkPipelineMultisampleStateCreateInfo::rasterizationSamples` parameter used to create the bound graphics pipeline.

- **VUID-vkCmdDraw-samples-07473**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT` state and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, then the `samples` parameter in the last call to `vkCmdSetSampleMaskEXT` must be greater or equal to the `rasterizationSamples` parameter in the last call to `vkCmdSetRasterizationSamplesEXT`.

- **VUID-vkCmdDraw-rasterizationSamples-07474**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, and neither the `VK_AMD_mixed_attachment_samples` nor the `VK_NV_framebuffer_mixed_samples` extensions are enabled, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` must be the same as the current subpass color and/or depth/stencil attachments.

- **VUID-vkCmdDraw-None-09211**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, or a shader object is bound to any graphics stage, and the current render pass instance includes a `VkMultisampledRenderToSingleSampledInfoEXT` structure with `multisampledRenderToSingleSampledEnable` equal to `VK_TRUE`, then the `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT` must be the same as the `rasterizationSamples` member of that structure.

- **VUID-vkCmdDraw-firstAttachment-07476**
If the bound graphics pipeline state was created with the 
VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT dynamic state enabled then 
vkCmdSetColorBlendEnableEXT must have been called in the current command buffer 
prior to this drawing command, and the attachments specified by the firstAttachment and 
attachmentCount parameters of vkCmdSetColorBlendEnableEXT calls must specify an enable 
for all active color attachments in the current subpass

• VUID-vkCmdDraw-rasterizerDiscardEnable-09417
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent 
call to vkCmdSetRasterizerDiscardEnable in the current command buffer set 
rasterizerDiscardEnable to VK_FALSE, then vkCmdSetColorBlendEnableEXT must have 
been called in the current command buffer prior to this drawing command, and the 
attachments specified by the firstAttachment and attachmentCount parameters of 
vkCmdSetColorBlendEnableEXT calls must specify an enable for all active color attachments 
in the current subpass

• VUID-vkCmdDraw-firstAttachment-07477
  If the bound graphics pipeline state was created with the 
VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT dynamic state enabled then 
vkCmdSetColorBlendEquationEXT must have been called in the current command buffer 
prior to this drawing command, and the attachments specified by the firstAttachment and 
attachmentCount parameters of vkCmdSetColorBlendEquationEXT calls must specify the blend 
equations for all active color attachments in the current subpass where blending is enabled

• VUID-vkCmdDraw-rasterizerDiscardEnable-09418
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent 
call to vkCmdSetRasterizerDiscardEnable in the current command buffer set 
rasterizerDiscardEnable to VK_FALSE, then vkCmdSetColorBlendEquationEXT must have 
been called in the current command buffer prior to this drawing command, and the 
attachments specified by the firstAttachment and attachmentCount parameters of 
vkCmdSetColorBlendEquationEXT calls must specify the blend equations for all active color 
attachments in the current subpass where blending is enabled

• VUID-vkCmdDraw-firstAttachment-07478
  If the bound graphics pipeline state was created with the 
VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT dynamic state enabled then 
vkCmdSetColorWriteMaskEXT must have been called in the current command buffer 
prior to this drawing command, and the attachments specified by the firstAttachment and 
attachmentCount parameters of vkCmdSetColorWriteMaskEXT calls must specify the color 
write mask for all active color attachments in the current subpass

• VUID-vkCmdDraw-rasterizerDiscardEnable-09419
  If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, and the most recent 
call to vkCmdSetRasterizerDiscardEnable in the current command buffer set 
rasterizerDiscardEnable to VK_FALSE, then vkCmdSetColorWriteMaskEXT must have 
been called in the current command buffer prior to this drawing command, and the 
attachments specified by the firstAttachment and attachmentCount parameters of 
vkCmdSetColorWriteMaskEXT calls must specify the color write mask for all active color 
attachments in the current subpass
If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT dynamic state enabled then
vkCmdSetColorBlendAdvancedEXT must have been called in the current command buffer
prior to this drawing command, and the attachments specified by the firstAttachment and
attachmentCount parameters of vkCmdSetColorBlendAdvancedEXT calls must specify the
advanced blend equations for all active color attachments in the current subpass where
blending is enabled.

If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT and VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT
dynamic states enabled and the last calls to vkCmdSetColorBlendEnableEXT and
vkCmdSetColorBlendAdvancedEXT have enabled advanced blending, then the number of
active color attachments in the current subpass must not exceed
advancedBlendMaxColorAttachments.

If the primitivesGeneratedQueryWithNonZeroStreams feature is not enabled and the
VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT query is active, and the bound graphics pipeline
was created with VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT state enabled, the last call to
vkCmdSetRasterizationStreamEXT must have set the rasterizationStream to zero.

If the bound graphics pipeline state was created with the
VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state enabled and the
VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT state disabled, then the
sampleLocationsPerPixel member of pSampleLocationsInfo in the last call to
vkCmdSetSampleLocationsEXT must equal the rasterizationSamples member of the
VkPipelineMultisampleStateCreateInfo structure the bound graphics pipeline has been
created with.

