If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODER_H264_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the reconstruct picture must be less than pDecodeInfo->srcBufferRange.

- VUID-vkCmdDecodeVideoKHR-StdVideoH264SequenceParameterSet-07154
If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODER_H264_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the StdVideoH264SequenceParameterSet entry with seq_parameter_set_id matching StdVideoDecodeH264PictureInfo::seq_parameter_set_id that is provided in the pStdPictureInfo member of the VkVideoDecodeH264PictureInfoKHR structure included in the pNext chain of pDecodeInfo must be less than pDecodeInfo->srcBufferRange.

- VUID-vkCmdDecodeVideoKHR-StdVideoH264PictureParameterSet-07155
If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODER_H264_BIT_KHR but was not created with interlaced frame support, and if pDecodeInfo->pSetupReferenceSlot is not NULL, then the reconstructed picture must be less than pDecodeInfo->srcBufferRange.

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07156
If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODER_H264_BIT_KHR and pDecodeInfo->pSetupReferenceSlot is not NULL, then the pNext chain of pDecodeInfo->pSetupReferenceSlot must include a VkVideoDecodeH264DpbSlotInfoKHR structure.

- VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07259
If the bound video session was created with the video codec operation VK_VIDEO_CODEC_OPERATION_DECODER_H264_BIT_KHR but was not created with interlaced frame support, and if pDecodeInfo->pSetupReferenceSlot is not NULL, then the reconstructed picture must be less than pDecodeInfo->srcBufferRange.
**must** represent a frame

- **VUID-vkCmdDecodeVideoKHR-pNext-07157**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR`, then the `pNext` chain of each element of `pDecodeInfo->pReferenceSlots` **must** include a `VkVideoDecodeH264DpbSlotInfoKHR` structure.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07260**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR` but was not created with interlaced frame support, then each active reference picture corresponding to the elements of `pDecodeInfo->pReferenceSlots` **must** represent a frame.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07261**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the decode output picture represents a frame, then the reconstructed picture **must** also represent a frame.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07262**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the decode output picture represents a top field, then the reconstructed picture **must** also represent a top field.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07263**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR`, `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, and the decode output picture represents a bottom field, then the reconstructed picture **must** also represent a bottom field.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07266**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR` and an active reference picture corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a frame, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a frame picture matching the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07267**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR` and an active reference picture corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a top field, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a top field picture matching the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07268**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATIONDecodeH264_BIT_KHR` and an active reference picture...
corresponding to any element of `pDecodeInfo->pReferenceSlots` represents a bottom field, then the DPB slot index of the bound video session specified by the `slotIndex` member of that element **must** be currently associated with a bottom field picture matching the video picture resource specified by the `pPictureResource` member of the same element at the time the command is executed on the device.

- **VUID-vkCmdDecodeVideoKHR-pNext-07158**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain of `pDecodeInfo` **must** include a `VkVideoDecodeH265PictureInfoKHR` structure.

- **VUID-vkCmdDecodeVideoKHR-pSliceSegmentOffsets-07159**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then all elements of the `pSliceSegmentOffsets` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo` **must** be less than `pDecodeInfo->srcBufferRange`.

- **VUID-vkCmdDecodeVideoKHR-StdVideoH265VideoParameterSet-07160**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265VideoParameterSet` entry with `vps_video_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` that is provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`.

- **VUID-vkCmdDecodeVideoKHR-StdVideoH265SequenceParameterSet-07161**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265SequenceParameterSet` entry with `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id` and `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`.

- **VUID-vkCmdDecodeVideoKHR-StdVideoH265PictureParameterSet-07162**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the bound video session parameters object **must** contain a `StdVideoH265PictureParameterSet` entry with `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` matching `StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id`, `StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id`, and `StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id`, respectively, that are provided in the `pStdPictureInfo` member of the `VkVideoDecodeH265PictureInfoKHR` structure included in the `pNext` chain of `pDecodeInfo`.

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-07163**
  If the bound video session was created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and `pDecodeInfo->pSetupReferenceSlot` is not `NULL`, then the `pNext` chain of `pDecodeInfo->pSetupReferenceSlot` **must** include a `VkVideoDecodeH265DpbSlotInfoKHR` structure.
If the bound video session was created with the video codec operation

`VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`, then the `pNext` chain of each element of

`pDecodeInfo->pReferenceSlots` must include a `VkVideoDecodeH265DpbSlotInfoKHR` structure

### Valid Usage (Implicit)

- **VUID-vkCmdDecodeVideoKHR-commandBuffer-parameter**
  
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- **VUID-vkCmdDecodeVideoKHR-pDecodeInfo-parameter**
  
  `pDecodeInfo` must be a valid pointer to a valid `VkVideoDecodeInfoKHR` structure

- **VUID-vkCmdDecodeVideoKHR-commandBuffer-recording**
  
  `commandBuffer` must be in the recording state

- **VUID-vkCmdDecodeVideoKHR-commandBuffer-cmdpool**
  
  The `VkCommandPool` that `commandBuffer` was allocated from must support decode operations

- **VUID-vkCmdDecodeVideoKHR-renderpass**
  
  This command must only be called outside of a render pass instance

- **VUID-vkCmdDecodeVideoKHR-videocoding**
  
  This command must only be called inside of a video coding scope

- **VUID-vkCmdDecodeVideoKHR-bufferlevel**
  
  `commandBuffer` must be a primary `VkCommandBuffer`

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>

The `VkVideoDecodeInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_decode_queue
typedef struct VkVideoDecodeInfoKHR {
    VkStructureType sType;
};
```
const void* pNext;
VkVideoDecodeFlagsKHR flags;
VkBuffer srcBuffer;
VkDeviceSize srcBufferOffset;
VkDeviceSize srcBufferRange;
VkVideoPictureResourceInfoKHR dstPictureResource;
const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
uint32_t referenceSlotCount;
const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
} VkVideoDecodeInfoKHR;

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **flags** is reserved for future use.
- **srcBuffer** is the source video bitstream buffer to read the encoded bitstream from.
- **srcBufferOffset** is the starting offset in bytes from the start of **srcBuffer** to read the encoded bitstream from.
- **srcBufferRange** is the size in bytes of the encoded bitstream to decode from **srcBuffer**, starting from **srcBufferOffset**.
- **dstPictureResource** is the video picture resource to use as the decode output picture.
- **pSetupReferenceSlot** is NULL or a pointer to a *VkVideoReferenceSlotInfoKHR* structure describing the DPB slot to activate and the video picture resource to use as the reconstructed picture to activate the DPB slot with.
- **referenceSlotCount** is the number of elements in the **pReferenceSlots** array.
- **pReferenceSlots** is NULL or a pointer to an array of *VkVideoReferenceSlotInfoKHR* structures describing the DPB slots and corresponding reference picture resources to use in this video decode operation (the set of active reference pictures).

**Valid Usage**

- VUID-VkVideoDecodeInfoKHR-srcBuffer-07165  
  **srcBuffer** must have been created with *VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR* set
- VUID-VkVideoDecodeInfoKHR-srcBufferOffset-07166  
  **srcBufferOffset** must be less than the size of **srcBuffer**
- VUID-VkVideoDecodeInfoKHR-srcBufferRange-07167  
  **srcBufferRange** must be less than or equal to the size of **srcBuffer** minus **srcBufferOffset**
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07168  
  If **pSetupReferenceSlot** is not NULL, then its **slotIndex** member must not be negative
- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-07169  
  If **pSetupReferenceSlot** is not NULL, then its **pPictureResource** must not be NULL
- VUID-VkVideoDecodeInfoKHR-slotIndex-07171  
  The **slotIndex** member of each element of **pReferenceSlots** must not be negative
Valid Usage (Implicit)

- VUID-VkVideoDecodeInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR

- VUID-VkVideoDecodeInfoKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkVideoDecodeH264PictureInfoKHR or VkVideoDecodeH265PictureInfoKHR

- VUID-VkVideoDecodeInfoKHR-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkVideoDecodeInfoKHR-flags-zerobitmask
  flags must be 0

- VUID-VkVideoDecodeInfoKHR-srcBuffer-parameter
  srcBuffer must be a valid VkBuffer handle

- VUID-VkVideoDecodeInfoKHR-dstPictureResource-parameter
  dstPictureResource must be a valid VkVideoPictureResourceInfoKHR structure

- VUID-VkVideoDecodeInfoKHR-pSetupReferenceSlot-parameter
  If pSetupReferenceSlot is not NULL, pSetupReferenceSlot must be a valid pointer to a valid VkVideoReferenceSlotInfoKHR structure

- VUID-VkVideoDecodeInfoKHR-pReferenceSlots-parameter
  If referenceSlotCount is not 0, pReferenceSlots must be a valid pointer to an array of referenceSlotCount valid VkVideoReferenceSlotInfoKHR structures

```
// Provided by VK_KHR_video_decode_queue
typedef VkFlags VkVideoDecodeFlagsKHR;
```

VkVideoDecodeFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future use.

42.11. H.264 Decode Operations

Video decode operations using an H.264 decode profile can be used to decode elementary video stream sequences compliant to the ITU-T H.264 Specification.

**Note**

Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

This process is performed according to the video decode operation steps with the codec-specific
semantics defined in section 8 of the ITU-T H.264 Specification as follows:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The StdVideoH264SequenceParameterSet structure corresponding to the active SPS specifying the H.264 sequence parameter set.
  - The StdVideoH264PictureParameterSet structure corresponding to the active PPS specifying the H.264 picture parameter set.
  - The StdVideoDecodeH264PictureInfo structure specifying the H.264 picture information.
  - The StdVideoDecodeH264ReferenceInfo structures specifying the H.264 reference information corresponding to the optional reconstructed picture and any active reference pictures.

- The contents of the provided video bitstream buffer range are interpreted as defined in the H.264 Decode Bitstream Data Access section.

- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the H.264 Decode Picture Data Access section.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.264 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation may complete unsuccessfully.

### 42.11.1. H.264 Decode Bitstream Data Access

If the target decode output picture is a frame, then the video bitstream buffer range should contain a VCL NAL unit comprised of the slice headers and data of a picture representing an entire frame, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

If the target decode output picture is a field, then the video bitstream buffer range should contain a VCL NAL unit comprised of the slice headers and data of a picture representing a field, as defined in sections 7.3.3 and 7.3.4, and this data is interpreted as defined in sections 7.4.3 and 7.4.4 of the ITU-T H.264 Specification, respectively.

The offsets provided in VkVideoDecodeH264PictureInfoKHR::pSliceOffsets should specify the starting offsets corresponding to each slice header within the video bitstream buffer range.

### 42.11.2. H.264 Decode Picture Data Access

The effective imageOffset and imageExtent corresponding to a decode output picture, reference picture, or reconstructed picture used in video decode operations with an H.264 decode profile are defined as follows:

- imageOffset is (codedOffset.x, codedOffset.y) and imageExtent is (codedExtent.width, codedExtent.height), if the picture represents a frame.
• \textit{imageOffset} is \((\text{codedOffset.x}, \text{codedOffset.y})\) and \textit{imageExtent} is \((\text{codedExtent.width}, \text{codedExtent.height})\), if the picture represents a field and the picture layout of the used \texttt{H.264 decode profile} is \texttt{VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_INTERLEAVED_LINES\_BIT\_KHR}.

• \textit{imageOffset} is \((\text{codedOffset.x}, \text{codedOffset.y})\) and \textit{imageExtent} is \((\text{codedExtent.width}, \text{codedExtent.height}/2)\), if the picture represents a field and the picture layout of the used \texttt{H.264 decode profile} is \texttt{VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_SEPARATE_PLANES\_BIT\_KHR}.

Where \texttt{codedOffset} and \texttt{codedExtent} are the members of the \texttt{VkVideoPictureResourceInfoKHR} structure corresponding to the picture.

However, accesses to image data within a video picture resource happen at the granularity indicated by \texttt{VkVideoCapabilitiesKHR::pictureAccessGranularity}, as returned by \texttt{vkGetPhysicalDeviceVideoCapabilitiesKHR} for the used \texttt{video profile}. This means that the complete image subregion accessed by video coding operations using an \texttt{H.264 decode profile} for the video picture resource is defined as the set of texels within the coordinate range:

\[((\text{startX},\text{endX}), (\text{startY}, \text{endY}))\]

Where:

• \textit{startX} equals \textit{imageOffset.x} rounded down to the nearest integer multiple of \texttt{pictureAccessGranularity.width};

• \textit{endX} equals \textit{imageOffset.x} + \textit{imageExtent.width} rounded up to the nearest integer multiple of \texttt{pictureAccessGranularity.width} and clamped to the width of the image subresource referred to by the corresponding \texttt{VkVideoPictureResourceInfoKHR} structure;

• \textit{startY} equals \textit{imageOffset.y} rounded down to the nearest integer multiple of \texttt{pictureAccessGranularity.height};

• \textit{endY} equals \textit{imageOffset.y} + \textit{imageExtent.height} rounded up to the nearest integer multiple of \texttt{pictureAccessGranularity.height} and clamped to the height of the image subresource referred to by the corresponding \texttt{VkVideoPictureResourceInfoKHR} structure.

In case of video decode operations using an \texttt{H.264 decode profile}, any access to a picture at the coordinates \((x,y)\), as defined by the ITU-T \texttt{H.264 Specification}, is an access to the image subresource referred to by the corresponding \texttt{VkVideoPictureResourceInfoKHR} structure at the texel coordinates specified below:

• \((x,y)\), if the accessed picture represents a frame.

• \((x,y \times 2)\), if the accessed picture represents a top field and the picture layout of the used \texttt{H.264 decode profile} is \texttt{VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_INTERLEAVED_LINES\_BIT\_KHR}.

• \((x,y \times 2 + 1)\), if the accessed picture represents a bottom field and the picture layout of the used \texttt{H.264 decode profile} is \texttt{VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_INTERLEAVED_LINES\_BIT\_KHR}.

• \((x,y)\), if the accessed picture represents a top field and the picture layout of the used \texttt{H.264 decode profile} is \texttt{VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_SEPARATE_PLANES\_BIT\_KHR}.

• \((\text{codedOffset.x} + x, \text{codedOffset.y} + y)\), if the accessed picture represents a bottom field and the
The used H.264 decode profile is

\texttt{VK\_VIDEO\_DECODE\_H264\_PICTURE\_LAYOUT\_INTERLACED\_SEPARATE\_PLANES\_BIT\_KHR}.

Where \texttt{codedOffset} is the member of the corresponding \texttt{VkVideoPictureResourceInfoKHR} structure.

### 42.11.3. H.264 Decode Profile

A video profile supporting H.264 video decode operations is specified by setting \texttt{VkVideoProfileInfoKHR::videoCodecOperation} to \texttt{VK\_VIDEO\_CODEC\_OPERATION\_DECODE\_H264\_BIT\_KHR} and adding a \texttt{VkVideoDecodeH264ProfileInfoKHR} structure to the \texttt{VkVideoProfileInfoKHR::pNext} chain.

The \texttt{VkVideoDecodeH264ProfileInfoKHR} structure is defined as:

```c
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264ProfileInfoKHR {
    VkStructureType sType;
    const void* pNext;
    StdVideoH264ProfileIdc stdProfileIdc;
    VkVideoDecodeH264PictureLayoutFlagBitsKHR pictureLayout;
} VkVideoDecodeH264ProfileInfoKHR;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \texttt{stdProfileIdc} is a \texttt{StdVideoH264ProfileIdc} value specifying the H.264 codec profile IDC, as defined in section A.2 of the ITU-T H.264 Specification.
- \texttt{pictureLayout} is a \texttt{VkVideoDecodeH264PictureLayoutFlagBitsKHR} value specifying the picture layout used by the H.264 video sequence to be decoded.

#### Valid Usage (Implicit)

- \texttt{VUID-VkVideoDecodeH264ProfileInfoKHR-sType-sType} \texttt{sType} must be \texttt{VK\_STRUCTURE\_TYPE\_VIDEO\_DECODE\_H264\_PROFILE\_INFO\_KHR}
- \texttt{VUID-VkVideoDecodeH264ProfileInfoKHR-pictureLayout-parameter} If \texttt{pictureLayout} is not 0, \texttt{pictureLayout} must be a valid \texttt{VkVideoDecodeH264PictureLayoutFlagBitsKHR} value

The H.264 video decode picture layout flags are defined as follows:

```c
// Provided by VK_KHR_video_decode_h264
typedef enum VkVideoDecodeH264PictureLayoutFlagBitsKHR {
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR = 0,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR = 0x00000001,
    VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR = 0x00000002,
};
```
• **VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_PROGRESSIVE_KHR** specifies support for progressive content. This flag has the value 0.

• **VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR** specifies support for or use of a picture layout for interlaced content where all lines belonging to the top field are decoded to the even-numbered lines within the picture resource, and all lines belonging to the bottom field are decoded to the odd-numbered lines within the picture resource.

• **VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR** specifies support for or use of a picture layout for interlaced content where all lines belonging to a field are grouped together in a single image subregion, and the two fields comprising the frame can be stored in separate image subregions of the same image subresource or in separate image subresources.

// Provided by VK_KHR_video_decode_h264
typedef VkFlags VkVideoDecodeH264PictureLayoutFlagsKHR;

VkVideoDecodeH264PictureLayoutFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoDecodeH264PictureLayoutFlagBitsKHR.

### 42.11.4. H.264 Decode Capabilities

When calling **vkGetPhysicalDeviceVideoCapabilitiesKHR** to query the capabilities for an H.264 decode profile, the **VkVideoCapabilitiesKHR::pNext** chain must include a **VkVideoDecodeH264CapabilitiesKHR** structure that will be filled with the profile-specific capabilities.

The **VkVideoDecodeH264CapabilitiesKHR** structure is defined as:

// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264CapabilitiesKHR {
    VkStructureType sType;
    void* pNext;
    StdVideoH264LevelIdc maxLevelIdc;
    VkOffset2D fieldOffsetGranularity;
} VkVideoDecodeH264CapabilitiesKHR;

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **maxLevelIdc** is a **StdVideoH264LevelIdc** value specifying the maximum H.264 level supported by the profile, where enum constant **STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>** identifies H.264 level `<major>..<minor>` as defined in section A.3 of the ITU-T H.264 Specification.

• **fieldOffsetGranularity** is the minimum alignment for **VkVideoPictureResourceInfoKHR::codedOffset** specified for a video picture resource when using the picture layout **VK_VIDEO_DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR**.
42.11.5. H.264 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR` can contain the following types of parameters:

**H.264 Sequence Parameter Sets (SPS)**

Represented by `StdVideoH264SequenceParameterSet` structures and interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `seq_parameter_set_id` is used as the key of the SPS entry;
- `level_idc` is one of the enum constants `STD_VIDEO_H264_LEVEL_IDC_<major>_<minor>` identifying the H.264 level `<major>.<minor>` as defined in section A.3 of the ITU-T H.264 Specification;
- if `flags.seq_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `seq_scaling_list_present_flag[i]` as defined in section 7.4.2.1 of the ITU-T H.264 Specification;
  - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.1 of the ITU-T H.264 Specification;
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.1 of the ITU-T H.264 Specification;
- if `flags.vui_parameters_present_flag` is set, then `pSequenceParameterSetVui` is a pointer to a `StdVideoH264SequenceParameterSetVui` structure that is interpreted as follows:
  - `reserved1` is used only for padding purposes and is otherwise ignored;
  - if `flags.nal_hrd_parameters_present_flag` or `flags.vcl_hrd_parameters_present_flag` is set, then the `StdVideoH264HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
    - `reserved1` is used only for padding purposes and is otherwise ignored;
    - all other members of `StdVideoH264HrdParameters` are interpreted as defined in section E.2.2 of the ITU-T H.264 Specification;
    - all other members of `StdVideoH264SequenceParameterSetVui` are interpreted as defined in section E.2.1 of the ITU-T H.264 Specification;
- all other members of `StdVideoH264SequenceParameterSet` are interpreted as defined in section 7.4.2.1 of the ITU-T H.264 Specification.
H.264 Picture Parameter Sets (PPS)

Represented by `StdVideoH264PictureParameterSet` structures and interpreted as follows:

- the pair constructed from `seq_parameter_set_id` and `pic_parameter_set_id` is used as the key of the PPS entry;
- if `flags.pic_scaling_matrix_present_flag` is set, then the `StdVideoH264ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `scaling_list_present_mask` is a bitmask where bit index `i` corresponds to `pic_scaling_list_present_flag[i]` as defined in section 7.4.2.2 of the ITU-T H.264 Specification;
  - `use_default_scaling_matrix_mask` is a bitmask where bit index `i` corresponds to `UseDefaultScalingMatrix4x4Flag[i]`, when `i < 6`, or corresponds to `UseDefaultScalingMatrix8x8Flag[i-6]`, otherwise, as defined in section 7.3.2.2 of the ITU-T H.264 Specification;
  - `ScalingList4x4` and `ScalingList8x8` correspond to the identically named syntax elements defined in section 7.3.2.2 of the ITU-T H.264 Specification;
- all other members of `StdVideoH264PictureParameterSet` are interpreted as defined in section 7.4.2.2 of the ITU-T H.264 Specification.

When a video session parameters object is created with the codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, the `VkVideoSessionParametersCreateInfoKHR::pNext` chain must include a `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure specifying the capacity and initial contents of the object.

The `VkVideoDecodeH264SessionParametersCreateInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersCreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t maxStdSPSCount;
    uint32_t maxStdPPSCount;
    const VkVideoDecodeH264SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH264SessionParametersCreateInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `maxStdSPSCount` is the maximum number of H.264 SPS entries the created `VkVideoSessionParametersKHR` can contain.
- `maxStdPPSCount` is the maximum number of H.264 PPS entries the created `VkVideoSessionParametersKHR` can contain.
- `pParametersAddInfo` is NULL or a pointer to a `VkVideo DecodeH264SessionParametersAddInfoKHR` structure specifying H.264 parameters to add upon object creation.
Valid Usage (Implicit)

- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-sType-sType must be VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR
- VUID-VkVideoDecodeH264SessionParametersCreateInfoKHR-pParametersAddInfo-parameter

If pParametersAddInfo is not NULL, pParametersAddInfo must be a valid pointer to a valid VkVideoDecodeH264SessionParametersAddInfoKHR structure.

The VkVideoDecodeH264SessionParametersAddInfoKHR structure is defined as:

```c
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264SessionParametersAddInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoDecodeH264SessionParametersAddInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of StdVideoH264SequenceParameterSet structures describing the H.264 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of StdVideoH264PictureParameterSet structures describing the H.264 PPS entries to add.

This structure can be specified in the following places:

- In the `pParametersAddInfo` member of the VkVideoDecodeH264SessionParametersCreateInfoKHR structure specified in the `pNext` chain of VkVideoSessionParametersCreateInfoKHR used to create a video session parameters object. In this case, if the video codec operation the video session parameters object is created with is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then it defines the set of initial parameters to add to the created object (see Creating Video Session Parameters).

- In the `pNext` chain of VkVideoSessionParametersUpdateInfoKHR. In this case, if the video codec operation the video session parameters object to be updated was created with is VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR, then it defines the set of parameters to add to it (see Updating Video Session Parameters).
Valid Usage

• VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04825
  The `seq_parameter_set_id` member of each `StdVideoH264SequenceParameterSet` structure specified in the elements of `pStdSPSs` must be unique within `pStdSPSs`.

• VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-None-04826
  The pair constructed from the `seq_parameter_set_id` and `pic_parameter_set_id` members of each `StdVideoH264PictureParameterSet` structure specified in the elements of `pStdPPSs` must be unique within `pStdPPSs`.

Valid Usage (Implicit)

• VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODER_H264_SESSION_PARAMETERS_ADD_INFO_KHR`.

• VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdSPSs-parameter
  If `stdSPSCount` is not 0, `pStdSPSs` must be a valid pointer to an array of `stdSPSCount` `StdVideoH264SequenceParameterSet` values.

• VUID-VkVideoDecodeH264SessionParametersAddInfoKHR-pStdPPSs-parameter
  If `stdPPSCount` is not 0, `pStdPPSs` must be a valid pointer to an array of `stdPPSCount` `StdVideoH264PictureParameterSet` values.

42.11.6. H.264 Decoding Parameters

The `VkVideoDecodeH264PictureInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264PictureInfoKHR {
    VkStructureType sType;
    const void* pNext;
    const StdVideoDecodeH264PictureInfo* pStdPictureInfo;
    uint32_t sliceCount;
    const uint32_t* pSliceOffsets;
} VkVideoDecodeH264PictureInfoKHR;
```

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.
• `pStdPictureInfo` is a pointer to a `StdVideoDecodeH264PictureInfo` structure specifying H.264 picture information.
• `sliceCount` is the number of elements in `pSliceOffsets`.
• `pSliceOffsets` is a pointer to an array of `sliceCount` offsets specifying the start offset of the slices of the picture within the video bitstream buffer range specified in `VkVideoDecodeInfoKHR`. 
This structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR` to specify the codec-specific picture information for an H.264 decode operation.

**Decode Output Picture Information**

When this structure is specified in the `pNext` chain of the `VkVideoDecodeInfoKHR` structure passed to `vkCmdDecodeVideoKHR`, the information related to the decode output picture is defined as follows:

- If `pStdPictureInfo->flags.field_pic_flag` is not set, then the picture represents a frame.
- If `pStdPictureInfo->flags.field_pic_flag` is set, then the picture represents a field. Specifically:
  - If `pStdPictureInfo->flags.bottom_field_flag` is not set, then the picture represents the top field of the frame.
  - If `pStdPictureInfo->flags.bottom_field_flag` is set, then the picture represents the bottom field of the frame.
- The image subregion used is determined according to the H.264 Decode Picture Data Access section.
- The decode output picture is associated with the H.264 picture information provided in `pStdPictureInfo`.

**Std Picture Information**

The members of the `StdVideoDecodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;
- `flags.is_intra` as defined in section 3.73 of the ITU-T H.264 Specification;
- `flags.is_reference` as defined in section 3.136 of the ITU-T H.264 Specification;
- `flags.complementary_field_pair` as defined in section 3.35 of the ITU-T H.264 Specification;
- `seq_parameter_set_id` and `pic_parameter_set_id` are used to identify the active parameter sets, as described below;
- all other members are interpreted as defined in section 7.4.3 of the ITU-T H.264 Specification.

**Active Parameter Sets**

The members of the `StdVideoDecodeH264PictureInfo` structure pointed to by `pStdPictureInfo` are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The active SPS is the SPS identified by the key specified in `StdVideoDecodeH264PictureInfo::seq_parameter_set_id`.
- The active PPS is the PPS identified by the key specified by the pair constructed from `StdVideoDecodeH264PictureInfo::seq_parameter_set_id` and `StdVideoDecodeH264PictureInfo::pic_parameter_set_id`. 
Valid Usage (Implicit)

- VUID-VkVideoDecodeH264PictureInfoKHR-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PICTURE_INFO_KHR`

- VUID-VkVideoDecodeH264PictureInfoKHR-pStdPictureInfo-parameter
  `pStdPictureInfo` must be a valid pointer to a valid `StdVideoDecodeH264PictureInfo` value

- VUID-VkVideoDecodeH264PictureInfoKHR-pSliceOffsets-parameter
  `pSliceOffsets` must be a valid pointer to an array of `sliceCount uint32_t` values

- VUID-VkVideoDecodeH264PictureInfoKHR-sliceCount-arraylength
  `sliceCount` must be greater than 0

The `VkVideoDecodeH264DpbSlotInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_decode_h264
typedef struct VkVideoDecodeH264DpbSlotInfoKHR {
    VkStructureType sType;
    const void* pNext;
    const StdVideoDecodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoDecodeH264DpbSlotInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoDecodeH264ReferenceInfo` structure specifying H.264 reference information.

This structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, if not `NULL`, and the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots` to specify the codec-specific reference picture information for an H.264 decode operation.

Active Reference Picture Information

When this structure is specified in the `pNext` chain of the elements of `VkVideoDecodeInfoKHR::pReferenceSlots`, one or two elements are added to the list of active reference pictures used by the video decode operation for each element of `VkVideoDecodeInfoKHR::pReferenceSlots` as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a frame reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture is added as a top field reference to the list of active reference pictures.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture is added as a bottom field reference to the list of active reference pictures.
- For each added reference picture, the corresponding image subregion used is determined...
according to the H.264 Decode Picture Data Access section.

- Each added reference picture is associated with the DPB slot index specified in the `slotIndex` member of the corresponding element of `VkVideoDecodeInfoKHR::pReferenceSlots`.
- Each added reference picture is associated with the H.264 reference information provided in `pStdReferenceInfo`.

**Note**

When both the top and bottom field of an interlaced frame currently associated with a DPB slot is intended to be used as an active reference picture and both fields are stored in the same image subregion (which is the case when using `VK_VIDEO DECODE_H264_PICTURE_LAYOUT_INTERLACED_INTERLEAVED_LINES_BIT_KHR` which stores the two fields at even and odd scanlines of the same image subregion), both references have to be provided through a single `VkVideoReferenceSlotInfoKHR` structure that has both `flags.top_field_flag` and `flags.bottom_field_flag` set in the `StdVideoDecodeH264ReferenceInfo` structure pointed to by the `pStdReferenceInfo` member of the `VkVideoDecodeH264DpbSlotInfoKHR` structure included in the corresponding `VkVideoReferenceSlotInfoKHR` structure's `pNext` chain. However, this approach can only be used when both fields are stored in the same image subregion. If that is not the case (e.g. when using `VK_VIDEO DECODE_H264_PICTURE_LAYOUT_INTERLACED_SEPARATE_PLANES_BIT_KHR` which requires separate `codedOffset` values for the two fields and also allows storing the two fields of a frame in separate image layers or entirely separate images), then a separate `VkVideoReferenceSlotInfoKHR` structure needs to be provided for referencing the two fields, each only setting one of `flags.top_field_flag` or `flags.bottom_field_flag`, and providing the appropriate video picture resource information in `VkVideoReferenceSlotInfoKHR::pPictureResource`.

**Reconstructed Picture Information**

When this structure is specified in the `pNext` chain of `VkVideoDecodeInfoKHR::pSetupReferenceSlot`, the information related to the reconstructed picture is defined as follows:

- If neither `pStdReferenceInfo->flags.top_field_flag` nor `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a frame.
- If `pStdReferenceInfo->flags.top_field_flag` is set, then the picture represents a field, specifically, the top field of the frame.
- If `pStdReferenceInfo->flags.bottom_field_flag` is set, then the picture represents a field, specifically, the bottom field of the frame.
- The image subregion used is determined according to the H.264 Decode Picture Data Access section.
- The reconstructed picture is used to activate the DPB slot with the index specified in `VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex`.
- The reconstructed picture is associated with the H.264 reference information provided in `pStdReferenceInfo`.
Std Reference Information

The members of the StdVideoDecodeH264ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- `flags.top_field_flag` is used to indicate whether the reference is used as top field reference;
- `flags.bottom_field_flag` is used to indicate whether the reference is used as bottom field reference;
- `flags.used_for_long_term_reference` is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.2.5.1 of the ITU-T H.264 Specification;
- `flags.is_non_existing` is used to indicate whether the picture is marked as “non-existing” as defined in section 8.2.5.2 of the ITU-T H.264 Specification;
- all other members are interpreted as defined in section 8.2 of the ITU-T H.264 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH264DpbSlotInfoKHR-sType-sType
  sType **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_DPB_SLOT_INFO_KHR`
- VUID-VkVideoDecodeH264DpbSlotInfoKHR-pStdReferenceInfo-parameter
  pStdReferenceInfo **must** be a valid pointer to a valid StdVideoDecodeH264ReferenceInfo value

42.11.7. H.264 Decode Requirements

This section describes the **required** H.264 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR`, as returned by `vkGetPhysicalDeviceQueueFamilyProperties2` in `VkQueueFamilyVideoPropertiesKHR::videoCodecOperations`.

**Table 51. Required Video Std Header Versions**

<td>vulkan_video_codec_h264std_decode</td>
<td>1.0.0</td>
</tr>
</tbody>
</table>

42.12. H.265 Decode Operations

Video decode operations using an **H.265 decode profile** can be used to decode elementary video stream sequences compliant to the ITU-T H.265 Specification.

**Note**

Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.
This process is performed according to the video decode operation steps with the codec-specific semantics defined in section 8 of ITU-T H.265 Specification:

- Syntax elements, derived values, and other parameters are applied from the following structures:
  - The `StdVideoH265VideoParameterSet` structure corresponding to the active VPS specifying the H.265 video parameter set.
  - The `StdVideoH265SequenceParameterSet` structure corresponding to the active SPS specifying the H.265 sequence parameter set.
  - The `StdVideoH265PictureParameterSet` structure corresponding to the active PPS specifying the H.265 picture parameter set.
  - The `StdVideoDecodeH265PictureInfo` structure specifying the H.265 picture information.
  - The `StdVideoDecodeH265ReferenceInfo` structures specifying the H.265 reference information corresponding to the optional reconstructed picture and any active reference pictures.

- The contents of the provided video bitstream buffer range are interpreted as defined in the H.265 Decode Bitstream Data Access section.

- Picture data in the video picture resources corresponding to the used active reference pictures, decode output picture, and optional reconstructed picture is accessed as defined in the H.265 Decode Picture Data Access section.

If the parameters and the bitstream adhere to the syntactic and semantic requirements defined in the corresponding sections of the ITU-T H.265 Specification, as described above, and the DPB slots associated with the active reference pictures all refer to valid picture references, then the video decode operation will complete successfully. Otherwise, the video decode operation may complete unsuccessfully.

### 42.12.1. H.265 Decode Bitstream Data Access

The video bitstream buffer range should contain a VCL NAL unit comprised of the slice segment headers and data of a picture representing a frame, as defined in sections 7.3.6 and 7.3.8, and this data is interpreted as defined in sections 7.4.7 and 7.4.9 of the ITU-T H.265 Specification, respectively.

The offsets provided in `VkVideoDecodeH265PictureInfoKHR::pSliceSegmentOffsets` should specify the starting offsets corresponding to each slice segment header within the video bitstream buffer range.

### 42.12.2. H.265 Decode Picture Data Access

Accesses to image data within a video picture resource happen at the granularity indicated by `VkVideoCapabilitiesKHR::pictureAccessGranularity`, as returned by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the used video profile. Accordingly, the complete image subregion of a decode output picture, reference picture, or reconstructed picture accessed by video coding operations using an H.265 decode profile is defined as the set of texels within the coordinate range:
Where:

- `endX` equals `codedExtent.width` rounded up to the nearest integer multiple of `pictureAccessGranularity.width` and clamped to the width of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

- `endY` equals `codedExtent.height` rounded up to the nearest integer multiple of `pictureAccessGranularity.height` and clamped to the height of the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure;

Where `codedExtent` is the member of the `VkVideoPictureResourceInfoKHR` structure corresponding to the picture.

In case of video decode operations using an H.265 decode profile, any access to a picture at the coordinates `(x, y)`, as defined by the ITU-T H.265 Specification, is an access to the image subresource referred to by the corresponding `VkVideoPictureResourceInfoKHR` structure at the texel coordinates `(x, y)`.

### 42.12.3. H.265 Decode Profile

A video profile supporting H.265 video decode operations is specified by setting `VkVideoProfileInfoKHR::videoCodecOperation` to `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` and adding a `VkVideoDecodeH265ProfileInfoKHR` structure to the `VkVideoProfileInfoKHR::pNext` chain.

The `VkVideoDecodeH265ProfileInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265ProfileInfoKHR {
    VkStructureType         sType;
    const void*            pNext;
    StdVideoH265ProfileIdc   stdProfileIdc;
} VkVideoDecodeH265ProfileInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `stdProfileIdc` is a `StdVideoH265ProfileIdc` value specifying the H.265 codec profile IDC, as defined in section A3 of the ITU-T H.265 Specification.

**Valid Usage (Implicit)**

- `VUID-VkVideoDecodeH265ProfileInfoKHR-sType-sType`

  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PROFILE_INFO_KHR`
42.12.4. H.265 Decode Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` to query the capabilities for an H.265 decode profile, the `VkVideoCapabilitiesKHR::pNext` chain must include a `VkVideoDecodeH265CapabilitiesKHR` structure that will be filled with the profile-specific capabilities.

The `VkVideoDecodeH265CapabilitiesKHR` structure is defined as:

```c
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265CapabilitiesKHR {
    VkStructureType sType;
    void* pNext;
    StdVideoH265LevelIdc maxLevelIdc;
} VkVideoDecodeH265CapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxLevelIdc` is a `StdVideoH265LevelIdc` value specifying the maximum H.265 level supported by the profile, where enum constant `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifies H.265 level `<major>.<minor>` as defined in section A.4 of the ITU-T H.265 Specification.

**Valid Usage (Implicit)**

- `VUID-VkVideoDecodeH265CapabilitiesKHR-sType-sType`
  
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_CAPABILITIES_KHR`

42.12.5. H.265 Decode Parameter Sets

Video session parameters objects created with the video codec operation `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR` can contain the following types of parameters:

**H.265 Video Parameter Sets (VPS)**

Represented by `StdVideoH265VideoParameterSet` structures and interpreted as follows:

- `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
- `vps_video_parameter_set_id` is used as the key of the VPS entry;
- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `vps_max_latency_increase_plus1`, `vps_max_dec_pic_buffering_minus1`, and `vps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.1 of the ITU-T H.265 Specification;
- the `StdVideoH265HrdParameters` structure pointed to by `pHrdParameters` is interpreted as follows:
  - `reserved` is used only for padding purposes and is otherwise ignored;
• `flags.fixed_pic_rate_general_flag` is a bitmask where bit index \(i\) corresponds to `fixed_pic_rate_general_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;

• `flags.fixed_pic_rate_within_cvs_flag` is a bitmask where bit index \(i\) corresponds to `fixed_pic_rate_within_cvs_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;

• `flags.low_delay_hrd_flag` is a bitmask where bit index \(i\) corresponds to `low_delay_hrd_flag[i]` as defined in section E.3.2 of the ITU-T H.265 Specification;

• if `flags.nal_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersNal` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
  • `cbr_flag` is a bitmask where bit index \(i\) corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
  • all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;

• if `flags.vcl_hrd_parameters_present_flag` is set, then `pSubLayerHrdParametersVcl` is a pointer to an array of `vps_max_sub_layers_minus1 + 1` number of `StdVideoH265SubLayerHrdParameters` structures where `vps_max_sub_layers_minus1` is the corresponding member of the encompassing `StdVideoH265VideoParameterSet` structure and each element is interpreted as follows:
  • `cbr_flag` is a bitmask where bit index \(i\) corresponds to `cbr_flag[i]` as defined in section E.3.3 of the ITU-T H.265 Specification;
  • all other members of the `StdVideoH265SubLayerHrdParameters` structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;

• all other members of `StdVideoH265HrdParameters` are interpreted as defined in section E.3.2 of the ITU-T H.265 Specification;

• the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
  • `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>_.<minor>` as defined in section A.4 of the ITU-T H.265 Specification;
  • all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the ITU-T H.265 Specification;

• all other members of `StdVideoH265VideoParameterSet` are interpreted as defined in section 7.4.3.1 of the ITU-T H.265 Specification.

**H.265 Sequence Parameter Sets (SPS)**

Represented by `StdVideoH265SequenceParameterSet` structures and interpreted as follows:

• `reserved1` and `reserved2` are used only for padding purposes and are otherwise ignored;

• the pair constructed from `sps_video_parameter_set_id` and `sps_seq_parameter_set_id` is used
as the key of the SPS entry;

- the `StdVideoH265ProfileTierLevel` structure pointed to by `pProfileTierLevel` are interpreted as follows:
  - `general_level_idc` is one of the enum constants `STD_VIDEO_H265_LEVEL_IDC_<major>_<minor>` identifying the H.265 level `<major>.<minor>` as defined in section A.4 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265ProfileTierLevel` are interpreted as defined in section 7.4.4 of the ITU-T H.265 Specification;

- the `max_latency_increase_plus1`, `max_dec_pic_buffering_minus1`, and `max_num_reorder_pics` members of the `StdVideoH265DecPicBufMgr` structure pointed to by `pDecPicBufMgr` correspond to `sps_max_latency_increase_plus1`, `sps_max_dec_pic_buffering_minus1`, and `sps_max_num_reorder_pics`, respectively, as defined in section 7.4.3.2 of the ITU-T H.265 Specification;

- if `flags.sps_scaling_list_data_present_flag` is set, then the `StdVideoH265ScalingLists` structure pointed to by `pScalingLists` is interpreted as follows:
  - `ScalingListDCCoef16x16` and `ScalingListDCCoef32x32` correspond to `scaling_list_dc_coef_minus8[0]` and `scaling_list_dc_coef_minus8[1]`, respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;

- `pShortTermRefPicSet` is a pointer to an array of `num_short_term_ref_pic_sets` number of `StdVideoH265ShortTermRefPicSet` structures where each element is interpreted as follows:
  - `reserved1`, `reserved2`, and `reserved3` are used only for padding purposes and are otherwise ignored;
  - `used_by_curr_pic_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `use_delta_flag` is a bitmask where bit index `i` corresponds to `use_delta_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `used_by_curr_pic_s0_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s0_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - `used_by_curr_pic_s1_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_s1_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265ShortTermRefPicSet` are interpreted as defined in section 7.4.8 of the ITU-T H.265 Specification;

- if `flags.long_term_ref_pics_present_flag` is set then the `StdVideoH265LongTermRefPicsSps` structure pointed to by `pLongTermRefPicsSps` is interpreted as follows:
  - `used_by_curr_pic_lt_sps_flag` is a bitmask where bit index `i` corresponds to `used_by_curr_pic_lt_sps_flag[i]` as defined in section 7.4.8 of the ITU-T H.265 Specification;
  - all other members of `StdVideoH265LongTermRefPicsSps` are interpreted as defined in
if flags.vui_parameters_present_flag is set, then the StdVideoH265SequenceParameterSetVui structure pointed to by pSequenceParameterSetVui is interpreted as follows:

- reserved1, reserved2, and reserved3 are used only for padding purposes and are otherwise ignored;
- the StdVideoH265HrdParameters structure pointed to by pHrdParameters is interpreted as follows:
  - flags.fixed_pic_rate_general_flag is a bitmask where bit index i corresponds to fixed_pic_rate_general_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
  - flags.fixed_pic_rate_within_cvs_flag is a bitmask where bit index i corresponds to fixed_pic_rate_within_cvs_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
  - flags.low_delay_hrd_flag is a bitmask where bit index i corresponds to low_delay_hrd_flag[i] as defined in section E.3.2 of the ITU-T H.265 Specification;
- if flags.nal_hrd_parameters_present_flag is set, then pSubLayerHrdParametersNal is a pointer to an array of sps_max_sub_layers_minus1 + 1 number of StdVideoH265SubLayerHrdParameters structures where sps_max_sub_layers_minus1 is the corresponding member of the encompassing StdVideoH265SequenceParameterSet structure and each element is interpreted as follows:
  - cbr_flag is a bitmask where bit index i corresponds to cbr_flag[i] as defined in section E.3.3 of the ITU-T H.265 Specification;
  - all other members of the StdVideoH265SubLayerHrdParameters structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
- if flags.vcl_hrd_parameters_present_flag is set, then pSubLayerHrdParametersVcl is a pointer to an array of sps_max_sub_layers_minus1 + 1 number of StdVideoH265SubLayerHrdParameters structures where sps_max_sub_layers_minus1 is the corresponding member of the encompassing StdVideoH265SequenceParameterSet structure and each element is interpreted as follows:
  - cbr_flag is a bitmask where bit index i corresponds to cbr_flag[i] as defined in section E.3.3 of the ITU-T H.265 Specification;
  - all other members of the StdVideoH265SubLayerHrdParameters structure are interpreted as defined in section E.3.3 of the ITU-T H.265 Specification;
  - all other members of StdVideoH265HrdParameters are interpreted as defined in section E.3.2 of the ITU-T H.265 Specification;
- all other members of pSequenceParameterSetVui are interpreted as defined in section E.3.1 of the ITU-T H.265 Specification;
- if flags.sps_palette_predictor_initializer_present_flag is set, then the PredictorPaletteEntries member of the StdVideoH265PredictorPaletteEntries structure pointed to by pPredictorPaletteEntries is interpreted as defined in section 7.4.9.13 of the ITU-T H.265 Specification;
• all other members of StdVideoH265SequenceParameterSet are interpreted as defined in section 7.4.3.1 of the ITU-T H.265 Specification.

**H.265 Picture Parameter Sets (PPS)**

Represented by StdVideoH265PictureParameterSet structures and interpreted as follows:

- **reserved1, reserved2, and reserved3** are used only for padding purposes and are otherwise ignored;
- the triplet constructed from sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id is used as the key of the PPS entry;
- if flags.pps_scaling_list_data_present_flag is set, then the StdVideoH265ScalingLists structure pointed to by pScalingLists is interpreted as follows:
  - ScalingList4x4, ScalingList8x8, ScalingList16x16, and ScalingList32x32 correspond to ScalingList[0], ScalingList[1], ScalingList[2], and ScalingList[3], respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
  - ScalingListDCCoef16x16 and ScalingListDCCoef32x32 correspond to scaling_list_dc_coef_minus8[0] and scaling_list_dc_coef_minus8[1], respectively, as defined in section 7.3.4 of the ITU-T H.265 Specification;
- if flags.pps_palette_predictor_initializer_present_flag is set, then the PredictorPaletteEntries member of the StdVideoH265PredictorPaletteEntries structure pointed to by pPredictorPaletteEntries is interpreted as defined in section 7.4.9.13 of the ITU-T H.265 Specification;
- all other members of StdVideoH265PictureParameterSet are interpreted as defined in section 7.4.3.3 of the ITU-T H.265 Specification.

When a video session parameters object is created with the codec operation VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, the VkVideoSessionParametersCreateInfoKHR::pNext chain must include a VkVideoDecodeH265SessionParametersCreateInfoKHR structure specifying the capacity and initial contents of the object.

The VkVideoDecodeH265SessionParametersCreateInfoKHR structure is defined as:

```c
typedef struct VK_KHR_video_decode_h265
VkVideoDecodeH265SessionParametersCreateInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t maxStdVPSCount;
    uint32_t maxStdSPSCount;
    uint32_t maxStdPPSCount;
    const VkVideoDecodeH265SessionParametersAddInfoKHR* pParametersAddInfo;
} VkVideoDecodeH265SessionParametersCreateInfoKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxStdVPSCount** is the maximum number of H.265 VPS entries the created
VkVideoSessionParametersKHR can contain.

- `maxStdSPSCount` is the maximum number of H.265 SPS entries the created `VkVideoSessionParametersKHR` can contain.
- `maxStdPPSCount` is the maximum number of H.265 PPS entries the created `VkVideoSessionParametersKHR` can contain.
- `pParametersAddInfo` is NULL or a pointer to a `VkVideoDecodeH265SessionParametersAddInfoKHR` structure specifying H.265 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR`
- VUID-VkVideoDecodeH265SessionParametersCreateInfoKHR-pParametersAddInfo-parameter
  If `pParametersAddInfo` is not NULL, `pParametersAddInfo` must be a valid pointer to a valid `VkVideoDecodeH265SessionParametersAddInfoKHR` structure.

The `VkVideoDecodeH265SessionParametersAddInfoKHR` structure is defined as:

```c
typedef struct VkVideoDecodeH265SessionParametersAddInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSs;
    uint32_t stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSs;
    uint32_t stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSs;
} VkVideoDecodeH265SessionParametersAddInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `stdVPSCount` is the number of elements in the `pStdVPSs` array.
- `pStdVPSs` is a pointer to an array of `StdVideoH265VideoParameterSet` structures describing the H.265 VPS entries to add.
- `stdSPSCount` is the number of elements in the `pStdSPSs` array.
- `pStdSPSs` is a pointer to an array of `StdVideoH265SequenceParameterSet` structures describing the H.265 SPS entries to add.
- `stdPPSCount` is the number of elements in the `pStdPPSs` array.
- `pStdPPSs` is a pointer to an array of `StdVideoH265PictureParameterSet` structures describing the H.265 PPS entries to add.
This structure can be specified in the following places:

- In the pParametersAddInfo member of the VkVideoDecodeH265SessionParametersCreateInfoKHR structure specified in the pNext chain of VkVideoSessionParametersCreateInfoKHR used to create a video session parameters object. In this case, if the video codec operation the video session parameters object is created with is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then it defines the set of initial parameters to add to the created object (see Creating Video Session Parameters).

- In the pNext chain of VkVideoSessionParametersUpdateInfoKHR. In this case, if the video codec operation the video session parameters object to be updated was created with is VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR, then it defines the set of parameters to add to it (see Updating Video Session Parameters).

### Valid Usage

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04833
  The vps_video_parameter_set_id member of each StdVideoH265VideoParameterSet structure specified in the elements of pStdVPSs must be unique within pStdVPSs.

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04834
  The pair constructed from the sps_video_parameter_set_id and sps_seq_parameter_set_id members of each StdVideoH265SequenceParameterSet structure specified in the elements of pStdSPSs must be unique within pStdSPSs.

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-None-04835
  The triplet constructed from the sps_video_parameter_set_id, pps_seq_parameter_set_id, and pps_pic_parameter_set_id members of each StdVideoH265PictureParameterSet structure specified in the elements of pStdPPs must be unique within pStdPPs.

### Valid Usage (Implicit)

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR.

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdVPSs-parameter
  If stdVPSCount is not 0, pStdVPSs must be a valid pointer to an array of stdVPSCount StdVideoH265VideoParameterSet values.

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdSPSs-parameter
  If stdSPSCount is not 0, pStdSPSs must be a valid pointer to an array of stdSPSCount StdVideoH265SequenceParameterSet values.

- VUID-VkVideoDecodeH265SessionParametersAddInfoKHR-pStdPPSs-parameter
  If stdPPSCount is not 0, pStdPPSs must be a valid pointer to an array of stdPPSCount StdVideoH265PictureParameterSet values.
42.12.6. H.265 Decoding Parameters

The VkVideoDecodeH265PictureInfoKHR structure is defined as:

```c
// Provided by VK_KHR_video_decode_h265
typedef struct VkVideoDecodeH265PictureInfoKHR {
    VkStructureType sType;
    const void* pNext;
    const StdVideoDecodeH265PictureInfo* pStdPictureInfo;
    uint32_t sliceSegmentCount;
    const uint32_t* pSliceSegmentOffsets;
} VkVideoDecodeH265PictureInfoKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `pStdPictureInfo` is a pointer to a StdVideoDecodeH265PictureInfo structure specifying H.265 picture information.
- `sliceSegmentCount` is the number of elements in `pSliceSegmentOffsets`.
- `pSliceSegmentOffsets` is a pointer to an array of `sliceSegmentCount` offsets specifying the start offset of the slice segments of the picture within the video bitstream buffer range specified in VkVideoDecodeInfoKHR.

This structure is specified in the `pNext` chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR to specify the codec-specific picture information for an H.265 decode operation.

**Decode Output Picture Information**

When this structure is specified in the `pNext` chain of the VkVideoDecodeInfoKHR structure passed to vkCmdDecodeVideoKHR, the information related to the decode output picture is defined as follows:

- The image subregion used is determined according to the H.265 Decode Picture Data Access section.
- The decode output picture is associated with the H.265 picture information provided in `pStdPictureInfo`.

**Std Picture Information**

The members of the StdVideoDecodeH265PictureInfo structure pointed to by `pStdPictureInfo` are interpreted as follows:

- `reserved` is used only for padding purposes and is otherwise ignored;
- `flags.IrapPicFlag` as defined in section 3.73 of the ITU-T H.265 Specification;
- `flags.IdrPicFlag` as defined in section 3.67 of the ITU-T H.265 Specification;
- `flags.IsReference` as defined in section 3.132 of the ITU-T H.265 Specification;
- `sps_video_parameter_set_id`, `pps_seq_parameter_set_id`, and `pps_pic_parameter_set_id` are
used to identify the active parameter sets, as described below;

- **PicOrderCntVal** as defined in section 8.3.1 of the [ITU-T H.265 Specification](https://www.itu.int/rec/T-REC-H.265-201809-I/en);
- **NumBitsForSTRefPicSetInSlice** is the number of bits used in **st_ref_pic_set** when `short_term_ref_pic_set_sps_flag` is 0, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](https://www.itu.int/rec/T-REC-H.265-201809-I/en);
- **NumDeltaPocsOfRefRpsIdx** is the value of `NumDeltaPocs[RefRpsIdx]` when `short_term_ref_pic_set_sps_flag` is 1, or 0 otherwise, as defined in sections 7.4.7 and 7.4.8 of the [ITU-T H.265 Specification](https://www.itu.int/rec/T-REC-H.265-201809-I/en);
- **RefPicSetStCurrBefore**, **RefPicSetStCurrAfter**, and **RefPicSetLtCurr** are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](https://www.itu.int/rec/T-REC-H.265-201809-I/en) where each element of these arrays either identifies an active reference picture using its DPB slot index or contains the value 0xFF to indicate "no reference picture";
- all other members are interpreted as defined in section 8.3.2 of the [ITU-T H.265 Specification](https://www.itu.int/rec/T-REC-H.265-201809-I/en).

**Active Parameter Sets**

The members of the **StdVideoDecodeH265PictureInfo** structure pointed to by **pStdPictureInfo** are used to select the active parameter sets to use from the bound video session parameters object, as follows:

- The **active VPS** is the **VPS** identified by the key specified in **StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id**.
- The **active SPS** is the **SPS** identified by the key specified by the pair constructed from **StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id** and **StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id**.
- The **active PPS** is the **PPS** identified by the key specified by the triplet constructed from **StdVideoDecodeH265PictureInfo::sps_video_parameter_set_id**, **StdVideoDecodeH265PictureInfo::pps_seq_parameter_set_id**, and **StdVideoDecodeH265PictureInfo::pps_pic_parameter_set_id**.

**Valid Usage (Implicit)**

- **VUID-VkVideoDecodeH265PictureInfoKHR-sType-sType**
  - `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PICTURE_INFO_KHR`
- **VUID-VkVideoDecodeH265PictureInfoKHR-pStdPictureInfo-parameter**
  - **pStdPictureInfo** **must** be a valid pointer to a valid **StdVideoDecodeH265PictureInfo** value
- **VUID-VkVideoDecodeH265PictureInfoKHR-pSliceSegmentOffsets-parameter**
  - **pSliceSegmentOffsets** **must** be a valid pointer to an array of `sliceSegmentCount uint32_t` values
- **VUID-VkVideoDecodeH265PictureInfoKHR-sliceSegmentCount-arraylength**
  - **sliceSegmentCount** **must** be greater than 0

The **VkVideoDecodeH265DpbSlotInfoKHR** structure is defined as:

```cpp
// Provided by VK_KHR_video_decode_h265
```
typedef struct VkVideoDecodeH265DpbSlotInfoKHR {
    VkStructureType          sType;
    const void*              pNext;
    const StdVideoDecodeH265ReferenceInfo*  pStdReferenceInfo;
} VkVideoDecodeH265DpbSlotInfoKHR;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• pStdReferenceInfo is a pointer to a StdVideoDecodeH265ReferenceInfo structure specifying reference picture information described in section 8.3 of the ITU-T H.265 Specification.

This structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, if not NULL, and the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots to specify the codec-specific reference picture information for an H.265 decode operation.

Active Reference Picture Information

When this structure is specified in the pNext chain of the elements of VkVideoDecodeInfoKHR::pReferenceSlots, one element is added to the list of active reference pictures used by the video decode operation for each element of VkVideoDecodeInfoKHR::pReferenceSlots as follows:

- The image subregion used is determined according to the H.265 Decode Picture Data Access section.
- The reference picture is associated with the DPB slot index specified in the slotIndex member of the corresponding element of VkVideoDecodeInfoKHR::pReferenceSlots.
- The reference picture is associated with the H.265 reference information provided in pStdReferenceInfo.

Reconstructed Picture Information

When this structure is specified in the pNext chain of VkVideoDecodeInfoKHR::pSetupReferenceSlot, the information related to the reconstructed picture is defined as follows:

- The image subregion used is determined according to the H.265 Decode Picture Data Access section.
- The reconstructed picture is used to activate the DPB slot with the index specified in VkVideoDecodeInfoKHR::pSetupReferenceSlot->slotIndex.
- The reconstructed picture is associated with the H.265 reference information provided in pStdReferenceInfo.

Std Reference Information

The members of the StdVideoDecodeH265ReferenceInfo structure pointed to by pStdReferenceInfo are interpreted as follows:

- flags.used_for_long_term_reference is used to indicate whether the picture is marked as “used for long-term reference” as defined in section 8.3.2 of the ITU-T H.265 Specification;
- flags.unused_for_reference is used to indicate whether the picture is marked as “unused for reference” as defined in section 8.3.2 of the ITU-T H.265 Specification;
all other members are interpreted as defined in section 8.3 of the ITU-T H.265 Specification.

Valid Usage (Implicit)

- VUID-VkVideoDecodeH265DpbSlotInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_DPB SLOT_INFO_KHR
- VUID-VkVideoDecodeH265DpbSlotInfoKHR-pStdReferenceInfo-parameter
  pStdReferenceInfo must be a valid pointer to a valid StdVideoDecodeH265ReferenceInfo value

42.12.7. H.265 Decode Requirements

This section describes the required H.265 decoding capabilities for physical devices that have at least one queue family that supports the video codec operation VK_VIDEO_CODEC_OPERATION DECODE_H265_BIT_KHR, as returned by vkGetPhysicalDeviceQueueFamilyProperties2 in VkQueueFamilyVideoPropertiesKHR::videoCodecOperations.

<td>1.0.0</td>
</tr>
</tbody>
</table>

42.13. Video Encode Operations

Before the application can start recording Vulkan command buffers for the Video Encode Operations, it must do the following, beforehand:

1. Ensure that the implementation can encode the Video Content by querying the supported codec operations and profiles using vkGetPhysicalDeviceQueueFamilyProperties2.

2. By using vkGetPhysicalDeviceVideoFormatPropertiesKHR and providing one or more video profiles, choose the Vulkan formats supported by the implementation. The formats for input and reference pictures must be queried and chosen separately. Refer to the section on Video Format Capabilities.

3. Before creating an image to be used as a video picture resource, obtain the supported image creation parameters by querying with vkGetPhysicalDeviceFormatProperties2 and vkGetPhysicalDeviceImageFormatProperties2 using one of the reported formats and adding VkVideoProfileListInfoKHR to the pNext chain of VkFormatProperties2. When querying the parameters with vkGetPhysicalDeviceImageFormatProperties2 for images targeting input and reference (DPB) pictures, the VkPhysicalDeviceImageFormatInfo2::usage field should contain VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR and VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR, respectively.

4. Create none, some, or all of the required images for the input and reference pictures. More Video Picture Resources can be created at some later point if needed while processing the content to be encoded. Also, if the size of the picture to be encoded is expected to change,
images can be created based on the maximum expected content size.

5. Create the video session to be used for video encode operations. Before creating the Encode Video Session, the encode capabilities should be queried with `vkGetPhysicalDeviceVideoCapabilitiesKHR` to obtain the limits of the parameters allowed by the implementation for a particular codec profile.

6. Bind memory resources with the encode video session by calling `vkBindVideoSessionMemoryKHR`. The video session cannot be used until memory resources are allocated and bound to it. In order to determine the required memory sizes and heap types of the device memory allocations, `vkGetVideoSessionMemoryRequirementsKHR` should be called.

7. Create one or more Video Session Parameter objects for use across command buffer recording operations, if required by the codec extension in use. These objects must be created against a video session with the parameters required by the codec. Each Video Session Parameter object created is a child object of the associated Session object and cannot be bound in the command buffer with any other Session Object.

The recording of Video Encode Commands against a Vulkan Command Buffer consists of the following sequence:

1. `vkCmdBeginVideoCodingKHR` starts the recording of one or more Video Encode operations in the command buffer. For each Video Encode Command operation, a Video Session must be bound to the command buffer within this command. This command establishes a Vulkan Video Encode Context that consists of the bound Video Session Object, Session Parameters Object, and the required Video Picture Resources. The established Video Encode Context is in effect until the `vkCmdEndVideoCodingKHR` command is recorded. If more Video Encode operations are to be required after the `vkCmdEndVideoCodingKHR` command, another Video Encode Context can be started with the `vkCmdBeginVideoCodingKHR` command.

2. `vkCmdEncodeVideoKHR` specifies one or more frames to be encoded. The `VkVideoEncodeInfoKHR` parameters, and the codec extension structures chained to this, specify the details of the encode operation.

3. `vkCmdControlVideoCodingKHR` records operations against the encoded data, encoding device, or the Video Session state.

4. `vkCmdEndVideoCodingKHR` signals the end of the recording of the Vulkan Video Encode Context, as established by `vkCmdBeginVideoCodingKHR`.

In addition to the above, the following commands can be recorded between `vkCmdBeginVideoCodingKHR` and `vkCmdEndVideoCodingKHR`:

- Query operations
- Global Memory Barriers
- Buffer Memory Barriers
- Image Memory Barriers (these must be used to transition the Video Picture Resources to the proper `VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR` and `VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR` layouts).
- Pipeline Barriers
The following Video Encode related commands must be recorded outside the Vulkan Video Encode Context established with the `vkCmdBeginVideoCodingKHR` and `vkCmdEndVideoCodingKHR` commands:

- Sparse Memory Binding
- Copy Commands
- Clear Commands

### 42.13.1. Encode Input Picture

The primary source of input pixels for the video encoding process is the *Encode Input Picture*, represented by a `VkImageView`. It may also be a direct target of video decode, graphics, or compute operations, or with Window System Integration APIs.

### 42.13.2. Capabilities

When calling `vkGetPhysicalDeviceVideoCapabilitiesKHR` with `pVideoProfile->videoCodecOperation` specified as one of the encode operation bits, the `VkVideoEncodeCapabilitiesKHR` structure must be included in the `pNext` chain of the `VkVideoCapabilitiesKHR` structure to retrieve capabilities specific to video encoding.

The `VkVideoEncodeCapabilitiesKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeCapabilitiesKHR {
    VkStructureType sType;
    void* pNext;
    VkVideoEncodeCapabilityFlagsKHR flags;
    VkVideoEncodeRateControlModeFlagsKHR rateControlModes;
    uint32_t maxRateControlLayers;
    uint64_t maxBitrate;
    uint32_t maxQualityLevels;
    VkExtent2D encodeInputPictureGranularity;
    VkVideoEncodeFeedbackFlagsKHR supportedEncodeFeedbackFlags;
} VkVideoEncodeCapabilitiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeCapabilityFlagBitsKHR` describing supported encoding features.
- `rateControlModes` is a bitmask of `VkVideoEncodeRateControlModeFlagBitsKHR` indicating supported rate control modes.
• **maxRateControlLayers** indicates the maximum number of rate control layers supported.

• **maxBitrate** indicates the maximum supported bitrate.

• **maxQualityLevels** indicates the number of discrete video encode quality levels supported. Implementations must report at least 1.

• **encodeInputPictureGranularity** indicates the granularity at which encode input picture data is encoded.

• **supportedEncodeFeedbackFlags** is a bitmask of VkVideoEncodeFeedbackFlagBitsKHR values specifying the supported flags for video encode feedback queries.

Implementations must include support for at least VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BUFFER_OFFSET_BIT_KHR and VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_BYTES_WRITTEN_BIT_KHR in supportedEncodeFeedbackFlags.

The input content and encode resolution (specified in VkVideoEncodeInfoKHR::codedExtent) may not be aligned with the codec-specific coding block size. For example, the input content may be 1920x1080 and the coding block size may be 16x16 pixel blocks. In this example, the content is horizontally aligned with the coding block size, but not vertically aligned with the coding block size. Encoding of the last row of blocks may be impacted by contents of the input image in pixel rows 1081 to 1088 (the next vertical alignment with the coding block size). In general, to ensure efficient encoding for the last row/column of blocks, and/or to ensure consistent encoding results between repeated encoding of the same input content, these extra pixel rows/columns should be filled to known values up to the coding block size alignment before encoding operations are performed. Some implementations support performing auto-fill of unaligned pixels beyond a specific alignment for the purposes of encoding, which is reported in encodeInputPictureGranularity. For example, if an implementation reports 1x1 in encodeInputPictureGranularity, then the implementation will perform auto-fill for any unaligned pixels beyond the encode resolution up to the next coding block size. For a coding block size of 16x16, if the implementation reports 16x16 in encodeInputPictureGranularity, then it is the application's responsibility to fill any unaligned pixels, if desired. When the application does not fill these unaligned pixels, there may be an impact on the encoding efficiency but there will be no effect on the validity of the generated bitstream. If the implementation reports 8x8 in encodeInputPictureGranularity, then for the 1920x1080 example, since the content is aligned to 8 pixels vertically, the implementation will auto-fill pixel rows 1081 to 1088 (up to the 16x16 coding block size in the example). The auto-fill value(s) are implementation-specific. The auto-fill value(s) are not written to the input image memory, but are used as part of the encoding operation on the input image.

---

**Valid Usage (Implicit)**

- VUID-VkVideoEncodeCapabilitiesKHR-sType-sType

  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_CAPABILITIES_KHR

---

// Provided by VK_KHR_video_encode_queue

typedef VkFlags VkVideoEncodeCapabilityFlagsKHR;

VkVideoEncodeCapabilityFlagsKHR is a bitmask type for setting a mask of zero or more
Bits which may be set in `VkVideoEncodeCapabilitiesKHR::flags`, indicating the encoding tools supported, are:

```c
// Provided by VK_KHR_video_encode_queue
typedef enum VkVideoEncodeCapabilityFlagBitsKHR {
    VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR = 0x00000002,
} VkVideoEncodeCapabilityFlagBitsKHR;
```

- `VK_VIDEO_ENCODE_CAPABILITY_PRECEDING_EXTERNALLY_ENCODED_BYTES_BIT_KHR` indicates that the implementation supports the use of `VkVideoEncodeInfoKHR::precedingExternallyEncodedBytes`.
- `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` indicates that the implementation is able to detect and report when the destination video bitstream buffer range provided by the application is not sufficiently large to fit the encoded bitstream data produced by a video encode operation by reporting the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code.

**Note**

Some implementations may not be able to reliably detect insufficient bitstream buffer range conditions in all situations. Such implementations will not report support for the `VK_VIDEO_ENCODE_CAPABILITY_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_DETECTION_BIT_KHR` encode capability flag for the video profile, but may still report the `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` query result status code in certain cases. Applications should always check for the specific query result status code `VK_QUERY_RESULT_STATUS_INSUFFICIENT_BITSTREAM_BUFFER_RANGE_KHR` even when this encode capability flag is not supported by the implementation for the video profile in question. However, applications must not assume that a different negative query result status code indicating an unsuccessful completion of a video encode operation is not the result of an insufficient bitstream buffer condition unless this encode capability flag is supported.

### 42.13.3. Video Encode Quality Levels

To query properties for a specific video encode quality level supported by a video encode profile, call:

```c
// Provided by VK_KHR_video_encode_queue
VkResult vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR* pQualityLevelInfo,
)
```
• **physicalDevice** is the physical device to query the video encode quality level properties for.
• **pQualityLevelInfo** is a pointer to a `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure specifying the video encode profile and quality level to query properties for.
• **pQualityLevelProperties** is a pointer to a `VkVideoEncodeQualityLevelPropertiesKHR` structure in which the properties are returned.

### Valid Usage (Implicit)
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-physicalDevice-parameter
  `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelInfo-parameter
  `pQualityLevelInfo` must be a valid pointer to a valid `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure
- VUID-vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR-pQualityLevelProperties-parameter
  `pQualityLevelProperties` must be a valid pointer to a `VkVideoEncodeQualityLevelPropertiesKHR` structure

### Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`

The `VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR {
    VkStructureType   sType;
    const void*       pNext;
    const VkVideoProfileInfoKHR*  pVideoProfile;
} VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR;
```
```c
uint32_t qualityLevel;
} VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pVideoProfile` is a pointer to a `VkVideoProfileInfoKHR` structure specifying the video profile to query the video encode quality level properties for.
- `qualityLevel` is the video encode quality level to query properties for.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR`
- `VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pNext-pNext`  
  `pNext` must be `NULL`
- `VUID-VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR-pVideoProfile-parameter`  
  `pVideoProfile` must be a valid pointer to a valid `VkVideoProfileInfoKHR` structure

The `VkVideoEncodeQualityLevelPropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkVideoEncodeRateControlModeFlagBitsKHR preferredRateControlMode;
    uint32_t preferredRateControlLayerCount;
} VkVideoEncodeQualityLevelPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `preferredRateControlMode` is a `VkVideoEncodeRateControlModeFlagBitsKHR` value indicating the preferred rate control mode to use with the video encode quality level.
- `preferredRateControlLayerCount` indicates the preferred number of rate control layers to use with the quality level.

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeQualityLevelPropertiesKHR-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_PROPERTIES_KHR`
- `VUID-VkVideoEncodeQualityLevelPropertiesKHR-pNext-pNext`  
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264QualityLevelPropertiesEXT` or
The `VkVideoEncodeQualityLevelInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeQualityLevelInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint32_t qualityLevel;
} VkVideoEncodeQualityLevelInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **qualityLevel** is the used video encode quality level.

This structure can be specified in the following places:

- In the **pNext** chain of `VkVideoSessionParametersCreateInfoKHR` to specify the video encode quality level to use for a video session parameters object created for a video encode session. If no instance of this structure is included in the **pNext** chain of `VkVideoSessionParametersCreateInfoKHR`, then the video session parameters object is created with a video encode quality level of zero.
- In the **pNext** chain of `VkVideoCodingControlInfoKHR` to change the video encode quality level state of the bound video session.

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeQualityLevelInfoKHR-sType-sType**
  
  **sType** must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR`

### 42.13.4. Retrieving Encoded Session Parameters

Any codec-specific parameters stored in video session parameters objects may need to be separately encoded and included in the final video bitstream data, depending on the used video compression standard. In such cases the application must call the `vkGetEncodedVideoSessionParametersKHR` command to retrieve the encoded parameter data from the used video session parameters object in order to be able to produce a compliant video bitstream.

Encoded parameter data can be retrieved from a video session parameters object created with a video encode operation using the command:
// Provided by VK_KHR_video_encode_queue

VkResult vkGetEncodedVideoSessionParametersKHR(
    VkDevice device,
    const VkVideoEncodeSessionParametersGetInfoKHR* pVideoSessionParametersInfo,
    VkVideoEncodeSessionParametersFeedbackInfoKHR* pFeedbackInfo,
    size_t* pDataSize,
    void* pData);

- device is the logical device that owns the video session parameters object.

- pVideoSessionParametersInfo is a pointer to a VkVideoEncodeSessionParametersGetInfoKHR structure specifying the parameters of the encoded parameter data to retrieve.

- pFeedbackInfo is either NULL or a pointer to a VkVideoEncodeSessionParametersFeedbackInfoKHR structure in which feedback about the requested parameter data is returned.

- pDataSize is a pointer to a size_t value related to the amount of encode parameter data returned, as described below.

- pData is either NULL or a pointer to a buffer to write the encoded parameter data to.

If pData is NULL, then the size of the encoded parameter data, in bytes, that can be retrieved is returned in pDataSize. Otherwise, pDataSize must point to a variable set by the application to the size of the buffer, in bytes, pointed to by pData, and on return the variable is overwritten with the number of bytes actually written to pData. If pDataSize is less than the size of the encoded parameter data that can be retrieved, then no data will be written to pData, zero will be written to pDataSize, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that no encoded parameter data was returned.

If pFeedbackInfo is not NULL then the members of the VkVideoEncodeSessionParametersFeedbackInfoKHR structure and any additional structures included in its pNext chain that are applicable to the video session parameters object specified in pVideoSessionParametersInfo::videoSessionParameters will be filled with feedback about the requested parameter data on all successful calls to this command.

Note:
This includes the cases when pData is NULL or when VK_INCOMPLETE is returned by the command, and enables the application to determine whether the implementation overrode any of the requested video session parameters without actually needing to retrieve the encoded parameter data itself.

Valid Usage (Implicit)

- VUID-vkGetEncodedVideoSessionParametersKHR-device-parameter device must be a valid VkDevice handle

- VUID-vkGetEncodedVideoSessionParametersKHR-pVideoSessionParametersInfo-parameter pVideoSessionParametersInfo must be a valid pointer to a valid
### VkVideoEncodeSessionParametersGetInfoKHR structure

- **VUID-vkGetEncodedVideoSessionParametersKHR-pFeedbackInfo-parameter**
  If `pFeedbackInfo` is not NULL, `pFeedbackInfo` must be a valid pointer to a `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure.

- **VUID-vkGetEncodedVideoSessionParametersKHR-pDataSize-parameter**
  `pDataSize` must be a valid pointer to a `size_t` value.

- **VUID-vkGetEncodedVideoSessionParametersKHR-pData-parameter**
  If the value referenced by `pDataSize` is not 0, and `pData` is not NULL, `pData` must be a valid pointer to an array of `pDataSize` bytes.

### Return Codes

**Success**
- **VK_SUCCESS**
- **VK_INCOMPLETE**

**Failure**
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

The `VkVideoEncodeSessionParametersGetInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersGetInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkVideoSessionParametersKHR videoSessionParameters;
} VkVideoEncodeSessionParametersGetInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `videoSessionParameters` is the `VkVideoSessionParametersKHR` object to retrieve encoded parameter data from.

Depending on the used video encode operation, additional codec-specific structures may need to be included in the `pNext` chain of this structure to identify the specific video session parameters to retrieve encoded parameter data for, as described in the corresponding sections.

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_GET_INFO_KHR`.

- **VUID-VkVideoEncodeSessionParametersGetInfoKHR-pNext-pNext**
Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264SessionParametersGetInfoEXT` or `VkVideoEncodeH265SessionParametersGetInfoEXT`

- VUID-VkVideoEncodeSessionParametersGetInfoKHR-sType-unique
  The `sType` value of each struct in the `pNext` chain **must** be unique
- VUID-VkVideoEncodeSessionParametersGetInfoKHR-videoSessionParameters-parameter
  `videoSessionParameters` **must** be a valid `VkVideoSessionParametersKHR` handle

The `VkVideoEncodeSessionParametersFeedbackInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeSessionParametersFeedbackInfoKHR {
    VkStructureType sType;
    void*             pNext;
    VkBool32          hasOverrides;
} VkVideoEncodeSessionParametersFeedbackInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hasOverrides` indicates whether any of the requested parameter data were overridden by the implementation.

Depending on the used video encode operation, additional codec-specific structures **may** need to be included in the `pNext` chain of this structure to capture feedback information about the requested parameter data, as described in the corresponding sections.

**Valid Usage (Implicit)**

- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-sType
  `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_FEEDBACK_INFO_KHR`
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkVideoEncodeH264SessionParametersFeedbackInfoEXT` or `VkVideoEncodeH265SessionParametersFeedbackInfoEXT`
- VUID-VkVideoEncodeSessionParametersFeedbackInfoKHR-sType-unique
  The `sType` value of each struct in the `pNext` chain **must** be unique

### 42.13.5. Video Encode Commands

To launch video encode operations, call:

```c
// Provided by VK_KHR_video_encode_queue
```
void vkCmdEncodeVideoKHR(
    VkCommandBuffer commandBuffer,
    const VkVideoEncodeInfoKHR* pEncodeInfo);

- **commandBuffer** is the command buffer to be filled with this function for encoding to generate a bitstream.
- **pEncodeInfo** is a pointer to a `VkVideoEncodeInfoKHR` structure.

Each call issues one or more video encode operations. The implicit parameter `opCount` corresponds to the number of video encode operations issued by the command. After calling this command, the active query index of each active query is incremented by `opCount`.

Currently each call to this command results in the issue of a single video encode operation.

### Valid Usage

- **VUID-vkCmdEncodeVideoKHR-opCount-07174**
  For each active query, the active query index corresponding to the query type of that query plus `opCount` must be less than or equal to the last activatable query index corresponding to the query type of that query plus one

### Valid Usage (Implicit)

- **VUID-vkCmdEncodeVideoKHR-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle
- **VUID-vkCmdEncodeVideoKHR-pEncodeInfo-parameter**
  `pEncodeInfo` must be a valid pointer to a valid `VkVideoEncodeInfoKHR` structure
- **VUID-vkCmdEncodeVideoKHR-commandBuffer-recording**
  `commandBuffer` must be in the recording state
- **VUID-vkCmdEncodeVideoKHR-commandBuffer-cmdpool**
  The `VkCommandPool` that `commandBuffer` was allocated from must support encode operations
- **VUID-vkCmdEncodeVideoKHR-renderpass**
  This command must only be called outside of a render pass instance
- **VUID-vkCmdEncodeVideoKHR-videocoding**
  This command must only be called inside of a video coding scope
- **VUID-vkCmdEncodeVideoKHR-bufferlevel**
  `commandBuffer` must be a primary `VkCommandBuffer`

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally
The `VkVideoEncodeInfoKHR` structure is defined as:

```c
// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkVideoEncodeFlagsKHR flags;
    VkBuffer dstBuffer;
    VkDeviceSize dstBufferOffset;
    VkDeviceSize dstBufferRange;
    VkVideoPictureResourceInfoKHR srcPictureResource;
    const VkVideoReferenceSlotInfoKHR* pSetupReferenceSlot;
    uint32_t referenceSlotCount;
    const VkVideoReferenceSlotInfoKHR* pReferenceSlots;
    uint32_t precedingExternallyEncodedBytes;
} VkVideoEncodeInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is a pointer to a structure extending this structure. A codec-specific extension structure must be chained to specify what bitstream unit to generate with this encode operation.
- **flags** is reserved for future use.
- **dstBuffer** is the destination video bitstream buffer to write the encoded bitstream to.
- **dstBufferOffset** is the starting offset in bytes from the start of `dstBuffer` to write the encoded bitstream to. `dstBufferOffset`'s value must be aligned to `VkVideoCapabilitiesKHR::minBitstreamBufferOffsetAlignment`, as reported by the implementation.
- **dstBufferRange** is the maximum size in bytes of the encoded bitstream written to `dstBuffer`, starting from `dstBufferOffset`. `dstBufferRange`'s value must be aligned to `VkVideoCapabilitiesKHR::minBitstreamBufferSizeAlignment`, as reported by the implementation.
- **srcPictureResource** is the Picture Resource of the Input Picture to be encoded by the operation.
- **pSetupReferenceSlot** is a pointer to a `VkVideoReferenceSlotInfoKHR` structure used for generating a reconstructed reference slot and Picture Resource. `pSetupReferenceSlot->slotIndex` specifies the slot index number to use as a target for producing the Reconstructed (DPB) data. `pSetupReferenceSlot` must be one of the entries provided in `VkVideoBeginCodingInfoKHR` via the `pReferenceSlots` within the `vkCmdBeginVideoCodingKHR` command that established the Vulkan Video Encode Context for this command.
• **referenceSlotCount** is the number of Reconstructed Reference Pictures that will be used when this encoding operation is executing.

• **pReferenceSlots** is **NULL** or a pointer to an array of VkVideoReferenceSlotInfoKHR structures that will be used when this encoding operation is executing. Each entry in **pReferenceSlots** must be one of the entries provided in VkVideoBeginCodingInfoKHR via the **pReferenceSlots** within the vkCmdBeginVideoCodingKHR command that established the Vulkan Video Encode Context for this command.

• **precedingExternallyEncodedBytes** is the number of bytes externally encoded for insertion in the active video encode session overall bitstream prior to the bitstream that will be generated by the implementation for this instance of VkVideoEncodeInfoKHR. The value provided is used to update the implementation’s rate control algorithm for the rate control layer this instance of VkVideoEncodeInfoKHR belongs to, by accounting for the bitrate budget consumed by these externally encoded bytes. See VkVideoEncodeRateControlInfoKHR for additional information about encode rate control.

The coded size of the encode operation is specified in **codedExtent** of **srcPictureResource**.

Multiple **vkCmdEncodeVideoKHR** commands may be recorded within a Vulkan Video Encode Context. The execution of each **vkCmdEncodeVideoKHR** command will result in generating codec-specific bitstream units. These bitstream units are generated consecutively into the bitstream buffer specified in **dstBuffer** of a VkVideoEncodeInfoKHR structure within the vkCmdBeginVideoCodingKHR command. The produced bitstream is the sum of all these bitstream units, including any padding between the bitstream units. Any bitstream padding must be filled with data compliant to the codec standard so as not to cause any syntax errors during decoding of the bitstream units with the padding included. The range of the bitstream buffer written can be queried via video encode feedback queries.

### Valid Usage

- VUID-VkVideoEncodeInfoKHR-None-07012
  The bound video session must not be in uninitialized state at the time the command is executed on the device

### Valid Usage (Implicit)

- VUID-VkVideoEncodeInfoKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_INFO_KHR

- VUID-VkVideoEncodeInfoKHR-pNext-pNext
  Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkVideoEncodeH264PictureInfoEXT or VkVideoEncodeH265PictureInfoEXT

- VUID-VkVideoEncodeInfoKHR-sType-unique
  The sType value of each struct in the pNext chain must be unique

- VUID-VkVideoEncodeInfoKHR-flags-zerobitmask
  flags must be 0
• VUID-VkVideoEncodeInfoKHR-dstBuffer-parameter
dstBuffer must be a valid VkBuffer handle

• VUID-VkVideoEncodeInfoKHR-srcPictureResource-parameter
srcPictureResource must be a valid VkVideoPictureResourceInfoKHR structure

• VUID-VkVideoEncodeInfoKHR-pSetupReferenceSlot-parameter
If pSetupReferenceSlot is not NULL, pSetupReferenceSlot must be a valid pointer to a valid
VkVideoReferenceSlotInfoKHR structure

• VUID-VkVideoEncodeInfoKHR-pReferenceSlots-parameter
If referenceSlotCount is not 0, pReferenceSlots must be a valid pointer to an array of
referenceSlotCount valid VkVideoReferenceSlotInfoKHR structures

// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeFlagsKHR;

VkVideoEncodeFlagsKHR is a bitmask type for setting a mask, but is currently reserved for future
use.

The VkVideoEncodeRateControlInfoKHR structure is defined as:

// Provided by VK_KHR_video_encode_queue
typedef struct VkVideoEncodeRateControlInfoKHR {
    VkStructureType sType;
    const void* pNext;
    VkVideoEncodeRateControlFlagsKHR flags;
    VkVideoEncodeRateControlModeFlagBitsKHR rateControlMode;
    uint32_t layerCount;
    const VkVideoEncodeRateControlLayerInfoKHR* pLayers;
    uint32_t virtualBufferSizeInMs;
    uint32_t initialVirtualBufferSizeInMs;
} VkVideoEncodeRateControlInfoKHR;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• flags is reserved for future use.
• rateControlMode is a VkVideoEncodeRateControlModeFlagBitsKHR value specifying the encode
  stream rate control mode.
• layerCount specifies the number of rate control layers in the video encode stream.
• pLayers is a pointer to an array of VkVideoEncodeRateControlLayerInfoKHR structures
  specifying the rate control configurations of layerCount rate control layers.
• virtualBufferSizeInMs is the leaky bucket model virtual buffer size in milliseconds, with respect
to peak bitrate. Valid when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR
or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR. For example, virtual buffer size is
(virtualBufferSizeInMs × maxBitrate / 1000).
• **initialVirtualBufferSizeInMs** is the initial occupancy in milliseconds of the virtual buffer in the leaky bucket model. Valid when rate control mode is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR` or `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR`.

Including this structure in the `pNext` chain of `VkVideoCodingControlInfoKHR` and including `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR` in `VkVideoCodingControlInfoKHR::flags` will define stream rate control settings for video encoding.

Additional structures providing codec-specific rate control parameters may need to be included in the `pNext` chain of `VkVideoCodingControlInfoKHR` depending on the codec profile the bound video session was created with and the parameters specified in `VkVideoEncodeRateControlInfoKHR` (see [Video Coding Control](#)).

To ensure that the video session is properly initialized with stream-level rate control settings, the application must call `vkCmdControlVideoCodingKHR` with stream-level rate control settings at least once in execution order before the first `vkCmdEncodeVideoKHR` command that is executed after video session reset. If not provided, default implementation-specific stream rate control settings will be used.

Stream rate control settings can also be re-initialized during an active video encoding session. The re-initialization takes effect whenever the `VkVideoEncodeRateControlInfoKHR` structure is included in the `pNext` chain of the `VkVideoCodingControlInfoKHR` structure in the call to `vkCmdControlVideoCodingKHR`, and only impacts `vkCmdEncodeVideoKHR` operations that follow in execution order.

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeRateControlInfoKHR-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_INFO_KHR`

- **VUID-VkVideoEncodeRateControlInfoKHR-flags-zerobitmask**
  - `flags` must be 0

- **VUID-VkVideoEncodeRateControlInfoKHR-rateControlMode-parameter**
  - If `rateControlMode` is not 0, `rateControlMode` must be a valid `VkVideoEncodeRateControlModeFlagBitsKHR` value

- **VUID-VkVideoEncodeRateControlInfoKHR-pLayers-parameter**
  - If `layerCount` is not 0, `layers` must be a valid pointer to an array of `layerCount` valid `VkVideoEncodeRateControlLayerInfoKHR` structures

```c
// Provided by VK_KHR_video_encode_queue
typedef VkFlags VkVideoEncodeRateControlFlagsKHR;
```

`VkVideoEncodeRateControlFlagsKHR` is a bitmask type for setting a mask, but currently reserved for future use.

The rate control modes are defined with the following enums:
typedef enum VkVideoEncodeRateControlModeFlagBitsKHR {
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR = 0,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR = 0x00000001,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR = 0x00000002,
    VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR = 0x00000004,
} VkVideoEncodeRateControlModeFlagBitsKHR;

- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR** specifies the use of implementation-specific rate control.
- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR** specifies that rate control is disabled and any quality control parameters for the encoding are provided on a per-picture basis. In this mode implementations will encode pictures independently of the output bitrate of prior video encode operations. When using an H.264 encode profile, implementations will use the QP values specified in the VkVideoEncodeH264RateControlInfoEXT structure for the encoded picture. When using an H.265 encode profile, implementations will use the QP values specified in the VkVideoEncodeH265RateControlInfoEXT structure for the encoded picture.
- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR** specifies the use of constant bitrate rate control mode.
- **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR** specifies the use of variable bitrate rate control mode.

typedef VkFlags VkVideoEncodeRateControlModeFlagsKHR;

VkVideoEncodeRateControlModeFlagsKHR is a bitmask type for setting a mask of zero or more VkVideoEncodeRateControlModeFlagBitsKHR.

The VkVideoEncodeRateControlLayerInfoKHR structure is defined as:

typedef struct VkVideoEncodeRateControlLayerInfoKHR {
    VkStructureType sType;
    const void* pNext;
    uint64_t averageBitrate;
    uint64_t maxBitrate;
    uint32_t frameRateNumerator;
    uint32_t frameRateDenominator;
} VkVideoEncodeRateControlLayerInfoKHR;

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is a pointer to a structure extending this structure.
- **averageBitrate** is the average bitrate in bits/second. Valid when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR or
VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR.

- `maxBitrate` is the peak bitrate in bits/second. Valid when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR.

- `frameRateNumerator` is the numerator of the frame rate. Valid when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR.

- `frameRateDenominator` is the denominator of the frame rate. Valid when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_CBR_BIT_KHR or VK_VIDEO_ENCODE_RATE_CONTROL_MODE_VBR_BIT_KHR.

A codec-specific structure specifying additional per-layer rate control settings must be chained to VkVideoEncodeRateControlLayerInfoKHR. If multiple rate control layers are enabled (VkVideoEncodeRateControlInfoKHR::layerCount is greater than 1), then the chained codec-specific extension structure also identifies the specific video coding layer its parent VkVideoEncodeRateControlLayerInfoKHR applies to. If multiple rate control layers are enabled, the number of rate control layers must match the number of video coding layers. The specification for an encode codec-specific extension would describe how multiple video coding layers are enabled for the corresponding codec.

Per-layer rate control settings for all enabled rate control layers must be initialized or re-initialized whenever stream rate control settings are provided via VkVideoEncodeRateControlInfoKHR. This is done by specifying settings for all enabled rate control layers in VkVideoEncodeRateControlInfoKHR::pLayers.

It is possible for an application to enable multiple video coding layers (via codec-specific extensions to encoding operations) while only enabling a single layer of rate control for the entire video stream. To achieve this, layerCount in VkVideoEncodeRateControlInfoKHR must be set to 1, and the single VkVideoEncodeRateControlLayerInfoKHR provided in pLayers would apply to all encoded segments of the video stream, regardless of which codec-defined video coding layer they belong to. In this case, the implementation decides bitrate distribution across video coding layers (if applicable to the specified stream rate control mode).

### Valid Usage (Implicit)

- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-sType sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_LAYER_INFO_KHR

- VUID-VkVideoEncodeRateControlLayerInfoKHR-pNext-pNext Each pNext member of any structure (including this one) in the pNext chain must be either NULL or a pointer to a valid instance of VkVideoEncodeH264RateControlLayerInfoEXT or VkVideoEncodeH265RateControlLayerInfoEXT

- VUID-VkVideoEncodeRateControlLayerInfoKHR-sType-unique The sType value of each struct in the pNext chain must be unique
42.14. Encode H.264

The VK_EXT_video_encode_h264 extension adds H.264 codec specific structures/types needed to support H.264 encoding. Unless otherwise noted, all references to the H.264 specification are to the 2010 edition published by the ITU-T, dated March 2010. This specification is available at https://www.itu.int/rec/T-REC-H.264.

Note
Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.

42.14.1. H.264 Encode Profile

The VkVideoEncodeH264ProfileInfoEXT structure is defined as:

```c
typedef struct VkVideoEncodeH264ProfileInfoEXT {
    VkStructureType sType;
    const void* pNext;
    StdVideoH264ProfileIdc stdProfileIdc;
} VkVideoEncodeH264ProfileInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `stdProfileIdc` is a StdVideoH264ProfileIdc value specifying the H.264 codec profile IDC.