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound
graphics pipeline state was created with the
VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT state enabled, and sampleLocationsEnable was VK_TRUE in the last call to
vkCmdSetSampleLocationsEnableEXT, and the current subpass has a depth/stencil
attachment, then that attachment must have been created with the
VK_IMAGE_CREATE_SAMPLE_LOCATIONS_COMPATIBLE_DEPTH_BIT_EXT bit set.

If a shader object is bound to the VK_SHADER_STAGE_FRAGMENT_BIT stage, or the bound
graphics pipeline state was created with the VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT state
enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.sampleLocationGridSize.width` in the last call to `vkCmdSetSampleLocationsEXT` must evenly divide `VkMultisamplePropertiesEXT::sampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`.

- **VUID-vkCmdDraw-sampleLocationsEnable-07486**
  If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state enabled and the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, then the `sampleLocationsInfo.sampleLocationGridSize.height` in the last call to `vkCmdSetSampleLocationsEXT` must evenly divide `VkMultisamplePropertiesEXT::sampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling `rasterizationSamples`.

- **VUID-vkCmdDraw-sampleLocationsEnable-07487**
  If a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, and if `sampleLocationsEnable` was `VK_TRUE` in the last call to `vkCmdSetSampleLocationsEnableEXT`, the fragment shader code must not statically use the extended instruction `InterpolateAtSample`.

- **VUID-vkCmdDraw-sampleLocationsEnable-07936**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, the `sampleLocationsEnable` member of a `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` in the bound graphics pipeline is `VK_TRUE` or `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, then, `sampleLocationsInfo.sampleLocationGridSize.width` must evenly divide `VkMultisamplePropertiesEXT::sampleLocationGridSize.width` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`.

- **VUID-vkCmdDraw-sampleLocationsEnable-07937**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, the `sampleLocationsEnable` member of a `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` in the bound graphics pipeline is `VK_TRUE` or `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, then, `sampleLocationsInfo.sampleLocationGridSize.height` must evenly divide `VkMultisamplePropertiesEXT::sampleLocationGridSize.height` as returned by `vkGetPhysicalDeviceMultisamplePropertiesEXT` with a `samples` parameter equaling the value of `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`.

- **VUID-vkCmdDraw-sampleLocationsEnable-07938**
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_EXT` state disabled and the `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` state enabled, the `sampleLocationsEnable` member of a `VkPipelineSampleLocationsStateCreateInfoEXT::sampleLocationsEnable` in the bound graphics pipeline is `VK_TRUE` or `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT` state enabled, then, `sampleLocationsInfo.sampleLocationsPerPixel` must equal `rasterizationSamples` in the last call to `vkCmdSetRasterizationSamplesEXT`.

- **VUID-vkCmdDraw-coverageModulationTableEnable-07488**
  If a shader object is bound to any graphics stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV` state enabled, and the last call to `vkCmdSetCoverageModulationTableEnableNV` set `coverageModulationTableEnable` to `VK_TRUE`, then the `coverageModulationTableCount` parameter in the last call to `vkCmdSetCoverageModulationTableNV` must equal the current `rasterizationSamples` divided by the number of color samples in the current subpass.

- **VUID-vkCmdDraw-rasterizationSamples-07489**
  If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if current subpass has a depth/stencil attachment and depth test, stencil test, or depth bounds test are enabled in the currently bound pipeline state, then the current `rasterizationSamples` must be the same as the sample count of the depth/stencil attachment.

- **VUID-vkCmdDraw-coverageToColorEnable-07490**
  If the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` state enabled and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then the current subpass must have a color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`.

- **VUID-vkCmdDraw-rasterizerDiscardEnable-09420**
  If the `VK_NV_fragment_coverage_to_color` extension is enabled, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, and the last call to `vkCmdSetCoverageToColorEnableNV` set the `coverageToColorEnable` to `VK_TRUE`, then the current subpass must have a color attachment at the location selected by the last call to `vkCmdSetCoverageToColorLocationNV` with a `VkFormat` of `VK_FORMAT_R8_UINT`, `VK_FORMAT_R8_SINT`, `VK_FORMAT_R16_UINT`, `VK_FORMAT_R16_SINT`, `VK_FORMAT_R32_UINT`, or `VK_FORMAT_R32_SINT`.

- **VUID-vkCmdDraw-coverageReductionMode-07491**
  If this `VK_NV_coverage_reduction_mode` extension is enabled, the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV` and `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT` states enabled, the current coverage reduction mode `coverageReductionMode`, and the sample counts for the color and depth/stencil attachments (if the subpass has them) must be a valid combination returned by `vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV`.
• VUID-vkCmdDraw-viewportCount-07492
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` dynamic state enabled, but not the `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic state enabled, then the bound graphics pipeline must have been created with `VkPipelineViewportSwizzleStateCreateInfoNV`::viewportCount greater or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

• VUID-vkCmdDraw-viewportCount-07493
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT` and `VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV` dynamic states enabled then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` must be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

• VUID-vkCmdDraw-viewportCount-09421
If the `VK_NV_viewport_swizzle` extension is enabled, and a shader object is bound to any graphics stage, then the `viewportCount` parameter in the last call to `vkCmdSetViewportSwizzleNV` must be greater than or equal to the `viewportCount` parameter in the last call to `vkCmdSetViewportWithCount`

• VUID-vkCmdDraw-rasterizationSamples-07494
If the `VK_NV_framebuffer_mixed_samples` extension is enabled, and if the current subpass has any color attachments and `rasterizationSamples` of the last call to `vkCmdSetRasterizationSamplesEXT` is greater than the number of color samples, then the pipeline sampleShadingEnable must be `VK_FALSE`

• VUID-vkCmdDraw-stippledLineEnable-07495
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current stippledLineEnable state is `VK_TRUE` and the current lineRasterizationMode state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_KHR`, then the stippledRectangularLines feature must be enabled

• VUID-vkCmdDraw-stippledLineEnable-07496
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current stippledLineEnable state is `VK_TRUE` and the current lineRasterizationMode state is `VK_LINE_RASTERIZATION_MODE_BRESENHAM_KHR`, then the stippledBresenhamLines feature must be enabled

• VUID-vkCmdDraw-stippledLineEnable-07497
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current stippledLineEnable state is `VK_TRUE` and the current lineRasterizationMode state is `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH_KHR`, then the stippledSmoothLines feature must be enabled

• VUID-vkCmdDraw-stippledLineEnable-07498
If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT` or `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT` dynamic states enabled, and if the current `stippledLineEnable` state is `VK_TRUE` and the current `lineRasterizationMode` state is `VK_LINE_RASTERIZATION_MODE_DEFAULT_KHR`, then the `stippledRectangularLines` feature must be enabled and `VkPhysicalDeviceLimits::strictLines` must be `VK_TRUE`.

- **VUID-vkCmdDraw-conservativePointAndLineRasterization-07499**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT` dynamic state enabled, conservativePointAndLineRasterization is not supported, and the effective primitive topology output by the last pre-rasterization shader stage is a line or point, then the `conservativeRasterizationMode` set by the last call to `vkCmdSetConservativeRasterizationModeEXT` must be `VK_CONSERVATIVE_RASTERIZATION_MODE_DISABLED_EXT`.

- **VUID-vkCmdDraw-stage-07073**
  If the currently bound pipeline was created with the `VkPipelineShaderStageCreateInfo`::`stage` member of an element of `VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_VERTEX_BIT`, `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT` or `VK_SHADER_STAGE_GEOMETRY_BIT`, then Mesh Shader Queries must not be active.

- **VUID-vkCmdDraw-None-08877**
  If there is no bound graphics pipeline, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_VERTEX_BIT`.

- **VUID-vkCmdDraw-None-08684**
  If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`.

- **VUID-vkCmdDraw-None-08685**
  If there is no bound graphics pipeline, and the `tessellationShader` feature is enabled, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`.

- **VUID-vkCmdDraw-None-08686**
  If there is no bound graphics pipeline, and the `geometryShader` feature is enabled, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_GEOMETRY_BIT`.
• VUID-vkCmdDraw-None-08688
  If there is no bound graphics pipeline, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_FRAGMENT_BIT`.

• VUID-vkCmdDraw-None-08689
  If there is no bound graphics pipeline, and the `taskShader` feature is enabled, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_TASK_BIT_EXT`.

• VUID-vkCmdDraw-None-08690
  If there is no bound graphics pipeline, and the `meshShader` feature is enabled, `vkCmdBindShadersEXT` must have been called in the current command buffer with `pStages` with an element of `VK_SHADER_STAGE_MESH_BIT_EXT`.

• VUID-vkCmdDraw-None-08693
  If there is no bound graphics pipeline, and at least one of the `taskShader` and `meshShader` features is enabled, one of the `VK_SHADER_STAGE_VERTEX_BIT` or `VK_SHADER_STAGE_MESH_BIT_EXT` stages must have a valid `VkShaderEXT` bound, and the other must have no `VkShaderEXT` bound.

• VUID-vkCmdDraw-None-08694
  If there is no bound graphics pipeline, and both the `taskShader` and `meshShader` features are enabled, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_MESH_BIT_EXT` stage, and that `VkShaderEXT` was created without the `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` flag, a valid `VkShaderEXT` must be bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage.

• VUID-vkCmdDraw-None-08695
  If there is no bound graphics pipeline, and both the `taskShader` and `meshShader` features are enabled, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_MESH_BIT_EXT` stage, and that `VkShaderEXT` was created with the `VK_SHADER_CREATE_NO_TASK_SHADER_BIT_EXT` flag, there must be no `VkShaderEXT` bound to the `VK_SHADER_STAGE_TASK_BIT_EXT` stage.

• VUID-vkCmdDraw-None-08696
  If there is no bound graphics pipeline, and a valid `VkShaderEXT` is bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage, there must be no `VkShaderEXT` bound to either the `VK_SHADER_STAGE_TASK_BIT_EXT` stage or the `VK_SHADER_STAGE_MESH_BIT_EXT` stage.

• VUID-vkCmdDraw-None-08698
  If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, then all shaders created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag in the same `vkCreateShadersEXT` call must also be bound.

• VUID-vkCmdDraw-None-08699
  If any graphics shader is bound which was created with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag, any stages in between stages whose shaders which did not create a shader with the `VK_SHADER_CREATE_LINK_STAGE_BIT_EXT` flag as part of the same `vkCreateShadersEXT` call must not have any `VkShaderEXT` bound.

• VUID-vkCmdDraw-None-08878
  All bound graphics shader objects must have been created with identical or identically defined push constant ranges.
All bound graphics shader objects must have been created with identical or identically defined arrays of descriptor set layouts.