An H.264 encode profile is specified by including a VkVideoEncodeH264ProfileInfoEXT structure in the `pNext` chain of the VkVideoProfileInfoKHR structure when VkVideoProfileInfoKHR::videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_EXT.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264ProfileInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PROFILE_INFO_EXT

42.14.2. Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with `pVideoProfile->videoCodecOperation` specified as VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_EXT, the VkVideoEncodeH264CapabilitiesEXT structure must be included in the `pNext` chain of the VkVideoCapabilitiesKHR structure to retrieve more capabilities specific to H.264 video encoding.

The VkVideoEncodeH264CapabilitiesEXT structure is defined as:
// Provided by VK_EXT_video_encode_h264

typedef struct VkVideoEncodeH264CapabilitiesEXT {
    VkStructureType sType;
    void* pNext;
    VkVideoEncodeH264CapabilityFlagsEXT flags;
    StdVideoH264LevelIdc maxLevelIdc;
    uint32_t maxSliceCount;
    uint32_t maxPPictureL0ReferenceCount;
    uint32_t maxBPictureL0ReferenceCount;
    uint32_t maxL1ReferenceCount;
    uint32_t maxTemporalLayerCount;
    VkBool32 expectDyadicTemporalLayerPattern;
    int32_t minQp;
    int32_t maxQp;
    VkBool32 prefersGopRemainingFrames;
    VkBool32 requiresGopRemainingFrames;
    VkVideoEncodeH264StdFlagsEXT stdSyntaxFlags;
} VkVideoEncodeH264CapabilitiesEXT;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is a bitmask of `VkVideoEncodeH264CapabilityFlagBitsEXT` indicating supported H.264 encoding capabilities.
- **maxLevelIdc** is a `StdVideoH264LevelIdc` value indicating the maximum H.264 level supported.
- **maxSliceCount** indicates the maximum number of slices that can be encoded for a single picture. Further restrictions may apply to the number of slices that can be encoded for a single picture depending on other capabilities and codec-specific rules.
- **maxPPictureL0ReferenceCount** indicates the maximum number of reference pictures the implementation supports in the reference list L0 for P pictures.
- **maxBPictureL0ReferenceCount** indicates the maximum number of reference pictures the implementation supports in the reference list L0 for B pictures. The reported value is 0 if encoding of B pictures is not supported.
- **maxL1ReferenceCount** reports the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of B pictures is supported. The reported value is 0 if encoding of B pictures is not supported.
- **maxTemporalLayerCount** indicates the maximum number of H.264 temporal layers supported by the implementation.
- **expectDyadicTemporalLayerPattern** indicates that the implementation's rate control algorithms expect the application to use a dyadic temporal layer pattern when encoding multiple temporal layers.
- **minQp** indicates the minimum QP value supported.
- **maxQp** indicates the maximum QP value supported.
- **prefersGopRemainingFrames** indicates that the implementation's rate control algorithm prefers
the application to specify the number of frames of each type remaining in the current group of pictures.

- **requiresGopRemainingFrames** indicates that the implementation’s rate control algorithm requires the application to specify the number of frames of each type remaining in the current group of pictures.

- **stdSyntaxFlags** is a bitmask of `VkVideoEncodeH264StdFlagBitsEXT` indicating capabilities related to H.264 syntax elements.

When `vkGetPhysicalDeviceVideoCapabilitiesKHR` is called to query the capabilities with parameter `videoCodecOperation` specified as `VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_EXT`, a `VkVideoEncodeH264CapabilitiesEXT` structure can be chained to `VkVideoCapabilitiesKHR` to retrieve H.264 extension specific capabilities.

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeH264CapabilitiesEXT-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_CAPABILITIES_EXT`.

Bits which **may** be set in `VkVideoEncodeH264CapabilitiesEXT::flags`, indicating the supported H.264 encoding capabilities, are:

```cpp
// Provided by VK_EXT_video_encode_h264
typedef enum VkVideoEncodeH264CapabilityFlagBitsEXT {
    VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_EXT = 0x00000008,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT = 0x00000010,
    VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_EXT = 0x00000020,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_EXT = 0x00000040,
    VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_EXT = 0x00000080,
    VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_EXT = 0x00000100,
} VkVideoEncodeH264CapabilityFlagBitsEXT;
```

- **VK_VIDEO_ENCODE_H264_CAPABILITY_HRD_COMPLIANCE_BIT_EXT** indicates if the implementation guarantees generating a HRD compliant bitstream if `nal_hrd_parameters_present_flag` or `vcl_hrd_parameters_present_flag` are enabled in `StdVideoH264SpsVuiFlags`.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_EXT** indicates that when weighted_pred_flag is enabled or `STD_VIDEO_H264_WEIGHTED_BIPRED_IDC_EXPLICIT` from `StdVideoH264WeightedBipredIdc` is used, the implementation is able to internally decide syntax for `pred_weight_table`.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_ROW_UNALIGNED_SLICE_BIT_EXT** indicates that each slice in a frame with multiple slices may begin or finish at any offset in a macroblock row. If not supported, all slices in the frame **must** begin at the start of a macroblock row (and hence each

...
slice must finish at the end of a macroblock row).

- **VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_SLICE_TYPE_BIT_EXT** indicates that when a frame is encoded with multiple slices, the implementation allows encoding each slice with a different `StdVideoEncodeH264SliceHeader::slice_type`. If not supported, all slices of the frame must be encoded with the same `slice_type` which corresponds to the picture type of the frame. For example, all slices of a P-frame would be encoded as P-slices.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT** indicates support for using a B frame as L0 reference.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_EXT** indicates support for using a B frame as L1 reference.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_EXT** indicates support for specifying different QP values in the members of `VkVideoEncodeH264QpEXT`.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_PER_SLICE_CONSTANT_QP_BIT_EXT** indicates support for specifying different constant QP values for each slice.

- **VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_EXT** indicates support for generating prefix NALUs by setting `VkVideoEncodeH264PictureInfoEXT::generatePrefixNalu` to `VK_TRUE`.

// Provided by VK_EXT_video_encode_h264
typedef VkFlags VkVideoEncodeH264CapabilityFlagsEXT;

VkVideoEncodeH264CapabilityFlagsEXT is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264CapabilityFlagBitsEXT`.

Bits which may be set in `VkVideoEncodeH264CapabilitiesEXT::stdSyntaxFlags`, indicating the capabilities related to the H.264 syntax elements, are:

// Provided by VK_EXT_video_encode_h264
typedef enum VkVideoEncodeH264StdFlagBitsEXT {
    VK_VIDEO_ENCODE_H264_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H264_STD_QPPRIME_Y_ZERO_TRANSFORM_BYPASS_FLAG_SET_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H264_STD_SCALING_MATRIX_PRESENT_FLAG_SET_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H264_STD_CHROMA_QP_INDEX_OFFSET_BIT_EXT = 0x00000008,
    VK_VIDEO_ENCODE_H264_STD_SECOND_CHROMA_QP_INDEX_OFFSET_BIT_EXT = 0x00000010,
    VK_VIDEO_ENCODE_H264_STD_PIC_INIT_QP_MINUS26_BIT_EXT = 0x00000020,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_PRED_FLAG_SET_BIT_EXT = 0x00000040,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_EXPLICIT_BIT_EXT = 0x00000080,
    VK_VIDEO_ENCODE_H264_STD_WEIGHTED_BIPRED_IDC_IMPLICIT_BIT_EXT = 0x00000100,
    VK_VIDEO_ENCODE_H264_STD_TRANSFORM_8X8_MODE_FLAG_SET_BIT_EXT = 0x00000200,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_SPATIAL_MV_PRED_FLAG_UNSET_BIT_EXT = 0x00000400,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_UNSET_BIT_EXT = 0x00000800,
    VK_VIDEO_ENCODE_H264_STD_ENTROPY_CODING_MODE_FLAG_SET_BIT_EXT = 0x00001000,
    VK_VIDEO_ENCODE_H264_STD_DIRECT_8X8_INFERENCE_FLAG_UNSET_BIT_EXT = 0x00002000,
    VK_VIDEO_ENCODE_H264_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_EXT = 0x00004000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_DISABLED_BIT_EXT = 0x00008000,
    VK_VIDEO_ENCODE_H264_STD_DEBLOCKING_FILTER_ENABLED_BIT_EXT = 0x00010000,
};
\begin{itemize}
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_SEPARATE\_COLOR\_PLANE\_FLAG\_SET\_BIT\_EXT} indicates if enabling separate_colour_plane_flag in StdVideoH264SpsFlags is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_QP\_PRIME\_Y\_ZERO\_TRANSFORM\_BYPASS\_FLAG\_SET\_BIT\_EXT} indicates if enabling qpprime_y_zero_transform_bypass_flag in StdVideoH264SpsFlags is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_SCALING\_MATRIX\_PRESENT\_FLAG\_SET\_BIT\_EXT} indicates if enabling seq_scaling_matrix_present_flag in StdVideoH264SpsFlags or pic_scaling_matrix_present_flag in StdVideoH264PpsFlags are supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_CHROMA\_QP\_INDEX\_OFFSET\_BIT\_EXT} indicates if setting non-zero chroma_qp_index_offset in StdVideoH264PictureParameterSet is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_SECOND\_CHROMA\_QP\_INDEX\_OFFSET\_BIT\_EXT} indicates if setting non-zero second_chroma_qp_index_offset in StdVideoH264PictureParameterSet is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_PIC\_INIT\_QP\_MINUS26\_BIT\_EXT} indicates if setting non-zero pic_init_qp_minus26 in StdVideoH264PictureParameterSet is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_WEIGHTED\_PRED\_FLAG\_SET\_BIT\_EXT} indicates if enabling weighted_pred_flag in StdVideoH264PpsFlags is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_WEIGHTED\_BIPRED\_IDC\_EXPLICIT\_BIT\_EXT} indicates if using STD\_VIDEO\_H264\_WEIGHTED\_BIPRED\_IDC\_EXPLICIT from StdVideoH264WeightedBipredIdc is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_WEIGHTED\_BIPRED\_IDC\_IMPLICIT\_BIT\_EXT} indicates if using STD\_VIDEO\_H264\_WEIGHTED\_BIPRED\_IDC\_IMPLICIT from StdVideoH264WeightedBipredIdc is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_TRANSFORM\_8X8\_MODE\_FLAG\_SET\_BIT\_EXT} indicates if enabling transform_8x8_mode_flag in StdVideoH264PpsFlags is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_DIRECT\_SPATIAL\_MV\_PREDE\_FLAG\_UNSET\_BIT\_EXT} indicates if disabling StdVideoEncodeH264SliceHeaderFlags::direct_spatial_mv_pred_flag is supported when it is present in the slice header.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_ENTROPY\_CODING\_MODE\_FLAG\_UNSET\_BIT\_EXT} indicates if CAVLC entropy coding is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_ENTROPY\_CODING\_MODE\_FLAG\_SET\_BIT\_EXT} indicates if CABAC entropy coding is supported. An implementation \textbf{must} support at least one entropy coding mode.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_DIRECT\_8X8\_INFERENCE\_FLAG\_UNSET\_BIT\_EXT} indicates if disabling direct_8x8_inference_flag in StdVideoH264SpsFlags is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_CONSTRAINED\_INTRA\_PREDE\_FLAG\_SET\_BIT\_EXT} indicates if enabling constrained_intra_pred_flag in StdVideoH264PpsFlags is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_DEBLOCKING\_FILTER\_DISABLE\_BIT\_EXT} indicates if using from StdVideoH264DisableDeblockingFilterIdc is supported.
  \item \texttt{VK\_VIDEO\_Encode\_H264\_STD\_DEBLOCKING\_FILTER\_ENABLE\_BIT\_EXT} indicates if using
\end{itemize}
The `VkVideoEncodeH264QualityLevelPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264QualityLevelPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkVideoEncodeH264RateControlFlagsEXT preferredRateControlFlags;
    uint32_t preferredGopFrameCount;
    uint32_t preferredIdrPeriod;
    uint32_t preferredConsecutiveBFrameCount;
    uint32_t preferredTemporalLayerCount;
    VkVideoEncodeH264QpEXT preferredConstantQp;
    uint32_t preferredMaxL0ReferenceCount;
    uint32_t preferredMaxL1ReferenceCount;
    VkBool32 preferredStdEntropyCodingModeFlag;
} VkVideoEncodeH264QualityLevelPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.

• **preferredRateControlFlags** is a bitmask of **VkVideoEncodeH264RateControlFlagBitsEXT** values indicating the preferred flags to use for **VkVideoEncodeH264RateControlInfoEXT::flags**.

• **preferredGopFrameCount** indicates the preferred value to use for **VkVideoEncodeH264RateControlInfoEXT::gopFrameCount**.

• **preferredIdrPeriod** indicates the preferred value to use for **VkVideoEncodeH264RateControlInfoEXT::idrPeriod**.

• **preferredConsecutiveBFrameCount** indicates the preferred value to use for **VkVideoEncodeH264RateControlInfoEXT::consecutiveBFrameCount**.

• **preferredTemporalLayerCount** indicates the preferred value to use for **VkVideoEncodeH264RateControlInfoEXT::temporalLayerCount**.

• **preferredConstantQp** indicates the preferred values to use for **VkVideoEncodeH264NaluSliceInfoEXT::constantQp** for each picture type when using rate control mode **VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR**.

• **preferredMaxL0ReferenceCount** indicates the preferred maximum number of reference pictures to use in the reference list L0.

• **preferredMaxL1ReferenceCount** indicates the preferred maximum number of reference pictures to use in the reference list L1.

• **preferredStdEntropyCodingModeFlag** indicates the preferred value to use for **entropy_coding_mode_flag** in **StdVideoH264PpsFlags**.

---

**Valid Usage (Implicit)**

• VUID-VkVideoEncodeH264QualityLevelPropertiesEXT-sType-sType

  **sType** must be **VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_QUALITY_LEVEL_PROPERTIES_EXT**

---

### 42.14.4. H.264 Encode Session

Additional parameters can be specified when creating a video session with an H.264 encode profile by including an instance of the **VkVideoEncodeH264SessionCreateInfoEXT** structure in the **pNext** chain of **VkVideoSessionCreateInfoKHR**.

The **VkVideoEncodeH264SessionCreateInfoEXT** structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264SessionCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 useMaxLevelIdc;
    StdVideoH264LevelIdc maxLevelIdc;
} VkVideoEncodeH264SessionCreateInfoEXT;
```

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.

• **useMaxLevelIdc** indicates whether the value of **maxLevelIdc** should be used by the implementation. When it is set to VK_FALSE, the implementation ignores the value of **maxLevelIdc** and uses the value of **VkVideoEncodeH264CapabilitiesEXT:maxLevelIdc**, as reported by **vkGetPhysicalDeviceVideoCapabilitiesKHR** for the video profile.

• **maxLevelIdc** provides the upper bound on the H.264 level for the video bitstreams produced by the created video session.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionCreateInfoEXT-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_CREATE_INFO_EXT

42.14.5. Encoder Parameter Sets

To reduce parameter traffic during encoding, the encoder parameter set object supports storing H.264 SPS/PPS parameter sets that may be later referenced during encoding.

The **VkVideoEncodeH264SessionParametersCreateInfoEXT** structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    uint32_t maxStdSPSCount;
    uint32_t maxStdPPSCount;
    const VkVideoEncodeH264SessionParametersAddInfoEXT* pParametersAddInfo;
} VkVideoEncodeH264SessionParametersCreateInfoEXT;
```

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **maxStdSPSCount** is the maximum number of SPS parameters that the **VkVideoSessionParametersKHR** can contain.

• **maxStdPPSCount** is the maximum number of PPS parameters that the **VkVideoSessionParametersKHR** can contain.

• **pParametersAddInfo** is NULL or a pointer to a **VkVideoEncodeH264SessionParametersAddInfoEXT** structure specifying H.264 parameters to add upon object creation.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH264SessionParametersCreateInfoEXT-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_CREATE_INFO_EXT

- VUID-VkVideoEncodeH264SessionParametersCreateInfoEXT-pParametersAddInfo-
If `pParametersAddInfo` is not `NULL`, `pParametersAddInfo` must be a valid pointer to a valid `VkVideoEncodeH264SessionParametersAddInfoEXT` structure.

The `VkVideoEncodeH264SessionParametersAddInfoEXT` structure is defined as:

```c
#define VK_EXT_VIDEO_ENCODE_H264次会议
typedef struct VkVideoEncodeH264SessionParametersAddInfoEXT {
    VkStructureType    sType;
    const void*        pNext;
    uint32_t           stdSPSCount;
    const StdVideoH264SequenceParameterSet* pStdSPSs;
    uint32_t           stdPPSCount;
    const StdVideoH264PictureParameterSet* pStdPPSs;
} VkVideoEncodeH264SessionParametersAddInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stdSPSCount` is the number of SPS elements in the `pStdSPSs`. Its value must be less than or equal to the value of `maxStdSPSCount`.
- `pStdSPSs` is a pointer to an array of `StdVideoH264SequenceParameterSet` structures representing H.264 sequence parameter sets. Each element of the array must have a unique H.264 SPS ID.
- `stdPPSCount` is the number of PPS provided in `pStdPPSs`. Its value must be less than or equal to the value of `maxStdPPSCount`.
- `pStdPPSs` is a pointer to an array of `StdVideoH264PictureParameterSet` structures representing H.264 picture parameter sets. Each element of the array must have a unique H.264 SPS-PPS ID pair.

**Valid Usage**

- VUID-VkVideoEncodeH264SessionParametersAddInfoEXT-stdSPSCount-04837
  The values of `stdSPSCount` and `stdPPSCount` must be less than or equal to the values of `maxStdSPSCount` and `maxStdPPSCount`, respectively.

- VUID-VkVideoEncodeH264SessionParametersAddInfoEXT-maxStdSPSCount-04838
  When the `maxStdSPSCount` number of parameters of type `StdVideoH264SequenceParameterSet` in the Video Session Parameters object is reached, no additional parameters of that type can be added to the object. `VK_ERROR_TOO_MANY_OBJECTS` will be returned if an attempt is made to add additional data to this object at this point.

- VUID-VkVideoEncodeH264SessionParametersAddInfoEXT-maxStdPPSCount-04839
  When the `maxStdPPSCount` number of parameters of type `StdVideoH264PictureParameterSet` in the Video Session Parameters object is reached, no additional parameters of that type can be added to the object. `VK_ERROR_TOO_MANY_OBJECTS` will be returned if an attempt is made to add additional data to this object at this point.
Each entry to be added must have a unique, to the rest of the parameter array entries and the existing parameters in the Video Session Parameters Object that is being updated, SPS-PPS IDs.

Parameter entries that already exist in Video Session Parameters object with a particular SPS-PPS IDs cannot be replaced nor updated.

When creating a new object using a Video Session Parameters as a template, the array's parameters with the same SPS-PPS IDs as the ones from the template take precedence.

SPS/PPS parameters must comply with the limits specified in VkVideoSessionCreateInfoKHR during Video Session creation.

Valid Usage (Implicit)

sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_ADD_INFO_EXT

If stdSPSCount is not 0, and pStdSPSs is not NULL, pStdSPSs must be a valid pointer to an array of stdSPSCount StdVideoH264SequenceParameterSet values.

If stdPPSCount is not 0, and pStdPPSs is not NULL, pStdPPSs must be a valid pointer to an array of stdPPSCount StdVideoH264PictureParameterSet values.

The VkVideoEncodeH264SessionParametersGetInfoEXT structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersGetInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 writeStdSPS;
    VkBool32 writeStdPPS;
    uint32_t stdSPSId;
    uint32_t stdPPSId;
} VkVideoEncodeH264SessionParametersGetInfoEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- writeStdSPS indicates whether the encoded H.264 sequence parameter set identified by stdSPSId is requested to be retrieved.
- writeStdPPS indicates whether the encoded H.264 picture parameter set identified by the pair constructed from stdSPSId and stdPPSId is requested to be retrieved.
• stdSPSId specifies the H.264 sequence parameter set ID used to identify the retrieved H.264 sequence and/or picture parameter set(s).

• stdPPSId specifies the H.264 picture parameter set ID used to identify the retrieved H.264 picture parameter set when writeStdPPS is set to VK_TRUE.

When this structure is specified in the pNext chain of the VkVideoEncodeSessionParametersGetInfoKHR structure passed to vkGetEncodedVideoSessionParametersKHR, the command will write encoded parameter data to the output buffer in the following order:

1. The H.264 sequence parameter set identified by stdSPSId, if writeStdSPS is set to VK_TRUE.
2. The H.264 picture parameter set identified by the pair constructed from stdSPSId and stdPPSId, if writeStdPPS is set to VK_TRUE.

Valid Usage (Implicit)

• VUID-VkVideoEncodeH264SessionParametersGetInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_GET_INFO_EXT

The VkVideoEncodeH264SessionParametersFeedbackInfoEXT structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264SessionParametersFeedbackInfoEXT {
    VkStructureType   sType;
    void*             pNext;
    VkBool32          hasStdSPSOverrides;
    VkBool32          hasStdPPSOverrides;
} VkVideoEncodeH264SessionParametersFeedbackInfoEXT;
```

• sType is a VkStructureType value identifying this structure.

• pNext is NULL or a pointer to a structure extending this structure.

• hasStdSPSOverrides indicates whether any of the parameters of the requested H.264 sequence parameter set, if one was requested via VkVideoEncodeH264SessionParametersGetInfoEXT::writeStdSPS, were overridden by the implementation.

• hasStdPPSOverrides indicates whether any of the parameters of the requested H.264 picture parameter set, if one was requested via VkVideoEncodeH264SessionParametersGetInfoEXT::writeStdPPS, were overridden by the implementation.

Valid Usage (Implicit)

• VUID-VkVideoEncodeH264SessionParametersFeedbackInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_FEEDBACK_INFO_EXT
42.14.6. Frame Encoding

In order to encode a frame, add a `VkVideoEncodeH264PictureInfoEXT` structure to the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to the `vkCmdEncodeVideoKHR` command.

The `VkVideoEncodeH264PictureInfoEXT` structure representing a frame encode operation is defined as:

```c
typedef struct VkVideoEncodeH264PictureInfoEXT {
    VkStructureType        sType;       
    const void*            pNext;       
    uint32_t                naluSliceEntryCount;  
    const VkVideoEncodeH264NaluSliceInfoEXT* pNaluSliceEntries;  
    const StdVideoEncodeH264PictureInfo*    pStdPictureInfo;  
    VkBool32                 generatePrefixNalu;  
} VkVideoEncodeH264PictureInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceEntryCount` is the number of slice NALUs in the frame.
- `pNaluSliceEntries` is a pointer to an array of `naluSliceEntryCount` `VkVideoEncodeH264NaluSliceInfoEXT` structures specifying the division of the current picture into slices and the properties of these slices. This is an ordered sequence; the NALUs are generated consecutively in `VkVideoEncodeInfoKHR::dstBuffer` in the same order as in this array.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeH264PictureInfo` structure specifying the syntax and other codec-specific information from the H.264 specification associated with this picture. The information provided must reflect the decoded picture marking operations that are applicable to this frame.
- `generatePrefixNalu` controls whether prefix NALUs are generated before slice NALUs into the target bitstream.

**Valid Usage (Implicit)**

- `VUID-VkVideoEncodeH264PictureInfoEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_PICTURE_INFO_EXT`

- `VUID-VkVideoEncodeH264PictureInfoEXT-pNaluSliceEntries-parameter`  
  `pNaluSliceEntries` must be a valid pointer to an array of `naluSliceEntryCount` valid `VkVideoEncodeH264NaluSliceInfoEXT` structures

- `VUID-VkVideoEncodeH264PictureInfoEXT-pStdPictureInfo-parameter`  
  `pStdPictureInfo` must be a valid pointer to a valid `StdVideoEncodeH264PictureInfo` value

- `VUID-VkVideoEncodeH264PictureInfoEXT-naluSliceEntryCount-arraylength`  
  `naluSliceEntryCount` must be greater than 0
The `VkVideoEncodeH264NaluSliceInfoEXT` structure representing a slice is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264NaluSliceInfoEXT {
    VkStructureType sType;
    const void* pNext;
    int32_t constantQp;
    const StdVideoEncodeH264SliceHeader* pStdSliceHeader;
} VkVideoEncodeH264NaluSliceInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `constantQp` is the QP to use for the slice if the current rate control mode configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- `pStdSliceHeader` is a pointer to a `StdVideoEncodeH264SliceHeader` structure specifying the slice header for the current slice.

**Valid Usage (Implicit)**

- VUID-VkVideoEncodeH264NaluSliceInfoEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_NALU_SLICE_INFO_EXT`
- VUID-VkVideoEncodeH264NaluSliceInfoEXT-pNext-pNext `pNext` must be `NULL`
- VUID-VkVideoEncodeH264NaluSliceInfoEXT-pStdSliceHeader-parameter `pStdSliceHeader` must be a valid pointer to a valid `StdVideoEncodeH264SliceHeader` value

The `VkVideoEncodeH264DpbSlotInfoEXT` structure, representing a reconstructed picture that is being used as a reference picture, is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264DpbSlotInfoEXT {
    VkStructureType sType;
    const void* pNext;
    const StdVideoEncodeH264ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH264DpbSlotInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pStdReferenceInfo` is a pointer to a `StdVideoEncodeH264ReferenceInfo` structure specifying the syntax and other codec-specific information from the H.264 specification associated with this reference picture.
Valid Usage (Implicit)

- VUID-VkVideoEncodeH264DpbSlotInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_DPB_SLOT_INFO_EXT

- VUID-VkVideoEncodeH264DpbSlotInfoEXT-pStdReferenceInfo-parameter
  pStdReferenceInfo must be a valid pointer to a valid StdVideoEncodeH264ReferenceInfo value

42.14.7. Rate Control

The VkVideoEncodeH264RateControlInfoEXT structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264RateControlInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkVideoEncodeH264RateControlFlagsEXT flags;
    uint32_t gopFrameCount;
    uint32_t idrPeriod;
    uint32_t consecutiveBFrameCount;
    uint32_t temporalLayerCount;
} VkVideoEncodeH264RateControlInfoEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of **VkVideoEncodeH264RateControlFlagBitsEXT** specifying H.264 rate control flags.
- **gopFrameCount** is the number of frames contained within the group of pictures (GOP), starting from an intra frame and until the next intra frame. If it is set to 0, the implementation chooses a suitable value. If it is set to `UINT32_MAX`, the GOP length is treated as infinite.
- **idrPeriod** is the interval, in terms of number of frames, between two IDR frames. If it is set to 0, the implementation chooses a suitable value. If it is set to `UINT32_MAX`, the IDR period is treated as infinite.
- **consecutiveBFrameCount** is the number of consecutive B-frames between I- and/or P-frames within the GOP.
- **temporalLayerCount** specifies the number of temporal layers enabled in the stream.

In order to provide H.264-specific stream rate control parameters, add a `VkVideoEncodeH264RateControlInfoEXT` structure to the **pNext** chain of the `VkVideoEncodeRateControlInfoKHR` structure in the **pNext** chain of the `VkVideoCodingControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command.

The parameters from this structure act as a guidance for implementations to apply various rate control heuristics.
It is possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided in `vkCmdEncodeVideoKHR`. Additionally, it is not required for the video session to be reset if the inferred picture type does not match the actual picture type.

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeH264RateControlInfoEXT-sType-sType**
  - `sType` **must** be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_INFO_EXT`

- **VUID-VkVideoEncodeH264RateControlInfoEXT-flags-parameter**
  - `flags` **must** be a valid combination of `VkVideoEncodeH264RateControlFlagBitsEXT` values

Bits which **can** be set in `VkVideoEncodeH264RateControlInfoEXT::flags`, specifying H.264 rate control flags, are:

```c
// Provided by VK_EXT_video_encode_h264
typedef enum VkVideoEncodeH264RateControlFlagBitsEXT {
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_EXT = 0x00000008,
    VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_EXT = 0x00000010,
} VkVideoEncodeH264RateControlFlagBitsEXT;
```

- **VK_VIDEO_ENCODE_H264_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_EXT** specifies that rate control **should** attempt to produce an HRD compliant bitstream.
- **VK_VIDEO_ENCODE_H264_RATE_CONTROL_REGULAR_GOP_BIT_EXT** specifies that the application intends to use a regular GOP structure according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH264RateControlInfoEXT` structure.
- **VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_EXT** specifies that the application intends to follow a flat reference pattern.
- **VK_VIDEO_ENCODE_H264_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_EXT** specifies that the application intends to follow a dyadic reference pattern.
- **VK_VIDEO_ENCODE_H264_RATE_CONTROL_TEMPORAL_LAYER_PATTERN_DYADIC_BIT_EXT** specifies that the application intends to follow a dyadic temporal layer pattern.

```c
// Provided by VK_EXT_video_encode_h264
typedef VkFlags VkVideoEncodeH264RateControlFlagsEXT;
```

`VkVideoEncodeH264RateControlFlagsEXT` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH264RateControlFlagBitsEXT`.
The `VkVideoEncodeH264RateControlLayerInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264

typedef struct VkVideoEncodeH264RateControlLayerInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 useMinQp;
    VkVideoEncodeH264QpEXT minQp;
    VkBool32 useMaxQp;
    VkVideoEncodeH264QpEXT maxQp;
    VkBool32 useMaxFrameSize;
    VkVideoEncodeH264FrameSizeEXT maxFrameSize;
} VkVideoEncodeH264RateControlLayerInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMinQp` indicates whether the values within `minQp` should be used by the implementation. When it is set to `VK_FALSE`, the implementation ignores the values in `minQp` and chooses suitable values.
- `minQp` provides the lower bound on the QP values for each picture type, to be used in rate control calculations.
- `useMaxQp` indicates whether the values within `maxQp` should be used by the implementation. When it is set to `VK_FALSE`, the implementation ignores the values in `maxQp` and chooses suitable values.
- `maxQp` provides the upper bound on the QP values for each picture type, to be used in rate control calculations.
- `useMaxFrameSize` indicates whether the values within `maxFrameSize` should be used by the implementation.
- `maxFrameSize` provides the upper bound on the encoded frame size for each picture type. The implementation does not guarantee the encoded frame sizes will be within the specified limits, however these limits may be used as a guide in rate control calculations. If enabled and not set properly, the `maxQp` limit may prevent the implementation from respecting the `maxFrameSize` limit.

H.264-specific per-layer rate control parameters must be specified by adding a `VkVideoEncodeH264RateControlLayerInfoEXT` structure to the `pNext` chain of each `VkVideoEncodeRateControlLayerInfoKHR` structure in a call to `vkCmdControlVideoCodingKHR` command, when the command buffer context has an active video encode H.264 session.

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeH264RateControlLayerInfoEXT-sType-sType` 
  - `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_RATE_CONTROL_LAYER_INFO_EXT`
- `VUID-VkVideoEncodeH264RateControlLayerInfoEXT-minQp-parameter`
The `VkVideoEncodeH264QpEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264QpEXT {
    int32_t qpI;
    int32_t qpP;
    int32_t qpB;
} VkVideoEncodeH264QpEXT;
```

- `qpI` is the QP to be used for I-frames.
- `qpP` is the QP to be used for P-frames.
- `qpB` is the QP to be used for B-frames.

The `VkVideoEncodeH264FrameSizeEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264FrameSizeEXT {
    uint32_t frameISize;
    uint32_t framePSize;
    uint32_t frameBSize;
} VkVideoEncodeH264FrameSizeEXT;
```

- `frameISize` is the size in bytes to be used for I-frames.
- `framePSize` is the size in bytes to be used for P-frames.
- `frameBSize` is the size in bytes to be used for B-frames.

The `VkVideoEncodeH264GopRemainingFrameInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h264
typedef struct VkVideoEncodeH264GopRemainingFrameInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 useGopRemainingFrames;
    uint32_t gopRemainingI;
    uint32_t gopRemainingP;
    uint32_t gopRemainingB;
} VkVideoEncodeH264GopRemainingFrameInfoEXT;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **useGopRemainingFrames** indicates whether the implementation's rate control algorithm should use the values specified in `gopRemainingI`, `gopRemainingP`, and `gopRemainingB`. If `useGopRemainingFrames` is `VK_FALSE`, then the values of `gopRemainingI`, `gopRemainingP`, and `gopRemainingB` are ignored.

• **gopRemainingI** specifies the number of I-frames the implementation's rate control algorithm should assume to be remaining in the GOP prior to executing the video encode operation.

• **gopRemainingP** specifies the number of P-frames the implementation's rate control algorithm should assume to be remaining in the GOP prior to executing the video encode operation.

• **gopRemainingB** specifies the number of B-frames the implementation's rate control algorithm should assume to be remaining in the GOP prior to executing the video encode operation.

Setting `useGopRemainingFrames` to `VK_TRUE` and including this structure in the `pNext` chain of `VkVideoEncodeInfoKHR` is only mandatory if the `VkVideoEncodeH264CapabilitiesEXT::requiresGopRemainingFrames` reported for the used video profile is `VK_TRUE`. However, implementations may use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a regular GOP structure, these values may provide additional guidance for the implementation's rate control algorithm.

The `VkVideoEncodeH264CapabilitiesEXT::prefersGopRemainingFrames` capability is also used to indicate that the implementation's rate control algorithm may operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation's rate control algorithm may deviate from the one expected by the application.

---

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeH264GopRemainingFrameInfoEXT-sType-sType**

  • **sType** must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_GOP_REMAINING_FRAME_INFO_EXT`

---

### 42.15. Encode H.265

The `VK_EXT_video_encode_h265` extension adds H.265 codec-specific structures/types needed to support H.265 video encoding. Unless otherwise noted, all references to the H.265 specification are to the 2013 edition published by the ITU-T, dated April 2013. This specification is available at https://www.itu.int/rec/T-REC-H.265.

---

**Note**

Refer to the Preamble for information on how the Khronos Intellectual Property Rights Policy relates to normative references to external materials not created by Khronos.
42.15.1. H.265 Encode Profile

An H.265 encode profile is specified by including the VkVideoEncodeH265ProfileInfoEXT structure in the pNext chain of the VkVideoProfileInfoKHR structure when VkVideoProfileInfoKHR::videoCodecOperation is VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_EXT.

The VkVideoEncodeH265ProfileInfoEXT structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265ProfileInfoEXT {
    VkStructureType sType;
    const void* pNext;
    StdVideoH265ProfileIdc stdProfileIdc;
} VkVideoEncodeH265ProfileInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `stdProfileIdc` is a StdVideoH265ProfileIdc value specifying the H.265 codec profile IDC.

Valid Usage (Implicit)

```
VUID-VkVideoEncodeH265ProfileInfoEXT-sType-sType
sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PROFILE_INFO_EXT
```

42.15.2. Capabilities

When calling vkGetPhysicalDeviceVideoCapabilitiesKHR with pVideoProfile->videoCodecOperation specified as VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_EXT, the VkVideoEncodeH265CapabilitiesEXT structure must be included in the pNext chain of the VkVideoCapabilitiesKHR structure to retrieve more capabilities specific to H.265 video encoding.

The VkVideoEncodeH265CapabilitiesEXT structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265CapabilitiesEXT {
    VkStructureType sType;
    void* pNext;
    VkVideoEncodeH265CapabilityFlagsEXT flags;
    StdVideoH265LevelIdc maxLevelIdc;
    uint32_t maxSliceSegmentCount;
    VkExtent2D maxTiles;
    VkVideoEncodeH265CtbSizeFlagsEXT ctbSizes;
    VkVideoEncodeH265TransformBlockSizeFlagsEXT transformBlockSizes;
    uint32_t maxPPictureL0ReferenceCount;
    uint32_t maxBPictureL0ReferenceCount;
    uint32_t maxL1ReferenceCount;
    uint32_t maxSubLayerCount;
} VkVideoEncodeH265CapabilitiesEXT;
```
VkBool32 expectDyadicTemporalSubLayerPattern;
  int32_t minQp;
  int32_t maxQp;
  VkBool32 prefersGopRemainingFrames;
  VkBool32 requiresGopRemainingFrames;
  VkVideoEncodeH265StdFlagsEXT stdSyntaxFlags;
} VkVideoEncodeH265CapabilitiesEXT;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- flags is a bitmask of VkVideoEncodeH265CapabilityFlagBitsEXT indicating supported H.265 encoding capabilities.
- maxLevelIdc is a StdVideoH265LevelIdc value indicating the maximum H.265 level supported.
- maxSliceSegmentCount indicates the maximum number of slice segments that can be encoded for a single picture. Further restrictions may apply to the number of slice segments that can be encoded for a single picture depending on other capabilities and codec-specific rules.
- maxTiles indicates the maximum number of H.265 tile columns and rows that can be encoded for a single picture. Further restrictions may apply to the number of H.265 tiles that can be encoded for a single picture depending on other capabilities and codec-specific rules.
- ctbSizes is a bitmask of VkVideoEncodeH265CtbSizeFlagBitsEXT describing the supported CTB sizes.
- transformBlockSizes is a bitmask of VkVideoEncodeH265TransformBlockSizeFlagBitsEXT describing the supported transform block sizes.
- maxPPictureL0ReferenceCount indicates the maximum number of reference pictures the implementation supports in the reference list L0 for P pictures.
- maxBPictureL0ReferenceCount indicates the maximum number of reference pictures the implementation supports in the reference list L0 for B pictures. The reported value is 0 if encoding of B pictures is not supported.
- maxL1ReferenceCount indicates the maximum number of reference pictures the implementation supports in the reference list L1 if encoding of B pictures is supported. The reported value is 0 if encoding of B pictures is not supported.
- maxSubLayerCount indicates the maximum number of H.265 sub-layers supported by the implementation.
- expectDyadicTemporalSubLayerPattern indicates that the implementation’s rate control algorithms expect the application to use a dyadic temporal sub-layer pattern when encoding multiple temporal sub-layers.
- minQp indicates the minimum QP value supported.
- maxQp indicates the maximum QP value supported.
- prefersGopRemainingFrames indicates that the implementation’s rate control algorithm prefers the application to specify the number of frames of each type remaining in the current group of pictures.
- `requiresGopRemainingFrames` indicates that the implementation’s rate control algorithm requires the application to specify the number of frames of each type remaining in the current group of pictures.

- `stdSyntaxFlags` is a bitmask of `VkVideoEncodeH265StdFlagBitsEXT` indicating capabilities related to H.265 syntax elements.

---

### Valid Usage (Implicit)

- `VUID-VkVideoEncodeH265CapabilitiesEXT-sType-sType` 
  *sType* must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_CAPABILITIES_EXT`

Bits which may be set in `VkVideoEncodeH265CapabilitiesEXT::flags` indicating the supported H.265 encoding capabilities, are:

```c
typedef enum VkVideoEncodeH265CapabilityFlagBitsEXT {
    VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H265_CAPABILITYDIFFERENT_SLICE_SEGMENT_TYPE_BIT_EXT = 0x00000008,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT = 0x00000010,
    VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_EXT = 0x00000020,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_EXT = 0x00000040,
    VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_EXT = 0x00000080,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_EXT = 0x00000100,
    VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_EXT = 0x00000200,
} VkVideoEncodeH265CapabilityFlagBitsEXT;
```

- `VK_VIDEO_ENCODE_H265_CAPABILITY_HRD_COMPLIANCE_BIT_EXT` indicates if the implementation guarantees generating a HRD compliant bitstream if `nal_hrd_parameters_present_flag`, `vcl_hrd_parameters_present_flag`, or `sub_pic_hrd_params_present_flag` are enabled in `StdVideoH265HrdFlags`, or `vui_hrd_parameters_present_flag` is enabled in `StdVideoH265SpsVuiFlags`.

- `VK_VIDEO_ENCODE_H265_CAPABILITY_PREDICTION_WEIGHT_TABLE_GENERATED_BIT_EXT` indicates that when `weighted_pred_flag` or `weighted_bipred_flag` in `StdVideoH265PpsFlags` are enabled, the implementation is able to internally decide syntax for `pred_weight_table`.

- `VK_VIDEO_ENCODE_H265_CAPABILITY_ROW_UNALIGNED_SLICE_SEGMENT_BIT_EXT` indicates that each slice segment in a frame with a single or multiple tiles per slice may begin or finish at any offset in a CTB row. If not supported, all slice segments in such a frame must begin at the start of a CTB row (and hence each slice segment must finish at the end of a CTB row). Also indicates that each slice segment in a frame with multiple slices per tile may begin or finish at any offset within the enclosing tile’s CTB row. If not supported, slice segments in such a frame must begin at the start of the enclosing tile’s CTB row (and hence each slice segment must finish at the end of the...
enclosing tile’s CTB row).

- **VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_SLICE_SEGMENT_TYPE_BIT_EXT** indicates that when a frame is encoded with multiple slice segments, the implementation allows encoding each slice segment with a different `StdVideoEncodeH265SliceSegmentHeader::slice_type`. If not supported, all slice segments of the frame must be encoded with the same `slice_type` which corresponds to the picture type of the frame. For example, all slice segments of a P-frame would be encoded as P-slices.

- **VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT** indicates support for using a B frame as L0 reference.

- **VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L1_LIST_BIT_EXT** indicates support for using a B frame as L1 reference.

- **VK_VIDEO_ENCODE_H265_CAPABILITY_PER_PICTURE_TYPE_MIN_MAX_QP_BIT_EXT** indicates support for specifying different QP values in the members of `VkVideoEncodeH265QpEXT`.

- **VK_VIDEO_ENCODE_H265_CAPABILITY_PER_SLICE_SEGMENT_CONSTANT_QP_BIT_EXT** indicates support for specifying different constant QP values for each slice segment.

- **VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_TILES_PER_SLICE_SEGMENT_BIT_EXT** indicates if encoding multiple tiles per slice segment is supported. If not set, the implementation is only able to encode a single tile for each slice segment.

- **VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_TILE_BIT_EXT** indicates if encoding multiple slice segments per tile is supported. If not set, the implementation is only able to encode a single slice segment for each tile.

```c
// Provided by VK_EXT_video_encode_h265
typedef VkFlags VkVideoEncodeH265CapabilityFlagsEXT;
```

`VkVideoEncodeH265CapabilityFlagsEXT` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265CapabilityFlagBitsEXT`.

Bits which may be set in `VkVideoEncodeH265CapabilitiesEXT::stdSyntaxFlags`, indicating the capabilities related to the H.265 syntax elements, are:

```c
// Provided by VK_EXT_video_encode_h265
typedef enum VkVideoEncodeH265StdFlagBitsEXT {
    VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H265_STD_PCM_ENABLED_FLAG_SET_BIT_EXT = 0x00000008,
    VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_EXT = 0x00000010,
    VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_EXT = 0x00000020,
    VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_EXT = 0x00000040,
    VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_EXT = 0x00000080,
    VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_EXT = 0x00000100,
    VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_EXT = 0x00000200,
    VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_EXT = 0x00000400,
};
```
VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_EXT = 0x00000800,

VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_EXT = 0x00040000,
VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_EXT = 0x00080000,
VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_EXT = 0x00100000,
} VkVideoEncodeH265StdFlagBitsEXT;

- VK_VIDEO_ENCODE_H265_STD_SEPARATE_COLOR_PLANE_FLAG_SET_BIT_EXT indicates if enabling separate_color_plane_flag in StdVideoH265SpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_SAMPLE_ADAPTIVE_OFFSET_ENABLED_FLAG_SET_BIT_EXT indicates if enabling sample_adaptive_offset_enabled_flag in StdVideoH265SpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_SCALING_LIST_DATA_PRESENT_FLAG_SET_BIT_EXT indicates if enabling scaling_list_enabled_flag and sps_scaling_list_data_present_flag in StdVideoH265SpsFlags, or enabling pps_scaling_list_data_present_flag in StdVideoH265PpsFlags are supported.
- VK_VIDEO.Encode_H265_STD_PCM_ENABLED_FLAG_SET_BIT_EXT indicates if enabling pcm_enable_flag in StdVideoH265SpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_SPS_TEMPORAL_MVP_ENABLED_FLAG_SET_BIT_EXT indicates if enabling sps_temporal_mvp_enabled_flag in StdVideoH265SpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_INIT_QP_MINUS26_BIT_EXT indicates if setting non-zero init_qp_minus26 in StdVideoH265PictureParameterSet is supported.
- VK_VIDEO_ENCODE_H265_STD_WEIGHTED_PRED_FLAG_SET_BIT_EXT indicates if enabling weighted_pred_flag in StdVideoH265PpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_WEIGHTED_BIPRED_FLAG_SET_BIT_EXT indicates if enabling weighted_bipred_flag in StdVideoH265PpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_LOG2_PARALLEL_MERGE_LEVEL_MINUS2_BIT_EXT indicates if setting non-zero value for log2_parallel_merge_level_minus2 in StdVideoH265PictureParameterSet is supported.
- VK_VIDEO_ENCODE_H265_STD_SIGN_DATA_HIDING_ENABLED_FLAG_SET_BIT_EXT indicates if enabling sign_data_hiding_enabled_flag in StdVideoH265PpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_EXT indicates if enabling transform_skip_enabled_flag in StdVideoH265PpsFlags is supported.
- VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_EXT indicates if disabling transform_skip_enabled_flag in StdVideoH265PpsFlags is supported. Implementations must report at least one of VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_SET_BIT_EXT and VK_VIDEO_ENCODE_H265_STD_TRANSFORM_SKIP_ENABLED_FLAG_UNSET_BIT_EXT as supported.
• VK_VIDEO_ENCODE_H265_STD_PPS_SLICE_CHROMA_QP_OFFSETS_PRESENT_FLAG_SET_BIT_EXT indicates if enabling pps_slice_chroma_qp_offsets_present_flag in StdVideoH265PpsFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_TRANSQUANT_BYPASS_ENABLED_FLAG_SET_BIT_EXT indicates if enabling transquant_bypass_enabled_flag in StdVideoH265PpsFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_CONSTRAINED_INTRA_PRED_FLAG_SET_BIT_EXT indicates if enabling constrained_intra_pred_flag in StdVideoH265PpsFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_ENTROPY_CODING_SYNC_ENABLED_FLAG_SET_BIT_EXT indicates if enabling entropy_coding_sync_enabled_flag in StdVideoH265PpsFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_DEBLOCKING_FILTER_OVERRIDE_ENABLED_FLAG_SET_BIT_EXT indicates if enabling deblocking_filter_override_enabled_flag in StdVideoH265PpsFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENTS_ENABLED_FLAG_SET_BIT_EXT indicates if enabling dependent_slice_segments_enabled_flag in StdVideoH265PpsFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_DEPENDENT_SLICE_SEGMENT_FLAG_SET_BIT_EXT indicates if enabling dependent_slice_segment_flag in StdVideoEncodeH265SliceHeaderFlags is supported.

• VK_VIDEO_ENCODE_H265_STD_SLICE_QP_DELTA_BIT_EXT indicates whether the implementation supports using the application-provided value for StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta when that value is identical across the slice segments of the encoded frame.

• VK_VIDEO_ENCODE_H265_STD_DIFFERENT_SLICE_QP_DELTA_BIT_EXT indicates whether the implementation supports using the application-provided value for StdVideoEncodeH265SliceSegmentHeader::slice_qp_delta when that value is different across the slice segments of the encoded frame.

// Provided by VK_EXT_video_encode_h265
typedef VkFlags VkVideoEncodeH265StdFlagsEXT;

VkVideoEncodeH265StdFlagsEXT is a bitmask type for setting a mask of zero or more VkVideoEncodeH265StdFlagBitsEXT.

// Provided by VK_EXT_video_encode_h265
typedef VkFlags VkVideoEncodeH265CtbSizeFlagsEXT;

VkVideoEncodeH265CtbSizeFlagsEXT is a bitmask type for setting a mask of zero or more VkVideoEncodeH265CtbSizeFlagBitsEXT. Implementations must set at least one of VkVideoEncodeH265CtbSizeFlagBitsEXT.

Bits which may be set in VkVideoEncodeH265CapabilitiesEXT::ctbSizes, indicating the CTB sizes supported by the implementation, are:

// Provided by VK_EXT_video_encode_h265
typedef enum VkVideoEncodeH265CtbSizeFlagBitsEXT {
    VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_EXT = 0x00000004,
};
• **VK_VIDEO_ENCODE_H265_CTB_SIZE_16_BIT_EXT** specifies that a CTB size of 16x16 is supported.
• **VK_VIDEO_ENCODE_H265_CTB_SIZE_32_BIT_EXT** specifies that a CTB size of 32x32 is supported.
• **VK_VIDEO_ENCODE_H265_CTB_SIZE_64_BIT_EXT** specifies that a CTB size of 64x64 is supported.

```cpp
// Provided by VK_EXT_video_encode_h265
typedef VkFlags VkVideoEncodeH265TransformBlockSizeFlagsEXT;
```

VkVideoEncodeH265TransformBlockSizeFlagsEXT is a bitmask type for setting a mask of zero or more **VkVideoEncodeH265TransformBlockSizeFlagBitsEXT**. Implementations must set at least one of **VkVideoEncodeH265TransformBlockSizeFlagBitsEXT**.

Bits which may be set in **VkVideoEncodeH265CapabilitiesEXT::transformBlockSizes**, indicating the transform block sizes supported by the implementation, are:

```cpp
// Provided by VK_EXT_video_encode_h265
typedef enum VkVideoEncodeH265TransformBlockSizeFlagBitsEXT {
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_EXT = 0x00000008,
} VkVideoEncodeH265TransformBlockSizeFlagBitsEXT;
```

• **VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_4_BIT_EXT** specifies that a transform block size of 4x4 is supported.
• **VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_8_BIT_EXT** specifies that a transform block size of 8x8 is supported.
• **VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_16_BIT_EXT** specifies that a transform block size of 16x16 is supported.
• **VK_VIDEO_ENCODE_H265_TRANSFORM_BLOCK_SIZE_32_BIT_EXT** specifies that a transform block size of 32x32 is supported.

### 42.15.3. H.265 Encode Quality Level Properties

When calling **vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR** with `pVideoProfile->videoCodecOperation` specified as **VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_EXT**, the **VkVideoEncodeH265QualityLevelPropertiesEXT** structure can be included in the `pNext` chain of the **VkVideoEncodeQualityLevelPropertiesKHR** structure to retrieve additional video encode quality level properties specific to H.265 encoding.

The **VkVideoEncodeH265QualityLevelPropertiesEXT** structure is defined as:

```cpp
// Provided by VK_EXT_video_encode_h265
```
typedef struct VkVideoEncodeH265QualityLevelPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkVideoEncodeH265RateControlFlagsEXT preferredRateControlFlags;
    uint32_t preferredGopFrameCount;
    uint32_t preferredIdrPeriod;
    uint32_t preferredConsecutiveBFrameCount;
    VkVideoEncodeH265QpEXT preferredSubLayerCount;
    uint32_t preferredConstantQp;
    uint32_t preferredMaxL0ReferenceCount;
    uint32_t preferredMaxL1ReferenceCount;
} VkVideoEncodeH265QualityLevelPropertiesEXT;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- preferredRateControlFlags is a bitmask of VkVideoEncodeH265RateControlFlagBitsEXT values indicating the preferred flags to use for VkVideoEncodeH265RateControlInfoEXT::flags.
- preferredGopFrameCount indicates the preferred value to use for VkVideoEncodeH265RateControlInfoEXT::gopFrameCount.
- preferredIdrPeriod indicates the preferred value to use for VkVideoEncodeH265RateControlInfoEXT::idrPeriod.
- preferredConsecutiveBFrameCount indicates the preferred value to use for VkVideoEncodeH265RateControlInfoEXT::consecutiveBFrameCount.
- preferredSubLayerCount indicates the preferred value to use for VkVideoEncodeH265RateControlInfoEXT::subLayerCount.
- preferredConstantQp indicates the preferred values to use for VkVideoEncodeH265NaluSliceSegmentInfoEXT::constantQp for each picture type when using rate control mode VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR.
- preferredMaxL0ReferenceCount indicates the preferred maximum number of reference pictures to use in the reference list L0.
- preferredMaxL1ReferenceCount indicates the preferred maximum number of reference pictures to use in the reference list L1.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265QualityLevelPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUALITY_LEVEL_PROPERTIES_EXT

42.15.4. H.265 Encode Session

Additional parameters can be specified when creating a video session with an H.265 encode profile by including an instance of the VkVideoEncodeH265SessionCreateInfoEXT structure in the pNext chain of VkVideoSessionCreateInfoKHR.
The `VkVideoEncodeH265SessionCreateInfoEXT` structure is defined as:

```c
typedef struct VkVideoEncodeH265SessionCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 useMaxLevelIdc;
    StdVideoH265LevelIdc maxLevelIdc;
} VkVideoEncodeH265SessionCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useMaxLevelIdc` indicates whether the value of `maxLevelIdc` should be used by the implementation. When it is set to `VK_FALSE`, the implementation ignores the value of `maxLevelIdc` and uses the value of `VkVideoEncodeH265CapabilitiesEXT::maxLevelIdc`, as reported by `vkGetPhysicalDeviceVideoCapabilitiesKHR` for the video profile.
- `maxLevelIdc` provides the upper bound on the H.265 level for the video bitstreams produced by the created video session.

**Valid Usage (Implicit)**

- `VUID-VkVideoEncodeH265SessionCreateInfoEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_CREATE_INFO_EXT`

### 42.15.5. Encoder H.265 Video Session Parameters Object

When creating a Video Session Parameters object, add a `VkVideoEncodeH265SessionParametersCreateInfoEXT` structure to the `pNext` chain of the `VkVideoSessionParametersCreateInfoKHR` structure passed to `vkCreateVideoSessionParametersKHR` in order to specify the H.265-specific video encoder session parameters.

The `VkVideoEncodeH265SessionParametersCreateInfoEXT` structure is defined as:

```c
typedef struct VkVideoEncodeH265SessionParametersCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    uint32_t maxStdVPSCount;
    uint32_t maxStdSPSCount;
    uint32_t maxStdPPSCount;
    const VkVideoEncodeH265SessionParametersAddInfoEXT* pParametersAddInfo;
} VkVideoEncodeH265SessionParametersCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.

- `maxStdVPSCount` is the maximum number of entries of type `StdVideoH265VideoParameterSet` within `VkVideoSessionParametersKHR`.

- `maxStdSPSCount` is the maximum number of entries of type `StdVideoH265SequenceParameterSet` within `VkVideoSessionParametersKHR`.

- `maxStdPPSCount` is the maximum number of entries of type `StdVideoH265PictureParameterSet` within `VkVideoSessionParametersKHR`.

- `pParametersAddInfo` is NULL or a pointer to a `VkVideoEncodeH265SessionParametersAddInfoEXT` structure specifying the video session parameters to add upon creation of this object.

When a `VkVideoSessionParametersKHR` object contains `maxStdVPSCount` `StdVideoH265VideoParameterSet` entries, no additional `StdVideoH265VideoParameterSet` entries can be added to it, and `VK_ERROR_TOO_MANY_OBJECTS` will be returned if an attempt is made to add these entries. When a `VkVideoSessionParametersKHR` object contains `maxStdSPSCount` `StdVideoH265SequenceParameterSet` entries, no additional `StdVideoH265SequenceParameterSet` entries can be added to it, and `VK_ERROR_TOO_MANY_OBJECTS` will be returned if an attempt is made to add these entries. When a `VkVideoSessionParametersKHR` object contains `maxStdPPSCount` `StdVideoH265PictureParameterSet` entries, no additional `StdVideoH265PictureParameterSet` entries can be added to it, and `VK_ERROR_TOO_MANY_OBJECTS` will be returned if an attempt is made to add these entries.

### Valid Usage (Implicit)

- VUID-VkVideoEncodeH265SessionParametersCreateInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_CREATE_INFO_EXT`

- VUID-VkVideoEncodeH265SessionParametersCreateInfoEXT-pParametersAddInfo-
  If `pParametersAddInfo` is not NULL, `pParametersAddInfo` must be a valid pointer to a valid
  `VkVideoEncodeH265SessionParametersAddInfoEXT` structure

The `VkVideoEncodeH265SessionParametersAddInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersAddInfoEXT {
    VkStructureType              sType;
    const void*                  pNext;
    uint32_t                      stdVPSCount;
    const StdVideoH265VideoParameterSet* pStdVPSs;
    uint32_t                      stdSPSCount;
    const StdVideoH265SequenceParameterSet* pStdSPSs;
    uint32_t                      stdPPSCount;
    const StdVideoH265PictureParameterSet* pStdPPSs;
} VkVideoEncodeH265SessionParametersAddInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `stdVPSCount` is the number of VPS elements in `pStdVPSSs`.

• `pStdVPSSs` is a pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` structures representing H.265 video parameter sets.

• `stdSPSCount` is the number of SPS elements in `pStdSPSSs`.

• `pStdSPSSs` is a pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` structures representing H.265 sequence parameter sets.

• `stdPPSCount` is the number of PPS elements in `pStdPPSSs`.

• `pStdPPSSs` is a pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` structures representing H.265 picture parameter sets.

### Valid Usage (Implicit)

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_ADD_INFO_EXT`

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-pStdVPSSs-parameter**
  - If `stdVPSCount` is not `0`, and `pStdVPSSs` is not `NULL`, `pStdVPSSs` must be a valid pointer to an array of `stdVPSCount` `StdVideoH265VideoParameterSet` values.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-pStdSPSSs-parameter**
  - If `stdSPSCount` is not `0`, and `pStdSPSSs` is not `NULL`, `pStdSPSSs` must be a valid pointer to an array of `stdSPSCount` `StdVideoH265SequenceParameterSet` values.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-pStdPPSSs-parameter**
  - If `stdPPSCount` is not `0`, and `pStdPPSSs` is not `NULL`, `pStdPPSSs` must be a valid pointer to an array of `stdPPSCount` `StdVideoH265PictureParameterSet` values.

### Valid Usage

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-stdVPSCount-06438**
  - The values of `stdVPSCount`, `stdSPSCount` and `stdPPSCount` must be less than or equal to the values of `VkVideoEncodeH265SessionParametersCreateInfoEXT::maxStdVPSCount`, `VkVideoEncodeH265SessionParametersCreateInfoEXT::maxStdSPSCount`, and `VkVideoEncodeH265SessionParametersCreateInfoEXT::maxStdPPSCount`, respectively.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-pStdVPSSs-06439**
  - Each `StdVideoH265VideoParameterSet` entry in `pStdVPSSs` must have a unique H.265 VPS ID.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-pStdSPSSs-06440**
  - Each `StdVideoH265SequenceParameterSet` entry in `pStdSPSSs` must have a unique H.265 VPS-SPS ID pair.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-pStdPPSSs-06441**
  - Each `StdVideoH265PictureParameterSet` entry in `pStdPPSSs` must have a unique H.265 VPS-SPS-PPS ID tuple.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-None-06442**
Each entry to be added **must** have a unique, to the rest of the parameter array entries and the existing parameters in the Video Session Parameters Object that is being updated, VPS-SPS-PPS IDs.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-None-06443**
  
  Parameter entries that already exist in Video Session Parameters object with a particular VPS-SPS-PPS IDs **must** not be replaced nor updated.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-None-06444**
  
  When creating a new object using a Video Session Parameters as a template, the array's parameters with the same VPS-SPS-PPS IDs as the ones from the template take precedence.

- **VUID-VkVideoEncodeH265SessionParametersAddInfoEXT-None-06445**
  
  VPS/SPS/PPS parameters **must** comply with the limits specified in `VkVideoSessionCreateInfoKHR` during Video Session creation.

The `VkVideoEncodeH265SessionParametersGetInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265

typedef struct VkVideoEncodeH265SessionParametersGetInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 writeStdVPS;
    VkBool32 writeStdSPS;
    VkBool32 writeStdPPS;
    uint32_t stdVPSId;
    uint32_t stdSPSId;
    uint32_t stdPPSId;
} VkVideoEncodeH265SessionParametersGetInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **writeStdVPS** indicates whether the encoded H.265 video parameter set identified by `stdVPSId` is requested to be retrieved.
- **writeStdSPS** indicates whether the encoded H.265 sequence parameter set identified by the pair constructed from `stdVPSId` and `stdSPSId` is requested to be retrieved.
- **writeStdPPS** indicates whether the encoded H.265 picture parameter set identified by the triplet constructed from `stdVPSId`, `stdSPSId`, and `stdPPSId` is requested to be retrieved.
- **stdVPSId** specifies the H.265 video parameter set ID used to identify the retrieved H.265 video, sequence, and/or picture parameter set(s).
- **stdSPSId** specifies the H.265 sequence parameter set ID used to identify the retrieved H.265 sequence and/or picture parameter set(s) when `writeStdSPS` and/or `writeStdPPS` is set to `VK_TRUE`.
- **stdPPSId** specifies the H.265 picture parameter set ID used to identify the retrieved H.265 picture parameter set when `writeStdPPS` is set to `VK_TRUE`.

When this structure is specified in the `pNext` chain of the
VkVideoEncodeSessionParametersGetInfoKHR structure passed to vkGetEncodedVideoSessionParametersKHR, the command will write encoded parameter data to the output buffer in the following order:

1. The H.265 video parameter set identified by stdVPSId, if writeStdVPS is set to VK_TRUE.
2. The H.265 sequence parameter set identified by the pair constructed from stdVPSId and stdSPSId, if writeStdSPS is set to VK_TRUE.
3. The H.265 picture parameter set identified by the triplet constructed from stdVPSId, stdSPSId, and stdPPSId, if writeStdPPS is set to VK_TRUE.

Valid Usage (Implicit)

• VUID-VkVideoEncodeH265SessionParametersGetInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_GET_INFO_EXT

The VkVideoEncodeH265SessionParametersFeedbackInfoEXT structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265SessionParametersFeedbackInfoEXT {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           hasStdVPSOverrides;
    VkBool32           hasStdSPSOverrides;
    VkBool32           hasStdPPSOverrides;
} VkVideoEncodeH265SessionParametersFeedbackInfoEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• hasStdVPSOverrides indicates whether any of the parameters of the requested H.265 video parameter set, if one was requested via VkVideoEncodeH265SessionParametersGetInfoEXT::writeStdVPS, were overridden by the implementation.
• hasStdSPSOverrides indicates whether any of the parameters of the requested H.265 sequence parameter set, if one was requested via VkVideoEncodeH265SessionParametersGetInfoEXT::writeStdSPS, were overridden by the implementation.
• hasStdPPSOverrides indicates whether any of the parameters of the requested H.265 picture parameter set, if one was requested via VkVideoEncodeH265SessionParametersGetInfoEXT::writeStdPPS, were overridden by the implementation.

Valid Usage (Implicit)

• VUID-VkVideoEncodeH265SessionParametersFeedbackInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_FEEDBACK_INFO_EXT
42.15.6. Frame Encoding

In order to encode a frame, add a `VkVideoEncodeH265PictureInfoEXT` structure to the `pNext` chain of the `VkVideoEncodeInfoKHR` structure passed to the `vkCmdEncodeVideoKHR` command.

The `VkVideoEncodeH265PictureInfoEXT` structure representing a frame encode operation is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265PictureInfoEXT {
    VkStructureType sType;  
    const void* pNext;     
    uint32_t naluSliceSegmentEntryCount; 
    const VkVideoEncodeH265NaluSliceSegmentInfoEXT* pNaluSliceSegmentEntries; 
    const StdVideoEncodeH265PictureInfo* pStdPictureInfo;  
} VkVideoEncodeH265PictureInfoEXT; 
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `naluSliceSegmentEntryCount` is the number of slice segment NALUs in the frame.
- `pNaluSliceSegmentEntries` is a pointer to an array of `VkVideoEncodeH265NaluSliceSegmentInfoEXT` structures specifying the division of the current picture into slice segments and the properties of these slice segments.
- `pStdPictureInfo` is a pointer to a `StdVideoEncodeH265PictureInfo` structure specifying the syntax and other codec-specific information from the H.265 specification, associated with this picture.

Valid Usage (Implicit)

- VUID-VkVideoEncodeH265PictureInfoEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PICTURE_INFO_EXT`.
- VUID-VkVideoEncodeH265PictureInfoEXT-pNaluSliceSegmentEntries-parameter `pNaluSliceSegmentEntries` must be a valid pointer to an array of `VkVideoEncodeH265NaluSliceSegmentInfoEXT` structures.
- VUID-VkVideoEncodeH265PictureInfoEXT-pStdPictureInfo-parameter `pStdPictureInfo` must be a valid pointer to a valid `StdVideoEncodeH265PictureInfo` value.
- VUID-VkVideoEncodeH265PictureInfoEXT-naluSliceSegmentEntryCount-arraylength `naluSliceSegmentEntryCount` must be greater than 0.

The `VkVideoEncodeH265NaluSliceSegmentInfoEXT` structure representing a slice segment is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265NaluSliceSegmentInfoEXT {
    VkStructureType sType; 
    const void* pNext; 
    const StdVideoEncodeH265NaluSegmentInfo* pStdSegmentInfo; 
} VkVideoEncodeH265NaluSliceSegmentInfoEXT; 
```
**VkVideoEncodeH265NaluSliceSegmentInfoEXT**

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **constantQp** is the QP to use for the slice segment if the current rate control mode configured for the video session is `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR`.
- **pStdSliceSegmentHeader** is a pointer to a `StdVideoEncodeH265SliceSegmentHeader` structure specifying the slice segment header for the current slice segment.

**Valid Usage (Implicit)**

- VUID-VkVideoEncodeH265NaluSliceSegmentInfoEXT-sType-sType **sType** must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_NALU_SLICE_SEGMENT_INFO_EXT`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoEXT-pNext-pNext **pNext** must be `NULL`
- VUID-VkVideoEncodeH265NaluSliceSegmentInfoEXT-pStdSliceSegmentHeader-parameter **pStdSliceSegmentHeader** must be a valid pointer to a valid `StdVideoEncodeH265SliceSegmentHeader` value

The `VkVideoEncodeH265DpbSlotInfoEXT` structure, representing a reconstructed picture that is being used as a reference picture, is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265DpbSlotInfoEXT {
    VkStructureType sType;
    const void* pNext;
    const StdVideoEncodeH265ReferenceInfo* pStdReferenceInfo;
} VkVideoEncodeH265DpbSlotInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pStdReferenceInfo** is a pointer to a `StdVideoEncodeH265ReferenceInfo` structure specifying the syntax and other codec-specific information from the H.265 specification, associated with this reference picture.

**Valid Usage (Implicit)**

- VUID-VkVideoEncodeH265DpbSlotInfoEXT-sType-sType **sType** must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_DPB_SLOT_INFO_EXT`
42.15.7. Rate Control

The `VkVideoEncodeH265RateControlInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265RateControlInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkVideoEncodeH265RateControlFlagsEXT flags;
    uint32_t gopFrameCount;
    uint32_t idrPeriod;
    uint32_t consecutiveBFrameCount;
    uint32_t subLayerCount;
} VkVideoEncodeH265RateControlInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkVideoEncodeH265RateControlFlagBitsEXT` specifying H.265 rate control flags.
- `gopFrameCount` is the number of frames contained within the group of pictures (GOP), starting from an intra frame and until the next intra frame. If it is set to 0, the implementation chooses a suitable value. If it is set to `UINT32_MAX`, the GOP length is treated as infinite.
- `idrPeriod` is the interval, in terms of number of frames, between two IDR frames. If it is set to 0, the implementation chooses a suitable value. If it is set to `UINT32_MAX`, the IDR period is treated as infinite.
- `consecutiveBFrameCount` is the number of consecutive B-frames between I- and/or P-frames within the GOP.
- `subLayerCount` specifies the number of sub layers enabled in the stream.

In order to provide H.265-specific stream rate control parameters, add a `VkVideoEncodeH265RateControlInfoEXT` structure to the `pNext` chain of the `VkVideoEncodeRateControlInfoKHR` structure in the `pNext` chain of the `VkVideoCodingControlInfoKHR` structure passed to the `vkCmdControlVideoCodingKHR` command.

The parameters from this structure act as a guidance for implementations to apply various rate control heuristics.

It is possible to infer the picture type to be used when encoding a frame, on the basis of the values provided for `consecutiveBFrameCount`, `idrPeriod`, and `gopFrameCount`, but this inferred picture type will not be used by implementations to override the picture type provided in `vkCmdEncodeVideoKHR`. Additionally, it is not required for the video session to be reset if the
Valid Usage (Implicit)

- **VUID-VkVideoEncodeH265RateControlInfoEXT-sType-sType**
  
  *sType* must be `VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_INFO_EXT`

- **VUID-VkVideoEncodeH265RateControlInfoEXT-flags-parameter**
  
  *flags* must be a valid combination of `VkVideoEncodeH265RateControlFlagBitsEXT` values

Bits which **can** be set in `VkVideoEncodeH265RateControlInfoEXT::flags`, specifying H.265 rate control flags, are:

```c
// Provided by VK_EXT_video_encode_h265
typedef enum VkVideoEncodeH265RateControlFlagBitsEXT {
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_EXT = 0x00000001,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_EXT = 0x00000002,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_EXT = 0x00000004,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_EXT = 0x00000008,
    VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_EXT = 0x00000010,
} VkVideoEncodeH265RateControlFlagBitsEXT;
```

- **VK_VIDEO_ENCODE_H265_RATE_CONTROL_ATTEMPT_HRD_COMPLIANCE_BIT_EXT** specifies that rate control *should* attempt to produce an HRD compliant bitstream.

- **VK_VIDEO_ENCODE_H265_RATE_CONTROL_REGULAR_GOP_BIT_EXT** specifies that the application intends to use a regular GOP structure according to the parameters specified in the `gopFrameCount`, `idrPeriod`, and `consecutiveBFrameCount` members of the `VkVideoEncodeH265RateControlInfoEXT` structure.

- **VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_FLAT_BIT_EXT** specifies that the application intends to follow a flat reference pattern.

- **VK_VIDEO_ENCODE_H265_RATE_CONTROL_REFERENCE_PATTERN_DYADIC_BIT_EXT** specifies that the application intends to follow a dyadic reference pattern.

- **VK_VIDEO_ENCODE_H265_RATE_CONTROL_TEMPORAL_SUB_LAYER_PATTERN_DYADIC_BIT_EXT** specifies that the application intends to follow a dyadic temporal sub-layer pattern.

```c
// Provided by VK_EXT_video_encode_h265
typedef VkFlags VkVideoEncodeH265RateControlFlagsEXT;
```

`VkVideoEncodeH265RateControlFlagsEXT` is a bitmask type for setting a mask of zero or more `VkVideoEncodeH265RateControlFlagBitsEXT`.

The `VkVideoEncodeH265RateControlLayerInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
```
typedef struct VkVideoEncodeH265RateControlLayerInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 useMinQp;
    VkVideoEncodeH265QpEXT minQp;
    VkBool32 useMaxQp;
    VkVideoEncodeH265QpEXT maxQp;
    VkBool32 useMaxFrameSize;
    VkVideoEncodeH265FrameSizeEXT maxFrameSize;
} VkVideoEncodeH265RateControlLayerInfoEXT;

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure.
• **useMinQp** indicates whether the values within **minQp** should be used by the implementation. When it is set to **VK_FALSE**, the implementation ignores the values in **minQp** and chooses suitable values.
• **minQp** provides the lower bound on the QP values for each picture type, to be used in rate control calculations.
• **useMaxQp** indicates whether the values within **maxQp** should be used by the implementation. When it is set to **VK_FALSE**, the implementation ignores the values in **maxQp** and chooses suitable values.
• **maxQp** provides the upper bound on the QP values for each picture type, to be used in rate control calculations.
• **useMaxFrameSize** indicates whether the values within **maxFrameSize** should be used by the implementation.
• **maxFrameSize** provides the upper bound on the encoded frame size for each picture type. The implementation does not guarantee the encoded frame sizes will be within the specified limits, however these limits may be used as a guide in rate control calculations. If enabled and not set properly, the **maxQp** limit may prevent the implementation from respecting the **maxFrameSize** limit.

H.265-specific per-layer rate control parameters **must** be specified by adding a **VkVideoEncodeH265RateControlLayerInfoEXT** structure to the **pNext** chain of each **VkVideoEncodeRateControlLayerInfoKHR** structure in a call to *vkCmdControlVideoCodingKHR* command, when the command buffer context has an active video encode H.265 session.

### Valid Usage (Implicit)

• **VUID-VkVideoEncodeH265RateControlLayerInfoEXT-sType-sType**
  *sType** must be **VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_LAYER_INFO_EXT**

• **VUID-VkVideoEncodeH265RateControlLayerInfoEXT-minQp-parameter**
  **minQp** must be a valid **VkVideoEncodeH265QpEXT** structure

• **VUID-VkVideoEncodeH265RateControlLayerInfoEXT-maxQp-parameter**
  **maxQp** must be a valid **VkVideoEncodeH265QpEXT** structure
The `VkVideoEncodeH265QpEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265QpEXT {
    int32_t qpI;
    int32_t qpP;
    int32_t qpB;
} VkVideoEncodeH265QpEXT;
```

- `qpI` is the QP to be used for I-frames.
- `qpP` is the QP to be used for P-frames.
- `qpB` is the QP to be used for B-frames.

The `VkVideoEncodeH265FrameSizeEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265FrameSizeEXT {
    uint32_t frameISize;
    uint32_t framePSize;
    uint32_t frameBSize;
} VkVideoEncodeH265FrameSizeEXT;
```

- `frameISize` is the size in bytes to be used for I-frames.
- `framePSize` is the size in bytes to be used for P-frames.
- `frameBSize` is the size in bytes to be used for B-frames.

The `VkVideoEncodeH265GopRemainingFrameInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_video_encode_h265
typedef struct VkVideoEncodeH265GopRemainingFrameInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkBool32 useGopRemainingFrames;
    uint32_t gopRemainingI;
    uint32_t gopRemainingP;
    uint32_t gopRemainingB;
} VkVideoEncodeH265GopRemainingFrameInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `useGopRemainingFrames` indicates whether the implementation's rate control algorithm should
use the values specified in gopRemainingI, gopRemainingP, and gopRemainingB. If useGopRemainingFrames is VK_FALSE, then the values of gopRemainingI, gopRemainingP, and gopRemainingB are ignored.

- **gopRemainingI** specifies the number of I-frames the implementation’s rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.
- **gopRemainingP** specifies the number of P-frames the implementation’s rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.
- **gopRemainingB** specifies the number of B-frames the implementation’s rate control algorithm **should** assume to be remaining in the GOP prior to executing the video encode operation.

Setting useGopRemainingFrames to VK_TRUE and including this structure in the pNext chain of VkVideoEncodeInfoKHR is only mandatory if the VkVideoEncodeH265CapabilitiesEXT::requiresGopRemainingFrames reported for the used video profile is VK_TRUE. However, implementations **may** use these remaining frame counts, when specified, even when it is not required. In particular, when the application does not use a regular GOP structure, these values **may** provide additional guidance for the implementation’s rate control algorithm.

The VkVideoEncodeH265CapabilitiesEXT::prefersGopRemainingFrames capability is also used to indicate that the implementation’s rate control algorithm **may** operate more accurately if the application specifies the remaining frame counts using this structure.

As with other rate control guidance values, if the effective order and number of frames encoded by the application are not in line with the remaining frame counts specified in this structure at any given point, then the behavior of the implementation’s rate control algorithm **may** deviate from the one expected by the application.

**Valid Usage (Implicit)**

- VUID-VkVideoEncodeH265GopRemainingFrameInfoEXT-sType-sType **sType must be** VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_GOP_REMAINING_FRAME_INFO_EXT
Chapter 43. Optical Flow

43.1. Optical Flow Queues

The VK_NV_optical_flow adds a optical flow queue type bit VK_QUEUE_OPTICAL_FLOW_BIT_NV to VkQueueFlagBits. Optical flow operations are supported by queues with an advertised queue capability of VK_QUEUE_OPTICAL_FLOW_BIT_NV. As in the case of other queue types, an application must use vkGetPhysicalDeviceQueueFamilyProperties to query whether the physical device has support for the Optical Flow Queue. When the implementation reports the VK_QUEUE_OPTICAL_FLOW_BIT_NV bit for a queue family, it advertises general support for Vulkan queue operations described in Devices and Queues.

43.2. Optical Flow Image Formats

To enumerate the supported image formats for a specific optical flow usage, call:

```c
// Provided by VK_NV_optical_flow
VkResult vkGetPhysicalDeviceOpticalFlowImageFormatsNV(
    VkPhysicalDevice physicalDevice,
    const VkOpticalFlowImageFormatInfoNV* pOpticalFlowImageFormatInfo,
    uint32_t* pFormatCount,
    VkOpticalFlowImageFormatPropertiesNV* pImageFormatProperties
);
```

- **physicalDevice** is the physical device being queried.
- **pOpticalFlowImageFormatInfo** is a pointer to a VkOpticalFlowImageFormatInfoNV structure specifying the optical flow usage for which information is returned.
- **pFormatCount** is a pointer to an integer related to the number of optical flow properties available or queried, as described below.
- **pImageFormatProperties** is a pointer to an array of VkOpticalFlowImageFormatPropertiesNV structures in which supported formats and image parameters are returned.

If pImageFormatProperties is NULL, then the number of optical flow properties supported for the given physicalDevice is returned in pFormatCount. Otherwise, pFormatCount must point to a variable set by the user to the number of elements in the pImageFormatProperties array, and on return the variable is overwritten with the number of values actually written to pImageFormatProperties. If the value of pFormatCount is less than the number of optical flow properties supported, at most pFormatCount values will be written to pImageFormatProperties, and VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available values were returned. Before creating an image to be used as an optical flow frame, obtain the supported image creation parameters by querying with vkGetPhysicalDeviceFormatProperties2 and vkGetPhysicalDeviceImageFormatProperties2 using one of the reported formats and adding VkOpticalFlowImageFormatInfoNV to the pNext chain of VkPhysicalDeviceImageFormatInfo2. When querying the parameters with vkGetPhysicalDeviceImageFormatProperties2 for images used for optical flow operations, the VkOpticalFlowImageFormatInfoNV::usage field should contain one or more of the bits defined in VkOpticalFlowUsageFlagBitsNV.
Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceOpticalFlowImageFormatsNV-physicalDevice-parameter
  physicalDevice must be a valid VkPhysicalDevice handle
  pOpticalFlowImageFormatInfo must be a valid pointer to a valid
  VkOpticalFlowImageFormatInfoNV structure
  pFormatCount must be a valid pointer to a uint32_t value
  If the value referenced by pFormatCount is not 0, and pImageFormatProperties is not NULL,
  pImageFormatProperties must be a valid pointer to an array of pFormatCount
  VkOpticalFlowImageFormatPropertiesNV structures

Return Codes

Success
- VK_SUCCESS
- VK_INCOMPLETE

Failure
- VK_ERROR_EXTENSION_NOT_PRESENT
- VK_ERROR_INITIALIZATION_FAILED
- VK_ERROR_FORMAT_NOT_SUPPORTED

Note

VK_FORMAT_B8G8R8A8_UNORM, VK_FORMAT_R8_UNORM, and
VK_FORMAT_G8_B8R8_2PLANE_420_UNORM are initially supported for images with optical
usage VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV.

VK_FORMAT_R16G16_S10_5_NV is initially supported for images with optical flow usage
VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV, VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV and
VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV.

VK_FORMAT_R8_UINT and VK_FORMAT_R32_UINT are initially supported for images with
optical flow usage VK_OPTICAL_FLOW_USAGE_COST_BIT_NV. It is recommended to use
VK_FORMAT_R8_UINT because of the lower bandwidth.

The VkOpticalFlowImageFormatInfoNV structure is defined as:

// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkOpticalFlowUsageFlagsNV usage;
} VkOpticalFlowImageFormatInfoNV;

• **sType** is a VkStructureType value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **usage** is a bitmask of VkOpticalFlowUsageFlagBitsNV describing the intended optical flow usage of the image.

### Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatInfoNV-sType-sType
  *sType must be VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_INFO_NV*

- VUID-VkOpticalFlowImageFormatInfoNV-usage-parameter
  *usage must be a valid combination of VkOpticalFlowUsageFlagBitsNV values*

- VUID-VkOpticalFlowImageFormatInfoNV-usage-requiredbitmask
  *usage must not be 0*

Bits which can be set in VkOpticalFlowImageFormatInfoNV::usage, controlling optical flow usage, are:

```c
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowUsageFlagBitsNV {
    VKOPTICALFLOWUSAGEUNKNOWN_NV = 0,
    VKOPTICALFLOWUSAGEINPUT_BIT_NV = 0x00000001,
    VKOPTICALFLOWUSAGENOTIFICATION_BIT_NV = 0x00000002,
    VKOPTICALFLOWUSAGEHINT_BIT_NV = 0x00000004,
    VKOPTICALFLOWUSAGELOCALFLOW_BIT_NV = 0x00000008,
    VKOPTICALFLOWUSAGETOTAL_FLOW_BIT_NV = 0x00000010,
} VkOpticalFlowUsageFlagBitsNV;
```

- **VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV** specifies that the image can be used as input or reference frame for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV** specifies that the image can be used as output flow vector map for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_HINT_BIT_NV** specifies that the image can be used as hint flow vector map for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_COST_BIT_NV** specifies that the image can be used as output cost map for an optical flow operation.
- **VK_OPTICAL_FLOW_USAGE_GLOBAL_FLOW_BIT_NV** specifies that the image can be used as global flow vector for an optical flow operation.
// Provided by VK_NV_optical_flow
typedef VkFlags VkOpticalFlowUsageFlagsNV;

VkOpticalFlowUsageFlagsNV is a bitmask type for setting a mask of zero or more VkOpticalFlowUsageFlagBitsNV.

The VkOpticalFlowImageFormatPropertiesNV structure is defined as:

// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowImageFormatPropertiesNV {
    VkStructureType sType;
    const void* pNext;
    VkFormat format;
} VkOpticalFlowImageFormatPropertiesNV;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- format is a VkFormat that specifies the format that can be used with the specified optical flow image usages.

Valid Usage (Implicit)

- VUID-VkOpticalFlowImageFormatPropertiesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_NV

- VUID-VkOpticalFlowImageFormatPropertiesNV-pNext-pNext
  pNext must be NULL

43.3. Optical Flow Session

43.3.1. Optical Flow Session Object

Optical flow session objects are abstracted and represented by VkOpticalFlowSessionNV handles:

// Provided by VK_NV_optical_flow
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkOpticalFlowSessionNV)

Creating an Optical Flow Session

To create an optical flow session object, call:

// Provided by VK_NV_optical_flow
VkResult vkCreateOpticalFlowSessionNV(
    VkDevice device, 
const VkOpticalFlowSessionCreateInfoNV* pCreateInfo,
const VkAllocationCallbacks* pAllocator,
VkOpticalFlowSessionNV* pSession);

- **device** is the logical device that creates the optical flow session object.
- **pCreateInfo** is a pointer to a `VkOpticalFlowSessionCreateInfoNV` structure containing parameters specifying the creation of the optical flow session.
- **pAllocator** controls host memory allocation as described in the **Memory Allocation** chapter.
- **pSession** is a pointer to a `VkOpticalFlowSessionNV` handle specifying the optical flow session object which will be created by this function when it returns **VK_SUCCESS**

### Valid Usage (Implicit)

- VUID-vkCreateOpticalFlowSessionNV-device-parameter
  - `device` must be a valid `VkDevice` handle
- VUID-vkCreateOpticalFlowSessionNV-pCreateInfo-parameter
  - `pCreateInfo` must be a valid pointer to a valid `VkOpticalFlowSessionCreateInfoNV` structure
- VUID-vkCreateOpticalFlowSessionNV-pAllocator-parameter
  - If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateOpticalFlowSessionNV-pSession-parameter
  - `pSession` must be a valid pointer to a `VkOpticalFlowSessionNV` handle

### Return Codes

**Success**

- **VK_SUCCESS**

**Failure**

- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_INITIALIZATION_FAILED**

The `VkOpticalFlowSessionCreateInfoNV` structure is defined as:

```c
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreateInfoNV {
    VkStructureType sType;
    void* pNext;
    uint32_t width;
    uint32_t height;
    VkFormat imageFormat;
    VkFormat flowVectorFormat;
} VkOpticalFlowSessionCreateInfoNV;
```
VkOpticalFlowSessionCreateInfoNV
{
    sType;
    pNext;        // NULL or a pointer to a structure extending this structure.
    width is the width in pixels of the input or reference frame to be bound to this optical flow session.
    height is the height in pixels of the input or reference frame to be bound to this optical flow session.
    imageFormat is the VkFormat of the input and reference frame to be bound to this optical flow session.
    flowVectorFormat is the VkFormat of the flow vector maps (output or hint) to be bound to this optical flow session.
    costFormat is the VkFormat of the cost maps to be bound to this optical flow session.
    outputGridSize is exactly one bit of VkOpticalFlowGridSizeFlagsNV specifying the grid size of the output flow and cost maps to be bound to this optical flow session. The size of the output flow and cost maps is determined by VkOpticalFlowSessionCreateInfoNV::width and VkOpticalFlowSessionCreateInfoNV::height divided by VkOpticalFlowSessionCreateInfoNV::outputGridSize.
    hintGridSize is one exactly bit of VkOpticalFlowGridSizeFlagsNV specifying the grid size of the hint flow vector maps to be bound to this optical flow session. The size of the hint maps is determined by VkOpticalFlowSessionCreateInfoNV::width and VkOpticalFlowSessionCreateInfoNV::height divided by VkOpticalFlowSessionCreateInfoNV::hintGridSize.
    performanceLevel is the VkOpticalFlowPerformanceLevelNV used for this optical flow session.
    flags are the VkOpticalFlowSessionCreateFlagsNV used for this optical flow session.
}

Valid Usage

- VUID-VkOpticalFlowSessionCreateInfoNV-width-07581
  width must be greater than or equal to VkPhysicalDeviceOpticalFlowPropertiesNV::minWidth and less than or equal to VkPhysicalDeviceOpticalFlowPropertiesNV::maxWidth

- VUID-VkOpticalFlowSessionCreateInfoNV-height-07582
  height must be greater than or equal to VkPhysicalDeviceOpticalFlowPropertiesNV::minHeight and less than or equal to VkPhysicalDeviceOpticalFlowPropertiesNV::maxHeight

- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-07583
  imageFormat must be one of the formats returned by vkGetPhysicalDeviceOpticalFlowImageFormatsNV for VK_OPTICAL_FLOW_USAGE_INPUT_BIT_NV

- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-07584
flowVectorFormat must be one of the formats returned by
vkGetPhysicalDeviceOpticalFlowImageFormatsNV for
VK_OPTICAL_FLOW_USAGE_OUTPUT_BIT_NV

- VUID-VkOpticalFlowSessionCreateInfoNV-costFormat-07585
costFormat must be one of the formats returned by
vkGetPhysicalDeviceOpticalFlowImageFormatsNV for VK_OPTICAL_FLOW_USAGE_COST_BIT_NV
if VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV is set in flags

- VUID-VkOpticalFlowSessionCreateInfoNV-outputGridSize-07586
outputGridSize must be exactly one of the bits reported in
VkPhysicalDeviceOpticalFlowPropertiesNV::supportedOutputGridSizes

- VUID-VkOpticalFlowSessionCreateInfoNV-hintGridSize-07587
hintGridSize must be exactly one of the bits reported in
VkPhysicalDeviceOpticalFlowPropertiesNV::supportedHintGridSizes
if VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV is set in flags

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07588
VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV must not be set in flags if
VkPhysicalDeviceOpticalFlowPropertiesNV::hintSupported is VK_FALSE

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07589
VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV must not be set in flags if
VkPhysicalDeviceOpticalFlowPropertiesNV::costSupported is VK_FALSE

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07590
VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV must not be set in flags if
VkPhysicalDeviceOpticalFlowPropertiesNV::globalFlowSupported is VK_FALSE

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07591
VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV must not be set in flags if
VkPhysicalDeviceOpticalFlowPropertiesNV::maxNumRegionsOfInterest is 0

- VUID-VkOpticalFlowSessionCreateInfoNV-flags-07592
VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV must not be set in flags if
VkPhysicalDeviceOpticalFlowPropertiesNV::bidirectionalFlowSupported is VK_FALSE

Valid Usage (Implicit)

- VUID-VkOpticalFlowSessionCreateInfoNV-sType-sType
sType must be VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_INFO_NV

- VUID-VkOpticalFlowSessionCreateInfoNV-pNext-pNext
pNext must be NULL or a pointer to a valid instance of
VkOpticalFlowSessionCreatePrivateDataInfoNV

- VUID-VkOpticalFlowSessionCreateInfoNV-sType-unique
The sType value of each struct in the pNext chain must be unique

- VUID-VkOpticalFlowSessionCreateInfoNV-imageFormat-parameter
imageFormat must be a valid VkFormat value

- VUID-VkOpticalFlowSessionCreateInfoNV-flowVectorFormat-parameter
The **VkOpticalFlowSessionCreateInfoNV** structure is for NV internal use only and is defined as:

```c
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowSessionCreateInfoNV {
    VkStructureType sType;
    void* pNext;
    uint32_t id;
    uint32_t size;
    const void* pPrivateData;
} VkOpticalFlowSessionCreateInfoNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **id** is an identifier for data which is passed at a memory location specified in VkOpticalFlowSessionCreateInfoNV::pPrivateData.
- **size** is the size of data in bytes which is passed at a memory location specified in VkOpticalFlowSessionCreateInfoNV::pPrivateData.
- **pPrivateData** is a pointer to NV internal data.

**Valid Usage (Implicit)**

- **VUID-VkOpticalFlowSessionCreateInfoNV-sType-sType**
  sType **must** be **VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_INFO_NV**

- **VUID-VkOpticalFlowSessionCreateInfoNV-pPrivateData-parameter**
  pPrivateData **must** be a pointer value
Optical flow vectors are generated block-wise, one vector for each block of NxN pixels (referred to as grid).

Bits which can be set in `VkOpticalFlowSessionCreateInfoNV::outputGridSize` and `VkOpticalFlowSessionCreateInfoNV::hintGridSize`, or which are returned in `VkPhysicalDeviceOpticalFlowPropertiesNV::supportedOutputGridSizes` and `VkPhysicalDeviceOpticalFlowPropertiesNV::supportedHintGridSizes` controlling optical flow grid sizes, are:

```c
typedef enum VkOpticalFlowGridSizeFlagBitsNV {
    VK_OPTICAL_FLOW_GRID_SIZE_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV = 0x00000008,
} VkOpticalFlowGridSizeFlagBitsNV;
```

- `VK_OPTICAL_FLOW_GRID_SIZE_1X1_BIT_NV` specifies that grid is 1x1 pixel.
- `VK_OPTICAL_FLOW_GRID_SIZE_2X2_BIT_NV` specifies that grid is 2x2 pixel.
- `VK_OPTICAL_FLOW_GRID_SIZE_4X4_BIT_NV` specifies that grid is 4x4 pixel.
- `VK_OPTICAL_FLOW_GRID_SIZE_8X8_BIT_NV` specifies that grid is 8x8 pixel.