If the current render pass instance was begun with `vkCmdBeginRendering` and a `VkRenderingInfo::colorAttachmentCount` equal to 1, a color attachment with a resolve mode of `VK_RESOLVE_MODE_EXTERNAL_FORMAT_DOWNSAMPLE_ANDROID`, and a fragment shader is bound, it must not declare the `DepthReplacing` or `StencilRefReplacingEXT` execution modes.

If the `attachmentFeedbackLoopDynamicState` feature is enabled on the device, and a shader object is bound to the `VK_SHADER_STAGE_FRAGMENT_BIT` stage, and the most recent call to `vkCmdSetRasterizerDiscardEnable` in the current command buffer set `rasterizerDiscardEnable` to `VK_FALSE`, then `vkCmdSetAttachmentFeedbackLoopEnableEXT` must have been called in the current command buffer prior to this drawing command.

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpDepthAttachmentReadEXT`, the `depthWriteEnable` parameter in the last call to `vkCmdSetDepthWriteEnable` must be `VK_FALSE`.

If the bound graphics pipeline state includes a fragment shader stage, was created with `VK_DYNAMIC_STATE_STENCIL_WRITE_MASK` set in `VkPipelineDynamicStateCreateInfo::pDynamicStates`, and the fragment shader declares the `EarlyFragmentTests` execution mode and uses `OpStencilAttachmentReadEXT`, the `writeMask` parameter in the last call to `vkCmdSetStencilWriteMask` must be 0.

If a shader object is bound to any graphics stage or the currently bound graphics pipeline was created with `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`, and the format of any color attachment is `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32`, the corresponding element of the `pColorWriteMasks` parameter of `vkCmdSetColorWriteMaskEXT` must either include all of `VK_COLOR_COMPONENT_R_BIT`, `VK_COLOR_COMPONENT_G_BIT`, and `VK_COLOR_COMPONENT_B_BIT`, or none of them.

If blending is enabled for any attachment where either the source or destination blend factors for that attachment use the secondary color input, the maximum value of `Location` for any output attachment statically used in the Fragment Execution Model executed by this command must be less than `maxFragmentDualSrcAttachments`.

If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, the value of each element of `VkRenderingAttachmentLocationInfoKHR::pColorAttachmentLocations` set by `vkCmdSetRenderingAttachmentLocationsKHR` must match the value set for the corresponding element in the currently bound pipeline.
If the current render pass was begun with `vkCmdBeginRendering`, and there is no shader object bound to any graphics stage, input attachment index mappings in the currently bound pipeline must match those set for the current render pass instance via `VkRenderingInputAttachmentIndexInfoKHR`

- **VUID-vkCmdDraw-commandBuffer-02712**
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, any resource written to by the `VkPipeline` object bound to the pipeline bind point used by this command must not be an unprotected resource

- **VUID-vkCmdDraw-commandBuffer-02713**
  If `commandBuffer` is a protected command buffer and `protectedNoFault` is not supported, pipeline stages other than the framebuffer-space and compute stages in the `VkPipeline` object bound to the pipeline bind point used by this command must not write to any resource

- **VUID-vkCmdDraw-commandBuffer-04617**
  If any of the shader stages of the `VkPipeline` bound to the pipeline bind point used by this command uses the `RayQueryKHR` capability, then `commandBuffer` must not be a protected command buffer

- **VUID-vkCmdDraw-None-04007**
  All vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface must have either valid or `VK_NULL_HANDLE` buffers bound

- **VUID-vkCmdDraw-None-04008**
  If the `nullDescriptor` feature is not enabled, all vertex input bindings accessed via vertex input variables declared in the vertex shader entry point's interface must not be `VK_NULL_HANDLE`

- **VUID-vkCmdDraw-None-02721**
  For a given vertex buffer binding, any attribute data fetched must be entirely contained within the corresponding vertex buffer binding, as described in Vertex Input Description

- **VUID-vkCmdDraw-None-07842**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled then `vkCmdSetPrimitiveTopology` must have been called in the current command buffer prior to this drawing command

- **VUID-vkCmdDraw-dynamicPrimitiveTopologyUnrestricted-07500**
  If the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY` dynamic state enabled and the `dynamicPrimitiveTopologyUnrestricted` is `VK_FALSE`, then the `primitiveTopology` parameter of `vkCmdSetPrimitiveTopology` must be of the same topology class as the pipeline `VkPipelineInputAssemblyStateCreateInfo::topology` state

- **VUID-vkCmdDraw-None-04912**
  If the bound graphics pipeline was created with both the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` and `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE_EXT` dynamic states enabled, then `vkCmdSetVertexInputEXT` must have been called in the
current command buffer prior to this draw command

- **VUID-vkCmdDraw-pStrides-04913**
  If the bound graphics pipeline was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE_EXT` dynamic state enabled, but without the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, then `vkCmdBindVertexBuffers2EXT` must have been called in the current command buffer prior to this draw command, and the `pStrides` parameter of `vkCmdBindVertexBuffers2EXT` must not be `NULL`.

- **VUID-vkCmdDraw-None-04914**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then `vkCmdSetVertexInputEXT` must have been called in the current command buffer prior to this draw command.