```c
typedef VkFlags VkOpticalFlowGridSizeFlagsNV;
```

`VkOpticalFlowGridSizeFlagsNV` is a bitmask type for setting a mask of zero or more `VkOpticalFlowGridSizeFlagBitsNV`.

Optical flow exposes performance levels which the user can choose based on the desired performance and quality requirement.

The optical flow performance level types are defined with the following:

```c
typedef enum VkOpticalFlowPerformanceLevelNV {
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV = 1,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV = 2,
    VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV = 3,
} VkOpticalFlowPerformanceLevelNV;
```

- `VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_SLOW_NV` is a level with slower performance but higher quality.
- `VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_MEDIUM_NV` is a level with medium performance and medium
quality.

- **VK_OPTICAL_FLOW_PERFORMANCE_LEVEL_FAST_NV** is a preset with higher performance but lower quality.

Bits which **can** be set in `VkOpticalFlowSessionCreateInfoNV::flags`, controlling optical flow session operations, are:

```
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionCreateFlagBitsNV {
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV = 0x00000001,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV = 0x00000002,
    VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV = 0x00000004,
    VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV = 0x00000008,
    VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV = 0x00000010,
} VkOpticalFlowSessionCreateFlagBitsNV;
```

- **VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_HINT_BIT_NV** specifies that a `VkImageView` with external flow vectors will be used as hints in performing the motion search and must be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV`.

- **VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_COST_BIT_NV** specifies that the cost for the forward flow is generated in a `VkImageView` which must be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV`. Additionally, if **VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV** is also set, the cost for backward flow is generated in a `VkImageView` which must be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV`. The cost is the confidence level of the flow vector for each grid in the frame. The Cost implies how (in)accurate the flow vector is. Higher cost value implies the flow vector to be less accurate and vice-versa.

- **VK_OPTICAL_FLOW_SESSION_CREATE_ENABLE_GLOBAL_FLOW_BIT_NV** specifies that a global flow vector is estimated from forward flow in a single pixel `VkImageView` which must be bound to `VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV`.

- **VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV** specifies that regions of interest can be specified in `VkOpticalFlowExecuteInfoNV`.

- **VK_OPTICAL_FLOW_SESSION_CREATE_BOTH_DIRECTIONS_BIT_NV** specifies that backward flow is generated in addition to forward flow which is always generated.

`VkOpticalFlowSessionCreateFlagsNV` is a bitmask type for setting a mask of zero or more `VkOpticalFlowSessionCreateFlagBitsNV`.

```
// Provided by VK_NV_optical_flow
typedef VkFlags VkOpticalFlowSessionCreateFlagsNV;
```

**Destroying an Optical Flow Session**

To destroy a optical flow session object, call:

3456
void vkDestroyOpticalFlowSessionNV(
    VkDevice device, 
    VkOpticalFlowSessionNV session, 
    const VkAllocationCallbacks* pAllocator);

- **device** is the device that was used for the creation of the optical flow session.
- **session** is the optical flow session to be destroyed.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.

### Valid Usage (Implicit)

- VUID-vkDestroyOpticalFlowSessionNV-device-parameter  
  **device** must be a valid VkDevice handle
- VUID-vkDestroyOpticalFlowSessionNV-session-parameter  
  **session** must be a valid VkOpticalFlowSessionNV handle
- VUID-vkDestroyOpticalFlowSessionNV-pAllocator-parameter  
  If **pAllocator** is not NULL, **pAllocator** must be a valid pointer to a valid VkAllocationCallbacks structure
- VUID-vkDestroyOpticalFlowSessionNV-session-parent  
  **session** must have been created, allocated, or retrieved from **device**

#### 43.3.2. Binding Vulkan Image Views to an Optical Flow Session

To bind a Vulkan image to an optical flow session object, call:

```c
// Provided by VK_NV_optical_flow
VkResult vkBindOpticalFlowSessionImageNV(
    VkDevice device, 
    VkOpticalFlowSessionNV session, 
    VkOpticalFlowSessionBindingPointNV bindingPoint, 
    VkImageView view, 
    VkImageLayout layout);
```

- **device** is the device which owns the optical flow session object **session**.
- **session** is the optical flow session object to which the image view is to be bound.
- **bindingPoint** specifies the binding point VkOpticalFlowSessionBindingPointNV to which the image view is bound.
- **view** is a VkImageView to be bound.
- **layout** must specify the layout that the image subresources accessible from **view** will be in at the time the optical flow vectors are calculated with vkCmdOpticalFlowExecuteNV on a VkDevice.
Valid Usage (Implicit)

- VUID-vkBindOpticalFlowSessionImageNV-device-parameter
  
  device must be a valid VkDevice handle

- VUID-vkBindOpticalFlowSessionImageNV-session-parameter
  
  session must be a valid VkOpticalFlowSessionNV handle

- VUID-vkBindOpticalFlowSessionImageNV-bindingPoint-parameter
  
  bindingPoint must be a valid VkOpticalFlowSessionBindingPointNV value

- VUID-vkBindOpticalFlowSessionImageNV-view-parameter
  
  If view is not VK_NULL_HANDLE, view must be a valid VkImageView handle

- VUID-vkBindOpticalFlowSessionImageNV-layout-parameter
  
  layout must be a valid VkImageLayout value

- VUID-vkBindOpticalFlowSessionImageNV-session-parent
  
  session must have been created, allocated, or retrieved from device

- VUID-vkBindOpticalFlowSessionImageNV-view-parent
  
  If view is a valid handle, it must have been created, allocated, or retrieved from device

Return Codes

Success
  
  • VK_SUCCESS

Failure
  
  • VK_ERROR_OUT_OF_HOST_MEMORY
  
  • VK_ERROR_INITIALIZATION_FAILED

The optical flow session binding points are defined with the following:

```c
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowSessionBindingPointNV {
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_UNKNOWN_NV = 0,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV = 1,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV = 2,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV = 3,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV = 4,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV = 5,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV = 6,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV = 7,
    VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV = 8,
} VkOpticalFlowSessionBindingPointNV;
```

- VK_OPTICAL_FLOW_SESSION_BINDING_POINT_INPUT_NV specifies the binding point for the input frame.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_REFERENCE_NV specifies the binding point for the input reference frame.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_HINT_NV specifies the binding point for the optional external hint flow vectors.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_FLOW_VECTOR_NV specifies the binding point for output flow vectors of default forward flow calculation.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_FLOW_VECTOR_NV specifies the binding point for the optional output flow vector map of optional backward flow calculation.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_COST_NV specifies the binding point for the optional output cost map of default forward flow calculation.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_BACKWARD_COST_NV specifies the binding point for the optional output cost map of optional backward flow calculation.
• VK_OPTICAL_FLOW_SESSION_BINDING_POINT_GLOBAL_FLOW_NV specifies the binding point for the optional global flow value of default forward flow calculation.

### 43.3.3. Optical Flow Execution

Default direction of flow estimation is forward which calculates the optical flow from input frame to reference frame. Optionally backward flow estimation can be additionally calculated. An output flow vector \((V_x, V_y)\) means that current pixel \((x, y)\) of input frame can be found at location \((x+V_x, y+V_y)\) in reference frame. A backward flow vector \((V_x, V_y)\) means that current pixel \((x, y)\) of reference frame can be found at location \((x+V_x, y+V_y)\) in input frame.

To calculate optical flow vectors from two input frames, call:

```c
// Provided by VK_NV_optical_flow
void vkCmdOpticalFlowExecuteNV(  
    VkCommandBuffer commandBuffer,  
    VkOpticalFlowSessionNV session,  
    const VkOpticalFlowExecuteInfoNV* pExecuteInfo);
```

- `commandBuffer` is the command buffer into which the command will be recorded.
- `session` is the optical flow session object on which this command is operating.
- `pExecuteInfo` Info is a pointer to a `VkOpticalFlowExecuteInfoNV`.

### Valid Usage (Implicit)

- VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-parameter `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdOpticalFlowExecuteNV-session-parameter `session` must be a valid `VkOpticalFlowSessionNV` handle
- VUID-vkCmdOpticalFlowExecuteNV-pExecuteInfo-parameter `pExecuteInfo` must be a valid pointer to a valid `VkOpticalFlowExecuteInfoNV` structure
• VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-recording
  `commandBuffer` must be in the **recording state**

• VUID-vkCmdOpticalFlowExecuteNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support optical flow operations

• VUID-vkCmdOpticalFlowExecuteNV-renderpass
  This command must only be called outside of a render pass instance

• VUID-vkCmdOpticalFlowExecuteNV-videocoding
  This command must only be called outside of a video coding scope

• VUID-vkCmdOpticalFlowExecuteNV-commonparent
  Both of `commandBuffer`, and `session` must have been created, allocated, or retrieved from the same `VkDevice`

**Host Synchronization**

• Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Outside</td>
<td>Outside</td>
<td>Opticalflow</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

The `VkOpticalFlowExecuteInfoNV` structure is defined as:

```c
// Provided by VK_NV_optical_flow
typedef struct VkOpticalFlowExecuteInfoNV {
    VkStructureType sType;
    void* pNext;
    VkOpticalFlowExecuteFlagsNV flags;
    uint32_t regionCount;
    const VkRect2D* pRegions;
} VkOpticalFlowExecuteInfoNV;
```

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is NULL or a pointer to a structure extending this structure.

• `flags` are the `VkOpticalFlowExecuteFlagsNV` used for this command.

• `regionCount` is the number of regions of interest specified in `pRegions`.

• `pRegions` is a pointer to `regionCount VkRect2D` regions of interest.
Valid Usage

- VUID-VkOpticalFlowExecuteInfoNV-regionCount-07593
  regionCount must be 0 if VK_OPTICAL_FLOW_SESSION_CREATE_ALLOW_REGIONS_BIT_NV was not set for VkOpticalFlowSessionNV on which this command is operating

Valid Usage (Implicit)

- VUID-VkOpticalFlowExecuteInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_OPTICAL_FLOW_EXECUTE_INFO_NV

- VUID-VkOpticalFlowExecuteInfoNV-pNext-pNext
  pNext must be NULL

- VUID-VkOpticalFlowExecuteInfoNV-flags-parameter
  flags must be a valid combination of VkOpticalFlowExecuteFlagBitsNV values

- VUID-VkOpticalFlowExecuteInfoNV-pRegions-parameter
  If regionCount is not 0, pRegions must be a valid pointer to an array of regionCount VkRect2D structures

Bits which can be set in VkOpticalFlowExecuteInfoNV::flags, controlling optical flow execution, are:

```c
// Provided by VK_NV_optical_flow
typedef enum VkOpticalFlowExecuteFlagBitsNV {
    VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV = 0x00000001,
} VkOpticalFlowExecuteFlagBitsNV;
```

- VK_OPTICAL_FLOW_EXECUTE_DISABLE_TEMPORAL_HINTS_BIT_NV specifies that temporal hints from previously generated flow vectors are not used. If temporal hints are enabled, optical flow vectors from previous vkCmdOpticalFlowExecuteNV call are automatically used as hints for the current vkCmdOpticalFlowExecuteNV call, to take advantage of temporal correlation in a video sequence. Temporal hints should be disabled if there is a-priori knowledge of no temporal correlation (e.g. a scene change, independent successive frame pairs).

VkOpticalFlowExecuteFlagsNV is a bitmask type for setting a mask of zero or more VkOpticalFlowExecuteFlagBitsNV.

```c
// Provided by VK_NV_optical_flow
typedef VkFlags VkOpticalFlowExecuteFlagsNV;
```
Chapter 44. Execution Graphs

Execution graphs provide a way for applications to dispatch multiple operations dynamically from a single initial command on the host. To achieve this, a new execution graph pipeline is provided, that links together multiple shaders or pipelines which each describe one or more operations that can be dispatched within the execution graph. Each linked pipeline or shader describes an execution node within the graph, which can be dispatched dynamically from another shader within the same graph. This allows applications to describe much richer execution topologies at a finer granularity than would typically be possible with API commands alone.

44.1. Pipeline Creation

To create execution graph pipelines, call:

```c
// Provided by VK_AMDX_shader_enqueue
VkResult vkCreateExecutionGraphPipelinesAMDX(
    VkDevice device,                  // Logical device
    VkPipelineCache pipelineCache,    // Pipeline cache or VK_NULL_HANDLE
    uint32_t createInfoCount,         // Length of pCreateInfos
    const VkExecutionGraphPipelineCreateInfoAMDX* pCreateInfos, // Array of create info
    const VkAllocationCallbacks* pAllocator, // Memory allocator
    VkPipeline* pPipelines);           // Array of pipeline handles
```

- `device` is the logical device that creates the execution graph pipelines.
- `pipelineCache` is either `VK_NULL_HANDLE`, indicating that pipeline caching is disabled; or the handle of a valid pipeline cache object, in which case use of that cache is enabled for the duration of the command.
- `createInfoCount` is the length of the `pCreateInfos` and `pPipelines` arrays.
- `pCreateInfos` is a pointer to an array of `VkExecutionGraphPipelineCreateInfoAMDX` structures.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pPipelines` is a pointer to an array of `VkPipeline` handles in which the resulting execution graph pipeline objects are returned.

The implementation will create a pipeline in each element of `pPipelines` from the corresponding element of `pCreateInfos`. If creation of any pipeline fails, that pipeline will be set to `VK_NULL_HANDLE`.

If creation fails for a pipeline create info with a `VkExecutionGraphPipelineCreateInfoAMDX::flags` value that included `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`, all pipelines at a greater index all automatically fail.

Valid Usage

- VUID-vkCreateExecutionGraphPipelinesAMDX-shaderEnqueue-09124
  The shaderEnqueue feature must be enabled
If the `flags` member of any element of `pCreateInfos` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and the `basePipelineIndex` member of that same element is not -1, `basePipelineIndex` must be less than the index into `pCreateInfos` that corresponds to that element.

If the `flags` member of any element of `pCreateInfos` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, the base pipeline must have been created with the `VK_PIPELINE_CREATE_ALLOW_DERIVATIVES_BIT` flag set.

If `pipelineCache` was created with `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`, host access to `pipelineCache` must be externally synchronized.

### Valid Usage (Implicit)

- **device** must be a valid `VkDevice` handle
- If `pipelineCache` is not `VK_NULL_HANDLE`, `pipelineCache` must be a valid `VkPipelineCache` handle
- `pCreateInfos` must be a valid pointer to an array of `createInfoCount` valid `VkExecutionGraphPipelineCreateInfoAMDX` structures
- If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure
- `pPipelines` must be a valid pointer to an array of `createInfoCount` `VkPipeline` handles
- `createInfoCount` must be greater than 0
- If `pipelineCache` is a valid handle, it must have been created, allocated, or retrieved from `device`

### Return Codes

**Success**
- `VK_SUCCESS`
- `VK_PIPELINE_COMPILE_REQUIRED_EXT`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
The `VkExecutionGraphPipelineCreateInfoAMDX` structure is defined as:

```c
typedef struct VkExecutionGraphPipelineCreateInfoAMDX {
    VkStructureType sType;
    const void* pNext;
    VkPipelineCreateFlags flags;
    uint32_t stageCount;
    const VkPipelineShaderStageCreateInfo* pStages;
    const VkPipelineLibraryCreateInfoKHR* pLibraryInfo;
    VkPipelineLayout layout;
    VkPipeline basePipelineHandle;
    int32_t basePipelineIndex;
} VkExecutionGraphPipelineCreateInfoAMDX;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkPipelineCreateFlagBits` specifying how the pipeline will be generated.
- `stageCount` is the number of entries in the `pStages` array.
- `pStages` is a pointer to an array of `stageCount` `VkPipelineShaderStageCreateInfo` structures describing the set of the shader stages to be included in the execution graph pipeline.
- `pLibraryInfo` is a pointer to a `VkPipelineLibraryCreateInfoKHR` structure defining pipeline libraries to include.
- `layout` is the description of binding locations used by both the pipeline and descriptor sets used with the pipeline.
- `basePipelineHandle` is a pipeline to derive from
- `basePipelineIndex` is an index into the `pCreateInfos` parameter to use as a pipeline to derive from

The parameters `basePipelineHandle` and `basePipelineIndex` are described in more detail in Pipeline Derivatives.

Each shader stage provided when creating an execution graph pipeline (including those in libraries) is associated with a name and an index, determined by the inclusion or omission of a `VkPipelineShaderStageNodeCreateInfoAMDX` structure in its `pNext` chain.

In addition to the shader name and index, an internal "node index" is also generated for each node, which can be queried with `vkGetExecutionGraphPipelineNodeIndexAMDX`, and is used exclusively for initial dispatch of an execution graph.
Valid Usage

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07984**
  If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineIndex` is -1, `basePipelineHandle` must be a valid execution graph `VkPipeline` handle.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07985**
  If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` must be a valid index into the calling command’s `pCreateInfos` parameter.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-07986**
  If `flags` contains the `VK_PIPELINE_CREATE_DERIVATIVE_BIT` flag, and `basePipelineHandle` is `VK_NULL_HANDLE`, `basePipelineIndex` must be -1 or `basePipelineHandle` must be `VK_NULL_HANDLE`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07987**
  If a push constant block is declared in a shader, a push constant range in `layout` must match both the shader stage and range.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07988**
  If a resource variables is declared in a shader, a descriptor slot in `layout` must match the shader stage.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07990**
  If a resource variables is declared in a shader, and the descriptor type is not `VK_DESCRIPTOR_TYPE_MUTABLE_EXT`, a descriptor slot in `layout` must match the descriptor type.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-07991**
  If a resource variables is declared in a shader as an array, a descriptor slot in `layout` must match the descriptor count.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03365**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03366**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03367**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03368**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03369**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03370**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-03576**
  `flags` must not include `VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR`. 
• VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-04945
  flags must not include VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-09007
  If the VkPhysicalDeviceDeviceGeneratedCommandsComputeFeaturesNV::deviceGeneratedComputePipelines is not enabled, flags must not include VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-09008
  If flags includes VK_PIPELINE_CREATE_INDIRECT_BINDABLE_BIT_NV, then the pNext chain must include a pointer to a valid instance of VkComputePipelineIndirectBufferInfoNV specifying the address where the pipeline's metadata will be saved

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-pipelineCreationCacheControl-02875
  If the pipelineCreationCacheControl feature is not enabled, flags must not include VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT or VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-stage-09128
  The stage member of any element of pStages must be VK_SHADER_STAGE_COMPUTE_BIT

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-pStages-09129
  The shader code for the entry point identified by each element of pStages and the rest of the state identified by this structure must adhere to the pipeline linking rules described in the Shader Interfaces chapter

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-09130
  layout must be consistent with the layout of the shaders specified in pStages

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-09131
  If pLibraryInfo is not NULL, each element of its pLibraries member must have been created with a layout that is compatible with the layout in this pipeline

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-09132
  The number of resources in layout accessible to each shader stage that is used by the pipeline must be less than or equal to VkPhysicalDeviceLimits::maxPerStageResources

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-09133
  If pLibraryInfo is not NULL, each element of pLibraryInfo->libraries must be either a compute pipeline or an execution graph pipeline

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09134
  There must be no two nodes in the pipeline that share both the same shader name and index, as specified by VkPipelineShaderStageNodeCreateInfoAMDX

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09135
  There must be no two nodes in the pipeline that share the same shader name and have input payload declarations with different sizes

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-None-09136
  There must be no two nodes in the pipeline that share the same name but have different execution models

• VUID-VkExecutionGraphPipelineCreateInfoAMDX-CoalescedInputCountAMDX-09137
  There must be no two nodes in the pipeline that share the same name where one includes CoalescedInputCountAMDX and the other does not
There **must** be no two nodes in the pipeline that share the same name where one includes `StaticNumWorkgroupsAMDX` and the other does not.

If an output payload declared in any shader in the pipeline has a `PayloadNodeNameAMDX` decoration with a `Node Name` that matches the shader name of any other node in the graph, the size of the output payload **must** match the size of the input payload in the matching node.

### Valid Usage (Implicit)

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-sType-sType**  
  `sType` **must** be `VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_CREATE_INFO_AMDX`

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-pNext-pNext**  
  Each `pNext` member of any structure (including this one) in the `pNext` chain **must** be either `NULL` or a pointer to a valid instance of `VkPipelineCompilerControlCreateInfoAMD` or `VkPipelineCreationFeedbackCreateInfo`.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-sType-unique**  
  The `sType` value of each struct in the `pNext` chain **must** be unique.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-flags-parameter**  
  `flags` **must** be a valid combination of `VkPipelineCreateFlagBits` values.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-pStages-parameter**  
  If `stageCount` is not 0, and `pStages` is not `NULL`, `pStages` **must** be a valid pointer to an array of `stageCount` valid `VkPipelineShaderStageCreateInfo` structures.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-pLibraryInfo-parameter**  
  If `pLibraryInfo` is not `NULL`, `pLibraryInfo` **must** be a valid pointer to a valid `VkPipelineLibraryCreateInfoKHR` structure.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-layout-parameter**  
  `layout` **must** be a valid `VkPipelineLayout` handle.

- **VUID-VkExecutionGraphPipelineCreateInfoAMDX-commonparent**  
  Both of `basePipelineHandle`, and `layout` that are valid handles of non-ignored parameters **must** have been created, allocated, or retrieved from the same `VkDevice`.

**VK_SHADER_INDEX_UNUSED_AMDX** is a special shader index used to indicate that the created node does not override the index. In this case, the shader index is determined through other means. It is defined as:

```c
#define VK_SHADER_INDEX_UNUSED_AMDX (~0U)
```

The `VkPipelineShaderStageNodeCreateInfoAMDX` structure is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
```
typedef struct VkPipelineShaderStageNodeCreateInfoAMDX {
    VkStructureType sType;
    const void* pNext;
    const char* pName;
    uint32_t index;
} VkPipelineShaderStageNodeCreateInfoAMDX;

• **sType** is a *VkStructureType* value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **pName** is the shader name to use when creating a node in an execution graph. If **pName** is NULL, the name of the entry point specified in SPIR-V is used as the shader name.

• **index** is the shader index to use when creating a node in an execution graph. If **index** is VK_SHADER_INDEX_UNUSED_AMDX then the original index is used, either as specified by the ShaderIndexAMDX execution mode, or 0 if that too is not specified.

When included in the **pNext** chain of a *VkPipelineShaderStageCreateInfo* structure, this structure specifies the shader name and shader index of a node when creating an execution graph pipeline. If this structure is omitted, the shader name is set to the name of the entry point in SPIR-V and the shader index is set to 0.

When dispatching a node from another shader, the name is fixed at pipeline creation, but the index can be set dynamically. By associating multiple shaders with the same name but different indexes, applications can dynamically select different nodes to execute. Applications must ensure each node has a unique name and index.

### Valid Usage (Implicit)

- **VUID-VkPipelineShaderStageNodeCreateInfoAMDX-sType-sType**
  
  **sType** must be VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_NODE_CREATE_INFO_AMDX

- **VUID-VkPipelineShaderStageNodeCreateInfoAMDX-pName-parameter**
  
  If **pName** is not NULL, **pName** must be a null-terminated UTF-8 string

To query the internal node index for a particular node in an execution graph, call:

```c
// Provided by VK_AMDX_shader_enqueue
VkResult vkGetExecutionGraphPipelineNodeIndexAMDX(
    VkDevice device, // Provided by the executionGraph.
    VkPipeline executionGraph, // Provided by the executionGraph.
    const VkPipelineShaderStageNodeCreateInfoAMDX* pNodeInfo, // Providing the nodeInfo.
    uint32_t* pNodeIndex // Provide an index to be updated.
);
```

• **device** is the that **executionGraph** was created on.

• **executionGraph** is the execution graph pipeline to query the internal node index for.

• **pNodeInfo** is a pointer to a *VkPipelineShaderStageNodeCreateInfoAMDX* structure identifying
the name and index of the node to query.

- `pNodeIndex` is the returned internal node index of the identified node.

Once this function returns, the contents of `pNodeIndex` contain the internal node index of the identified node.

### Valid Usage

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeInfo-09140
  
  `pNodeInfo->pName` must not be NULL

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeInfo-09141
  
  `pNodeInfo->index` must not be `VK_SHADER_INDEX_UNUSED_AMDX`

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-executionGraph-09142
  
  There must be a node in `executionGraph` with a shader name and index equal to `pNodeInfo->pName` and `pNodeInfo->index`

### Valid Usage (Implicit)

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-device-parameter
  
  `device` must be a valid `VkDevice` handle

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-executionGraph-parameter
  
  `executionGraph` must be a valid `VkPipeline` handle

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeInfo-parameter
  
  `pNodeInfo` must be a valid pointer to a valid `VkPipelineShaderStageNodeCreateInfoAMDX` structure

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-pNodeIndex-parameter
  
  `pNodeIndex` must be a valid pointer to a `uint32_t` value

- VUID-vkGetExecutionGraphPipelineNodeIndexAMDX-executionGraph-parent
  
  `executionGraph` must have been created, allocated, or retrieved from `device`

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`

### 44.2. Initializing Scratch Memory

Implementations may need scratch memory to manage dispatch queues or similar when executing a pipeline graph, and this is explicitly managed by the application.
To query the scratch space required to dispatch an execution graph, call:

```c
// Provided by VK_AMDX_shader_enqueue
VkResult vkGetExecutionGraphPipelineScratchSizeAMDX(
    VkDevice device,
    VkPipeline executionGraph,
    VkExecutionGraphPipelineScratchSizeAMDX* pSizeInfo);
```

- `device` is the device that `executionGraph` was created on.
- `executionGraph` is the execution graph pipeline to query the scratch space for.
- `pSizeInfo` is a pointer to a `VkExecutionGraphPipelineScratchSizeAMDX` structure that will contain the required scratch size.

After this function returns, information about the scratch space required will be returned in `pSizeInfo`.

**Valid Usage (Implicit)**

- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-device-parameter `device` must be a valid `VkDevice` handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-executionGraph-parameter `executionGraph` must be a valid `VkPipeline` handle
- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-pSizeInfo-parameter `pSizeInfo` must be a valid pointer to a `VkExecutionGraphPipelineScratchSizeAMDX` structure
- VUID-vkGetExecutionGraphPipelineScratchSizeAMDX-executionGraph-parent `executionGraph` must have been created, allocated, or retrieved from `device`

**Return Codes**

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkExecutionGraphPipelineScratchSizeAMDX` structure is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
typedef struct VkExecutionGraphPipelineScratchSizeAMDX {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize size;
};
```
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **size** indicates the scratch space required for dispatch the queried execution graph.

### Valid Usage (Implicit)

- **VUID-VkExecutionGraphPipelineScratchSizeAMDX-sType-sType**

  `sType` must be `VK_STRUCTURE_TYPE_EXECUTION_GRAPH_PIPELINE_SCRATCH_SIZE_AMDX`

To initialize scratch memory for a particular execution graph, call:

```c
// Provided by VK_AMDX_shader_enqueue
void vkCmdInitializeGraphScratchMemoryAMDX(
    VkCommandBuffer commandBuffer,
    VkDeviceAddress scratch);
```

- **commandBuffer** is the command buffer into which the command will be recorded.
- **scratch** is a pointer to the scratch memory to be initialized.

This command **must** be called before using **scratch** to dispatch the currently bound execution graph pipeline.

Execution of this command **may** modify any memory locations in the range \([\text{scratch, scratch + size}]\), where **size** is the value returned in `VkExecutionGraphPipelineScratchSizeAMDX::size` by `VkExecutionGraphPipelineScratchSizeAMDX` for the currently bound execution graph pipeline. Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

If any portion of **scratch** is modified by any command other than `vkCmdDispatchGraphAMDX`, `vkCmdDispatchGraphIndirectAMDX`, `vkCmdDispatchGraphIndirectCountAMDX`, or `vkCmdInitializeGraphScratchMemoryAMDX` with the same execution graph, it **must** be reinitialized for the execution graph again before dispatching against it.

### Valid Usage

- **VUID-vkCmdInitializeGraphScratchMemoryAMDX-scratch-09143**

  **scratch** must be the device address of an allocated memory range at least as large as the value of `VkExecutionGraphPipelineScratchSizeAMDX::size` returned by `VkExecutionGraphPipelineScratchSizeAMDX` for the currently bound execution graph pipeline.

- **VUID-vkCmdInitializeGraphScratchMemoryAMDX-scratch-09144**

  **scratch** must be a multiple of 64
Valid Usage (Implicit)

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-commandBuffer-parameter
  `commandBuffer` **must** be a valid `VkCommandBuffer` handle

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-commandBuffer-recording
  `commandBuffer` **must** be in the recording state

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-renderpass
  This command **must** only be called outside of a render pass instance

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-videocoding
  This command **must** only be called outside of a video coding scope

- VUID-vkCmdInitializeGraphScratchMemoryAMDX-bufferlevel
  `commandBuffer` **must** be a primary `VkCommandBuffer`

Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>

</tbody>
</table>

44.3. Dispatching a Graph

Initial dispatch of an execution graph is done from the host in the same way as any other command, and **can** be used in a similar way to compute dispatch commands, with indirect variants available.

To record an execution graph dispatch, call:

```c
// Provided by VK_AMDX_shader_enqueue
void vkCmdDispatchGraphAMDX(
    VkCommandBuffer commandBuffer,
    VkDeviceAddress scratch,
    const VkDispatchGraphCountInfoAMDX* pCountInfo);
```
• **commandBuffer** is the command buffer into which the command will be recorded.
• **scratch** is a pointer to the scratch memory to be used.
• **pCountInfo** is a host pointer to a VkDispatchGraphCountInfoAMDX structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in **pCountInfo** are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched.

For this command, all device/host pointers in substructures are treated as host pointers and read only during host execution of this command. Once this command returns, no reference to the original pointers is retained.

Execution of this command **may** modify any memory locations in the range \([\text{scratch}, \text{scratch} + \text{size})\), where **size** is the value returned in VkExecutionGraphPipelineScratchSizeAMDX::size by VkExecutionGraphPipelineScratchSizeAMDX for the currently bound execution graph pipeline. Accesses to this memory range are performed in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT and VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT access flags.

### Valid Usage

- **VUID-vkCmdDispatchGraphAMDX-magFilter-04553**
  If a VkSampler created with **magFilter** or **minFilter** equal to VK_FILTER_LINEAR and **compareEnable** equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- **VUID-vkCmdDispatchGraphAMDX-mipmapMode-04770**
  If a VkSampler created with **mipmapMode** equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and **compareEnable** equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- **VUID-vkCmdDispatchGraphAMDX-None-06479**
  If a VkImageView is sampled with depth comparison, the image view's format features **must** contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT

- **VUID-vkCmdDispatchGraphAMDX-None-02691**
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features **must** contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT

- **VUID-vkCmdDispatchGraphAMDX-None-07888**
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features **must** contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

- **VUID-vkCmdDispatchGraphAMDX-None-02692**
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then...
the image view’s format features must contain
VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT

• VUID-vkCmdDispatchGraphAMDX-None-02693
If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with
VK_FILTER_CUBIC_EXT as a result of this command, it must not have a VkImageViewType of
VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

• VUID-vkCmdDispatchGraphAMDX-filterCubic-02694
Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command
must have a VkImageViewType and format that supports cubic filtering, as specified by
VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by
vkGetPhysicalDeviceImageViewImageFormatProperties2

• VUID-vkCmdDispatchGraphAMDX-filterCubicMinmax-02695
Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of
either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this
command must have a VkImageViewType and format that supports cubic filtering together
with minmax filtering, as specified by
VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax returned by
vkGetPhysicalDeviceImageViewImageFormatProperties2

• VUID-vkCmdDispatchGraphAMDX-cubicRangeClamp-09212
If the cubicRangeClamp feature is not enabled, then any VkImageView being sampled with
VK_FILTER_CUBIC_EXT as a result of this command must not have a
VkSamplerReductionModeCreateInfo::reductionMode equal to
VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM

• VUID-vkCmdDispatchGraphAMDX-reductionMode-09213
Any VkImageView being sampled with a VkSamplerReductionModeCreateInfo::reductionMode
equal to VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM as a
result of this command must sample with VK_FILTER_CUBIC_EXT

• VUID-vkCmdDispatchGraphAMDX-selectableCubicWeights-09214
If the selectableCubicWeights feature is not enabled, then any VkImageView being sampled with
VK_FILTER_CUBIC_EXT as a result of this command must have
VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights equal to
VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM

• VUID-vkCmdDispatchGraphAMDX-flags-02696
Any VkImage created with a VkImageCreateInfo::flags containing
VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV sampled as a result of this command must only be
sampled using a VkSamplerAddressMode of VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE

• VUID-vkCmdDispatchGraphAMDX-OpTypeImage-07027
For any VkImageView being written as a storage image where the image format field of
the OpTypeImage is Unknown, the view’s format features must contain
VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT

• VUID-vkCmdDispatchGraphAMDX-OpTypeImage-07028
For any VkImageView being read as a storage image where the image format field of the
OpTypeImage is Unknown, the view’s format features must contain
VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT
For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view’s buffer features must contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`.

Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view’s buffer features must contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`.

For each set n that is statically used by a bound shader, a descriptor set must have been bound to n at the same pipeline bind point, with a `VkPipelineLayout` that is compatible for set n, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in Pipeline Layout Compatibility.

For each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` and `VkPushConstantRange` arrays used to create the current `VkShaderEXT`, as described in Pipeline Layout Compatibility.

If the `maintenance4` feature is not enabled, then for each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a `VkPipelineLayout` that is compatible for push constants, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` and `VkPushConstantRange` arrays used to create the current `VkShaderEXT`, as described in Pipeline Layout Compatibility.

Descriptors in each bound descriptor set, specified via `vkCmdBindDescriptorSets`, must be valid as described by descriptor validity if they are statically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was not created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`.

If the descriptors used by the `VkPipeline` bound to the pipeline bind point were specified via `vkCmdBindDescriptorSets`, the bound `VkPipeline` must have been created without `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`.

Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, must be valid if they are dynamically used by the `VkPipeline` bound to the pipeline bind point used by this command and the bound `VkPipeline` was created with `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`.

Descriptors in bound descriptor buffers, specified via `vkCmdSetDescriptorBufferOffsetsEXT`, must be valid if they are dynamically used by any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this...
command

• VUID-vkCmdDispatchGraphAMDX-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline must have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

• VUID-vkCmdDispatchGraphAMDX-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident

• VUID-vkCmdDispatchGraphAMDX-None-08605
  If a descriptor is dynamically used with a VkShaderEXT created with a VkDescriptorSetLayout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident

• VUID-vkCmdDispatchGraphAMDX-None-08606
  If the shaderObject feature is not enabled, a valid pipeline must be bound to the pipeline bind point used by this command

• VUID-vkCmdDispatchGraphAMDX-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there must not have been any calls to dynamic state setting commands for any state not specified as dynamic in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound

• VUID-vkCmdDispatchGraphAMDX-None-08609
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used to sample from any VkImage with a VkImageView of the type VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, VK_IMAGE_VIEW_TYPE_1D_ARRAY, VK_IMAGE_VIEW_TYPE_2D_ARRAY or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY, in any shader stage

• VUID-vkCmdDispatchGraphAMDX-None-08610
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name, in any shader stage

• VUID-vkCmdDispatchGraphAMDX-None-08611
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values, in any shader stage

• VUID-vkCmdDispatchGraphAMDX-None-08607
  If the shaderObject is enabled, either a valid pipeline must be bound to the pipeline bind point used by this command, or a valid combination of valid and VK_NULL_HANDLE shader objects must be bound to every supported shader stage corresponding to the
pipeline bind point used by this command

- **VUID-vkCmdDispatchGraphAMDX-uniformBuffers-06935**
  If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphAMDX-None-08612**
  If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphAMDX-storageBuffers-06936**
  If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `storageBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphAMDX-None-08613**
  If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphAMDX-commandBuffer-02707**
  If `commandBuffer` is an unprotected command buffer and `protectedNoFault` is not supported, any resource accessed by `bound shaders` **must** not be a protected resource

- **VUID-vkCmdDispatchGraphAMDX-ConstOffset-06550**
  If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler Y'C_aC` conversion, that object **must** only be used with `OpImageSample*` or `OpImageSparseSample*` instructions

- **VUID-vkCmdDispatchGraphAMDX-ConstOffset-06551**
  If a `bound shader` accesses a `VkSampler` or `VkImageView` object that enables `sampler Y'C_aC` conversion, that object **must** not use the `ConstOffset` and `Offset` operands

- **VUID-vkCmdDispatchGraphAMDX-viewType-07752**
  If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` **must** match the `Dim` operand of the `OpTypeImage` as described in Instruction/Sampler/Image View Validation

- **VUID-vkCmdDispatchGraphAMDX-format-07753**
  If a `VkImageView` is accessed as a result of this command, then the numeric type of the image view's `format` and the `Sampled Type` operand of the `OpTypeImage` **must** match
If a VkImageView created with a format other than VK_FORMAT_A8_UNORM_KHR is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have at least as many components as the image view's format.

If a VkImageView created with the format VK_FORMAT_A8_UNORM_KHR is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have four components.

If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have at least as many components as the buffer view's format.

If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64.

If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32.

If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64.

If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32.

If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command.

If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command.

If OpImageWeightedSampleQCOM is used to sample a VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM.

If OpImageWeightedSampleQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM.
If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`.

If `OpImageBlockMatchSSDQCOM` is used to read from a `VkImageView` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler must have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler must not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

If an `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format must be a single-component format.

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view's format must be a single-component format.

If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as a result of this command, then the specified reference coordinates must not fail integer texel coordinate validation.

Any shader invocation executed by this command must terminate.

`VUID-vkCmdDispatchGraphAMDX-None-07288`
commandBuffer must not be a protected command buffer

- VUID-vkCmdDispatchGraphAMDX-commandBuffer-09182
  commandBuffer must be a primary command buffer

- VUID-vkCmdDispatchGraphAMDX-scratch-09183
  scratch must be the address of an allocated memory range at least as large as the value of VkExecutionGraphPipelineScratchSizeAMDX::size returned by VkExecutionGraphPipelineScratchSizeAMDX for the currently bound execution graph pipeline

- VUID-vkCmdDispatchGraphAMDX-scratch-09184
  scratch must be a device address within a VkBuffer created with the VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT AMDX or VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT AMDX flag

- VUID-vkCmdDispatchGraphAMDX-scratch-09185
  Device memory in the range [scratch, scratch + VkExecutionGraphPipelineScratchSizeAMDX::size) must have been initialized with vkCmdInitializeGraphScratchMemoryAMDX using the currently bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command

- VUID-vkCmdDispatchGraphAMDX-maxComputeWorkGroupCount-09186
  Execution of this command must not cause a node to be dispatched with a larger number of workgroups than that specified by either a MaxNumWorkgroupsAMDX decoration in the dispatched node or maxComputeWorkGroupCount

- VUID-vkCmdDispatchGraphAMDX-maxExecutionGraphShaderPayloadCount-09187
  Execution of this command must not cause any shader to initialize more than maxExecutionGraphShaderPayloadCount output payloads

- VUID-vkCmdDispatchGraphAMDX-NodeMaxPayloadsAMDX-09188
  Execution of this command must not cause any shader that declares NodeMaxPayloadsAMDX to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each NodeMaxPayloadsAMDX decoration separately

- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09145
  pCountInfo->infos must be a host pointer to a memory allocation at least as large as the product of count and stride

- VUID-vkCmdDispatchGraphAMDX-infos-09146
  Host memory locations at indexes in the range [infos, infos + (count*stride)), at a granularity of stride must contain valid VkDispatchGraphInfoAMDX structures in the first 24 bytes

- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09147
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads must be a host pointer to a memory allocation at least as large as the product of payloadCount and payloadStride

- VUID-vkCmdDispatchGraphAMDX-pCountInfo-09148
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, nodeIndex must be a valid node index in the currently bound execution graph pipeline, as returned by
For each `VkDispatchGraphInfoAMDX` structure in `pCountInfo->infos`, host memory locations at indexes in the range \([\text{payloads}, \text{payloads} + (\text{payloadCount} \times \text{payloadStride})]\), at a granularity of `payloadStride` must contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes.

**Valid Usage (Implicit)**

- VUID-vkCmdDispatchGraphAMDX-commandBuffer-parameter
  
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdDispatchGraphAMDX-pCountInfo-parameter
  
  `pCountInfo` must be a valid pointer to a valid `VkDispatchGraphCountInfoAMDX` structure

- VUID-vkCmdDispatchGraphAMDX-commandBuffer-recording
  
  `commandBuffer` must be in the recording state

- VUID-vkCmdDispatchGraphAMDX-commandBuffer-cmdpool
  
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- VUID-vkCmdDispatchGraphAMDX-renderpass
  
  This command must only be called outside of a render pass instance

- VUID-vkCmdDispatchGraphAMDX-videocoding
  
  This command must only be called outside of a video coding scope

- VUID-vkCmdDispatchGraphAMDX-bufferlevel
  
  `commandBuffer` must be a primary `VkCommandBuffer`

**Host Synchronization**

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

**Command Properties**

To record an execution graph dispatch with node and payload parameters read on device, call:

```c
// Provided by VK_AMDX_shader_enqueue```

3481
void vkCmdDispatchGraphIndirectAMDX(
    VkCommandBuffer commandBuffer,
    VkDeviceAddress scratch,
    const VkDispatchGraphCountInfoAMDX* pCountInfo);

- `commandBuffer` is the command buffer into which the command will be recorded.
- `scratch` is a pointer to the scratch memory to be used.
- `pCountInfo` is a host pointer to a `VkDispatchGraphCountInfoAMDX` structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in `pCountInfo` are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched.

For this command, all device/host pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only needs to be valid during device execution. All of these addresses will be read in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` access flag.

Execution of this command may modify any memory locations in the range `[scratch, scratch + size)`, where `size` is the value returned in `VkExecutionGraphPipelineScratchSizeAMDX:size` by `VkExecutionGraphPipelineScratchSizeAMDX` for the currently bound execution graph pipeline. Accesses to this memory range are performed in the `VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT` pipeline stage with the `VK_ACCESS_2_SHADER_STORAGE_READ_BIT` and `VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT` access flags.

**Valid Usage**

- VUID-vkCmdDispatchGraphIndirectAMDX-magFilter-04553
  If a `VkSampler` created with `magFilter` or `minFilter` equal to `VK_FILTER_LINEAR` and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDispatchGraphIndirectAMDX-mipmapMode-04770
  If a `VkSampler` created with `mipmapMode` equal to `VK_SAMPLER_MIPMAP_MODE_LINEAR` and `compareEnable` equal to `VK_FALSE` is used to sample a `VkImageView` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT`

- VUID-vkCmdDispatchGraphIndirectAMDX-None-06479
  If a `VkImageView` is sampled with depth comparison, the image view's format features must contain `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT`

- VUID-vkCmdDispatchGraphIndirectAMDX-None-02691
  If a `VkImageView` is accessed using atomic operations as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT`
If a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features must contain `VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT`.

If a `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, then the image view's format features must contain `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`.

If the `VK_EXT_filter_cubic` extension is not enabled and any `VkImageView` is sampled with `VK_FILTER_CUBIC_EXT` as a result of this command, it must not have a `VkImageViewType` of `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`.

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command must have a `VkImageViewType` and format that supports cubic filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic` returned by `vkGetPhysicalDeviceImageFormatProperties2`.

Any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` with a reduction mode of either `VK_SAMPLER_REDUCTION_MODE_MIN` or `VK_SAMPLER_REDUCTION_MODE_MAX` as a result of this command must have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`.

If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command must not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`.

Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command must sample with `VK_FILTER_CUBIC_EXT`.

If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command must have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command must only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

For any `VkImageView` being written as a storage image where the image format field of
the OpTypeImage is Unknown, the view's format features must contain VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT

• VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07028
For any VkImageView being read as a storage image where the image format field of the OpTypeImage is Unknown, the view's format features must contain VK_FORMAT_FEATURE_2_STORAGE_READ WITHOUT_FORMAT_BIT

• VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07029
For any VkBufferView being written as a storage texel buffer where the image format field of the OpTypeImage is Unknown, the view's buffer features must contain VK_FORMAT_FEATURE_2_STORAGE_WRITE WITHOUT_FORMAT_BIT

• VUID-vkCmdDispatchGraphIndirectAMDX-OpTypeImage-07030
Any VkBufferView being read as a storage texel buffer where the image format field of the OpTypeImage is Unknown then the view's buffer features must contain VK_FORMAT_FEATURE_2_STORAGE_READ WITHOUT_FORMAT_BIT

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08600
For each set n that is statically used by a bound shader, a descriptor set must have been bound to n at the same pipeline bind point, with a VkPipelineLayout that is compatible for set n, with the VkPipelineLayout used to create the current VkPipeline or the VkDescriptorSetLayout array used to create the current VkShaderEXT, as described in Pipeline Layout Compatibility

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08601
For each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a VkPipelineLayout that is compatible for push constants, with the VkPipelineLayout used to create the current VkPipeline or the VkDescriptorSetLayout array used to create the current VkShaderEXT, as described in Pipeline Layout Compatibility

• VUID-vkCmdDispatchGraphIndirectAMDX-maintenance4-08602
If the maintenance4 feature is not enabled, then for each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a VkPipelineLayout that is compatible for push constants, with the VkPipelineLayout used to create the current VkPipeline or the VkDescriptorSetLayout and VkPushConstantRange arrays used to create the current VkShaderEXT, as described in Pipeline Layout Compatibility

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08114
Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, must be valid as described by descriptor validity if they are statically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08115
If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline must have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08116
Descriptors in bound descriptor buffers, specified via
vkCmdSetDescriptorBufferOffsetsEXT, must be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08604
  Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, must be valid if they are dynamically used by any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08117
  If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline must have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08119
  If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08605
  If a descriptor is dynamically used with a VkShaderEXT created with a VkDescriptorSetLayout that was created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08606
  If the shaderObject feature is not enabled, a valid pipeline must be bound to the pipeline bind point used by this command

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08608
  If a pipeline is bound to the pipeline bind point used by this command, there must not have been any calls to dynamic state setting commands for any state not specified as dynamic in the VkPipeline object bound to the pipeline bind point used by this command, since that pipeline was bound

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08609
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used to sample from any VkImage with a VkImageView of the type VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, VK_IMAGE_VIEW_TYPE_1D_ARRAY, VK_IMAGE_VIEW_TYPE_2D_ARRAY or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY, in any shader stage

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08610
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a VkSampler object that uses unnormalized coordinates, that sampler must not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions with ImplicitLod, Dref or Proj in their name, in any shader stage

• VUID-vkCmdDispatchGraphIndirectAMDX-None-08611
  If the VkPipeline object bound to the pipeline bind point used by this command or any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this
command accesses a VkSampler object that uses unnormalized coordinates, that sampler **must** not be used with any of the SPIR-V OpImageSample* or OpImageSparseSample* instructions that includes a LOD bias or any offset values, in any shader stage

- **VUID-vkCmdDispatchGraphIndirectAMDX-None-08607**
  If the shaderObject is enabled, either a valid pipeline **must** be bound to the pipeline bind point used by this command, or a valid combination of valid and VK_NULL_HANDLE shader objects **must** be bound to every supported shader stage corresponding to the pipeline bind point used by this command

- **VUID-vkCmdDispatchGraphIndirectAMDX-uniformBuffers-06935**
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT for uniformBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphIndirectAMDX-None-08612**
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphIndirectAMDX-storageBuffers-06936**
  If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT for storageBuffers, and the robustBufferAccess feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphIndirectAMDX-None-08613**
  If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point

- **VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-02707**
  If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, any resource accessed by bound shaders **must** not be a protected resource

- **VUID-vkCmdDispatchGraphIndirectAMDX-None-06550**
  If a bound shader accesses a VkSampler or VkImageView object that enables sampler $Y'_{C_B}$ conversion, that object **must** only be used with OpImageSample* or OpImageSparseSample* instructions

- **VUID-vkCmdDispatchGraphIndirectAMDX-ConstOffset-06551**
  If a bound shader accesses a VkSampler or VkImageView object that enables sampler $Y'_{C_B}$ conversion, that object **must** not use the ConstOffset and Offset operands
If a `VkImageView` is accessed as a result of this command, then the image view's `viewType` must match the `Dim` operand of the `OpTypeImage` as described in Instruction/Sampler/Image View Validation.

If a `VkImageView` is accessed as a result of this command, then the numeric type of the image view's `format` and the `Sampled Type` operand of the `OpTypeImage` must match.

If a `VkImageView` created with a format other than `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction must have at least as many components as the image view's format.

If a `VkImageView` created with the format `VK_FORMAT_A8_UNORM_KHR` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction must have four components.

If a `VkBufferView` is accessed using `OpImageWrite` as a result of this command, then the `Type` of the `Texel` operand of that instruction must have at least as many components as the buffer view's format.

If a `VkImageView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a `Width` of 64.

If a `VkImageView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a `Width` of 32.

If a `VkBufferView` with a `VkFormat` that has a 64-bit component width is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a `Width` of 64.

If a `VkBufferView` with a `VkFormat` that has a component width less than 64-bit is accessed as a result of this command, the `SampledType` of the `OpTypeImage` operand of that instruction must have a `Width` of 32.

If the `sparseImageInt64Atomics` feature is not enabled, `VkImage` objects created with the `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` flag must not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command.

If the `sparseImageInt64Atomics` feature is not enabled, `VkBuffer` objects created with the `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` flag must not be accessed by atomic instructions through an `OpTypeImage` with a `SampledType` with a `Width` of 64 by this command.
• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWeightedSampleQCOM-06971**
  If `OpImageWeightedSampleQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWeightedSampleQCOM-06972**
  If `OpImageWeightedSampleQCOM` uses a `VkImageView` as a sample weight image as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBoxFilterQCOM-06973**
  If `OpImageBoxFilterQCOM` is used to sample a `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchSSDQCOM-06974**
  If `OpImageBlockMatchSSDQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchSADQCOM-06975**
  If `OpImageBlockMatchSADQCOM` is used to read from an `VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindowSSDQCOM-06976**
  If `OpImageBlockMatchWindowSSDQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates **must** not fail integer texel coordinate validation.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09215**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an ` VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09216**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an ` VkImageView` as a result of this command, then the image view's format features **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWeightedSampleQCOM-06977**
  If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageWeightedSampleQCOM-06978**
  If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler **must** not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09215**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an ` VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

• **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09216**
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an ` VkImageView` as a result of this command, then the image view's format features **must** contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`.

3488
**must** be a single-component format.

- **VUID-vkCmdDispatchGraphIndirectAMDX-OpImageBlockMatchWindow-09217**
  If an `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates **must** not fail integer texel coordinate validation.

- **VUID-vkCmdDispatchGraphIndirectAMDX-None-07288**
  Any shader invocation executed by this command **must** terminate.

- **VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-09181**
  `commandBuffer` **must** not be a protected command buffer.

- **VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-09182**
  `commandBuffer` **must** be a primary command buffer.

- **VUID-vkCmdDispatchGraphIndirectAMDX-scratch-09183**
  `scratch` **must** be the device address of an allocated memory range at least as large as the value of `VkExecutionGraphPipelineScratchSizeAMDX::size` returned by `VkExecutionGraphPipelineScratchSizeAMDX` for the currently bound execution graph pipeline.

- **VUID-vkCmdDispatchGraphIndirectAMDX-scratch-09184**
  `scratch` **must** be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDX` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMDX` flag.

- **VUID-vkCmdDispatchGraphIndirectAMDX-scratch-09185**
  Device memory in the range `[scratch, scratch + VkExecutionGraphPipelineScratchSizeAMDX::size)` **must** have been initialized with `vkCmdInitializeGraphScratchMemoryAMDX` using the currently bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command.

- **VUID-vkCmdDispatchGraphIndirectAMDX-maxComputeWorkGroupCount-09186**
  Execution of this command **must** not cause a node to be dispatched with a larger number of workgroups than that specified by either a `MaxNumWorkgroupsAMDX` decoration in the dispatched node or `maxComputeWorkGroupCount`.

- **VUID-vkCmdDispatchGraphIndirectAMDX-maxExecutionGraphShaderPayloadCount-09187**
  Execution of this command **must** not cause any shader to initialize more than `maxExecutionGraphShaderPayloadCount` output payloads.

- **VUID-vkCmdDispatchGraphIndirectAMDX-NodeMaxPayloadsAMDX-09188**
  Execution of this command **must** not cause any shader that declares `NodeMaxPayloadsAMDX` to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each `NodeMaxPayloadsAMDX` decoration separately.

- **VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09150**
  `pCountInfo->infos` **must** be a device pointer to a memory allocation at least as large as the product of `count` and `stride` when this command is executed on the device.

- **VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09151**
  `pCountInfo->infos` **must** be a device address within a `VkBuffer` created with the
VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT flag

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09152
  pCountInfo->infos must be a multiple of executionGraphDispatchAddressAlignment

- VUID-vkCmdDispatchGraphIndirectAMDX-infos-09153
  Device memory locations at indexes in the range [infos, infos + (count*stride)], at a granularity of stride must contain valid VkDispatchGraphInfoAMDX structures in the first 24 bytes when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09154
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads must be a device pointer to a memory allocation at least as large as the product of payloadCount and payloadStride when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09155
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads must be a device address within a VkBuffer created with the VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT flag

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09156
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, payloads must be a multiple of executionGraphDispatchAddressAlignment

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09157
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, nodeIndex must be a valid node index in the currently bound execution graph pipeline, as returned by vkGetExecutionGraphPipelineNodeIndexAMDX when this command is executed on the device

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-09158
  For each VkDispatchGraphInfoAMDX structure in pCountInfo->infos, device memory locations at indexes in the range [payloads, payloads + (payloadCount * payloadStride)), at a granularity of payloadStride must contain a payload matching the size of the input payload expected by the node in nodeIndex in the first bytes when this command is executed on the device

Valid Usage (Implicit)

- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdDispatchGraphIndirectAMDX-pCountInfo-parameter
  pCountInfo must be a valid pointer to a valid VkDispatchGraphCountInfoAMDX structure

- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdDispatchGraphIndirectAMDX-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or compute operations

- VUID-vkCmdDispatchGraphIndirectAMDX-renderpass
This command **must** only be called outside of a render pass instance

- VUID-vkCmdDispatchGraphIndirectAMDX-videocoding
  This command **must** only be called outside of a video coding scope
- VUID-vkCmdDispatchGraphIndirectAMDX-bufferlevel
  commandBuffer **must** be a primary VkCommandBuffer

---

**Host Synchronization**

- Host access to the VkCommandPool that commandBuffer was allocated from **must** be externally synchronized

---

**Command Properties**

<table>
<thead>

To record an execution graph dispatch with all parameters read on device, call:

```c
// Provided by VK_AMDX_shader_enqueue
void vkCmdDispatchGraphIndirectCountAMDX(
    VkCommandBuffer commandBuffer,
    VkDeviceAddress scratch,
    VkDeviceAddress countInfo);
```

- commandBuffer is the command buffer into which the command will be recorded.
- scratch is a pointer to the scratch memory to be used.
- countInfo is a device address of a VkDispatchGraphCountInfoAMDX structure defining the nodes which will be initially executed.

When this command is executed, the nodes specified in countInfo are executed. Nodes executed as part of this command are not implicitly synchronized in any way against each other once they are dispatched.

For this command, all pointers in substructures are treated as device pointers and read during device execution of this command. The allocation and contents of these pointers only needs to be valid during device execution. All of these addresses will be read in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT access flag.

Execution of this command **may** modify any memory locations in the range \([\text{scratch}, \text{scratch} + \text{size})\), where size is the value returned in VkExecutionGraphPipelineScratchSizeAMDX::size by
VkExecutionGraphPipelineScratchSizeAMDX for the currently bound execution graph pipeline. Accesses to this memory range are performed in the VK_PIPELINE_STAGE_2_COMPUTE_SHADER_BIT pipeline stage with the VK_ACCESS_2_SHADER_STORAGE_READ_BIT and VK_ACCESS_2_SHADER_STORAGE_WRITE_BIT access flags.

Valid Usage

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-magFilter-04553**
  If a VkSampler created with magFilter or minFilter equal to VK_FILTER_LINEAR and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-mipmapMode-04770**
  If a VkSampler created with mipmapMode equal to VK_SAMPLER_MIPMAP_MODE_LINEAR and compareEnable equal to VK_FALSE is used to sample a VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-None-06479**
  If a VkImageView is sampled with depth comparison, the image view's format features must contain VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-None-02691**
  If a VkImageView is accessed using atomic operations as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-None-07888**
  If a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor is accessed using atomic operations as a result of this command, then the storage texel buffer's format features must contain VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-None-02692**
  If a VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-None-02693**
  If the VK_EXT_filter_cubic extension is not enabled and any VkImageView is sampled with VK_FILTER_CUBIC_EXT as a result of this command, it must not have a VkImageViewType of VK_IMAGE_VIEW_TYPE_3D, VK_IMAGE_VIEW_TYPE_CUBE, or VK_IMAGE_VIEW_TYPE_CUBE_ARRAY

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-filterCubic-02694**
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT as a result of this command must have a VkImageViewType and format that supports cubic filtering, as specified by VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubic returned by vkGetPhysicalDeviceImageFormatProperties2

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-filterCubicMinmax-02695**
  Any VkImageView being sampled with VK_FILTER_CUBIC_EXT with a reduction mode of either VK_SAMPLER_REDUCTION_MODE_MIN or VK_SAMPLER_REDUCTION_MODE_MAX as a result of this
command **must** have a `VkImageViewType` and format that supports cubic filtering together with minmax filtering, as specified by `VkFilterCubicImageViewImageFormatPropertiesEXT::filterCubicMinmax` returned by `vkGetPhysicalDeviceImageFormatProperties2`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-cubicRangeClamp-09212**
  If the `cubicRangeClamp` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** not have a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-reductionMode-09213**
  Any `VkImageView` being sampled with a `VkSamplerReductionModeCreateInfo::reductionMode` equal to `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE_RANGECLAMP_QCOM` as a result of this command **must** sample with `VK_FILTER_CUBIC_EXT`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-selectableCubicWeights-09214**
  If the `selectableCubicWeights` feature is not enabled, then any `VkImageView` being sampled with `VK_FILTER_CUBIC_EXT` as a result of this command **must** have `VkSamplerCubicWeightsCreateInfoQCOM::cubicWeights` equal to `VK_CUBIC_FILTER_WEIGHTS_CATMULL_ROM_QCOM`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-flags-02696**
  Any `VkImage` created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV` sampled as a result of this command **must** only be sampled using a `VkSamplerAddressMode` of `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_EDGE`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07027**
  For any `VkImageView` being written as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07028**
  For any `VkImageView` being read as a storage image where the image format field of the `OpTypeImage` is `Unknown`, the view's `format features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07029**
  For any `VkBufferView` being written as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown`, the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-OpTypeImage-07030**
  Any `VkBufferView` being read as a storage texel buffer where the image format field of the `OpTypeImage` is `Unknown` then the view's `buffer features` **must** contain `VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT`.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-None-08600**
  For each set `n` that is statically used by a `bound shader`, a descriptor set **must** have been bound to `n` at the same pipeline bind point, with a `VkPipelineLayout` that is compatible for set `n`, with the `VkPipelineLayout` used to create the current `VkPipeline` or the `VkDescriptorSetLayout` array used to create the current `VkShaderEXT`, as described in `Pipeline Layout Compatibility`.
For each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a VkPipelineLayout that is compatible for push constants, with the VkPipelineLayout used to create the current VkPipeline or the VkDescriptorSetLayout array used to create the current VkShaderEXT, as described in Pipeline Layout Compatibility.

If the maintenance4 feature is not enabled, then for each push constant that is statically used by a bound shader, a push constant value must have been set for the same pipeline bind point, with a VkPipelineLayout that is compatible for push constants, with the VkPipelineLayout used to create the current VkPipeline or the VkDescriptorSetLayout and VkPushConstantRange arrays used to create the current VkShaderEXT, as described in Pipeline Layout Compatibility.

Descriptors in each bound descriptor set, specified via vkCmdBindDescriptorSets, must be valid as described by descriptor validity if they are statically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was not created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT.

If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdBindDescriptorSets, the bound VkPipeline must have been created without VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT.

Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, must be valid if they are dynamically used by the VkPipeline bound to the pipeline bind point used by this command and the bound VkPipeline was created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT.

Descriptors in bound descriptor buffers, specified via vkCmdSetDescriptorBufferOffsetsEXT, must be valid if they are dynamically used by any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command.

If the descriptors used by the VkPipeline bound to the pipeline bind point were specified via vkCmdSetDescriptorBufferOffsetsEXT, the bound VkPipeline must have been created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT.

If a descriptor is dynamically used with a VkPipeline created with VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident.

If a descriptor is dynamically used with a VkShaderEXT created with VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT, the descriptor memory must be resident.
If the `shaderObject` feature is not enabled, a valid pipeline **must** be bound to the pipeline bind point used by this command.

If a pipeline is bound to the pipeline bind point used by this command, there **must** not have been any calls to dynamic state setting commands for any state not specified as dynamic in the `VkPipeline` object bound to the pipeline bind point used by this command, since that pipeline was bound.

If the `VkPipeline` object bound to the pipeline bind point used by this command or any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a `VkSampler` object that uses unnormalized coordinates, that sampler **must** not be used to sample from any `VkImage` with a `VkImageView` of the type `VK_IMAGE_VIEW_TYPE_3D`, `VK_IMAGE_VIEW_TYPE_CUBE`, `VK_IMAGE_VIEW_TYPE_1D_ARRAY`, `VK_IMAGE_VIEW_TYPE_2D_ARRAY` or `VK_IMAGE_VIEW_TYPE_CUBE_ARRAY`, in any shader stage.

If any stage of the `VkPipeline` object bound to the pipeline bind point used by this command accesses a uniform buffer, and that stage was created without enabling either `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT` or `VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT` for `uniformBuffers`, and the `robustBufferAccess` feature is not enabled, that stage **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point.

If the `robustBufferAccess` feature is not enabled, and any `VkShaderEXT` bound to a stage corresponding to the pipeline bind point used by this command accesses a uniform buffer, it **must** not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point.
If any stage of the VkPipeline object bound to the pipeline bind point used by this command accesses a storage buffer, and that stage was created without enabling either VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_EXT or VK_PIPELINE_ROBUSTNESS_BUFFER_BEHAVIOR_ROBUST_BUFFER_ACCESS_2_EXT for storageBuffers, and the robustBufferAccess feature is not enabled, that stage must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point.

If the robustBufferAccess feature is not enabled, and any VkShaderEXT bound to a stage corresponding to the pipeline bind point used by this command accesses a storage buffer, it must not access values outside of the range of the buffer as specified in the descriptor set bound to the same pipeline bind point.

If commandBuffer is an unprotected command buffer and protectedNoFault is not supported, any resource accessed by bound shaders must not be a protected resource.

If a bound shader accesses a VkSampler or VkImageView object that enables sampler Y’C aCbCr conversion, that object must only be used with OpImageSample* or OpImageSparseSample* instructions.

If a bound shader accesses a VkSampler or VkImageView object that enables sampler Y’C aCbCr conversion, that object must not use the ConstOffset and Offset operands.

If a VkImageView is accessed as a result of this command, then the image view’s viewType must match the Dim operand of the OpTypeImage as described in Instruction/Sampler/Image View Validation.

If a VkImageView is accessed as a result of this command, then the numeric type of the image view’s format and the Sampled Type operand of the OpTypeImage must match.

If a VkImageView created with a format other than VK_FORMAT_A8_UNORM_KHR is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have at least as many components as the image view’s format.

If a VkImageView created with the format VK_FORMAT_A8_UNORM_KHR is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have four components.

If a VkBufferView is accessed using OpImageWrite as a result of this command, then the Type of the Texel operand of that instruction must have at least as many components as the buffer view’s format.

If a VkImageView with a VkFormat that has a 64-bit component width is accessed as a
result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04471
  If a VkImageView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04472
  If a VkBufferView with a VkFormat that has a 64-bit component width is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 64.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-SampledType-04473
  If a VkBufferView with a VkFormat that has a component width less than 64-bit is accessed as a result of this command, the SampledType of the OpTypeImage operand of that instruction must have a Width of 32.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-sparseImageInt64Atomics-04474
  If the sparseImageInt64Atomics feature is not enabled, VkImage objects created with the VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-sparseImageInt64Atomics-04475
  If the sparseImageInt64Atomics feature is not enabled, VkBuffer objects created with the VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT flag must not be accessed by atomic instructions through an OpTypeImage with a SampledType with a Width of 64 by this command.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWeightedSampleQCOM-06971
  If OpImageWeightedSampleQCOM is used to sample a VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWeightedSampleQCOM-06972
  If OpImageWeightedSampleQCOM uses a VkImageView as a sample weight image as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBoxFilterQCOM-06973
  If OpImageBoxFilterQCOM is used to sample a VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchSSDQCOM-06974
  If OpImageBlockMatchSSDQCOM is used to read from an VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchSADQCOM-06975
  If OpImageBlockMatchSADQCOM is used to read from an VkImageView as a result of this command, then the image view's format features must contain VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM.
If `OpImageBlockMatchSADQCOM` or `OpImageBlockMatchSSDQCOM` is used to read from a reference image as result of this command, then the specified reference coordinates must not fail integer texel coordinate validation

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWeightedSampleQCOM-06977
  If `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, or `OpImageBlockMatchSSDQCOM` uses a `VkSampler` as a result of this command, then the sampler must have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageWeightedSampleQCOM-06978
  If any command other than `OpImageWeightedSampleQCOM`, `OpImageBoxFilterQCOM`, `OpImageBlockMatchWindowSSDQCOM`, `OpImageBlockMatchWindowSADQCOM`, `OpImageBlockMatchGatherSSDQCOM`, `OpImageBlockMatchGatherSADQCOM`, `OpImageBlockMatchSSDQCOM`, or `OpImageBlockMatchSADQCOM` uses a `VkSampler` as a result of this command, then the sampler must not have been created with `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-09215
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view’s format features must contain `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM`

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-09216
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` instruction is used to read from an `VkImageView` as a result of this command, then the image view’s format must be a single-component format.

- VUID-vkCmdDispatchGraphIndirectCountAMDX-OpImageBlockMatchWindow-09217
  If a `OpImageBlockMatchWindow*QCOM` or `OpImageBlockMatchGather*QCOM` read from a reference image as result of this command, then the specified reference coordinates must not fail integer texel coordinate validation

- VUID-vkCmdDispatchGraphIndirectCountAMDX-None-07288
  Any shader invocation executed by this command must terminate

- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-09181
  commandBuffer must not be a protected command buffer

- VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-09182
  commandBuffer must be a primary command buffer

- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratch-09183
  scratch must be the device address of an allocated memory range at least as large as the value of `VkExecutionGraphPipelineScratchSizeAMDX:size` returned by `VkExecutionGraphPipelineScratchSizeAMDX` for the currently bound execution graph pipeline

- VUID-vkCmdDispatchGraphIndirectCountAMDX-scratch-09184
  scratch must be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_EXECUTION_GRAPH_SCRATCH_BIT_AMDX` or `VK_BUFFER_USAGE_2_EXECUTION_GRAPH_SCRATCH_BIT_AMDX` flag
Device memory in the range \([\text{scratch}, \text{scratch}]\) must have been initialized with \(\text{vkCmdInitializeGraphScratchMemoryAMDX}\) using the currently bound execution graph pipeline, and not modified after that by anything other than another execution graph dispatch command.

Execution of this command must not cause a node to be dispatched with a larger number of workgroups than that specified by either a \(\text{MaxNumWorkgroupsAMDX}\) decoration in the dispatched node or \(\text{maxComputeWorkGroupCount}\).

Execution of this command must not cause any shader to initialize more than \(\text{maxExecutionGraphShaderPayloadCount}\) output payloads.

Execution of this command must not cause any shader that declares \(\text{NodeMaxPayloadsAMDX}\) to initialize more output payloads than specified by the max number of payloads for that decoration. This requirement applies to each \(\text{NodeMaxPayloadsAMDX}\) decoration separately.

\(\text{countInfo}\) must be a device pointer to a memory allocation containing a valid \(\text{VkDispatchGraphCountInfoAMDX}\) structure when this command is executed on the device.

\(\text{countInfo}\) must be a device address within a \(\text{VkBuffer}\) created with the \(\text{VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT}\) flag.

\(\text{countInfo}\) must be a multiple of \(\text{executionGraphDispatchAddressAlignment}\).

\(\text{countInfo->infos}\) must be a device pointer to a memory allocation at least as large as the product of \(\text{count}\) and \(\text{stride}\) when this command is executed on the device.

\(\text{countInfo->infos}\) must be a device address within a \(\text{VkBuffer}\) created with the \(\text{VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT}\) flag.

\(\text{countInfo->infos}\) must be a multiple of \(\text{executionGraphDispatchAddressAlignment}\).

Device memory locations at indexes in the range \([\text{infos}, \text{infos} + (\text{count}\times\text{stride})]\), at a granularity of \(\text{stride}\) must contain valid \(\text{VkDispatchGraphInfoAMDX}\) structures in the first 24 bytes when this command is executed on the device.

For each \(\text{VkDispatchGraphInfoAMDX}\) structure in \(\text{countInfo->infos}\), \(\text{payloads}\) must be a device pointer to a memory allocation at least as large as the product of \(\text{payloadCount}\) and \(\text{payloadStride}\) when this command is executed on the device.
For each `VkDispatchGraphInfoAMDX` structure in `countInfo->infos`, payloads must be a device address within a `VkBuffer` created with the `VK_BUFFER_USAGE_INDIRECT_BUFFER_BIT` flag.

For each `VkDispatchGraphInfoAMDX` structure in `countInfo->infos`, payloads must be a multiple of `executionGraphDispatchAddressAlignment`.

For each `VkDispatchGraphInfoAMDX` structure in `countInfo->infos`, `nodeIndex` must be a valid node index in the currently bound execution graph pipeline, as returned by `vkGetExecutionGraphPipelineNodeIndexAMDX` when this command is executed on the device.

For each `VkDispatchGraphInfoAMDX` structure in `countInfo->infos`, device memory locations at indexes in the range `[payloads, payloads + (payloadCount * payloadStride)}`, at a granularity of `payloadStride` must contain a payload matching the size of the input payload expected by the node in `nodeIndex` in the first bytes when this command is executed on the device.

### Valid Usage (Implicit)

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-recording**
  `commandBuffer` must be in the recording state.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-commandBuffer-cmdpool**
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-renderpass**
  This command must only be called outside of a render pass instance.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-videocoding**
  This command must only be called outside of a video coding scope.

- **VUID-vkCmdDispatchGraphIndirectCountAMDX-bufferlevel**
  `commandBuffer` must be a primary `VkCommandBuffer`.

### Host Synchronization

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.
Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>

</tr>
</tbody>
</table>

The `VkDeviceOrHostAddressConstAMDX` union is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
typedef union VkDeviceOrHostAddressConstAMDX {
    VkDeviceAddress deviceAddress;
    const void* hostAddress;
} VkDeviceOrHostAddressConstAMDX;
```

- `deviceAddress` is a buffer device address as returned by the `vkGetBufferDeviceAddressKHR` command.
- `hostAddress` is a const host memory address.

The `VkDispatchGraphCountInfoAMDX` structure is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
typedef struct VkDispatchGraphCountInfoAMDX {
    uint32_t count;
    VkDeviceOrHostAddressConstAMDX infos;
    uint64_t stride;
} VkDispatchGraphCountInfoAMDX;
```

- `count` is the number of dispatches to perform.
- `infos` is the device or host address of a flat array of `VkDispatchGraphInfoAMDX` structures.
- `stride` is the byte stride between successive `VkDispatchGraphInfoAMDX` structures in `infos`.

Whether `infos` is consumed as a device or host pointer is defined by the command this structure is used in.

The `VkDispatchGraphInfoAMDX` structure is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
typedef struct VkDispatchGraphInfoAMDX {
    uint32_t nodeIndex;
    uint32_t payloadCount;
    VkDeviceOrHostAddressConstAMDX payloads;
    uint64_t payloadStride;
} VkDispatchGraphInfoAMDX;
```
• **nodeIndex** is the index of a node in an execution graph to be dispatched.
• **payloadCount** is the number of payloads to dispatch for the specified node.
• **payloads** is a device or host address pointer to a flat array of payloads with size equal to the product of **payloadCount** and **payloadStride**
• **payloadStride** is the byte stride between successive payloads in **payloads**

Whether **payloads** is consumed as a device or host pointer is defined by the command this structure is used in.

---

**Valid Usage**

- VUID-VkDispatchGraphInfoAMDX-payloadCount-09171
  
  **payloadCount** must be no greater than maxExecutionGraphShaderPayloadCount

---

### 44.4. Shader Enqueue

Compute shaders in an execution graph can use the **OpInitializeNodePayloadsAMDX** to initialize nodes for dispatch. Any node payload initialized in this way will be enqueued for dispatch once the shader is done writing to the payload. As compilers may be conservative when making this determination, shaders can further call **OpFinalizeNodePayloadsAMDX** to guarantee that the payload is no longer being written.

The **Node Name** operand of the **PayloadNodeNameAMDX** decoration on a payload identifies the shader name of the node to be enqueued, and the **Shader Index** operand of **OpInitializeNodePayloadsAMDX** identifies the shader index. A node identified in this way is dispatched as described in the following sections.

#### 44.4.1. Compute Nodes

Compute shaders added as nodes to an execution graph are executed differently based on the presence or absence of the **StaticNumWorkgroupsAMDX** or **CoalescingAMDX** execution modes.

Dispatching a compute shader node that does not declare either the **StaticNumWorkgroupsAMDX** or **CoalescingAMDX** execution mode will execute a number of workgroups in each dimension specified by the first 12 bytes of the payload, interpreted as a **VkDispatchIndirectCommand**. The same payload will be broadcast to each workgroup in the same dispatch. Additional values in the payload have no effect on execution.

Dispatching a compute shader node with the **StaticNumWorkgroupsAMDX** execution mode will execute workgroups in each dimension according to the **x**, **y**, and **z** size operands to the **StaticNumWorkgroupsAMDX** execution mode. The same payload will be broadcast to each workgroup in the same dispatch. Any values in the payload have no effect on execution.

Dispatching a compute shader node with the **CoalescingAMDX** execution mode will enqueue a single invocation for execution. Implementations may combine multiple such dispatches into the same workgroup, up to the size of the workgroup. The number of invocations coalesced into a given
workgroup in this way **can** be queried via the `CoalescedInputCountAMDX` built-in. Any values in the payload have no effect on execution.
Chapter 45. Low Latency 2

45.1. Latency Reduction

To enable or disable low latency mode on a swapchain, call:

```c
// Provided by VK_NV_low_latency2
VkResult vkSetLatencySleepModeNV(
    VkDevice device,
    VkSwapchainKHR swapchain,
    const VkLatencySleepModeInfoNV* pSleepModeInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to enable or disable low latency mode on.
- `pSleepModeInfo` is `NULL` or a pointer to a `VkLatencySleepModeInfoNV` structure specifying the parameters of the latency sleep mode.

If `pSleepModeInfo` is `NULL`, `vkSetLatencySleepModeNV` will disable low latency mode, low latency boost, and set the minimum present interval previously specified by `VkLatencySleepModeInfoNV` to zero on `swapchain`. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to `vkSetLatencySleepModeNV` may be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR`. Access to the swapchain data associated with this extension must be atomic within the implementation.

Valid Usage (Implicit)

- VUID-vkSetLatencySleepModeNV-device-parameter `device must be a valid VkDevice handle`
- VUID-vkSetLatencySleepModeNV-swapchain-parameter `swapchain must be a valid VkSwapchainKHR handle`
- VUID-vkSetLatencySleepModeNV-pSleepModeInfo-parameter `pSleepModeInfo must be a valid pointer to a valid VkLatencySleepModeInfoNV structure`
- VUID-vkSetLatencySleepModeNV-swapchain-parent `swapchain must have been created, allocated, or retrieved from device`

Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_INITIALIZATION_FAILED`
The `VkLatencySleepModeInfoNV` structure is defined as:

```c
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepModeInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkBool32 lowLatencyMode;
    VkBool32 lowLatencyBoost;
    uint32_t minimumIntervalUs;
} VkLatencySleepModeInfoNV;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **lowLatencyMode** is the toggle to enable or disable low latency mode.
- **lowLatencyBoost** allows an application to hint to the GPU to increase performance to provide additional latency savings at a cost of increased power consumption.
- **minimumIntervalUs** is the microseconds between `vkQueuePresentKHR` calls for a given swapchain that `vkLatencySleepNV` will enforce.

If `lowLatencyMode` is set to `VK_FALSE`, `lowLatencyBoost` will still hint to the GPU to increase its power state and `vkLatencySleepNV` will still enforce `minimumIntervalUs` between `vkQueuePresentKHR` calls.

### Valid Usage (Implicit)

- **VUID-VkLatencySleepModeInfoNV-sType-sType**
  `sType` must be `VK_STRUCTURE_TYPE_LATENCY_SLEEP_MODE_INFO_NV`

To provide the synchronization primitive used to delay host CPU work for lower latency rendering, call:

```c
// Provided by VK_NV_low_latency2
VkResult vkLatencySleepNV(  
    VkDevice device,  
    VkSwapchainKHR swapchain,  
    const VkLatencySleepInfoNV* pSleepInfo);
```

- **device** is the device associated with `swapchain`.
- **swapchain** is the swapchain to delay associated CPU work based on `VkLatencySubmissionPresentIdNV` submissions.
- **pSleepInfo** is a pointer to a `VkLatencySleepInfoNV` structure specifying the parameters of the latency sleep.

`vkLatencySleepNV` returns immediately. Applications **should** use `vkWaitSemaphores` with `pSleepInfo::signalSemaphore` to delay host CPU work. CPU work refers to application work done...
before presenting which includes but is not limited to: input sampling, simulation, command buffer recording, command buffer submission, and present submission. It is recommended to call this function before input sampling. When using this function, it should be called exactly once between presents.

Valid Usage (Implicit)

- VUID-vkLatencySleepNV-device-parameter
device must be a valid VkDevice handle

- VUID-vkLatencySleepNV-swapchain-parameter
swapchain must be a valid VkSwapchainKHR handle

- VUID-vkLatencySleepNV-pSleepInfo-parameter
pSleepInfo must be a valid pointer to a valid VkLatencySleepInfoNV structure

- VUID-vkLatencySleepNV-swapchain-parent
swapchain must have been created, allocated, or retrieved from device

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_UNKNOWN

The VkLatencySleepInfoNV structure is defined as:

```c
// Provided by VK_NV_low_latency2
typedef struct VkLatencySleepInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkSemaphore signalSemaphore;
    uint64_t value;
} VkLatencySleepInfoNV;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `signalSemaphore` is a semaphore that is signaled to indicate that the application should resume input sampling work.
- `value` is the value that `signalSemaphore` is set to for resuming sampling work.

Valid Usage

- VUID-VkLatencySleepInfoNV-signalSemaphore-09361
signalSemaphore must be a timeline semaphore

Valid Usage (Implicit)

• VUID-VkLatencySleepInfoNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_LATENCY_SLEEP_INFO_NV

• VUID-VkLatencySleepInfoNV-signalSemaphore-parameter
  signalSemaphore must be a valid VkSemaphore handle

An application can provide timestamps at various stages of its frame generation work by calling:

```c
void vkSetLatencyMarkerNV(
    VkDevice device,          // Provided by VK_NV_low_latency2
    VkSwapchainKHR swapchain, // device is the device associated with swapchain.
    const VkSetLatencyMarkerInfoNV* pLatencyMarkerInfo); // swapchain is the swapchain to capture timestamps on.
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to capture timestamps on.
- `pSetLatencyMarkerInfo` is a pointer to a `VkSetLatencyMarkerInfoNV` structure specifying the parameters of the marker to set.

At the beginning and end of simulation and render threads and beginning and end of `vkQueuePresentKHR` calls, `vkSetLatencyMarkerNV` can be called to provide timestamps for the application’s reference. These timestamps are returned with a call to `vkGetLatencyTimingsNV` alongside driver provided timestamps at various points of interest with regards to latency within the application. As an exception to the normal rules for objects which are externally synchronized, the swapchain passed to `vkSetLatencyMarkerNV` may be simultaneously used by other threads in calls to functions other than `vkDestroySwapchainKHR`. Access to the swapchain data associated with this extension must be atomic within the implementation.

Valid Usage (Implicit)

• VUID-vkSetLatencyMarkerNV-device-parameter
  device must be a valid VkDevice handle

• VUID-vkSetLatencyMarkerNV-swapchain-parameter
  swapchain must be a valid VkSwapchainKHR handle

• VUID-vkSetLatencyMarkerNV-pLatencyMarkerInfo-parameter
  pLatencyMarkerInfo must be a valid pointer to a valid VkSetLatencyMarkerInfoNV structure

• VUID-vkSetLatencyMarkerNV-swapchain-parent
  swapchain must have been created, allocated, or retrieved from device
The `VkSetLatencyMarkerInfoNV` structure is defined as:

```c
// Provided by VK_NV_low_latency2
typedef struct VkSetLatencyMarkerInfoNV {
    VkStructureType sType;
    const void* pNext;
    uint64_t presentID;
    VkLatencyMarkerNV marker;
} VkSetLatencyMarkerInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `presentId` is an application provided value that is used to associate the timestamp with a `vkQueuePresentKHR` command using `VkPresentIdKHR::pPresentIds` for a given present.
- `marker` is the type of timestamp to be recorded.

**Valid Usage (Implicit)**

- VUID-VkSetLatencyMarkerInfoNV-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_SET_LATENCY_MARKER_INFO_NV`
- VUID-VkSetLatencyMarkerInfoNV-marker-parameter
  `marker` must be a valid `VkLatencyMarkerNV` value

The `VkLatencyMarkerNV` enum is defined as:

```c
// Provided by VK_NV_low_latency2
typedef enum VkLatencyMarkerNV {
    VK_LATENCY_MARKER_SIMULATION_START_NV = 0,
    VK_LATENCY_MARKER_SIMULATION_END_NV = 1,
    VK_LATENCY_MARKER_RENDERSUBMIT_START_NV = 2,
    VK_LATENCY_MARKER_RENDERSUBMIT_END_NV = 3,
    VK_LATENCY_MARKER_PRESENT_START_NV = 4,
    VK_LATENCY_MARKER_PRESENT_END_NV = 5,
    VK_LATENCY_MARKER_INPUT_SAMPLE_NV = 6,
    VK_LATENCY_MARKER_TRIGGER_FLASH_NV = 7,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_START_NV = 8,
    VK_LATENCY_MARKER_OUT_OF_BAND_RENDERSUBMIT_END_NV = 9,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_START_NV = 10,
    VK_LATENCY_MARKER_OUT_OF_BAND_PRESENT_END_NV = 11,
} VkLatencyMarkerNV;
```

The members of the `VkLatencyMarkerNV` are used as arguments for `vkSetLatencyMarkerNV` in the use cases described below:

- `VK_LATENCY_MARKER_SIMULATION_START_NV` should be called at the start of the simulation execution
each frame, but after the call to `vkLatencySleepNV`.

- **VK_LATENCY_MARKER_SIMULATION_END_NV** should be called at the end of the simulation execution each frame.
- **VK_LATENCY_MARKER_RENDSUBMIT_START_NV** should be called at the beginning of the render submission execution each frame. This should be wherever Vulkan API calls are made and must not span into asynchronous rendering.
- **VK_LATENCY_MARKER_RENDSUBMIT_END_NV** should be called at the end of the render submission execution each frame.
- **VK_LATENCY_MARKER_PRESENT_START_NV** should be called just before `vkQueuePresentKHR`.
- **VK_LATENCY_MARKER_PRESENT_END_NV** should be called when `vkQueuePresentKHR` returns.
- **VK_LATENCY_MARKER_INPUT_SAMPLE_NV** should be called just before the application gathers input data.
- **VK_LATENCY_MARKER_TRIGGER_FLASH_NV** should be called anywhere between **VK_LATENCY_MARKER_SIMULATION_START_NV** and **VK_LATENCY_MARKER_SIMULATION_END_NV** whenever a left mouse click occurs.

To get an array containing the newest collected latency data, call:

```c
void vkGetLatencyTimingsNV(
    VkDevice device,
    VkSwapchainKHR swapchain,
    VkGetLatencyMarkerInfoNV* pLatencyMarkerInfo);
```

- `device` is the device associated with `swapchain`.
- `swapchain` is the swapchain to return data from.
- `pGetLatencyMarkerInfo` is a pointer to a `VkGetLatencyMarkerInfoNV` structure specifying the parameters for returning latency information.

The timings returned by `vkGetLatencyTimingsNV` contain the timestamps requested from `vkSetLatencyMarkerNV` and additional implementation-specific markers defined in `VkLatencyTimingsFrameReportNV`.

---

**Valid Usage (Implicit)**

- VUID-vkGetLatencyTimingsNV-device-parameter
  `device` must be a valid `VkDevice` handle
- VUID-vkGetLatencyTimingsNV-swapchain-parameter
  `swapchain` must be a valid `VkSwapchainKHR` handle
- VUID-vkGetLatencyTimingsNV-pLatencyMarkerInfo-parameter
  `pLatencyMarkerInfo` must be a valid pointer to a `VkGetLatencyMarkerInfoNV` structure
- VUID-vkGetLatencyTimingsNV-swapchain-parent
  `swapchain` must have been created, allocated, or retrieved from `device`
The `VkGetLatencyMarkerInfoNV` structure is defined as:

```c
typedef struct VkGetLatencyMarkerInfoNV {
    VkStructureType sType;
    const void* pNext;
    uint32_t timingCount;
    VkLatencyTimingsFrameReportNV* pTimings;
} VkGetLatencyMarkerInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is either `NULL` or a pointer to a structure extending this structure.
- `timingCount` is an integer related to the number of of previous frames of latency data available or queried, as described below.
- `pTimings` is either `NULL` or a pointer to an array of `VkLatencyTimingsFrameReportNV` structures.

If `pTimings` is `NULL` then the maximum number of queryable frame data is returned in `timingCount`. Otherwise, `timingCount` must be set by the user to the number of elements in the `pTimings` array, and on return the variable is overwritten with the number of values actually written to `pTimings`. The elements of `pTimings` are arranged in the order they were requested in, with the oldest data in the first entry.

**Valid Usage (Implicit)**

- `VUID-VkGetLatencyMarkerInfoNV-sType-sType` 
  `sType` must be `VK_STRUCTURE_TYPE_GET_LATENCY_MARKER_INFO_NV`

- `VUID-VkGetLatencyMarkerInfoNV-pTimings-parameter` 
  If `timingCount` is not 0, and `pTimings` is not `NULL`, `pTimings` must be a valid pointer to an array of `timingCount` `VkLatencyTimingsFrameReportNV` structures

The `VkLatencyTimingsFrameReportNV` structure describes latency data returned by `vkGetLatencyTimingsNV`

```c
typedef struct VkLatencyTimingsFrameReportNV {
    VkStructureType sType;
    const void* pNext;
    uint64_t presentID;
    uint64_t inputSampleTimeUs;
    uint64_t simStartTimeUs;
    uint64_t simEndTimeUs;
    uint64_t renderSubmitStartTimeUs;
    uint64_t renderSubmitEndTimeUs;
    uint64_t presentStartTimeUs;
    uint64_t presentEndTimeUs;
} VkLatencyTimingsFrameReportNV;
```
The members of the `VkLatencyTimingsFrameReportNV` structure describe the following:

- **presentId** is the application provided value that is used to associate the timestamp with a `vkQueuePresentKHR` command using `VkPresentIdKHR::pPresentIds` for a given present.

- **simStartTimeUs** is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_SIMULATION_START_NV`.

- **simEndTimeUs** is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_SIMULATION_END_NV`.

- **renderStartTimeUs** is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_RENDERSUBMIT_START_NV`.

- **renderEndTimeUs** is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_RENDERSUBMIT_END_NV`.

- **presentStartTimeUs** is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_PRESENT_START_NV`.

- **presentEndTimeUs** is the timestamp written when `vkSetLatencyMarkerNV` is called with the `VkLatencyMarkerNV` enum `VK_LATENCY_MARKER_PRESENT_END_NV`.

- **driverStartTimeUs** is the timestamp written when the first `vkQueueSubmit` for the frame is called.

- **driverEndTimeUs** is the timestamp written when the final `vkQueueSubmit` hands off from the Vulkan Driver.

- **osRenderQueueStartTimeUs** is the timestamp written when the final `vkQueueSubmit` hands off from the Vulkan Driver.

- **osRenderQueueEndTimeUs** is the timestamp written when the first submission reaches the GPU.

- **gpuRenderStartTimeUs** is the timestamp written when the first submission reaches the GPU.

- **gpuRenderEndTimeUs** is the timestamp written when the final submission finishes on the GPU for the frame.

---

**Valid Usage (Implicit)**

- VUID-VkLatencyTimingsFrameReportNV-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_LATENCY_TIMINGS_FRAME_REPORT_NV`

The `VkLatencySubmissionPresentIdNV` structure is defined as:

```
// Provided by VK_NV_low_latency2
```
typedef struct VkLatencySubmissionPresentIdNV {
    VkStructureType sType;
    const void* pNext;
    uint64_t presentID;
} VkLatencySubmissionPresentIdNV;

• **sType** is a VkStructureType value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **presentID** is used to associate the vkQueueSubmit with the presentId used for a given vkQueuePresentKHR via VkPresentIdKHR::pPresentIds.

For any submission to be tracked with low latency mode pacing, it needs to be associated with other submissions in a given present. Applications must include the VkLatencySubmissionPresentIdNV in the pNext chain of vkQueueSubmit to associate that submission with the presentId present for low latency mode.

**Valid Usage (Implicit)**

- VUID-VkLatencySubmissionPresentIdNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_LATENCY_SUBMISSION_PRESENT_ID_NV

An application can mark a queue as Out of Band to indicate that all vkQueueSubmit calls on this queue are ignored for latency evaluation by calling:

```c
// Provided by VK_NV_low_latency2
void vkQueueNotifyOutOfBandNV(
    VkQueue queue,
    const VkOutOfBandQueueTypeInfoNV* pQueueTypeInfo);
```

• **queue** is the VkQueue to be marked as out of band.
• **pQueueTypeInfo** is a pointer to a VkOutOfBandQueueTypeInfoNV structure specifying the queue type.

**Valid Usage (Implicit)**

- VUID-vkQueueNotifyOutOfBandNV-queue-parameter
  queue must be a valid VkQueue handle
- VUID-vkQueueNotifyOutOfBandNV-pQueueTypeInfo-parameter
  pQueueTypeInfo must be a valid pointer to a valid VkOutOfBandQueueTypeInfoNV structure
The `VkOutOfBandQueueTypeInfoNV` structure is defined as:

```c
// Provided by VK_NV_low_latency2
typedef struct VkOutOfBandQueueTypeInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkOutOfBandQueueTypeNV queueType;
} VkOutOfBandQueueTypeInfoNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `queueType` describes the usage of the queue to be marked as out of band.

**Valid Usage (Implicit)**

- VUID-VkOutOfBandQueueTypeInfoNV-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_OUT_OF_BAND_QUEUE_TYPE_INFO_NV`
- VUID-VkOutOfBandQueueTypeInfoNV-queueType-parameter
  `queueType` must be a valid `VkOutOfBandQueueTypeNV` value

The `VkOutOfBandQueueTypeNV` enum is defined as:

```c
// Provided by VK_NV_low_latency2
typedef enum VkOutOfBandQueueTypeNV {
    VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV = 0,
    VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV = 1,
} VkOutOfBandQueueTypeNV;
```

The members of the `VkOutOfBandQueueTypeNV` are used to describe the queue type in `VkOutOfBandQueueTypeInfoNV` as described below:

- `VK_OUT_OF_BAND_QUEUE_TYPE_RENDER_NV` indicates that work will be submitted to this queue.
- `VK_OUT_OF_BAND_QUEUE_TYPE_PRESENT_NV` indicates that this queue will be presented from.

To allow low latency mode to be used by a swapchain, add a `VkSwapchainLatencyCreateInfoNV` structure to the `pNext` chain of `VkSwapchainCreateInfoKHR`. 
The VkSwapchainLatencyCreateInfoNV structure is defined as:

```c
// Provided by VK_NV_low_latency2
typedef struct VkSwapchainLatencyCreateInfoNV {
    VkStructureType sType;
    const void* pNext;
    VkBool32 latencyModeEnable;
} VkSwapchainLatencyCreateInfoNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **lowLatencyModeEnable** indicates if the swapchain created will utilize low latency mode.

### Valid Usage (Implicit)

- VUID-VkSwapchainLatencyCreateInfoNV-sType-sType
  
  **sType** must be VK_STRUCTURE_TYPE_SWAPCHAIN_LATENCY_CREATE_INFO_NV

The VkLatencySurfaceCapabilitiesNV structure is defined as:

```c
// Provided by VK_NV_low_latency2
typedef struct VkLatencySurfaceCapabilitiesNV {
    VkStructureType sType;
    const void* pNext;
    uint32_t presentModeCount;
    VkPresentModeKHR* pPresentModes;
} VkLatencySurfaceCapabilitiesNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **presentModeCount** is the number of presentation modes provided.
- **pPresentModes** is list of presentation modes optimized for use with low latency mode with presentModeCount entries.

If **pPresentModes** is NULL, then the number of present modes that are optimized for use with low latency mode returned in presentModeCount. Otherwise, presentModeCount must be set by the user to the number of elements in the pPresentModes array, and on return the variable is overwritten with the number of values actually written to pPresentModes. If the value of presentModeCount is less than the number of optimized present modes, at most presentModeCount values will be written to pPresentModes.

### Valid Usage (Implicit)

- VUID-VkLatencySurfaceCapabilitiesNV-sType-sType
**sType** must be **VK_STRUCTURE_TYPE_LATENCY_SURFACE_CAPABILITIES_NV**

- VUID-VkLatencySurfaceCapabilitiesNV-pPresentModes-parameter
  
  If `presentModeCount` is not 0, and `pPresentModes` is not NULL, `pPresentModes` must be a valid pointer to an array of `presentModeCount` `VkPresentModeKHR` values.
Chapter 46. Extending Vulkan

New functionality may be added to Vulkan via either new extensions or new versions of the core, or new versions of an extension in some cases.

This chapter describes how Vulkan is versioned, how compatibility is affected between different versions, and compatibility rules that are followed by the Vulkan Working Group.

46.1. Instance and Device Functionality

Commands that enumerate instance properties, or that accept a VkInstance object as a parameter, are considered instance-level functionality.

Commands that dispatch from a VkDevice object or a child object of a VkDevice, or take any of them as a parameter, are considered device-level functionality. Types defined by a device extension are also considered device-level functionality.

Commands that dispatch from VkPhysicalDevice, or accept a VkPhysicalDevice object as a parameter, are considered either instance-level or device-level functionality depending if the functionality is specified by an instance extension or device extension respectively.

Additionally, commands that enumerate physical device properties are considered device-level functionality.

Note
Applications usually interface to Vulkan using a loader that implements only instance-level functionality, passing device-level functionality to implementations of the full Vulkan API on the system. In some circumstances, as these may be implemented independently, it is possible that the loader and device implementations on a given installation will support different versions. To allow for this and call out when it happens, the Vulkan specification enumerates device and instance level functionality separately - they have independent version queries.

Note
Vulkan 1.0 initially specified new physical device enumeration functionality as instance-level, requiring it to be included in an instance extension. As the capabilities of device-level functionality require discovery via physical device enumeration, this led to the situation where many device extensions required an instance extension as well. To alleviate this extra work, VK_KHR_get_physical_device_properties2 (and subsequently Vulkan 1.1) redefined device-level functionality to include physical device enumeration.

46.2. Core Versions

The Vulkan Specification is regularly updated with bug fixes and clarifications. Occasionally new
functionality is added to the core and at some point it is expected that there will be a desire to perform a large, breaking change to the API. In order to indicate to developers how and when these changes are made to the specification, and to provide a way to identify each set of changes, the Vulkan API maintains a version number.

46.2.1. Version Numbers

The Vulkan version number comprises four parts indicating the variant, major, minor and patch version of the Vulkan API Specification.

The variant indicates the variant of the Vulkan API supported by the implementation. This is always 0 for the Vulkan API.

Note
A non-zero variant indicates the API is a variant of the Vulkan API and applications will typically need to be modified to run against it. The variant field was a later addition to the version number, added in version 1.2.175 of the Specification. As Vulkan uses variant 0, this change is fully backwards compatible with the previous version number format for Vulkan implementations. New version number macros have been added for this change and the old macros deprecated. For existing applications using the older format and macros, an implementation with non-zero variant will decode as a very high Vulkan version. The high version number should be detectable by applications performing suitable version checking.

The major version indicates a significant change in the API, which will encompass a wholly new version of the specification.

The minor version indicates the incorporation of new functionality into the core specification.

The patch version indicates bug fixes, clarifications, and language improvements have been incorporated into the specification.

Compatibility guarantees made about versions of the API sharing any of the same version numbers are documented in Core Versions

The version number is used in several places in the API. In each such use, the version numbers are packed into a 32-bit integer as follows:

- The variant is a 3-bit integer packed into bits 31-29.
- The major version is a 7-bit integer packed into bits 28-22.
- The minor version number is a 10-bit integer packed into bits 21-12.
- The patch version number is a 12-bit integer packed into bits 11-0.

VK_API_VERSION_VARIANT extracts the API variant number from a packed version number:

```
// Provided by VK_VERSION_1_0
```
#define VK_API_VERSION_VARIANT(version) ((uint32_t)(version) >> 29U)

**VK_API_VERSION_MAJOR** extracts the API major version number from a packed version number:

```c
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MAJOR(version) (((uint32_t)(version) >> 22U) & 0x7FU)
```

**VK_VERSION_MAJOR** extracts the API major version number from a packed version number:

```c
// Provided by VK_VERSION_1_0
// DEPRECATED: This define is deprecated. VK_API_VERSION_MAJOR should be used instead.
#define VK_VERSION_MAJOR(version) ((uint32_t)(version) >> 22U)
```

**VK_API_VERSION_MINOR** extracts the API minor version number from a packed version number:

```c
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

**VK_VERSION_MINOR** extracts the API minor version number from a packed version number:

```c
// Provided by VK_VERSION_1_0
// DEPRECATED: This define is deprecated. VK_API_VERSION_MINOR should be used instead.
#define VK_VERSION_MINOR(version) (((uint32_t)(version) >> 12U) & 0x3FFU)
```

**VK_API_VERSION_PATCH** extracts the API patch version number from a packed version number:

```c
// Provided by VK_VERSION_1_0
#define VK_API_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

**VK_VERSION_PATCH** extracts the API patch version number from a packed version number:

```c
// Provided by VK_VERSION_1_0
// DEPRECATED: This define is deprecated. VK_API_VERSION_PATCH should be used instead.
#define VK_VERSION_PATCH(version) ((uint32_t)(version) & 0xFFFU)
```

**VK_MAKE_API_VERSION** constructs an API version number.

```c
// Provided by VK_VERSION_1_0
#define VK_MAKE_API_VERSION(variant, major, minor, patch) \ 
    (((uint32_t)(variant)) << 29U) | (((uint32_t)(major)) << 22U) | \ 
    (((uint32_t)(minor)) << 12U) | ((uint32_t)(patch))
```
• **variant** is the variant number.
• **major** is the major version number.
• **minor** is the minor version number.
• **patch** is the patch version number.

**VK_MAKE_VERSION** constructs an API version number.

```c
// Provided by VK_VERSION_1_0
// DEPRECATED: This define is deprecated. VK_MAKE_API_VERSION should be used instead.
#define VK_MAKE_VERSION(major, minor, patch) 
   (((uint32_t)(major)) << 22U) | (((uint32_t)(minor)) << 12U) | 
   ((uint32_t)(patch))
```

• **major** is the major version number.
• **minor** is the minor version number.
• **patch** is the patch version number.

**VK_API_VERSION_1_0** returns the API version number for Vulkan 1.0.0.

```c
// Provided by VK_VERSION_1_0
// Vulkan 1.0 version number
#define VK_API_VERSION_1_0 VK_MAKE_API_VERSION(0, 1, 0, 0)// Patch version should always be set to 0
```

**VK_API_VERSION_1_1** returns the API version number for Vulkan 1.1.0.

```c
// Provided by VK_VERSION_1_1
// Vulkan 1.1 version number
#define VK_API_VERSION_1_1 VK_MAKE_API_VERSION(0, 1, 1, 0)// Patch version should always be set to 0
```

**VK_API_VERSION_1_2** returns the API version number for Vulkan 1.2.0.

```c
// Provided by VK_VERSION_1_2
// Vulkan 1.2 version number
#define VK_API_VERSION_1_2 VK_MAKE_API_VERSION(0, 1, 2, 0)// Patch version should always be set to 0
```

**VK_API_VERSION_1_3** returns the API version number for Vulkan 1.3.0.

```c
// Provided by VK_VERSION_1_3
// Vulkan 1.3 version number
#define VK_API_VERSION_1_3 VK_MAKE_API_VERSION(0, 1, 3, 0)// Patch version should always be set to 0
```
46.2.2. Querying Version Support

The version of instance-level functionality can be queried by calling `vkEnumerateInstanceVersion`.

The version of device-level functionality can be queried by calling `vkGetPhysicalDeviceProperties` or `vkGetPhysicalDeviceProperties2`, and is returned in `VkPhysicalDeviceProperties::apiVersion`, encoded as described in Version Numbers.

46.3. Layers

When a layer is enabled, it inserts itself into the call chain for Vulkan commands the layer is interested in. Layers can be used for a variety of tasks that extend the base behavior of Vulkan beyond what is required by the specification - such as call logging, tracing, validation, or providing additional extensions.

Note

For example, an implementation is not expected to check that the value of enums used by the application fall within allowed ranges. Instead, a validation layer would do those checks and flag issues. This avoids a performance penalty during production use of the application because those layers would not be enabled in production.

Note

Vulkan layers may wrap object handles (i.e. return a different handle value to the application than that generated by the implementation). This is generally discouraged, as it increases the probability of incompatibilities with new extensions. The validation layers wrap handles in order to track the proper use and destruction of each object. See the “Architecture of the Vulkan Loader Interfaces” document for additional information.

To query the available layers, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceLayerProperties(  
    uint32_t* pPropertyCount,  
    VkLayerProperties* pProperties);
```

- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkLayerProperties` structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` must point to a variable set by the user to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually
written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of available layers may change at any time due to actions outside of the Vulkan implementation, so two calls to `vkEnumerateInstanceLayerProperties` with the same parameters may return different results, or retrieve different `pPropertyCount` values or `pProperties` contents. Once an instance has been created, the layers enabled for that instance will continue to be enabled and valid for the lifetime of that instance, even if some of them become unavailable for future instances.

### Valid Usage (Implicit)

- VUID-vkEnumerateInstanceLayerProperties-pPropertyCount-parameter
  `pPropertyCount` must be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateInstanceLayerProperties-pProperties-parameter
  If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not NULL, `pProperties` must be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures

### Return Codes

**Success**
- `VK_SUCCESS`
- `VK_INCOMPLETE`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkLayerProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkLayerProperties {
    char layerName[VK_MAX_EXTENSION_NAME_SIZE];
    uint32_t specVersion;
    uint32_t implementationVersion;
    char description[VK_MAX_DESCRIPTION_SIZE];
} VkLayerProperties;
```

- `layerName` is an array of `VK_MAX_EXTENSION_NAME_SIZE` `char` containing a null-terminated UTF-8 string which is the name of the layer. Use this name in the `ppEnabledLayerNames` array passed in the `VkInstanceCreateInfo` structure to enable this layer for an instance.
- `specVersion` is the Vulkan version the layer was written to, encoded as described in Version Numbers.
• **implementationVersion** is the version of this layer. It is an integer, increasing with backward compatible changes.

• **description** is an array of **VK_MAX_DESCRIPTION_SIZE** char containing a null-terminated UTF-8 string which provides additional details that can be used by the application to identify the layer.

**VK_MAX_EXTENSION_NAME_SIZE** is the length in char values of an array containing a layer or extension name string, as returned in **VkLayerProperties::layerName**, **VkExtensionProperties::extensionName**, and other queries.

```c
#define VK_MAX_EXTENSION_NAME_SIZE        256U
```

**VK_MAX_DESCRIPTION_SIZE** is the length in char values of an array containing a string with additional descriptive information about a query, as returned in **VkLayerProperties::description** and other queries.

```c
#define VK_MAX_DESCRIPTION_SIZE           256U
```

To enable a layer, the name of the layer should be added to the **ppEnabledLayerNames** member of **VkInstanceCreateInfo** when creating a **VkInstance**.

Loader implementations may provide mechanisms outside the Vulkan API for enabling specific layers. Layers enabled through such a mechanism are implicitly enabled, while layers enabled by including the layer name in the **ppEnabledLayerNames** member of **VkInstanceCreateInfo** are explicitly enabled. Implicitly enabled layers are loaded before explicitly enabled layers, such that implicitly enabled layers are closer to the application, and explicitly enabled layers are closer to the driver. Except where otherwise specified, implicitly enabled and explicitly enabled layers differ only in the way they are enabled, and the order in which they are loaded. Explicitly enabling a layer that is implicitly enabled results in this layer being loaded as an implicitly enabled layer; it has no additional effect.

### 46.3.1. Device Layer Deprecation

Previous versions of this specification distinguished between instance and device layers. Instance layers were only able to intercept commands that operate on **VkInstance** and **VkPhysicalDevice**, except they were not able to intercept **vkCreateDevice**. Device layers were enabled for individual devices when they were created, and could only intercept commands operating on that device or its child objects.

Device-only layers are now deprecated, and this specification no longer distinguishes between instance and device layers. Layers are enabled during instance creation, and are able to intercept all commands operating on that instance or any of its child objects. At the time of deprecation there were no known device-only layers and no compelling reason to create one.

In order to maintain compatibility with implementations released prior to device-layer deprecation, applications should still enumerate and enable device layers. The behavior of **vkEnumerateDeviceLayerProperties** and valid usage of the **ppEnabledLayerNames** member of **VkDeviceCreateInfo** maximizes compatibility with applications written to work with the previous
To enumerate device layers, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceLayerProperties(
    VkPhysicalDevice physicalDevice,
    uint32_t* pPropertyCount,
    VkLayerProperties* pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pPropertyCount` is a pointer to an integer related to the number of layer properties available or queried.
- `pProperties` is either `NULL` or a pointer to an array of `VkLayerProperties` structures.

If `pProperties` is `NULL`, then the number of layer properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` must point to a variable set by the user to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of layer properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

The list of layers enumerated by `vkEnumerateDeviceLayerProperties` must be exactly the sequence of layers enabled for the instance. The members of `VkLayerProperties` for each enumerated layer must be the same as the properties when the layer was enumerated by `vkEnumerateInstanceLayerProperties`.

**Note**
Due to platform details on Android, `vkEnumerateDeviceLayerProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behaviour will only be observed by layer implementations, and not the underlying Vulkan driver.

**Valid Usage (Implicit)**

- VUID-vkEnumerateDeviceLayerProperties-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkEnumerateDeviceLayerProperties-pPropertyCount-parameter `pPropertyCount` must be a valid pointer to a `uint32_t` value
- VUID-vkEnumerateDeviceLayerProperties-pProperties-parameter If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` must be a valid pointer to an array of `pPropertyCount` `VkLayerProperties` structures
Return Codes

Success
- VK_SUCCESS
- VK_INCOMPLETE

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The `ppEnabledLayerNames` and `enabledLayerCount` members of `VkDeviceCreateInfo` are deprecated and their values **must** be ignored by implementations. However, for compatibility, only an empty list of layers or a list that exactly matches the sequence enabled at instance creation time are valid, and validation layers **should** issue diagnostics for other cases.

Regardless of the enabled layer list provided in `VkDeviceCreateInfo`, the sequence of layers active for a device will be exactly the sequence of layers enabled when the parent instance was created.

46.4. Extensions

Extensions **may** define new Vulkan commands, structures, and enumerants. For compilation purposes, the interfaces defined by registered extensions, including new structures and enumerants as well as function pointer types for new commands, are defined in the Khronos-supplied `vulkan_core.h` together with the core API. However, commands defined by extensions **may** not be available for static linking - in which case function pointers to these commands **should** be queried at runtime as described in Command Function Pointers. Extensions **may** be provided by layers as well as by a Vulkan implementation.

Because extensions **may** extend or change the behavior of the Vulkan API, extension authors **should** add support for their extensions to the Khronos validation layers. This is especially important for new commands whose parameters have been wrapped by the validation layers. See the “Architecture of the Vulkan Loader Interfaces” document for additional information.

Note

To enable an instance extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkInstanceCreateInfo` when creating a `VkInstance`.

To enable a device extension, the name of the extension **can** be added to the `ppEnabledExtensionNames` member of `VkDeviceCreateInfo` when creating a `VkDevice`.

Physical-Device-Level functionality does not have any enabling mechanism and **can** be used as long as the `VkPhysicalDevice` supports the device extension as determined by `vkEnumerateDeviceExtensionProperties`.

Enabling an extension (with no further use of that extension) does not change the behavior of functionality exposed by the core Vulkan API or any other extension,
other than making valid the use of the commands, enums and structures defined by that extension.

Valid Usage sections for individual commands and structures do not currently contain which extensions have to be enabled in order to make their use valid, although they might do so in the future. It is defined only in the Valid Usage for Extensions section.

### 46.4.1. Instance Extensions

Instance extensions add new instance-level functionality to the API, outside of the core specification.

To query the available instance extensions, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkEnumerateInstanceExtensionProperties(
    const char* pLayerName,
    uint32_t* pPropertyCount,
    VkExtensionProperties* pProperties);
```

- `pLayerName` is either `NULL` or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, as described below.
- `pProperties` is either `NULL` or a pointer to an array of `VkExtensionProperties` structures.

When `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the instance extensions provided by that layer are returned.

If `pProperties` is `NULL`, then the number of extensions properties available is returned in `pPropertyCount`. Otherwise, `pPropertyCount` must point to a variable set by the user to the number of elements in the `pProperties` array, and on return the variable is overwritten with the number of structures actually written to `pProperties`. If `pPropertyCount` is less than the number of extension properties available, at most `pPropertyCount` structures will be written, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available properties were returned.

Because the list of available layers may change externally between calls to `vkEnumerateInstanceExtensionProperties`, two calls may retrieve different results if a `pLayerName` is available in one call but not in another. The extensions supported by a layer may also change between two calls, e.g. if the layer implementation is replaced by a different version between those calls.

Implementations must not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.
Valid Usage (Implicit)

- VUID-vkEnumerateInstanceExtensionProperties-pLayerName-parameter
  If `pLayerName` is not NULL, `pLayerName` must be a null-terminated UTF-8 string

- VUID-vkEnumerateInstanceExtensionProperties-pPropertyCount-parameter
  `pPropertyCount` must be a valid pointer to a `uint32_t` value

- VUID-vkEnumerateInstanceExtensionProperties-pProperties-parameter
  If the value referenced by `pPropertyCount` is not 0, and `pProperties` is not NULL, `pProperties` must be a valid pointer to an array of `pPropertyCount` `VkExtensionProperties` structures

Return Codes

Success
- VK_SUCCESS
- VK_INCOMPLETE

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_LAYER_NOT_PRESENT

46.4.2. Device Extensions

Device extensions add new device-level functionality to the API, outside of the core specification.

To query the extensions available to a given physical device, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkEnumerateDeviceExtensionProperties(
    VkPhysicalDevice physicalDevice,
    const char* pLayerName,
    uint32_t* pPropertyCount,
    VkExtensionProperties* pProperties);
```

- `physicalDevice` is the physical device that will be queried.
- `pLayerName` is either NULL or a pointer to a null-terminated UTF-8 string naming the layer to retrieve extensions from.
- `pPropertyCount` is a pointer to an integer related to the number of extension properties available or queried, and is treated in the same fashion as the `vkEnumerateInstanceExtensionProperties` ::`pPropertyCount` parameter.
- `pProperties` is either NULL or a pointer to an array of `VkExtensionProperties` structures.
When `pLayerName` parameter is `NULL`, only extensions provided by the Vulkan implementation or by implicitly enabled layers are returned. When `pLayerName` is the name of a layer, the device extensions provided by that layer are returned.

Implementations **must** not advertise any pair of extensions that cannot be enabled together due to behavioral differences, or any extension that cannot be enabled against the advertised version.

Implementations claiming support for the **Roadmap 2022** profile **must** advertise the `VK_KHR_global_priority` extension in `pProperties`.

---

**Note**

Due to platform details on Android, `vkEnumerateDeviceExtensionProperties` may be called with `physicalDevice` equal to `NULL` during layer discovery. This behaviour will only be observed by layer implementations, and not the underlying Vulkan driver.

---

### Valid Usage (Implicit)

- **VUID-vkEnumerateDeviceExtensionProperties-physicalDevice-parameter**
  
  `physicalDevice` **must** be a valid `VkPhysicalDevice` handle

- **VUID-vkEnumerateDeviceExtensionProperties-pLayerName-parameter**
  
  If `pLayerName` is not `NULL`, `pLayerName` **must** be a null-terminated UTF-8 string

- **VUID-vkEnumerateDeviceExtensionProperties-pPropertyCount-parameter**
  
  `pPropertyCount` **must** be a valid pointer to a `uint32_t` value

- **VUID-vkEnumerateDeviceExtensionProperties-pProperties-parameter**
  
  If the value referenced by `pPropertyCount` is not `0`, and `pProperties` is not `NULL`, `pProperties` **must** be a valid pointer to an array of `pPropertyCount` `VkExtensionProperties` structures

---

### Return Codes

**Success**

- `VK_SUCCESS`
- `VK_INCOMPLETE`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_LAYER_NOT_PRESENT`

---

The `VkExtensionProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkExtensionProperties {
```
char extensionName[VK_MAX_EXTENSION_NAME_SIZE];
uint32_t specVersion;
} VkExtensionProperties;

• extensionName is an array of VK_MAX_EXTENSION_NAME_SIZE char containing a null-terminated UTF-8 string which is the name of the extension.

• specVersion is the version of this extension. It is an integer, incremented with backward compatible changes.

Accessing Device-Level Functionality From a VkPhysicalDevice

Some device extensions also add support for physical-device-level functionality. Physical-device-level functionality can be used, if the required extension is supported as advertised by vkEnumerateDeviceExtensionProperties for a given VkPhysicalDevice.

Accessing Device-Level Functionality From a VkDevice

For commands that are dispatched from a VkDevice, or from a child object of a VkDevice, device extensions must be enabled in vkCreateDevice.

46.5. Extension Dependencies

Some extensions are dependent on other extensions, or on specific core API versions, to function. To enable extensions with dependencies, any required extensions must also be enabled through the same API mechanisms when creating an instance with vkCreateInstance or a device with vkCreateDevice. Each extension which has such dependencies documents them in the appendix summarizing that extension.

If an extension is supported (as queried by vkEnumerateInstanceExtensionProperties or vkEnumerateDeviceExtensionProperties), then required extensions of that extension must also be supported for the same instance or physical device.

Any device extension that has an instance extension dependency that is not enabled by vkCreateInstance is considered to be unsupported, hence it must not be returned by vkEnumerateDeviceExtensionProperties for any VkPhysicalDevice child of the instance. Instance extensions do not have dependencies on device extensions.

If a required extension has been promoted to another extension or to a core API version, then as a general rule, the dependency is also satisfied by the promoted extension or core version. This will be true so long as any features required by the original extension are also required or enabled by the promoted extension or core version. However, in some cases an extension is promoted while making some of its features optional in the promoted extension or core version. In this case, the dependency may not be satisfied. The only way to be certain is to look at the descriptions of the original dependency and the promoted version in the Layers & Extensions and Core Revisions appendices.

Note
There is metadata in vk.xml describing some aspects of promotion, especially
requires, promotedto and deprecatedby attributes of <extension> tags. However, the metadata does not yet fully describe this scenario. In the future, we may extend the XML schema to describe the full set of extensions and versions satisfying a dependency. As discussed in more detail for Promotion below, when an extension is promoted it does not mean that a mechanical substitution of an extension API by the corresponding promoted API will work in exactly the same fashion; be supported at runtime; or even exist.

### 46.6. Compatibility Guarantees (Informative)

This section is marked as informal as there is no binding responsibility on implementations of the Vulkan API - these guarantees are however a contract between the Vulkan Working Group and developers using this Specification.

#### 46.6.1. Core Versions

Each of the major, minor, and patch versions of the Vulkan specification provide different compatibility guarantees.

**Patch Versions**

A difference in the patch version indicates that a set of bug fixes or clarifications have been made to the Specification. Informative enums returned by Vulkan commands that will not affect the runtime behavior of a valid application may be added in a patch version (e.g. VkVendorId).

The specification's patch version is strictly increasing for a given major version of the specification; any change to a specification as described above will result in the patch version being increased by 1. Patch versions are applied to all minor versions, even if a given minor version is not affected by the provoking change.

Specifications with different patch versions but the same major and minor version are fully compatible with each other - such that a valid application written against one will work with an implementation of another.

**Note**

If a patch version includes a bug fix or clarification that could have a significant impact on developer expectations, these will be highlighted in the change log. Generally the Vulkan Working Group tries to avoid these kinds of changes, instead fixing them in either an extension or core version.

**Minor Versions**

Changes in the minor version of the specification indicate that new functionality has been added to the core specification. This will usually include new interfaces in the header, and may also include behavior changes and bug fixes. Core functionality may be deprecated in a minor version, but will not be obsoleted or removed.

The specification's minor version is strictly increasing for a given major version of the
specification; any change to a specification as described above will result in the minor version being increased by 1. Changes that can be accommodated in a patch version will not increase the minor version.

Specifications with a lower minor version are backwards compatible with an implementation of a specification with a higher minor version for core functionality and extensions issued with the KHR vendor tag. Vendor and multi-vendor extensions are not guaranteed to remain functional across minor versions, though in general they are with few exceptions - see Obsoletion for more information.

**Major Versions**

A difference in the major version of specifications indicates a large set of changes which will likely include interface changes, behavioral changes, removal of deprecated functionality, and the modification, addition, or replacement of other functionality.

The specification’s major version is monotonically increasing; any change to the specification as described above will result in the major version being increased. Changes that can be accommodated in a patch or minor version will not increase the major version.

The Vulkan Working Group intends to only issue a new major version of the Specification in order to realise significant improvements to the Vulkan API that will necessarily require breaking compatibility.

A new major version will likely include a wholly new version of the specification to be issued - which could include an overhaul of the versioning semantics for the minor and patch versions. The patch and minor versions of a specification are therefore not meaningful across major versions. If a major version of the specification includes similar versioning semantics, it is expected that the patch and the minor version will be reset to 0 for that major version.

### 46.6.2. Extensions

A KHR extension must be able to be enabled alongside any other KHR extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A multi-vendor extension should be able to be enabled alongside any KHR extension or other multi-vendor extension, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension should be able to be enabled alongside any KHR extension, multi-vendor extension, or other vendor extension from the same vendor, and for any minor or patch version of the core Specification beyond the minimum version it requires. A vendor extension may be able to be enabled alongside vendor extensions from another vendor.

The one other exception to this is if a vendor or multi-vendor extension is made obsolete by either a core version or another extension, which will be highlighted in the extension appendix.

**Promotion**

Extensions, or features of an extension, may be promoted to a new core version of the API, or a newer extension which an equal or greater number of implementors are in favour of.

When extension functionality is promoted, minor changes may be introduced, limited to the
following:

- Naming
- Non-intrusive parameter changes
- Feature advertisement/enablement
- Combining structure parameters into larger structures
- Author ID suffixes changed or removed

**Note**
If extension functionality is promoted, there is no guarantee of direct compatibility, however it should require little effort to port code from the original feature to the promoted one.

The Vulkan Working Group endeavours to ensure that larger changes are marked as either deprecated or obsoleted as appropriate, and can do so retroactively if necessary.

Extensions that are promoted are listed as being promoted in their extension appendices, with reference to where they were promoted to.

When an extension is promoted, any backwards compatibility aliases which exist in the extension will **not** be promoted.

**Note**
As a hypothetical example, if the `VK_KHR_surface` extension were promoted to part of a future core version, the `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR` token defined by that extension would be promoted to `VK_COLOR_SPACE_SRGB_NONLINEAR`. However, the `VK_COLORSPACE_SRGB_NONLINEAR_KHR` token aliases `VK_COLOR_SPACE_SRGB_NONLINEAR_KHR`. The `VK_COLORSPACE_SRGB_NONLINEAR_KHR` would not be promoted, because it is a backwards compatibility alias that exists only due to a naming mistake when the extension was initially published.

**Deprecation**

Extensions **may** be marked as deprecated when the intended use cases either become irrelevant or can be solved in other ways. Generally, a new feature will become available to solve the use case in another extension or core version of the API, but it is not guaranteed.

**Note**
Features that are intended to replace deprecated functionality have no guarantees of compatibility, and applications may require drastic modification in order to make use of the new features.

Extensions that are deprecated are listed as being deprecated in their extension appendices, with an explanation of the deprecation and any features that are relevant.
Obsoletion

Occasionally, an extension will be marked as obsolete if a new version of the core API or a new extension is fundamentally incompatible with it. An obsoleted extension must not be used with the extension or core version that obsoleted it.

Extensions that are obsoleted are listed as being obsoleted in their extension appendices, with reference to what they were obsoleted by.

Aliases

When an extension is promoted or deprecated by a newer feature, some or all of its functionality may be replicated into the newer feature. Rather than duplication of all the documentation and definitions, the specification instead identifies the identical commands and types as aliases of one another. Each alias is mentioned together with the definition it aliases, with the older aliases marked as “equivalents”. Each alias of the same command has identical behavior, and each alias of the same type has identical meaning - they can be used interchangeably in an application with no compatibility issues.

Note

For promoted types, the aliased extension type is semantically identical to the new core type. The C99 headers simply typedef the older aliases to the promoted types.

For promoted command aliases, however, there are two separate entry point definitions, due to the fact that the C99 ABI has no way to alias command definitions without resorting to macros. Calling via either entry point definition will produce identical behavior within the bounds of the specification, and should still invoke the same entry point in the implementation. Debug tools may use separate entry points with different debug behavior; to write the appropriate command name to an output log, for instance.

Special Use Extensions

Some extensions exist only to support a specific purpose or specific class of application. These are referred to as “special use extensions”. Use of these extensions in applications not meeting the special use criteria is not recommended.

Special use cases are restricted, and only those defined below are used to describe extensions:

Table 53. Extension Special Use Cases

<table>
<thead>
<tr>
<th>Special Use</th>
<th>XML Tag</th>
<th>Full Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CAD support</td>
<td>cadsupport</td>
<td>Extension is intended to support specialized functionality used by CAD/CAM applications.</td>
</tr>
<tr>
<td>D3D support</td>
<td>d3demulation</td>
<td>Extension is intended to support D3D emulation layers, and applications ported from D3D, by adding functionality specific to D3D.</td>
</tr>
<tr>
<td>Special Use</td>
<td>XML Tag</td>
<td>Full Description</td>
</tr>
<tr>
<td>--------------------------</td>
<td>------------</td>
<td>-----------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Developer tools</td>
<td>devtools</td>
<td>Extension is intended to support developer tools such as capture-replay libraries.</td>
</tr>
<tr>
<td>Debugging tools</td>
<td>debugging</td>
<td>Extension is intended for use by applications when debugging.</td>
</tr>
<tr>
<td>OpenGL / ES support</td>
<td>glemulation</td>
<td>Extension is intended to support OpenGL and/or OpenGL ES emulation layers, and applications ported from those APIs, by adding functionality specific to those APIs.</td>
</tr>
</tbody>
</table>

Special use extensions are identified in the metadata for each such extension in the Layers & Extensions appendix, using the name in the “Special Use” column above.

Special use extensions are also identified in vk.xml with the short name in “XML Tag” column above, as described in the “API Extensions (extension tag)” section of the registry schema documentation.
Chapter 47. Features

Features describe functionality which is not supported on all implementations. Features are properties of the physical device. Features are optional, and must be explicitly enabled before use. Support for features is reported and enabled on a per-feature basis.

Note

Features are reported via the basic VkPhysicalDeviceFeatures structure, as well as the extensible structure VkPhysicalDeviceFeatures2, which was added in the VK_KHR_get_physical_device_properties2 extension and included in Vulkan 1.1. When new features are added in future Vulkan versions or extensions, each extension should introduce one new feature structure, if needed. This structure can be added to the pNext chain of the VkPhysicalDeviceFeatures2 structure.

For convenience, new core versions of Vulkan may introduce new unified feature structures for features promoted from extensions. At the same time, the extension’s original feature structure (if any) is also promoted to the core API, and is an alias of the extension’s structure. This results in multiple names for the same feature: in the original extension’s feature structure and the promoted structure alias, in the unified feature structure. When a feature was implicitly supported and enabled in the extension, but an explicit name was added during promotion, then the extension itself acts as an alias for the feature as listed in the table below.

All aliases of the same feature in the core API must be reported consistently: either all must be reported as supported, or none of them. When a promoted extension is available, any corresponding feature aliases must be supported.

Table 54. Extension Feature Aliases

<table>
<thead>
<tr>
<th>Extension</th>
<th>Feature(s)</th>
</tr>
</thead>
<tbody>
<tr>
<td>VK_KHR_shader_draw_parameters</td>
<td>shaderDrawParameters</td>
</tr>

<tr>
<td>VK_EXT_sampler_filter_minmax</td>
<td>samplerFilterMinmax</td>
</tr>
<tr>
<td>VK_EXT_shader_viewport_index_layer</td>
<td>shaderOutputViewportIndex, shaderOutputLayer</td>
</tr>
</tbody>
</table>

To query supported features, call:

```c
// Provided by VK_VERSION_1_0
void vkGetPhysicalDeviceFeatures(
    VkPhysicalDevice physicalDevice,
    VkPhysicalDeviceFeatures* pFeatures);
```

- `physicalDevice` is the physical device from which to query the supported features.
- `pFeatures` is a pointer to a VkPhysicalDeviceFeatures structure in which the physical device
features are returned. For each feature, a value of \texttt{VK\_TRUE} specifies that the feature is supported on this physical device, and \texttt{VK\_FALSE} specifies that the feature is not supported.

**Valid Usage (Implicit)**

- VUID-vkGetPhysicalDeviceFeatures-physicalDevice-parameter \texttt{physicalDevice} must be a valid \texttt{VkPhysicalDevice} handle

- VUID-vkGetPhysicalDeviceFeatures-pFeatures-parameter \texttt{pFeatures} must be a valid pointer to a \texttt{VkPhysicalDeviceFeatures} structure

Fine-grained features used by a logical device must be enabled at \texttt{VkDevice} creation time. If a feature is enabled that the physical device does not support, \texttt{VkDevice} creation will fail and return \texttt{VK\_ERROR\_FEATURE\_NOT\_PRESENT}.

The fine-grained features are enabled by passing a pointer to the \texttt{VkPhysicalDeviceFeatures} structure via the \texttt{pEnabledFeatures} member of the \texttt{VkDeviceCreateInfo} structure that is passed into the \texttt{vkCreateDevice} call. If a member of \texttt{pEnabledFeatures} is set to \texttt{VK\_TRUE} or \texttt{VK\_FALSE}, then the device will be created with the indicated feature enabled or disabled, respectively. Features can also be enabled by using the \texttt{VkPhysicalDeviceFeatures2} structure.

If an application wishes to enable all features supported by a device, it can simply pass in the \texttt{VkPhysicalDeviceFeatures} structure that was previously returned by \texttt{vkGetPhysicalDeviceFeatures}. To disable an individual feature, the application can set the desired member to \texttt{VK\_FALSE} in the same structure. Setting \texttt{pEnabledFeatures} to \texttt{NULL} and not including a \texttt{VkPhysicalDeviceFeatures2} in the \texttt{pNext} chain of \texttt{VkDeviceCreateInfo} is equivalent to setting all members of the structure to \texttt{VK\_FALSE}.

**Note**

Some features, such as \texttt{robustBufferAccess}, may incur a runtime performance cost. Application writers should carefully consider the implications of enabling all supported features.

To query supported features defined by the core or extensions, call:

```c
// Provided by VK\_VERSION\_1\_1
void vkGetPhysicalDeviceFeatures2(
    VkPhysicalDevice physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```

or the equivalent command

```c
// Provided by VK\_KHR\_get\_physical\_device\_properties2
void vkGetPhysicalDeviceFeatures2KHR(
    VkPhysicalDevice physicalDevice,
    VkPhysicalDeviceFeatures2* pFeatures);
```
• **physicalDevice** is the physical device from which to query the supported features.

• **pFeatures** is a pointer to a `VkPhysicalDeviceFeatures2` structure in which the physical device features are returned.

Each structure in `pFeatures` and its `pNext` chain contains members corresponding to fine-grained features. `vkGetPhysicalDeviceFeatures2` writes each member to a boolean value indicating whether that feature is supported.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFeatures2-physicalDevice-parameter
  `physicalDevice` must be a valid `VkPhysicalDevice` handle

- VUID-vkGetPhysicalDeviceFeatures2-pFeatures-parameter
  `pFeatures` must be a valid pointer to a `VkPhysicalDeviceFeatures2` structure

The `VkPhysicalDeviceFeatures2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceFeatures2 {
    VkStructureType sType;
    void* pNext;
    VkPhysicalDeviceFeatures features;
} VkPhysicalDeviceFeatures2;
```

or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkPhysicalDeviceFeatures2 VkPhysicalDeviceFeatures2KHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **features** is a `VkPhysicalDeviceFeatures` structure describing the fine-grained features of the Vulkan 1.0 API.

The `pNext` chain of this structure is used to extend the structure with features defined by extensions. This structure **can** be used in `vkGetPhysicalDeviceFeatures2` or **can** be included in the `pNext` chain of a `VkDeviceCreateInfo` structure, in which case it controls which features are enabled on the device in lieu of `pEnabledFeatures`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFeatures2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2`
The `VkPhysicalDeviceFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceFeatures {
    VkBool32 robustBufferAccess;
    VkBool32 fullDrawIndexUint32;
    VkBool32 imageCubeArray;
    VkBool32 independentBlend;
    VkBool32 geometryShader;
    VkBool32 tessellationShader;
    VkBool32 sampleRateShading;
    VkBool32 dualSrcBlend;
    VkBool32 logicOp;
    VkBool32 multiDrawIndirect;
    VkBool32 drawIndirectFirstInstance;
    VkBool32 depthClamp;
    VkBool32 depthBiasClamp;
    VkBool32 fillModeNonSolid;
    VkBool32 depthBounds;
    VkBool32 wideLines;
    VkBool32 largePoints;
    VkBool32 alphaToOne;
    VkBool32 multiViewport;
    VkBool32 samplerAnisotropy;
    VkBool32 textureCompressionETC2;
    VkBool32 textureCompressionASTC_LDR;
    VkBool32 textureCompressionBC;
    VkBool32 occlusionQueryPrecise;
    VkBool32 pipelineStatisticsQuery;
    VkBool32 vertexPipelineStoresAndAtomics;
    VkBool32 fragmentStoresAndAtomics;
    VkBool32 shaderTessellationAndGeometryPointSize;
    VkBool32 shaderImageGatherExtended;
    VkBool32 shaderStorageImageExtendedFormats;
    VkBool32 shaderStorageImageMultisample;
    VkBool32 shaderStorageImageReadWriteWithoutFormat;
    VkBool32 shaderUniformBufferArrayDynamicIndexing;
    VkBool32 shaderSampledImageArrayDynamicIndexing;
    VkBool32 shaderStorageBufferArrayDynamicIndexing;
    VkBool32 shaderStorageImageArrayDynamicIndexing;
    VkBool32 shaderClipDistance;
    VkBool32 shaderCullDistance;
    VkBool32 shaderFloat64;
    VkBool32 shaderInt64;
    VkBool32 shaderInt16;
    VkBool32 shaderResourceResidency;
    VkBool32 shaderResourceMinLod;
    VkBool32 sparseBinding;
    VkBool32 sparseResidencyBuffer;
};
```
This structure describes the following features:

- **robustBufferAccess** specifies that accesses to buffers are bounds-checked against the range of the buffer descriptor (as determined by \( \text{VkDescriptorBufferInfo}::\text{range} \), \( \text{VkBufferViewCreateInfo}::\text{range} \), or the size of the buffer). Out of bounds accesses must not cause application termination, and the effects of shader loads, stores, and atomics must conform to an implementation-dependent behavior as described below.
  
  - A buffer access is considered to be out of bounds if any of the following are true:
    
    - The pointer was formed by \( \text{OpImageTexelPointer} \) and the coordinate is less than zero or greater than or equal to the number of whole elements in the bound range.
    
    - The pointer was not formed by \( \text{OpImageTexelPointer} \) and the object pointed to is not wholly contained within the bound range. This includes accesses performed via \text{variable pointers} where the buffer descriptor being accessed cannot be statically determined. Uninitialized pointers and pointers equal to \( \text{OpConstantNull} \) are treated as pointing to a zero-sized object, so all accesses through such pointers are considered to be out of bounds. Buffer accesses through buffer device addresses are not bounds-checked.
    
    - If the \( \text{VkPhysicalDeviceCooperativeMatrixFeaturesNV}::\text{cooperativeMatrixRobustBufferAccess} \) feature is not enabled, then accesses using \( \text{OpCooperativeMatrixLoadNV} \) and \( \text{OpCooperativeMatrixStoreNV} \) may not be bounds-checked.
    
    - If the \( \text{VkPhysicalDeviceCooperativeMatrixFeaturesKHR}::\text{cooperativeMatrixRobustBufferAccess} \) feature is not enabled, then accesses using \( \text{OpCooperativeMatrixLoadKHR} \) and \( \text{OpCooperativeMatrixStoreKHR} \) may not be bounds-checked.

  - If robustBufferAccess2 is not enabled and any buffer access is determined to be out of bounds, then any other access of the same type (load, store, or atomic) to the same buffer that accesses an address less than 16 bytes away from the out of bounds address may also be considered out of bounds.

  - **Note**

    If a SPIR-V \( \text{OpLoad} \) instruction loads a structure and the tail end of the structure is out of bounds, then all members of the structure are considered out of bounds even if the members at the end are not statically used.
If the access is a load that reads from the same memory locations as a prior store in the same shader invocation, with no other intervening accesses to the same memory locations in that shader invocation, then the result of the load may be the value stored by the store instruction, even if the access is out of bounds. If the load is Volatile, then an out of bounds load must return the appropriate out of bounds value.

Accesses to descriptors written with a VK_NULL_HANDLE resource or view are not considered to be out of bounds. Instead, each type of descriptor access defines a specific behavior for accesses to a null descriptor.

Out-of-bounds buffer loads will return any of the following values:

- If the access is to a uniform buffer and robustBufferAccess2 is enabled, loads of offsets between the end of the descriptor range and the end of the descriptor range rounded up to a multiple of robustUniformBufferAccessSizeAlignment bytes must return either zero values or the contents of the memory at the offset being loaded. Loads of offsets past the descriptor range rounded up to a multiple of robustUniformBufferAccessSizeAlignment bytes must return zero values.

- If the access is to a storage buffer and robustBufferAccess2 is enabled, loads of offsets between the end of the descriptor range and the end of the descriptor range rounded up to a multiple of robustStorageBufferAccessSizeAlignment bytes must return either zero values or the contents of the memory at the offset being loaded. Loads of offsets past the descriptor range rounded up to a multiple of robustStorageBufferAccessSizeAlignment bytes must return zero values. Similarly, stores to addresses between the end of the descriptor range and the end of the descriptor range rounded up to a multiple of robustStorageBufferAccessSizeAlignment bytes may be discarded.

- Non-atomic accesses to storage buffers that are a multiple of 32 bits may be decomposed into 32-bit accesses that are individually bounds-checked.

- If the access is to an index buffer and robustBufferAccess2 is enabled, zero values must be returned.

- If the access is to a uniform texel buffer or storage texel buffer and robustBufferAccess2 is enabled, zero values must be returned, and then Conversion to RGBA is applied based on the buffer view's format.

- Values from anywhere within the memory range(s) bound to the buffer (possibly including bytes of memory past the end of the buffer, up to the end of the bound range).

- Zero values, or (0,0,0,x) vectors for vector reads where x is a valid value represented in the type of the vector components and may be any of:
  - 0, 1, or the maximum representable positive integer value, for signed or unsigned integer components
  - 0.0 or 1.0, for floating-point components

Out-of-bounds writes may modify values within the memory range(s) bound to the buffer, but must not modify any other memory.

- If robustBufferAccess2 is enabled, out of bounds writes must not modify any memory.

Out-of-bounds atomics may modify values within the memory range(s) bound to the buffer, but must not modify any other memory, and return an undefined value.
If robustBufferAccess2 is enabled, out of bounds atomics must not modify any memory, and return an undefined value.

- If robustBufferAccess2 is disabled, vertex input attributes are considered out of bounds if the offset of the attribute in the bound vertex buffer range plus the size of the attribute is greater than either:
  - vertexBufferRangeSize, if bindingStride == 0; or
  - (vertexBufferRangeSize - (vertexBufferRangeSize % bindingStride))

where vertexBufferRangeSize is the byte size of the memory range bound to the vertex buffer binding and bindingStride is the byte stride of the corresponding vertex input binding. Further, if any vertex input attribute using a specific vertex input binding is out of bounds, then all vertex input attributes using that vertex input binding for that vertex shader invocation are considered out of bounds.

- If a vertex input attribute is out of bounds, it will be assigned one of the following values:
  - Values from anywhere within the memory range(s) bound to the buffer, converted according to the format of the attribute.
  - Zero values, format converted according to the format of the attribute.
  - Zero values, or (0,0,0,x) vectors, as described above.

- If robustBufferAccess2 is enabled, vertex input attributes are considered out of bounds if the offset of the attribute in the bound vertex buffer range plus the size of the attribute is greater than the byte size of the memory range bound to the vertex buffer binding.

- If a vertex input attribute is out of bounds, the raw data extracted are zero values, and missing G, B, or A components are filled with (0,0,1).

- If robustBufferAccess is not enabled, applications must not perform out of bounds accesses except under the conditions enabled by the pipelineRobustness feature.

- fullDrawIndexUint32 specifies the full 32-bit range of indices is supported for indexed draw calls when using a VkIndexType of VK_INDEX_TYPE_UINT32. maxDrawIndexedIndexValue is the maximum index value that may be used (aside from the primitive restart index, which is always $2^{32} - 1$ when the VkIndexType is VK_INDEX_TYPE_UINT32). If this feature is supported, maxDrawIndexedIndexValue must be $2^{32} - 1$; otherwise it must be no smaller than $2^{24} - 1$. See maxDrawIndexedIndexValue.

- imageCubeArray specifies whether image views with a VkImageViewType of VK_IMAGE_VIEW_TYPE_CUBE_ARRAY can be created, and that the corresponding SampledCubeArray and ImageCubeArray SPIR-V capabilities can be used in shader code.

- independentBlend specifies whether the VkPipelineColorBlendAttachmentState settings are controlled independently per-attachment. If this feature is not enabled, the VkPipelineColorBlendAttachmentState settings for all color attachments must be identical. Otherwise, a different VkPipelineColorBlendAttachmentState can be provided for each bound color attachment.

- geometryShader specifies whether geometry shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_GEOMETRY_BIT and VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT enum values must
not be used. This also specifies whether shader modules can declare the Geometry capability.

- **tessellationShader** specifies whether tessellation control and evaluation shaders are supported. If this feature is not enabled, the `VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT`, `VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT`, `VK_PIPELINE_STAGE_TESSELLATION_CONTROL_SHADER_BIT`, `VK_PIPELINE_STAGE_TESSELLATION_EVALUATION_SHADER_BIT`, and `VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_STATE_CREATE_INFO` enum values must not be used. This also specifies whether shader modules can declare the Tessellation capability.

- **sampleRateShading** specifies whether Sample Shading and multisample interpolation are supported. If this feature is not enabled, the `sampleShadingEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure must be set to `VK_FALSE` and the `minSampleShading` member is ignored. This also specifies whether shader modules can declare the SampleRateShading capability.

- **dualSrcBlend** specifies whether blend operations which take two sources are supported. If this feature is not enabled, the `VK_BLEND_FACTOR_SRC1_COLOR`, `VK_BLEND_FACTOR_ONE_MINUS_SRC1_COLOR`, `VK_BLEND_FACTOR_SRC1_ALPHA`, and `VK_BLEND_FACTOR_ONE_MINUS_SRC1_ALPHA` enum values must not be used as source or destination blending factors. See Dual-Source Blending.

- **logicOp** specifies whether logic operations are supported. If this feature is not enabled, the `logicOpEnable` member of the `VkPipelineColorBlendStateCreateInfo` structure must be set to `VK_FALSE`, and the `logicOp` member is ignored.

- **multiDrawIndirect** specifies whether multiple draw indirect is supported. If this feature is not enabled, the `drawCount` parameter to the `vkCmdDrawIndirect` and `vkCmdDrawIndexedIndirect` commands must be 0 or 1. The `maxDrawIndirectCount` member of the `VkPhysicalDeviceLimits` structure must also be 1 if this feature is not supported. See maxDrawIndirectCount.

- **drawIndirectFirstInstance** specifies whether indirect drawing calls support the `firstInstance` parameter. If this feature is not enabled, the `firstInstance` member of all `VkDrawIndirectCommand` and `VkDrawIndexedIndirectCommand` structures that are provided to the `vkCmdDrawIndirect` and `vkCmdDrawIndexedIndirect` commands must be 0.

- **depthClamp** specifies whether depth clamping is supported. If this feature is not enabled, the `depthClampEnable` member of the `VkPipelineRasterizationStateCreateInfo` structure must be set to `VK_FALSE`. Otherwise, setting `depthClampEnable` to `VK_TRUE` will enable depth clamping.

- **depthBiasClamp** specifies whether depth bias clamping is supported. If this feature is not enabled, the `depthBiasClamp` member of the `VkPipelineRasterizationStateCreateInfo` structure must be set to 0.0 unless the `VK_DYNAMIC_STATE_DEPTH_BIAS` dynamic state is enabled, and the `depthBiasClamp` parameter to `vkCmdSetDepthBias` must be set to 0.0.

- **fillModeNonSolid** specifies whether point and wireframe fill modes are supported. If this feature is not enabled, the `VK_POLYGON_MODE_POINT` and `VK_POLYGON_MODE_LINE` enum values must not be used.

- **depthBounds** specifies whether depth bounds tests are supported. If this feature is not enabled, the `depthBoundsTestEnable` member of the `VkPipelineDepthStencilStateCreateInfo` structure must be set to `VK_FALSE`. When `depthBoundsTestEnable` is set to `VK_FALSE`, the `minDepthBounds` and `maxDepthBounds` members of the `VkPipelineDepthStencilStateCreateInfo` structure are ignored.

- **wideLines** specifies whether lines with width other than 1.0 are supported. If this feature is not
enabled, the `lineWidth` member of the `VkPipelineRasterizationStateCreateInfo` structure must be set to 1.0 unless the `VK_DYNAMIC_STATE_LINE_WIDTH` dynamic state is enabled, and the `lineWidth` parameter to `vkCmdSetLineWidth` must be set to 1.0. When this feature is supported, the range and granularity of supported line widths are indicated by the `lineWidthRange` and `lineWidthGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.

- `largePoints` specifies whether points with size greater than 1.0 are supported. If this feature is not enabled, only a point size of 1.0 written by a shader is supported. The range and granularity of supported point sizes are indicated by the `pointSizeRange` and `pointSizeGranularity` members of the `VkPhysicalDeviceLimits` structure, respectively.

- `alphaToOne` specifies whether the implementation is able to replace the alpha value of the fragment shader color output in the `Multisample Coverage` fragment operation. If this feature is not enabled, then the `alphaToOneEnable` member of the `VkPipelineMultisampleStateCreateInfo` structure must be set to `VK_FALSE`. Otherwise setting `alphaToOneEnable` to `VK_TRUE` will enable alpha-to-one behavior.

- `multiViewport` specifies whether more than one viewport is supported. If this feature is not enabled:
  - The `viewportCount` and `scissorCount` members of the `VkPipelineViewportStateCreateInfo` structure must be set to 1.
  - The `firstViewport` and `viewportCount` parameters to the `vkCmdSetViewport` command must be set to 0 and 1, respectively.
  - The `firstScissor` and `scissorCount` parameters to the `vkCmdSetScissor` command must be set to 0 and 1, respectively.
  - The `exclusiveScissorCount` member of the `VkPipelineViewportExclusiveScissorStateCreateInfoNV` structure must be set to 0 or 1.
  - The `firstExclusiveScissor` and `exclusiveScissorCount` parameters to the `vkCmdSetExclusiveScissorNV` command must be set to 0 and 1, respectively.

- `samplerAnisotropy` specifies whether anisotropic filtering is supported. If this feature is not enabled, the `anisotropyEnable` member of the `VkSamplerCreateInfo` structure must be `VK_FALSE`.

- `textureCompressionETC2` specifies whether all of the ETC2 and EAC compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features must be supported in `optimalTilingFeatures` for the following formats:
  - `VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK`
  - `VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK`
  - `VK_FORMAT_EAC_R11_UNORM_BLOCK`
  - `VK_FORMAT_EAC_R11_SNORM_BLOCK`
• VK_FORMAT_EAC_R11G11_UNORM_BLOCK
• VK_FORMAT_EAC_R11G11_SNORM_BLOCK

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` can be used to check for supported properties of individual formats as normal.

• `textureCompressionASTC_LDR` specifies whether all of the ASTC LDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features must be supported in `optimalTilingFeatures` for the following formats:

  ◦ VK_FORMAT_ASTC_4x4_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_4x4_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_5x4_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_5x4_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_5x5_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_5x5_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_6x5_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_6x5_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_6x6_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_6x6_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_8x5_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_8x5_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_8x6_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_8x6_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_8x8_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_8x8_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_10x5_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_10x5_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_10x6_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_10x6_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_10x8_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_10x8_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_10x10_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_10x10_SRGB_BLOCK
  ◦ VK_FORMAT_ASTC_12x10_UNORM_BLOCK
  ◦ VK_FORMAT_ASTC_12x10_SRGB_BLOCK
• textureCompressionBC specifies whether all of the BC compressed texture formats are supported. If this feature is enabled, then the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features must be supported in optimalTilingFeatures for the following formats:

  - VK_FORMAT_BC1_RGB_UNORM_BLOCK
  - VK_FORMAT_BC1_RGB_SRGB_BLOCK
  - VK_FORMAT_BC1_RGBA_UNORM_BLOCK
  - VK_FORMAT_BC1_RGBA_SRGB_BLOCK
  - VK_FORMAT_BC2_UNORM_BLOCK
  - VK_FORMAT_BC2_SRGB_BLOCK
  - VK_FORMAT_BC3_UNORM_BLOCK
  - VK_FORMAT_BC3_SRGB_BLOCK
  - VK_FORMAT_BC4_UNORM_BLOCK
  - VK_FORMAT_BC4_SNORM_BLOCK
  - VK_FORMAT_BC5_UNORM_BLOCK
  - VK_FORMAT_BC5_SNORM_BLOCK
  - VK_FORMAT_BC6H_UFLOAT_BLOCK
  - VK_FORMAT_BC6H_SFLOAT_BLOCK
  - VK_FORMAT_BC7_UNORM_BLOCK
  - VK_FORMAT_BC7_SRGB_BLOCK

To query for additional properties, or if the feature is not enabled, vkGetPhysicalDeviceFormatProperties and vkGetPhysicalDeviceImageFormatProperties can be used to check for supported properties of individual formats as normal.

• occlusionQueryPrecise specifies whether occlusion queries returning actual sample counts are supported. Occlusion queries are created in a VkQueryPool by specifying the queryType of VK_QUERY_TYPE_OCCLUSION in the VkQueryPoolCreateInfo structure which is passed to vkCreateQueryPool. If this feature is enabled, queries of this type can enable VK_QUERY_CONTROL_PRECISE_BIT in the flags parameter to vkCmdBeginQuery. If this feature is not supported, the implementation supports only boolean occlusion queries. When any samples are passed, boolean queries will return a non-zero result value, otherwise a result value of zero is returned. When this feature is enabled and VK_QUERY_CONTROL_PRECISE_BIT is set, occlusion queries will report the actual number of samples passed.

• pipelineStatisticsQuery specifies whether the pipeline statistics queries are supported. If this
feature is not enabled, queries of type VK_QUERY_TYPE_PIPELINE_STATISTICS cannot be created, and none of the VkQueryPipelineStatisticFlagBits bits can be set in the pipelineStatistics member of the VkQueryPoolCreateInfo structure.

- **vertexPipelineStoresAndAtomics** specifies whether storage buffers and images support stores and atomic operations in the vertex, tessellation, and geometry shader stages. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by these stages in shader modules must be decorated with the NonWritable decoration (or the readonly memory qualifier in GLSL).

- **fragmentStoresAndAtomics** specifies whether storage buffers and images support stores and atomic operations in the fragment shader stage. If this feature is not enabled, all storage image, storage texel buffer, and storage buffer variables used by the fragment stage in shader modules must be decorated with the NonWritable decoration (or the readonly memory qualifier in GLSL).

- **shaderTessellationAndGeometryPointSize** specifies whether the PointSize built-in decoration is available in the tessellation control, tessellation evaluation, and geometry shader stages. If this feature is not enabled, members decorated with the PointSize built-in decoration must not be read from or written to and all points written from a tessellation or geometry shader will have a size of 1.0. This also specifies whether shader modules can declare the TessellationPointSize capability for tessellation control and evaluation shaders, or if the shader modules can declare the GeometryPointSize capability for geometry shaders. An implementation supporting this feature must also support one or both of the tessellationShader or geometryShader features.

- **shaderImageGatherExtended** specifies whether the extended set of image gather instructions are available in shader code. If this feature is not enabled, the OpImage*Gather instructions do not support the Offset and ConstOffsets operands. This also specifies whether shader modules can declare the ImageGatherExtended capability.

- **shaderStorageImageExtendedFormats** specifies whether all the “storage image extended formats” below are supported; if this feature is supported, then the VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT must be supported in optimalTilingFeatures for the following formats:

  - VK_FORMAT_R16G16_SFLOAT
  - VK_FORMAT_B10G11R11_UFLOAT_PACK32
  - VK_FORMAT_R16_SFLOAT
  - VK_FORMAT_R16G16B16A16_UNORM
  - VK_FORMAT_A2B10G10R10_UNORM_PACK32
  - VK_FORMAT_R16G16B16A16_SNORM
  - VK_FORMAT_R16G16_SNORM
  - VK_FORMAT_R8G8_SNORM
  - VK_FORMAT_R16_SNORM
  - VK_FORMAT_R8G8_UNORM
  - VK_FORMAT_R16_UNORM
  - VK_FORMAT_R8_UNORM
  - VK_FORMAT_R16G16B16A16_SNORM
  - VK_FORMAT_R16G16_SNORM
  - VK_FORMAT_R8G8_SNORM
  - VK_FORMAT_R16_SNORM
- VK_FORMAT_R8_SNORM
- VK_FORMAT_R16G16_SINT
- VK_FORMAT_R8G8_SINT
- VK_FORMAT_R16_SINT
- VK_FORMAT_R8_SINT
- VK_FORMAT_A2B10G10R10_UINT_PACK32
- VK_FORMAT_R16G16_UINT
- VK_FORMAT_R8G8_UINT
- VK_FORMAT_R16_UINT
- VK_FORMAT_R8_UINT

Note

`shaderStorageImageExtendedFormats` feature only adds a guarantee of format support, which is specified for the whole physical device. Therefore enabling or disabling the feature via `vkCreateDevice` has no practical effect.

To query for additional properties, or if the feature is not supported, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` can be used to check for supported properties of individual formats, as usual rules allow.

`VK_FORMAT_R32G32_UINT`, `VK_FORMAT_R32G32_SINT`, and `VK_FORMAT_R32G32_SFLOAT` from `StorageImageExtendedFormats` SPIR-V capability, are already covered by core Vulkan mandatory format support.

- `shaderStorageImageMultisample` specifies whether multisampled storage images are supported. If this feature is not enabled, images that are created with a `usage` that includes `VK_IMAGE_USAGE_STORAGE_BIT` must be created with `samples` equal to `VK_SAMPLE_COUNT_1_BIT`. This also specifies whether shader modules can declare the `StorageImageMultisample` and `ImageMSArray` capabilities.

- `shaderStorageImageReadWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when reading. `shaderStorageImageReadWithoutFormat` applies only to formats listed in the `storage without format` list.

- `shaderStorageImageWriteWithoutFormat` specifies whether storage images and storage texel buffers require a format qualifier to be specified when writing. `shaderStorageImageWriteWithoutFormat` applies only to formats listed in the `storage without format` list.

- `shaderUniformBufferArrayDynamicIndexing` specifies whether arrays of uniform buffers can be indexed by `dynamically uniform` integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules can declare the `UniformBufferArrayDynamicIndexing` capability.
• **shaderSampledImageArrayDynamicIndexing** specifies whether arrays of samplers or sampled images can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules can declare the `SampledImageArrayDynamicIndexing` capability.

• **shaderStorageBufferArrayDynamicIndexing** specifies whether arrays of storage buffers can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules can declare the `StorageBufferArrayDynamicIndexing` capability.

• **shaderStorageImageArrayDynamicIndexing** specifies whether arrays of storage images can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also specifies whether shader modules can declare the `StorageImageArrayDynamicIndexing` capability.

• **shaderClipDistance** specifies whether clip distances are supported in shader code. If this feature is not enabled, any members decorated with the `ClipDistance` built-in decoration must not be read from or written to in shader modules. This also specifies whether shader modules can declare the `ClipDistance` capability.

• **shaderCullDistance** specifies whether cull distances are supported in shader code. If this feature is not enabled, any members decorated with the `CullDistance` built-in decoration must not be read from or written to in shader modules. This also specifies whether shader modules can declare the `CullDistance` capability.

• **shaderFloat64** specifies whether 64-bit floats (doubles) are supported in shader code. If this feature is not enabled, 64-bit floating-point types must not be used in shader code. This also specifies whether shader modules can declare the `Float64` capability. Declaring and using 64-bit floats is enabled for all storage classes that SPIR-V allows with the `Float64` capability.

• **shaderInt64** specifies whether 64-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 64-bit integer types must not be used in shader code. This also specifies whether shader modules can declare the `Int64` capability. Declaring and using 64-bit integers is enabled for all storage classes that SPIR-V allows with the `Int64` capability.

• **shaderInt16** specifies whether 16-bit integers (signed and unsigned) are supported in shader code. If this feature is not enabled, 16-bit integer types must not be used in shader code. This also specifies whether shader modules can declare the `Int16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int16` SPIR-V capability: Declaring and using 16-bit integers in the `Private, Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant, Uniform, StorageBuffer, Input, Output, and PushConstant`) is not enabled.

• **shaderResourceResidency** specifies whether image operations that return resource residency information are supported in shader code. If this feature is not enabled, the `OpImageSparse*` instructions must not be used in shader code. This also specifies whether shader modules can declare the `SparseResidency` capability. The feature requires at least one of the `sparseResidency*`
features to be supported.

- **shaderResourceMinLod** specifies whether image operations specifying the minimum resource LOD are supported in shader code. If this feature is not enabled, the MinLod image operand must not be used in shader code. This also specifies whether shader modules can declare the MinLod capability.

- **sparseBinding** specifies whether resource memory can be managed at opaque sparse block level instead of at the object level. If this feature is not enabled, resource memory must be bound only on a per-object basis using the `vkBindBufferMemory` and `vkBindImageMemory` commands. In this case, buffers and images must not be created with `VK_BUFFER_CREATE_SPARSE_BINDING_BIT` and `VK_IMAGE_CREATE_SPARSE_BINDING_BIT` set in the `flags` member of the `VkBufferCreateInfo` and `VkImageCreateInfo` structures, respectively. Otherwise resource memory can be managed as described in Sparse Resource Features.

- **sparseResidencyBuffer** specifies whether the device can access partially resident buffers. If this feature is not enabled, buffers must not be created with `VK_BUFFER_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkBufferCreateInfo` structure.

- **sparseResidencyImage2D** specifies whether the device can access partially resident 2D images with 1 sample per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_1_BIT` must not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- **sparseResidencyImage3D** specifies whether the device can access partially resident 3D images. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_3D` must not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- **sparseResidency2Samples** specifies whether the physical device can access partially resident 2D images with 2 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_2_BIT` must not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- **sparseResidency4Samples** specifies whether the physical device can access partially resident 2D images with 4 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_4_BIT` must not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- **sparseResidency8Samples** specifies whether the physical device can access partially resident 2D images with 8 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_8_BIT` must not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.

- **sparseResidency16Samples** specifies whether the physical device can access partially resident 2D images with 16 samples per pixel. If this feature is not enabled, images with an `imageType` of `VK_IMAGE_TYPE_2D` and `samples` set to `VK_SAMPLE_COUNT_16_BIT` must not be created with `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT` set in the `flags` member of the `VkImageCreateInfo` structure.
• **sparseResidencyAliased** specifies whether the physical device **can** correctly access data aliased into multiple locations. If this feature is not enabled, the `VK_BUFFER_CREATE_SPARSE_ALIASED_BIT` and `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` enum values **must** not be used in flags members of the `VkBufferCreateInfo` and `VkImageCreateInfo` structures, respectively.

• **variableMultisampleRate** specifies whether all pipelines that will be bound to a command buffer during a subpass which uses no attachments **must** have the same value for `VkPipelineMultisampleStateCreateInfo::rasterizationSamples`. If set to `VK_TRUE`, the implementation supports variable multisample rates in a subpass which uses no attachments. If set to `VK_FALSE`, then all pipelines bound in such a subpass **must** have the same multisample rate. This has no effect in situations where a subpass uses any attachments.

• **inheritedQueries** specifies whether a secondary command buffer **may** be executed while a query is active.

The `VkPhysicalDeviceVulkan11Features` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan11Features {
    VkStructureType sType;
    void* pNext;
    VkBool32 storageBuffer16BitAccess;
    VkBool32 uniformAndStorageBuffer16BitAccess;
    VkBool32 storagePushConstant16;
    VkBool32 storageInputOutput16;
    VkBool32 multiview;
    VkBool32 multiviewGeometryShader;
    VkBool32 multiviewTessellationShader;
    VkBool32 variablePointersStorageBuffer;
    VkBool32 variablePointers;
    VkBool32 protectedMemory;
    VkBool32 samplerYcbcrConversion;
    VkBool32 shaderDrawParameters;
} VkPhysicalDeviceVulkan11Features;
```

This structure describes the following features:

• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **storageBuffer16BitAccess** specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `StorageBuffer16BitAccess` capability.

• **uniformAndStorageBuffer16BitAccess** specifies whether objects in the `Uniform` storage class with the `Block` decoration **can** have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members **must** not be used in such objects. This also specifies whether shader modules **can** declare the `UniformAndStorageBuffer16BitAccess`
- **storagePushConstant16** specifies whether objects in the PushConstant storage class can have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members must not be used in such objects. This also specifies whether shader modules can declare the StoragePushConstant16 capability.

- **storageInputOutput16** specifies whether objects in the Input and Output storage classes can have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members must not be used in such objects. This also specifies whether shader modules can declare the StorageInputOutput16 capability.

- **multiview** specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass must always be zero.

- **multiviewGeometryShader** specifies whether the implementation supports multiview rendering within a render pass, with geometry shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask must not include a geometry shader.

- **multiviewTessellationShader** specifies whether the implementation supports multiview rendering within a render pass, with tessellation shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask must not include any tessellation shaders.

- **variablePointersStorageBuffer** specifies whether the implementation supports the SPIR-V VariablePointersStorageBuffer capability. When this feature is not enabled, shader modules must not declare the SPV_KHR_variable_pointers extension or the VariablePointersStorageBuffer capability.

- **variablePointers** specifies whether the implementation supports the SPIR-V VariablePointers capability. When this feature is not enabled, shader modules must not declare the VariablePointers capability.

- **protectedMemory** specifies whether protected memory is supported.

- **samplerYcbcrConversion** specifies whether the implementation supports sampler Y’C_bC_r conversion. If samplerYcbcrConversion is VK_FALSE, sampler Y’C_bC_r conversion is not supported, and samplers using sampler Y’C_bC_r conversion must not be used.

- **shaderDrawParameters** specifies whether the implementation supports the SPIR-V DrawParameters capability. When this feature is not enabled, shader modules must not declare the SPV_KHR_shader_draw_parameters extension or the DrawParameters capability.

If the VkPhysicalDeviceVulkan11Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceVulkan11Features can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan11Features-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_1_FEATURES

3550
The `VkPhysicalDeviceVulkan12Features` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceVulkan12Features {
    VkStructureType sType;

    VkBool32 vulkanMemoryModelDeviceScope;
    VkBool32 vulkanMemoryModelAvailabilityVisibilityChains;
};
```
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **samplerMirrorClampToEdge** indicates whether the implementation supports the `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` sampler address mode. If this feature is not enabled, the `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` sampler address mode **must** not be used.

- **drawIndirectCount** indicates whether the implementation supports the `vkCmdDrawIndirectCount` and `vkCmdDrawIndexedIndirectCount` functions. If this feature is not enabled, these functions **must** not be used.

- **storageBuffer8BitAccess** indicates whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `StorageBuffer8BitAccess` capability.

- **uniformAndStorageBuffer8BitAccess** indicates whether objects in the `Uniform` storage class with the `Block` decoration **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `UniformAndStorageBuffer8BitAccess` capability.

- **storagePushConstant8** indicates whether objects in the `PushConstant` storage class **can** have 8-bit integer members. If this feature is not enabled, 8-bit integer members **must** not be used in such objects. This also indicates whether shader modules **can** declare the `StoragePushConstant8` capability.

- **shaderBufferInt64Atomics** indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on buffers.

- **shaderSharedInt64Atomics** indicates whether shaders **can** perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.

- **shaderFloat16** indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules **can** declare the `Float16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Float16` SPIR-V capability: Declaring and using 16-bit floats in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

- **shaderInt8** indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules **can** declare the `Int8` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int8` SPIR-V capability: Declaring and using 8-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g.,
UniformConstant, Uniform, StorageBuffer, Input, Output, and PushConstant) is not enabled.

- descriptorIndexing indicates whether the implementation supports the minimum set of descriptor indexing features as described in the Feature Requirements section. Enabling the descriptorIndexing member when vkCreateDevice is called does not imply the other minimum descriptor indexing features are also enabled. Those other descriptor indexing features must be enabled individually as needed by the application.

- shaderInputAttachmentArrayDynamicIndexing indicates whether arrays of input attachments can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the InputAttachmentArrayDynamicIndexing capability.

- shaderUniformTexelBufferArrayDynamicIndexing indicates whether arrays of uniform texel buffers can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the UniformTexelBufferArrayDynamicIndexing capability.

- shaderStorageTexelBufferArrayDynamicIndexing indicates whether arrays of storage texel buffers can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the StorageTexelBufferArrayDynamicIndexing capability.

- shaderUniformBufferArrayNonUniformIndexing indicates whether arrays of uniform buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the UniformBufferArrayNonUniformIndexing capability.

- shaderSampledImageArrayNonUniformIndexing indicates whether arrays of samplers or sampled images can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the SampledImageArrayNonUniformIndexing capability.

- shaderStorageBufferArrayNonUniformIndexing indicates whether arrays of storage buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the StorageBufferArrayNonUniformIndexing capability.

- shaderStorageImageArrayNonUniformIndexing indicates whether arrays of storage images can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled,
resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the `StorageImageArrayNonUniformIndexing` capability.

- `shaderInputAttachmentArrayNonUniformIndexing` indicates whether arrays of input attachments can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the `InputAttachmentArrayNonUniformIndexing` capability.

- `shaderUniformTexelBufferArrayNonUniformIndexing` indicates whether arrays of uniform texel buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the `UniformTexelBufferArrayNonUniformIndexing` capability.

- `shaderStorageTexelBufferArrayNonUniformIndexing` indicates whether arrays of storage texel buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the `StorageTexelBufferArrayNonUniformIndexing` capability.

- `descriptorBindingUniformBufferUpdateAfterBind` indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`.

- `descriptorBindingSampledImageUpdateAfterBind` indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_SAMPLER`, `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, or `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`.

- `descriptorBindingStorageImageUpdateAfterBind` indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`.

- `descriptorBindingStorageBufferUpdateAfterBind` indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`.

- `descriptorBindingUniformTexelBufferUpdateAfterBind` indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`.

- `descriptorBindingStorageTexelBufferUpdateAfterBind` indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.
supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`.

- `descriptorBindingUpdateUnusedWhilePending` indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT` must not be used.

- `descriptorBindingPartiallyBound` indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT` must not be used.

- `descriptorBindingVariableDescriptorCount` indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` must not be used.

- `runtimeDescriptorArray` indicates whether the implementation supports the SPIR-V `RuntimeDescriptorArray` capability. If this feature is not enabled, descriptors must not be declared in runtime arrays.

- `samplerFilterMinmax` indicates whether the implementation supports a minimum set of required formats supporting min/max filtering as defined by the `filterMinmaxSingleComponentFormats` property minimum requirements. If this feature is not enabled, then `VkSamplerReductionModeCreateInfo` must only use `VK_SAMPLER_REDUCTION_MODE_WEIGHTED_AVERAGE`.

- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using scalar alignment.

- `imagelessFramebuffer` indicates that the implementation supports specifying the image view for attachments at render pass begin time via `VkRenderPassAttachmentBeginInfo`.

- `uniformBufferStandardLayout` indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See Standard Buffer Layout.

- `shaderSubgroupExtendedTypes` is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in group operations with subgroup scope, if the implementation supports the types.

- `separateDepthStencilLayouts` indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECTDEPTH_BITT` or `VK_IMAGE_ASPECT_STENCIL_BITT` set, and whether `VK_IMAGE_LAYOUTDEPTH_ATTACHMENTOPTIMAL`, `VK_IMAGE_LAYOUTDEPTH_READONLYOPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENTOPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READONLYOPTIMAL` can be used.

- `hostQueryReset` indicates that the implementation supports resetting queries from the host with `vkResetQueryPool`.

- `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.

- `bufferDeviceAddress` indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddress`.

- `bufferDeviceAddressCaptureReplay` indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.
bufferDeviceAddressMultiDevice indicates that the implementation supports the bufferDeviceAddress, rayTracingPipeline and rayQuery features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses must not be queried on a logical device created with more than one physical device.

vulkanMemoryModel indicates whether shader modules can declare the VulkanMemoryModel capability.

evulkanMemoryModelDeviceScope indicates whether the Vulkan Memory Model can use Device scope synchronization. This also indicates whether shader modules can declare the VulkanMemoryModelDeviceScope capability.

vulkanMemoryModelAvailabilityVisibilityChains indicates whether the Vulkan Memory Model can use availability and visibility chains with more than one element.

shaderOutputViewportIndex indicates whether the implementation supports the ShaderViewportIndex SPIR-V capability enabling variables decorated with the ViewportIndex built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the ViewportIndex built-in decoration must not be used on outputs in mesh, vertex or tessellation evaluation shaders.

shaderOutputLayer indicates whether the implementation supports the ShaderLayer SPIR-V capability enabling variables decorated with the Layer built-in to be exported from mesh, vertex or tessellation evaluation shaders. If this feature is not enabled, the Layer built-in decoration must not be used on outputs in mesh, vertex or tessellation evaluation shaders.

If subgroupBroadcastDynamicId is VK_TRUE, the “Id” operand of OpGroupNonUniformBroadcast can be dynamically uniform within a subgroup, and the “Index” operand of OpGroupNonUniformQuadBroadcast can be dynamically uniform within the derivative group. If it is VK_FALSE, these operands must be constants.

If the VkPhysicalDeviceVulkan12Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceVulkan12Features can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan12Features-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_1_2_FEATURES

The VkPhysicalDeviceVulkan13Features structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceVulkan13Features {
    VkStructureType sType;
    void* pNext;
    VkBool32 robustImageAccess;
    VkBool32 inlineUniformBlock;
    VkBool32 descriptorBindingInlineUniformBlockUpdateAfterBind;
    VkBool32 pipelineCreationCacheControl;
} VkPhysicalDeviceVulkan13Features;
```
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.

- **robustImageAccess** indicates whether image accesses are tightly bounds-checked against the dimensions of the image view. **Invalid texels** resulting from out of bounds image loads will be replaced as described in **Texel Replacement**, with either (0,0,1) or (0,0,0) values inserted for missing G, B, or A components based on the format.

- **inlineUniformBlock** indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` must not be used.

- **descriptorBindingInlineUniformBlockUpdateAfterBind** indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.

- **pipelineCreationCacheControl** indicates that the implementation supports:
  - The following can be used in `Vk*PipelineCreateInfo::flags`:
    - `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`
    - `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
  - The following can be used in `VkPipelineCacheCreateInfo::flags`:
    - `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`

- **privateData** indicates whether the implementation supports private data. See **Private Data**.

- **shaderDemoteToHelperInvocation** indicates whether the implementation supports the SPIR-V DemoteToHelperInvocationEXT capability.

- **shaderTerminateInvocation** specifies whether the implementation supports SPIR-V modules that use the SPV_KHR_terminate_invocation extension.

- **subgroupSizeControl** indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure.
• **computeFullSubgroups** indicates whether the implementation supports requiring full subgroups in compute, mesh, or task shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.

• **synchronization2** indicates whether the implementation supports the new set of synchronization commands introduced in `VK_KHR_synchronization2`.

• **textureCompressionASTC_HDR** indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features must be supported in `optimalTilingFeatures` for the following formats:

  - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` can be used to check for supported properties of individual formats as normal.

• **shaderZeroInitializeWorkgroupMemory** specifies whether the implementation supports initializing a variable in Workgroup storage class.

• **dynamicRendering** specifies that the implementation supports dynamic render pass instances using the `vkCmdBeginRendering` command.

• **shaderIntegerDotProduct** specifies whether shader modules can declare the `DotProductInputAllKHR`, `DotProductInput4x8BitKHR`, `DotProductInput4x8BitPackedKHR` and `DotProductKHR` capabilities.

• **maintenance4** indicates that the implementation supports the following:

  - The application may destroy a `VkPipelineLayout` object immediately after using it to create another object.

  - `LocalSizeId` can be used as an alternative to `LocalSize` to specify the local workgroup size with specialization constants.
• Images created with identical creation parameters will always have the same alignment requirements.

• The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.

• Push constants do not have to be initialized before they are dynamically accessed.

• The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.

If the `VkPhysicalDeviceVulkan13Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVulkan13Features` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVulkan13Features-sType-sType

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL DEVICE_VULKAN_1_3_FEATURES`

The `VkPhysicalDeviceVariablePointersFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceVariablePointersFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 variablePointersStorageBuffer;
    VkBool32 variablePointers;
} VkPhysicalDeviceVariablePointersFeatures;
```

or the equivalent

```c
// Provided by VK_VERSION_1_1
typedef VkPhysicalDeviceVariablePointersFeatures
    VkPhysicalDeviceVariablePointerFeatures;
```

This structure describes the following features:
• **sType** is a VkStructureType value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **variablePointersStorageBuffer** specifies whether the implementation supports the SPIR-V VariablePointersStorageBuffer capability. When this feature is not enabled, shader modules **must** not declare the SPV_KHR_variable_pointers extension or the VariablePointersStorageBuffer capability.

• **variablePointers** specifies whether the implementation supports the SPIR-V VariablePointers capability. When this feature is not enabled, shader modules **must** not declare the VariablePointers capability.

If the VkPhysicalDeviceVariablePointersFeatures structure is included in the **pNext** chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceVariablePointersFeatures** can also be used in the **pNext** chain of VkDeviceCreateInfo to selectively enable these features.

### Valid Usage

- VUID-VkPhysicalDeviceVariablePointersFeatures-variablePointers-01431
  
  If **variablePointers** is enabled then **variablePointersStorageBuffer** **must** also be enabled.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVariablePointersFeatures-sType-sType
  
  **sType** **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTERS_FEATURES.

The VkPhysicalDeviceMultiviewFeatures structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 multiview;
    VkBool32 multiviewGeometryShader;
    VkBool32 multiviewTessellationShader;
} VkPhysicalDeviceMultiviewFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_multiview
typedef VkPhysicalDeviceMultiviewFeatures VkPhysicalDeviceMultiviewFeaturesKHR;
```

This structure describes the following features:
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **multiview** specifies whether the implementation supports multiview rendering within a render pass. If this feature is not enabled, the view mask of each subpass must always be zero.