- **VUID-vkCmdDraw-Input-07939**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then all variables with the `Input` storage class decorated with `Location` in the `Vertex Execution Model OpEntryPoint` must contain a location in `VkVertexInputAttributeDescription2EXT::location`.

- **VUID-vkCmdDraw-Input-08734**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled then the numeric type associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` must be the same as `VkVertexInputAttributeDescription2EXT::format`.

- **VUID-vkCmdDraw-format-08936**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then the scalar width associated with all `Input` variables of the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` must be 64-bit.

- **VUID-vkCmdDraw-format-08937**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and the scalar width associated with a `Location` decorated `Input` variable in the `Vertex Execution Model OpEntryPoint` is 64-bit, then the corresponding `VkVertexInputAttributeDescription2EXT::format` must have a 64-bit component.

- **VUID-vkCmdDraw-None-09203**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound graphics pipeline state was created with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled and `VkVertexInputAttributeDescription2EXT::format` has a 64-bit component, then all `Input` variables at the corresponding `Location` in the `Vertex Execution Model OpEntryPoint` must not use components that are not present in the format.

- **VUID-vkCmdDraw-None-04875**
  If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage and the most
recent call to `vkCmdSetPrimitiveTopology` in the current command buffer set
primitiveTopology to `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST`, or the bound graphics pipeline
state was created with the `VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT` dynamic state
enabled then `vkCmdSetPatchControlPointsEXT` must have been called in the current
command buffer prior to this drawing command

• VUID-vkCmdDraw-None-04879
If there is a shader object bound to the `VK_SHADER_STAGE_VERTEX_BIT` stage or the bound
graphics pipeline state was created with the `VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE`
dynamic state enabled then `vkCmdSetPrimitiveRestartEnable` must have been called in
the current command buffer prior to this drawing command

• VUID-vkCmdDraw-stage-06481
The bound graphics pipeline must not have been created with the
`VkPipelineShaderStageCreateInfo::stage` member of an element of
`VkGraphicsPipelineCreateInfo::pStages` set to `VK_SHADER_STAGE_TASK_BIT_EXT` or
`VK_SHADER_STAGE_MESH_BIT_EXT`

• VUID-vkCmdDraw-None-08885
There must be no shader object bound to either of the `VK_SHADER_STAGE_TASK_BIT_EXT` or
`VK_SHADER_STAGE_MESH_BIT_EXT` stages

• VUID-vkCmdDraw-pNext-09461
If the bound graphics pipeline state was created with
`VkPipelineVertexInputDivisorStateCreateInfoKHR` in the `pNext` chain of
`VkGraphicsPipelineCreateInfo::pVertexInputState`, any member of the
`VkPipelineVertexInputDivisorStateCreateInfoKHR::pVertexBindingDivisors` has a value
other than 1 in `divisor`, and `VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR::supportsNonZeroFirstInstance` is `VK_FALSE`, then `firstInstance` must be 0

• VUID-vkCmdDraw-None-09462
If shader objects are used for drawing or the bound graphics pipeline state was created
with the `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT` dynamic state enabled, any member of the
`pVertexBindingDescriptions` parameter to the `vkCmdSetVertexInputEXT` call that sets this
dynamic state has a value other than 1 in `divisor`, and `VkPhysicalDeviceVertexAttributeDivisorPropertiesKHR::supportsNonZeroFirstInstance` is `VK_FALSE`, then `firstInstance` must be 0

Valid Usage (Implicit)

• VUID-vkCmdDraw-commandBuffer-parameter
`commandBuffer` must be a valid `VkCommandBuffer` handle

• VUID-vkCmdDraw-commandBuffer-recording
`commandBuffer` must be in the recording state

• VUID-vkCmdDraw-commandBuffer-cmdpool
The `VkCommandPool` that `commandBuffer` was allocated from must support graphics
operations

• VUID-vkCmdDraw-renderpass
This command **must** only be called inside of a render pass instance

- VUID-vkCmdDraw-videocoding
  This command **must** only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