• **multiviewGeometryShader** specifies whether the implementation supports multiview rendering within a render pass, with geometry shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask must not include a geometry shader.

• **multiviewTessellationShader** specifies whether the implementation supports multiview rendering within a render pass, with tessellation shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask must not include any tessellation shaders.

If the `VkPhysicalDeviceMultiviewFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiviewFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage

- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewGeometryShader-00580
  If **multiviewGeometryShader** is enabled then **multiview** must also be enabled

- VUID-VkPhysicalDeviceMultiviewFeatures-multiviewTessellationShader-00581
  If **multiviewTessellationShader** is enabled then **multiview** must also be enabled

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewFeatures-sType-sType
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_FEATURES`

The `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_atomic_float
typedef struct VkPhysicalDeviceShaderAtomicFloatFeaturesEXT {
  VkStructureType   sType;
  void*             pNext;
  VkBool32          shaderBufferFloat32Atomics;
  VkBool32          shaderBufferFloat32AtomicAdd;
  VkBool32          shaderBufferFloat64Atomics;
  VkBool32          shaderBufferFloat64AtomicAdd;
  VkBool32          shaderSharedFloat32Atomics;
  VkBool32          shaderSharedFloat32AtomicAdd;
  VkBool32          shaderSharedFloat64Atomics;
  VkBool32          shaderSharedFloat64AtomicAdd;
  VkBool32          shaderImageFloat32Atomics;
}
```
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **shaderBufferFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store and exchange atomic operations on storage buffers.
- **shaderBufferFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic operations on storage buffers.
- **shaderBufferFloat64Atomics** indicates whether shaders **can** perform 64-bit floating-point load, store and exchange atomic operations on storage buffers.
- **shaderBufferFloat64AtomicAdd** indicates whether shaders **can** perform 64-bit floating-point add atomic operations on storage buffers.
- **shaderSharedFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store and exchange atomic operations on shared and payload memory.
- **shaderSharedFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic operations on shared and payload memory.
- **shaderSharedFloat64Atomics** indicates whether shaders **can** perform 64-bit floating-point load, store and exchange atomic operations on shared and payload memory.
- **shaderSharedFloat64AtomicAdd** indicates whether shaders **can** perform 64-bit floating-point add atomic operations on shared and payload memory.
- **shaderImageFloat32Atomics** indicates whether shaders **can** perform 32-bit floating-point load, store and exchange atomic image operations.
- **shaderImageFloat32AtomicAdd** indicates whether shaders **can** perform 32-bit floating-point add atomic image operations.
- **sparseImageFloat32Atomics** indicates whether 32-bit floating-point load, store and exchange atomic operations **can** be used on sparse images.
- **sparseImageFloat32AtomicAdd** indicates whether 32-bit floating-point add atomic operations **can** be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderAtomicFloatFeaturesEXT` **can** also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloatFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_FEATURES_EXT

The `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_atomic_float2
typedef struct VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderBufferFloat16Atomics;
    VkBool32 shaderBufferFloat16AtomicAdd;
    VkBool32 shaderBufferFloat16AtomicMinMax;
    VkBool32 shaderBufferFloat32AtomicMinMax;
    VkBool32 shaderBufferFloat64AtomicMinMax;
    VkBool32 shaderSharedFloat16Atomics;
    VkBool32 shaderSharedFloat16AtomicAdd;
    VkBool32 shaderSharedFloat16AtomicMinMax;
    VkBool32 shaderSharedFloat32AtomicMinMax;
    VkBool32 shaderSharedFloat64AtomicMinMax;
    VkBool32 shaderImageFloat32AtomicMinMax;
    VkBool32 sparseImageFloat32AtomicMinMax;
} VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderBufferFloat16Atomics** indicates whether shaders **can** perform 16-bit floating-point load, store, and exchange atomic operations on storage buffers.
- **shaderBufferFloat16AtomicAdd** indicates whether shaders **can** perform 16-bit floating-point add atomic operations on storage buffers.
- **shaderBufferFloat16AtomicMinMax** indicates whether shaders **can** perform 16-bit floating-point min and max atomic operations on storage buffers.
- **shaderBufferFloat32AtomicMinMax** indicates whether shaders **can** perform 32-bit floating-point min and max atomic operations on storage buffers.
- **shaderBufferFloat64AtomicMinMax** indicates whether shaders **can** perform 64-bit floating-point min and max atomic operations on storage buffers.
- **shaderSharedFloat16Atomics** indicates whether shaders **can** perform 16-bit floating-point load, store and exchange atomic operations on shared and payload memory.
- **shaderSharedFloat16AtomicAdd** indicates whether shaders **can** perform 16-bit floating-point add atomic operations on shared and payload memory.
• `shaderSharedFloat16AtomicMinMax` indicates whether shaders can perform 16-bit floating-point min and max atomic operations on shared and payload memory.

• `shaderSharedFloat32AtomicMinMax` indicates whether shaders can perform 32-bit floating-point min and max atomic operations on shared and payload memory.

• `shaderSharedFloat64AtomicMinMax` indicates whether shaders can perform 64-bit floating-point min and max atomic operations on shared and payload memory.

• `shaderImageFloat32AtomicMinMax` indicates whether shaders can perform 32-bit floating-point min and max atomic image operations.

• `sparseImageFloat32AtomicMinMax` indicates whether 32-bit floating-point min and max atomic operations can be used on sparse images.

If the `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderAtomicFloat2FeaturesEXT-sType-sType

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_2_FEATURES_EXT`

The `VkPhysicalDeviceShaderAtomicInt64Features` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderAtomicInt64Features {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderBufferInt64Atomics;
    VkBool32 shaderSharedInt64Atomics;
} VkPhysicalDeviceShaderAtomicInt64Features;
```

or the equivalent

```c
// Provided by VK_KHR_shader_atomic_int64
typedef VkPhysicalDeviceShaderAtomicInt64Features
    VkPhysicalDeviceShaderAtomicInt64FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderBufferInt64Atomics` indicates whether shaders can perform 64-bit unsigned and signed
integer atomic operations on buffers.

- `shaderSharedInt64Atomics` indicates whether shaders can perform 64-bit unsigned and signed integer atomic operations on shared and payload memory.

If the `VkPhysicalDeviceShaderAtomicInt64Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderAtomicInt64Features` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderAtomicInt64Features-sType-sType` 
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_INT64_FEATURES`.

The `VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_image_atomic_int64
typedef struct VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderImageInt64Atomics;
    VkBool32 sparseImageInt64Atomics;
} VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `shaderImageInt64Atomics` indicates whether shaders can support 64-bit unsigned and signed integer atomic operations on images.
- `sparseImageInt64Atomics` indicates whether 64-bit integer atomic operations can be used on sparse images.

If the `VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderImageAtomicInt64FeaturesEXT-sType-sType` 
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_IMAGE_ATOMIC_INT64_FEATURES_EXT`. 

3565
The `VkPhysicalDevice8BitStorageFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDevice8BitStorageFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 storageBuffer8BitAccess;
    VkBool32 uniformAndStorageBuffer8BitAccess;
    VkBool32 storagePushConstant8;
} VkPhysicalDevice8BitStorageFeatures;
```
or the equivalent

```c
// Provided by VK_KHR_8bit_storage
typedef VkPhysicalDevice8BitStorageFeatures VkPhysicalDevice8BitStorageFeaturesKHR;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **storageBuffer8BitAccess** indicates whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration can have 8-bit integer members. If this feature is not enabled, 8-bit integer members must not be used in such objects. This also indicates whether shader modules can declare the `StorageBuffer8BitAccess` capability.
- **uniformAndStorageBuffer8BitAccess** indicates whether objects in the `Uniform` storage class with the `Block` decoration can have 8-bit integer members. If this feature is not enabled, 8-bit integer members must not be used in such objects. This also indicates whether shader modules can declare the `UniformAndStorageBuffer8BitAccess` capability.
- **storagePushConstant8** indicates whether objects in the `PushConstant` storage class can have 8-bit integer members. If this feature is not enabled, 8-bit integer members must not be used in such objects. This also indicates whether shader modules can declare the `StoragePushConstant8` capability.

If the `VkPhysicalDevice8BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevice8BitStorageFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDevice8BitStorageFeatures-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICALDEVICE_8BIT_STORAGE_FEATURES`

The `VkPhysicalDevice16BitStorageFeatures` structure is defined as:
```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevice16BitStorageFeatures {
    VkStructureType    sType;
    void*              pNext;
    VkBool32           storageBuffer16BitAccess;
    VkBool32           uniformAndStorageBuffer16BitAccess;
    VkBool32           storagePushConstant16;
    VkBool32           storageInputOutput16;
} VkPhysicalDevice16BitStorageFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_16bit_storage
typedef VkPhysicalDevice16BitStorageFeatures VkPhysicalDevice16BitStorageFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `storageBuffer16BitAccess` specifies whether objects in the `StorageBuffer`, `ShaderRecordBufferKHR`, or `PhysicalStorageBuffer` storage class with the `Block` decoration can have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members must not be used in such objects. This also specifies whether shader modules can declare the `StorageBuffer16BitAccess` capability.
- `uniformAndStorageBuffer16BitAccess` specifies whether objects in the `Uniform` storage class with the `Block` decoration can have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members must not be used in such objects. This also specifies whether shader modules can declare the `UniformAndStorageBuffer16BitAccess` capability.
- `storagePushConstant16` specifies whether objects in the `PushConstant` storage class can have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or floating-point members must not be used in such objects. This also specifies whether shader modules can declare the `StoragePushConstant16` capability.
- `storageInputOutput16` specifies whether objects in the `Input` and `Output` storage classes can have 16-bit integer and 16-bit floating-point members. If this feature is not enabled, 16-bit integer or 16-bit floating-point members must not be used in such objects. This also specifies whether shader modules can declare the `StorageInputOutput16` capability.

If the `VkPhysicalDevice16BitStorageFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevice16BitStorageFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- **VUID-VkPhysicalDevice16BitStorageFeatures-sType-sType**
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_16BIT_STORAGE_FEATURES`

The `VkPhysicalDeviceShaderFloat16Int8Features` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderFloat16Int8Features {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderFloat16;
    VkBool32 shaderInt8;
} VkPhysicalDeviceShaderFloat16Int8Features;
```

or the equivalent

```c
// Provided by VK_KHR_shader_float16_int8
typedef VkPhysicalDeviceShaderFloat16Int8Features
    VkPhysicalDeviceShaderFloat16Int8FeaturesKHR;
```

```c
// Provided by VK_KHR_shader_float16_int8
typedef VkPhysicalDeviceShaderFloat16Int8Features
    VkPhysicalDeviceFloat16Int8FeaturesKHR;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderFloat16** indicates whether 16-bit floats (halves) are supported in shader code. This also indicates whether shader modules can declare the `Float16` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Float16` SPIR-V capability: Declaring and using 16-bit floats in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

- **shaderInt8** indicates whether 8-bit integers (signed and unsigned) are supported in shader code. This also indicates whether shader modules can declare the `Int8` capability. However, this only enables a subset of the storage classes that SPIR-V allows for the `Int8` SPIR-V capability: Declaring and using 8-bit integers in the `Private`, `Workgroup` (for non-Block variables), and `Function` storage classes is enabled, while declaring them in the interface storage classes (e.g., `UniformConstant`, `Uniform`, `StorageBuffer`, `Input`, `Output`, and `PushConstant`) is not enabled.

If the `VkPhysicalDeviceShaderFloat16Int8Features` structure is included in the `pNext` chain of the
The `VkPhysicalDeviceShaderFloat16Int8Features` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderFloat16Int8Features` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderFloat16Int8Features-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_FLOAT16_INT8_FEATURES`.

The `VkPhysicalDeviceShaderClockFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_shader_clock
typedef struct VkPhysicalDeviceShaderClockFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderSubgroupClock;
    VkBool32 shaderDeviceClock;
} VkPhysicalDeviceShaderClockFeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderSubgroupClock` indicates whether shaders can perform `Subgroup` scoped clock reads.
- `shaderDeviceClock` indicates whether shaders can perform `Device` scoped clock reads.

If the `VkPhysicalDeviceShaderClockFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderClockFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderClockFeaturesKHR-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CLOCK_FEATURES_KHR`.

The `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSamplerYcbcrConversionFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 samplerYcbcrConversion;
} VkPhysicalDeviceSamplerYcbcrConversionFeatures;
```
or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkPhysicalDeviceSamplerYcbcrConversionFeatures
VkPhysicalDeviceSamplerYcbcrConversionFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `samplerYcbcrConversion` specifies whether the implementation supports sampler Y’C_bC_r conversion. If `samplerYcbcrConversion` is `VK_FALSE`, sampler Y’C_bC_r conversion is not supported, and samplers using sampler Y’C_bC_r conversion must not be used.

If the `VkPhysicalDeviceSamplerYcbcrConversionFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSamplerYcbcrConversionFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerYcbcrConversionFeatures-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_YCBCR_CONVERSION_FEATURES`
indicate whether each corresponding feature is supported. 

VkPhysicalDeviceProtectedMemoryFeatures can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceProtectedMemoryFeatures-sType-sType  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_FEATURES

The VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 advancedBlendCoherentOperations;
} VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **advancedBlendCoherentOperations** specifies whether blending using advanced blend operations is guaranteed to execute atomically and in primitive order. If this is VK_TRUE, VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT is treated the same as VK_ACCESS_COLOR_ATTACHMENT_READ_BIT, and advanced blending needs no additional synchronization over basic blending. If this is VK_FALSE, then memory dependencies are required to guarantee order between two advanced blending operations that occur on the same sample.

If the VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT-sType-sType  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_FEATURES_EXT

The VkPhysicalDeviceConditionalRenderingFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_conditional_rendering
typedef struct VkPhysicalDeviceConditionalRenderingFeaturesEXT {
```

---

3571
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **conditionalRendering** specifies whether conditional rendering is supported.
- **inheritedConditionalRendering** specifies whether a secondary command buffer can be executed while conditional rendering is active in the primary command buffer.

If the `VkPhysicalDeviceConditionalRenderingFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceConditionalRenderingFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceConditionalRenderingFeaturesEXT-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONDITIONAL_RENDERING_FEATURES_EXT`

The `VkPhysicalDeviceShaderDrawParametersFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceShaderDrawParametersFeatures {
    VkStructureType sType;
    void*pNext;
    VkBool32 shaderDrawParameters;
} VkPhysicalDeviceShaderDrawParametersFeatures;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderDrawParameters** specifies whether the implementation supports the SPIR-V DrawParameters capability. When this feature is not enabled, shader modules **must** not declare the
SPV_KHR_shader_draw_parameters extension or the DrawParameters capability.

If the VkPhysicalDeviceShaderDrawParametersFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceShaderDrawParametersFeatures can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDrawParametersFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DRAW_PARAMETERS_FEATURES

The VkPhysicalDeviceMeshShaderFeaturesNV structure is defined as:

```c
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderFeaturesNV {
  VkStructureType sType;
  void* pNext;
  VkBool32 taskShader;
  VkBool32 meshShader;
} VkPhysicalDeviceMeshShaderFeaturesNV;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **taskShader** specifies whether task shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_TASK_BIT_NV and VK_PIPELINE_STAGE_TASK_SHADER_BIT_NV enum values must not be used.
- **meshShader** specifies whether mesh shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_MESH_BIT_NV and VK_PIPELINE_STAGE_MESH_SHADER_BIT_NV enum values must not be used.

If the VkPhysicalDeviceMeshShaderFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceMeshShaderFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_NV

The VkPhysicalDeviceMeshShaderFeaturesEXT structure is defined as:
typedef struct VkPhysicalDeviceMeshShaderFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 taskShader;
    VkBool32 meshShader;
    VkBool32 multiviewMeshShader;
    VkBool32 primitiveFragmentShadingRateMeshShader;
    VkBool32 meshShaderQueries;
} VkPhysicalDeviceMeshShaderFeaturesEXT;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• taskShader specifies whether task shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_TASK_BIT_EXT and VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT enum values must not be used.
• meshShader specifies whether mesh shaders are supported. If this feature is not enabled, the VK_SHADER_STAGE_MESH_BIT_EXT and VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT enum values must not be used.
• multiviewMeshShader specifies whether the implementation supports multiview rendering within a render pass, with mesh shaders. If this feature is not enabled, then a pipeline compiled against a subpass with a non-zero view mask must not include a mesh shader.
• primitiveFragmentShadingRateMeshShader indicates that the implementation supports the primitive fragment shading rate in mesh shaders.
• meshShaderQueries indicates that the implementation supports creating query pools using the VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT query type and statistic queries containing the VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT and VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT flags.

If the VkPhysicalDeviceMeshShaderFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceMeshShaderFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

The corresponding features of the VkPhysicalDeviceMeshShaderFeaturesNV structure must match those in VkPhysicalDeviceMeshShaderFeaturesEXT.

Valid Usage

• VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-multiviewMeshShader-07032
  If multiviewMeshShader is enabled then VkPhysicalDeviceMultiviewFeaturesKHR::multiview must also be enabled

• VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-primitiveFragmentShadingRateMeshShader-07033
  If primitiveFragmentShadingRateMeshShader is enabled then
**VkPhysicalDeviceFragmentShadingRateFeaturesKHR**::primitiveFragmentShadingRate must also be enabled.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderFeaturesEXT-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_EXT**

The **VkPhysicalDeviceMemoryDecompressionFeaturesNV** structure is defined as:

```c
// Provided by VK_NV_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 memoryDecompression;
} VkPhysicalDeviceMemoryDecompressionFeaturesNV;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **memoryDecompression** indicates whether memory decompression is supported.

If the **VkPhysicalDeviceMemoryDecompressionFeaturesNV** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceMemoryDecompressionFeaturesNV** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryDecompressionFeaturesNV-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_FEATURES_NV**

The **VkPhysicalDeviceDescriptorIndexingFeatures** structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderInputAttachmentArrayDynamicIndexing;
    VkBool32 shaderUniformTexelBufferArrayDynamicIndexing;
    VkBool32 shaderStorageTexelBufferArrayDynamicIndexing;
    VkBool32 shaderUniformBufferArrayNonUniformIndexing;
} VkPhysicalDeviceDescriptorIndexingFeatures;
```
VkBool32 shaderSampledImageArrayNonUniformIndexing;
VkBool32 shaderStorageBufferArrayNonUniformIndexing;
VkBool32 shaderStorageImageArrayNonUniformIndexing;
VkBool32 shaderInputAttachmentArrayNonUniformIndexing;
VkBool32 shaderUniformTexelBufferArrayNonUniformIndexing;
VkBool32 shaderStorageTexelBufferArrayNonUniformIndexing;
VkBool32 descriptorBindingUniformBufferUpdateAfterBind;
VkBool32 descriptorBindingSampledImageUpdateAfterBind;
VkBool32 descriptorBindingStorageImageUpdateAfterBind;
VkBool32 descriptorBindingStorageBufferUpdateAfterBind;
VkBool32 descriptorBindingUniformTexelBufferUpdateAfterBind;
VkBool32 descriptorBindingStorageTexelBufferUpdateAfterBind;
VkBool32 descriptorBindingUpdateUnusedWhilePending;
VkBool32 descriptorBindingPartiallyBound;
VkBool32 descriptorBindingVariableDescriptorCount;
VkBool32 runtimeDescriptorArray;

VkPhysicalDeviceDescriptorIndexingFeatures;

or the equivalent

// Provided by VK_EXT_descriptor_indexing
typedef VkPhysicalDeviceDescriptorIndexingFeatures
VkPhysicalDeviceDescriptorIndexingFeaturesEXT;

This structure describes the following features:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.

- **shaderInputAttachmentArrayDynamicIndexing** indicates whether arrays of input attachments can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of *VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT* must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the *InputAttachmentArrayDynamicIndexing* capability.

- **shaderUniformTexelBufferArrayDynamicIndexing** indicates whether arrays of uniform texel buffers can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of *VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER* must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the *UniformTexelBufferArrayDynamicIndexing* capability.

- **shaderStorageTexelBufferArrayDynamicIndexing** indicates whether arrays of storage texel buffers can be indexed by dynamically uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of *VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER* must be indexed only by constant integral expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the *StorageTexelBufferArrayDynamicIndexing* capability.
• **shaderUniformBufferArrayNonUniformIndexing** indicates whether arrays of uniform buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER** or **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **UniformBufferArrayNonUniformIndexing** capability.

• **shaderSampledImageArrayNonUniformIndexing** indicates whether arrays of samplers or sampled images can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_SAMPLER**, **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER**, or **VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **SampledImageArrayNonUniformIndexing** capability.

• **shaderStorageBufferArrayNonUniformIndexing** indicates whether arrays of storage buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER** or **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **StorageBufferArrayNonUniformIndexing** capability.

• **shaderStorageImageArrayNonUniformIndexing** indicates whether arrays of storage images can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_STORAGE_IMAGE** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **StorageImageArrayNonUniformIndexing** capability.

• **shaderInputAttachmentArrayNonUniformIndexing** indicates whether arrays of input attachments can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **InputAttachmentArrayNonUniformIndexing** capability.

• **shaderUniformTexelBufferArrayNonUniformIndexing** indicates whether arrays of uniform texel buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **UniformTexelBufferArrayNonUniformIndexing** capability.

• **shaderStorageTexelBufferArrayNonUniformIndexing** indicates whether arrays of storage texel buffers can be indexed by non-uniform integer expressions in shader code. If this feature is not enabled, resources with a descriptor type of **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** must not be indexed by non-uniform integer expressions when aggregated into arrays in shader code. This also indicates whether shader modules can declare the **StorageTexelBufferArrayNonUniformIndexing** capability.

• **descriptorBindingUniformBufferUpdateAfterBind** indicates whether the implementation supports updating uniform buffer descriptors after a set is bound. If this feature is not enabled,
VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER.

- descriptorBindingSampledImageUpdateAfterBind indicates whether the implementation supports updating sampled image descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_SAMPLER, VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, or VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE.

- descriptorBindingStorageImageUpdateAfterBind indicates whether the implementation supports updating storage image descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_STORAGE_IMAGE.

- descriptorBindingStorageBufferUpdateAfterBind indicates whether the implementation supports updating storage buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_STORAGE_BUFFER.

- descriptorBindingUniformTexelBufferUpdateAfterBind indicates whether the implementation supports updating uniform texel buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER.

- descriptorBindingStorageTexelBufferUpdateAfterBind indicates whether the implementation supports updating storage texel buffer descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER.

- descriptorBindingUpdateUnusedWhilePending indicates whether the implementation supports updating descriptors while the set is in use. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT must not be used.

- descriptorBindingPartiallyBound indicates whether the implementation supports statically using a descriptor set binding in which some descriptors are not valid. If this feature is not enabled, VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT must not be used.

- descriptorBindingVariableDescriptorCount indicates whether the implementation supports descriptor sets with a variable-sized last binding. If this feature is not enabled, VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT must not be used.

- runtimeDescriptorArray indicates whether the implementation supports the SPIR-V RuntimeDescriptorArray capability. If this feature is not enabled, descriptors must not be declared in runtime arrays.

If the VkPhysicalDeviceDescriptorIndexingFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceDescriptorIndexingFeatures can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorIndexingFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_FEATURES

The VkPhysicalDeviceCopyMemoryIndirectFeaturesNV structure is defined as:

```c
// Provided by VK_NV_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 indirectCopy;
} VkPhysicalDeviceCopyMemoryIndirectFeaturesNV;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **indirectCopy** indicates whether indirect copies are supported.

If the VkPhysicalDeviceCopyMemoryIndirectFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceCopyMemoryIndirectFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectFeaturesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_FEATURES_NV

The VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 vertexAttributeInstanceRateDivisor;
    VkBool32 vertexAttributeInstanceRateZeroDivisor;
} VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.

• **vertexAttributeInstanceRateDivisor** specifies whether vertex attribute fetching may be repeated in case of instanced rendering.

• **vertexAttributeInstanceRateZeroDivisor** specifies whether a zero value for `VkVertexInputBindingDivisorDescriptionEXT::divisor` is supported.

If the `VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT-sType-sType
  
  *sType must be* `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES_EXT`

The `VkPhysicalDeviceASTCDecodeFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_astc_decode_mode
typedef struct VkPhysicalDeviceASTCDecodeFeaturesEXT {
    VkStructureType   sType;
    void*             pNext;
    VkBool32          decodeModeSharedExponent;
} VkPhysicalDeviceASTCDecodeFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.

- **pNext** is NULL or a pointer to a structure extending this structure.

- **decodeModeSharedExponent** indicates whether the implementation supports decoding ASTC compressed formats to `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32` internal precision.

If the `VkPhysicalDeviceASTCDecodeFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceASTCDecodeFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceASTCDecodeFeaturesEXT-sType-sType
  
  *sType must be* `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT`

The `VkPhysicalDeviceTransformFeedbackFeaturesEXT` structure is defined as:
This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `transformFeedback` indicates whether the implementation supports transform feedback and shader modules can declare the `TransformFeedback` capability.
- `geometryStreams` indicates whether the implementation supports the `GeometryStreams` SPIR-V capability.

If the `VkPhysicalDeviceTransformFeedbackFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTransformFeedbackFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceTransformFeedbackFeaturesEXT-sType-sType`: `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT`
This structure describes the following features:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.

- **vulkanMemoryModel** indicates whether shader modules can declare the VulkanMemoryModel capability.
- **vulkanMemoryModelDeviceScope** indicates whether the Vulkan Memory Model can use Device scope synchronization. This also indicates whether shader modules can declare the VulkanMemoryModelDeviceScope capability.
- **vulkanMemoryModelAvailabilityVisibilityChains** indicates whether the Vulkan Memory Model can use availability and visibility chains with more than one element.

If the VkPhysicalDeviceVulkanMemoryModelFeaturesKHR structure is included in the **pNext** chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceVulkanMemoryModelFeaturesKHR can also be used in the **pNext** chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceVulkanMemoryModelFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_MEMORY_MODEL_FEATURES

The VkPhysicalDeviceInlineUniformBlockFeatures structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 inlineUniformBlock;
    VkBool32 descriptorBindingInlineUniformBlockUpdateAfterBind;
} VkPhysicalDeviceInlineUniformBlockFeatures;
```

or the equivalent

```c
// Provided by VK_EXT_inline_uniform_block
typedef VkPhysicalDeviceInlineUniformBlockFeatures
    VkPhysicalDeviceInlineUniformBlockFeaturesEXT;
```

This structure describes the following features:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- `inlineUniformBlock` indicates whether the implementation supports inline uniform block descriptors. If this feature is not enabled, `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` must not be used.

- `descriptorBindingInlineUniformBlockUpdateAfterBind` indicates whether the implementation supports updating inline uniform block descriptors after a set is bound. If this feature is not enabled, `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT` must not be used with `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK`.

If the `VkPhysicalDeviceInlineUniformBlockFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceInlineUniformBlockFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)
- `VUID-VkPhysicalDeviceInlineUniformBlockFeatures-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_FEATURES`.

The `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_representative_fragment_test
typedef struct VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV {
    VkStructureType          sType;
    void*                    pNext;
    VkBool32                 representativeFragmentTest;
} VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `representativeFragmentTest` indicates whether the implementation supports the representative fragment test. See Representative Fragment Test.

If the `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)
- `VUID-VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV-sType-sType`  
  `sType` must be 3583.
The `VkPhysicalDeviceExclusiveScissorFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_scissor_exclusive
typedef struct VkPhysicalDeviceExclusiveScissorFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 exclusiveScissor;
} VkPhysicalDeviceExclusiveScissorFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `exclusiveScissor` indicates that the implementation supports the exclusive scissor test.

See [Exclusive Scissor Test](#) for more information.

If the `VkPhysicalDeviceExclusiveScissorFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExclusiveScissorFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExclusiveScissorFeaturesNV-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXCLUSIVE_SCISSOR_FEATURES_NV`

The `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_corner_sampled_image
typedef struct VkPhysicalDeviceCornerSampledImageFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 cornerSampledImage;
} VkPhysicalDeviceCornerSampledImageFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `cornerSampledImage` specifies whether images can be created with a `VkImageCreateInfo::flags` containing `VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV`. See [Corner-Sampled Images](#).
If the `VkPhysicalDeviceCornerSampledImageFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCornerSampledImageFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCornerSampledImageFeaturesNV-sType-sType`  
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CORNER_SAMPLED_IMAGE_FEATURES_NV`

The `VkPhysicalDeviceComputeShaderDerivativesFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_compute_shader_derivatives  
typedef struct VkPhysicalDeviceComputeShaderDerivativesFeaturesNV {
    VkStructureType sType;  
    void* pNext;  
    VkBool32 computeDerivativeGroupQuads;  
    VkBool32 computeDerivativeGroupLinear;
} VkPhysicalDeviceComputeShaderDerivativesFeaturesNV;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `computeDerivativeGroupQuads` indicates that the implementation supports the `ComputeDerivativeGroupQuadsNV` SPIR-V capability.
- `computeDerivativeGroupLinear` indicates that the implementation supports the `ComputeDerivativeGroupLinearNV` SPIR-V capability.

See [Quad shader scope](......) for more information.

If the `VkPhysicalDeviceComputeShaderDerivativesFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceComputeShaderDerivativesFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceComputeShaderDerivativesFeaturesNV-sType-sType`  
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_SHADER_DERIVATIVES_FEATURES_NV`

The `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_fragment_shader_barycentric  
typedef struct VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR {
    VkStructureType sType;  
    void* pNext;  
    VkBool32 computeBarycentricWeights;  
    VkBool32 computeBarycentricWeightsNV;  
    VkBool32 computeBarycentricWeightsExt;  
} VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR;
```
typedef struct VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 fragmentShaderBarycentric;
} VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR;

or the equivalent

// Provided by VK_NV_fragment_shader_barycentric
typedef VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR VkPhysicalDeviceFragmentShaderBarycentricFeaturesNV;

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **fragmentShaderBarycentric** indicates that the implementation supports the `BaryCoordKHR` and `BaryCoordNoPerspKHR` SPIR-V fragment shader built-ins and supports the `PerVertexKHR` SPIR-V decoration on fragment shader input variables.

See [Barycentric Interpolation](#) for more information.

If the `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR-sType-sType must be \( \text{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_KHR} \)

The `VkPhysicalDeviceShaderImageFootprintFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_shader_image_footprint
typedef struct VkPhysicalDeviceShaderImageFootprintFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 imageFootprint;
} VkPhysicalDeviceShaderImageFootprintFeaturesNV;
```

This structure describes the following feature:
• **sType** is a *VkStructureType* value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **imageFootprint** specifies whether the implementation supports the *ImageFootprintNV* SPIR-V capability.

See [Texel Footprint Evaluation](#) for more information.

If the *VkPhysicalDeviceShaderImageFootprintFeaturesNV* structure is included in the `pNext` chain of the *VkPhysicalDeviceFeatures2* structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDeviceShaderImageFootprintFeaturesNV* can also be used in the `pNext` chain of *VkDeviceCreateInfo* to selectively enable these features.

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceShaderImageFootprintFeaturesNV-sType-sType**

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_IMAGE_FOOTPRINT_FEATURES_NV`

The *VkPhysicalDeviceShadingRateImageFeaturesNV* structure is defined as:

```c
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImageFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 shadingRateImage;
    VkBool32 shadingRateCoarseSampleOrder;
} VkPhysicalDeviceShadingRateImageFeaturesNV;
```

This structure describes the following features:

• **sType** is a *VkStructureType* value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **shadingRateImage** indicates that the implementation supports the use of a shading rate image to derive an effective shading rate for fragment processing. It also indicates that the implementation supports the *ShadingRateNV* SPIR-V execution mode.

• **shadingRateCoarseSampleOrder** indicates that the implementation supports a user-configurable ordering of coverage samples in fragments larger than one pixel.

See [Shading Rate Image](#) for more information.

If the *VkPhysicalDeviceShadingRateImageFeaturesNV* structure is included in the `pNext` chain of the *VkPhysicalDeviceFeatures2* structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDeviceShadingRateImageFeaturesNV* can also be used in the `pNext` chain of *VkDeviceCreateInfo* to selectively enable these features.
The `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapFeaturesEXT {
    VkStructureType          sType;
    void*                    pNext;
    VkBool32                 fragmentDensityMap;
    VkBool32                 fragmentDensityMapDynamic;
    VkBool32                 fragmentDensityMapNonSubsampledImages;
} VkPhysicalDeviceFragmentDensityMapFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `fragmentDensityMap` specifies whether the implementation supports render passes with a fragment density map attachment. If this feature is not enabled and the `pNext` chain of `VkRenderPassCreateInfo` includes a `VkRenderPassFragmentDensityMapCreateInfoEXT` structure, `fragmentDensityMapAttachment` must be `VK_ATTACHMENT_UNUSED`.
- `fragmentDensityMapDynamic` specifies whether the implementation supports dynamic fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT` must not be included in `VkImageViewCreateInfo::flags`.
- `fragmentDensityMapNonSubsampledImages` specifies whether the implementation supports regular non-subsampled image attachments with fragment density map render passes. If this feature is not enabled, render passes with a fragment density map attachment must only have subsampled attachments bound.

If the `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentDensityMapFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
The `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 fragmentDensityMapDeferred;
} VkPhysicalDeviceFragmentDensityMap2FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapDeferred` specifies whether the implementation supports deferred reads of fragment density map image views. If this feature is not enabled, `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DEFERRED_BIT_EXT` must not be included in `VkImageViewCreateInfo::flags`.

If the `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentDensityMap2FeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMap2FeaturesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_FEATURES_EXT`.

The `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM` structure is defined as:

```c
// Provided by VK_QCOM_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 fragmentDensityMapOffset;
} VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityMapOffsets` specifies whether the implementation supports fragment density map offsets.
If the `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_FEATURES_QCOM`

The `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI` structure is defined as:

```c
// Provided by VK_HUAWEI_invocation_mask
typedef struct VkPhysicalDeviceInvocationMaskFeaturesHUAWEI {
    VkStructureType sType;
    void* pNext;
    VkBool32 invocationMask;
} VkPhysicalDeviceInvocationMaskFeaturesHUAWEI;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `invocationMask` indicates that the implementation supports the use of an invocation mask image to optimize the ray dispatch.

If the `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceInvocationMaskFeaturesHUAWEI-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INVOCATION_MASK_FEATURES_HUAWEI`

The `VkPhysicalDeviceScalarBlockLayoutFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceScalarBlockLayoutFeatures {
    VkStructureType sType;
    void* pNext;
} VkPhysicalDeviceScalarBlockLayoutFeatures;
```
```c
VkBool32 scalarBlockLayout;
} VkPhysicalDeviceScalarBlockLayoutFeatures;
```

or the equivalent

```c
// Provided by VK_EXT_scalar_block_layout
typedef VkPhysicalDeviceScalarBlockLayoutFeatures
VkPhysicalDeviceScalarBlockLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `scalarBlockLayout` indicates that the implementation supports the layout of resource blocks in shaders using scalar alignment.

If the `VkPhysicalDeviceScalarBlockLayoutFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceScalarBlockLayoutFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceScalarBlockLayoutFeatures-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCALAR_BLOCK_LAYOUT_FEATURES`

The `VkPhysicalDeviceUniformBufferStandardLayoutFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceUniformBufferStandardLayoutFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 uniformBufferStandardLayout;
} VkPhysicalDeviceUniformBufferStandardLayoutFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_uniform_buffer_standard_layout
typedef VkPhysicalDeviceUniformBufferStandardLayoutFeatures
VkPhysicalDeviceUniformBufferStandardLayoutFeaturesKHR;
```

This structure describes the following feature:
• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is NULL or a pointer to a structure extending this structure.

• `uniformBufferStandardLayout` indicates that the implementation supports the same layouts for uniform buffers as for storage and other kinds of buffers. See Standard Buffer Layout.

If the `VkPhysicalDeviceUniformBufferStandardLayoutFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceUniformBufferStandardLayoutFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

```
• VUID-VkPhysicalDeviceUniformBufferStandardLayoutFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_UNIFORM_BUFFER_STANDARD_LAYOUT_FEATURES
```

The `VkPhysicalDeviceDepthClipEnableFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_depth_clip_enable
typedef struct VkPhysicalDeviceDepthClipEnableFeaturesEXT {
  VkStructureType sType;
  void* pNext;
  VkBool32 depthClipEnable;
} VkPhysicalDeviceDepthClipEnableFeaturesEXT;
```

This structure describes the following feature:

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is NULL or a pointer to a structure extending this structure.

• `depthClipEnable` indicates that the implementation supports setting the depth clipping operation explicitly via the `VkPipelineRasterizationDepthClipStateCreateInfoEXT` pipeline state. Otherwise depth clipping is only enabled when `VkPipelineRasterizationStateCreateInfo::depthClampEnable` is set to `VK_FALSE`.

If the `VkPhysicalDeviceDepthClipEnableFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDepthClipEnableFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

```
• VUID-VkPhysicalDeviceDepthClipEnableFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_ENABLE_FEATURES_EXT
```
The `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_memory_priority
typed struct VkPhysicalDeviceMemoryPriorityFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 memoryPriority;
} VkPhysicalDeviceMemoryPriorityFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `memoryPriority` indicates that the implementation supports memory priorities specified at memory allocation time via `VkMemoryPriorityAllocateInfoEXT`.

If the `VkPhysicalDeviceMemoryPriorityFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMemoryPriorityFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceMemoryPriorityFeaturesEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PRIORITY_FEATURES_EXT`

The `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typed struct VkPhysicalDeviceBufferDeviceAddressFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 bufferDeviceAddress;
    VkBool32 bufferDeviceAddressCaptureReplay;
    VkBool32 bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_buffer_device_address
typed VkPhysicalDeviceBufferDeviceAddressFeatures
VkPhysicalDeviceBufferDeviceAddressFeaturesKHR;
```

This structure describes the following features:
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **bufferDeviceAddress** indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddress`.

• **bufferDeviceAddressCaptureReplay** indicates that the implementation supports saving and reusing buffer and device addresses, e.g. for trace capture and replay.

• **bufferDeviceAddressMultiDevice** indicates that the implementation supports the `bufferDeviceAddress`, `rayTracingPipeline` and `rayQuery` features for logical devices created with multiple physical devices. If this feature is not supported, buffer and acceleration structure addresses must not be queried on a logical device created with more than one physical device.

**Note**

`bufferDeviceAddressMultiDevice` exists to allow certain legacy platforms to be able to support `bufferDeviceAddress` without needing to support shared GPU virtual addresses for multi-device configurations.

See `vkGetBufferDeviceAddress` for more information.

If the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceBufferDeviceAddressFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceBufferDeviceAddressFeatures-sType-sType`

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES`.

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_buffer_device_address
typedef struct VkPhysicalDeviceBufferDeviceAddressFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 bufferDeviceAddress;
    VkBool32 bufferDeviceAddressCaptureReplay;
    VkBool32 bufferDeviceAddressMultiDevice;
} VkPhysicalDeviceBufferDeviceAddressFeaturesEXT;
```

```c
// Provided by VK_EXT_buffer_device_address
typedef VkPhysicalDeviceBufferDeviceAddressFeaturesEXT
    VkPhysicalDeviceBufferDeviceAddressFeaturesEXT;
```
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **bufferDeviceAddress** indicates that the implementation supports accessing buffer memory in shaders as storage buffers via an address queried from `vkGetBufferDeviceAddressEXT`.
- **bufferDeviceAddressCaptureReplay** indicates that the implementation supports saving and reusing buffer addresses, e.g. for trace capture and replay.
- **bufferDeviceAddressMultiDevice** indicates that the implementation supports the **bufferDeviceAddress** feature for logical devices created with multiple physical devices. If this feature is not supported, buffer addresses **must** not be queried on a logical device created with more than one physical device.

If the `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Note**

The `VkPhysicalDeviceBufferDeviceAddressFeaturesEXT` structure has the same members as the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure, but the functionality indicated by the members is expressed differently. The features indicated by the `VkPhysicalDeviceBufferDeviceAddressFeatures` structure requires additional flags to be passed at memory allocation time, and the capture and replay mechanism is built around opaque capture addresses for buffer and memory objects.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceBufferDeviceAddressFeaturesEXT-sType-sType
  
  **sType** **must** be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BUFFER_DEVICE_ADDRESS_FEATURES_EXT

The `VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_dedicated_allocation_image_aliasing
typedef struct VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 dedicatedAllocationImageAliasing;
} VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
• \textit{pNext} is NULL or a pointer to a structure extending this structure.

• \textit{dedicatedAllocationImageAliasing} indicates that the implementation supports aliasing of compatible image objects on a dedicated allocation.

If the \texttt{VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV} structure is included in the \textit{pNext} chain of the \texttt{VkPhysicalDeviceFeatures2} structure passed to \texttt{vkGetPhysicalDeviceFeatures2}, it is filled in to indicate whether each corresponding feature is supported. \texttt{VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV} can also be used in the \textit{pNext} chain of \texttt{VkDeviceCreateInfo} to selectively enable these features.

\begin{center}
\textbf{Valid Usage (Implicit)}
\end{center}

\begin{itemize}
\item VUID-VkPhysicalDeviceDedicatedAllocationImageAliasingFeaturesNV-sType-sType \textit{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEDICATED_ALLOCATION_IMAGE_ALIASING_FEATURES_NV}
\end{itemize}

The \texttt{VkPhysicalDeviceImagelessFramebufferFeatures} structure is defined as:

\begin{verbatim}
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceImagelessFramebufferFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 imagelessFramebuffer;
} VkPhysicalDeviceImagelessFramebufferFeatures;
\end{verbatim}

or the equivalent

\begin{verbatim}
// Provided by VK_KHR_imageless_framebuffer
typedef VkPhysicalDeviceImagelessFramebufferFeatures
    VkPhysicalDeviceImagelessFramebufferFeaturesKHR;
\end{verbatim}

This structure describes the following feature:

• \textit{sType} is a \texttt{VkStructureType} value identifying this structure.

• \textit{pNext} is NULL or a pointer to a structure extending this structure.

• \textit{imagelessFramebuffer} indicates that the implementation supports specifying the image view for attachments at render pass begin time via \texttt{VkRenderPassAttachmentBeginInfo}.

If the \texttt{VkPhysicalDeviceImagelessFramebufferFeatures} structure is included in the \textit{pNext} chain of the \texttt{VkPhysicalDeviceFeatures2} structure passed to \texttt{vkGetPhysicalDeviceFeatures2}, it is filled in to indicate whether each corresponding feature is supported. \texttt{VkPhysicalDeviceImagelessFramebufferFeatures} can also be used in the \textit{pNext} chain of \texttt{VkDeviceCreateInfo} to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImagelessFramebufferFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGELESS_FRAMEBUFFER_FEATURES

The VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT structure is defined as:

// Provided by VK_EXT_fragment_shader_interlock
typedef struct VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 fragmentShaderSampleInterlock;
    VkBool32 fragmentShaderPixelInterlock;
    VkBool32 fragmentShaderShadingRateInterlock;
} VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT;

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fragmentShaderSampleInterlock indicates that the implementation supports the FragmentShaderSampleInterlockEXT SPIR-V capability.
- fragmentShaderPixelInterlock indicates that the implementation supports the FragmentShaderPixelInterlockEXT SPIR-V capability.
- fragmentShaderShadingRateInterlock indicates that the implementation supports the FragmentShaderShadingRateInterlockEXT SPIR-V capability.

If the VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_INTERLOCK_FEATURES_EXT

The VkPhysicalDeviceCooperativeMatrixFeaturesNV structure is defined as:

// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesNV {
    VkStructureType sType;
} VkPhysicalDeviceCooperativeMatrixFeaturesNV;
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **cooperativeMatrix** indicates that the implementation supports the `CooperativeMatrixNV` SPIR-V capability.
- **cooperativeMatrixRobustBufferAccess** indicates that the implementation supports robust buffer access for SPIR-V `OpCooperativeMatrixLoadNV` and `OpCooperativeMatrixStoreNV` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceCooperativeMatrixFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceCooperativeMatrixFeaturesNV-sType-sType**
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_NV`

The `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixFeaturesKHR {
  VkStructureType sType;
  void* pNext;
  VkBool32 cooperativeMatrix;
  VkBool32 cooperativeMatrixRobustBufferAccess;
} VkPhysicalDeviceCooperativeMatrixFeaturesKHR;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **cooperativeMatrix** indicates that the implementation supports the `CooperativeMatrixKHR` SPIR-V capability.
- **cooperativeMatrixRobustBufferAccess** indicates that the implementation supports robust buffer access for SPIR-V `OpCooperativeMatrixLoadKHR` and `OpCooperativeMatrixStoreKHR` instructions.

If the `VkPhysicalDeviceCooperativeMatrixFeaturesKHR` structure is included in the `pNext` chain of the
VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceCooperativeMatrixFeaturesKHR can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixFeaturesKHR-sType-sType
  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_KHR

The VkPhysicalDeviceYcbcrImageArraysFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_ycbcr_image_arrays
typedef struct VkPhysicalDeviceYcbcrImageArraysFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 ycbcrImageArrays;
} VkPhysicalDeviceYcbcrImageArraysFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- ycbcrImageArrays indicates that the implementation supports creating images with a format that requires Y’C_B_C_R conversion and has multiple array layers.

If the VkPhysicalDeviceYcbcrImageArraysFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceYcbcrImageArraysFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcrImageArraysFeaturesEXT-sType-sType
  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_IMAGE_ARRAYS_FEATURES_EXT

The VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderSubgroupExtendedTypes;
} VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures;
```
or the equivalent

```c
typedef VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures
VkPhysicalDeviceShaderSubgroupExtendedTypesFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderSubgroupExtendedTypes** is a boolean specifying whether subgroup operations can use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types in group operations with subgroup scope, if the implementation supports the types.

If the `VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderSubgroupExtendedTypesFeatures-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_EXTENDED_TYPES_FEATURES`

The `VkPhysicalDeviceHostQueryResetFeatures` structure is defined as:

```c
typedef struct VkPhysicalDeviceHostQueryResetFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 hostQueryReset;
} VkPhysicalDeviceHostQueryResetFeatures;
```

or the equivalent

```c
typedef VkPhysicalDeviceHostQueryResetFeatures
VkPhysicalDeviceHostQueryResetFeaturesEXT;
```

This structure describes the following feature:
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **hostQueryReset** indicates that the implementation supports resetting queries from the host with `vkResetQueryPool`.

If the `VkPhysicalDeviceHostQueryResetFeatures` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceHostQueryResetFeatures` can also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostQueryResetFeatures-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_QUERY_RESET_FEATURES`

---

The `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` structure is defined as:

```c
typedef struct VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderIntegerFunctions2;
} VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL;
```

This structure describes the following feature:

• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **shaderIntegerFunctions2** indicates that the implementation supports the `IntegerFunctions2INTEL` SPIR-V capability.

If the `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL` can also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderIntegerFunctions2FeaturesINTEL-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_FUNCTIONS_2_FEATURES_INTEL`

---

The `VkPhysicalDeviceCoverageReductionModeFeaturesNV` structure is defined as:
// Provided by VK_NV_coverage_reduction_mode

typedef struct VkPhysicalDeviceCoverageReductionModeFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 coverageReductionMode;
} VkPhysicalDeviceCoverageReductionModeFeaturesNV;

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **coverageReductionMode** indicates whether the implementation supports coverage reduction modes. See Coverage Reduction.

If the `VkPhysicalDeviceCoverageReductionModeFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCoverageReductionModeFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceCoverageReductionModeFeaturesNV-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COVERAGE_REDUCTION_MODE_FEATURES_NV`

The `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is defined as:

// Provided by VK_VERSION_1_2

typedef struct VkPhysicalDeviceTimelineSemaphoreFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 timelineSemaphore;
} VkPhysicalDeviceTimelineSemaphoreFeatures;

or the equivalent

// Provided by VK_KHR_timeline_semaphore

typedef VkPhysicalDeviceTimelineSemaphoreFeatures
    VkPhysicalDeviceTimelineSemaphoreFeaturesKHR;

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
• `timelineSemaphore` indicates whether semaphores created with a `VkSemaphoreType` of `VK_SEMAPHORE_TYPE_TIMELINE` are supported.

If the `VkPhysicalDeviceTimelineSemaphoreFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTimelineSemaphoreFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceTimelineSemaphoreFeatures-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_FEATURES`.

The `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure is defined as:

```c
typedef struct VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX {
    VkStructureType     sType;
    void*                pNext;
    VkBool32             screenBufferImport;
} VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX;
```

The members of the `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure describe the following features:

- `screenBufferImport` indicates whether QNX Screen buffer import functionality is supported. If `screenBufferImport` is set to `VK_TRUE`, `VkDeviceMemory` supports importing `_screen_buffer` from applications. In this case, the application is responsible for the resource management of the `_screen_buffer`.

**Table 55. Functionality supported for QNX Screen Buffer features**

<table>
<thead>
<tr>
<th>Features</th>
<th>Functionality</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>screenBufferImport</code></td>
<td><code>VkImportScreenBufferInfoQNX</code></td>
</tr>
<tr>
<td>Always supported 1</td>
<td><code>vkGetScreenBufferPropertiesQNX, VkScreenBufferPropertiesQNX, VkScreenBufferFormatPropertiesQNX, VkExternalFormatQNX</code></td>
</tr>
</tbody>
</table>

1  

Functionality in this row is always available.

The **Functionality supported for QNX Screen buffer features** table summarizes the functionality enabled by the `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure. Each entry in the body of the table summarizes the functionality that can be used when the given features are supported and enabled. This summarizes Valid Usage statements that are added elsewhere in this
specification.

If the `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryScreenBufferFeaturesQNX-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_SCREEN_BUFFER_FEATURES_QNX`

The `VkPhysicalDeviceIndexTypeUint8FeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_index_type_uint8
typedef struct VkPhysicalDeviceIndexTypeUint8FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 indexTypeUint8;
} VkPhysicalDeviceIndexTypeUint8FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `indexTypeUint8` indicates that `VK_INDEX_TYPE_UINT8_EXT` can be used with `vkCmdBindIndexBuffer2KHR` and `vkCmdBindIndexBuffer`.

If the `VkPhysicalDeviceIndexTypeUint8FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceIndexTypeUint8FeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceIndexTypeUint8FeaturesEXT-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INDEX_TYPE_UINT8_FEATURES_EXT`

The `VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_primitive_topology_list_restart
typedef struct VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT {
    // ... (structure definition)
} VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT;
```
This structure describes the following features:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **primitiveTopologyListRestart** indicates that list type primitives, `VK_PRIMITIVE_TOPOLOGY_POINT_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST`, `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST`, `VK_PRIMITIVE_TOPOLOGY_LINE_LIST_WITH_ADJACENCY` and `VK_PRIMITIVE_TOPOLOGY_TRIANGLE_LIST_WITH_ADJACENCY`, can use the primitive restart index value in index buffers.
- **primitiveTopologyPatchListRestart** indicates that the `VK_PRIMITIVE_TOPOLOGY_PATCH_LIST` topology can use the primitive restart index value in index buffers.

If the *VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT* structure is included in the *pNext* chain of the *VkPhysicalDeviceFeatures2* structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT* can also be used in the *pNext* chain of *VkDeviceCreateInfo* to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDevicePrimitiveTopologyListRestartFeaturesEXT-sType-sType**
  - The *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVE_TOPOLOGY_LIST_RESTART_FEATURES_EXT`.

The *VkPhysicalDeviceShaderSMBuiltinsFeaturesNV* structure is defined as:

```c
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderSMBuiltins;
} VkPhysicalDeviceShaderSMBuiltinsFeaturesNV;
```

This structure describes the following feature:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderSMBuiltins** indicates whether the implementation supports the SPIR-V *ShaderSMBuiltinsNV* capability.
If the `VkPhysicalDeviceShaderSMBuiltinsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderSMBuiltinsFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceShaderSMBuiltinsFeaturesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_FEATURES_NV`

The `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 separateDepthStencilLayouts;
} VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_separate_depth_stencil_layouts
typedef VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures
      VkPhysicalDeviceSeparateDepthStencilLayoutsFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `separateDepthStencilLayouts` indicates whether the implementation supports a `VkImageMemoryBarrier` for a depth/stencil image with only one of `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` set, and whether `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_OPTIMAL`, `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL`, `VK_IMAGE_LAYOUT_STENCIL_ATTACHMENT_OPTIMAL`, or `VK_IMAGE_LAYOUT_STENCIL_READ_ONLY_OPTIMAL` can be used.

If the `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSeparateDepthStencilLayoutsFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**
The `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_pipeline_executable_properties
typedef struct VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR {
    VkStructureType    sType;
    void*               pNext;
    VkBool32            pipelineExecutableInfo;
} VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineExecutableInfo` indicates that the implementation supports reporting properties and statistics about the pipeline executables associated with a compiled pipeline.

If the `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_EXECUTABLE_PROPERTIES_FEATURES_KHR`

The `VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures {
    VkStructureType    sType;
    void*               pNext;
    VkBool32            shaderDemoteToHelperInvocation;
} VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures;
```

or the equivalent

```c
// Provided by VK_EXT_shader_demote_to_helper_invocation
typedef VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures
```
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **shaderDemoteToHelperInvocation** indicates whether the implementation supports the SPIR-V `DemoteToHelperInvocationEXT` capability.

If the `VkPhysicalDeviceShaderDemoteToHelperInvocationFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderDemoteToHelperInvocationFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderDemoteToHelperInvocationFeatures-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_DEMOTE_TO_HELPER_INVOCATION_FEATURES`.

The `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_texel_buffer_alignment
typedef struct VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT {
  VkStructureType sType;
  void* pNext;
  VkBool32 texelBufferAlignment;
} VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **texelBufferAlignment** indicates whether the implementation uses more specific alignment requirements advertised in `VkPhysicalDeviceTexelBufferAlignmentProperties` rather than `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`.

If the `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_FEATURES_EXT

The `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_attachment_feedback_loop_dynamic_state
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 attachmentFeedbackLoopDynamicState;
} VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **attachmentFeedbackLoopDynamicState** specifies whether dynamic feedback loops are supported.

If the `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceAttachmentFeedbackLoopDynamicStateFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_DYNAMIC_STATE_FEATURES_EXT

The `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTextureCompressionASTCHDRFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 textureCompressionASTC_HDR;
} Vk PhysicalDeviceTextureCompressionASTCHDRFeatures;
```

or the equivalent

```c
// Provided by VK_EXT_texture_compression_astc_hdr
```
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **textureCompressionASTC_HDR** indicates whether all of the ASTC HDR compressed texture formats are supported. If this feature is enabled, then the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`, `VK_FORMAT_FEATURE_BLIT_SRC_BIT` and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT` features must be supported in `optimalTilingFeatures` for the following formats:

  - `VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK`
  - `VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK`

To query for additional properties, or if the feature is not enabled, `vkGetPhysicalDeviceFormatProperties` and `vkGetPhysicalDeviceImageFormatProperties` can be used to check for supported properties of individual formats as normal.

If the `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTextureCompressionASTCHDRFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceTextureCompressionASTCHDRFeatures-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXTURE_COMPRESSION_ASTC_HDR_FEATURES`
The `VkPhysicalDeviceLineRasterizationFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_line_rasterization
typedef struct VkPhysicalDeviceLineRasterizationFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 rectangularLines;
    VkBool32 bresenhamLines;
    VkBool32 smoothLines;
    VkBool32 stippledRectangularLines;
    VkBool32 stippledBresenhamLines;
    VkBool32 stippledSmoothLines;
} VkPhysicalDeviceLineRasterizationFeaturesEXT;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **rectangularLines** indicates whether the implementation supports rectangular line rasterization.
- **bresenhamLines** indicates whether the implementation supports Bresenham-style line rasterization.
- **smoothLines** indicates whether the implementation supports smooth line rasterization.
- **stippledRectangularLines** indicates whether the implementation supports stippled line rasterization with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_EXT` lines.
- **stippledBresenhamLines** indicates whether the implementation supports stippled line rasterization with `VK_LINE_RASTERIZATION_MODE_BRESENHAM_EXT` lines.
- **stippledSmoothLines** indicates whether the implementation supports stippled line rasterization with `VK_LINE_RASTERIZATION_MODE_RECTANGULAR_SMOOTH_EXT` lines.

If the `VkPhysicalDeviceLineRasterizationFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceLineRasterizationFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLineRasterizationFeaturesEXT-sType-sType

  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_FEATURES_EXT`

The `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlFeatures {
```
VkStructureType sType;
void* pNext;
VkBool32 subgroupSizeControl;
VkBool32 computeFullSubgroups;
} VkPhysicalDeviceSubgroupSizeControlFeatures;

or the equivalent

// Provided by VK_EXT_subgroup_size_control
typedef VkPhysicalDeviceSubgroupSizeControlFeatures
VkPhysicalDeviceSubgroupSizeControlFeaturesEXT;

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **subgroupSizeControl** indicates whether the implementation supports controlling shader subgroup sizes via the `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW_VARYING_SUBGROUP_SIZE_BIT` flag and the `VkPipelineShaderStageRequiredSubgroupSizeCreateInfo` structure.
- **computeFullSubgroups** indicates whether the implementation supports requiring full subgroups in `compute`, `mesh`, or `task` shaders via the `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE_FULL_SUBGROUPS_BIT` flag.

If the `VkPhysicalDeviceSubgroupSizeControlFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSubgroupSizeControlFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Note**
The `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` structure was added in version 2 of the `VK_EXT_subgroup_size_control` extension. Version 1 implementations of this extension will not fill out the features structure but applications may assume that both `subgroupSizeControl` and `computeFullSubgroups` are supported if the extension is supported. (See also the Feature Requirements section.) Applications are advised to add a `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` structure to the `pNext` chain of `VkDeviceCreateInfo` to enable the features regardless of the version of the extension supported by the implementation. If the implementation only supports version 1, it will safely ignore the `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` structure.

Vulkan 1.3 implementations always support the features structure.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_FEATURES

The VkPhysicalDeviceCoherentMemoryFeaturesAMD structure is defined as:

```c
// Provided by VK_AMD_device_coherent_memory
typedef struct VkPhysicalDeviceCoherentMemoryFeaturesAMD {
    VkStructureType     sType;
    void*               pNext;
    VkBool32            deviceCoherentMemory;
} VkPhysicalDeviceCoherentMemoryFeaturesAMD;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `deviceCoherentMemory` indicates that the implementation supports device coherent memory.

If the VkPhysicalDeviceCoherentMemoryFeaturesAMD structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceCoherentMemoryFeaturesAMD can also be used in the `pNext` chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCoherentMemoryFeaturesAMD-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COHERENT_MEMORY_FEATURES_AMD

The VkPhysicalDeviceAccelerationStructureFeaturesKHR structure is defined as:

```c
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructureFeaturesKHR {
    VkStructureType     sType;
    void*               pNext;
    VkBool32            accelerationStructure;
    VkBool32            accelerationStructureCaptureReplay;
    VkBool32            accelerationStructureIndirectBuild;
    VkBool32            accelerationStructureHostCommands;
    VkBool32            descriptorBindingAccelerationStructureUpdateAfterBind;
} VkPhysicalDeviceAccelerationStructureFeaturesKHR;
```

This structure describes the following features:
• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• accelerationStructure indicates whether the implementation supports the acceleration structure functionality. See Acceleration Structures.
• accelerationStructureCaptureReplay indicates whether the implementation supports saving and reusing acceleration structure device addresses, e.g. for trace capture and replay.
• accelerationStructureIndirectBuild indicates whether the implementation supports indirect acceleration structure build commands, e.g. vkCmdBuildAccelerationStructuresIndirectKHR.
• accelerationStructureHostCommands indicates whether the implementation supports host side acceleration structure commands, e.g. vkBuildAccelerationStructuresKHR, vkCopyAccelerationStructureKHR, vkCopyAccelerationStructureToMemoryKHR, vkCopyMemoryToAccelerationStructureKHR, vkWriteAccelerationStructuresPropertiesKHR.
• descriptorBindingAccelerationStructureUpdateAfterBind indicates whether the implementation supports updating acceleration structure descriptors after a set is bound. If this feature is not enabled, VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT must not be used with VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR.

If the VkPhysicalDeviceAccelerationStructureFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceAccelerationStructureFeaturesKHR can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceAccelerationStructureFeaturesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_FEATURES_KHR

The VkPhysicalDeviceRayTracingPipelineFeaturesKHR structure is defined as:

```c
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelineFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 rayTracingPipeline;
    VkBool32 rayTracingPipelineShaderGroupHandleCaptureReplay;
    VkBool32 rayTracingPipelineShaderGroupHandleCaptureReplayMixed;
    VkBool32 rayTraversalPrimitiveCulling;
    VkBool32 rayTracingPipelineTraceRaysIndirect;
    VkBool32 rayTraversalPrimitiveCulling;
} VkPhysicalDeviceRayTracingPipelineFeaturesKHR;
```

This structure describes the following features:

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.

• rayTracingPipeline indicates whether the implementation supports the ray tracing pipeline functionality. See Ray Tracing.

• rayTracingPipelineShaderGroupHandleCaptureReplay indicates whether the implementation supports saving and reusing shader group handles, e.g. for trace capture and replay.

• rayTracingPipelineShaderGroupHandleCaptureReplayMixed indicates whether the implementation supports reuse of shader group handles being arbitrarily mixed with creation of non-reused shader group handles. If this is VK_FALSE, all reused shader group handles must be specified before any non-reused handles may be created.

• rayTracingPipelineTraceRaysIndirect indicates whether the implementation supports indirect ray tracing commands, e.g. vkCmdTraceRaysIndirectKHR.

• rayTraversalPrimitiveCulling indicates whether the implementation supports primitive culling during ray traversal.

If the VkPhysicalDeviceRayTracingPipelineFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. 

VkPhysicalDeviceRayTracingPipelineFeaturesKHR can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage

• VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-rayTracingPipelineShaderGroupHandleCaptureReplayMixed-03575

  If rayTracingPipelineShaderGroupHandleCaptureReplayMixed is VK_TRUE, rayTracingPipelineShaderGroupHandleCaptureReplay must also be VK_TRUE

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceRayTracingPipelineFeaturesKHR-sType-sType

  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR

The VkPhysicalDeviceRayQueryFeaturesKHR structure is defined as:

```c
// Provided by VK_KHR_ray_query
typedef struct VkPhysicalDeviceRayQueryFeaturesKHR {
    VkStructureType      sType;
    void*                pNext;
    VkBool32             rayQuery;
} VkPhysicalDeviceRayQueryFeaturesKHR;
```

This structure describes the following feature:

• sType is a VkStructureType value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.
• `rayQuery` indicates whether the implementation supports ray query (`OpRayQueryProceedKHR`) functionality.

If the `VkPhysicalDeviceRayQueryFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayQueryFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceRayQueryFeaturesKHR-sType-sType**
  
  The `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR`.

---

The `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_ray_tracing_maintenance1
typedef struct VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 rayTracingMaintenance1;
    VkBool32 rayTracingPipelineTraceRaysIndirect2;
} VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `rayTracingMaintenance1` indicates that the implementation supports the following:
  - The `CullMaskKHR` SPIR-V built-in using the `SPV_KHR_ray_cull_mask` SPIR-V extension.
  - Additional acceleration structure property queries: `VK_QUERY_TYPE_ACCELERATION_STRUCTURE.Serialization.BOTTOM_LEVEL.POINTERS_KHR` and `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`.
  - A new access flag `VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR`.
  - A new pipeline stage flag `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`.
- `rayTracingPipelineTraceRaysIndirect2` indicates whether the implementation supports the extended indirect ray tracing command `vkCmdTraceRaysIndirect2KHR`.

If the `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR-sType-sType**

  The `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` structure is defined as:

  ```c
  // Provided by VK_EXT_extended_dynamic_state
typedef struct VkPhysicalDeviceExtendedDynamicStateFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 extendedDynamicState;
  } VkPhysicalDeviceExtendedDynamicStateFeaturesEXT;
  ```

  This structure describes the following feature:

  - **sType** is a `VkStructureType` value identifying this structure.
  - **pNext** is NULL or a pointer to a structure extending this structure.
  - **extendedDynamicState** indicates that the implementation supports the following dynamic states:

    - `VK_DYNAMIC_STATE_CULL_MODE`
    - `VK_DYNAMIC_STATE_FRONT_FACE`
    - `VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY`
    - `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`
    - `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`
    - `VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE`
    - `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE`
    - `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE`
    - `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP`
    - `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE`
    - `VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE`
    - `VK_DYNAMIC_STATE_STENCIL_OP`

  If the `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT` can also be used in the pNext chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicStateFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE FEATURES_EXT

The VkPhysicalDeviceExtendedDynamicState2FeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_extended_dynamic_state2
typedef struct VkPhysicalDeviceExtendedDynamicState2FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 extendedDynamicState2;
    VkBool32 extendedDynamicState2LogicOp;
    VkBool32 extendedDynamicState2PatchControlPoints;
} VkPhysicalDeviceExtendedDynamicState2FeaturesEXT;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **extendedDynamicState2** indicates that the implementation supports the following dynamic states:
  - VK_DYNAMIC_STATE_DEPTH_BIAS_ENABLE
  - VK_DYNAMIC_STATE_PRIMITIVE_RESTART_ENABLE
  - VK_DYNAMIC_STATE_RASTERIZER_DISCARD_ENABLE
- **extendedDynamicState2LogicOp** indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_LOGIC_OP_EXT
- **extendedDynamicState2PatchControlPoints** indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_PATCH_CONTROL_POINTS_EXT

If the VkPhysicalDeviceExtendedDynamicState2FeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceExtendedDynamicState2FeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState2FeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_2_FEATURES_EXT
The `VkPhysicalDeviceExtendedDynamicState3FeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 extendedDynamicState3TessellationDomainOrigin;
    VkBool32 extendedDynamicState3DepthClampEnable;
    VkBool32 extendedDynamicState3PolygonMode;
    VkBool32 extendedDynamicState3RasterizationSamples;
    VkBool32 extendedDynamicState3SampleMask;
    VkBool32 extendedDynamicState3AlphaToCoverageEnable;
    VkBool32 extendedDynamicState3AlphaToOneEnable;
    VkBool32 extendedDynamicState3LogicOpEnable;
    VkBool32 extendedDynamicState3ColorBlendEnable;
    VkBool32 extendedDynamicState3ColorBlendEquation;
    VkBool32 extendedDynamicState3ColorWriteMask;
    VkBool32 extendedDynamicState3RasterizationStream;
    VkBool32 extendedDynamicState3ConservativeRasterizationMode;
    VkBool32 extendedDynamicState3ExtraPrimitiveOverestimationSize;
    VkBool32 extendedDynamicState3DepthClipEnable;
    VkBool32 extendedDynamicState3SampleLocationsEnable;
    VkBool32 extendedDynamicState3ColorBlendAdvanced;
    VkBool32 extendedDynamicState3ProvokingVertexMode;
    VkBool32 extendedDynamicState3LineRasterizationMode;
    VkBool32 extendedDynamicState3LineStippleEnable;
    VkBool32 extendedDynamicState3DepthClipNegativeOneToOne;
    VkBool32 extendedDynamicState3ViewportWScalingEnable;
    VkBool32 extendedDynamicState3ViewportSwizzle;
    VkBool32 extendedDynamicState3CoverageToColorEnable;
    VkBool32 extendedDynamicState3CoverageToColorLocation;
    VkBool32 extendedDynamicState3CoverageModulationMode;
    VkBool32 extendedDynamicState3CoverageModulationTableEnable;
    VkBool32 extendedDynamicState3CoverageModulationTable;
    VkBool32 extendedDynamicState3CoverageReductionMode;
    VkBool32 extendedDynamicState3RepresentativeFragmentTestEnable;
    VkBool32 extendedDynamicState3ShadingRateImageEnable;
} VkPhysicalDeviceExtendedDynamicState3FeaturesEXT;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **extendedDynamicState3TessellationDomainOrigin** indicates that the implementation supports the following dynamic state:
  - `VK_DYNAMIC_STATE_TESSELLATION_DOMAIN_ORIGIN_EXT`
- **extendedDynamicState3DepthClampEnable** indicates that the implementation supports the following dynamic state:
• VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT

- extendedDynamicState3PolygonMode indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_POLYGON_MODE_EXT

- extendedDynamicState3RasterizationSamples indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT

- extendedDynamicState3SampleMask indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_SAMPLE_MASK_EXT

- extendedDynamicState3AlphaToCoverageEnable indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT

- extendedDynamicState3AlphaToOneEnable indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT

- extendedDynamicState3LogicOpEnable indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT

- extendedDynamicState3ColorBlendEnable indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT

- extendedDynamicState3ColorBlendEquation indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT

- extendedDynamicState3ColorWriteMask indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT

- extendedDynamicState3RasterizationStream indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT

- extendedDynamicState3ConservativeRasterizationMode indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT

- extendedDynamicState3ExtraPrimitiveOverestimationSize indicates that the implementation supports the following dynamic state:
  - VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT

- extendedDynamicState3DepthClipEnable indicates that the implementation supports the following dynamic state:
dynamic state:
  ◦ VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT

• extendedDynamicState3SampleLocationsEnable indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT

• extendedDynamicState3ColorBlendAdvanced indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT

• extendedDynamicState3ProvokingVertexMode indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT

• extendedDynamicState3LineRasterizationMode indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT

• extendedDynamicState3LineStippleEnable indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT

• extendedDynamicState3DepthClipNegativeOneToOne indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT

• extendedDynamicState3ViewportWScalingEnable indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_ENABLE_NV

• extendedDynamicState3ViewportSwizzle indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_VIEWPORT_SWIZZLE_NV

• extendedDynamicState3CoverageToColorEnable indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV

• extendedDynamicState3CoverageToColorLocation indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV

• extendedDynamicState3CoverageModulationMode indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV

• extendedDynamicState3CoverageModulationTableEnable indicates that the implementation supports the following dynamic state:
  ◦ VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV
extendedDynamicState3CoverageModulationTable indicates that the implementation supports the following dynamic state:

- VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV

extendedDynamicState3CoverageReductionMode indicates that the implementation supports the following dynamic state:

- VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV

extendedDynamicState3RepresentativeFragmentTestEnable indicates that the implementation supports the following dynamic state:

- VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV

extendedDynamicState3ShadingRateImageEnable indicates that the implementation supports the following dynamic state:

- VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV

If the VkPhysicalDeviceExtendedDynamicState3FeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceExtendedDynamicState3FeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedDynamicState3FeaturesEXT-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_FEATURES_EXT

The VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV structure is defined as:

```c
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 deviceGeneratedCommands;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV;
```

This structure describes the following feature:

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `deviceGeneratedCommands` indicates whether the implementation supports functionality to generate commands on the device. See Device-Generated Commands.

If the VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported.
VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV-sType-sType
  
  *sType must be* 
  
  VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_NV

The `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_device_generated_commands_compute
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV {
    VkStructureType   sType;
    void*             pNext;
    VkBool32          deviceGeneratedCompute;
    VkBool32          deviceGeneratedComputePipelines;
    VkBool32          deviceGeneratedComputeCaptureReplay;
} VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **deviceGeneratedCompute** indicates whether the implementation supports functionality to generate dispatch commands and push constants for the compute pipeline on the device. See Device-Generated Commands.
- **deviceGeneratedComputePipelines** indicates whether the implementation supports functionality to generate commands to bind compute pipelines on the device. See Device-Generated Commands.
- **deviceGeneratedComputeCaptureReplay** indicates whether the implementation supports functionality to capture compute pipeline address and reuse later for replay in Device-Generated Commands.

If the `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` structure is included in the pNext chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV` can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsFeaturesNV-sType-sType
  
  *sType must be* 
  
  VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_NV
The `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_device_diagnostics_config
typedef struct VkPhysicalDeviceDiagnosticsConfigFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 diagnosticsConfig;
} VkPhysicalDeviceDiagnosticsConfigFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `diagnosticsConfig` indicates whether the implementation supports the ability to configure diagnostic tools.

If the `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDiagnosticsConfigFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDiagnosticsConfigFeaturesNV-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DIAGNOSTICS_CONFIG_FEATURES_NV`.

The `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_device_memory_report
typedef struct VkPhysicalDeviceDeviceMemoryReportFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 deviceMemoryReport;
} VkPhysicalDeviceDeviceMemoryReportFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `deviceMemoryReport` indicates whether the implementation supports the ability to register device memory report callbacks.

If the `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to...
indicate whether each corresponding feature is supported. 

VkPhysicalDeviceDeviceMemoryReportFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceDeviceMemoryReportFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_MEMORY_REPORT_FEATURES_EXT

The VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR structure is defined as:

```c
// Provided by VK_KHR_global_priority
typedef struct VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 globalPriorityQuery;
} VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR;
```

or the equivalent

```c
// Provided by VK_EXT_global_priority_query
typedef VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR
VkPhysicalDeviceGlobalPriorityQueryFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- globalPriorityQuery indicates whether the implementation supports the ability to query global queue priorities.

If the VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES_KHR

The VkPhysicalDevicePipelineCreationCacheControlFeatures structure is defined as:
typedef struct VkPhysicalDevicePipelineCreationCacheControlFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 pipelineCreationCacheControl;
} VkPhysicalDevicePipelineCreationCacheControlFeatures;

or the equivalent

typedef VkPhysicalDevicePipelineCreationCacheControlFeatures
VkPhysicalDevicePipelineCreationCacheControlFeaturesEXT;

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineCreationCacheControl` indicates that the implementation supports:
  - The following can be used in `Vk*PipelineCreateInfo::flags`:
    - `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT`
    - `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT`
  - The following can be used in `VkPipelineCacheCreateInfo::flags`:
    - `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT`

If the `VkPhysicalDevicePipelineCreationCacheControlFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineCreationCacheControlFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePipelineCreationCacheControlFeatures-sType-sType` must be
  `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_CREATION_CACHE_CONTROL_FEATURES`

The `VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderZeroInitializeWorkgroupMemory;
} VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures;
```
VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures;

or the equivalent

```c
typedef VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures
    VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderZeroInitializeWorkgroupMemory` specifies whether the implementation supports initializing a variable in Workgroup storage class.

If the `VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

```
VUID-VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeatures-sType-sType
sType must be
VK_STRUCTURE_TYPE_PHYSICALDEVICEZEROINITIALIZEWORKGROUPMEMORYFEATURES
```

The `VkPhysicalDevicePrivateDataFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDevicePrivateDataFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 privateData;
} VkPhysicalDevicePrivateDataFeatures;
```

or the equivalent

```c
// Provided by VK_EXT_private_data
typedef VkPhysicalDevicePrivateDataFeatures VkPhysicalDevicePrivateDataFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.

• **privateData** indicates whether the implementation supports private data. See Private Data.

If the **VkPhysicalDevicePrivateDataFeatures** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDevicePrivateDataFeatures** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

---

### Valid Usage (Implicit)

- **VUID-VkPhysicalDevicePrivateDataFeatures-sType-sType**
  
  *sType* must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIVATE_DATA_FEATURES**

The **VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR** structure is defined as:

```c
typedef struct VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderSubgroupUniformControlFlow;
} VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderSubgroupUniformControlFlow** specifies whether the implementation supports the shader execution mode **SubgroupUniformControlFlowKHR**

If the **VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

---

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR-sType-sType**
  
  *sType* must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SUBGROUP_UNIFORM_CONTROL_FLOW_FEATURES_KHR**

The **VkPhysicalDeviceRobustness2FeaturesEXT** structure is defined as:

```c
// Provided by VK_EXT_robustness2
```

---

3628
typedef struct VkPhysicalDeviceRobustness2FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 robustBufferAccess2;
    VkBool32 robustImageAccess2;
    VkBool32 nullDescriptor;
} VkPhysicalDeviceRobustness2FeaturesEXT;

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **robustBufferAccess2** indicates whether buffer accesses are tightly bounds-checked against the range of the descriptor. Uniform buffers must be bounds-checked to the range of the descriptor, where the range is rounded up to a multiple of `robustUniformBufferAccessSizeAlignment`. Storage buffers must be bounds-checked to the range of the descriptor, where the range is rounded up to a multiple of `robustStorageBufferAccessSizeAlignment`. Out of bounds buffer loads will return zero values, and image load, sample, and atomic operations from texel buffers will have (0,0,1) values inserted for missing G, B, or A components based on the format.

- **robustImageAccess2** indicates whether image accesses are tightly bounds-checked against the dimensions of the image view. Out of bounds image load, sample, and atomic operations from images will return zero values, with (0,0,1) values inserted for missing G, B, or A components based on the format.

- **nullDescriptor** indicates whether descriptors can be written with a `VK_NULL_HANDLE` resource or view, which are considered valid to access and act as if the descriptor were bound to nothing.

If the `VkPhysicalDeviceRobustness2FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRobustness2FeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage

- VUID-VkPhysicalDeviceRobustness2FeaturesEXT-robustBufferAccess2-04000
  If `robustBufferAccess2` is enabled then `robustBufferAccess` must also be enabled

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2FeaturesEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_EXT`

The `VkPhysicalDeviceImageRobustnessFeatures` structure is defined as:
typedef struct VkPhysicalDeviceImageRobustnessFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 robustImageAccess;
} VkPhysicalDeviceImageRobustnessFeatures;

or the equivalent

typedef VkPhysicalDeviceImageRobustnessFeatures
VkPhysicalDeviceImageRobustnessFeaturesEXT;

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- robustImageAccess indicates whether image accesses are tightly bounds-checked against the dimensions of the image view. Invalid texels resulting from out of bounds image loads will be replaced as described in Texel Replacement, with either (0,0,1) or (0,0,0) values inserted for missing G, B, or A components based on the format.

If the VkPhysicalDeviceImageRobustnessFeatures structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceImageRobustnessFeatures can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageRobustnessFeatures-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ROBUSTNESS_FEATURES

The VkPhysicalDeviceShaderTerminateInvocationFeatures structure is defined as:

typedef struct VkPhysicalDeviceShaderTerminateInvocationFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderTerminateInvocation;
} VkPhysicalDeviceShaderTerminateInvocationFeatures;

or the equivalent

or the equivalent

3630
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderTerminateInvocation** specifies whether the implementation supports SPIR-V modules that use the `SPV_KHR_terminate_invocation` extension.

If the `VkPhysicalDeviceShaderTerminateInvocationFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderTerminate InvocationFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderTerminateInvocationFeatures-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TERMINATE_INVOCATION_FEATURES`.

The `VkPhysicalDeviceCustomBorderColorFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 customBorderColors;
    VkBool32 customBorderColorWithoutFormat;
} VkPhysicalDeviceCustomBorderColorFeaturesEXT;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **customBorderColors** indicates that the implementation supports providing a `borderColor` value with one of the following values at sampler creation time:
  - `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
  - `VK_BORDER_COLOR_INT_CUSTOM_EXT`
- **customBorderColorWithoutFormat** indicates that explicit formats are not required for custom border colors and the value of the `format` member of the `VkSamplerCustomBorderColorCreateInfoEXT` structure may be `VK_FORMAT_UNDEFINED`. If this
feature bit is not set, applications must provide the VkFormat of the image view(s) being sampled by this sampler in the format member of the VkSamplerCustomBorderColorCreateInfoEXT structure.

If the VkPhysicalDeviceCustomBorderColorFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceCustomBorderColorFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_FEATURES_EXT

The VkPhysicalDeviceBorderColorSwizzleFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_border_color_swizzle
typedef struct VkPhysicalDeviceBorderColorSwizzleFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 borderColorSwizzle;
    VkBool32 borderColorSwizzleFromImage;
} VkPhysicalDeviceBorderColorSwizzleFeaturesEXT;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **borderColorSwizzle** indicates that defined values are returned by sampled image operations when used with a sampler that uses a VK_BORDER_COLOR_FLOAT_OPAQUE_BLACK, VK_BORDER_COLOR_INT_OPAQUE_BLACK, VK_BORDER_COLOR_FLOAT_CUSTOM_EXT, or VK_BORDER_COLOR_INT_CUSTOM_EXT borderColor and an image view that uses a non-identity component mapping, when either borderColorSwizzleFromImage is enabled or theVkSamplerBorderColorComponentMappingCreateInfoEXT is specified.
- **borderColorSwizzleFromImage** indicates that the implementation will return the correct border color values from sampled image operations under the conditions expressed above, without the application having to specify the border color component mapping when creating the sampler object. If this feature bit is not set, applications can chain a VkSamplerBorderColorComponentMappingCreateInfoEXT structure when creating samplers for use with image views that do not have an identity swizzle and, when those samplers are combined with image views using the same component mapping, sampled image operations that use opaque black or custom border colors will return the correct border color values.

If the VkPhysicalDeviceBorderColorSwizzleFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to...
indicate whether each corresponding feature is supported. VkPhysicalDeviceBorderColorSwizzleFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBorderColorSwizzleFeaturesEXT-sType-sType
  - sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BORDER_COLOR_SWIZZLE_FEATURES_EXT

The VkPhysicalDevicePortabilitySubsetFeaturesKHR structure is defined as:

```c
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 constantAlphaColorBlendFactors;
    VkBool32 events;
    VkBool32 imageViewFormatReinterpretation;
    VkBool32 imageViewFormatSwizzle;
    VkBool32 imageView2DOn3DImage;
    VkBool32 multisampleArrayImage;
    VkBool32 mutableComparisonSamplers;
    VkBool32 pointPolygons;
    VkBool32 samplerMipLodBias;
    VkBool32 separateStencilMaskRef;
    VkBool32 shaderSampleRateInterpolationFunctions;
    VkBool32 tessellationIsolines;
    VkBool32 tessellationPointMode;
    VkBool32 triangleFans;
    VkBool32 vertexAttributeAccessBeyondStride;
} VkPhysicalDevicePortabilitySubsetFeaturesKHR;
```

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **constantAlphaColorBlendFactors** indicates whether this implementation supports constant alpha Blend Factors used as source or destination color Blending.
- **events** indicates whether this implementation supports synchronization using Events.
- **imageViewFormatReinterpretation** indicates whether this implementation supports a VkImageView being created with a texel format containing a different number of components, or a different number of bits in each component, than the texel format of the underlying VkImage.
- **imageViewFormatSwizzle** indicates whether this implementation supports remapping format components using VkImageViewCreateInfo::components.
- **imageView2DOn3DImage** indicates whether this implementation supports a VkImage being created
with the `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT` flag set, permitting a 2D or 2D array image view to be created on a 3D `VkImage`.

- `multisampleArrayImage` indicates whether this implementation supports a `VkImage` being created as a 2D array with multiple samples per texel.
- `mutableComparisonSamplers` indicates whether this implementation allows descriptors with comparison samplers to be updated.
- `pointPolygons` indicates whether this implementation supports Rasterization using a point Polygon Mode.
- `samplerMipLodBias` indicates whether this implementation supports setting a mipmap LOD bias value when creating a sampler.
- `separateStencilMaskRef` indicates whether this implementation supports separate front and back Stencil Test reference values.
- `shaderSampleRateInterpolationFunctions` indicates whether this implementation supports fragment shaders which use the `InterpolationFunction` capability and the extended instructions `InterpolateAtCentroid`, `InterpolateAtOffset`, and `InterpolateAtSample` from the GLSL.std.450 extended instruction set. This member is only meaningful if the `sampleRateShading` feature is supported.
- `tessellationIsolines` indicates whether this implementation supports isoline output from the Tessellation stage of a graphics pipeline. This member is only meaningful if `tessellationShader` are supported.
- `tessellationPointMode` indicates whether this implementation supports point output from the Tessellation stage of a graphics pipeline. This member is only meaningful if `tessellationShader` are supported.
- `triangleFans` indicates whether this implementation supports Triangle Fans primitive topology.
- `vertexAttributeAccessBeyondStride` indicates whether this implementation supports accessing a vertex input attribute beyond the stride of the corresponding vertex input binding.

If the `VkPhysicalDevicePortabilitySubsetFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePortabilitySubsetFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDevicePortabilitySubsetFeaturesKHR-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_FEATURES_KHR`.

The `VkPhysicalDevicePerformanceQueryFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryFeaturesKHR {
    VkStructureType sType;
} VkPhysicalDevicePerformanceQueryFeaturesKHR;
```
void* pNext;
VkBool32 performanceCounterQueryPools;
VkBool32 performanceCounterMultipleQueryPools;
} VkPhysicalDevicePerformanceQueryFeaturesKHR;

This structure describes the following features:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **performanceCounterQueryPools** indicates whether the implementation supports performance counter query pools.
- **performanceCounterMultipleQueryPools** indicates whether the implementation supports using multiple performance query pools in a primary command buffer and secondary command buffers executed within it.

If the *VkPhysicalDevicePerformanceQueryFeaturesKHR* structure is included in the **pNext** chain of the *VkPhysicalDeviceFeatures2* structure passed to *vkGetPhysicalDeviceFeatures2*, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDevicePerformanceQueryFeaturesKHR* can also be used in the **pNext** chain of *VkDeviceCreateInfo* to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDevicePerformanceQueryFeaturesKHR-sType-sType
  **sType** must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_FEATURES_KHR

The *VkPhysicalDevice4444FormatsFeaturesEXT* structure is defined as:

```c
typedef struct VkPhysicalDevice4444FormatsFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 formatA4R4G4B4;
    VkBool32 formatA4B4G4R4;
} VkPhysicalDevice4444FormatsFeaturesEXT;
```

This structure describes the following features:

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **formatA4R4G4B4** indicates that the implementation must support using a *VkFormat* of VK_FORMAT_A4R4G4B4_UNORM_PACK16_EXT with at least the following *VkFormatFeatureFlagBits*:
  - VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT
  - VK_FORMAT_FEATURE_BLIT_SRC_BIT
• \texttt{VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_FILTER\_LINEAR\_BIT}

• \texttt{formatA4B4G4R4} indicates that the implementation \textbf{must} support using a \texttt{VkFormat} of \texttt{VK\_FORMAT\_A4B4G4R4\_UNORM\_PACK16\_EXT} with at least the following \texttt{VkFormatFeatureFlagBits}:
  
  • \texttt{VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_BIT}
  
  • \texttt{VK\_FORMAT\_FEATURE\_BLIT\_SRC\_BIT}
  
  • \texttt{VK\_FORMAT\_FEATURE\_SAMPLED\_IMAGE\_FILTER\_LINEAR\_BIT}

If the \texttt{VkPhysicalDevice4444FormatsFeaturesEXT} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceFeatures2} structure passed to \texttt{vkGetPhysicalDeviceFeatures2}, it is filled in to indicate whether each corresponding feature is supported. \texttt{VkPhysicalDevice4444FormatsFeaturesEXT} can also be used in the \texttt{pNext} chain of \texttt{VkDeviceCreateInfo} to selectively enable these features.

### Valid Usage (Implicit)

- \textbf{VUID-VkPhysicalDevice4444FormatsFeaturesEXT-sType-sType}

  \texttt{sType} \textbf{must} be \texttt{VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_4444\_FORMATS\_FEATURES\_EXT}

\begin{quote}
\textbf{Note}

Although the formats defined by the \texttt{VK\_EXT\_4444\_formats} extension were promoted to Vulkan 1.3 as optional formats, the \texttt{VkPhysicalDevice4444FormatsFeaturesEXT} structure was not promoted to Vulkan 1.3.
\end{quote}

The \texttt{VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT} structure is defined as:

```c
// Provided by VK\_EXT\_mutable\_descriptor\_type
typedef struct VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT {
        VkStructureType sType;
        void* pNext;
        VkBool32 mutableDescriptorType;
    } VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT;
```

or the equivalent

```c
// Provided by VK\_VALVE\_mutable\_descriptor\_type
typedef VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT
    VkPhysicalDeviceMutableDescriptorTypeFeaturesVALVE;
```

This structure describes the following feature:

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.

- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.

- \texttt{mutableDescriptorType} indicates that the implementation \textbf{must} support using the \texttt{VkDescriptorType} of \texttt{VK\_DESCRIPTION\_TYPE\_MUTABLE\_EXT} with at least the following descriptor
types, where any combination of the types must be supported:

- VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE
- VK_DESCRIPTOR_TYPE_STORAGE_IMAGE
- VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER
- VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER
- VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER
- VK_DESCRIPTOR_TYPE_STORAGE_BUFFER

- Additionally, mutableDescriptorType indicates that:
  - Non-uniform descriptor indexing must be supported if all descriptor types in a VkMutableDescriptorTypeListEXT for VK_DESCRIPTOR_TYPE_MUTABLE_EXT have the corresponding non-uniform indexing features enabled in VkPhysicalDeviceDescriptorIndexingFeatures.
  - VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT with descriptorType of VK_DESCRIPTOR_TYPE_MUTABLE_EXT relaxes the list of required descriptor types to the descriptor types which have the corresponding update-after-bind feature enabled in VkPhysicalDeviceDescriptorIndexingFeatures.
  - Dynamically uniform descriptor indexing must be supported if all descriptor types in a VkMutableDescriptorTypeListEXT for VK_DESCRIPTOR_TYPE_MUTABLE_EXT have the corresponding dynamic indexing features enabled.
  - VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_EXT must be supported.
  - VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_EXT must be supported.

If the VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMutableDescriptorTypeFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MUTABLE_DESCRIPTOR_TYPE_FEATURES_EXT

The VkPhysicalDeviceDepthClipControlFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_depth_clip_control
typedef struct VkPhysicalDeviceDepthClipControlFeaturesEXT {
    VkStructureType     sType;
    void*                pNext;
    VkBool32             depthClipControl;
} VkPhysicalDeviceDepthClipControlFeaturesEXT;
```
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **depthClipControl** indicates that the implementation supports setting `VkPipelineViewportDepthClipControlCreateInfoEXT::negativeOneToOne` to `VK_TRUE`.

If the `VkPhysicalDeviceDepthClipControlFeaturesEXT` structure is included in the **pNext** chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDepthClipControlFeaturesEXT` can also be used in the **pNext** chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClipControlFeaturesEXT-sType-sType
  
  sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLIP_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_workgroup_memory_explicit_layout
typedef struct VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 workgroupMemoryExplicitLayout;
    VkBool32 workgroupMemoryExplicitLayoutScalarBlockLayout;
    VkBool32 workgroupMemoryExplicitLayout8BitAccess;
    VkBool32 workgroupMemoryExplicitLayout16BitAccess;
} VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **workgroupMemoryExplicitLayout** indicates whether the implementation supports the SPIR-V WorkgroupMemoryExplicitLayoutKHR capability.
- **workgroupMemoryExplicitLayoutScalarBlockLayout** indicates whether the implementation supports scalar alignment for laying out Workgroup Blocks.
- **workgroupMemoryExplicitLayout8BitAccess** indicates whether objects in the Workgroup storage class with the Block decoration can have 8-bit integer members. If this feature is not enabled, 8-bit integer members must not be used in such objects. This also indicates whether shader modules can declare the WorkgroupMemoryExplicitLayout8BitAccessKHR capability.
- **workgroupMemoryExplicitLayout16BitAccess** indicates whether objects in the Workgroup storage class with the Block decoration can have 16-bit integer and 16-bit floating-point members. If this
feature is not enabled, 16-bit integer or 16-bit floating-point members must not be used in such objects. This also indicates whether shader modules can declare the WorkgroupMemoryExplicitLayout16BitAccessKHR capability.

If the VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_FEATURES_KHR

The VkPhysicalDeviceSynchronization2Features structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSynchronization2Features {
    VkStructureType sType;
    void* pNext;
    VkBool32 synchronization2;
} VkPhysicalDeviceSynchronization2Features;
```

or the equivalent

```c
// Provided by VK_KHR_synchronization2
typedef VkPhysicalDeviceSynchronization2Features
VkPhysicalDeviceSynchronization2FeaturesKHR;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- synchronization2 indicates whether the implementation supports the new set of synchronization commands introduced in VK_KHR_synchronization2.

If the VkPhysicalDeviceSynchronization2Features structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceSynchronization2Features can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.
The `VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_vertex_input_dynamic_state
typedef struct VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 vertexInputDynamicState;
}VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `vertexInputDynamicState` indicates that the implementation supports the following dynamic states:
  - `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT`

If the `VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

The `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_primitives_generated_query
typedef struct VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 primitivesGeneratedQuery;
    VkBool32 primitivesGeneratedQueryWithRasterizerDiscard;
    VkBool32 primitivesGeneratedQueryWithNonZeroStreams;
}VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT;
```
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **primitivesGeneratedQuery** indicates whether the implementation supports the `VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT` query type.
- **primitivesGeneratedQueryWithRasterizerDiscard** indicates whether the implementation supports this query when `rasterization discard` is enabled.
- **primitivesGeneratedQueryWithNonZeroStreams** indicates whether the implementation supports this query with a non-zero index in `vkCmdBeginQueryIndexedEXT`.

If the `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVES_GENERATED_QUERY_FEATURES_EXT`.

The `VkPhysicalDeviceFragmentShadingRateFeaturesKHR` structure is defined as:

```c
typedef struct VkPhysicalDeviceFragmentShadingRateFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 pipelineFragmentShadingRate;
    VkBool32 primitiveFragmentShadingRate;
    VkBool32 attachmentFragmentShadingRate;
} VkPhysicalDeviceFragmentShadingRateFeaturesKHR;
```

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pipelineFragmentShadingRate** indicates that the implementation supports the `pipeline fragment shading rate`.
- **primitiveFragmentShadingRate** indicates that the implementation supports the `primitive fragment shading rate`.
- **attachmentFragmentShadingRate** indicates that the implementation supports the `attachment fragment shading rate`.

---

3641
If the VkPhysicalDeviceFragmentShadingRateFeaturesKHR structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceFragmentShadingRateFeaturesKHR can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateFeaturesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_FEATURES_KHR

The VkPhysicalDeviceLegacyDitheringFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_legacy_dithering
typedef struct VkPhysicalDeviceLegacyDitheringFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 legacyDithering;
} VkPhysicalDeviceLegacyDitheringFeaturesEXT;
```

This structure describes the following feature:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- legacyDithering indicates whether the implementation supports Legacy Dithering.

If the VkPhysicalDeviceLegacyDitheringFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceLegacyDitheringFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceLegacyDitheringFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LEGACY_DITHERING_FEATURES_EXT

The VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV structure is defined as:

```c
// Provided by VK_NV_fragment_shading_rate Enums
typedef struct VkPhysicalDeviceFragmentShadingRate EnumsFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 fragmentShadingRateEnums;
    VkBool32 supersampleFragmentShadingRates;
} VkPhysicalDeviceFragmentShadingRate EnumsFeaturesNV;
```
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **fragmentShadingRateEnums** indicates that the implementation supports specifying fragment shading rates using the `VkFragmentShadingRateNV` enumerated type.
- **supersampleFragmentShadingRates** indicates that the implementation supports fragment shading rate enum values indicating more than one invocation per fragment.
- **noInvocationFragmentShadingRates** indicates that the implementation supports a fragment shading rate enum value indicating that no fragment shaders should be invoked when that shading rate is used.

If the `VkPhysicalDeviceFragmentShadingRate EnumsFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFragmentShadingRate EnumsFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV-sType-sType**

The `VkPhysicalDeviceInheritedViewportScissorFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_inherited_viewport_scissor
typedef struct VkPhysicalDeviceInheritedViewportScissorFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 inheritedViewportScissor2D;
} VkPhysicalDeviceInheritedViewportScissorFeaturesNV;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **inheritedViewportScissor2D** indicates whether secondary command buffers can inherit most of the dynamic state affected by `VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT`, `VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT`, `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_EXT`, `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT`, `VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT`,...
VK_DYNAMIC_STATE_VIEWPORT or VK_DYNAMIC_STATE_SCISSOR, from a primary command buffer.

If the VkPhysicalDeviceInheritedViewportScissorFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceInheritedViewportScissorFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceInheritedViewportScissorFeaturesNV-sType-sType

The VkPhysicalDevicePipelineProtectedAccessFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_pipeline_protected_access
typedef struct VkPhysicalDevicePipelineProtectedAccessFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 pipelineProtectedAccess;
} VkPhysicalDevicePipelineProtectedAccessFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **pipelineProtectedAccess** indicates whether the implementation supports specifying protected access on individual pipelines.

If the VkPhysicalDevicePipelineProtectedAccessFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDevicePipelineProtectedAccessFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDevicePipelineProtectedAccessFeaturesEXT-sType-sType

The VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_ycbcr_2plane_444_formats
```
typedef structVkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 ycbcr2plane444Formats;
} VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT;

This structure describes the following feature:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **ycbcr2plane444Formats** indicates that the implementation supports the following 2-plane 444 Y'CbCr formats:
  - VK_FORMAT_G8_B8R8_2PLANE_444_UNORM
  - VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16
  - VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16
  - VK_FORMAT_G16_B16R16_2PLANE_444_UNORM

If the VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported.VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_2_PLANE_444_FORMATS_FEATURES_EXT

**Note**

Although the formats defined by the VK_EXT_ycbcr_2plane_444_formats were promoted to Vulkan 1.3 as optional formats, the VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure was not promoted to Vulkan 1.3.

The VkPhysicalDeviceColorWriteEnableFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_color_write_enable
typedef struct VkPhysicalDeviceColorWriteEnableFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 colorWriteEnable;
} VkPhysicalDeviceColorWriteEnableFeaturesEXT;
```
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **colorWriteEnable** indicates that the implementation supports the dynamic state `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT`.

If the `VkPhysicalDeviceColorWriteEnableFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceColorWriteEnableFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceColorWriteEnableFeaturesEXT-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COLOR_WRITE_ENABLE_FEATURES_EXT`

---

The `VkPhysicalDevicePipelinePropertiesFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_pipeline_properties
typedef struct VkPhysicalDevicePipelinePropertiesFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 pipelinePropertiesIdentifier;
} VkPhysicalDevicePipelinePropertiesFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pipelinePropertiesIdentifier** indicates that the implementation supports querying a unique pipeline identifier.

If the `VkPhysicalDevicePipelinePropertiesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelinePropertiesFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDevicePipelinePropertiesFeaturesEXT-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROPERTIES_FEATURES_EXT`
The **VkPhysicalDeviceProvokingVertexFeaturesEXT** structure is defined as:

```c
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 provokingVertexLast;
    VkBool32 transformFeedbackPreservesProvokingVertex;
} VkPhysicalDeviceProvokingVertexFeaturesEXT;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **provokingVertexLast** indicates whether the implementation supports the **VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT** provoking vertex mode for flat shading.
- **transformFeedbackPreservesProvokingVertex** indicates that the order of vertices within each primitive written by transform feedback will preserve the provoking vertex. This does not apply to triangle fan primitives when **transformFeedbackPreservesTriangleFanProvokingVertex** is **VK_FALSE**. **transformFeedbackPreservesProvokingVertex** must be **VK_FALSE** when the **VK_EXT_transform_feedback** extension is not supported.

If the **VkPhysicalDeviceProvokingVertexFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceProvokingVertexFeaturesEXT** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

When **VkPhysicalDeviceProvokingVertexFeaturesEXT** is in the **pNext** chain of **VkDeviceCreateInfo** but the **transformFeedback** feature is not enabled, the value of **transformFeedbackPreservesProvokingVertex** is ignored.

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceProvokingVertexFeaturesEXT-sType-sType**
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_FEATURES_EXT**

The **VkPhysicalDeviceDescriptorBufferFeaturesEXT** structure is defined as:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 descriptorBuffer;
    VkBool32 descriptorBufferCaptureReplay;
    VkBool32 descriptorBufferImageLayoutIgnored;
}VkPhysicalDeviceDescriptorBufferFeaturesEXT;
```
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **descriptorBuffer** indicates that the implementation supports putting shader-accessible descriptors directly in memory.
- **descriptorBufferCaptureReplay** indicates that the implementation supports capture and replay when using descriptor buffers. If this is `VK_TRUE`, all resources created with `VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`, or `VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT` must be created before resources of the same types without those flags.
- **descriptorBufferImageLayoutIgnored** indicates that the implementation will ignore `imageLayout` in `VkDescriptorImageInfo` when calling `vkGetDescriptorEXT`.
- **descriptorBufferPushDescriptors** indicates that the implementation supports using push descriptors with descriptor buffers.

If the `VkPhysicalDeviceDescriptorBufferFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDescriptorBufferFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceDescriptorBufferFeaturesEXT-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_FEATURES_EXT`

The `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_pageable_device_local_memory
typedef struct VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 pageableDeviceLocalMemory;
} VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.

• `pageableDeviceLocalMemory` indicates that the implementation supports pageable device-local memory and may transparently move device-local memory allocations to host-local memory to better share device-local memory with other applications.

If the `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PAGEABLE_DEVICE_LOCAL_MEMORY_FEATURES_EXT`

The `VkPhysicalDeviceMultiDrawFeaturesEXT` structure is defined as:

```c
#pragma once

typedef struct VkPhysicalDeviceMultiDrawFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 multiDraw;
} VkPhysicalDeviceMultiDrawFeaturesEXT;
```

This structure describes the following features:

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is NULL or a pointer to a structure extending this structure.

• `multiDraw` indicates that the implementation supports `vkCmdDrawMultiEXT` and `vkCmdDrawMultiIndexedEXT`.

If the `VkPhysicalDeviceMultiDrawFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiDrawFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMultiDrawFeaturesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_FEATURES_EXT`

The `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV` structure is defined as:
typedef struct VkPhysicalDeviceRayTracingMotionBlurFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 rayTracingMotionBlur;
    VkBool32 rayTracingMotionBlurPipelineTraceRaysIndirect;
} VkPhysicalDeviceRayTracingMotionBlurFeaturesNV;

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **rayTracingMotionBlur** indicates whether the implementation supports the motion blur feature.
- **rayTracingMotionBlurPipelineTraceRaysIndirect** indicates whether the implementation supports indirect ray tracing commands with the motion blur feature enabled.

If the VkPhysicalDeviceRayTracingMotionBlurFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceRayTracingMotionBlurFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingMotionBlurFeaturesNV-sType-sType

  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MOTION_BLUR_FEATURES_NV

The VkPhysicalDeviceOpacityMicromapFeaturesEXT structure is defined as:

typedef struct VkPhysicalDeviceOpacityMicromapFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 micromap;
    VkBool32 micromapCaptureReplay;
    VkBool32 micromapHostCommands;
} VkPhysicalDeviceOpacityMicromapFeaturesEXT;

This structure describes the following feature:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **micromap** indicates whether the implementation supports the micromap array feature.
- **micromapCaptureReplay** indicates whether the implementation supports capture and replay of
addresses for micromap arrays.

- **micromapHostCommands** indicates whether the implementation supports host side micromap array commands.

If the `VkPhysicalDeviceOpacityMicromapFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceOpacityMicromapFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceOpacityMicromapFeaturesEXT-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_FEATURES_EXT`

The `VkPhysicalDeviceDisplacementMicromapFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_displacement_micromap
typedef struct VkPhysicalDeviceDisplacementMicromapFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 displacementMicromap;
} VkPhysicalDeviceDisplacementMicromapFeaturesNV;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **displacementMicromap** indicates whether the implementation supports the displacement micromap feature.

If the `VkPhysicalDeviceDisplacementMicromapFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDisplacementMicromapFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceDisplacementMicromapFeaturesNV-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISPLACEMENT_MICROMAP_FEATURES_NV`

The `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` structure is defined as:

```c
// Provided by VK_HUAWEI_subpass_shading
```
typedef struct VkPhysicalDeviceSubpassShadingFeaturesHUAWEI {
  VkStructureType sType;
  void* pNext;
  VkBool32 subpassShading;
} VkPhysicalDeviceSubpassShadingFeaturesHUAWEI;

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subpassShading` specifies whether subpass shading is supported.

If the `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubpassShadingFeaturesHUAWEI-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_FEATURES_HUAWEI`

The `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_external_memory_rdma
typedef struct VkPhysicalDeviceExternalMemoryRDMAFeaturesNV {
  VkStructureType sType;
  void* pNext;
  VkBool32 externalMemoryRDMA;
} VkPhysicalDeviceExternalMemoryRDMAFeaturesNV;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalMemoryRDMA` indicates whether the implementation has support for the `VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV` memory property and the `VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV` external memory handle type.

If the `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExternalMemoryRDMAFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

• VUID-VkPhysicalDeviceExternalMemoryRDMAFeaturesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_RDMA_FEATURES_NV

The VkPhysicalDevicePresentIdFeaturesKHR structure is defined as:

```c
// Provided by VK_KHR_present_id
typedef struct VkPhysicalDevicePresentIdFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 presentId;
} VkPhysicalDevicePresentIdFeaturesKHR;
```

This structure describes the following feature:

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `presentId` indicates that the implementation supports specifying present ID values in the `VkPresentIdKHR` extension to the `VkPresentInfoKHR` struct.

If the `VkPhysicalDevicePresentIdFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentIdFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

• VUID-VkPhysicalDevicePresentIdFeaturesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_FEATURES_KHR

The `VkPhysicalDevicePresentWaitFeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_present_wait
typedef struct VkPhysicalDevicePresentWaitFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 presentWait;
} VkPhysicalDevicePresentWaitFeaturesKHR;
```

This structure describes the following feature:

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `presentWait` indicates that the implementation supports `vkWaitForPresentKHR`.

If the `VkPhysicalDevicePresentWaitFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentWaitFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentWaitFeaturesKHR-sType-sType

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_FEATURES_KHR`.

The `VkPhysicalDeviceHostImageCopyFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_host_image_copy
typedef struct VkPhysicalDeviceHostImageCopyFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 hostImageCopy;
} VkPhysicalDeviceHostImageCopyFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `hostImageCopy` indicates that the implementation supports copying from host memory to images using the `vkCopyMemoryToImageEXT` command, copying from images to host memory using the `vkCopyImageToMemoryEXT` command, and copying between images using the `vkCopyImageToImageEXT` command.

If the `VkPhysicalDeviceHostImageCopyFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceHostImageCopyFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostImageCopyFeaturesEXT-sType-sType

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_IMAGE_COPY_FEATURES_EXT`.

The `VkPhysicalDevicePresentBarrierFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_present_barrier
typedef struct VkPhysicalDevicePresentBarrierFeaturesNV {
```

3654
VkStructureType sType;
void* pNext;
VkBool32 presentBarrier;
} VkPhysicalDevicePresentBarrierFeaturesNV;

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **presentBarrier** indicates that the implementation supports the present barrier feature.

If the `VkPhysicalDevicePresentBarrierFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePresentBarrierFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePresentBarrierFeaturesNV-sType-sType
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_BARRIER_FEATURES_NV`

The `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceShaderIntegerDotProductFeatures {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderIntegerDotProduct;
} VkPhysicalDeviceShaderIntegerDotProductFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_shader_integer_dot_product
typedef VkPhysicalDeviceShaderIntegerDotProductFeaturesKHR;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderIntegerDotProduct** specifies whether shader modules can declare the `DotProductInputAllKHR`, `DotProductInput4x8BitKHR`, `DotProductInput4x8BitPackedKHR` and `DotProductKHR` capabilities.
If the `VkPhysicalDeviceShaderIntegerDotProductFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderIntegerDotProductFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderIntegerDotProductFeatures-sType-sType
  sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_DOT_PRODUCT_FEATURES`

The `VkPhysicalDeviceMaintenance4Features` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Features {
    VkStructureType sType;
    void* pNext;
    VkBool32 maintenance4;
} VkPhysicalDeviceMaintenance4Features;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance4
typedef VkPhysicalDeviceMaintenance4Features VkPhysicalDeviceMaintenance4FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance4` indicates that the implementation supports the following:
  - The application may destroy a `VkPipelineLayout` object immediately after using it to create another object.
  - `LocalSizeId` can be used as an alternative to `LocalSize` to specify the local workgroup size with specialization constants.
  - Images created with identical creation parameters will always have the same alignment requirements.
  - The size memory requirement of a buffer or image is never greater than that of another buffer or image created with a greater or equal size.
  - Push constants do not have to be initialized before they are dynamically accessed.
  - The interface matching rules allow a larger output vector to match with a smaller input vector, with additional values being discarded.
If the `VkPhysicalDeviceMaintenance4Features` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMaintenance4Features` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance4Features-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_FEATURES`

The `VkPhysicalDeviceMaintenance5FeaturesKHR` structure is defined as:

```c
// Provided by VK_KHR_maintenance5
typedef struct VkPhysicalDeviceMaintenance5FeaturesKHR {
    VkStructureType   sType;
    void*             pNext;
    VkBool32          maintenance5;
} VkPhysicalDeviceMaintenance5FeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maintenance5` indicates that the implementation supports the following:
  - The ability to expose support for the optional format `VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR`.
  - The ability to expose support for the optional format `VK_FORMAT_A8_UNORM_KHR`.
  - A property to indicate that multisample coverage operations are performed after sample counting in EarlyFragmentTests mode.
  - Creating a `VkBufferView` with a subset of the associated `VkBuffer` usage using `VkBufferUsageFlags2CreateInfoKHR`.
  - A new function `vkCmdBindIndexBuffer2KHR`, allowing a range of memory to be bound as an index buffer.
  - `vkGetDeviceProcAddr` will return `NULL` for function pointers of core functions for versions higher than the version requested by the application.
  - `vkCmdBindVertexBuffers2` supports using `VK_WHOLE_SIZE` in the `pSizes` parameter.
  - If `PointSize` is not written, a default value of `1.0` is used for the size of points.
  - `VkShaderModuleCreateInfo` can be added as a chained structure to pipeline creation via `VkPipelineShaderStageCreateInfo`, rather than having to create a shader module.
  - A function `vkGetRenderingAreaGranularityKHR` to query the optimal render area for a dynamic rendering instance.
  - A property to indicate that depth/stencil texturing operations with `VK_COMPONENT_SWIZZLE_ONE`...
have defined behavior.

- \( \text{vkGetDeviceImageSubresourceLayoutKHR} \) allows an application to perform a
  \( \text{vkGetImageSubresourceLayout} \) query without having to create an image.

- \( \text{VK_REMAINING_ARRAY LAYERS} \) as the \text{layerCount} member of \( \text{VkImageSubresourceLayers} \).

- A property to indicate whether \text{PointSize} controls the final rasterization of polygons if
  \text{polygon mode} is \text{VK_POLYGON_MODE_POINT}.

- Two properties to indicate the non-strict line rasterization algorithm used.

- Two new flags words \text{VkPipelineCreateFlagBits2KHR} and \text{VkBufferUsageFlagBits2KHR}.

- Physical-device-level functions \text{can} now be called with any value in the valid range for a
  type beyond the defined enumerants, such that applications can avoid checking individual
  features, extensions, or versions before querying supported properties of a particular
  enumerant.

- Copies between images of any type are allowed, with 1D images treated as 2D images with a
  height of 1.

If the \( \text{VkPhysicalDeviceMaintenance5FeaturesKHR} \) structure is included in the \text{pNext} chain of the
\( \text{VkPhysicalDeviceFeatures2} \) structure passed to \( \text{vkGetPhysicalDeviceFeatures2} \), it is filled in to
indicate whether each corresponding feature is supported. \( \text{VkPhysicalDeviceMaintenance5FeaturesKHR} \) \text{can} also be used in the \text{pNext} chain of \( \text{VkDeviceCreateInfo} \)
to selectively enable these features.

### Valid Usage (Implicit)

- \text{VUID-VkPhysicalDeviceMaintenance5FeaturesKHR-sType-sType}

  \text{sType must be VK_STRUCTURE_TYPE_PHYSICAL DEVICE MAINTENANCE 5 FEATURES_KHR}

The \( \text{VkPhysicalDeviceDynamicRenderingFeatures} \) structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceDynamicRenderingFeatures {
  VkStructureType sType;
  void* pNext;
  VkBool32 dynamicRendering;
} VkPhysicalDeviceDynamicRenderingFeatures;
```

or the equivalent

```c
// Provided by VK_KHR_dynamic_rendering
typedef VkPhysicalDeviceDynamicRenderingFeatures
  VkPhysicalDeviceDynamicRenderingFeaturesKHR;
```

This structure describes the following feature:
• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `dynamicRendering` specifies that the implementation supports dynamic render pass instances using the `vkCmdBeginRendering` command.

If the `VkPhysicalDeviceDynamicRenderingFeatures` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceDynamicRenderingFeatures` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDynamicRenderingFeatures-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_FEATURES`

---

The `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_rgba10x6_formats
typedef struct VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT {
    VkStructureType         sType;
    void*                   pNext;
    VkBool32                formatRgba10x6WithoutYCbCrSampler;
} VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT;
```

This structure describes the following feature:

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `formatRgba10x6WithoutYCbCrSampler` indicates that `VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16` can be used with a `VkImageView` with `subresourceRange.aspectMask` equal to `VK_IMAGE_ASPECT_COLOR_BIT` without a sampler Y’CmCn conversion enabled.

If the `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported.

`VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RGBA10X6_FORMATS_FEATURES_EXT`

---
The `VkPhysicalDevicePipelineRobustnessFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_pipeline_robustness
typedef struct VkPhysicalDevicePipelineRobustnessFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 pipelineRobustness;
} VkPhysicalDevicePipelineRobustnessFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pipelineRobustness` indicates that robustness can be requested on a per-pipeline-stage granularity.

**Note**

Enabling `pipelineRobustness` may, on some platforms, incur a minor performance cost when `robustBufferAccess` is disabled, even for pipelines which do not make use of any robustness features. If robustness is not needed, `pipelineRobustness` should not be enabled by an application.

If the `VkPhysicalDevicePipelineRobustnessFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineRobustnessFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDevicePipelineRobustnessFeaturesEXT-sType-sType`
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_FEATURES_EXT`

The `VkPhysicalDeviceImageViewMinLodFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_image_view_min_lod
typedef struct VkPhysicalDeviceImageViewMinLodFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 minLod;
} VkPhysicalDeviceImageViewMinLodFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **minLod** indicates whether the implementation supports clamping the minimum LOD value during *Image Level(s) Selection, Texel Gathering* and *Integer Texel Coordinate Operations* with a given **VkImageView** by **VkImageViewMinLodCreateInfoEXT::minLod**.

If the **VkPhysicalDeviceImageViewMinLodFeaturesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceFeatures2** structure passed to **vkGetPhysicalDeviceFeatures2**, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceImageViewMinLodFeaturesEXT** can also be used in the **pNext** chain of **VkDeviceCreateInfo** to selectively enable these features.

Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceImageViewMinLodFeaturesEXT-sType-sType**

  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_MIN_LOD_FEATURES_EXT**

The **VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT** structure is defined as:

```c
typedef struct VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 rasterizationOrderColorAttachmentAccess;
    VkBool32 rasterizationOrderDepthAttachmentAccess;
    VkBool32 rasterizationOrderStencilAttachmentAccess;
} VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT;
```

or the equivalent

```c
// Provided by VK_EXT_rasterization_order_attachment_access
typedef VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT
VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesARM;
```

This structure describes the following features:

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **rasterizationOrderColorAttachmentAccess** indicates that rasterization order access to color and input attachments is supported by the implementation.

• **rasterizationOrderDepthAttachmentAccess** indicates that rasterization order access to the depth aspect of depth/stencil and input attachments is supported by the implementation.

• **rasterizationOrderStencilAttachmentAccess** indicates that rasterization order access to the stencil aspect of depth/stencil and input attachments is supported by the implementation.
If the `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesEXT-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_FEATURES_EXT`

The `VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_subpass_merge_feedback
typedef struct VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 subpassMergeFeedback;
} VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subpassMergeFeedback` indicates whether the implementation supports feedback of subpass merging.

If the `VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubpassMergeFeedbackFeaturesEXT-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_MERGE_FEEDBACK_FEATURES_EXT`

The `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_linear_color_attachment
typedef struct VkPhysicalDeviceLinearColorAttachmentFeaturesNV {
    VkStructureType sType;
    void* pNext;
} VkPhysicalDeviceLinearColorAttachmentFeaturesNV;
```
This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `linearColorAttachment` indicates whether the implementation supports renderable Linear Color Attachment.

If the `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceLinearColorAttachmentFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceLinearColorAttachmentFeaturesNV-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINEAR_COLOR_ATTACHMENT_FEATURES_NV`

The `VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT` structure is defined as:

```
// Provided by VK_EXT_attachment_feedback_loop_layout
typedef struct VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 attachmentFeedbackLoopLayout;
} VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `attachmentFeedbackLoopLayout` indicates whether the implementation supports using `VK_IMAGE_LAYOUT_ATTACHMENT_FEEDBACK_LOOP_OPTIMAL_EXT` image layout for images created with `VK_IMAGE_USAGE_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT`.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceAttachmentFeedbackLoopLayoutFeaturesEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ATTACHMENT_FEEDBACK_LOOP_LAYOUT_FEATURES_EXT`
The `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is defined as:

```c
typedef struct VkPhysicalDeviceNestedCommandBufferFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 nestedCommandBuffer;
    VkBool32 nestedCommandBufferRendering;
    VkBool32 nestedCommandBufferSimultaneousUse;
} VkPhysicalDeviceNestedCommandBufferFeaturesEXT;
```

This structure describes the following features:

- `nestedCommandBuffer` indicates the implementation supports nested command buffers, which allows Secondary Command Buffers to execute other Secondary Command Buffers.
- `nestedCommandBufferRendering` indicates that it is valid to call `vkCmdExecuteCommands` inside a Secondary Command Buffer recorded with `VK_COMMAND_BUFFER_USAGE_RENDER_PASS_CONTINUE_BIT`.
- `nestedCommandBufferSimultaneousUse` indicates that the implementation supports nested command buffers with command buffers that are recorded with `VK_COMMAND_BUFFER_USAGE_SIMULTANEOUS_USE_BIT`.

If the `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceNestedCommandBufferFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceNestedCommandBufferFeaturesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_FEATURES_EXT`.

The `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` structure is defined as:

```c
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 graphicsPipelineLibrary;
} VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
• `graphicsPipelineLibrary` indicates that the implementation supports graphics pipeline libraries.

If the `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT-sType-sType must be
  VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_FEATURES_EXT`

The `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 multisampledRenderToSingleSampled;
} VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT;
```

This structure describes the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `multisampledRenderToSingleSampled` indicates that the implementation supports multisampled rendering to single-sampled render pass attachments.

If the `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

---

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT-sType-sType must be
  VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_FEATURES_EXT`

The `VkPhysicalDeviceImage2DViewOf3DFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_image_2d_view_of_3d
```

---
typedef struct VkPhysicalDeviceImage2DViewOf3DFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 image2DViewOf3D;
    VkBool32 sampler2DViewOf3D;
} VkPhysicalDeviceImage2DViewOf3DFeaturesEXT;

This structure describes the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **image2DViewOf3D** indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE if the image is created using VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT.
- **sampler2DViewOf3D** indicates that the implementation supports using a 2D view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER if the image is created using VK_IMAGE_CREATE_2D_VIEW_COMPATIBLE_BIT_EXT.

If the VkPhysicalDeviceImage2DViewOf3DFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported.

The members of the VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT structure describe the following features:

- **imageSlicedViewOf3D** indicates that the implementation supports using a sliced view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE by using a VkImageViewSlicedCreateInfoEXT structure when creating the view.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImage2DViewOf3DFeaturesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_2D_VIEW_OF_3D_FEATURES_EXT

The VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_image_sliced_view_of_3d
typedef struct VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 imageSlicedViewOf3D;
} VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT;
```

The members of the VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT structure describe the following features:

- **imageSlicedViewOf3D** indicates that the implementation supports using a sliced view of a 3D image in a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_IMAGE by using a VkImageViewSlicedCreateInfoEXT structure when creating the view.
If the `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceImageSlicedViewOf3DFeaturesEXT-sType-sType
  
sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_SLICED_VIEW_OF_3D_FEATURES_EXT`

The `VkPhysicalDeviceImageCompressionControlFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_image_compression_control
typedef struct VkPhysicalDeviceImageCompressionControlFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 imageCompressionControl;
} VkPhysicalDeviceImageCompressionControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `imageCompressionControl` indicates that the implementation supports providing controls for image compression at image creation time.

If the `VkPhysicalDeviceImageCompressionControlFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImageCompressionControlFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceImageCompressionControlFeaturesEXT-sType-sType
  
sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_image_compression_control_swapchain
typedef struct VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT {
    VkStructureType sType;
    void* pNext;
} VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT;
```
This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageCompressionControlSwapchain` indicates that the implementation supports controlling image controls per swapchain and querying image compression properties per surface.

If the `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_FEATURES_EXT`.

The `VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR` structure is defined as:

```c
typedef struct VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 rayTracingPositionFetch;
} VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `rayTracingPositionFetch` indicates that the implementation supports fetching the object space vertex positions of a hit triangle.

If the `VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR-sType-sType
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR`.

The *VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD* structure is defined as:

```c
// Provided by VK_AMD_shader_early_and_late_fragment_tests
typedef struct VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderEarlyAndLateFragmentTests;
} VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderEarlyAndLateFragmentTests** indicates whether the implementation supports the EarlyAndLateFragmentTestsAMD Execution Mode.

If the *VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD* structure is included in the `pNext` chain of the *VkPhysicalDeviceFeatures2* structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD* can also be used in the `pNext` chain of *VkDeviceCreateInfo* to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEarlyAndLateFragmentTestsFeaturesAMD-sType-sType
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_EARLY_AND_LATE_FRAGMENT_TESTS_FEATURES_AMD`.

The *VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT* structure is defined as:

```c
// Provided by VK_EXT_non_seamless_cube_map
typedef struct VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 nonSeamlessCubeMap;
} VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT;
```

This structure describes the following feature:
• *sType* is a *VkStructureType* value identifying this structure.

• *pNext* is NULL or a pointer to a structure extending this structure.

• *nonSeamlessCubeMap* indicates that the implementation supports `VK_SAMPLER_CREATE_NON_SEAMLESS_CUBE_MAP_BIT_EXT`.

If the *VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT* structure is included in the *pNext* chain of the *VkPhysicalDeviceFeatures2* structure passed to *vkGetPhysicalDeviceFeatures2*, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT* can also be used in the *pNext* chain of *VkDeviceCreateInfo* to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceNonSeamlessCubeMapFeaturesEXT-sType-sType
  sType must be *VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NON_SEAMLESS_CUBE_MAP_FEATURES_EXT*

The *VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT* structure is defined as:

```c
typedef struct VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderModuleIdentifier;
} VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT;
```

This structure describes the following feature:

• *sType* is a *VkStructureType* value identifying this structure.

• *pNext* is NULL or a pointer to a structure extending this structure.

• *shaderModuleIdentifier* indicates whether the implementation supports querying an identifier of a *VkShaderModule* or *VkShaderModuleCreateInfo* structure, and creating pipelines from identifiers only.

If the *VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT* structure is included in the *pNext* chain of the *VkPhysicalDeviceFeatures2* structure passed to *vkGetPhysicalDeviceFeatures2*, it is filled in to indicate whether each corresponding feature is supported. *VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT* can also be used in the *pNext* chain of *VkDeviceCreateInfo* to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderModuleIdentifierFeaturesEXT-sType-sType
  sType must be *VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_FEATURES_EXT*

The *VkPhysicalDeviceTilePropertiesFeaturesQCOM* structure is defined as:
This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **tileProperties** indicates that the implementation supports queries for returning tile properties.

If the `VkPhysicalDeviceTilePropertiesFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceTilePropertiesFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceTilePropertiesFeaturesQCOM-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TILE_PROPERTIES_FEATURES_QCOM`.

The `VkPhysicalDeviceImageProcessingFeaturesQCOM` structure is defined as:

This structure describes the following features:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **textureSampleWeighted** indicates that the implementation supports shader modules that declare the `TextureSampleWeightedQCOM` capability.
- **textureBoxFilter** indicates that the implementation supports shader modules that declare the `TextureBoxFilterQCOM` capability.
- **textureBlockMatch** indicates that the implementation supports shader modules that declare the
The **VkPhysicalDeviceImageProcessingFeaturesQCOM** structure is included in the `pNext` chain of the **VkPhysicalDeviceFeatures2** structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceImageProcessingFeaturesQCOM** can also be used in the `pNext` chain of **VkDeviceCreateInfo** to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageProcessingFeaturesQCOM-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_FEATURES_QCOM**

The **VkPhysicalDeviceImageProcessing2FeaturesQCOM** structure is defined as:

```c
// Provided by VK_QCOM_image_processing2
typedef struct VkPhysicalDeviceImageProcessing2FeaturesQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 textureBlockMatch2;
} VkPhysicalDeviceImageProcessing2FeaturesQCOM;
```

This structure describes the following features:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **textureBlockMatch2** indicates that the implementation supports shader modules that declare the **TextureBlockMatch2QCOM** capability.

If the **VkPhysicalDeviceImageProcessing2FeaturesQCOM** structure is included in the `pNext` chain of the **VkPhysicalDeviceFeatures2** structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. **VkPhysicalDeviceImageProcessing2FeaturesQCOM** can also be used in the `pNext` chain of **VkDeviceCreateInfo** to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageProcessing2FeaturesQCOM-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_2_FEATURES_QCOM**

The **VkPhysicalDeviceDepthClampZeroOneFeaturesEXT** structure is defined as:

```c
// Provided by VK_EXT_depth_clamp_zero_one
typedef struct VkPhysicalDeviceDepthClampZeroOneFeaturesEXT {
    VkStructureType sType;
} VkPhysicalDeviceDepthClampZeroOneFeaturesEXT;
```
void* pNext;
VkBool32 depthClampZeroOne;
} VkPhysicalDeviceDepthClampZeroOneFeaturesEXT;

This structure describes the following feature:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **depthClampZeroOne** indicates that the implementation supports clamping the depth to a range of 0 to 1.

If the VkPhysicalDeviceDepthClampZeroOneFeaturesEXT structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceDepthClampZeroOneFeaturesEXT can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthClampZeroOneFeaturesEXT-sType-sType
  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_CLAMP_ZERO_ONE_FEATURES_EXT

The VkPhysicalDeviceShaderTileImageFeaturesEXT structure is defined as:

```c
// Provided by VK_EXT_shader_tile_image
typedef struct VkPhysicalDeviceShaderTileImageFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderTileImageColorReadAccess;
    VkBool32 shaderTileImageDepthReadAccess;
    VkBool32 shaderTileImageStencilReadAccess;
} VkPhysicalDeviceShaderTileImageFeaturesEXT;
```

The members of the VkPhysicalDeviceShaderTileImageFeaturesEXT structure describe the following features:

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderTileImageColorReadAccess** indicates that the implementation supports the TileImageColorReadAccessEXT SPIR-V capability.
- **shaderTileImageDepthReadAccess** indicates that the implementation supports the TileImageDepthReadAccessEXT SPIR-V capability.
- **shaderTileImageStencilReadAccess** indicates that the implementation supports the TileImageStencilReadAccessEXT SPIR-V capability.
If the `VkPhysicalDeviceShaderTileImageFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderTileImageFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderTileImageFeaturesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TILE_IMAGE_FEATURES_EXT`

The `VkPhysicalDeviceDepthBiasControlFeaturesEXT` structure is defined as:

```c
typedef struct VkPhysicalDeviceDepthBiasControlFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 depthBiasControl;
    VkBool32 leastRepresentableValueForceUnormRepresentation;
    VkBool32 floatRepresentation;
    VkBool32 depthBiasExact;
} VkPhysicalDeviceDepthBiasControlFeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `depthBiasControl` indicates whether the implementation supports the `vkCmdSetDepthBias2EXT` command and the `VkDepthBiasRepresentationInfoEXT` structure.
- `leastRepresentableValueForceUnormRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_LEAST_REPRESENTABLE_VALUE_FORCE_UNORM_EXT` depth bias representation.
- `floatRepresentation` indicates whether the implementation supports using the `VK_DEPTH_BIAS_REPRESENTATION_FLOAT_EXT` depth bias representation.
- `depthBiasExact` indicates whether the implementation supports forcing depth bias to not be scaled to ensure a minimum resolvable difference using `VkDepthBiasRepresentationInfoEXT::depthBiasExact`.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthBiasControlFeaturesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_BIAS_CONTROL_FEATURES_EXT`

The `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is defined as:
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **reportAddressBinding** indicates whether this implementation supports reporting the binding of GPU virtual address ranges to Vulkan objects.

If the `VkPhysicalDeviceAddressBindingReportFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceAddressBindingReportFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceAddressBindingReportFeaturesEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ADDRESS_BINDING_REPORT_FEATURES_EXT`

The `VkPhysicalDeviceOpticalFlowFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 opticalFlow;
} VkPhysicalDeviceOpticalFlowFeaturesNV;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **opticalFlow** indicates whether the implementation supports optical flow.

If the `VkPhysicalDeviceOpticalFlowFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceOpticalFlowFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
The `VkPhysicalDeviceFaultFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkPhysicalDeviceFaultFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 deviceFault;
    VkBool32 deviceFaultVendorBinary;
} VkPhysicalDeviceFaultFeaturesEXT;
```

The members of the `VkPhysicalDeviceFaultFeaturesEXT` structure describe the following features:

- `deviceFault` indicates that the implementation supports the reporting of device fault information.
- `deviceFaultVendorBinary` indicates that the implementation supports the generation of vendor-specific binary crash dumps. These may provide additional information when imported into vendor-specific external tools.

If the `VkPhysicalDeviceFaultFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceFaultFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

The `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_pipeline_library_group_handles
typedef struct VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 pipelineLibraryGroupHandles;
} VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT;
```

This structure describes the following features:

- `pipelineLibraryGroupHandles` indicates whether the implementation supports querying group
handles directly from a ray tracing pipeline library, and guarantees bitwise identical group handles for such libraries when linked into other pipelines.

If the `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePipelineLibraryGroupHandlesFeaturesEXT-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_LIBRARY_GROUP_HANDLES_FEATURES_EXT`

The `VkPhysicalDeviceShaderObjectFeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderObject;
} VkPhysicalDeviceShaderObjectFeaturesEXT;
```

This structure describes the following feature:

- `shaderObject` indicates whether the implementation supports shader objects.

If the `VkPhysicalDeviceShaderObjectFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderObjectFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectFeaturesEXT-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_FEATURES_EXT`

The `VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM` structure is defined as:

```c
// Provided by VK_ARM_shader_core_builtins
typedef struct VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderCoreBuiltins;
} VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM;
```
This structure describes the following feature:

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is NULL or a pointer to a structure extending this structure.
- \texttt{shaderCoreBuiltins} indicates whether the implementation supports the SPIR-V \texttt{CoreBuiltinsARM} capability.

If the \texttt{VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceFeatures2} structure passed to \texttt{vkGetPhysicalDeviceFeatures2}, it is filled in to indicate whether each corresponding feature is supported. \texttt{VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM} can also be used in the \texttt{pNext} chain of \texttt{VkDeviceCreateInfo} to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM-sType-sType
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_FEATURES_ARM}

The \texttt{VkPhysicalDeviceFrameBoundaryFeaturesEXT} structure is defined as:

```c
// Provided by VK_EXT_frame_boundary
typedef struct VkPhysicalDeviceFrameBoundaryFeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 frameBoundary;
} VkPhysicalDeviceFrameBoundaryFeaturesEXT;
```

This structure describes the following feature:

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is NULL or a pointer to a structure extending this structure.
- \texttt{frameBoundary} indicates whether the implementation supports frame boundary information.

If the \texttt{VkPhysicalDeviceFrameBoundaryFeaturesEXT} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceFeatures2} structure passed to \texttt{vkGetPhysicalDeviceFeatures2}, it is filled in to indicate whether each corresponding feature is supported. \texttt{VkPhysicalDeviceFrameBoundaryFeaturesEXT} can also be used in the \texttt{pNext} chain of \texttt{VkDeviceCreateInfo} to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFrameBoundaryFeaturesEXT-sType-sType
  \texttt{sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAME_BOUNDARY_FEATURES_EXT}
The `VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT` structure is defined as:

```c
// Provided by VK_EXT_swapchain_maintenance1
typedef struct VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 swapchainMaintenance1;
} VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT;
```

This structure describes the following feature:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `swapchainMaintenace1` indicates that the implementation supports the following:
  - `VkSwapchainPresentFenceInfoEXT`, specifying a fence that is signaled when the resources associated with a present operation can be safely destroyed.
  - `VkSwapchainPresentModesCreateInfoEXT` and `VkSwapchainPresentModeInfoEXT`, allowing the swapchain to switch present modes without a need for recreation.
  - `VkSwapchainPresentScalingCreateInfoEXT`, specifying the scaling behavior of the swapchain in presence of window resizing.
  - The `VK_SWAPCHAIN_CREATE_DEFERRED_MEMORY_ALLOCATION_BIT_EXT` flag, allowing the implementation to defer the allocation of swapchain image memory until first acquisition.
  - `vkReleaseSwapchainImagesEXT`, allowing acquired swapchain images to be released without presenting them.

If the `VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SWAPCHAIN_MAINTENANCE_1_FEATURES_EXT`
This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **dynamicRenderingUnusedAttachments** indicates that the implementation supports binding graphics pipelines within a render pass instance where any pipeline `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` element with a format other than `VK_FORMAT_UNDEFINED` is allowed with a corresponding `VkRenderingInfo::pColorAttachments` element with a `imageView` equal to `VK_NULL_HANDLE`, or any pipeline `VkPipelineRenderingCreateInfo::pColorAttachmentFormats` element with a `VK_FORMAT_UNDEFINED` format is allowed with a corresponding `VkRenderingInfo::pColorAttachments` element with a non-`VK_NULL_HANDLE` `imageView`. Also a `VkPipelineRenderingCreateInfo::depthAttachmentFormat` other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` `VkRenderingInfo::pDepthAttachment`, or a `VkPipelineRenderingCreateInfo::depthAttachmentFormat` of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` `VkRenderingInfo::pDepthAttachment`. Also a `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` other than `VK_FORMAT_UNDEFINED` is allowed with a `VK_NULL_HANDLE` `VkRenderingInfo::pStencilAttachment`, or a `VkPipelineRenderingCreateInfo::stencilAttachmentFormat` of `VK_FORMAT_UNDEFINED` is allowed with a non-`VK_NULL_HANDLE` `VkRenderingInfo::pStencilAttachment`. Any writes to a `VkRenderingInfo::pColorAttachments`, `VkRenderingInfo::pDepthAttachment`, or `VkRenderingInfo::pStencilAttachment` with `VK_NULL_HANDLE` are discarded.

If the `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceDynamicRenderingUnusedAttachmentsFeaturesEXT-sType-sType**

```plaintext
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_UNUSED_ATTACHMENTS_FEATURES_EXT
```

The `VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 rayTracingInvocationReorder;
} VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV;
```

This structure describes the following feature:
• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• rayTracingInvocationReorder indicates that the implementation supports SPV_NV_shader_invocation_reorder.

If the VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceRayTracingInvocationReorderFeaturesNV-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_FEATURES_NV

The VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV structure is defined as:

```c
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 extendedSparseAddressSpace;
} VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV;
```

This structure describes the following feature:

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• extendedSparseAddressSpace indicates that the implementation supports allowing certain usages of sparse memory resources to exceed VkPhysicalDeviceLimits::sparseAddressSpaceSize. See VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV.

If the VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceExtendedSparseAddressSpaceFeaturesNV-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_SPARSE_ADDRESS_SPACE_FEATURES_NV
The `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` structure is defined as:

```c
// Provided by VK_QCOM_multiview_per_view_viewports
typedef struct VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 multiviewPerViewViewports;
} VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM;
```

This structure describes the following features:

- `multiviewPerViewViewports` indicates that the implementation supports multiview per-view viewports.

If the `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_VIEWPORTS_FEATURES_QCOM`

The `VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM` structure is defined as:

```c
// Provided by VK_QCOM_multiview_per_view_render_areas
typedef struct VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 multiviewPerViewRenderAreas;
} VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM;
```

This structure describes the following features:

- `multiviewPerViewRenderAreas` indicates that the implementation supports multiview per-view render areas.

If the `VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM-sType-sType must beVK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_RENDER AREAS FEATURES_QCOM

The VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI structure is defined as:

```c
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI {
    VkStructureType sType;
    void* pNext;
    VkBool32 clusterCullingShader;
    VkBool32 multiviewClusterCullingShader;
} VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `clusterCullingShader` specifies whether cluster culling shader is supported.
- `multiviewClusterCullingShader` specifies whether multiview is supported.

If the VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI structure is included in the `pNext` chain of the VkPhysicalDeviceFeatures2 structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI-sType-sType must beVK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER CULLING_SHADER FEATURES_HUAWEI

To query whether a Cluster Culling Shader supports the per-cluster shading rate feature, include a VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI structure in the `pNext` chain of the VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI structure. This structure is defined as:

```c
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI {
    VkStructureType sType;
    void* pNext;
    VkBool32 clusterShadingRate;
} VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI;
```
• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `clusterShadingRate` specifies whether per-cluster shading rates is supported.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceClusterCullingShaderVrsFeaturesHUAWEI-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_VRS_FEATURES_HUAWEI`

The `VkPhysicalDeviceShaderEnqueueFeaturesAMDX` structure is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
typedef struct VkPhysicalDeviceShaderEnqueueFeaturesAMDX {
    VkStructureType sType;
    void* pNext;
    VkBool32 shaderEnqueue;
} VkPhysicalDeviceShaderEnqueueFeaturesAMDX;
```

This structure describes the following feature:

- `shaderEnqueue` indicates whether the implementation supports execution graphs.

If the `VkPhysicalDeviceShaderEnqueueFeaturesAMDX` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceShaderEnqueueFeaturesAMDX` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceShaderEnqueueFeaturesAMDX-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ENQUEUE_FEATURES_AMDX`

The `VkPhysicalDeviceCubicClampFeaturesQCOM` structure is defined as:

```c
// Provided by VK_QCOM_filter_cubic_clamp
typedef struct VkPhysicalDeviceCubicClampFeaturesQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 cubicRangeClamp;
} VkPhysicalDeviceCubicClampFeaturesQCOM;
```

This structure describes the following features:
cubicRangeClamp indicates that the implementation supports cubic filtering in combination with a texel range clamp.

If the VkPhysicalDeviceCubicClampFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceCubicClampFeaturesQCOM can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicClampFeaturesQCOM-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUBIC_CLAMP_FEATURES_QCOM

The VkPhysicalDeviceYcbcrDegammaFeaturesQCOM structure is defined as:

```c
// Provided by VK_QCOM_ycbcr_degamma
typedef struct VkPhysicalDeviceYcbcrDegammaFeaturesQCOM {
    VkStructureType sType;
    void* pNext;
    VkBool32 ycbcrDegamma;
} VkPhysicalDeviceYcbcrDegammaFeaturesQCOM;
```

This structure describes the following features:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- ycbcrDegamma indicates whether the implementation supports Y’C’B’C’R degamma.

If the VkPhysicalDeviceYcbcrDegammaFeaturesQCOM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceYcbcrDegammaFeaturesQCOM can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceYcbcrDegammaFeaturesQCOM-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_DEGAMMA_FEATURES_QCOM

The VkPhysicalDeviceCubicWeightsFeaturesQCOM structure is defined as:

```c
// Provided by VK_QCOM_filter_cubic_weights
typedef struct VkPhysicalDeviceCubicWeightsFeaturesQCOM {
    VkStructureType sType;
    void* pNext;
} VkPhysicalDeviceCubicWeightsFeaturesQCOM;
```
This structure describes the following feature:

- **selectableCubicWeights** indicates that the implementation supports the selection of filter cubic weights.

If the `VkPhysicalDeviceCubicWeightsFeaturesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCubicWeightsFeaturesQCOM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCubicWeightsFeaturesQCOM-sType-sType

The `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` structure is defined as:

```c
typedef struct VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 descriptorPoolOverallocation;
} VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV;
```

This structure describes the following feature:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **descriptorPoolOverallocation** indicates that the implementation allows the application to opt into descriptor pool overallocation by creating the descriptor pool with `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_SETS_BIT_NV` and/or `VK_DESCRIPTOR_POOL_CREATE_ALLOW_OVERALLOCATION_POOLS_BIT_NV` flags.

If the `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorPoolOverallocationFeaturesNV-sType-sType
The `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` structure is defined as:

```c
// Provided by VK_NV_cudakernel_launch
typedef struct VkPhysicalDeviceCudaKernelLaunchFeaturesNV {
    VkStructureType sType;
    void* pNext;
    VkBool32 cudaKernelLaunchFeatures;
} VkPhysicalDeviceCudaKernelLaunchFeaturesNV;
```

This structure describes the following features:

- `cudaKernelLaunchFeatures` is non-zero if cuda kernel launch is supported.

If the `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceCudaKernelLaunchFeaturesNV` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceCudaKernelLaunchFeaturesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUDA_KERNEL_LAUNCH_FEATURES_NV`

The `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` structure is defined as:

```c
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkPhysicalDeviceExternalFormatResolveFeaturesANDROID {
    VkStructureType sType;
    void* pNext;
    VkBool32 externalFormatResolve;
} VkPhysicalDeviceExternalFormatResolveFeaturesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalFormatResolve` specifies whether external format resolves are supported.

If the `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceExternalFormatResolveFeaturesANDROID` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.
Valid Usage (Implicit)

• VUID-VkPhysicalDeviceExternalFormatResolveFeaturesANDROID-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FORMAT_RESOLVE_FEATURES_ANDROID

The VkPhysicalDeviceSchedulingControlsFeaturesARM structure is defined as:

```c
// Provided by VK_ARM_scheduling_controls
typedef struct VkPhysicalDeviceSchedulingControlsFeaturesARM {
    VkStructureType sType;
    void* pNext;
    VkBool32 schedulingControls;
} VkPhysicalDeviceSchedulingControlsFeaturesARM;
```

This structure describes the following features:

• schedulingControls indicates that the implementation supports scheduling controls.

If the VkPhysicalDeviceSchedulingControlsFeaturesARM structure is included in the pNext chain of the VkPhysicalDeviceFeatures2 structure passed to vkGetPhysicalDeviceFeatures2, it is filled in to indicate whether each corresponding feature is supported. VkPhysicalDeviceSchedulingControlsFeaturesARM can also be used in the pNext chain of VkDeviceCreateInfo to selectively enable these features.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceSchedulingControlsFeaturesARM-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SCHEDULING_CONTROLS_FEATURES_ARM

The VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG structure is defined as:

```c
// Provided by VK_IMG_relaxed_line_rasterization
typedef struct VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG {
    VkStructureType sType;
    void* pNext;
    VkBool32 relaxedLineRasterization;
} VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG;
```

This structure describes the following feature:

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• relaxedLineRasterization indicates that the implementation supports relaxed line rasterization control.
If the `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRelaxedLineRasterizationFeaturesIMG-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RELAXED_LINE_RASTERIZATION_FEATURES_IMG`

The `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure is defined as:

```c
typedef struct VkPhysicalDeviceRenderPassStripedFeaturesARM {
    VkStructureType sType;
    void* pNext;
    VkBool32 renderPassStriped;
} VkPhysicalDeviceRenderPassStripedFeaturesARM;
```

The members of the `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure describe the following features:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `renderPassStriped` indicates that striped rendering is supported by the implementation.

If the `VkPhysicalDeviceRenderPassStripedFeaturesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceFeatures2` structure passed to `vkGetPhysicalDeviceFeatures2`, it is filled in to indicate whether each corresponding feature is supported. `VkPhysicalDeviceRenderPassStripedFeaturesARM` can also be used in the `pNext` chain of `VkDeviceCreateInfo` to selectively enable these features.

Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceRenderPassStripedFeaturesARM-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RENDER_PASS_STRIPED_FEATURES_ARM`

47.1. Feature Requirements

All Vulkan graphics implementations must support the following features:

- `robustBufferAccess`, unless the `VK_KHR_portability_subset` extension is enabled.
• **multiview**, if Vulkan 1.1 is supported.
• **shaderDrawParameters**, if the **VK_KHR_shader_draw_parameters** extension is supported.
• **uniformBufferStandardLayout**, if Vulkan 1.2 or the **VK_KHR_uniform_buffer_standard_layout** extension is supported.
• **variablePointersStorageBuffer**, if the **VK_KHR_variable_pointers** extension is supported.
• **storageBuffer8BitAccess**, if the **VK_KHR_8bit_storage** extension is supported.
• **storageBuffer8BitAccess**, if **uniformAndStorageBuffer8BitAccess** is enabled.

If the **descriptorIndexing** feature is supported, or if the **VK_EXT_descriptor_indexing** extension is supported:
  • **shaderSampledImageArrayDynamicIndexing**
  • **shaderStorageBufferArrayDynamicIndexing**
  • **shaderUniformTexelBufferArrayDynamicIndexing**
  • **shaderStorageTexelBufferArrayDynamicIndexing**
  • **shaderSampledImageArrayNonUniformIndexing**
  • **shaderStorageBufferArrayNonUniformIndexing**
  • **shaderUniformTexelBufferArrayNonUniformIndexing**
  • **descriptorBindingSampledImageUpdateAfterBind**
  • **descriptorBindingStorageImageUpdateAfterBind**
  • **descriptorBindingStorageBufferUpdateAfterBind** (see also robustBufferAccessUpdateAfterBind)
  • **descriptorBindingUniformTexelBufferUpdateAfterBind**
  • **descriptorBindingStorageTexelBufferUpdateAfterBind**
  • **descriptorBindingUnusedWhilePending**
  • **descriptorBindingPartiallyBound**
  • **runtimeDescriptorArray**

If Vulkan 1.3 is supported:
  • **vulkanMemoryModel**
  • **vulkanMemoryModelDeviceScope**
• **inlineUniformBlock**, if Vulkan 1.3 or the **VK_EXT_inline_uniform_block** extension is supported.
• **descriptorBindingInlineUniformBlockUpdateAfterBind**, if Vulkan 1.3 or the **VK_EXT_inline_uniform_block** extension is supported; and if the **descriptorIndexing** feature is supported, or the **VK_EXT_descriptor_indexing** extension is supported.
• **scalarBlockLayout**, if the **VK_EXT_scalar_block_layout** extension is supported.
• **subgroupBroadcastDynamicId**, if Vulkan 1.2 is supported.
• **samplerMirrorClampToEdge**, if the **VK_KHR_sampler_mirror_clamp_to_edge** extension is supported.
• drawIndirectCount, if the VK_KHR_draw_indirect_count extension is supported.
• samplerFilterMax, if the VK_EXT_sampler_filter_minmax extension is supported.
• shaderOutputViewportIndex, if the VK_EXT_shader_viewport_index_layer extension is supported.
• shaderOutputLayer, if the VK_EXT_shader_viewport_index_layer extension is supported.
• subgroupSizeControl, if Vulkan 1.3 or the VK_EXT_subgroup_size_control extension is supported.
• computeFullSubgroups, if Vulkan 1.3 or the VK_EXT_subgroup_size_control extension is supported.
• deviceMemoryReport, if the VK_EXT_device_memory_report extension is supported.
• globalPriorityQuery, if the VK_EXT_global_priority_query extension is supported.
• globalPriorityQuery, if the VK_KHR_global_priority extension is supported.
• imagelessFramebuffer, if Vulkan 1.2 or the VK_KHR_imageless_framebuffer extension is supported.
• separateDepthStencilLayouts, if Vulkan 1.2 or the VK_KHR_separate_depthStencilLayouts extension is supported.
• hostQueryReset, if Vulkan 1.2 or the VK_EXT_host_query_reset extension is supported.
• timelineSemaphore, if Vulkan 1.2 or the VK_KHR_timeline_semaphore extension is supported.
• If the VK_KHR_acceleration_structure extension is supported:
  ◦ accelerationStructure
  ◦ All the features required by the descriptorIndexing feature if Vulkan 1.2 is supported, or the VK_EXT_descriptor_indexing extension.
  ◦ descriptorBindingAccelerationStructureUpdateAfterBind
  ◦ bufferDeviceAddress from Vulkan 1.2 or the VK_KHR_buffer_device_address extension.
• If the VK_KHR_ray_tracing_pipeline extension is supported:
  ◦ rayTracingPipeline
  ◦ rayTracingPipelineTraceRaysIndirect
  ◦ rayTraversalPrimitiveCulling, if rayQuery is supported
  ◦ the VK_KHR_pipeline_library extension must be supported.
• rayQuery, if the VK_KHR_ray_query extension is supported.
• pipelineCreationCacheControl, if Vulkan 1.3 or the VK_EXT_pipeline_creation_cache_control extension is supported.
• shaderSubgroupExtendedTypes, if Vulkan 1.2 or the VK_KHR_shader_subgroup_extended_types extension is supported.
• samplerYcbcrConversion, if the VK_KHR_sampler_ycbcr_conversion extension is supported.
• pipelineExecutableInfo, if the VK_KHR_pipeline_executable_properties extension is supported.
• textureCompressionASTC_HDR, if the VK_EXT_texture_compression_astc_hdr extension is supported.
• depthClipEnable, if the VK_EXT_depth_clip_enable extension is supported.
• memoryPriority, if the VK_EXT_memory_priority extension is supported.
• ycbcrImageArrays, if the VK_EXT_ycbcr_image_arrays extension is supported.
• indexTypeUint8, if the VK_EXT_index_type_uint8 extension is supported.
• primitiveTopologyListRestart, if the VK_EXT_primitive_topology_list_restart extension is supported.
• shaderDemoteToHelperInvocation, if Vulkan 1.3 or the VK_EXT_shader_demote_to_helper_invocation extension is supported.
• texelBufferAlignment, if Vulkan 1.3 or the VK_EXT_texel_buffer_alignment extension is supported.
• vulkanMemoryModel, if the VK_KHR_vulkan_memory_model extension is supported.
• bufferDeviceAddress, if Vulkan 1.3 or the VK_KHR_buffer_device_address extension is supported.
• performanceCounterQueryPools, if the VK_KHR_performance_query extension is supported.
• transformFeedback, if the VK_EXT_transform_feedback extension is supported.
• conditionalRendering, if the VK_EXT_conditional_rendering extension is supported.
• vertexAttributeInstanceRateDivisor, if the VK_EXT_vertex_attribute_divisor extension is supported.
• fragmentDensityMap, if the VK_EXT_fragment_density_map extension is supported.
• shaderSubgroupClock, if the VK_KHR_shader_clock extension is supported.
• shaderBufferInt64Atomics, if the VK_KHR_shader_atomic_int64 extension is supported.
• shaderInt64, if the shaderSharedInt64Atomics or shaderBufferInt64Atomics features are supported.
• shaderFloat16 or shaderInt8, if the VK_KHR_shader_float16_int8 extension is supported.
• fragmentShaderSampleInterlock or fragmentShaderPixelInterlock or fragmentShaderShadingRateInterlock, if the VK_EXT_fragment_shader_interlock extension is supported.
• rectangularLines or bresenhamLines or smoothLines or stippledRectangularLines or stippledBresenhamLines or stippledSmoothLines, if the VK_EXT_line_rasterization extension is supported.
• storageBuffer16BitAccess, if the VK_KHR_16bit_storage extension is supported.
• storageBuffer16BitAccess, if uniformAndStorageBuffer16BitAccess is enabled.
• robustImageAccess, if Vulkan 1.3 or the VK_EXT_image_robustness extension is supported.
• formatA4R4G4B4, if the VK_EXT_4444_formats extension is supported.
• mutableDescriptorType, if the VK_EXTmutable_descriptor_type or VK_VALVEmutable_descriptor_type extension is supported.
• shaderInt64 and shaderImageInt64Atomics, if the VK_EXT_shader_image_atomic_int64 extension is supported.
• shaderImageInt64Atomics, if the sparseImageInt64Atomics feature is supported.
• shaderImageFloat32Atomics, if the sparseImageFloat32Atomics feature is supported.
• shaderImageFloat32AtomicAdd, if the sparseImageFloat32AtomicAdd feature is supported.
• primitivesGeneratedQuery, if the VK_EXT_primitives_generated_query extension is supported.
• pipelineFragmentShadingRate, if the VK_KHR_fragment_shading_rate extension is supported.
• pipelineProtectedAccess, if the VK_EXT_pipeline_protected_access extension is supported.

• legacyDithering, if the VK_EXT_legacy_dithering extension is supported.

• shaderTerminateInvocation if Vulkan 1.3 or the VK_KHR_shader_terminate_invocation extension is supported.

• shaderZeroInitializeWorkgroupMemory, if Vulkan 1.3 or the VK_KHR_zero_initialize_workgroup_memory extension is supported.

• workgroupMemoryExplicitLayout, if the VK_KHR_workgroup_memory_explicit_layout extension is supported.

• vertexInputDynamicState, if the VK_EXT_vertex_input_dynamic_state extension is supported.

• synchronization2 if Vulkan 1.3 or the VK_KHR_synchronization2 extension is supported.

• provokingVertexLast, if the VK_EXT_provoking_vertex extension is supported.

• descriptorBuffer, if the VK_EXT_descriptor_buffer extension is supported.

• shaderSubgroupUniformControlFlow, if the VK_KHR_shader_subgroup_uniform_control_flow extension is supported.

• borderColorSwizzle if the VK_EXT_border_color_swizzle extension is supported.

• multiDraw, if the VK_EXT_multi_draw extension is supported.

• shaderImageFloat32AtomicMinMax, if the sparseImageFloat32AtomicMinMax feature is supported.

• presentId, if the VK_KHR_present_id extension is supported.

• presentWait, if the VK_KHR_present_wait extension is supported.

• hostImageCopy, if the VK_EXT_host_image_copy extension is supported.

• shaderIntegerDotProduct if Vulkan 1.3 or the VK_KHR_shader_integer_dot_product extension is supported.

• maintenance4, if Vulkan 1.3 or the VK_KHR_maintenance4 extension is supported.

• maintenance5, if the VK_KHR_maintenance5 extension is supported.

• image2DViewOf3D, if the VK_EXT_image_2d_view_of_3d extension is supported.

• imageSlicedViewOf3D, if the VK_EXT_image_sliced_view_of_3d extension is supported.

• privateData, if Vulkan 1.3 or the VK_EXT_private_data extension is supported.

• extendedDynamicState, if the VK_EXT_extended_dynamic_state extension is supported.

• extendedDynamicState2, if the VK_EXT_extended_dynamic_state2 extension is supported.

• depthClipControl, if the VK_EXT_depth_clip_control extension is supported.

• minLod, if the VK_EXT_image_view_min_lod extension is supported.

• linearColorAttachment, if the VK_NV_linear_color_attachment extension is supported.

• presentBarrier, if the VK_NV_present_barrier extension is supported.

• graphicsPipelineLibrary, if the VK_EXT_graphics_pipeline_library extension is supported.

• dynamicRendering, if Vulkan 1.3 or the VK_KHR_dynamic_rendering extension is supported.

• nestedCommandBuffer, if the VK_EXT_nested_command_buffer extension is supported.
• taskShader and meshShader, if the VK_EXT_mesh_shader extension is supported.
• primitiveFragmentShadingRate if primitiveFragmentShadingRateMeshShader feature is supported.
• subpassMergeFeedback, if the VK_EXT_subpass_merge_feedback extension is supported.
• rayTracingMaintenance1, if the VK_KHR_ray_tracing_maintenance1 extension is supported.
• colorWriteEnable, if the VK_EXT_color_write_enable extension is supported.
• multisampledRenderToSingleSampled, if the VK_EXT_multisampled_render_to_single_sampled extension is supported.
• imageCompressionControl, if the VK_EXT_image_compression_control extension is supported.
• imageCompressionControlSwapchain, if the VK_EXT_image_compression_control_swapchain extension is supported.
• shaderEarlyAndLateFragmentTests, if the VK_AMD_shader_early_and_late_fragment_tests extension is supported.
• nonSeamlessCubeMap, if the VK_EXT_non_seamless_cube_map extension is supported.
• shaderModuleIdentifier, if the VK_EXT_shader_module_identifier extension is supported.
• pipelineRobustness, if the VK_EXT_pipeline_robustness extension is supported.
• textureSampleWeighted, TextureBlockMatch, and TextureBoxFilter if VK_QCOM_image_processing extension is supported.
• TextureBlockMatch2 if VK_QCOM_image_processing2 extension is supported.
• tileProperties if VK_QCOM_tile_properties extension is supported.
• attachmentFeedbackLoopLayout, if the VK_EXT_attachment_feedback_loop_layout extension is supported.
• depthClampZeroOne, if the VK_EXT_depth_clamp_zero_one extension is supported.
• deviceFault, if the VK_EXT_device_fault extension is supported.
• reportAddressBinding, if the VK_EXT_device_address_binding_report extension is supported.
• micromap, if the VK_EXT_opacity_micromap extension is supported.
• frameBoundary, if the VK_EXT_frame_boundary extension is supported.
• displacementMicromap, if the VK_NV_displacement_micromap extension is supported.
• pipelineLibraryGroupHandles, if the VK_EXT_pipeline_library_group_handles extension is supported.
• swapchainMaintenance1, if the VK_EXT_swapchain_maintenance1 extension is supported.
• tessellationShader, if the extendedDynamicState3TessellationDomainOrigin feature is supported.
• depthClamp, if the extendedDynamicState3DepthClampEnable feature is supported.
• fillModeNonSolid, if the extendedDynamicState3PolygonMode feature is supported.
• alphaToOne, if the extendedDynamicState3AlphaToOneEnable feature is supported.
• logicOp, if the extendedDynamicState3LogicOpEnable feature is supported.
• geometryStreams, if the extendedDynamicState3RasterizationStream feature is supported.
• VK_EXT_conservative_rasterization extension, if the extendedDynamicState3ConservativeRasterizationMode feature is supported.
• VK_EXT_conservative_rasterization extension, if the extendedDynamicState3ExtraPrimitiveOverestimationSize feature is supported.
• VK_EXT_sample_locations extension, if the extendedDynamicState3SampleLocationsEnable feature is supported.
• VK_EXT_blend_operation_advanced extension, if the extendedDynamicState3ColorBlendAdvanced feature is supported.
• provokingVertexLast, if the extendedDynamicState3ProvokingVertexMode feature is supported.
• VK_EXT_line_rasterization extension, if the extendedDynamicState3LineRasterizationMode feature is supported.
• VK_EXT_line_rasterization extension, if the extendedDynamicState3LineStippleEnable feature is supported.
• depthClipControl, if the extendedDynamicState3DepthClipNegativeOneToOne feature is supported.
• VK_NV_clip_space_w_scaling extension, if the extendedDynamicState3ViewportWScalingEnable feature is supported.
• VK_NV_viewport_swizzle extension, if the extendedDynamicState3ViewportSwizzle feature is supported.
• VK_NV_fragment_coverage_to_color extension, if the extendedDynamicState3CoverageToColorEnable feature is supported.
• VK_NV_fragment_coverage_to_color extension, if the extendedDynamicState3CoverageToColorLocation feature is supported.
• VK_NV_framebuffer_mixed_samples extension, if the extendedDynamicState3CoverageModulationMode feature is supported.
• VK_NV_framebuffer_mixed_samples extension, if the extendedDynamicState3CoverageModulationTableEnable feature is supported.
• VK_NV_framebuffer_mixed_samples extension, if the extendedDynamicState3CoverageModulationTable feature is supported.
• coverageReductionMode, if the extendedDynamicState3CoverageReductionMode feature is supported.
• representativeFragmentTest, if the extendedDynamicState3RepresentativeFragmentTestEnable feature is supported.
• shadingRateImage, if the extendedDynamicState3ShadingRateImageEnable feature is supported.
• multiviewPerViewViewports, if the VK_QCOM_multiview_per_view_viewports extension is supported.
• attachmentFeedbackLoopDynamicState, if the VK_EXT_attachment_feedback_loop_dynamic_state extension is supported.
• rayTracingPositionFetch, if the VK_KHR_ray_tracing_position_fetch extension is supported.
• shaderObject, if the VK_EXT_shader_object extension is supported.
• shaderTileImageColorReadAccess, if the VK_EXT_shader_tile_image extension is supported.
• depthBiasControl, if the VK_EXT_depth_bias_control extension is supported.
• `deviceGeneratedCompute`, if the `VK_NV_device_generated_commands_compute` extension is supported.
• `shaderEnqueue` if the `VK_AMDX_shader_enqueue` extension is supported.
• `cooperativeMatrix` if the `VK_KHR_cooperative_matrix` extension is supported.
• `ycbcrDegamma`, if the `VK_QCOM_ycbcr_degamma` extension is supported.
• `descriptorPoolOverallocation`, if the `VK_NV_descriptor_pool_overallocation` extension is supported.
• `externalFormatResolve`, if the `VK_ANDROID_external_format_resolve` extension is supported.
• `extendedSparseAddressSpace`, if the `VK_NV_extended_sparse_address_space` extension is supported.
• `schedulingControls`, if the `VK_ARM_scheduling_controls` extension is supported.
• `relaxedLineRasterization`, if the `VK_IMG_relaxed_line_rasterization` extension is supported.
• `renderPassStriped`, if the `VK_ARM_render_pass_striped` extension is supported.

All other features defined in the Specification are *optional*.

### 47.2. Profile Features

#### 47.2.1. Roadmap 2022

Implementations that claim support for the Roadmap 2022 profile **must** support the following features:

• `fullDrawIndexUint32`
• `imageCubeArray`
• `independentBlend`
• `sampleRateShading`
• `drawIndirectFirstInstance`
• `depthClamp`
• `depthBiasClamp`
• `samplerAnisotropy`
• `occlusionQueryPrecise`
• `fragmentStoresAndAtomics`
• `shaderStorageImageExtendedFormats`
• `shaderUniformBufferArrayDynamicIndexing`
• `shaderSampledImageArrayDynamicIndexing`
• `shaderStorageBufferArrayDynamicIndexing`
• `shaderStorageImageArrayDynamicIndexing`
• `samplerYcbcrConversion`
• `samplerMirrorClampToEdge`
• descriptorIndexing
• shaderUniformTexelBufferArrayDynamicIndexing
• shaderStorageTexelBufferArrayDynamicIndexing
• shaderUniformBufferArrayNonUniformIndexing
• shaderSampledImageArrayNonUniformIndexing
• shaderStorageBufferArrayNonUniformIndexing
• shaderStorageImageArrayNonUniformIndexing
• shaderUniformTexelBufferArrayNonUniformIndexing
• shaderStorageTexelBufferArrayNonUniformIndexing
descriptorBindingSampledImageUpdateAfterBind
descriptorBindingStorageImageUpdateAfterBind
descriptorBindingStorageBufferUpdateAfterBind
descriptorBindingUniformTexelBufferUpdateAfterBind
descriptorBindingStorageTexelBufferUpdateAfterBind
descriptorBindingUpdateUnusedWhilePending
descriptorBindingPartiallyBound
descriptorBindingVariableDescriptorCount
• runtimeDescriptorArray
• scalarBlockLayout
Chapter 48. Limits

Limits are implementation-dependent minimums, maximums, and other device characteristics that an application may need to be aware of.

Note

Limits are reported via the basic `VkPhysicalDeviceLimits` structure as well as the extensible structure `VkPhysicalDeviceProperties2`, which was added in `VK_KHR_get_physical_device_properties2` and included in Vulkan 1.1. When limits are added in future Vulkan versions or extensions, each extension should introduce one new limit structure, if needed. This structure can be added to the `pNext` chain of the `VkPhysicalDeviceProperties2` structure.