### Command Properties

To record an indexed draw, call:

```c
// Provided by VK_VERSION_1_0
void vkCmdDrawIndexed(
  VkCommandBuffer commandBuffer,
  uint32_t indexCount,
  uint32_t instanceCount,
  uint32_t firstIndex,
  int32_t vertexOffset,
  uint32_t firstInstance);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `indexCount` is the number of vertices to draw.
- `instanceCount` is the number of instances to draw.
- `firstIndex` is the base index within the index buffer.
- `vertexOffset` is the value added to the vertex index before indexing into the vertex buffer.
- `firstInstance` is the instance ID of the first instance to draw.

When the command is executed, primitives are assembled using the current primitive topology and `indexCount` vertices whose indices are retrieved from the index buffer. The index buffer is treated as an array of tightly packed unsigned integers of size defined by the `vkCmdBindIndexBuffer2KHR::indexType` or the `vkCmdBindIndexBuffer::indexType` parameter with which the buffer was bound.

The first vertex index is at an offset of `firstIndex × indexSize + offset` within the bound index buffer, where `offset` is the offset specified by `vkCmdBindIndexBuffer` or `vkCmdBindIndexBuffer2KHR`, 1783
and \textit{indexSize} is the byte size of the type specified by \textit{indexType}. Subsequent index values are retrieved from consecutive locations in the index buffer. Indices are first compared to the primitive restart value, then zero extended to 32 bits (if the \textit{indexType} is \texttt{VK_INDEX_TYPE_UINT8_KHR} or \texttt{VK_INDEX_TYPE_UINT16}) and have \textit{vertexOffset} added to them, before being supplied as the \textit{vertexIndex} value.

The primitives are drawn \textit{instanceCount} times with \textit{instanceIndex} starting with \textit{firstInstance} and increasing sequentially for each instance. The assembled primitives execute the bound graphics pipeline.

### Valid Usage

- **VUID-vkCmdDrawIndexed-magFilter-04553**
  
  If a \texttt{VkSampler} created with \texttt{magFilter} or \texttt{minFilter} equal to \texttt{VK_FILTER_LINEAR} and \texttt{compareEnable} equal to \texttt{VK_FALSE} is used to sample a \texttt{VkImageView} as a result of this command, then the image view's \texttt{format} features \textbf{must} contain \texttt{VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT}

- **VUID-vkCmdDrawIndexed-mipmapMode-04770**
  
  If a \texttt{VkSampler} created with \texttt{mipmapMode} equal to \texttt{VK_SAMPLER_MIPMAP_MODE_LINEAR} and \texttt{compareEnable} equal to \texttt{VK_FALSE} is used to sample a \texttt{VkImageView} as a result of this command, then the image view's \texttt{format} features \textbf{must} contain \texttt{VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT}

- **VUID-vkCmdDrawIndexed-None-06479**
  
  If a \texttt{VkImageView} is sampled with \texttt{depth comparison}, the image view's \texttt{format} features \textbf{must} contain \texttt{VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT}

- **VUID-vkCmdDrawIndexed-None-02691**
  
  If a \texttt{VkImageView} is accessed using atomic operations as a result of this command, then the image view's \texttt{format} features \textbf{must} contain \texttt{VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT}

- **VUID-vkCmdDrawIndexed-None-07888**
  
  If a \texttt{VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER} descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's \texttt{format} features \textbf{must} contain \texttt{VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT}

- **VUID-vkCmdDrawIndexed-None-02692**
  
  If a \texttt{VkImageView} is sampled with \texttt{VK_FILTER_CUBIC_EXT} as a result of this command, then the image view's \texttt{format} features \textbf{must} contain \texttt{VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT}

- **VUID-vkCmdDrawIndexed-None-02693**
  
  If the \texttt{VK_EXT_filter_cubic} extension is not enabled and any \texttt{VkImageView} is sampled with \texttt{VK_FILTER_CUBIC_EXT} as a result of this command, it \textbf{must} not have a \texttt{VkImageViewType} of \texttt{VK_IMAGE_VIEW_TYPE_3D}, \texttt{VK_IMAGE_VIEW_TYPE_CUBE}, or \texttt{VK_IMAGE_VIEW_TYPE_CUBE_ARRAY}

- **VUID-vkCmdDrawIndexed-filterCubic-02694**
  
  Any \texttt{VkImageView} being sampled with \texttt{VK_FILTER_CUBIC_EXT} as a result of this command \textbf{must} have a \texttt{VkImageViewType} and format that supports cubic filtering, as specified by \texttt{VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic} returned by
vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdDrawIndexed-filterCubicMinmax-02695
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this command must have a VkImageViewType and format that supports cubic filtering together with minmax filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by vkGetPhysicalDeviceImageFormatProperties2

- VUID-vkCmdDrawIndexed-cubicRangeClamp-09212
  If the cubicRangeClamp feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command must not have a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM

- VUID-vkCmdDrawIndexed-reductionMode-09213
  Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::reductionMode equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a result of this command must sample with VK_FILTER_CUBIC_EXT

- VUID-vkCmdDrawIndexed-selectableCubicWeights-09214
  If the selectableCubicWeights feature is not enabled, then any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command must have VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights equal to VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM

- VUID-vkCmdDrawIndexed-flags-02696
  Any VkImage created with a VkImageCreateInfo::flags containing VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command must only be sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE

- VUID-vkCmdDrawIndexed-OpTypeImage-07027
  For any VkImageView being written as a storage image where the image format field of the OpTypeImage is Unknown, the view’s format features must contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT

- VUID-vkCmdDrawIndexed-OpTypeImage-07028
  For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view’s format features must contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT

- VUID-vkCmdDrawIndexed-OpTypeImage-07029