The `VkPhysicalDeviceLimits` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkPhysicalDeviceLimits {
    uint32_t maxImageDimension1D;
    uint32_t maxImageDimension2D;
    uint32_t maxImageDimension3D;
    uint32_t maxImageDimensionCube;
    uint32_t maxImageArrayLayers;
    uint32_t maxTexelBufferElements;
    uint32_t maxUniformBufferRange;
    uint32_t maxStorageBufferRange;
    uint32_t maxPushConstantsSize;
    uint32_t maxMemoryAllocationCount;
    uint32_t maxSamplerAllocationCount;
    VkDeviceSize bufferImageGranularity;
    VkDeviceSize sparseAddressSpaceSize;
    uint32_t maxBoundDescriptorSets;
    uint32_t maxPerStageDescriptorSamplers;
    uint32_t maxPerStageDescriptorUniformBuffers;
    uint32_t maxPerStageDescriptorStorageBuffers;
    uint32_t maxPerStageDescriptorSampledImages;
    uint32_t maxPerStageDescriptorStorageImages;
    uint32_t maxPerStageDescriptorInputAttachments;
    uint32_t maxVertexInputAttributes;
    uint32_t maxVertexInputBindings;
    uint32_t maxVertexInputAttributeOffset;
    ...
}. VkPhysicalDeviceLimits;
```

</tbody>
</table>
The **VkPhysicalDeviceLimits** are properties of the physical device. These are available in the **limits** member of the **VkPhysicalDeviceProperties** structure which is returned from **vkGetPhysicalDeviceProperties**.

- **maxImageDimension1D** is the largest dimension (width) that is guaranteed to be supported for all images created with an **imageType** of **VK_IMAGE_TYPE_1D**. Some combinations of image parameters (format, usage, etc.) may allow support for larger dimensions, which can be queried using **vkGetPhysicalDeviceImageFormatProperties**.

- **maxImageDimension2D** is the largest dimension (width or height) that is guaranteed to be supported for all images created with an **imageType** of **VK_IMAGE_TYPE_2D** and without **VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT** set in **flags**. Some combinations of image parameters (format, usage, etc.) may allow support for larger dimensions, which can be queried using **vkGetPhysicalDeviceImageFormatProperties**.

- **maxImageDimension3D** is the largest dimension (width, height, or depth) that is guaranteed to be supported for all images created with an **imageType** of **VK_IMAGE_TYPE_3D**. Some combinations of image parameters (format, usage, etc.) may allow support for larger dimensions, which can be queried using **vkGetPhysicalDeviceImageFormatProperties**.

- **maxImageDimensionCube** is the largest dimension (width or height) that is guaranteed to be supported for all images created with an **imageType** of **VK_IMAGE_TYPE_2D** and with **VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT** set in **flags**. Some combinations of image parameters (format, usage, etc.) may allow support for larger dimensions, which can be queried using **vkGetPhysicalDeviceImageFormatProperties**.
• **maxImageArrayLayers** is the maximum number of layers (arrayLayers) for an image.

• **maxTexelBufferElements** is the maximum number of addressable texels for a buffer view created on a buffer which was created with the **VK_BUFFER_USAGE_UNIFORM_TEXEL_BUFFER_BIT** or **VK_BUFFER_USAGE_STORAGE_TEXEL_BUFFER_BIT** set in the **usage** member of the **VkBufferCreateInfo** structure.

• **maxUniformBufferRange** is the maximum value that can be specified in the **range** member of a **VkDescriptorBufferInfo** structure passed to **vkUpdateDescriptorSets** for descriptors of type **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER** or **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC**.

• **maxStorageBufferRange** is the maximum value that can be specified in the **range** member of a **VkDescriptorBufferInfo** structure passed to **vkUpdateDescriptorSets** for descriptors of type **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER** or **VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC**.

• **maxPushConstantsSize** is the maximum size, in bytes, of the pool of push constant memory. For each of the push constant ranges indicated by the **pPushConstantRanges** member of the ** VkPipelineLayoutCreateInfo** structure, 
  \((\text{offset} + \text{size})\) must be less than or equal to this limit.

• **maxMemoryAllocationCount** is the maximum number of device memory allocations, as created by **vkAllocateMemory**, which can simultaneously exist.

• **maxSamplerAllocationCount** is the maximum number of sampler objects, as created by **vkCreateSampler**, which can simultaneously exist on a device.

• **bufferImageGranularity** is the granularity, in bytes, at which buffer or linear image resources, and optimal image resources can be bound to adjacent offsets in the same **VkDeviceMemory** object without aliasing. See **Buffer-Image Granularity** for more details.

• **sparseAddressSpaceSize** is the total amount of address space available, in bytes, for sparse memory resources. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them. If the **extendedSparseAddressSpace** feature is enabled, then the difference between **extendedSparseAddressSpaceSize** and **sparseAddressSpaceSize** can also be used, by **VkImage** created with the **usage** member of **VkImageCreateInfo** only containing bits in **extendedSparseImageUsageFlags** and **VkBuffer** created with the **usage** member of **VkBufferCreateInfo** only containing bits in **extendedSparseBufferUsageFlags**.

• **maxBoundDescriptorSets** is the maximum number of descriptor sets that can be simultaneously used by a pipeline. All **DescriptorSet** decorations in shader modules must have a value less than **maxBoundDescriptorSets**. See **Descriptor Sets**.

• **maxPerStageDescriptorSamplers** is the maximum number of samplers that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of **VK_DESCRIPTOR_TYPE_SAMPLER** or **VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER** count against this limit. Only descriptors in descriptor set layouts created without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set count against this limit. A descriptor is accessible to a shader stage when the **stageFlags** member of the **VkDescriptorSetLayoutBinding** structure has the bit for that shader stage set. See **Sampler** and **Combined Image Sampler**.

• **maxPerStageDescriptorUniformBuffers** is the maximum number of uniform buffers that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER** or **VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC** count against
this limit. Only descriptors in descriptor set layouts created without the
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A
descriptor is accessible to a shader stage when the stageFlags member of the
VkDescriptorsetLayoutBinding structure has the bit for that shader stage set. See Uniform Buffer
and Dynamic Uniform Buffer.

- **maxPerStageDescriptorStorageBuffers** is the maximum number of storage buffers that can be
accessible to a single shader stage in a pipeline layout. Descriptors with a type of
VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against
this limit. Only descriptors in descriptor set layouts created without the
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A
descriptor is accessible to a pipeline shader stage when the stageFlags member of the
VkDescriptorsetLayoutBinding structure has the bit for that shader stage set. See Storage Buffer
and Dynamic Storage Buffer.

- **maxPerStageDescriptorSampledImages** is the maximum number of sampled images that can be
accessible to a single shader stage in a pipeline layout. Descriptors with a type of
VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or
VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set
layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the
stageFlags member of the VkDescriptorsetLayoutBinding structure has the bit for that shader stage set. See Combined Image Sampler, Sampled Image, and Uniform Texel Buffer.

- **maxPerStageDescriptorStorageImages** is the maximum number of storage images that can be
accessible to a single shader stage in a pipeline layout. Descriptors with a type of
VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER count against
this limit. Only descriptors in descriptor set layouts created without the
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A
descriptor is accessible to a pipeline shader stage when the stageFlags member of the
VkDescriptorsetLayoutBinding structure has the bit for that shader stage set. See Storage Image,
and Storage Texel Buffer.

- **maxPerStageDescriptorInputAttachments** is the maximum number of input attachments that can be
accessible to a single shader stage in a pipeline layout. Descriptors with a type of
VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT count against this limit. Only descriptors in descriptor set
layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the
stageFlags member of the VkDescriptorsetLayoutBinding structure has the bit for that shader stage set. These are only supported for the fragment stage. See Input Attachment.

- **maxPerStageResources** is the maximum number of resources that can be accessible to a single
shader stage in a pipeline layout. Descriptors with a type of
VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE,
VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER,
VK_DESCRIPTOR_TYPE_STORAGE_BUFFER, VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER,
VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC, or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC
count against this limit. Only descriptors in descriptor set layouts created without the
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. For
the fragment shader stage the framebuffer color attachments also count against this limit.
• **maxDescriptorSetSamplers** is the maximum number of samplers that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_SAMPLER or VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Sampler and Combined Image Sampler.

• **maxDescriptorSetUniformBuffers** is the maximum number of uniform buffers that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Uniform Buffer and Dynamic Uniform Buffer.

• **maxDescriptorSetUniformBuffersDynamic** is the maximum number of dynamic uniform buffers that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Dynamic Uniform Buffer.

• **maxDescriptorSetStorageBuffers** is the maximum number of storage buffers that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Storage Buffer and Dynamic Storage Buffer.

• **maxDescriptorSetStorageBuffersDynamic** is the maximum number of dynamic storage buffers that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Dynamic Storage Buffer.

• **maxDescriptorSetSampledImages** is the maximum number of sampled images that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER, VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE, or VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Combined Image Sampler, Sampled Image, and Uniform Texel Buffer.

• **maxDescriptorSetStorageImages** is the maximum number of storage images that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_STORAGE_IMAGE, or VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See Storage Image, and Storage Texel Buffer.

• **maxDescriptorSetInputAttachments** is the maximum number of input attachments that can be included in a pipeline layout. Descriptors with a type of VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT count against this limit. Only descriptors in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit. See
Input Attachment.

- **maxVertexInputAttributes** is the maximum number of vertex input attributes that can be specified for a graphics pipeline. These are described in the array of `VkVertexInputAttributeDescription` structures that are provided at graphics pipeline creation time via the `pVertexAttributeDescriptions` member of the `VkPipelineVertexInputStateCreateInfo` structure. See Vertex Attributes and Vertex Input Description.

- **maxVertexInputBindings** is the maximum number of vertex buffers that can be specified for providing vertex attributes to a graphics pipeline. These are described in the array of `VkVertexInputBindingDescription` structures that are provided at graphics pipeline creation time via the `pVertexBindingDescriptions` member of the `VkPipelineVertexInputStateCreateInfo` structure. The `binding` member of `VkVertexInputBindingDescription` must be less than this limit. See Vertex Input Description.

- **maxVertexInputAttributeOffset** is the maximum vertex input attribute offset that can be added to the vertex input binding stride. The `offset` member of the `VkVertexInputAttributeDescription` structure must be less than or equal to this limit. See Vertex Input Description.

- **maxVertexInputBindingStride** is the maximum vertex input binding stride that can be specified in a vertex input binding. The `stride` member of the `VkVertexInputBindingDescription` structure must be less than or equal to this limit. See Vertex Input Description.

- **maxVertexOutputComponents** is the maximum number of components of output variables which can be output by a vertex shader. See Vertex Shaders.

- **maxTessellationGenerationLevel** is the maximum tessellation generation level supported by the fixed-function tessellation primitive generator. See Tessellation.

- **maxTessellationPatchSize** is the maximum patch size, in vertices, of patches that can be processed by the tessellation control shader and tessellation primitive generator. The `patchControlPoints` member of the `VkPipelineTessellationStateCreateInfo` structure specified at pipeline creation time and the value provided in the `OutputVertices` execution mode of shader modules must be less than or equal to this limit. See Tessellation.

- **maxTessellationControlPerVertexInputComponents** is the maximum number of components of input variables which can be provided as per-vertex inputs to the tessellation control shader stage.

- **maxTessellationControlPerVertexOutputComponents** is the maximum number of components of per-vertex output variables which can be output from the tessellation control shader stage.

- **maxTessellationControlPerPatchOutputComponents** is the maximum number of components of per-patch output variables which can be output from the tessellation control shader stage.

- **maxTessellationControlTotalOutputComponents** is the maximum total number of components of per-vertex and per-patch output variables which can be output from the tessellation control shader stage.

- **maxTessellationEvaluationInputComponents** is the maximum number of components of input variables which can be provided as per-vertex inputs to the tessellation evaluation shader stage.

- **maxTessellationEvaluationOutputComponents** is the maximum number of components of per-vertex output variables which can be output from the tessellation evaluation shader stage.
• **maxGeometryShaderInvocations** is the maximum invocation count supported for instanced geometry shaders. The value provided in the **Invocations** execution mode of shader modules **must** be less than or equal to this limit. See **Geometry Shading**.

• **maxGeometryInputComponents** is the maximum number of components of input variables which **can** be provided as inputs to the geometry shader stage.

• **maxGeometryOutputComponents** is the maximum number of components of output variables which **can** be output from the geometry shader stage.

• **maxGeometryOutputVertices** is the maximum number of vertices which **can** be emitted by any geometry shader.

• **maxGeometryTotalOutputComponents** is the maximum total number of components of output variables, across all emitted vertices, which **can** be output from the geometry shader stage.

• **maxFragmentInputComponents** is the maximum number of components of input variables which **can** be provided as inputs to the fragment shader stage.

• **maxFragmentOutputAttachments** is the maximum number of output attachments which **can** be written to by the fragment shader stage.

• **maxFragmentDualSrcAttachments** is the maximum number of output attachments which **can** be written to by the fragment shader stage when blending is enabled and one of the dual source blend modes is in use. See **Dual-Source Blending** and **dualSrcBlend**.

• **maxFragmentCombinedOutputResources** is the total number of storage buffers, storage images, and output **Location** decorated color attachments (described in **Fragment Output Interface**) which **can** be used in the fragment shader stage.

• **maxComputeSharedMemorySize** is the maximum total storage size, in bytes, available for variables declared with the **Workgroup** storage class in shader modules (or with the **shared** storage qualifier in GLSL) in the compute shader stage.

• **maxComputeWorkGroupIdCount[3]** is the maximum number of local workgroups that **can** be dispatched by a single dispatching command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the dispatching commands **must** be less than or equal to the corresponding limit. See **Dispatching Commands**.

• **maxComputeWorkGroupInvocations** is the maximum total number of compute shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the **LocalSize** or **LocalSizeId** execution mode in shader modules or by the object decorated by the **WorkgroupSize** decoration, **must** be less than or equal to this limit.

• **maxComputeWorkGroupSize[3]** is the maximum size of a local compute workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the **LocalSize** or **LocalSizeId** execution mode or by the object decorated by the **WorkgroupSize** decoration in shader modules, **must** be less than or equal to the corresponding limit.

• **subPixelPrecisionBits** is the number of bits of subpixel precision in framebuffer coordinates $x_f$ and $y_f$. See **Rasterization**.

• **subTexelPrecisionBits** is the number of bits of precision in the division along an axis of an image used for minification and magnification filters. $2^{\text{subTexelPrecisionBits}}$ is the actual number of
divisions along each axis of the image represented. Sub-texel values calculated during image sampling will snap to these locations when generating the filtered results.

- **mipmapPrecisionBits** is the number of bits of division that the LOD calculation for mipmap fetching get snapped to when determining the contribution from each mip level to the mip filtered results. \(2^{mipmapPrecisionBits}\) is the actual number of divisions.

- **maxDrawIndexedIndexValue** is the maximum index value that can be used for indexed draw calls when using 32-bit indices. This excludes the primitive restart index value of 0xFFFFFFFF. See fullDrawIndexUint32.

- **maxDrawIndirectCount** is the maximum draw count that is supported for indirect drawing calls. See multiDrawIndirect.

- **maxSamplerLodBias** is the maximum absolute sampler LOD bias. The sum of the mipLodBias member of the VkSamplerCreateInfo structure and the Bias operand of image sampling operations in shader modules (or 0 if no Bias operand is provided to an image sampling operation) are clamped to the range \([-\text{maxSamplerLodBias}, +\text{maxSamplerLodBias}]\). See [samplers-mipLodBias].

- **maxSamplerAnisotropy** is the maximum degree of sampler anisotropy. The maximum degree of anisotropic filtering used for an image sampling operation is the minimum of the maxAnisotropy member of the VkSamplerCreateInfo structure and this limit. See [samplers-maxAnisotropy].

- **maxViewports** is the maximum number of active viewports. The viewportCount member of the VkPipelineViewportStateCreateInfo structure that is provided at pipeline creation must be less than or equal to this limit.

- **maxViewportDimensions[2]** are the maximum viewport dimensions in the X (width) and Y (height) dimensions, respectively. The maximum viewport dimensions must be greater than or equal to the largest image which can be created and used as a framebuffer attachment. See Controlling the Viewport.

- **viewportBoundsRange[2]** is the [minimum, maximum] range that the corners of a viewport must be contained in. This range must be at least \([-2 \times size, 2 \times size - 1]\), where \(size = \max(\text{maxViewportDimensions}[0], \text{maxViewportDimensions}[1])\). See Controlling the Viewport.

  **Note**
  The intent of the viewportBoundsRange limit is to allow a maximum sized viewport to be arbitrarily shifted relative to the output target as long as at least some portion intersects. This would give a bounds limit of \([-size + 1, 2 \times size - 1]\) which would allow all possible non-empty-set intersections of the output target and the viewport. Since these numbers are typically powers of two, picking the signed number range using the smallest possible number of bits ends up with the specified range.

- **viewportSubPixelBits** is the number of bits of subpixel precision for viewport bounds. The subpixel precision that floating-point viewport bounds are interpreted at is given by this limit.

- **minMemoryMapAlignment** is the minimum required alignment, in bytes, of host visible memory allocations within the host address space. When mapping a memory allocation with vkMapMemory, subtracting offset bytes from the returned pointer will always produce an integer multiple of this limit. See Host Access to Device Memory Objects. The value must be a
power of two.

- **minTexelBufferOffsetAlignment** is the minimum **required** alignment, in bytes, for the offset member of the VkBufferViewCreateInfo structure for texel buffers. The value **must** be a power of two. If texelBufferAlignment is enabled, this limit is equivalent to the maximum of the uniformTexelBufferOffsetAlignmentBytes and storageTexelBufferOffsetAlignmentBytes members of VkPhysicalDeviceTexelBufferAlignmentProperties, but smaller alignment is **optionally** allowed by storageTexelBufferOffsetSingleTexelAlignment and uniformTexelBufferOffsetSingleTexelAlignment. If texelBufferAlignment is not enabled, VkBufferViewCreateInfo::offset **must** be a multiple of this value.

- **minUniformBufferOffsetAlignment** is the minimum **required** alignment, in bytes, for the offset member of the VkDescriptorBufferInfo structure for uniform buffers. When a descriptor of type VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER or VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC is updated, the offset **must** be an integer multiple of this limit. Similarly, dynamic offsets for uniform buffers **must** be multiples of this limit. The value **must** be a power of two.

- **minStorageBufferOffsetAlignment** is the minimum **required** alignment, in bytes, for the offset member of the VkDescriptorBufferInfo structure for storage buffers. When a descriptor of type VK_DESCRIPTOR_TYPE_STORAGE_BUFFER or VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC is updated, the offset **must** be an integer multiple of this limit. Similarly, dynamic offsets for storage buffers **must** be multiples of this limit. The value **must** be a power of two.

- **minTexelOffset** is the minimum offset value for the ConstOffset image operand of any of the OpImageSample* or OpImageFetch* image instructions.

- **maxTexelOffset** is the maximum offset value for the ConstOffset image operand of any of the OpImageSample* or OpImageFetch* image instructions.

- **minTexelGatherOffset** is the minimum offset value for the Offset, ConstOffset, or ConstOffsets image operands of any of the OpImage*Gather image instructions.

- **maxTexelGatherOffset** is the maximum offset value for the Offset, ConstOffset, or ConstOffsets image operands of any of the OpImage*Gather image instructions.

- **minInterpolationOffset** is the base minimum (inclusive) negative offset value for the Offset operand of the InterpolateAtOffset extended instruction.

- **maxInterpolationOffset** is the base maximum (inclusive) positive offset value for the Offset operand of the InterpolateAtOffset extended instruction.

- **subPixelInterpolationOffsetBits** is the number of fractional bits that the x and y offsets to the InterpolateAtOffset extended instruction **may** be rounded to as fixed-point values.

- **maxFramebufferWidth** is the maximum width for a framebuffer. The width member of the VkFramebufferCreateInfo structure **must** be less than or equal to this limit.

- **maxFramebufferHeight** is the maximum height for a framebuffer. The height member of the VkFramebufferCreateInfo structure **must** be less than or equal to this limit.

- **maxFramebufferLayers** is the maximum layer count for a layered framebuffer. The layers member of the VkFramebufferCreateInfo structure **must** be less than or equal to this limit.

- **framebufferColorSampleCounts** is a bitmask of VkSampleCountFlagBits indicating the color sample counts that are supported for all framebuffer color attachments with floating- or fixed-point formats. For color attachments with integer formats, see
framebufferIntegerColorSampleCounts.

- framebufferDepthSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the supported depth sample counts for all framebuffer depth/stencil attachments, when the format includes a depth component.

- framebufferStencilSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the supported stencil sample counts for all framebuffer depth/stencil attachments, when the format includes a stencil component.

- framebufferNoAttachmentsSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the supported sample counts for a subpass which uses no attachments.

- maxColorAttachments is the maximum number of color attachments that \textbf{can} be used by a subpass in a render pass. The colorAttachmentCount member of the VkSubpassDescription or VkSubpassDescription2 structure must be less than or equal to this limit.

- sampledImageColorSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, usage containing VK_IMAGE_USAGE_SAMPLED_BIT, and a non-integer color format.

- sampledImageIntegerSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, usage containing VK_IMAGE_USAGE_SAMPLED_BIT, and an integer color format.

- sampledImageDepthSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, usage containing VK_IMAGE_USAGE_SAMPLED_BIT, and a depth format.

- sampledImageStencilSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, usage containing VK_IMAGE_USAGE_SAMPLED_BIT, and a stencil format.

- storageImageSampleCounts is a bitmask\(^1\) of VkSampleCountFlagBits indicating the sample counts supported for all 2D images created with VK_IMAGE_TILING_OPTIMAL, and usage containing VK_IMAGE_USAGE_STORAGE_BIT.

- maxSampleMaskWords is the maximum number of array elements of a variable decorated with the SampleMask built-in decoration.

- timestampComputeAndGraphics specifies support for timestamps on all graphics and compute queues. If this limit is set to VK_TRUE, all queues that advertise the VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT in the VkQueueFamilyProperties::queueFlags support VkQueueFamilyProperties::timestampValidBits of at least 36. See Timestamp Queries.

- timestampPeriod is the number of nanoseconds \textbf{required} for a timestamp query to be incremented by 1. See Timestamp Queries.

- maxClipDistances is the maximum number of clip distances that \textbf{can} be used in a single shader stage. The size of any array declared with the ClipDistance built-in decoration in a shader module must be less than or equal to this limit.

- maxCullDistances is the maximum number of cull distances that \textbf{can} be used in a single shader stage. The size of any array declared with the CullDistance built-in decoration in a shader module must be less than or equal to this limit.

- maxCombinedClipAndCullDistances is the maximum combined number of clip and cull distances
that can be used in a single shader stage. The sum of the sizes of any pair of arrays declared with the ClipDistance and CullDistance built-in decoration used by a single shader stage in a shader module must be less than or equal to this limit.

- **discreteQueuePriorities** is the number of discrete priorities that can be assigned to a queue based on the value of each member of VkDeviceQueueCreateInfo::pQueuePriorities. This must be at least 2, and levels must be spread evenly over the range, with at least one level at 1.0, and another at 0.0. See Queue Priority.

- **pointSizeRange[2]** is the range $[\text{minimum}, \text{maximum}]$ of supported sizes for points. Values written to variables decorated with the PointSize built-in decoration are clamped to this range.

- **lineWidthRange[2]** is the range $[\text{minimum}, \text{maximum}]$ of supported widths for lines. Values specified by the lineWidth member of the VkPipelineRasterizationStateCreateInfo or the lineWidth parameter to vkCmdSetLineWidth are clamped to this range.

- **pointSizeGranularity** is the granularity of supported point sizes. Not all point sizes in the range defined by pointSizeRange are supported. This limit specifies the granularity (or increment) between successive supported point sizes.

- **lineWidthGranularity** is the granularity of supported line widths. Not all line widths in the range defined by lineWidthRange are supported. This limit specifies the granularity (or increment) between successive supported line widths.

- **strictLines** specifies whether lines are rasterized according to the preferred method of rasterization. If set to VK_FALSE, lines may be rasterized under a relaxed set of rules. If set to VK_TRUE, lines are rasterized as per the strict definition. See Basic Line Segment Rasterization.

- **standardSampleLocations** specifies whether rasterization uses the standard sample locations as documented in Multisampling. If set to VK_TRUE, the implementation uses the documented sample locations. If set to VK_FALSE, the implementation may use different sample locations.

- **optimalBufferCopyOffsetAlignment** is the optimal buffer offset alignment in bytes for vkCmdCopyBufferToImage2, vkCmdCopyBufferToImage, vkCmdCopyImageToBuffer2, and vkCmdCopyImageToBuffer. This value is also the optimal host memory offset alignment in bytes for vkCopyMemoryToImageEXT and vkCopyImageToMemoryEXT. The per texel alignment requirements are enforced, but applications should use the optimal alignment for optimal performance and power use. The value must be a power of two.

- **optimalBufferCopyRowPitchAlignment** is the optimal buffer row pitch alignment in bytes for vkCmdCopyBufferToImage2, vkCmdCopyBufferToImage, vkCmdCopyImageToBuffer2, and vkCmdCopyImageToBuffer. This value is also the optimal host memory row pitch alignment in bytes for vkCopyMemoryToImageEXT and vkCopyImageToMemoryEXT. Row pitch is the number of bytes between texels with the same X coordinate in adjacent rows (Y coordinates differ by one). The per texel alignment requirements are enforced, but applications should use the optimal alignment for optimal performance and power use. The value must be a power of two.

- **nonCoherentAtomSize** is the size and alignment in bytes that bounds concurrent access to host-mapped device memory. The value must be a power of two.

For all bitmasks of VkSampleCountFlagBits, the sample count limits defined above represent the minimum supported sample counts for each image type. Individual images may support
additional sample counts, which are queried using `vkGetPhysicalDeviceImageFormatProperties` as described in Supported Sample Counts.

Bits which may be set in the sample count limits returned by `VkPhysicalDeviceLimits`, as well as in other queries and structures representing image sample counts, are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkSampleCountFlagBits {
    VK_SAMPLE_COUNT_1_BIT = 0x00000001,
    VK_SAMPLE_COUNT_2_BIT = 0x00000002,
    VK_SAMPLE_COUNT_4_BIT = 0x00000004,
    VK_SAMPLE_COUNT_8_BIT = 0x00000008,
    VK_SAMPLE_COUNT_16_BIT = 0x00000010,
    VK_SAMPLE_COUNT_32_BIT = 0x00000020,
    VK_SAMPLE_COUNT_64_BIT = 0x00000040,
} VkSampleCountFlagBits;
```

- `VK_SAMPLE_COUNT_1_BIT` specifies an image with one sample per pixel.
- `VK_SAMPLE_COUNT_2_BIT` specifies an image with 2 samples per pixel.
- `VK_SAMPLE_COUNT_4_BIT` specifies an image with 4 samples per pixel.
- `VK_SAMPLE_COUNT_8_BIT` specifies an image with 8 samples per pixel.
- `VK_SAMPLE_COUNT_16_BIT` specifies an image with 16 samples per pixel.
- `VK_SAMPLE_COUNT_32_BIT` specifies an image with 32 samples per pixel.
- `VK_SAMPLE_COUNT_64_BIT` specifies an image with 64 samples per pixel.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkSampleCountFlags;
```

`VkSampleCountFlags` is a bitmask type for setting a mask of zero or more `VkSampleCountFlagBits`.

The `VkPhysicalDevicePushDescriptorPropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_push_descriptor
typedef struct VkPhysicalDevicePushDescriptorPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t maxPushDescriptors;
} VkPhysicalDevicePushDescriptorPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `maxPushDescriptors` is the maximum number of descriptors that can be used in a descriptor set layout created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR` set.
If the `VkPhysicalDevicePushDescriptorPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDevicePushDescriptorPropertiesKHR-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_DESCRIPTOR_PROPERTIES_KHR`

The `VkPhysicalDeviceMultiviewProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t maxMultiviewViewCount;
    uint32_t maxMultiviewInstanceIndex;
} VkPhysicalDeviceMultiviewProperties;
```

or the equivalent

```c
// Provided by VK_KHR_multiview
typedef VkPhysicalDeviceMultiviewProperties VkPhysicalDeviceMultiviewPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxMultiviewViewCount` is one greater than the maximum view index that can be used in a subpass.
- `maxMultiviewInstanceIndex` is the maximum valid value of instance index allowed to be generated by a drawing command recorded within a subpass of a multiview render pass instance.

If the `VkPhysicalDeviceMultiviewProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceMultiviewProperties-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PROPERTIES`

The `VkPhysicalDeviceFloatControlsProperties` structure is defined as:
// Provided by VK_VERSION_1_2

typedef struct VkPhysicalDeviceFloatControlsProperties {
    VkStructureType sType;
    void* pNext;
    VkShaderFloatControlsIndependence denormBehaviorIndependence;
    VkShaderFloatControlsIndependence roundingModeIndependence;
    VkBool32 shaderSignedZeroInfNanPreserveFloat16;
    VkBool32 shaderSignedZeroInfNanPreserveFloat32;
    VkBool32 shaderSignedZeroInfNanPreserveFloat64;
    VkBool32 shaderDenormPreserveFloat16;
    VkBool32 shaderDenormPreserveFloat32;
    VkBool32 shaderDenormPreserveFloat64;
    VkBool32 shaderDenormFlushToZeroFloat16;
    VkBool32 shaderDenormFlushToZeroFloat32;
    VkBool32 shaderDenormFlushToZeroFloat64;
    VkBool32 shaderRoundingModeRTEFloat16;
    VkBool32 shaderRoundingModeRTEFloat32;
    VkBool32 shaderRoundingModeRTEFloat64;
    VkBool32 shaderRoundingModeR TZFloat16;
    VkBool32 shaderRoundingModeR TZFloat32;
    VkBool32 shaderRoundingModeR TZFloat64;
} VkPhysicalDeviceFloatControlsProperties;

or the equivalent

// Provided by VK_KHR_shader_float_controls

typedef VkPhysicalDeviceFloatControlsProperties
    VkPhysicalDeviceFloatControlsPropertiesKHR;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• denormBehaviorIndependence is a VkShaderFloatControlsIndependence value indicating whether, and how, denorm behavior can be set independently for different bit widths.
• roundingModeIndependence is a VkShaderFloatControlsIndependence value indicating whether, and how, rounding modes can be set independently for different bit widths.
• shaderSignedZeroInfNanPreserveFloat16 is a boolean value indicating whether sign of a zero, Nans and ±∞ can be preserved in 16-bit floating-point computations. It also indicates whether the SignedZeroInfNanPreserve execution mode can be used for 16-bit floating-point types.
• shaderSignedZeroInfNanPreserveFloat32 is a boolean value indicating whether sign of a zero, Nans and ±∞ can be preserved in 32-bit floating-point computations. It also indicates whether the SignedZeroInfNanPreserve execution mode can be used for 32-bit floating-point types.
• shaderSignedZeroInfNanPreserveFloat64 is a boolean value indicating whether sign of a zero, Nans and ±∞ can be preserved in 64-bit floating-point computations. It also indicates whether the SignedZeroInfNanPreserve execution mode can be used for 64-bit floating-point types.
• shaderDenormPreserveFloat16 is a boolean value indicating whether denormals can be preserved in 16-bit floating-point computations. It also indicates whether the DenormPreserve execution mode can be used for 16-bit floating-point types.

• shaderDenormPreserveFloat32 is a boolean value indicating whether denormals can be preserved in 32-bit floating-point computations. It also indicates whether the DenormPreserve execution mode can be used for 32-bit floating-point types.

• shaderDenormPreserveFloat64 is a boolean value indicating whether denormals can be preserved in 64-bit floating-point computations. It also indicates whether the DenormPreserve execution mode can be used for 64-bit floating-point types.

• shaderDenormFlushToZeroFloat16 is a boolean value indicating whether denormals can be flushed to zero in 16-bit floating-point computations. It also indicates whether the DenormFlushToZero execution mode can be used for 16-bit floating-point types.

• shaderDenormFlushToZeroFloat32 is a boolean value indicating whether denormals can be flushed to zero in 32-bit floating-point computations. It also indicates whether the DenormFlushToZero execution mode can be used for 32-bit floating-point types.

• shaderDenormFlushToZeroFloat64 is a boolean value indicating whether denormals can be flushed to zero in 64-bit floating-point computations. It also indicates whether the DenormFlushToZero execution mode can be used for 64-bit floating-point types.

• shaderRoundingModeRTEFloat16 is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTE execution mode can be used for 16-bit floating-point types.

• shaderRoundingModeRTEFloat32 is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTE execution mode can be used for 32-bit floating-point types.

• shaderRoundingModeRTEFloat64 is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTE execution mode can be used for 64-bit floating-point types.

• shaderRoundingModeRTZFloat16 is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTZ execution mode can be used for 16-bit floating-point types.

• shaderRoundingModeRTZFloat32 is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTZ execution mode can be used for 32-bit floating-point types.

• shaderRoundingModeRTZFloat64 is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the RoundingModeRTZ execution mode can be used for 64-bit floating-point types.

If the VkPhysicalDeviceFloatControlsProperties structure is included in the pNext chain of the
**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFloatControlsProperties-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES`

Values which **may** be returned in the `denormBehaviorIndependence` and `roundingModeIndependence` fields of `VkPhysicalDeviceFloatControlsProperties` are:

```c
// Provided by VK_VERSION_1_2
typedef enum VkShaderFloatControlsIndependence {
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY = 0,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL = 1,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE = 2,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR =
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR =
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL,
    // Provided by VK_KHR_shader_float_controls
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR =
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE,
} VkShaderFloatControlsIndependence;
```

or the equivalent

```c
// Provided by VK_KHR_shader_float_controls
typedef VkShaderFloatControlsIndependence VkShaderFloatControlsIndependenceKHR;
```

- **VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY** specifies that shader float controls for 32-bit floating point can be set independently; other bit widths must be set identically to each other.

- **VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL** specifies that shader float controls for all bit widths can be set independently.

- **VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE** specifies that shader float controls for all bit widths must be set identically.

The `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_discard_rectangles
typedef struct VkPhysicalDeviceDiscardRectanglePropertiesEXT {
    VkStructureType sType;
    void* pNext;
};
```
\texttt{uint32_t} \quad \text{maxDiscardRectangles;}
\}
\textit{VkPhysicalDeviceDiscardRectanglePropertiesEXT;}

- \textit{sType} is a \textit{VkStructureType} value identifying this structure.
- \textit{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \textit{maxDiscardRectangles} is the maximum number of active discard rectangles that \textbf{can} be specified.

If the \textit{VkPhysicalDeviceDiscardRectanglePropertiesEXT} structure is included in the \textit{pNext} chain of the \textit{VkPhysicalDeviceProperties2} structure passed to \textit{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- \textbf{VUID-VkPhysicalDeviceDiscardRectanglePropertiesEXT-sType-sType}
  \textit{sType} \textbf{must} be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISCARD_RECTANGLE_PROPERTIES_EXT}

The \textit{VkPhysicalDeviceSampleLocationsPropertiesEXT} structure is defined as:

```
// Provided by VK_EXT_sample_locations
typedef struct \texttt{VkPhysicalDeviceSampleLocationsPropertiesEXT} {
    VkStructureType \textit{sType;}
    void* \textit{pNext;}
    VkSampleCountFlags \textit{sampleLocationSampleCounts;}
    VkExtent2D \textit{maxSampleLocationGridSize;}
    float \textit{sampleLocationCoordinateRange[2];}
    uint32_t \textit{sampleLocationSubPixelBits;}
    VkBool32 \textit{variableSampleLocations;}
} \textit{VkPhysicalDeviceSampleLocationsPropertiesEXT;}
```

- \textit{sType} is a \textit{VkStructureType} value identifying this structure.
- \textit{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \textit{sampleLocationSampleCounts} is a bitmask of \textit{VkSampleCountFlagBits} indicating the sample counts supporting custom sample locations.
- \textit{maxSampleLocationGridSize} is the maximum size of the pixel grid in which sample locations \textbf{can} vary that is supported for all sample counts in \textit{sampleLocationSampleCounts}.
- \textit{sampleLocationCoordinateRange[2]} is the range of supported sample location coordinates.
- \textit{sampleLocationSubPixelBits} is the number of bits of subpixel precision for sample locations.
- \textit{variableSampleLocations} specifies whether the sample locations used by all pipelines that will be bound to a command buffer during a subpass \textbf{must} match. If set to \texttt{VK_TRUE}, the implementation supports variable sample locations in a subpass. If set to \texttt{VK_FALSE}, then the sample locations \textbf{must} stay constant in each subpass.

If the \textit{VkPhysicalDeviceSampleLocationsPropertiesEXT} structure is included in the \textit{pNext} chain of the \textit{VkPhysicalDeviceProperties2} structure passed to \textit{vkGetPhysicalDeviceProperties2}, it is filled in with
each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSampleLocationsPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT

The VkPhysicalDeviceExternalMemoryHostPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_external_memory_host
typedef struct VkPhysicalDeviceExternalMemoryHostPropertiesEXT {
   VkStructureType sType;
    void* pNext;
    VkDeviceSize minImportedHostPointerAlignment;
} VkPhysicalDeviceExternalMemoryHostPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `minImportedHostPointerAlignment` is the minimum required alignment, in bytes, for the base address and size of host pointers that can be imported to a Vulkan memory object. The value must be a power of two.

If the VkPhysicalDeviceExternalMemoryHostPropertiesEXT structure is included in the `pNext` chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalMemoryHostPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_HOST_PROPERTIES_EXT

The VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX structure is defined as:

```c
// Provided by VK_NVX_multiview_per_view_attributes
typedef struct VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX {
    VkStructureType sType;
    void* pNext;
    VkBool32 perViewPositionAllComponents;
} VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `perViewPositionAllComponents` is VK_TRUE if the implementation supports per-view position values that differ in components other than the X component.
If the \texttt{VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX-sType-sType
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_ATTRIBUTES_PROPERTIES_NVX}

The \texttt{VkPhysicalDevicePointClippingProperties} structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevicePointClippingProperties {
    VkStructureType sType;
    void* pNext;
    VkPointClippingBehavior pointClippingBehavior;
} VkPhysicalDevicePointClippingProperties;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance2
typedef VkPhysicalDevicePointClippingProperties VkPhysicalDevicePointClippingPropertiesKHR;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is NULL or a pointer to a structure extending this structure.
- \texttt{pointClippingBehavior} is a \texttt{VkPointClippingBehavior} value specifying the point clipping behavior supported by the implementation.

If the \texttt{VkPhysicalDevicePointClippingProperties} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePointClippingProperties-sType-sType
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES}

The \texttt{VkPhysicalDeviceSubgroupProperties} structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSubgroupProperties {
    VkStructureType sType;
} VkPhysicalDeviceSubgroupProperties;
```
void* pNext;
uint32_t subgroupSize;
VkShaderStageFlags supportedStages;
VkSubgroupFeatureFlags supportedOperations;
VkBool32 quadOperationsInAllStages;
} VkPhysicalDeviceSubgroupProperties;

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.

- **subgroupSize** is the default number of invocations in each subgroup. **subgroupSize** is at least 1 if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. **subgroupSize** is a power-of-two.

- **supportedStages** is a bitfield of **VkShaderStageFlagBits** describing the shader stages that group operations with subgroup scope are supported in. **supportedStages** will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.

- **supportedOperations** is a bitmask of **VkSubgroupFeatureFlagBits** specifying the sets of group operations with subgroup scope supported on this device. **supportedOperations** will have the `VK_SUBGROUP_FEATURE_BASIC_BIT` bit set if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`.

- **quadOperationsInAllStages** is a boolean specifying whether quad group operations are available in all stages, or are restricted to fragment and compute stages.

If the **VkPhysicalDeviceSubgroupProperties** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

If **supportedOperations** includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, or **shaderSubgroupUniformControlFlow** is enabled, **subgroupSize** must be greater than or equal to 4.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceSubgroupProperties-sType-sType**  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_PROPERTIES**

Bits which can be set in **VkPhysicalDeviceSubgroupProperties::supportedOperations** and **VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations** to specify supported group operations with subgroup scope are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkSubgroupFeatureFlagBits {
    VK_SUBGROUP_FEATURE_BASIC_BIT = 0x00000001,
    VK_SUBGROUP_FEATURE_VOTE_BIT = 0x00000002,
    VK_SUBGROUP_FEATURE_ARITHMETIC_BIT = 0x00000004,
    VK_SUBGROUP_FEATURE_BALLOT_BIT = 0x00000008,
};
```
• **VK_SUBGROUP_FEATURE_BASIC_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniform capability.

• **VK_SUBGROUP_FEATURE_VOTE_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformVote capability.

• **VK_SUBGROUP_FEATURE_ARITHMETIC_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformArithmetic capability.

• **VK_SUBGROUP_FEATURE_BALLOT_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformBallot capability.

• **VK_SUBGROUP_FEATURE_SHUFFLE_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformShuffle capability.

• **VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformShuffleRelative capability.

• **VK_SUBGROUP_FEATURE_CLUSTERED_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformClustered capability.

• **VK_SUBGROUP_FEATURE_QUAD_BIT** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformQuad capability.

• **VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV** specifies the device will accept SPIR-V shader modules containing the GroupNonUniformPartitionedNV capability.

---

```c
typedef VkSubgroupFeatureFlagBits VkSubgroupFeatureFlags;
```

**VkSubgroupFeatureFlags** is a bitmask type for setting a mask of zero or more **VkSubgroupFeatureFlagBits**.

The **VkPhysicalDeviceSubgroupSizeControlProperties** structure is defined as:

```c
typedef struct VkPhysicalDeviceSubgroupSizeControlProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t minSubgroupSize;
    uint32_t maxSubgroupSize;
    uint32_t maxComputeWorkgroupSubgroups;
    VkShaderStageFlags requiredSubgroupSizeStages;
} VkPhysicalDeviceSubgroupSizeControlProperties;
```
or the equivalent

```c
typedef VkPhysicalDeviceSubgroupSizeControlProperties
        VkPhysicalDeviceSubgroupSizeControlPropertiesEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.

  - **minSubgroupSize** is the minimum subgroup size supported by this device. `minSubgroupSize` is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `minSubgroupSize` is a power-of-two. `minSubgroupSize` is less than or equal to `maxSubgroupSize`. `minSubgroupSize` is less than or equal to `subgroupSize`.

  - **maxSubgroupSize** is the maximum subgroup size supported by this device. `maxSubgroupSize` is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. `maxSubgroupSize` is a power-of-two. `maxSubgroupSize` is greater than or equal to `minSubgroupSize`. `maxSubgroupSize` is greater than or equal to `subgroupSize`.

  - **maxComputeWorkgroupSubgroups** is the maximum number of subgroups supported by the implementation within a workgroup.

  - **requiredSubgroupSizeStages** is a bitfield of what shader stages support having a required subgroup size specified.

If the `VkPhysicalDeviceSubgroupSizeControlProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `VkPhysicalDeviceSubgroupProperties::supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, `minSubgroupSize` must be greater than or equal to 4.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSubgroupSizeControlProperties-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_PROPERTIES`

The `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_blend_operation_advanced

typedef struct VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t advancedBlendMaxColorAttachments;
    VkBool32 advancedBlendIndependentBlend;
    VkBool32 advancedBlendNonPremultipliedSrcColor;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;
```
VkBool32 advancedBlendNonPremultipliedDstColor;
VkBool32 advancedBlendCorrelatedOverlap;
VkBool32 advancedBlendAllOperations;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• advancedBlendMaxColorAttachments is one greater than the highest color attachment index that can be used in a subpass, for a pipeline that uses an advanced blend operation.
• advancedBlendIndependentBlend specifies whether advanced blend operations can vary per-attachment.
• advancedBlendNonPremultipliedSrcColor specifies whether the source color can be treated as non-premultiplied. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT ::srcPremultiplied must be VK_TRUE.
• advancedBlendNonPremultipliedDstColor specifies whether the destination color can be treated as non-premultiplied. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT ::dstPremultiplied must be VK_TRUE.
• advancedBlendCorrelatedOverlap specifies whether the overlap mode can be treated as correlated. If this is VK_FALSE, then VkPipelineColorBlendAdvancedStateCreateInfoEXT ::blendOverlap must be VK_BLEND_OVERLAP_UNCORRELATED_EXT.
• advancedBlendAllOperations specifies whether all advanced blend operation enums are supported. See the valid usage of VkPipelineColorBlendAttachmentState.

If the VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT-sType-sType

The VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxVertexAttribDivisor;
} VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.
• `pNext` is **NULL** or a pointer to a structure extending this structure.

• `maxVertexAttribDivisor` is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.

If the `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES_EXT`

---

The `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSamplerFilterMinmaxProperties {
    VkStructureType sType;
    void* pNext;
    VkBool32 filterMinmaxSingleComponentFormats;
    VkBool32 filterMinmaxImageComponentMapping;
} VkPhysicalDeviceSamplerFilterMinmaxProperties;
```

or the equivalent

```c
// Provided by VK_EXT_sampler_filter_minmax
typedef VkPhysicalDeviceSamplerFilterMinmaxProperties
    VkPhysicalDeviceSamplerFilterMinmaxPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is **NULL** or a pointer to a structure extending this structure.
- `filterMinmaxSingleComponentFormats` is a boolean value indicating whether a minimum set of required formats support min/max filtering.
- `filterMinmaxImageComponentMapping` is a boolean value indicating whether the implementation supports non-identity component mapping of the image when doing min/max filtering.

If the `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `filterMinmaxSingleComponentFormats` is `VK_TRUE`, the following formats must support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature with `VK_IMAGE_TILING_OPTIMAL`, if they support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`:
• VK_FORMAT_R8_UNORM
• VK_FORMAT_R8_SNORM
• VK_FORMAT_R16_UNORM
• VK_FORMAT_R16_SNORM
• VK_FORMAT_R16_SFLOAT
• VK_FORMAT_R32_SFLOAT
• VK_FORMAT_D16_UNORM
• VK_FORMAT_X8_D24_UNORM_PACK32
• VK_FORMAT_D32_SFLOAT
• VK_FORMAT_D16_UNORM_S8_UINT
• VK_FORMAT_D24_UNORM_S8_UINT
• VK_FORMAT_D32_SFLOAT_S8_UINT

If the format is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports min/max filtering, and that min/max filtering of the depth aspect is supported when depth compare is disabled in the sampler.

If `filterMinmaxImageComponentMapping` is `VK_FALSE` the component mapping of the image view used with min/max filtering must have been created with the r component set to the identity swizzle. Only the r component of the sampled image value is defined and the other component values are undefined. If `filterMinmaxImageComponentMapping` is `VK_TRUE` this restriction does not apply and image component mapping works as normal.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceSamplerFilterMinmaxProperties-sType-sType
  sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_FILTER_MINMAX_PROPERTIES`
an unprotected queue operation, or perform a query in a protected queue operation. If this limit is
VK_TRUE, such writes will be discarded or have undefined values written, reads and queries
will return undefined values. If this limit is VK_FALSE, applications must not perform these
operations. See Protected Memory Access Rules for more information.

If the VkPhysicalDeviceProtectedMemoryProperties structure is included in the pNext chain of the
VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with
each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProtectedMemoryProperties-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_PROPERTIES

The VkPhysicalDeviceMaintenance3Properties structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMaintenance3Properties {
    VkStructureType sType;
    void* pNext;
    uint32_t maxPerSetDescriptors;
    VkDeviceSize maxMemoryAllocationSize;
} VkPhysicalDeviceMaintenance3Properties;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance3
typedef VkPhysicalDeviceMaintenance3Properties
VkPhysicalDeviceMaintenance3PropertiesKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxPerSetDescriptors** is a maximum number of descriptors (summed over all descriptor types)
in a single descriptor set that is guaranteed to satisfy any implementation-dependent
constraints on the size of a descriptor set itself. Applications can query whether a descriptor set
that goes beyond this limit is supported using vkGetDescriptorSetLayoutSupport.
- **maxMemoryAllocationSize** is the maximum size of a memory allocation that can be created, even
if there is more space available in the heap.

If the VkPhysicalDeviceMaintenance3Properties structure is included in the pNext chain of the
VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with
each corresponding implementation-dependent property.
The `VkPhysicalDeviceMaintenance4Properties` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Properties {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize maxBufferSize;
} VkPhysicalDeviceMaintenance4Properties;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance4
typedef VkPhysicalDeviceMaintenance4Properties
    VkPhysicalDeviceMaintenance4PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxBufferSize` is the maximum size `VkBuffer` that can be created.

If the `VkPhysicalDeviceMaintenance4Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

The `VkPhysicalDeviceMaintenance5PropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_maintenance5
typedef struct VkPhysicalDeviceMaintenance5PropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 earlyFragmentMultisampleCoverageAfterSampleCounting;
    VkBool32 earlyFragmentSampleMaskTestBeforeSampleCounting;
    VkBool32 depthStencilSwizzleOneSupport;
    VkBool32 polygonModePointSize;
    VkBool32 nonStrictSinglePixelWideLinesUseParallelogram;
} VkPhysicalDeviceMaintenance5PropertiesKHR;
```
VkBool32 nonStrictWideLinesUseParallelogram;
} VkPhysicalDeviceMaintenance5PropertiesKHR;

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **earlyFragmentMultisampleCoverageAfterSampleCounting** is a boolean value indicating whether the fragment shading and multisample coverage operations are performed after sample counting for fragment shaders with **EarlyFragmentTests** execution mode.
- **earlyFragmentSampleMaskTestBeforeSampleCounting** is a boolean value indicating whether the sample mask test operation is performed before sample counting for fragment shaders using the **EarlyFragmentTests** execution mode.
- **depthStencilSwizzleOneSupport** is a boolean indicating that depth/stencil texturing operations with **VK_COMPONENT_SWIZZLE_ONE** have defined behavior.
- **polygonModePointSize** is a boolean value indicating whether the point size of the final rasterization of polygons with **VK_POLYGON_MODE_POINT** is controlled by **PointSize**.
- **nonStrictSinglePixelWideLinesUseParallelogram** is a boolean value indicating whether non-strict lines with a width of 1.0 are rasterized as parallelograms or using Bresenham’s algorithm.
- **nonStrictWideLinesUseParallelogram** is a boolean value indicating whether non-strict lines with a width greater than 1.0 are rasterized as parallelograms or using Bresenham’s algorithm.

If the **VkPhysicalDeviceMaintenance5PropertiesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceMaintenance5PropertiesKHR-sType-sType**
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_PROPERTIES_KHR**

The **VkPhysicalDeviceMeshShaderPropertiesNV** structure is defined as:

```c
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t maxDrawMeshTasksCount;
    uint32_t maxTaskWorkGroupInvocations;
    uint32_t maxTaskWorkGroupSize[3];
    uint32_t maxTaskTotalMemorySize;
    uint32_t maxTaskOutputCount;
    uint32_t maxMeshWorkGroupInvocations;
    uint32_t maxMeshWorkGroupSize[3];
    uint32_t maxMeshTotalMemorySize;
    uint32_t maxMeshOutputVertices;
```

3726
uint32_t maxMeshOutputPrimitives;
uint32_t maxMeshMultiviewViewCount;
uint32_t meshOutputPerVertexGranularity;
uint32_t meshOutputPerPrimitiveGranularity;
}
VkPhysicalDeviceMeshShaderPropertiesNV;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxDrawMeshTasksCount` is the maximum number of local workgroups that can be launched by a single draw mesh tasks command. See Programmable Mesh Shading.
- `maxTaskWorkGroupInvocations` is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, must be less than or equal to this limit.
- `maxTaskWorkGroupSize[3]` is the maximum size of a local task workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, must be less than or equal to the corresponding limit.
- `maxTaskTotalMemorySize` is the maximum number of bytes that the task shader can use in total for shared and output memory combined.
- `maxTaskOutputCount` is the maximum number of output tasks a single task shader workgroup can emit.
- `maxMeshWorkGroupInvocations` is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, must be less than or equal to this limit.
- `maxMeshWorkGroupSize[3]` is the maximum size of a local mesh workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, must be less than or equal to the corresponding limit.
- `maxMeshTotalMemorySize` is the maximum number of bytes that the mesh shader can use in total for shared and output memory combined.
- `maxMeshOutputVertices` is the maximum number of vertices a mesh shader output can store.
- `maxMeshOutputPrimitives` is the maximum number of primitives a mesh shader output can store.
- `maxMeshMultiviewViewCount` is the maximum number of multiview views a mesh shader can use.
- `meshOutputPerVertexGranularity` is the granularity with which mesh vertex outputs are allocated. The value can be used to compute the memory size used by the mesh shader, which must be less than or equal to `maxMeshTotalMemorySize`.
- `meshOutputPerPrimitiveGranularity` is the granularity with which mesh outputs qualified as per-primitive are allocated. The value can be used to compute the memory size used by the mesh.
shader, which must be less than or equal to \texttt{maxMeshTotalMemorySize}.

If the \texttt{VkPhysicalDeviceMeshShaderPropertiesNV} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- \texttt{VUID-VkPhysicalDeviceMeshShaderPropertiesNV-sType-sType}
  \texttt{sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_NV}

The \texttt{VkPhysicalDeviceMeshShaderPropertiesEXT} structure is defined as:

```c
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxTaskWorkGroupTotalCount;
    uint32_t maxTaskWorkGroupCount[3];
    uint32_t maxTaskWorkGroupInvocations;
    uint32_t maxTaskWorkGroupSize[3];
    uint32_t maxTaskPayloadSize;
    uint32_t maxTaskPayloadAndSharedMemorySize;
    uint32_t maxMeshWorkGroupTotalCount;
    uint32_t maxMeshWorkGroupCount[3];
    uint32_t maxMeshWorkGroupInvocations;
    uint32_t maxMeshWorkGroupSize[3];
    uint32_t maxMeshSharedMemorySize;
    uint32_t maxMeshPayloadAndSharedMemorySize;
    uint32_t maxMeshPayloadAndOutputMemorySize;
    uint32_t maxMeshOutputMemorySize;
    uint32_t maxMeshOutputComponents;
    uint32_t maxMeshOutputVertices;
    uint32_t maxMeshOutputPrimitives;
    uint32_t maxMeshOutputLayers;
    uint32_t maxMeshMultiviewViewCount;
    uint32_t meshOutputPerVertexGranularity;
    uint32_t meshOutputPerPrimitiveGranularity;
    uint32_t maxPreferredTaskWorkGroupInvocations;
    uint32_t maxPreferredMeshWorkGroupInvocations;
    VkBool32 prefersLocalInvocationVertexOutput;
    VkBool32 prefersLocalInvocationPrimitiveOutput;
    VkBool32 prefersCompactVertexOutput;
    VkBool32 prefersCompactPrimitiveOutput;
} VkPhysicalDeviceMeshShaderPropertiesEXT;
```

The members of the \texttt{VkPhysicalDeviceMeshShaderPropertiesEXT} structure describe the following
implementation-dependent limits:

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxTaskWorkGroupTotalCount** is the maximum number of total local workgroups that can be launched by a single mesh tasks drawing command. See Programmable Mesh Shading.
- **maxTaskWorkGroupCount[3]** is the maximum number of local workgroups that can be launched by a single mesh tasks drawing command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the drawing commands must be less than or equal to the corresponding limit. The product of these dimensions must be less than or equal to **maxTaskWorkGroupTotalCount**.
- **maxTaskWorkGroupInvocations** is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, must be less than or equal to this limit.
- **maxTaskWorkGroupSize[3]** is the maximum size of a local task workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, must be less than or equal to the corresponding limit.
- **maxTaskPayloadSize** is the maximum total storage size, in bytes, available for variables declared with the `TaskPayloadWorkgroupEXT` storage class in shader modules in the task shader stage.
- **maxTaskSharedMemorySize** is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the task shader stage.
- **maxTaskPayloadAndSharedMemorySize** is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class, in shader modules in the task shader stage.
- **maxMeshWorkGroupTotalCount** is the maximum number of local output tasks a single task shader workgroup can emit.
- **maxMeshWorkGroupCount[3]** is the maximum number of local output tasks a single task shader workgroup can emit, per dimension. These three values represent the maximum number of local output tasks for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the `OpEmitMeshTasksEXT` must be less than or equal to the corresponding limit. The product of these dimensions must be less than or equal to **maxMeshWorkGroupTotalCount**.
- **maxMeshWorkGroupInvocations** is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode in shader modules or by the object decorated by the `WorkgroupSize` decoration, must be less than or equal to this limit.
- **maxMeshWorkGroupSize[3]** is the maximum size of a local mesh workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the `WorkgroupSize` decoration in shader modules, must be less than or equal to the corresponding limit.
• `maxMeshSharedMemorySize` is the maximum total storage size, in bytes, available for variables declared with the `Workgroup` storage class in shader modules in the mesh shader stage.

• `maxMeshPayloadAndSharedMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` or `Workgroup` storage class in shader modules in the mesh shader stage.

• `maxMeshOutputMemorySize` is the maximum total storage size, in bytes, available for output variables in shader modules in the mesh shader stage, according to the formula in Mesh Shader Output.

• `maxMeshPayloadAndOutputMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` storage class, or output variables in shader modules in the mesh shader stage, according to the formula in Mesh Shader Output.

• `maxMeshOutputComponents` is the maximum number of components of output variables which can be output from the mesh shader stage.

• `maxMeshOutputVertices` is the maximum number of vertices which can be emitted by a single mesh shader workgroup.

• `maxMeshOutputPrimitives` is the maximum number of primitives which can be emitted by a single mesh shader workgroup.

• `maxMeshOutputLayers` is one greater than the maximum layer index that can be output from the mesh shader stage.

• `maxMultiviewViewCount` is one greater than the maximum view index that can be used by any mesh shader.

• `meshOutputPerVertexGranularity` is the granularity of vertex allocation. The number of output vertices allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which must be less than or equal to `maxMeshOutputMemorySize`.

• `meshOutputPerPrimitiveGranularity` is the granularity of primitive allocation. The number of output primitives allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which must be less than or equal to `maxMeshOutputMemorySize`.

• `maxPreferredTaskWorkGroupInvocations` is the maximum number of task shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the task shader stage.

• `maxPreferredMeshWorkGroupInvocations` is the maximum number of mesh shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the mesh shader stage.

• `prefersLocalInvocationVertexOutput` specifies whether writes to the vertex output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.

• `prefersLocalInvocationPrimitiveOutput` specifies whether writes to the primitive output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.

• `prefersCompactVertexOutput` specifies whether output vertices should be compacted after custom culling in the mesh shader for best performance, otherwise keeping the vertices at their original location may be better.
• `prefersCompactPrimitiveOutput` specifies whether output primitives should be compacted after custom culling in the mesh shader for best performance, otherwise the use of `CullPrimitiveEXT` may be better.

If the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is included in the `pNext` chain of `VkPhysicalDeviceProperties2`, it is filled with the implementation-dependent limits.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceMeshShaderPropertiesEXT-sType-sType` 
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT`

The `VkPhysicalDeviceDescriptorIndexingProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t maxUpdateAfterBindDescriptorsInAllPools;
    VkBool32 shaderUniformBufferArrayNonUniformIndexingNative;
    VkBool32 shaderSampledImageArrayNonUniformIndexingNative;
    VkBool32 shaderStorageBufferArrayNonUniformIndexingNative;
    VkBool32 shaderStorageImageArrayNonUniformIndexingNative;
    VkBool32 shaderInputAttachmentArrayNonUniformIndexingNative;
    VkBool32 robustBufferAccessUpdateAfterBind;
    VkBool32 quadDivergentImplicitLod;
    uint32_t maxPerStageDescriptorUpdateAfterBindSamplers;
    uint32_t maxPerStageDescriptorUpdateAfterBindUniformBuffers;
    uint32_t maxPerStageDescriptorUpdateAfterBindStorageBuffers;
    uint32_t maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t maxPerStageDescriptorUpdateAfterBindUniformBuffersDynamic;
    uint32_t maxPerStageDescriptorUpdateAfterBindStorageBuffersDynamic;
    uint32_t maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t maxPerStageDescriptorUpdateAfterBindInputAttachments;
    uint32_t maxPerStageUpdateAfterBindResources;
    uint32_t maxDescriptorUpdateAfterBindSamplers;
    uint32_t maxDescriptorUpdateAfterBindUniformBuffers;
    uint32_t maxDescriptorUpdateAfterBindUniformBuffersDynamic;
    uint32_t maxDescriptorUpdateAfterBindStorageBuffers;
    uint32_t maxDescriptorUpdateAfterBindStorageBuffersDynamic;
    uint32_t maxDescriptorUpdateAfterBindSampledImages;
    uint32_t maxDescriptorUpdateAfterBindInputAttachments;
} VkPhysicalDeviceDescriptorIndexingProperties;
```

or the equivalent

```c
// Provided by VK_EXT_descriptor_indexing
typedef VkPhysicalDeviceDescriptorIndexingProperties
```
• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `maxUpdateAfterBindDescriptorsInAllPools` is the maximum number of descriptors (summed over all descriptor types) that can be created across all pools that are created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set. Pool creation may fail when this limit is exceeded, or when the space this limit represents is unable to satisfy a pool creation due to fragmentation.

• `shaderUniformBufferArrayNonUniformIndexingNative` is a boolean value indicating whether uniform buffer descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of uniform buffers may execute multiple times in order to access all the descriptors.

• `shaderSampledImageArrayNonUniformIndexingNative` is a boolean value indicating whether sampler and image descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of samplers or images may execute multiple times in order to access all the descriptors.

• `shaderStorageBufferArrayNonUniformIndexingNative` is a boolean value indicating whether storage buffer descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of storage buffers may execute multiple times in order to access all the descriptors.

• `shaderStorageImageArrayNonUniformIndexingNative` is a boolean value indicating whether storage image descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of storage images may execute multiple times in order to access all the descriptors.

• `shaderInputAttachmentArrayNonUniformIndexingNative` is a boolean value indicating whether input attachment descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of input attachments may execute multiple times in order to access all the descriptors.

• `robustBufferAccessUpdateAfterBind` is a boolean value indicating whether `robustBufferAccess` can be enabled on a device simultaneously with `descriptorBindingUniformBufferUpdateAfterBind`, `descriptorBindingStorageBufferUpdateAfterBind`, `descriptorBindingUniformTexelBufferUpdateAfterBind`, and/or `descriptorBindingStorageTexelBufferUpdateAfterBind`. If this is `VK_FALSE`, then either `robustBufferAccess` must be disabled or all of these update-after-bind features must be disabled.

• `quadDivergentImplicitLod` is a boolean value indicating whether implicit LOD calculations for image operations have well-defined results when the image and/or sampler objects used for the instruction are not uniform within a quad. See Derivative Image Operations.

• `maxPerStageDescriptorUpdateAfterBindSamplers` is similar to `maxPerStageDescriptorSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxPerStageDescriptorUpdateAfterBindUniformBuffers` is similar to `maxPerStageDescriptorUniformBuffers` but counts descriptors from descriptor sets created with or
without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxPerStageDescriptorUpdateAfterBindStorageBuffers is similar to maxPerStageDescriptorStorageBuffers but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxPerStageDescriptorUpdateAfterBindSampledImages is similar to maxPerStageDescriptorSampledImages but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxPerStageDescriptorUpdateAfterBindStorageImages is similar to maxPerStageDescriptorStorageImages but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxPerStageDescriptorUpdateAfterBindInputAttachments is similar to maxPerStageDescriptorInputAttachments but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxPerStageUpdateAfterBindResources is similar to maxPerStageResources but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxDescriptorSetUpdateAfterBindSamplers is similar to maxDescriptorSetSamplers but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxDescriptorSetUpdateAfterBindUniformBuffers is similar to maxDescriptorSetUniformBuffers but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application can allocate dynamic uniform buffer descriptors from a pool created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors must not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT.

- maxDescriptorSetUpdateAfterBindStorageBuffers is similar to maxDescriptorSetStorageBuffers but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set. While an application can allocate dynamic storage buffer descriptors from a pool created with the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT, bindings for these descriptors must not be present in any descriptor set layout that includes bindings created with VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT.

- maxDescriptorSetUpdateAfterBindSampledImages is similar to maxDescriptorSetSampledImages but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

- maxDescriptorSetUpdateAfterBindStorageImages is similar to maxDescriptorSetStorageImages but counts descriptors from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

- `maxDescriptorSetUpdateAfterBindInputAttachments` is similar to `maxDescriptorSetInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

If the `VkPhysicalDeviceDescriptorIndexingProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceDescriptorIndexingProperties-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES`.

The `VkPhysicalDeviceInlineUniformBlockProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t maxInlineUniformBlockSize;
    uint32_t maxPerStageDescriptorInlineUniformBlocks;
    uint32_t maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks;
    uint32_t maxDescriptorSetInlineUniformBlocks;
    uint32_t maxDescriptorSetUpdateAfterBindInlineUniformBlocks;
} VkPhysicalDeviceInlineUniformBlockProperties;
```

or the equivalent

```c
// Provided by VK_EXT_inline_uniform_block
typedef VkPhysicalDeviceInlineUniformBlockProperties VkPhysicalDeviceInlineUniformBlockPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxInlineUniformBlockSize` is the maximum size in bytes of an inline uniform block binding.
- `maxPerStageDescriptorInlineUniformBlocks` is the maximum number of inline uniform block bindings that can be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of `VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK` count against this limit. Only descriptor bindings in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit.
- `maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks` is similar to `maxPerStageDescriptorInlineUniformBlocks` but counts descriptor bindings from descriptor sets
created with or without the \texttt{VK_DESCRIPTOR\_SET\_LAYOUT\_CREATE\_UPDATE\_AFTER\_BIND\_POOL\_BIT} bit set.

- \texttt{maxDescriptorSetInlineUniformBlocks} is the maximum number of inline uniform block bindings that \texttt{can} be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of \texttt{VK\_DESCRIPTOR\_TYPE\_INLINE\_UNIFORM\_BLOCK} count against this limit. Only descriptor bindings in descriptor set layouts created without the \texttt{VK\_DESCRIPTOR\_SET\_LAYOUT\_CREATE\_UPDATE\_AFTER\_BIND\_POOL\_BIT} bit set count against this limit.

- \texttt{maxDescriptorSetUpdateAfterBindInlineUniformBlocks} is similar to \texttt{maxDescriptorSetInlineUniformBlocks} but counts descriptor bindings from descriptor sets created with or without the \texttt{VK\_DESCRIPTOR\_SET\_LAYOUT\_CREATE\_UPDATE\_AFTER\_BIND\_POOL\_BIT} bit set.

If the \texttt{VkPhysicalDeviceInlineUniformBlockProperties} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- \texttt{VUID-VkPhysicalDeviceInlineUniformBlockProperties-sType-sType}
  \texttt{sType} \texttt{must} be \texttt{VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_INLINE\_UNIFORM\_BLOCK\_PROPERTIES}

The \texttt{VkPhysicalDeviceConservativeRasterizationPropertiesEXT} structure is defined as:

```c
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPhysicalDeviceConservativeRasterizationPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    float primitiveOverestimationSize;
    float maxExtraPrimitiveOverestimationSize;
    float extraPrimitiveOverestimationSizeGranularity;
    VkBool32 primitiveUnderestimation;
    VkBool32 conservativePointAndLineRasterization;
    VkBool32 degenerateTrianglesRasterized;
    VkBool32 degenerateLinesRasterized;
    VkBool32 fullyCoveredFragmentShaderInputVariable;
    VkBool32 conservativeRasterizationPostDepthCoverage;
} VkPhysicalDeviceConservativeRasterizationPropertiesEXT;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \texttt{primitiveOverestimationSize} is the size in pixels the generating primitive is increased at each of its edges during conservative rasterization overestimation mode. Even with a size of 0.0, conservative rasterization overestimation rules still apply and if any part of the pixel rectangle is covered by the generating primitive, fragments are generated for the entire pixel. However implementations \texttt{may} make the pixel coverage area even more conservative by increasing the size of the generating primitive.
• **maxExtraPrimitiveOverestimationSize** is the maximum size in pixels of extra overestimation the implementation supports in the pipeline state. A value of 0.0 means the implementation does not support any additional overestimation of the generating primitive during conservative rasterization. A value above 0.0 allows the application to further increase the size of the generating primitive during conservative rasterization overestimation.

• **extraPrimitiveOverestimationSizeGranularity** is the granularity of extra overestimation that can be specified in the pipeline state between 0.0 and **maxExtraPrimitiveOverestimationSize** inclusive. A value of 0.0 means the implementation can use the smallest representable non-zero value in the screen space pixel fixed-point grid.

• **primitiveUnderestimation** is **VK_TRUE** if the implementation supports the **VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT** conservative rasterization mode in addition to **VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT**. Otherwise the implementation only supports **VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT**.

• **conservativePointAndLineRasterization** is **VK_TRUE** if the implementation supports conservative rasterization of point and line primitives as well as triangle primitives. Otherwise the implementation only supports triangle primitives.

• **degenerateTrianglesRasterized** is **VK_FALSE** if the implementation culls primitives generated from triangles that become zero area after they are quantized to the fixed-point rasterization pixel grid. **degenerateTrianglesRasterized** is **VK_TRUE** if these primitives are not culled and the provoking vertex attributes and depth value are used for the fragments. The primitive area calculation is done on the primitive generated from the clipped triangle if applicable. Zero area primitives are backfacing and the application can enable backface culling if desired.

• **degenerateLinesRasterized** is **VK_FALSE** if the implementation culls lines that become zero length after they are quantized to the fixed-point rasterization pixel grid. **degenerateLinesRasterized** is **VK_TRUE** if zero length lines are not culled and the provoking vertex attributes and depth value are used for the fragments.

• **fullyCoveredFragmentShaderInputVariable** is **VK_TRUE** if the implementation supports the SPIR-V builtin fragment shader input variable **FullyCoveredEXT** specifying that conservative rasterization is enabled and the fragment area is fully covered by the generating primitive.

• **conservativeRasterizationPostDepthCoverage** is **VK_TRUE** if the implementation supports conservative rasterization with the **PostDepthCoverage** execution mode enabled. Otherwise the **PostDepthCoverage** execution mode must not be used when conservative rasterization is enabled.

If the **VkPhysicalDeviceConservativeRasterizationPropertiesEXT** structure is included in the pNext chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceConservativeRasterizationPropertiesEXT-sType-sType**
  - **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONSERVATIVE_RASTERIZATION_PROPERTIES_EXT**
The `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkExtent2D minFragmentDensityTexelSize;
    VkExtent2D maxFragmentDensityTexelSize;
    VkBool32 fragmentDensityInvocations;
} VkPhysicalDeviceFragmentDensityMapPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minFragmentDensityTexelSize` is the minimum fragment density texel size.
- `maxFragmentDensityTexelSize` is the maximum fragment density texel size.
- `fragmentDensityInvocations` specifies whether the implementation may invoke additional fragment shader invocations for each covered sample.

If the `VkPhysicalDeviceFragmentDensityMapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFragmentDensityMapPropertiesEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_PROPERTIES_EXT`.

The `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2PropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 subsampledLoads;
    VkBool32 subsampledCoarseReconstructionEarlyAccess;
    uint32_t maxSubsampledArrayLayers;
    uint32_t maxDescriptorSetSubsampledSamplers;
} VkPhysicalDeviceFragmentDensityMap2PropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `subsampledLoads` specifies if performing image data read with load operations on subsampled attachments will be resampled to the fragment density of the render pass.
- `subsampledCoarseReconstructionEarlyAccess` specifies if performing image data read with...
samplers created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT in fragment shader will trigger additional reads during VK_PIPELINE_STAGE_VERTEX_SHADER_BIT

- maxSubsampledArrayLayers is the maximum number of VkImageView array layers for usages supporting subsampled samplers
- maxDescriptorSetSubsampledSamplers is the maximum number of subsampled samplers that can be included in a VkPipelineLayout

If the VkPhysicalDeviceFragmentDensityMap2PropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMap2PropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_PROPERTIES_EXT

The VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM structure is defined as:

```c
// Provided by VK_QCOM_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM {
    VkStructureType sType;
    void* pNext;
    VkExtent2D fragmentDensityOffsetGranularity;
} VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- fragmentDensityOffsetGranularity is the granularity for fragment density offsets.

If the VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_PROPERTIES_QCOM

The VkPhysicalDeviceShaderCorePropertiesAMD structure is defined as:

```c
// Provided by VK_AMD_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesAMD {
```

3738
VkStructureType sType;
void* pNext;
uint32_t shaderEngineCount;
uint32_t shaderArraysPerEngineCount;
uint32_t computeUnitsPerShaderArray;
uint32_t simdPerComputeUnit;
uint32_t wavefrontsPerSimd;
uint32_t wavefrontSize;
uint32_t sgprsPerSimd;
uint32_t minSgprAllocation;
uint32_t maxSgprAllocation;
uint32_t sgprAllocationGranularity;
uint32_t vgprsPerSimd;
uint32_t minVgprAllocation;
uint32_t maxVgprAllocation;
uint32_t vgprAllocationGranularity;
} VkPhysicalDeviceShaderCorePropertiesAMD;

• **sType** is a VkStructureType value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **shaderEngineCount** is an unsigned integer value indicating the number of shader engines found inside the shader core of the physical device.

• **shaderArraysPerEngineCount** is an unsigned integer value indicating the number of shader arrays inside a shader engine. Each shader array has its own scan converter, set of compute units, and a render back end (color and depth attachments). Shader arrays within a shader engine share shader processor input (wave launcher) and shader export (export buffer) units. Currently, a shader engine can have one or two shader arrays.

• **computeUnitsPerShaderArray** is an unsigned integer value indicating the physical number of compute units within a shader array. The active number of compute units in a shader array may be lower. A compute unit houses a set of SIMDs along with a sequencer module and a local data store.

• **simdPerComputeUnit** is an unsigned integer value indicating the number of SIMDs inside a compute unit. Each SIMD processes a single instruction at a time.

• **wavefrontSize** is an unsigned integer value indicating the maximum size of a subgroup.

• **sgprsPerSimd** is an unsigned integer value indicating the number of physical Scalar General-Purpose Registers (SGPRs) per SIMD.

• **minSgprAllocation** is an unsigned integer value indicating the minimum number of SGPRs allocated for a wave.

• **maxSgprAllocation** is an unsigned integer value indicating the maximum number of SGPRs allocated for a wave.

• **sgprAllocationGranularity** is an unsigned integer value indicating the granularity of SGPR allocation for a wave.

• **vgprsPerSimd** is an unsigned integer value indicating the number of physical Vector General-Purpose Registers (VGPRs) per SIMD.
• **minVgprAllocation** is an unsigned integer value indicating the minimum number of VGPRs allocated for a wave.

• **maxVgprAllocation** is an unsigned integer value indicating the maximum number of VGPRs allocated for a wave.

• **vgprAllocationGranularity** is an unsigned integer value indicating the granularity of VGPR allocation for a wave.

If the `VkPhysicalDeviceShaderCorePropertiesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCorePropertiesAMD-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_AMD`

The `VkPhysicalDeviceShaderCoreProperties2AMD` structure is defined as:

```c
typedef struct VkPhysicalDeviceShaderCoreProperties2AMD {
    VkStructureType sType;
    void* pNext;
    VkShaderCorePropertiesFlagsAMD shaderCoreFeatures;
    uint32_t activeComputeUnitCount;
} VkPhysicalDeviceShaderCoreProperties2AMD;
```

- **sType** is a `VkStructureType` value identifying this structure.

- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **shaderCoreFeatures** is a bitmask of `VkShaderCorePropertiesFlagBitsAMD` indicating the set of features supported by the shader core.

- **activeComputeUnitCount** is an unsigned integer value indicating the number of compute units that have been enabled.

If the `VkPhysicalDeviceShaderCoreProperties2AMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreProperties2AMD-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_2_AMD`

Bits for this type **may** be defined by future extensions, or new versions of the `VK_AMD_shader_core_properties2` extension. Possible values of the **flags** member of
VkShaderCorePropertiesFlagsAMD are:

```c
// Provided by VK_AMD_shader_core_properties2
typedef enum VkShaderCorePropertiesFlagBitsAMD {
} VkShaderCorePropertiesFlagBitsAMD;
```

```c
// Provided by VK_AMD_shader_core_properties2
typedef VkFlags VkShaderCorePropertiesFlagsAMD;
```

VkShaderCorePropertiesFlagsAMD is a bitmask type for providing zero or more VkShaderCorePropertiesFlagBitsAMD.

The VkPhysicalDeviceDepthStencilResolveProperties structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDepthStencilResolveProperties {
    VkStructureType          sType;
    void*                    pNext;
    VkResolveModeFlags       supportedDepthResolveModes;
    VkResolveModeFlags       supportedStencilResolveModes;
    VkBool32                 independentResolveNone;
    VkBool32                 independentResolve;
} VkPhysicalDeviceDepthStencilResolveProperties;
```

or the equivalent

```c
// Provided by VK_KHR_depth_stencil_resolve
typedef VkPhysicalDeviceDepthStencilResolveProperties
    VkPhysicalDeviceDepthStencilResolvePropertiesKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **supportedDepthResolveModes** is a bitmask of VkResolveModeFlagBits indicating the set of supported depth resolve modes. VK_RESOLVE_MODE_SAMPLE_ZERO_BIT must be included in the set but implementations may support additional modes.
- **supportedStencilResolveModes** is a bitmask of VkResolveModeFlagBits indicating the set of supported stencil resolve modes. VK_RESOLVE_MODE_SAMPLE_ZERO_BIT must be included in the set but implementations may support additional modes. VK_RESOLVE_MODE_AVERAGE_BIT must not be included in the set.
- **independentResolveNone** is VK_TRUE if the implementation supports setting the depth and stencil resolve modes to different values when one of those modes is VK_RESOLVE_MODE_NONE. Otherwise the implementation only supports setting both modes to the same value.
- **independentResolve** is VK_TRUE if the implementation supports all combinations of the supported...
depth and stencil resolve modes, including setting either depth or stencil resolve mode to
VK_RESOLVE_MODE_NONE. An implementation that supports independentResolve must also support
independentResolveNone.

If the VkPhysicalDeviceDepthStencilResolveProperties structure is included in the pNext chain of the
VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with
each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceDepthStencilResolveProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_STENCIL_RESOLVE_PROPERTIES

The VkPhysicalDevicePerformanceQueryPropertiesKHR structure is defined as:

```c
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryPropertiesKHR {
    VkStructureType     sType;
    void*               pNext;
    VkBool32            allowCommandBufferQueryCopies;
} VkPhysicalDevicePerformanceQueryPropertiesKHR;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• allowCommandBufferQueryCopies is VK_TRUE if the performance query pools are allowed to be used
  with vkCmdCopyQueryPoolResults.

If the VkPhysicalDevicePerformanceQueryPropertiesKHR structure is included in the pNext chain of the
VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with
each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDevicePerformanceQueryPropertiesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_PROPERTIES_KHR

The VkPhysicalDeviceShadingRateImagePropertiesNV structure is defined as:

```c
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImagePropertiesNV {
    VkStructureType           sType;
    void*                     pNext;
    VkExtent2D                shadingRateTexelSize;
    uint32_t                  shadingRatePaletteSize;
    uint32_t                  shadingRateMaxCoarseSamples;
} VkPhysicalDeviceShadingRateImagePropertiesNV;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **shadingRateTexelSize** indicates the width and height of the portion of the framebuffer corresponding to each texel in the shading rate image.

• **shadingRatePaletteSize** indicates the maximum number of palette entries supported for the shading rate image.

• **shadingRateMaxCoarseSamples** specifies the maximum number of coverage samples supported in a single fragment. If the product of the fragment size derived from the base shading rate and the number of coverage samples per pixel exceeds this limit, the final shading rate will be adjusted so that its product does not exceed the limit.

If the `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is included in the **pNext** chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to the **shading rate image** feature.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceShadingRateImagePropertiesNV-sType-sType`
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_PROPERTIES_NV`

The `VkPhysicalDeviceMemoryDecompressionPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkMemoryDecompressionMethodFlagsNV decompressionMethods;
    uint64_t maxDecompressionIndirectCount;
} VkPhysicalDeviceMemoryDecompressionPropertiesNV;
```

• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **decompressionMethods** is a bitmask of `VkMemoryDecompressionMethodFlagBitsNV` specifying memory decompression methods supported by the implementation.

• **maxDecompressionIndirectCount** specifies the maximum supported count value in the **countBuffer** of `vkCmdDecompressMemoryIndirectCountNV`.

If the `VkPhysicalDeviceMemoryDecompressionPropertiesNV` structure is included in the **pNext** chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMemoryDecompressionPropertiesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_PROPERTIES_NV

The VkPhysicalDeviceTransformFeedbackPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxTransformFeedbackStreams;
    uint32_t maxTransformFeedbackBuffers;
    VkDeviceSize maxTransformFeedbackBufferSize;
    uint32_t maxTransformFeedbackStreamDataSize;
    uint32_t maxTransformFeedbackBufferDataSize;
    uint32_t maxTransformFeedbackBufferDataStride;
    VkBool32 transformFeedbackQueries;
    VkBool32 transformFeedbackStreamsLinesTriangles;
    VkBool32 transformFeedbackRasterizationStreamSelect;
    VkBool32 transformFeedbackDraw;
} VkPhysicalDeviceTransformFeedbackPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxTransformFeedbackStreams is the maximum number of vertex streams that can be output from
  geometry shaders declared with the GeometryStreams capability. If the implementation does not
  support VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams then
  maxTransformFeedbackStreams must be set to 1.
- maxTransformFeedbackBuffers is the maximum number of transform feedback buffers that can be
  bound for capturing shader outputs from the last pre-rasterization shader stage.
- maxTransformFeedbackBufferSize is the maximum size that can be specified when binding a
  buffer for transform feedback in vkCmdBindTransformFeedbackBuffersEXT.
- maxTransformFeedbackStreamDataSize is the maximum amount of data in bytes for each vertex
  that captured to one or more transform feedback buffers associated with a specific vertex
  stream.
- maxTransformFeedbackBufferDataSize is the maximum amount of data in bytes for each vertex
  that can be captured to a specific transform feedback buffer.
- maxTransformFeedbackBufferDataStride is the maximum stride between each capture of vertex
  data to the buffer.
- transformFeedbackQueries is VK_TRUE if the implementation supports the
  VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT query type. transformFeedbackQueries is VK_FALSE if
  queries of this type cannot be created.
• transformFeedbackStreamsLinesTriangles is VK_TRUE if the implementation supports the geometry shader OpExecutionMode of OutputLineStrip and OutputTriangleStrip in addition to OutputPoints when more than one vertex stream is output. If transformFeedbackStreamsLinesTriangles is VK_FALSE the implementation only supports an OpExecutionMode of OutputPoints when more than one vertex stream is output from the geometry shader.

• transformFeedbackRasterizationStreamSelect is VK_TRUE if the implementation supports the GeometryStreams SPIR-V capability and the application can use VkPipelineRasterizationStateStreamCreateInfoEXT to modify which vertex stream output is used for rasterization. Otherwise vertex stream 0 must always be used for rasterization.

• transformFeedbackDraw is VK_TRUE if the implementation supports the vkCmdDrawIndirectByteCountEXT function otherwise the function must not be called.

If the VkPhysicalDeviceTransformFeedbackPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

<table>
<thead>
<tr>
<th>Valid Usage (Implicit)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• VUID-VkPhysicalDeviceTransformFeedbackPropertiesEXT-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT</td>
</tr>
</tbody>
</table>

The VkPhysicalDeviceCopyMemoryIndirectPropertiesNV structure is defined as:

```c
typedef struct VkPhysicalDeviceCopyMemoryIndirectPropertiesNV {
    VkStructureType     sType;
    void*                pNext;
    VkQueueFlags         supportedQueues;
} VkPhysicalDeviceCopyMemoryIndirectPropertiesNV;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- supportedQueues is a bitmask of VkQueueFlagBits indicating the queues on which indirect copy commands are supported.

If the indirectCopy feature is supported, supportedQueues must return at least one supported queue.

If the VkPhysicalDeviceCopyMemoryIndirectPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

<table>
<thead>
<tr>
<th>Valid Usage (Implicit)</th>
</tr>
</thead>
<tbody>
<tr>
<td>• VUID-VkPhysicalDeviceCopyMemoryIndirectPropertiesNV-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_PROPERTIES_NV</td>
</tr>
</tbody>
</table>
The `VkPhysicalDeviceRayTracingPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkPhysicalDeviceRayTracingPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t shaderGroupHandleSize;
    uint32_t maxRecursionDepth;
    uint32_t maxShaderGroupStride;
    uint32_t shaderGroupBaseAlignment;
    uint64_t maxGeometryCount;
    uint64_t maxInstanceCount;
    uint64_t maxTriangleCount;
    uint32_t maxDescriptorSetAccelerationStructures;
} VkPhysicalDeviceRayTracingPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRecursionDepth` is the maximum number of levels of recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the required alignment in bytes for the base of the shader binding table.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxTriangleCount` is the maximum number of triangles in all geometries in the bottom level acceleration structure.
- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that are allowed in a descriptor set.

Due to the fact that the geometry, instance, and triangle counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxTriangleCount` must not exceed $2^{32}-1$.

If the `VkPhysicalDeviceRayTracingPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure must match those specified with the same name in `VkPhysicalDeviceAccelerationStructurePropertiesKHR` and `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`. 

3746
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPropertiesNV-sType-sType
  
  **sType** must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PROPERTIES_NV

The VkPhysicalDeviceAccelerationStructurePropertiesKHR structure is defined as:

```c
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructurePropertiesKHR {
    VkStructureType   sType;
    void*             pNext;
    uint64_t          maxGeometryCount;
    uint64_t          maxInstanceCount;
    uint64_t          maxPrimitiveCount;
    uint32_t          maxPerStageDescriptorAccelerationStructures;
    uint32_t          maxPerStageDescriptorUpdateAfterBindAccelerationStructures;
    uint32_t          maxDescriptorSetAccelerationStructures;
    uint32_t          maxDescriptorSetUpdateAfterBindAccelerationStructures;
    uint32_t          minAccelerationStructureScratchOffsetAlignment;
} VkPhysicalDeviceAccelerationStructurePropertiesKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxGeometryCount** is the maximum number of geometries in the bottom level acceleration structure.
- **maxInstanceCount** is the maximum number of instances in the top level acceleration structure.
- **maxPrimitiveCount** is the maximum number of triangles or AABBs in all geometries in the bottom level acceleration structure.
- **maxPerStageDescriptorAccelerationStructures** is the maximum number of acceleration structure bindings that can be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- **maxPerStageDescriptorUpdateAfterBindAccelerationStructures** is similar to maxPerStageDescriptorAccelerationStructures but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- **maxDescriptorSetAccelerationStructures** is the maximum number of acceleration structure descriptors that can be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
• `maxDescriptorSetUpdateAfterBindAccelerationStructures` is similar to `maxDescriptorSetAccelerationStructures` but counts descriptor bindings from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `minAccelerationStructureScratchOffsetAlignment` is the minimum required alignment, in bytes, for scratch data passed in to an acceleration structure build command. The value must be a power of two.

Due to the fact that the geometry, instance, and primitive counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxPrimitiveCount` must not exceed $2^{32}$–1.

If the `VkPhysicalDeviceAccelerationStructurePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure must match those specified with the same name in `VkPhysicalDeviceRayTracingPropertiesNV`.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceAccelerationStructurePropertiesKHR-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_PROPERTIES_KHR`

The `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelinePropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t shaderGroupHandleSize;
    uint32_t maxRayRecursionDepth;
    uint32_t maxShaderGroupStride;
    uint32_t shaderGroupBaseAlignment;
    uint32_t shaderGroupHandleCaptureReplaySize;
    uint32_t maxRayDispatchInvocationCount;
    uint32_t shaderGroupHandleAlignment;
    uint32_t maxRayHitAttributeSize;
} VkPhysicalDeviceRayTracingPipelinePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRayRecursionDepth` is the maximum number of levels of ray recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the
shader binding table.

- **shaderGroupBaseAlignment** is the **required** alignment in bytes for the base of the shader binding table.

- **shaderGroupHandleCaptureReplaySize** is the number of bytes for the information required to do capture and replay for shader group handles.

- **maxRayDispatchInvocationCount** is the maximum number of ray generation shader invocations which **may** be produced by a single `vkCmdTraceRaysIndirectKHR` or `vkCmdTraceRaysKHR` command.

- **shaderGroupHandleAlignment** is the **required** alignment in bytes for each shader binding table entry. The value **must** be a power of two.

- **maxRayHitAttributeSize** is the maximum size in bytes for a ray attribute structure.

If the `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in `VkPhysicalDeviceRayTracingPropertiesNV`.

---

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceRayTracingPipelinePropertiesKHR-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_PROPERTIES_KHR`

The `VkPhysicalDeviceCooperativeMatrixPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesNV;
```

- **sType** is a `VkStructureType` value identifying this structure.

- **pNext** is `NULL` or a pointer to a structure extending this structure.

- **cooperativeMatrixSupportedStages** is a bitfield of `VkShaderStageFlagBits` describing the shader stages that cooperative matrix instructions are supported in. `cooperativeMatrixSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.

If the `VkPhysicalDeviceCooperativeMatrixPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
The `VkPhysicalDeviceCooperativeMatrixPropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `cooperativeMatrixSupportedStages` is a bitfield of `VkShaderStageFlagBits` describing the shader stages that cooperative matrix instructions are supported in. `cooperativeMatrixSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`. `cooperativeMatrixSupportedStages` must not have any bits other than `VK_SHADER_STAGE_COMPUTE_BIT` set.

If the `VkPhysicalDeviceCooperativeMatrixPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
• `pNext` is NULL or a pointer to a structure extending this structure.
• `shaderSMCount` is the number of SMs on the device.
• `shaderWarpsPerSM` is the maximum number of simultaneously executing warps on an SM.

If the `VkPhysicalDeviceShaderSMBuiltinsPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceShaderSMBuiltinsPropertiesNV-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_PROPERTIES_NV`

The `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTexelBufferAlignmentProperties {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize storageTexelBufferOffsetAlignmentBytes;
    VkBool32 storageTexelBufferOffsetSingleTexelAlignment;
    VkDeviceSize uniformTexelBufferOffsetAlignmentBytes;
    VkBool32 uniformTexelBufferOffsetSingleTexelAlignment;
} VkPhysicalDeviceTexelBufferAlignmentProperties;
```

or the equivalent

```c
// Provided by VK_EXT_texel_buffer_alignment
typedef VkPhysicalDeviceTexelBufferAlignmentProperties
    VkPhysicalDeviceTexelBufferAlignmentPropertiesEXT;
```

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.
• `storageTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a storage texel buffer of any format. The value must be a power of two.
• `storageTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a storage texel buffer of any format.
• `uniformTexelBufferOffsetAlignmentBytes` is a byte alignment that is sufficient for a uniform texel buffer of any format. The value must be a power of two.
• `uniformTexelBufferOffsetSingleTexelAlignment` indicates whether single texel alignment is sufficient for a uniform texel buffer of any format.

If the `VkPhysicalDeviceTexelBufferAlignmentProperties` structure is included in the `pNext` chain of
the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If the single texel alignment property is `VK_FALSE`, then the buffer view’s offset must be aligned to the corresponding byte alignment value. If the single texel alignment property is `VK_TRUE`, then the buffer view’s offset must be aligned to the lesser of the corresponding byte alignment value or the size of a single texel, based on `VkBufferViewCreateInfo::format`. If the size of a single texel is a multiple of three bytes, then the size of a single component of the format is used instead.

These limits must not advertise a larger alignment than the required maximum minimum value of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`, for any format that supports use as a texel buffer.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceTexelBufferAlignmentProperties-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES`

The `VkPhysicalDeviceTimelineSemaphoreProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreProperties {
    VkStructureType sType;
    void* pNext;
    uint64_t maxTimelineSemaphoreValueDifference;
} VkPhysicalDeviceTimelineSemaphoreProperties;
```

or the equivalent

```c
// Provided by VK_KHR_timeline_semaphore
typedef VkPhysicalDeviceTimelineSemaphoreProperties
    VkPhysicalDeviceTimelineSemaphorePropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxTimelineSemaphoreValueDifference` indicates the maximum difference allowed by the implementation between the current value of a timeline semaphore and any pending signal or wait operations.

If the `VkPhysicalDeviceTimelineSemaphoreProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

• VUID-VkPhysicalDeviceTimelineSemaphoreProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_PROPERTIES

The VkPhysicalDeviceLineRasterizationPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_line_rasterization
typedef struct VkPhysicalDeviceLineRasterizationPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t lineSubPixelPrecisionBits;
} VkPhysicalDeviceLineRasterizationPropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• lineSubPixelPrecisionBits is the number of bits of subpixel precision in framebuffer coordinates \( x_f \) and \( y_f \) when rasterizing line segments.

If the VkPhysicalDeviceLineRasterizationPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceLineRasterizationPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_PROPERTIES_EXT

The VkPhysicalDeviceRobustness2PropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_robustness2
typedef struct VkPhysicalDeviceRobustness2PropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize robustStorageBufferAccessSizeAlignment;
    VkDeviceSize robustUniformBufferAccessSizeAlignment;
} VkPhysicalDeviceRobustness2PropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• robustStorageBufferAccessSizeAlignment is the number of bytes that the range of a storage buffer descriptor is rounded up to when used for bounds-checking when the robustBufferAccess2 feature is enabled. This value must be either 1 or 4.
robustUniformBufferAccessSizeAlignment is the number of bytes that the range of a uniform buffer descriptor is rounded up to when used for bounds-checking when the robustBufferAccess2 feature is enabled. This value must be a power of two in the range [1, 256].

If the VkPhysicalDeviceRobustness2PropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2PropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_PROPERTIES_EXT

The VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV structure is defined as:

```c
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t maxGraphicsShaderGroupCount;
    uint32_t maxIndirectSequenceCount;
    uint32_t maxIndirectCommandsTokenCount;
    uint32_t maxIndirectCommandsStreamCount;
    uint32_t maxIndirectCommandsTokenOffset;
    uint32_t maxIndirectCommandsStreamStride;
    uint32_t minSequencesCountBufferOffsetAlignment;
    uint32_t minSequencesIndexBufferOffsetAlignment;
    uint32_t minIndirectCommandsBufferOffsetAlignment;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxGraphicsShaderGroupCount** is the maximum number of shader groups in VkGraphicsPipelineShaderGroupsCreateInfoNV.
- **maxIndirectSequenceCount** is the maximum number of sequences in VkGeneratedCommandsInfoNV and in VkGeneratedCommandsMemoryRequirementsInfoNV.
- **maxIndirectCommandsTokenCount** is the maximum number of tokens in VkIndirectCommandsLayoutCreateInfoNV.
- **maxIndirectCommandsStreamCount** is the maximum number of streams in VkIndirectCommandsLayoutCreateInfoNV.
- **maxIndirectCommandsTokenOffset** is the maximum offset in VkIndirectCommandsLayoutTokenNV.
- **maxIndirectCommandsStreamStride** is the maximum stream stride in VkIndirectCommandsLayoutCreateInfoNV.
- **minSequencesCountBufferOffsetAlignment** is the minimum alignment for memory addresses.
which can be used in VkGeneratedCommandsInfoNV.

- minSequencesIndexBufferOffsetAlignment is the minimum alignment for memory addresses which can be used in VkGeneratedCommandsInfoNV.

- minIndirectCommandsBufferOffsetAlignment is the minimum alignment for memory addresses used in VkIndirectCommandsStreamNV, and as preprocess buffer in VkGeneratedCommandsInfoNV.

If the VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV-sType-sType
  - sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_PROPERTIES_NV

The VkPhysicalDevicePortabilitySubsetPropertiesKHR structure is defined as:

```c
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t minVertexInputBindingStrideAlignment;
} VkPhysicalDevicePortabilitySubsetPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- minVertexInputBindingStrideAlignment indicates the minimum alignment for vertex input strides. VkVertexInputBindingDescription::stride must be a multiple of, and at least as large as, this value. The value must be a power of two.

If the VkPhysicalDevicePortabilitySubsetPropertiesKHR structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDevicePortabilitySubsetPropertiesKHR-sType-sType
  - sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_PROPERTIES_KHR

The VkPhysicalDeviceFragmentShadingRatePropertiesKHR structure is defined as:

```c
// Provided by VK_KHR_fragment_shading_rate
```
typedef struct VkPhysicalDeviceFragmentShadingRatePropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkExtent2D minFragmentShadingRateAttachmentTexelSize;
    VkExtent2D maxFragmentShadingRateAttachmentTexelSize;
    uint32_t maxFragmentShadingRateAttachmentTexelSizeAspectRatio;
    VkBool32 primitiveFragmentShadingRateWithMultipleViewports;
    VkBool32 layeredShadingRateAttachments;
    VkBool32 fragmentShadingRateNonTrivialCombinerOps;
    VkExtent2D maxFragmentSize;
    uint32_t maxFragmentSizeAspectRatio;
    uint32_t maxFragmentShadingRateCoverageSamples;
    VkSampleCountFlagBits maxFragmentShadingRateRasterizationSamples;
    VkBool32 fragmentShadingRateWithShaderDepthStencilWrites;
    VkBool32 fragmentShadingRateWithSampleMask;
    VkBool32 fragmentShadingRateWithShaderSampleMask;
    VkBool32 fragmentShadingRateWithConservativeRasterization;
    VkBool32 fragmentShadingRateWithFragmentShaderInterlock;
    VkBool32 fragmentShadingRateWithCustomSampleLocations;
    VkBool32 fragmentShadingRateStrictMultiplyCombiner;
} VkPhysicalDeviceFragmentShadingRatePropertiesKHR;

• **sType** is a *VkStructureType* value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **minFragmentShadingRateAttachmentTexelSize** indicates minimum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value must be less than or equal to the values in **maxFragmentShadingRateAttachmentTexelSize**. Each value must be a power-of-two. It must be (0,0) if the attachmentFragmentShadingRate feature is not supported.

• **maxFragmentShadingRateAttachmentTexelSize** indicates maximum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value must be greater than or equal to the values in **minFragmentShadingRateAttachmentTexelSize**. Each value must be a power-of-two. It must be (0,0) if the attachmentFragmentShadingRate feature is not supported.

• **maxFragmentShadingRateAttachmentTexelSizeAspectRatio** indicates the maximum ratio between the width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. maxFragmentShadingRateAttachmentTexelSizeAspectRatio must be a power-of-two value, and must be less than or equal to max(maxFragmentShadingRateAttachmentTexelSize.width / minFragmentShadingRateAttachmentTexelSize.height, maxFragmentShadingRateAttachmentTexelSize.height / minFragmentShadingRateAttachmentTexelSize.width). It must be 0 if the attachmentFragmentShadingRate feature is not supported.

• **primitiveFragmentShadingRateWithMultipleViewports** specifies whether the primitive fragment shading rate can be used when multiple viewports are used. If this value is VK_FALSE, only a single viewport must be used, and applications must not write to the **ViewportMaskNV** or **ViewportIndex** built-in when setting **PrimitiveShadingRateKHR**. It must be VK_FALSE if the
shaderOutputViewportIndex feature, the VK_EXT_shader_viewport_index_layer extension, or the geometryShader feature is not supported, or if the primitiveFragmentShadingRate feature is not supported.

- **layeredShadingRateAttachments** specifies whether a shading rate attachment image view can be created with multiple layers. If this value is VK_FALSE, when creating an image view with a usage that includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, layerCount must be 1. It must be VK_FALSE if the multiview feature, the shaderOutputViewportIndex feature, the VK_EXT_shader_viewport_index_layer extension, or the geometryShader feature is not supported, or if the attachmentFragmentShadingRate feature is not supported.

- **fragmentShadingRateNonTrivialCombinerOps** specifies whether VkFragmentShadingRateCombinerOpKHR enums other than VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR or VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR can be used. It must be VK_FALSE unless either the primitiveFragmentShadingRate or attachmentFragmentShadingRate feature is supported.

- **maxFragmentSize** indicates the maximum supported width and height of a fragment. Its width and height members must both be power-of-two values. This limit is purely informational, and is not validated.

- **maxFragmentSizeAspectRatio** indicates the maximum ratio between the width and height of a fragment. maxFragmentSizeAspectRatio must be a power-of-two value, and must be less than or equal to the maximum of the width and height members of maxFragmentSize. This limit is purely informational, and is not validated.