  Any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view’s buffer features must contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT

- VUID-vkCmdDrawIndexed-OpTypeImage-07030
  Any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown then the view’s buffer features must contain VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT

- VUID-vkCmdDrawIndexed-None-08600
  For each set n that is statically used by a bound shader, a descriptor set must have been
bound to \( n \) at the same pipeline bind point, with a \texttt{VkPipelineLayout} that is compatible for set \( n \), with the \texttt{VkPipelineLayout} used to create the current \texttt{VkPipeline} or the \texttt{VkDescriptorSetLayout} array used to create the current \texttt{VkShaderEXT}, as described in \textit{Pipeline Layout Compatibility}

- \texttt{VUID-vkCmdDrawIndexed-None-08601}
  For each push constant that is statically used by a bound shader, a push constant value \textbf{must} have been set for the same pipeline bind point, with a \texttt{VkPipelineLayout} that is compatible for push constants, with the \texttt{VkPipelineLayout} used to create the current \texttt{VkPipeline} or the \texttt{VkDescriptorSetLayout} array used to create the current \texttt{VkShaderEXT}, as described in \textit{Pipeline Layout Compatibility}

- \texttt{VUID-vkCmdDrawIndexed-maintenance4-08602}
  If the \texttt{maintenance4} feature is not enabled, then for each push constant that is statically used by a bound shader, a push constant value \textbf{must} have been set for the same pipeline bind point, with a \texttt{VkPipelineLayout} that is compatible for push constants, with the \texttt{VkPipelineLayout} used to create the current \texttt{VkPipeline} or the \texttt{VkDescriptorSetLayout} and \texttt{VkPushConstantRange} arrays used to create the current \texttt{VkShaderEXT}, as described in \textit{Pipeline Layout Compatibility}

- \texttt{VUID-vkCmdDrawIndexed-None-08114}
  Descriptors in each bound descriptor set, specified via \texttt{vkCmdBindDescriptorSets}, \textbf{must} be valid as described by \texttt{descriptor} \texttt{validity} if they are statically used by the \texttt{VkPipeline} bound to the pipeline bind point used by this command and the bound \texttt{VkPipeline} was not created with \texttt{VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT}

- \texttt{VUID-vkCmdDrawIndexed-None-08115}
  If the descriptors used by the \texttt{VkPipeline} bound to the pipeline bind point were specified via \texttt{vkCmdBindDescriptorSets}, the bound \texttt{VkPipeline} \textbf{must} have been created without \texttt{VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT}

- \texttt{VUID-vkCmdDrawIndexed-None-08116}
  Descriptors in bound descriptor buffers, specified via \texttt{vkCmdSetDescriptorBufferOffsetsEXT}, \textbf{must} be valid if they are dynamically used by the \texttt{VkPipeline} bound to the pipeline bind point used by this command and the bound \texttt{VkPipeline} was created with \texttt{VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT}

- \texttt{VUID-vkCmdDrawIndexed-None-08604}
  Descriptors in bound descriptor buffers, specified via \texttt{vkCmdSetDescriptorBufferOffsetsEXT}, \textbf{must} be valid if they are dynamically used by any \texttt{VkShaderEXT} bound to a stage corresponding to the pipeline bind point used by this command

- \texttt{VUID-vkCmdDrawIndexed-None-08117}
  If the descriptors used by the \texttt{VkPipeline} bound to the pipeline bind point were specified via \texttt{vkCmdSetDescriptorBufferOffsetsEXT}, the bound \texttt{VkPipeline} \textbf{must} have been created with \texttt{VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT}

- \texttt{VUID-vkCmdDrawIndexed-None-08119}
  If a descriptor is dynamically used with a \texttt{VkPipeline} created with \texttt{VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT}, the descriptor memory \textbf{must} be resident

- \texttt{VUID-vkCmdDrawIndexed-None-08605}
If a descriptor is dynamically used with a `VkShaderEXT` created with a `VkDescriptorSetLayout` that was created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`, the descriptor memory **must** be resident

- **VUID-vkCmdDrawIndexed-None-08606**
  If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command

- **VUID-vkCmdDrawIndexed-None-08608**
  If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state not specified as dynamic in the `VkPipeline` object bound to the pipeline bind point used by this command, since that pipeline was bound

- **VUID-vkCmdDrawIndexed-None-08609**
  If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used to sample from any `VkImage` with a `VkImageView` of the type `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, `VK_IMAGE_VIEW_TYPE_2D_ARRAY` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`, in any shader stage

- **VUID-vkCmdDrawIndexed-None-08610**
  If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions with `ImplicitLod`, `Dref` or `Proj` in their name, in any shader stage

- **VUID-vkCmdDrawIndexed-None-08611**
  If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V `OpImageSample*` or `OpImageSparseSample*` instructions that includes a LOD bias or any offset values, in any shader stage

- **VUID-vkCmdDrawIndexed-None-08607**
  If the `shaderObject` is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and `VK_NULL_HANDLE` shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command

- **VUID-vkCmdDrawIndexed-uniformBuffers-06935**
  If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDrawIndexed-None-08612**
If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDrawIndexed-storageBuffers-06936**
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT for storageBuffers, and the robustBufferAccess feature is not enabled, that stage must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDrawIndexed-None-08613**
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDrawIndexed-commandBuffer-02707**
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, any resource accessed by bound shaders must not be a protected resource

- **VUID-vkCmdDrawIndexed-None-06550**
  If a bound shader accesses a VkSampler or VkImageView object that enables sampler Y'C_aC_b conversion, that object must only be used with OpImageSample* or OpImageSparseSample* instructions

- **VUID-vkCmdDrawIndexed-ConstOffset-06551**
  If a bound shader accesses a VkSampler or VkImageView object that enables sampler Y'C_aC_b conversion, that object must not use the ConstOffset and Offset operands

- **VUID-vkCmdDrawIndexed-viewType-07752**
  If a VkImageView is accessed as a result of this command, then the image view's viewType must match the Dim operand of the OpTypeImage as described in Instruction/Sampler/Image View Validation

- **VUID-vkCmdDrawIndexed-format-07753**
  If a VkImageView is accessed as a result of this command, then the numeric type of the image view's format and the Sampled Type operand of the OpTypeImage must match

- **VUID-vkCmdDrawIndexed-OpImageWrite-08795**
  If a VkImageView created with a format other than VK_FORMAT_A8_UNORM_KHR is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have at least as many components as the image view's format

- **VUID-vkCmdDrawIndexed-OpImageWrite-08796**
  If a VkImageView created with the format VK_FORMAT_A8_UNORM_KHR is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have four components

- **VUID-vkCmdDrawIndexed-OpImageWrite-04469**
  If a VkBufferView is accessed using OpImageWrite as a result of this command, then the
Type of the Texel operand of that instruction must have at least as many components as the buffer view’s format

- VUID-vkCmdDrawIndexed-SampledType-04470
  If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64

- VUID-vkCmdDrawIndexed-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32

- VUID-vkCmdDrawIndexed-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64

- VUID-vkCmdDrawIndexed-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32

- VUID-vkCmdDrawIndexed-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command

- VUID-vkCmdDrawIndexed-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command

- VUID-vkCmdDrawIndexed-OpImageWeightedSampleQCOM-06971
  If OpImageWeightedSampleQCOM is used to sample a VkImageView as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM

- VUID-vkCmdDrawIndexed-OpImageWeightedSampleQCOM-06972
  If OpImageWeightedSampleQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM

- VUID-vkCmdDrawIndexed-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM

- VUID-vkCmdDrawIndexed-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from an VkImageView as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM

- VUID-vkCmdDrawIndexed-OpImageBlockMatchSADQCOM-06975
  If OpImageBlockMatchSADQCOM is used to read from an VkImageView as a result of this command, then the image view’s format features must contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view’s format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

- **VUID-vkCmdDrawIndexed-OpImageBlockMatchSADQCOM-06976**
  If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail integer texel coordinate validation.

- **VUID-vkCmdDrawIndexed-OpImageWeightedSampleQCOM-06977**
  If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

- **VUID-vkCmdDrawIndexed-OpImageWeightedSampleQCOM-06978**
  If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

- **VUID-vkCmdDrawIndexed-OpImageBlockMatchWindow-09215**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view’s format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

- **VUID-vkCmdDrawIndexed-OpImageBlockMatchWindow-09216**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view’s format **must** be a single-component format.

- **VUID-vkCmdDrawIndexed-OpImageBlockMatchWindow-09217**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail integer texel coordinate validation.

- **VUID-vkCmdDrawIndexed-None-07288**
  Any shader invocation executed by this command **must** terminate.

- **VUID-vkCmdDrawIndexed-renderPass-02684**
  The current render pass **must** be compatible with the `renderPass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`.

- **VUID-vkCmdDrawIndexed-subpass-02685**
  The subpass index of the current render pass **must** be equal to the `subpass` member of the `VkGraphicsPipelineCreateInfo` structure specified when creating the `VkPipeline` bound to `VK_PIPELINE_BIND_POINT_GRAPHICS`.

- **VUID-vkCmdDrawIndexed-None-07748**
  If any shader statically accesses an input attachment, a valid descriptor **must** be bound to
the pipeline via a descriptor set

- **VUID-vkCmdDrawIndexed-OpTypeImage-07468**
  If any shader executed by this pipeline accesses an `OpTypeImage` variable with a `Dim` operand of `SubpassData`, it **must** be decorated with an `InputAttachmentIndex` that corresponds to a valid input attachment in the current subpass.

- **VUID-vkCmdDrawIndexed-None-07469**
  Input attachment views accessed in a subpass **must** be created with the same `VkFormat` as the corresponding subpass definition, and be created with a `VkImageView` that is compatible with the attachment referenced by the subpass' `pInputAttachments[InputAttachmentIndex]` in the currently bound `VkFramebuffer` as specified by Fragment Input Attachment Compatibility.

- **VUID-vkCmdDrawIndexed-None-06537**
  Memory backing image subresources used as attachments in the current render pass **must** not be written in any way other than as an attachment by this command.

- **VUID-vkCmdDrawIndexed-None-09000**
  If a color attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it is not in the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` image layout, and either:
  - the `VK_PIPELINE_CREATE_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` is set on the currently bound pipeline or
  - the last call to `vkCmdSetAttachmentFeedbackLoopEnableEXT` included `VK_IMAGE_ASPECT_COLOR_BIT` and
    - there is no currently bound graphics pipeline or
    - the currently bound graphics pipeline was created with `VK_DYNAMIC_STATE_ATTACHMENT_FEEDBACK_LOOP_ENABLE_EXT` and **must** not be accessed in any way other than as an attachment by this command.

- **VUID-vkCmdDrawIndexed-None-09001**
  If a depth attachment is written by any prior command in this subpass or by the load, store, or resolve operations for this subpass, it is not in the `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` image layout, and either:
  - the `VK_PIPELINE_CREATE_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT` is set on the currently bound pipeline or
  - the last call to `vkCmdSetAttachmentFeedbackLoopEnableEXT` included `VK_IMAGE_ASPECT_DEPTH_BIT` and
    - there is no currently bound graphics pipeline or