- **maxFragmentShadingRateCoverageSamples** specifies the maximum number of coverage samples supported in a single fragment. maxFragmentShadingRateCoverageSamples must be less than or equal to the product of the width and height members of maxFragmentSize, and the sample count reported by maxFragmentShadingRateRasterizationSamples. maxFragmentShadingRateCoverageSamples must be less than or equal to maxSampleMaskWords × 32 if fragmentShadingRateWithShaderSampleMask is supported. This limit is purely informational, and is not validated.

- **maxFragmentShadingRateRasterizationSamples** is a VkSampleCountFlagBits value specifying the maximum sample rate supported when a fragment covers multiple pixels. This limit is purely informational, and is not validated.

- **fragmentShadingRateWithShaderDepthStencilWrites** specifies whether the implementation supports writing FragDepth or FragStencilRefEXT from a fragment shader for multi-pixel fragments. If this value is VK_FALSE, writing to those built-ins will clamp the fragment shading rate to (1,1).

- **fragmentShadingRateWithSampleMask** specifies whether the implementation supports setting valid bits of VkPipelineMultisampleStateCreateInfo::pSampleMask to 0 for multi-pixel fragments. If this value is VK_FALSE, zeroing valid bits in the sample mask will clamp the fragment shading rate to (1,1).

- **fragmentShadingRateWithShaderSampleMask** specifies whether the implementation supports reading or writing SampleMask for multi-pixel fragments. If this value is VK_FALSE, using that built-in will clamp the fragment shading rate to (1,1).

- **fragmentShadingRateWithConservativeRasterization** specifies whether conservative rasterization is supported for multi-pixel fragments. It must be VK_FALSE if VK_EXT_conservative_rasterization
is not supported. If this value is VK_FALSE, using conservative rasterization will clamp the fragment shading rate to (1,1).

- fragmentShadingRateWithFragmentShaderInterlock specifies whether fragment shader interlock is supported for multi-pixel fragments. It must be VK_FALSE if VK_EXT_fragment_shader_interlock is not supported. If this value is VK_FALSE, using fragment shader interlock will clamp the fragment shading rate to (1,1).

- fragmentShadingRateWithCustomSampleLocations specifies whether custom sample locations are supported for multi-pixel fragments. It must be VK_FALSE if VK_EXT_sample_locations is not supported. If this value is VK_FALSE, using custom sample locations will clamp the fragment shading rate to (1,1).

- fragmentShadingRateStrictMultiplyCombiner specifies whether VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR accurately performs a multiplication or not. Implementations where this value is VK_FALSE will instead combine rates with an addition. If fragmentShadingRateNonTrivialCombinerOps is VK_FALSE, implementations must report this as VK_FALSE. If fragmentShadingRateNonTrivialCombinerOps is VK_TRUE, implementations should report this as VK_TRUE.

Note
Multiplication of the combiner rates using the fragment width/height in linear space is equivalent to an addition of those values in log2 space. Some implementations inadvertently implemented an addition in linear space due to unclear requirements originating outside of this specification. This resulted in fragmentShadingRateStrictMultiplyCombiner being added. Fortunately, this only affects situations where a rate of 1 in either dimension is combined with another rate of 1. All other combinations result in the exact same result as if multiplication was performed in linear space due to the clamping logic, and the fact that both the sum and product of 2 and 2 are equal. In many cases, this limit will not affect the correct operation of applications.

If the VkPhysicalDeviceFragmentShadingRatePropertiesKHR structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

These properties are related to fragment shading rates.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRatePropertiesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_PROPERTIES_KHR

The VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV structure is defined as:

```c
// Provided by VK_NV_fragment_shading_rateEnums
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV {
    VkStructureType sType;
};
```
```c
void* pNext;
VkSampleCountFlagBits maxFragmentShadingRateInvocationCount;
} VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxFragmentShadingRateInvocationCount** is a VkSampleCountFlagBits value indicating the maximum number of fragment shader invocations per fragment supported in pipeline, primitive, and attachment fragment shading rates.

If the `VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to fragment shading rates.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceFragmentShadingRate EnumsPropertiesNV-sType-sType**
  - *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT SHADING_RATE.EnumsPROPERTIES_NV`

- **VUID-VkPhysicalDeviceFragmentShadingRate EnumsPropertiesNV-maxFragmentShadingRateInvocationCount-parameter**
  - *maxFragmentShadingRateInvocationCount* must be a valid VkSampleCountFlagBits value

The `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxCustomBorderColorSamplers;
} VkPhysicalDeviceCustomBorderColorPropertiesEXT;
```

- **maxCustomBorderColorSamplers** indicates the maximum number of samplers with custom border colors which can simultaneously exist on a device.

If the `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceCustomBorderColorPropertiesEXT-sType-sType**
  - *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_PROPERTIES_EXT`
The `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 provokingVertexModePerPipeline;
    VkBool32 transformFeedbackPreservesTriangleFanProvokingVertex;
} VkPhysicalDeviceProvokingVertexPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `provokingVertexModePerPipeline` indicates whether the implementation supports graphics pipelines with different provoking vertex modes within the same render pass instance.
- `transformFeedbackPreservesTriangleFanProvokingVertex` indicates whether the implementation can preserve the provoking vertex order when writing triangle fan vertices to transform feedback.

If the `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceProvokingVertexPropertiesEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_PROPERTIES_EXT`

The `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 combinedImageSamplerDescriptorSingleArray;
    VkBool32 bufferlessPushDescriptors;
    VkBool32 allowSamplerImageViewPostSubmitCreation;
    VkDeviceSize descriptorBufferOffsetAlignment;
    uint32_t maxDescriptorBufferBindings;
    uint32_t maxResourceDescriptorBufferBindings;
    uint32_t maxSamplerDescriptorBufferBindings;
    uint32_t maxEmbeddedImmutableSamplerBindings;
    uint32_t maxEmbeddedImmutableSamplers;
    size_t bufferCaptureReplayDescriptorDataSize;
    size_t imageCaptureReplayDescriptorDataSize;
    size_t imageViewCaptureReplayDescriptorDataSize;
    size_t samplerCaptureReplayDescriptorDataSize;
} VkPhysicalDeviceDescriptorBufferPropertiesEXT;
```
<table>

</table>

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **combinedImageSamplerDescriptorSingleArray** indicates that the implementation does not require an array of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors.
- **bufferlessPushDescriptors** indicates that the implementation does not require a buffer created with `VK_BUFFER_USAGE_PUSH Descriptors_DESCRIPTOR_BUFFER_BIT_EXT` to be bound when using push descriptors.
- **allowSamplerImageViewPostSubmitCreation** indicates that the implementation does not restrict when the `VkSampler` or `VkImageView` objects used to retrieve descriptor data can be created in relation to command buffer submission. If this value is `VK_FALSE`, then the application must create any `VkSampler` or `VkImageView` objects whose descriptor data is accessed during the execution of a command buffer, before the `vkQueueSubmit`, or `vkQueueSubmit2`, call that submits that command buffer.
- **descriptorBufferOffsetAlignment** indicates the required alignment in bytes when setting offsets into the descriptor buffer.
- **maxDescriptorBufferBindings** indicates the maximum sum total number of descriptor buffers and embedded immutable sampler sets that can be bound.
- **maxResourceDescriptorBufferBindings** indicates the maximum number of resource descriptor buffers that can be bound.
- **maxSamplerDescriptorBufferBindings** indicates the maximum number of sampler descriptor buffers that can be bound.
• **maxEmbeddedImmutableSamplerBindings** indicates the maximum number of embedded immutable sampler sets that can be bound.

• **maxEmbeddedImmutableSamplers** indicates the maximum number of unique immutable samplers in descriptor sets layouts created with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`, and pipeline layouts created from them, which can simultaneously exist on a device.

• **bufferCaptureReplayDescriptorDataSize** indicates the maximum size in bytes of the opaque data used for capture and replay with buffers.

• **imageCaptureReplayDescriptorDataSize** indicates the maximum size in bytes of the opaque data used for capture and replay with images.

• **imageViewCaptureReplayDescriptorDataSize** indicates the maximum size in bytes of the opaque data used for capture and replay with image views.

• **samplerCaptureReplayDescriptorDataSize** indicates the maximum size in bytes of the opaque data used for capture and replay with samplers.

• **accelerationStructureCaptureReplayDescriptorDataSize** indicates the maximum size in bytes of the opaque data used for capture and replay with acceleration structures.

• **samplerDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_SAMPLER` descriptor.

• **combinedImageSamplerDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor.

• **sampledImageDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE` descriptor.

• **storageImageDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE` descriptor.

• **uniformTexelBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is not enabled.

• **robustUniformTexelBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.

• **storageTexelBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is not enabled.

• **robustStorageTexelBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.

• **uniformBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor.

• **robustUniformBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.

• **storageBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor.

• **robustStorageBufferDescriptorSize** indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` descriptor if the `robustBufferAccess` feature is enabled.
• `inputAttachmentDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` descriptor.

• `accelerationStructureDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR` or `VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV` descriptor.

• `maxSamplerDescriptorBufferRange` indicates the maximum range in bytes from the address of a sampler descriptor buffer binding that is accessible to a shader.

• `maxResourceDescriptorBufferRange` indicates the maximum range in bytes from the address of a resource descriptor buffer binding that is accessible to a shader.

• `samplerDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT`.

• `resourceDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`.

• `descriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with both `VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT` and `VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT`.

A descriptor binding with type `VK_DESCRIPTOR_TYPE_MUTABLE_VALVE` has a descriptor size which is implied by the descriptor types included in the `VkMutableDescriptorTypeCreateInfoVALVE::pDescriptorTypes` list. The descriptor size is equal to the maximum size of any descriptor type included in the `pDescriptorTypes` list.

As there is no way to request robust and non-robust descriptors separately, or specify robust/non-robust descriptors in the set layout, if `robustBufferAccess` is enabled then robust descriptors are always used.

If the `VkPhysicalDeviceDescriptorBufferPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceDescriptorBufferPropertiesEXT-sType-sType`  
  `sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_PROPERTIES_EXT`

The `VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT {
    VkStructureType  sType;
    void*            pNext;
    size_t           combinedImageSamplerDensityMapDescriptorSize;
} VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT;
```
• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `combinedImageSamplerDensityMapDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor when creating the descriptor with `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` set.

If the `VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_DENSITY_MAP_PROPERTIES_EXT`

The `VkPhysicalDeviceHostImageCopyPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_host_image_copy
typedef struct VkPhysicalDeviceHostImageCopyPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t copySrcLayoutCount;
    VkImageLayout* pCopySrcLayouts;
    uint32_t copyDstLayoutCount;
    VkImageLayout* pCopyDstLayouts;
    uint8_t optimalTilingLayoutUUID[VK_UUID_SIZE];
    VkBool32 identicalMemoryTypeRequirements;
} VkPhysicalDeviceHostImageCopyPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.

- `pNext` is `NULL` or a pointer to a structure extending this structure.

- `copySrcLayoutCount` is an integer related to the number of image layouts for host copies from images available or queried, as described below.

- `pCopySrcLayouts` is a pointer to an array of `VkImageLayout` in which supported image layouts for use with host copy operations from images are returned.

- `copyDstLayoutCount` is an integer related to the number of image layouts for host copies to images available or queried, as described below.

- `pCopyDstLayouts` is a pointer to an array of `VkImageLayout` in which supported image layouts for use with host copy operations to images are returned.

- `optimalTilingLayoutUUID` is an array of `VK_UUID_SIZE` uint8_t values representing a universally
unique identifier for the implementation’s swizzling layout of images created with VK_IMAGE_TILING_OPTIMAL.

- identicalMemoryTypeRequirements indicates that specifying the VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT flag in VkImageCreateInfo::usage does not affect the memory type requirements of the image.

If the VkPhysicalDeviceHostImageCopyPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If pCopyDstLayouts is NULL, then the number of image layouts that are supported in VkCopyMemoryToImageInfoEXT::dstImageLayout and VkCopyImageToImageInfoEXT::dstImageLayout is returned in copyDstLayoutCount. Otherwise, copyDstLayoutCount must be set by the user to the number of elements in the pCopyDstLayouts array, and on return the variable is overwritten with the number of values actually written to pCopyDstLayouts. If the value of copyDstLayoutCount is less than the number of image layouts that are supported, at most copyDstLayoutCount values will be written to pCopyDstLayouts. The implementation must include the VK_IMAGE_LAYOUT_GENERAL image layout in pCopyDstLayouts.

If pCopySrcLayouts is NULL, then the number of image layouts that are supported in VkCopyImageToMemoryInfoEXT::srcImageLayout and VkCopyImageToImageInfoEXT::srcImageLayout is returned in copySrcLayoutCount. Otherwise, copySrcLayoutCount must be set by the user to the number of elements in the pCopySrcLayouts array, and on return the variable is overwritten with the number of values actually written to pCopySrcLayouts. If the value of copySrcLayoutCount is less than the number of image layouts that are supported, at most copySrcLayoutCount values will be written to pCopySrcLayouts. The implementation must include the VK_IMAGE_LAYOUT_GENERAL image layout in pCopySrcLayouts.

The optimalTilingLayoutUUID value can be used to ensure compatible data layouts when using the VK_HOST_IMAGE_COPY_MEMCPY_EXT flag in vkCopyMemoryToImageEXT and vkCopyImageToMemoryEXT.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceHostImageCopyPropertiesEXT-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_HOST_IMAGE_COPY_PROPERTIES_EXT
- VUID-VkPhysicalDeviceHostImageCopyPropertiesEXT-pCopySrcLayouts-parameter If copySrcLayoutCount is not 0, and pCopySrcLayouts is not NULL, pCopySrcLayouts must be a valid pointer to an array of copySrcLayoutCount VkImageLayout values
- VUID-VkPhysicalDeviceHostImageCopyPropertiesEXT-pCopyDstLayouts-parameter If copyDstLayoutCount is not 0, and pCopyDstLayouts is not NULL, pCopyDstLayouts must be a valid pointer to an array of copyDstLayoutCount VkImageLayout values

The VkPhysicalDeviceSubpassShadingPropertiesHUawei structure is defined as:

```c
// Provided by VK_HUAWEI_subpass_shading
```
typedef struct VkPhysicalDeviceSubpassShadingPropertiesHUAWEI {
    VkStructureType sType;
    void* pNext;
    uint32_t maxSubpassShadingWorkgroupSizeAspectRatio;
} VkPhysicalDeviceSubpassShadingPropertiesHUAWEI;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• maxSubpassShadingWorkgroupSizeAspectRatio indicates the maximum ratio between the width and height of the portion of the subpass shading shader workgroup size. maxSubpassShadingWorkgroupSizeAspectRatio must be a power-of-two value, and must be less than or equal to max(WorkgroupSize.x / WorkgroupSize.y, WorkgroupSize.y / WorkgroupSize.x).

If the VkPhysicalDeviceSubpassShadingPropertiesHUAWEI structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)
• VUID-VkPhysicalDeviceSubpassShadingPropertiesHUAWEI-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_PROPERTIES_HUAWEI

The VkPhysicalDeviceMultiDrawPropertiesEXT structure is defined as:

// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxMultiDrawCount;
} VkPhysicalDeviceMultiDrawPropertiesEXT;

The members of the VkPhysicalDeviceMultiDrawPropertiesEXT structure describe the following features:
• maxMultiDrawCount indicates the maximum number of draw calls which can be batched into a single multidraw.

If the VkPhysicalDeviceMultiDrawPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)
• VUID-VkPhysicalDeviceMultiDrawPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_PROPERTIES_EXT
The `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_nested_command_buffer
typedef struct VkPhysicalDeviceNestedCommandBufferPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxCommandBufferNestingLevel;
} VkPhysicalDeviceNestedCommandBufferPropertiesEXT;
```

The members of the `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure describe the following features:

- `maxCommandBufferNestingLevel` indicates the maximum nesting level of calls to `vkCmdExecuteCommands` from Secondary Command Buffers. A `maxCommandBufferNestingLevel` of `UINT32_MAX` means there is no limit to the nesting level.

If the `VkPhysicalDeviceNestedCommandBufferPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceNestedCommandBufferPropertiesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_NESTED_COMMAND_BUFFER_PROPERTIES_EXT`

The `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 graphicsPipelineLibraryFastLinking;
    VkBool32 graphicsPipelineLibraryIndependentInterpolationDecoration;
} VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT;
```

- `graphicsPipelineLibraryFastLinking` indicates whether fast linking of graphics pipelines is supported. If it is `VK_TRUE`, creating a graphics pipeline entirely from pipeline libraries without `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` is comparable in cost to recording a command in a command buffer.

- `graphicsPipelineLibraryIndependentInterpolationDecoration` indicates whether `NoPerspective` and `Flat` interpolation decorations in the last vertex processing stage and the fragment shader are required to match when using graphics pipeline libraries. If it is `VK_TRUE`, the interpolation decorations do not need to match. If it is `VK_FALSE`, these decorations must either be present in both stages or neither stage in order for a given interface variable to match.

If the `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT` structure is included in the `pNext`
chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GRAPHICS_PIPELINE_LIBRARY_PROPERTIES_EXT`

The `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 triStripVertexOrderIndependentOfProvokingVertex;
} VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR;
```

- When the **provoking vertex mode** is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, and the primitive order is odd in a triangle strip, the ordering of vertices is defined in last vertex table. `triStripVertexOrderIndependentOfProvokingVertex` equal to `VK_TRUE` indicates that the implementation ignores this and uses the vertex order defined by `VK_PROVOKING_VERTEX_MODE_FIRST_VERTEX_EXT` instead.

If the `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR`

The `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint8_t shaderModuleIdentifierAlgorithmUUID[VK_UUID_SIZE];
} VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT;
```

The members of the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure describe the following:
• shaderModuleIdentifierAlgorithmUUID is an array of VK_UUID_SIZE uint8_t values which uniquely represents the algorithm used to compute an identifier in vkGetShaderModuleIdentifierEXT and vkGetShaderModuleCreateInfoIdentifierEXT. Implementations should not change this value in different driver versions if the algorithm used to compute an identifier is the same.

Note
The algorithm UUID may be the same in different ICDs if the algorithms are guaranteed to produce the same results. This may happen in driver stacks which support different kinds of hardware with shared code.

Khronos’ conformance testing can not guarantee that shaderModuleIdentifierAlgorithmUUID values are actually unique, so implementors should make their own best efforts to ensure that their UUID is unlikely to conflict with other implementations which may use a different algorithm. In particular, hard-coded values which easily conflict, such as all-0 bits, should never be used. Hard-coded values are acceptable if best effort is ensured that the value will not accidentally conflict.

If the VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_PROPERTIES_EXT

The VkPhysicalDevicePipelineRobustnessPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_pipeline_robustness
typedef struct VkPhysicalDevicePipelineRobustnessPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkPipelineRobustnessBufferBehaviorEXT defaultRobustnessStorageBuffers;
    VkPipelineRobustnessBufferBehaviorEXT defaultRobustnessUniformBuffers;
    VkPipelineRobustnessBufferBehaviorEXT defaultRobustnessVertexInputs;
    VkPipelineRobustnessImageBehaviorEXT defaultRobustnessImages;
} VkPhysicalDevicePipelineRobustnessPropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• defaultRobustnessStorageBuffers describes the behaviour of out of bounds accesses made to storage buffers when no robustness features are enabled
• defaultRobustnessUniformBuffers describes the behaviour of out of bounds accesses made to
uniform buffers when no robustness features are enabled

- **defaultRobustnessVertexInputs** describes the behaviour of out of bounds accesses made to vertex input attributes when no robustness features are enabled
- **defaultRobustnessImages** describes the behaviour of out of bounds accesses made to images when no robustness features are enabled

Some implementations of Vulkan may be able to guarantee that certain types of accesses are always performed with robustness even when the Vulkan API’s robustness features are not explicitly enabled.

Even when an implementation reports that accesses to a given resource type are robust by default, it remains invalid to make an out of bounds access without requesting the appropriate robustness feature.

If the **VkPhysicalDevicePipelineRobustnessPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDevicePipelineRobustnessPropertiesEXT-sType-sType**  
  sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_PROPERTIES_EXT**

The **VkPhysicalDeviceExtendedDynamicState3PropertiesEXT** structure is defined as:

```c
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3PropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 dynamicPrimitiveTopologyUnrestricted;
} VkPhysicalDeviceExtendedDynamicState3PropertiesEXT;
```

- **dynamicPrimitiveTopologyUnrestricted** indicates that the implementation allows **vkCmdSetPrimitiveTopology** to use a different **primitive topology class** to the one specified in the active graphics pipeline.

If the **VkPhysicalDeviceExtendedDynamicState3PropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceExtendedDynamicState3PropertiesEXT-sType-sType**  
  sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_PROPERTIES_EXT**
The `VkPhysicalDeviceOpticalFlowPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkOpticalFlowGridSizeFlagsNV supportedOutputGridSizes;
    VkOpticalFlowGridSizeFlagsNV supportedHintGridSizes;
    VkBool32 hintSupported;
    VkBool32 costSupported;
    VkBool32 bidirectionalFlowSupported;
    VkBool32 globalFlowSupported;
    uint32_t minWidth;
    uint32_t minHeight;
    uint32_t maxWidth;
    uint32_t maxHeight;
    uint32_t maxNumRegionsOfInterest;
} VkPhysicalDeviceOpticalFlowPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `supportedOutputGridSizes` are the supported `VkOpticalFlowGridSizeFlagsNV` which can be specified in `VkOpticalFlowSessionCreateInfoNV::outputGridSize`.
- `supportedHintGridSizes` are the supported `VkOpticalFlowGridSizeFlagsNV` which can be specified in `VkOpticalFlowSessionCreateInfoNV::hintGridSize`.
- `hintSupported` is a boolean describing whether using hint flow vector map is supported in an optical flow session.
- `costSupported` is a boolean describing whether cost map generation is supported in an optical flow session.
- `bidirectionalFlowSupported` is a boolean describing whether bi-directional flow generation is supported in an optical flow session.
- `globalFlowSupported` is a boolean describing whether global flow vector map generation is supported in an optical flow session.
- `minWidth` is the minimum width in pixels for images used in an optical flow session.
- `minHeight` is the minimum height in pixels for images used in an optical flow session.
- `maxWidth` is the maximum width in pixels for images used in an optical flow session.
- `maxHeight` is the maximum height in pixels for images used in an optical flow session.
- `maxNumRegionsOfInterest` is the maximum number of regions of interest which can be used in an optical flow session. If this `maxNumRegionsOfInterest` is 0, regions of interest are not supported in an optical flow session.

If the `VkPhysicalDeviceOpticalFlowPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with
each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceOpticalFlowPropertiesNV-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_PROPERTIES_NV

The VkPhysicalDeviceOpacityMicromapPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxOpacity2StateSubdivisionLevel;
    uint32_t maxOpacity4StateSubdivisionLevel;
} VkPhysicalDeviceOpacityMicromapPropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.

• pNext is NULL or a pointer to a structure extending this structure.

• maxOpacity2StateSubdivisionLevel is the maximum allowed subdivisionLevel when format is VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT

• maxOpacity4StateSubdivisionLevel is the maximum allowed subdivisionLevel when format is VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT

If the VkPhysicalDeviceOpacityMicromapPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceOpacityMicromapPropertiesEXT-sType-sType

sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_PROPERTIES_EXT

The VkPhysicalDeviceDisplacementMicromapPropertiesNV structure is defined as:

```c
// Provided by VK_NV_displacement_micromap
typedef struct VkPhysicalDeviceDisplacementMicromapPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t maxDisplacementMicromapSubdivisionLevel;
} VkPhysicalDeviceDisplacementMicromapPropertiesNV;
```

• sType is a VkStructureType value identifying this structure.

• pNext is NULL or a pointer to a structure extending this structure.
• maxDisplacementMicromapSubdivisionLevel is the maximum allowed subdivisionLevel for displacement micromaps.

If the VkPhysicalDeviceDisplacementMicromapPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceDisplacementMicromapPropertiesNV-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICALDEVICE_DISPLACEMENT_MICROMAP_PROPERTIES_NV

The VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM structure is defined as:

```c
typedef struct VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM {
    VkStructureType sType;
    void* pNext;
    uint64_t shaderCoreMask;
    uint32_t shaderCoreCount;
    uint32_t shaderWarpsPerCore;
} VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• shaderCoreMask is a bitfield where each bit set represents the presence of a shader core whose ID is the bit position. The highest ID for any shader core on the device is the position of the most significant bit set.
• shaderCoreCount is the number of shader cores on the device.
• shaderWarpsPerCore is the maximum number of simultaneously executing warps on a shader core.

If the VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM-sType-sType sType must be VK_STRUCTURE_TYPE_PHYSICALDEVICE_SHADER_CORE_BUILTINS_PROPERTIES_ARM

Values which may be returned in the rayTracingInvocationReorderReorderingHint field of VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV are:
typedef enum VkRayTracingInvocationReorderModeNV {
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_NV = 0,
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_NV = 1,
} VkRayTracingInvocationReorderModeNV;

- **VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_NV** indicates that the implementation is likely to not reorder at reorder calls.
- **VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_NV** indicates that the implementation is likely to reorder at reorder calls.

The `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkRayTracingInvocationReorderModeNV rayTracingInvocationReorderReorderingHint;
} VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV;
```

- `rayTracingInvocationReorderReorderingHint` is a hint indicating if the implementation will actually reorder at the reorder calls.

**Note**
Because the extension changes how hits are managed there is a compatibility reason to expose the extension even when an implementation does not have sorting active.

If the `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**
- `VUID-VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV-sType-sType` 
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_PROPERTIES_NV`

The `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI` structure is defined as:

```c
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI {
    VkStructureType sType;
    void* pNext;
    uint32_t maxWorkGroupCount[3];
} VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI;
```
uint32_t maxWorkGroupSize[3];
uint32_t maxOutputClusterCount;
VkDeviceSize indirectBufferOffsetAlignment;
}

VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI

• sType is a VkStructureType value identifying this structure.

• pNext is NULL or a pointer to a structure extending this structure.

• maxWorkGroupCount[3] is the maximum number of local workgroups that can be launched by a single command. These three value represent the maximum local workgroup count in the X, Y and Z dimensions, respectively. In the current implementation, the values of Y and Z are both implicitly set as one. groupCountX of DrawCluster command must be less than or equal to maxWorkGroupCount[0].

• maxWorkGroupSize[3] is the maximum size of a local workgroup. These three value represent the maximum local workgroup size in the X, Y and Z dimensions, respectively. The x, y and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, must be less than or equal to the corresponding limit. In the current implementation, the maximum workgroup size of the X dimension is 32, the others are 1.

• maxOutputClusterCount is the maximum number of output cluster a single cluster culling shader workgroup can emit.

• indirectBufferOffsetAlignment indicates the alignment for cluster drawing command buffer stride. vkCmdDrawClusterIndirectHUAWEI::offset must be a multiple of this value.

If the VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_PROPERTIES_HUAWEI

The VkPhysicalDeviceShaderCorePropertiesARM structure is defined as:

// Provided by VK_ARM_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesARM {
    VkStructureType sType;
    void* pNext;
    uint32_t pixelRate;
    uint32_t texelRate;
    uint32_t fmaRate;
} VkPhysicalDeviceShaderCorePropertiesARM;
- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **pixelRate** is an unsigned integer value indicating the maximum number of pixels output per clock per shader core.
- **texelRate** is an unsigned integer value indicating the maximum number of texels per clock per shader core.
- **fmaRate** is an unsigned integer value indicating the maximum number of single-precision fused multiply-add operations per clock per shader core.

If a throughput rate cannot be determined on the physical device, the value 0 will be returned for that rate.

If the `VkPhysicalDeviceShaderCorePropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceShaderCorePropertiesARM-sType-sType**
  - **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_ARM`

The `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectPropertiesEXT {
    VkStructureType       sType;
    void*                 pNext;
    uint8_t*              shaderBinaryUUID[VK_UUID_SIZE];
    uint32_t              shaderBinaryVersion;
} VkPhysicalDeviceShaderObjectPropertiesEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderBinaryUUID** is an array of `VK_UUID_SIZE` `uint8_t` values representing a universally unique identifier for one or more implementations whose shader binaries are guaranteed to be compatible with each other.
- **shaderBinaryVersion** is an unsigned integer incremented to represent backwards compatible differences between implementations with the same `shaderBinaryUUID`.

The purpose and usage of the values of this structure are described in greater detail in [Binary Shader Compatibility](#).

If the `VkPhysicalDeviceShaderObjectPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderObjectPropertiesEXT-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT**

The **VkPhysicalDeviceShaderEnqueuePropertiesAMDX** structure is defined as:

```c
// Provided by VK_AMDX_shader_enqueue
typedef struct VkPhysicalDeviceShaderEnqueuePropertiesAMDX {
    VkStructureType     sType;
    void*                pNext;
    uint32_t             maxExecutionGraphDepth;
    uint32_t             maxExecutionGraphShaderOutputNodes;
    uint32_t             maxExecutionGraphShaderPayloadSize;
    uint32_t             maxExecutionGraphShaderPayloadCount;
    uint32_t             executionGraphDispatchAddressAlignment;
} VkPhysicalDeviceShaderEnqueuePropertiesAMDX;
```

The members of the **VkPhysicalDeviceShaderEnqueuePropertiesAMDX** structure describe the following limits:

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxExecutionGraphDepth** defines the maximum node chain depth in the graph. The dispatched node is at depth 1 and the node enqueued by it is at depth 2, and so on. If a node enqueues itself, each recursive enqueue increases the depth by 1 as well.
- **maxExecutionGraphShaderOutputNodes** specifies the maximum number of unique nodes that can be dispatched from a single shader, and must be at least 256.
- **maxExecutionGraphShaderPayloadSize** specifies the maximum total size of payload declarations in a shader. For any payload declarations that share resources, indicated by **NodeSharesPayloadLimitsWithAMDX** decorations, the maximum size of each set of shared payload declarations is taken. The sum of each shared set's maximum size and the size of each unshared payload is counted against this limit.
- **maxExecutionGraphShaderPayloadCount** specifies the maximum number of output payloads that can be initialized in a single workgroup.
- **executionGraphDispatchAddressAlignment** specifies the alignment of non-scratch **VkDeviceAddress** arguments consumed by graph dispatch commands.

If the **VkPhysicalDeviceShaderEnqueuePropertiesAMDX** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderEnqueuePropertiesAMDX-sType-sType
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER.Enqueue_PROPERTIES_AMDx`.

The `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV` structure is defined as:

```c
// Provided by VK_NV_extended_sparse_address_space
typedef struct VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize extendedSparseAddressSpaceSize;
    VkImageUsageFlags extendedSparseImageUsageFlags;
    VkBufferUsageFlags extendedSparseBufferUsageFlags;
} VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV;
```

- *sType* is a `VkStructureType` value identifying this structure.
- *pNext* is `NULL` or a pointer to a structure extending this structure.
- *extendedSparseAddressSpaceSize* is the total amount of address space available, in bytes, for sparse memory resources of all usages if the `extendedSparseAddressSpace` feature is enabled. This *must* be greater than or equal to `VkPhysicalDeviceLimits::sparseAddressSpaceSize`, and the difference in space *must* only be used with usages allowed below. This is an upper bound on the sum of the sizes of all sparse resources, regardless of whether any memory is bound to them.
- *extendedSparseImageUsageFlags* is a bitmask of `VkImageUsageFlagBits` of usages which *may* allow an implementation to use the full `extendedSparseAddressSpaceSize` space.
- *extendedSparseBufferUsageFlags* is a bitmask of `VkBufferUsageFlagBits` of usages which *may* allow an implementation to use the full `extendedSparseAddressSpaceSize` space.

If the `VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV` structure is included in the *pNext* chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExtendedSparseAddressSpacePropertiesNV-sType-sType
  
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_SPARSE_ADDRESS_SPACE_PROPERTIES_NV`.

The `VkPhysicalDeviceCudaKernelLaunchPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_cuda_kernel_launch
typedef struct VkPhysicalDeviceCudaKernelLaunchPropertiesNV {
    VkStructureType sType;
    void* pNext;
} VkPhysicalDeviceCudaKernelLaunchPropertiesNV;
```
The members of the `VkPhysicalDeviceCudaKernelLaunchPropertiesNV` structure describe the following features:

- `computeCapabilityMinor` indicates the minor version number of the compute code.
- `computeCapabilityMajor` indicates the major version number of the compute code.

If the `VkPhysicalDeviceCudaKernelLaunchPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceCudaKernelLaunchPropertiesNV-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUDA_KERNEL_LAUNCH_PROPERTIES_NV`

The `VkPhysicalDeviceExternalFormatResolvePropertiesANDROID` structure is defined as:

```c
// Provided by VK_ANDROID_external_format_resolve
typedef struct VkPhysicalDeviceExternalFormatResolvePropertiesANDROID {
    VkStructureType sType;
    void* pNext;
    VkBool32 nullColorAttachmentWithExternalFormatResolve;
    VkChromaLocation externalFormatResolveChromaOffsetX;
    VkChromaLocation externalFormatResolveChromaOffsetY;
} VkPhysicalDeviceExternalFormatResolvePropertiesANDROID;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `nullColorAttachmentWithExternalFormatResolve` indicates that there must be no color attachment image when performing external format resolves if it is `VK_TRUE`.
- `externalFormatResolveChromaOffsetX` indicates the `VkChromaLocation` that an implementation uses in the X axis for accesses to an external format image as a resolve attachment. This must be consistent between external format resolves and load operations from external format resolve attachments to color attachments when `nullColorAttachmentWithExternalFormatResolve` is `VK_TRUE`.
- `externalFormatResolveChromaOffsetY` indicates the `VkChromaLocation` that an implementation uses in the Y axis for accesses to an external format image as a resolve attachment. This must be consistent between external format resolves and load operations from external format resolve attachments to color attachments when `nullColorAttachmentWithExternalFormatResolve` is `VK_TRUE`.  

3779
If the `VkPhysicalDeviceExternalFormatResolvePropertiesANDROID` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceExternalFormatResolvePropertiesANDROID-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FORMAT_RESOLVE_PROPERTIES_ANDROID`

---

The `VkPhysicalDeviceRenderPassStripedPropertiesARM` structure is defined as:

```c
// Provided by VK_ARM_render_pass_stripped
typedef struct VkPhysicalDeviceRenderPassStripedPropertiesARM {
    VkStructureType sType;
    void* pNext;
    VkExtent2D renderPassStripeGranularity;
    uint32_t maxRenderPassStripes;
} VkPhysicalDeviceRenderPassStripedPropertiesARM;
```

The members of the `VkPhysicalDeviceRenderPassStripedPropertiesARM` structure describe the following limits:

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `renderPassStripeGranularity` indicates the minimum supported granularity of striped render pass regions.
- `maxRenderPassStripes` indicates the maximum number of stripes supported in striped rendering.

If the `VkPhysicalDeviceRenderPassStripedPropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceRenderPassStripedPropertiesARM-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RENDER_PASS_STRIPED_PROPERTIES_ARM`

---

### 48.1. Limit Requirements

The following table specifies the required minimum/maximum for all Vulkan graphics implementations. Where a limit corresponds to a fine-grained device feature which is optional, the feature name is listed with two required limits, one when the feature is supported and one when it is not supported. If an implementation supports a feature, the limits reported are the same whether
or not the feature is enabled.

Table 56. Required Limit Types

extendedSparseAddressSpaceSize | 0 | sparseAddressSpace Size | min
renderPassStripeGranularity | - | (64,64) | max
maxRenderPassStripes | - | 32 | min

1
The **Limit Type** column specifies the limit is either the minimum limit all implementations **must** support, the maximum limit all implementations **must** support, or the exact value all implementations **must** support. For bitmasks a minimum limit is the least bits all implementations **must** set, but they **may** have additional bits set beyond this minimum.

2
The **maxPerStageResources** **must** be at least the smallest of the following:

- the sum of the **maxPerStageDescriptorUniformBuffers**, **maxPerStageDescriptorStorageBuffers**, **maxPerStageDescriptorSampledImages**, **maxPerStageDescriptorStorageImages**, **maxPerStageDescriptorInputAttachments**, **maxColorAttachments** limits, or
- 128.

It may not be possible to reach this limit in every stage.

3
See **maxViewportDimensions** for the **required** relationship to other limits.

4
See **viewportBoundsRange** for the **required** relationship to other limits.

5
The values **minInterpolationOffset** and **maxInterpolationOffset** describe the closed interval of supported interpolation offsets: \([\text{minInterpolationOffset}, \text{maxInterpolationOffset}]\). The ULP is determined by **subPixelInterpolationOffsetBits**. If **subPixelInterpolationOffsetBits** is 4, this provides increments of \((1/2^4) = 0.0625\), and thus the range of supported interpolation offsets would be \([-0.5, 0.4375]\).

6
The point size ULP is determined by **pointSizeGranularity**. If the **pointSizeGranularity** is 0.125, the range of supported point sizes **must** be at least \([1.0, 63.875]\).

7
The line width ULP is determined by **lineWidthGranularity**. If the **lineWidthGranularity** is 0.0625,
the range of supported line widths must be at least [1.0, 7.9375].

8

The minimum maxDescriptorSet* limit is \( n \) times the corresponding specification minimum maxPerStageDescriptor* limit, where \( n \) is the number of shader stages supported by the VkPhysicalDevice. If all shader stages are supported, \( n = 6 \) (vertex, tessellation control, tessellation evaluation, geometry, fragment, compute).

9

The UpdateAfterBind descriptor limits must each be greater than or equal to the corresponding non-UpdateAfterBind limit.

10

If the VK_KHR_portability_subset extension is enabled, the required minimum value of maxVertexInputBindings is 8.

12

maxResourceDescriptorSize is defined as the maximum value of storageImageDescriptorSize, sampledImageDescriptorSize, robustUniformTexelBufferDescriptorSize, robustStorageTexelBufferDescriptorSize, robustStorageBufferDescriptorSize, inputAttachmentDescriptorSize, and accelerationStructureDescriptorSize.

48.2. Additional Multisampling Capabilities

To query additional multisampling capabilities which may be supported for a specific sample count, beyond the minimum capabilities described for Limits above, call:

```c
// Provided by VK_EXT_sample_locations
void vkGetPhysicalDeviceMultisamplePropertiesEXT(
    VkPhysicalDevice physicalDevice,
    VkSampleCountFlagBits samples,
    VkMultisamplePropertiesEXT* pMultisampleProperties);
```

- `physicalDevice` is the physical device from which to query the additional multisampling capabilities.
- `samples` is a VkSampleCountFlagBits value specifying the sample count to query capabilities for.
- `pMultisampleProperties` is a pointer to a VkMultisamplePropertiesEXT structure in which information about additional multisampling capabilities specific to the sample count is returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-physicalDevice-parameter physicalDevice must be a valid VkPhysicalDevice handle
The `VkMultisamplePropertiesEXT` structure is defined as

```c
// Provided by VK_EXT_sample_locations
typedef struct VkMultisamplePropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkExtent2D maxSampleLocationGridSize;
} VkMultisamplePropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations can vary.

### Valid Usage (Implicit)

- VUID-VkMultisamplePropertiesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_MULTISAMPLE_PROPERTIES_EXT`

- VUID-VkMultisamplePropertiesEXT-pNext-pNext
  
  `pNext` must be `NULL`

If the sample count for which additional multisampling capabilities are requested using `vkGetPhysicalDeviceMultisamplePropertiesEXT` is set in `sampleLocationSampleCounts` the `width` and `height` members of `VkMultisamplePropertiesEXT::maxSampleLocationGridSize` must be greater than or equal to the corresponding members of `maxSampleLocationGridSize`, respectively, otherwise both members must be `0`.

### 48.3. Profile Limits

#### 48.3.1. Roadmap 2022

Implementations that claim support for the Roadmap 2022 profile must satisfy the following additional limit requirements:

<table>
<thead>
<tr>
<th>Limit</th>

Chapter 49. Formats

Supported buffer and image formats may vary across implementations. A minimum set of format features are guaranteed, but others must be explicitly queried before use to ensure they are supported by the implementation.

The features for the set of formats (VkFormat) supported by the implementation are queried individually using the vkGetPhysicalDeviceFormatProperties command.

49.1. Format Definition

The following image formats can be passed to, and may be returned from Vulkan commands. The memory required to store each format is discussed with that format, and also summarized in the Representation and Texel Block Size section and the Compatible formats table.

```c
// Provided by VK_VERSION_1_0
typedef enum VkFormat {
    VK_FORMAT_UNDEFINED = 0,
    VK_FORMAT_R4G4_UNORM_PACK8 = 1,
    VK_FORMAT_R4G4B4A4_UNORM_PACK16 = 2,
    VK_FORMAT_B4G4R4A4_UNORM_PACK16 = 3,
    VK_FORMAT_R5G6B5_UNORM_PACK16 = 4,
    VK_FORMAT_B5G6R5_UNORM_PACK16 = 5,
    VK_FORMAT_R5G5B5A1_UNORM_PACK16 = 6,
    VK_FORMAT_B5G5R5A1_UNORM_PACK16 = 7,
    VK_FORMAT_A1R5G5B5_UNORM_PACK16 = 8,
    VK_FORMAT_R8_UNORM = 9,
    VK_FORMAT_R8_SNORM = 10,
    VK_FORMAT_R8_USCALED = 11,
    VK_FORMAT_R8_SSCALED = 12,
    VK_FORMAT_R8_UINT = 13,
    VK_FORMAT_R8_SINT = 14,
    VK_FORMAT_R8_SRGB = 15,
    VK_FORMAT_R8G8_UNORM = 16,

• **VK_FORMAT_UNDEFINED** specifies that the format is not specified.

• **VK_FORMAT_R4G4_UNORM_PACK8** specifies a two-component, 8-bit packed unsigned normalized format that has a 4-bit R component in bits 4..7, and a 4-bit G component in bits 0..3.

• **VK_FORMAT_R4G4B4A4_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit R component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit B component in bits 4..7, and a 4-bit A component in bits 0..3.

• **VK_FORMAT_B4G4R4A4_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit B component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit R component in bits 4..7, and a 4-bit A component in bits 0..3.

• **VK_FORMAT_A4R4G4B4_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit R component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit B component in bits 0..3.

• **VK_FORMAT_A4B4G4R4_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit B component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit R component in bits 0..3.

• **VK_FORMAT_R5G6B5_UNORM_PACK16** specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit B component in bits 0..4.

• **VK_FORMAT_B5G6R5_UNORM_PACK16** specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit R component in bits 0..4.

• **VK_FORMAT_R5G5B5A1_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit B component in bits 1..5, and a 1-bit A component in bit 0.

• **VK_FORMAT_B5G5R5A1_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit R component in bits 1..5, and a 1-bit A component in bit 0.

• **VK_FORMAT_A1R5G5B5_UNORM_PACK16** specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit R component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit B component in bits 0..4.

• **VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR** specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit B component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit R component in bits 0..4.

• **VK_FORMAT_A8_UNORM_KHR** specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit A component.

• **VK_FORMAT_R8_UNORM** specifies a one-component, 8-bit unsigned normalized format that has a
single 8-bit R component.

- **VK_FORMAT_R8_SNORM** specifies a one-component, 8-bit signed normalized format that has a single 8-bit R component.
- **VK_FORMAT_R8_USCALED** specifies a one-component, 8-bit unsigned scaled integer format that has a single 8-bit R component.
- **VK_FORMAT_R8_SSCALED** specifies a one-component, 8-bit signed scaled integer format that has a single 8-bit R component.
- **VK_FORMAT_R8_UINT** specifies a one-component, 8-bit unsigned integer format that has a single 8-bit R component.
- **VK_FORMAT_R8_SINT** specifies a one-component, 8-bit signed integer format that has a single 8-bit R component.
- **VK_FORMAT_R8_SRGB** specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit R component stored with sRGB nonlinear encoding.
- **VK_FORMAT_R8G8_UNORM** specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SNORM** specifies a two-component, 16-bit signed normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_USCALED** specifies a two-component, 16-bit unsigned scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SSCALED** specifies a two-component, 16-bit signed scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_UINT** specifies a two-component, 16-bit unsigned integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SINT** specifies a two-component, 16-bit signed integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SRGB** specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, and an 8-bit G component stored with sRGB nonlinear encoding in byte 1.
- **VK_FORMAT_R8G8B8_UNORM** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SNORM** specifies a three-component, 24-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_USCALED** specifies a three-component, 24-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SSCALED** specifies a three-component, 24-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_UINT** specifies a three-component, 24-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SINT** specifies a three-component, 24-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.

- **VK_FORMAT_R8G8B8_SRGB** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit B component stored with sRGB nonlinear encoding in byte 2.

- **VK_FORMAT_B8G8R8_UNORM** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

- **VK_FORMAT_B8G8R8_SNORM** specifies a three-component, 24-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

- **VK_FORMAT_B8G8R8_USCALED** specifies a three-component, 24-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

- **VK_FORMAT_B8G8R8_SSCALED** specifies a three-component, 24-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

- **VK_FORMAT_B8G8R8_UINT** specifies a three-component, 24-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

- **VK_FORMAT_B8G8R8_SINT** specifies a three-component, 24-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

- **VK_FORMAT_B8G8R8_SRGB** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit R component stored with sRGB nonlinear encoding in byte 2.

- **VK_FORMAT_R8G8B8A8_UNORM** specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_R8G8B8A8_SNORM** specifies a four-component, 32-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_R8G8B8A8_USCALED** specifies a four-component, 32-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_R8G8B8A8_SSCALED** specifies a four-component, 32-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_R8G8B8A8_UINT** specifies a four-component, 32-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_R8G8B8A8_SINT** specifies a four-component, 32-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.
• **VK_FORMAT_R8G8B8A8_SRGB** specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit B component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_B8G8R8A8_UNORM** specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_B8G8R8A8_SNORM** specifies a four-component, 32-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_B8G8R8A8_USCALED** specifies a four-component, 32-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_B8G8R8A8_SSCALED** specifies a four-component, 32-bit signed scaled format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_B8G8R8A8_UINT** specifies a four-component, 32-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_B8G8R8A8_SINT** specifies a four-component, 32-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

• **VK_FORMAT_A8B8G8R8_UNORM_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

• **VK_FORMAT_A8B8G8R8_SNORM_PACK32** specifies a four-component, 32-bit packed signed normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

• **VK_FORMAT_A8B8G8R8_USCALED_PACK32** specifies a four-component, 32-bit packed unsigned scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

• **VK_FORMAT_A8B8G8R8_SSCALED_PACK32** specifies a four-component, 32-bit packed signed scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

• **VK_FORMAT_A8B8G8R8_UINT_PACK32** specifies a four-component, 32-bit packed unsigned integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

• **VK_FORMAT_A8B8G8R8_SINT_PACK32** specifies a four-component, 32-bit packed signed integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.
component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_SRGB_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component stored with sRGB nonlinear encoding in bits 16..23, an 8-bit G component stored with sRGB nonlinear encoding in bits 8..15, and an 8-bit R component stored with sRGB nonlinear encoding in bits 0..7.

- **VK_FORMAT_A2R10G10B10_UNORM_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

- **VK_FORMAT_A2R10G10B10_SNORM_PACK32** specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

- **VK_FORMAT_A2R10G10B10_USCALED_PACK32** specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

- **VK_FORMAT_A2R10G10B10_SSCALED_PACK32** specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

- **VK_FORMAT_A2R10G10B10_UINT_PACK32** specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

- **VK_FORMAT_A2R10G10B10_SINT_PACK32** specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

- **VK_FORMAT_A2B10G10R10_UNORM_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- **VK_FORMAT_A2B10G10R10_SNORM_PACK32** specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- **VK_FORMAT_A2B10G10R10_USCALED_PACK32** specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- **VK_FORMAT_A2B10G10R10_SSCALED_PACK32** specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- **VK_FORMAT_A2B10G10R10_UINT_PACK32** specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- **VK_FORMAT_A2B10G10R10_SINT_PACK32** specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

- **VK_FORMAT_R16_UNORM** specifies a one-component, 16-bit unsigned normalized format that has a
• **VK_FORMAT_R16_SNORM** specifies a one-component, 16-bit signed normalized format that has a single 16-bit R component.

• **VK_FORMAT_R16_USCALED** specifies a one-component, 16-bit unsigned scaled integer format that has a single 16-bit R component.

• **VK_FORMAT_R16_SSCALED** specifies a one-component, 16-bit signed scaled integer format that has a single 16-bit R component.

• **VK_FORMAT_R16_UINT** specifies a one-component, 16-bit unsigned integer format that has a single 16-bit R component.

• **VK_FORMAT_R16_SINT** specifies a one-component, 16-bit signed integer format that has a single 16-bit R component.

• **VK_FORMAT_R16_SFLOAT** specifies a one-component, 16-bit signed floating-point format that has a single 16-bit R component.

• **VK_FORMAT_R16G16_UNORM** specifies a two-component, 32-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16_SNORM** specifies a two-component, 32-bit signed normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16_USCALED** specifies a two-component, 32-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16_SSCALED** specifies a two-component, 32-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16_UINT** specifies a two-component, 32-bit unsigned integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16_SINT** specifies a two-component, 32-bit signed integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16_SFLOAT** specifies a two-component, 32-bit signed floating-point format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

• **VK_FORMAT_R16G16B16_UNORM** specifies a three-component, 48-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

• **VK_FORMAT_R16G16B16_SNORM** specifies a three-component, 48-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

• **VK_FORMAT_R16G16B16_USCALED** specifies a three-component, 48-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

• **VK_FORMAT_R16G16B16_SSCALED** specifies a three-component, 48-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

• **VK_FORMAT_R16G16B16_UINT** specifies a three-component, 48-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

• **VK_FORMAT_R16G16B16_SINT** specifies a three-component, 48-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in.
- **VK_FORMAT_R16G16B16_SINT** specifies a three-component, 48-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_SFLOAT** specifies a three-component, 48-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16A16_UNORM** specifies a four-component, 64-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SNORM** specifies a four-component, 64-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_USCALED** specifies a four-component, 64-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SSCALED** specifies a four-component, 64-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_UINT** specifies a four-component, 64-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SINT** specifies a four-component, 64-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SFLOAT** specifies a four-component, 64-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R32_UINT** specifies a one-component, 32-bit unsigned integer format that has a single 32-bit R component.

- **VK_FORMAT_R32_SINT** specifies a one-component, 32-bit signed integer format that has a single 32-bit R component.

- **VK_FORMAT_R32_SFLOAT** specifies a one-component, 32-bit signed floating-point format that has a single 32-bit R component.

- **VK_FORMAT_R32G32_UINT** specifies a two-component, 64-bit unsigned integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- **VK_FORMAT_R32G32_SINT** specifies a two-component, 64-bit signed integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- **VK_FORMAT_R32G32_SFLOAT** specifies a two-component, 64-bit signed floating-point format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- **VK_FORMAT_R32G32B32_UINT** specifies a three-component, 96-bit unsigned integer format that has a
32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.

- **VK_FORMAT_R32G32B32_SINT** specifies a three-component, 96-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.

- **VK_FORMAT_R32G32B32_SFLOAT** specifies a three-component, 96-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.

- **VK_FORMAT_R32G32B32A32_UINT** specifies a four-component, 128-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.

- **VK_FORMAT_R32G32B32A32_SINT** specifies a four-component, 128-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.

- **VK_FORMAT_R32G32B32A32_SFLOAT** specifies a four-component, 128-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.

- **VK_FORMAT_R64_UINT** specifies a one-component, 64-bit unsigned integer format that has a single 64-bit R component.

- **VK_FORMAT_R64_SINT** specifies a one-component, 64-bit signed integer format that has a single 64-bit R component.

- **VK_FORMAT_R64_SFLOAT** specifies a one-component, 64-bit signed floating-point format that has a single 64-bit R component.

- **VK_FORMAT_R64G64_UINT** specifies a two-component, 128-bit unsigned integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.

- **VK_FORMAT_R64G64_SINT** specifies a two-component, 128-bit signed integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.

- **VK_FORMAT_R64G64_SFLOAT** specifies a two-component, 128-bit signed floating-point format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.

- **VK_FORMAT_R64G64B64_UINT** specifies a three-component, 192-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

- **VK_FORMAT_R64G64B64_SINT** specifies a three-component, 192-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

- **VK_FORMAT_R64G64B64_SFLOAT** specifies a three-component, 192-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

- **VK_FORMAT_R64G64B64A64_UINT** specifies a four-component, 256-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.
• **VK_FORMAT_R64G64B64A64_SINT** specifies a four-component, 256-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.

• **VK_FORMAT_R64G64B64A64_SFLOAT** specifies a four-component, 256-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.

• **VK_FORMAT_B10G11R11_UFLOAT_PACK32** specifies a three-component, 32-bit packed unsigned floating-point format that has a 10-bit B component in bits 22..31, an 11-bit G component in bits 11..21, an 11-bit R component in bits 0..10. See [Unsigned 10-Bit Floating-Point Numbers](#) and [Unsigned 11-Bit Floating-Point Numbers](#).

• **VK_FORMAT_E5B9G9R9_UFLOAT_PACK32** specifies a three-component, 32-bit packed unsigned floating-point format that has a 5-bit shared exponent in bits 27..31, a 9-bit B component mantissa in bits 18..26, a 9-bit G component mantissa in bits 9..17, and a 9-bit R component mantissa in bits 0..8.

• **VK_FORMAT_D16_UNORM** specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit depth component.

• **VK_FORMAT_X8_D24_UNORM_PACK32** specifies a two-component, 32-bit format that has 24 unsigned normalized bits in the depth component and, optionally, 8 bits that are unused.

• **VK_FORMAT_D32_SFLOAT** specifies a one-component, 32-bit signed floating-point format that has 32 bits in the depth component.

• **VK_FORMAT_S8_UINT** specifies a one-component, 8-bit unsigned integer format that has 8 bits in the stencil component.

• **VK_FORMAT_D16_UNORM_S8_UINT** specifies a two-component, 24-bit format that has 16 unsigned normalized bits in the depth component and 8 unsigned integer bits in the stencil component.

• **VK_FORMAT_D24_UNORM_S8_UINT** specifies a two-component, 32-bit packed format that has 8 unsigned integer bits in the stencil component, and 24 unsigned normalized bits in the depth component.

• **VK_FORMAT_D32_SFLOAT_S8_UINT** specifies a two-component format that has 32 signed float bits in the depth component and 8 unsigned integer bits in the stencil component. There are optionally 24 bits that are unused.

• **VK_FORMAT_BC1_RGB_UNORM_BLOCK** specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.

• **VK_FORMAT_BC1_RGB_SRGB_BLOCK** specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.

• **VK_FORMAT_BC1_RGBA_UNORM_BLOCK** specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.

• **VK_FORMAT_BC1_RGBA_SRGB_BLOCK** specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.

• **VK_FORMAT_BC2_UNORM_BLOCK** specifies a four-component, block-compressed format where each
128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.

- **VK_FORMAT_BC2_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.

- **VK_FORMAT_BC3_UNORM_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.

- **VK_FORMAT_BC3_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.

- **VK_FORMAT_BC4_UNORM_BLOCK** specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.

- **VK_FORMAT_BC4_SNORM_BLOCK** specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.

- **VK_FORMAT_BC5_UNORM_BLOCK** specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.

- **VK_FORMAT_BC5_SNORM_BLOCK** specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.

- **VK_FORMAT_BC6H_UFLOAT_BLOCK** specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned floating-point RGB texel data.

- **VK_FORMAT_BC6H_SFLOAT_BLOCK** specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point RGB texel data.

- **VK_FORMAT_BC7_UNORM_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_BC7_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK** specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.

- **VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK** specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.

- **VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK** specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB
texel data, and provides 1 bit of alpha.

- **VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK** specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.

- **VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK** specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.

- **VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK** specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding applied.

- **VK_FORMAT_EAC_R11_UNORM_BLOCK** specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized red texel data.

- **VK_FORMAT_EAC_R11_SNORM_BLOCK** specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a $4 \times 4$ rectangle of signed normalized red texel data.

- **VK_FORMAT_EAC_R11G11_UNORM_BLOCK** specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.

- **VK_FORMAT_EAC_R11G11_SNORM_BLOCK** specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.

- **VK_FORMAT_ASTC_4x4_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_4x4_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $4 \times 4$ rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_5x4_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $5 \times 4$ rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_5x4_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $5 \times 4$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $5 \times 4$ rectangle of signed floating-point RGBA texel data.
VK_FORMAT_ASTC_5x5_SRGB_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $5 \times 5$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $5 \times 5$ rectangle of signed floating-point RGBA texel data.

VK_FORMAT_ASTC_6x5_UNORM_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $6 \times 5$ rectangle of unsigned normalized RGBA texel data.

VK_FORMAT_ASTC_6x5_SRGB_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $6 \times 5$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $6 \times 5$ rectangle of signed floating-point RGBA texel data.

VK_FORMAT_ASTC_6x6_UNORM_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $6 \times 6$ rectangle of unsigned normalized RGBA texel data.

VK_FORMAT_ASTC_6x6_SRGB_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $6 \times 6$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $6 \times 6$ rectangle of signed floating-point RGBA texel data.

VK_FORMAT_ASTC_8x5_UNORM_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $8 \times 5$ rectangle of unsigned normalized RGBA texel data.

VK_FORMAT_ASTC_8x5_SRGB_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $8 \times 5$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $8 \times 5$ rectangle of signed floating-point RGBA texel data.

VK_FORMAT_ASTC_8x6_UNORM_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $8 \times 6$ rectangle of unsigned normalized RGBA texel data.

VK_FORMAT_ASTC_8x6_SRGB_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $8 \times 6$ rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a $8 \times 6$ rectangle of signed floating-point RGBA texel data.
data.

- **VK_FORMAT_ASTC_8x8_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_8x8_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_10x5_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_10x5_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_10x6_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_10x6_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_10x8_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_10x8_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_10x10_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_10x10_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data.
texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_12x10_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_12x10_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_12x12_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_12x12_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_G8B8G8R8_422_UNORM** specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit G component for the even i coordinate in byte 0, an 8-bit B component in byte 1, an 8-bit G component for the odd i coordinate in byte 2, and an 8-bit R component in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_B8G8R8G8_422_UNORM** specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit B component in byte 0, an 8-bit G component for the even i coordinate in byte 1, an 8-bit R component in byte 2, and an 8-bit G component for the odd i coordinate in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G8_B8_R8_3PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which
\[ i_G \times 0.5] = i_B = i_R \] and \[ j_G \times 0.5] = j_B = j_R \]. The location of each plane when this image is in linear layout can be determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the B plane, and \texttt{VK_IMAGE_ASPECT_PLANE_2_BIT} for the R plane. This format only supports images with a width and height that is a multiple of two.

- \texttt{VK_FORMAT_G8_B8R8_2PLANE_420_UNORM} specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which \[ i_G \times 0.5] = i_B = i_R \] and \[ j_G \times 0.5] = j_B = j_R \]. The location of each plane when this image is in linear layout can be determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, and \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the BR plane. This format only supports images with a width and height that is a multiple of two.

- \texttt{VK_FORMAT_G8_B8_R8_3PLANE_422_UNORM} specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \[ i_G \times 0.5] = i_B = i_R \]. The location of each plane when this image is in linear layout can be determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the B plane, and \texttt{VK_IMAGE_ASPECT_PLANE_2_BIT} for the R plane. This format only supports images with a width that is a multiple of two.

- \texttt{VK_FORMAT_G8_B8R8_2PLANE_422_UNORM} specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \[ i_G \times 0.5] = i_B = i_R \]. The location of each plane when this image is in linear layout can be determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the B plane, and \texttt{VK_IMAGE_ASPECT_PLANE_2_BIT} for the BR plane. This format only supports images with a width that is a multiple of two.

- \texttt{VK_FORMAT_G8_B8_R8_3PLANE_444_UNORM} specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. Each plane has the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the B plane, and \texttt{VK_IMAGE_ASPECT_PLANE_2_BIT} for the R plane.

- \texttt{VK_FORMAT_R10X6_UNORM_PACK16} specifies a one-component, 16-bit unsigned normalized format that has a single 10-bit R component in the top 10 bits of a 16-bit word, with the bottom 6 bits unused.

- \texttt{VK_FORMAT_R10X6G10X6_UNORM_2PACK16} specifies a two-component, 32-bit unsigned normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, and a 10-bit G component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused.

- \texttt{VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16} specifies a four-component, 64-bit unsigned normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, a
10-bit G component in the top 10 bits of the word in bytes 2..3, a 10-bit B component in the top 10 bits of the word in bytes 4..5, and a 10-bit A component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused.

- **VK_FORMAT_G10X6B10X6G10X6R10X6_422_UNORM_4PACK16** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2\times1 rectangle of unsigned normalized RGB texel data. One G value is present at each \(i\) coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit G component for the even \(i\) coordinate in the top 10 bits of the word in bytes 0..1, a 10-bit B component in the top 10 bits of the word in bytes 2..3, a 10-bit G component for the odd \(i\) coordinate in the top 10 bits of the word in bytes 4..5, and a 10-bit R component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2\times1 compressed texel block.

- **VK_FORMAT_B10X6G10X6R10X6G10X6_422_UNORM_4PACK16** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2\times1 rectangle of unsigned normalized RGB texel data. One G value is present at each \(i\) coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit B component in the top 10 bits of the word in bytes 0..1, a 10-bit G component for the even \(i\) coordinate in the top 10 bits of the word in bytes 2..3, a 10-bit R component in the top 10 bits of the word in bytes 4..5, and a 10-bit G component for the odd \(i\) coordinate in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2\times1 compressed texel block.

- **VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which \(\lfloor iG \times 0.5 \rfloor = i_R = i_B\) and \(\lfloor iG \times 0.5 \rfloor = j_R = j_B\). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G10X6_B10X6R10X6_2PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which \(\lfloor iG \times 0.5 \rfloor = i_B = i_R\) and \(\lfloor iG \times 0.5 \rfloor = j_B = j_R\). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width and height that is a multiple of two.
VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_422_UNORM_3PACK16 specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \(|i_G \times 0.5| = i_R = i_B\). The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, VK_IMAGE_ASPECT_PLANE_1_BIT for the B plane, and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane. This format only supports images with a width that is a multiple of two.

VK_FORMAT_G10X6_B10X6R10X6_2PLANE_422_UNORM_3PACK16 specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \(|i_G \times 0.5| = i_B = i_R\). The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, and VK_IMAGE_ASPECT_PLANE_1_BIT for the BR plane. This format only supports images with a width that is a multiple of two.

VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_444_UNORM_3PACK16 specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. Each plane has the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, VK_IMAGE_ASPECT_PLANE_1_BIT for the B plane, and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane.

VK_FORMAT_R12X4_UNORM_PACK16 specifies a one-component, 16-bit unsigned normalized format that has a single 12-bit R component in the top 12 bits of a 16-bit word, with the bottom 4 bits unused.

VK_FORMAT_R12X4G12X4_UNORM_2PACK16 specifies a two-component, 32-bit unsigned normalized format that has a 12-bit R component in the top 12 bits of the word in bytes 0..1, and a 12-bit G component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused.

VK_FORMAT_R12X4G12X4B12X4A12X4_UNORM_4PACK16 specifies a four-component, 64-bit unsigned normalized format that has a 12-bit R component in the top 12 bits of the word in bytes 0..1, a 12-bit G component in the top 12 bits of the word in bytes 2..3, a 12-bit B component in the top 12 bits of the word in bytes 4..5, and a 12-bit A component in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused.

VK_FORMAT_G12X4B12X4G12X4R12X4_422_UNORM_4PACK16 specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 12-bit G component for the even i
coordinate in the top 12 bits of the word in bytes 0..1, a 12-bit B component in the top 12 bits of
the word in bytes 2..3, a 12-bit G component for the odd \( i \) coordinate in the top 12 bits of the
word in bytes 4..5, and a 12-bit R component in the top 12 bits of the word in bytes 6..7, with the
bottom 4 bits of each word unused. This format only supports images with a width that is a
multiple of two. For the purposes of the constraints on copy extents, this format is treated as a
compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_B12X4G12X4R12X4G12X4_422_UNORM_4PACK16** specifies a four-component, 64-bit format
containing a pair of G components, an R component, and a B component, collectively encoding a
2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each \( i \) coordinate,
with the B and R values shared across both G values and thus recorded at half the horizontal resolution
of the image. This format has a 12-bit B component in the top 12 bits of the word in bytes 0..1, a 12-bit G component for the even \( i \) coordinate in the top 12 bits of the word in bytes 2..3, a 12-bit R component in the top 12 bits of the word in bytes 4..5, and a 12-bit G component for the odd \( i \) coordinate in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-
planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a
12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in
the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. The
horizontal and vertical dimensions of the R and B planes are halved relative to the image
dimensions, and each R and B component is shared with the G components for which
\( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \) and \( \lfloor j_G \times 0.5 \rfloor = j_B = j_R \). The location of each plane when this image is in linear
layout can be determined via \texttt{vkGetImageSubresourceLayout}, using
\texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the B plane, and
\texttt{VK_IMAGE_ASPECT_PLANE_2_BIT} for the R plane. This format only supports images with a width and
height that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4_R12X4_2PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-
planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and
a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the
word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, with
the bottom 4 bits of each word unused. The horizontal and vertical dimensions of the BR plane
are halved relative to the image dimensions, and each R and B value is shared with the G
components for which \( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \) and \( \lfloor j_G \times 0.5 \rfloor = j_B = j_R \). The location of each plane when this image is in linear
layout can be determined via \texttt{vkGetImageSubresourceLayout}, using
\texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, and \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the BR plane.
This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_422_UNORM_3PACK16** specifies an unsigned normalized multi-
planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a
12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in
the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. The
horizontal dimension of the R and B plane is halved relative to the image dimensions, and each
R and B value is shared with the G components for which \( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \). The location of each plane when this image is in linear
layout can be determined via \texttt{vkGetImageSubresourceLayout}, using
\texttt{VK_IMAGE_ASPECT_PLANE_0_BIT} for the G plane, \texttt{VK_IMAGE_ASPECT_PLANE_1_BIT} for the R plane,
and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane. This format only supports images with a width that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4R12X4_2PLANE_422_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( i_G \times 0.5 = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, and VK_IMAGE_ASPECT_PLANE_1_BIT for the BR plane. This format only supports images with a width that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4R12X4_3PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. Each plane has the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, VK_IMAGE_ASPECT_PLANE_1_BIT for the B plane, and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane.

- **VK_FORMAT_G16B16G16R16_422_UNORM** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 16-bit G component for the even i coordinate in the word in bytes 0..1, a 16-bit B component in the word in bytes 2..3, a 16-bit G component for the odd i coordinate in the word in bytes 4..5, and a 16-bit R component in the word in bytes 6..7. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_B16G16R16G16_422_UNORM** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 16-bit B component in the word in bytes 0..1, a 16-bit G component for the even i coordinate in the word in bytes 2..3, a 16-bit R component in the word in bytes 4..5, and a 16-bit G component for the odd i coordinate in the word in bytes 6..7. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G16_B16_R16_3PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which \( i_G \times 0.5 = i_B = i_R \) and \( j_G \times 0.5 = j_B = j_R \). The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, VK_IMAGE_ASPECT_PLANE_1_BIT for the B plane, and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane.
plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G16_B16R16_2PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which \( i_G \times 0.5 = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G16_B16_R16_3PLANE_422_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( i_G \times 0.5 = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width that is a multiple of two.

- **VK_FORMAT_G16_B16_R16_2PLANE_422_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( i_G \times 0.5 = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width that is a multiple of two.

- **VK_FORMAT_G16_B16_R16_3PLANE_444_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. Each plane has the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane.

- **VK_FORMAT_G8_BBR8_2PLANE_444_UNORM** specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. Both planes have the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

- **VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of
the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, the bottom 6 bits of each word unused. Both planes have the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

- **VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, the bottom 4 bits of each word unused. Both planes have the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

- **VK_FORMAT_G16_B16R16_2PLANE_444_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. Both planes have the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

- **VK_FORMAT_PVRTC1_2BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_PVRTC1_4BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_PVRTC2_2BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_PVRTC2_4BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_PVRTC1_2BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_PVRTC1_4BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_PVRTC2_2BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_PVRTC2_4BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
• **VK_FORMAT_R16G16_S10_5_NV** specifies a two-component, fixed-point format where most significant bit specifies the sign bit, next 10 bits specify the integer value and last 5 bits represent the fractional value.

### 49.1.1. Compatible Formats of Planes of Multi-Planar Formats

Individual planes of multi-planar formats are size-compatible with single-plane color formats if they occupy the same number of bits per texel block, and are compatible with those formats if they have the same block extent.

In the following table, individual planes of a *multi-planar* format are compatible with the format listed against the relevant plane index for that multi-planar format, and any format compatible with the listed single-plane format according to Format Compatibility Classes. These planes are also size-compatible with any format that is size-compatible with the listed single-plane format.

**Table 58. Plane Format Compatibility Table**

49.1.2. Multi-planar Format Image Aspect

When using `VkImageAspectFlagBits` to select a plane of a multi-planar format, the following are the valid options:

- Two planes
  - `VK_IMAGE_ASPECT_PLANE_0_BIT`
  - `VK_IMAGE_ASPECT_PLANE_1_BIT`

- Three planes
  - `VK_IMAGE_ASPECT_PLANE_0_BIT`
  - `VK_IMAGE_ASPECT_PLANE_1_BIT`
  - `VK_IMAGE_ASPECT_PLANE_2_BIT`

49.1.3. Packed Formats

For the purposes of address alignment when accessing buffer memory containing vertex attribute or texel data, the following formats are considered packed - components of the texels or attributes are stored in bitfields packed into one or more 8-, 16-, or 32-bit fundamental data type.

- **Packed into 8-bit data types:**
  - `VK_FORMAT_R4G4_UNORM_PACK8`

- **Packed into 16-bit data types:**
  - `VK_FORMAT_R4G4B4A4_UNORM_PACK16`
  - `VK_FORMAT_B4G4R4A4_UNORM_PACK16`
  - `VK_FORMAT_R5G6B5_UNORM_PACK16`
  - `VK_FORMAT_B5G6R5_UNORM_PACK16`
  - `VK_FORMAT_R5G5B5A1_UNORM_PACK16`
  - `VK_FORMAT_B5G5R5A1_UNORM_PACK16`
  - `VK_FORMAT_A1R5G5B5_UNORM_PACK16_KHR`
  - `VK_FORMAT_R10X6_UNORM_PACK16`
  - `VK_FORMAT_R10X6G10X6_UNORM_2PACK16`
  - `VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16`
  - `VK_FORMAT_G10X6B10X6G10X6R10X6_422_UNORM_4PACK16`
  - `VK_FORMAT_B10X6G10X6R10X6_2PLANE_420_UNORM_3PACK16`
  - `VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_420_UNORM_3PACK16`
  - `VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_422_UNORM_3PACK16`
  - `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_420_UNORM_3PACK16`
- VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_444_UNORM_3PACK16
- VK_FORMAT_R12X4_UNORM_PACK16
- VK_FORMAT_R12X4G12X4_UNORM_2PACK16
- VK_FORMAT_R12X4G12X4B12X4A12X4_UNORM_4PACK16
- VK_FORMAT_G12X4B12X4G12X4R12X4_422_UNORM_4PACK16
- VK_FORMAT_B12X4G12X4R12X4G12X4_422_UNORM_4PACK16
- VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_420_UNORM_3PACK16
- VK_FORMAT_G12X4_B12X4R12X4_2PLANE_420_UNORM_3PACK16
- VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_422_UNORM_3PACK16
- VK_FORMAT_G12X4_B12X4R12X4_2PLANE_422_UNORM_3PACK16
- VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_444_UNORM_3PACK16
- VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16
- VK_FORMAT_A4R4G4B4_UNORM_PACK16
- VK_FORMAT_A4B4G4R4_UNORM_PACK16

- Packed into 32-bit data types:
  - VK_FORMAT_A8B8G8R8_UNORM_PACK32
  - VK_FORMAT_A8B8G8R8_SNORM_PACK32
  - VK_FORMAT_A8B8G8R8_USCALED_PACK32
  - VK_FORMAT_A8B8G8R8_SSCALED_PACK32
  - VK_FORMAT_A8B8G8R8_UINT_PACK32
  - VK_FORMAT_A8B8G8R8_SINT_PACK32
  - VK_FORMAT_A2R10G10B10_UNORM_PACK32
  - VK_FORMAT_A2R10G10B10_SNORM_PACK32
  - VK_FORMAT_A2R10G10B10_USCALED_PACK32
  - VK_FORMAT_A2R10G10B10_SSCALED_PACK32
  - VK_FORMAT_A2R10G10B10_UINT_PACK32
  - VK_FORMAT_A2R10G10B10_SINT_PACK32
  - VK_FORMAT_A2B10G10R10_UNORM_PACK32
  - VK_FORMAT_A2B10G10R10_SNORM_PACK32
  - VK_FORMAT_A2B10G10R10_USCALED_PACK32
  - VK_FORMAT_A2B10G10R10_SSCALED_PACK32
  - VK_FORMAT_A2B10G10R10_UINT_PACK32
  - VK_FORMAT_A2B10G10R10_SINT_PACK32
49.1.4. Identification of Formats

A “format” is represented by a single enum value. The name of a format is usually built up by using the following pattern:

\[
\text{VK_FORMAT}_{\{\text{component-format|compression-scheme}\}_{\{\text{numeric-format}\}}}
\]

The component-format indicates either the size of the R, G, B, and A components (if they are present) in the case of a color format, or the size of the depth (D) and stencil (S) components (if they are present) in the case of a depth/stencil format (see below). An X indicates a component that is unused, but may be present for padding.
### Table 59. Interpretation of Numeric Format

<table>
<thead>
<tr>
<th>Numeric format</th>
<th>Type-Declaration instructions</th>
<th>Numeric type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UNORM</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are unsigned normalized values in the range [0,1]</td>
</tr>
<tr>
<td>SNORM</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are signed normalized values in the range [-1,1]</td>
</tr>
<tr>
<td>USCALED</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are unsigned integer values that get converted to floating-point in the range ([0,2^n-1])</td>
</tr>
<tr>
<td>SSCALED</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are signed integer values that get converted to floating-point in the range ([-2^{n-1},2^{n-1}-1])</td>
</tr>
<tr>
<td>UINT</td>
<td>OpTypeInt</td>
<td>unsigned integer</td>
<td>The components are unsigned integer values in the range ([0,2^n-1])</td>
</tr>
<tr>
<td>SINT</td>
<td>OpTypeInt</td>
<td>signed integer</td>
<td>The components are signed integer values in the range ([-2^{n-1},2^{n-1}-1])</td>
</tr>
<tr>
<td>UFLOAT</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are unsigned floating-point numbers (used by packed, shared exponent, and some compressed formats)</td>
</tr>
<tr>
<td>SFLOAT</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are signed floating-point numbers</td>
</tr>
<tr>
<td>SRGB</td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The R, G, and B components are unsigned normalized values that represent values using sRGB nonlinear encoding, while the A component (if one exists) is a regular unsigned normalized value</td>
</tr>
</tbody>
</table>

\(n\) is the number of bits in the component.

The suffix \_PACKnn\ indicates that the format is packed into an underlying type with \(nn\) bits. The suffix \_mPACKnn\ is a short-hand that indicates that the format has \(m\) groups of components (which may or may not be stored in separate planes) that are each packed into an underlying type with \(nn\) bits.

The suffix \_BLOCK\ indicates that the format is a block-compressed format, with the representation of multiple pixels encoded interdependently within a region.

### Table 60. Interpretation of Compression Scheme

<table>
<thead>
<tr>
<th>Compression scheme</th>
<th>Description</th>

<tr>
<td>EAC</td>
<td>ETC2 Alpha Compression. See <a href="#">ETC Compressed Image Formats</a>.</td>
</tr>
</tbody>
</table>
Compression scheme | Description
---|---
ASTC | Adaptive Scalable Texture Compression (LDR Profile). See [ASTC Compressed Image Formats](#).

For *multi-planar* images, the components in separate *planes* are separated by underscores, and the number of planes is indicated by the addition of a `_2PLANE` or `_3PLANE` suffix. Similarly, the separate aspects of depth-stencil formats are separated by underscores, although these are not considered separate planes. Formats are suffixed by `_422` to indicate that planes other than the first are reduced in size by a factor of two horizontally or that the R and B values appear at half the horizontal frequency of the G values, `_420` to indicate that planes other than the first are reduced in size by a factor of two both horizontally and vertically, and `_444` for consistency to indicate that all three planes of a three-planar image are the same size.

**Note**

No common format has a single plane containing both R and B components but does not store these components at reduced horizontal resolution.

### 49.1.5. Representation and Texel Block Size

Color formats **must** be represented in memory in exactly the form indicated by the format’s name. This means that promoting one format to another with more bits per component and/or additional components **must** not occur for color formats. Depth/stencil formats have more relaxed requirements as discussed below.

Each format has a *texel block size*, the number of bytes used to store one *texel block* (a single addressable element of an uncompressed image, or a single compressed block of a compressed image). The texel block size for each format is shown in the Compatible formats table.

The representation of non-packed formats is that the first component specified in the name of the format is in the lowest memory addresses and the last component specified is in the highest memory addresses. See [Byte mappings for non-packed/compressed color formats](#). The in-memory ordering of bytes within a component is determined by the host endianness.

| Table 61. Byte mappings for non-packed/compressed color formats |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | ← Byte |
| R | \[VK\_FORMAT\_R8\_*] |
| R G | \[VK\_FORMAT\_R8G8\_*] |
| R G B | \[VK\_FORMAT\_R8G8B8\_*] |
| B G R | \[VK\_FORMAT\_B8G8R8\_*] |
| R G B A | \[VK\_FORMAT\_R8G8B8A8\_*] |
| B G R A | \[VK\_FORMAT\_B8G8R8A8\_*] |
| A | \[VK\_FORMAT\_A8\_UNORM\_KHR] |
| G₀ B G₁ R | \[VK\_FORMAT\_G8B8G8R8\_422\_UNORM] |
Packed formats store multiple components within one underlying type. The bit representation is that the first component specified in the name of the format is in the most-significant bits and the last component specified is in the least-significant bits of the underlying type. The in-memory ordering of bytes comprising the underlying type is determined by the host endianness.

49.1.6. Depth/Stencil Formats

Depth/stencil formats are considered opaque and need not be stored in the exact number of bits per texel or component ordering indicated by the format enum. However, implementations must not substitute a different depth or stencil precision than is described in the format (e.g. D16 must not be implemented as D24 or D32).

49.1.7. Format Compatibility Classes

Uncompressed color formats are compatible with each other if they occupy the same number of bits per texel block as long as neither or both are alpha formats (e.g., VK_FORMAT_A8_UNORM_KHR). Compressed color formats are compatible with each other if the only difference between them is the numeric format of the uncompressed pixels. Each depth/stencil format is only compatible with itself. In the following table, all the formats in the same row are compatible. Each format has a defined texel block extent specifying how many texels each texel block represents in each dimension.

Table 65. Compatible Formats

### Size Compatibility

Color formats with the same texel block size are considered *size-compatible* as long as neither or both are alpha formats (e.g., `VK_FORMAT_A8_UNORM_KHR`). If two size-compatible formats have different block extents (i.e., for compressed formats), then an image with size \( A \times B \times C \) in one format with a block extent of \( a \times b \times c \) can be represented as an image with size \( X \times Y \times Z \) in the other format with block extent \( x \times y \times z \) at the ratio between the block extents for each format, where

\[
\lceil \frac{A}{a} \rceil = \lceil \frac{X}{x} \rceil
\]

\[
\lceil \frac{B}{b} \rceil = \lceil \frac{Y}{y} \rceil
\]

\[
\lceil \frac{C}{c} \rceil = \lceil \frac{Z}{z} \rceil
\]

---

**Note**

For example, a 7x3 image in the `VK_FORMAT_ASTC_8x5_UNORM_BLOCK` format can be represented as a 1x1 `VK_FORMAT_R64G64_UINT` image.

Images created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag can have size-compatible views created from them to enable access via different size-compatible formats. Image views created in this way will be sized to match the expectations of the block extents noted above.

Copy operations are able to copy between size-compatible formats in different resources to enable manipulation of data in different formats. The extent used in these copy operations always matches the source image, and is resized to the expectations of the block extents noted above for the destination image.

### 49.2. Format Properties

To query supported format features which are properties of the physical device, call:
void vkGetPhysicalDeviceFormatProperties(
    VkPhysicalDevice physicalDevice, 
    VkFormat format, 
    VkFormatProperties* pFormatProperties);

- `physicalDevice` is the physical device from which to query the format properties.
- `format` is the format whose properties are queried.
- `pFormatProperties` is a pointer to a `VkFormatProperties` structure in which physical device properties for `format` are returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFormatProperties-physicalDevice-parameter
  `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFormatProperties-format-parameter
  `format` must be a valid `VkFormat` value
- VUID-vkGetPhysicalDeviceFormatProperties-pFormatProperties-parameter
  `pFormatProperties` must be a valid pointer to a `VkFormatProperties` structure

The `VkFormatProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkFormatProperties {
    VkFormatFeatureFlags linearTilingFeatures; 
    VkFormatFeatureFlags optimalTilingFeatures; 
    VkFormatFeatureFlags bufferFeatures; 
} VkFormatProperties;
```

- `linearTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_LINEAR`.
- `optimalTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_OPTIMAL`.
- `bufferFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by buffers.

**Note**

If no format feature flags are supported, the format itself is not supported, and images of that format cannot be created.

If `format` is a block-compressed format, then `bufferFeatures` must not support any features for the format.
If format is not a multi-plane format then linearTilingFeatures and optimalTilingFeatures must not contain VK_FORMAT_FEATURE_DISJOINT_BIT.

Bits which can be set in the VkFormatProperties features linearTilingFeatures, optimalTilingFeatures, VkDrmFormatModifierPropertiesEXT:drmFormatModifierTilingFeatures, and bufferFeatures are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkFormatFeatureFlagBits {
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT = 0x00000001,
    VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT = 0x00000002,
    VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT = 0x00000004,
    VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT = 0x00000008,
    VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT = 0x00000010,
    VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT = 0x00000020,
    VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT = 0x00000080,
    VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT = 0x00000100,
    VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT = 0x00000200,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT = 0x00001000,
    VK_FORMAT_FEATURE_TRANSFER_SRC_BIT = 0x00004000,
    VK_FORMAT_FEATURE_TRANSFER_DST_BIT = 0x00008000,
    VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT = 0x00020000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT = 0x00040000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT = 0x00080000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT = 0x00100000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT = 0x00200000,
    VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT = 0x00800000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT = 0x00010000,
    VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR = 0x02000000,
} VkFormatFeatureFlagBits;
```
// Provided by VK_KHR_video_decode_queue
VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR = 0x04000000,
// Provided by VK_KHR_acceleration_structure
VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR = 0x20000000,
// Provided by VK_EXT_filter_cubic
VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT = 0x00002000,
// Provided by VK_EXT_fragment_density_map
VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT = 0x01000000,
// Provided by VK_KHR_fragment_shading_rate
VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR = 0x40000000,
#endif
// Provided by VK_KHR_video_encode_queue
VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR = 0x08000000,
#ifdef VK_ENABLE_BETA_EXTENSIONS
// Provided by VK_KHR_video_encode_queue
VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR = 0x10000000,
#endif
// Provided by VK_KHR_maintenance1
VK_FORMAT_FEATURE_TRANSFER_SRC_BIT_KHR = VK_FORMAT_FEATURE_TRANSFER_SRC_BIT,
// Provided by VK_KHR_maintenance1
VK_FORMAT_FEATURE_TRANSFER_DST_BIT_KHR = VK_FORMAT_FEATURE_TRANSFER_DST_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT_KHR = VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT_KHR = VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT_KHR = VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT,
These values all have the same meaning as the equivalently named values for VkFormatFeatureFlags2 and may be set in linearTilingFeatures, optimalTilingFeatures, and VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures, specifying that the features are supported by images or image views or sampler Y′C_bC_r conversion objects created with the queried vkGetPhysicalDeviceFormatProperties::format:

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT** specifies that an image view can be sampled from.
- **VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT** specifies that an image view can be used as a storage image.
- **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT** specifies that an image view can be used as storage image that supports atomic operations.
- **VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT** specifies that an image view can be used as a framebuffer color attachment and as an input attachment.
- **VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT** specifies that an image view can be used as a framebuffer color attachment that supports blending.
- **VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT** specifies that an image view can be used as a framebuffer depth/stencil attachment and as an input attachment.
- **VK_FORMAT_FEATURE_BLIT_SRC_BIT** specifies that an image can be used as srcImage for the vkCmdBlitImage2 and vkCmdBlitImage commands.
- **VK_FORMAT_FEATURE_BLIT_DST_BIT** specifies that an image can be used as dstImage for the vkCmdBlitImage2 and vkCmdBlitImage commands.
- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT** specifies that if VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT is also set, an image view can be used with a sampler that has either of magFilter or minFilter set to VK_FILTER_LINEAR, or.mipmapMode set to VK_SAMPLER_MIPMAP_MODE_LINEAR. If VK_FORMAT_FEATURE_BLIT_SRC_BIT is also set, an image can be used as the srcImage to vkCmdBlitImage2 and vkCmdBlitImage with a filter of VK_FILTER_LINEAR. This bit must only be exposed for formats that also support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT or VK_FORMAT_FEATURE_BLIT_SRC_BIT.

If the format being queried is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports linear filtering, and that linear filtering of the depth aspect is supported whether depth compare is enabled in the sampler or not. Where depth comparison is supported it may be linear filtered whether this bit is present or not, but where this bit is not present the filtered value may be computed in an implementation-dependent manner which differs from the normal rules of linear filtering. The resulting value must be in the range [0,1] and should be proportional to, or a weighted average of, the number of comparison passes or failures.

- **VK_FORMAT_FEATURE_TRANSFER_SRC_BIT** specifies that an image can be used as a source image for

---

3866
copy commands. If the application apiVersion is Vulkan 1.0 and VK_KHR_maintenance1 is not supported, VK_FORMAT_FEATURE_TRANSFER_SRC_BIT is implied to be set when the format feature flag is not 0.

- **VK_FORMAT_FEATURE_TRANSFER_DST_BIT** specifies that an image can be used as a destination image for copy commands and clear commands. If the application apiVersion is Vulkan 1.0 and VK_KHR_maintenance1 is not supported, VK_FORMAT_FEATURE_TRANSFER_DST_BIT is implied to be set when the format feature flag is not 0.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT** specifies that VkImage can be used as a sampled image with a min or max VkSamplerReductionMode. This bit must only be exposed for formats that also support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT** specifies that VkImage can be used with a sampler that has either of magFilter or minFilter set to VK_FILTER_CUBIC_EXT, or be the source image for a blit with filter set to VK_FILTER_CUBIC_EXT. This bit must only be exposed for formats that also support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT. If the format being queried is a depth/stencil format, this only specifies that the depth aspect is cubic filterable.

- **VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT** specifies that an application can define a sampler Y’C’bC’r conversion using this format as a source, and that an image of this format can be used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of VK_CHROMA_LOCATION_MIDPOINT. Otherwise both xChromaOffset and yChromaOffset must be VK_CHROMA_LOCATION_COSITED_EVEN. If a format does not incorporate chroma downsampling (it is not a “422” or “420” format) but the implementation supports sampler Y’C’bC’r conversion for this format, the implementation must set VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT.

- **VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT** specifies that an application can define a sampler Y’C’bC’r conversion using this format as a source, and that an image of this format can be used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of VK_CHROMA_LOCATION_MIDPOINT. If neither VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT nor VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT is set, the application must not define a sampler Y’C’bC’r conversion using this format as a source.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT** specifies that an application can define a sampler Y’C’bC’r conversion using this format as a source with chromaFilter set to VK_FILTER_LINEAR.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT** specifies that the format can have different chroma, min, and mag filters.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT** specifies that reconstruction is explicit, as described in Chroma Reconstruction. If this bit is not present, reconstruction is implicit by default.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT** specifies that reconstruction can be forcibly made explicit by setting VkSamplerYcbcrConversionCreateInfo::forceExplicitReconstruction to VK_TRUE. If the format being queried supports VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT, it must also support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT.
**IT.**

- **VK_FORMAT_FEATURE_DISJOINT_BIT** specifies that a multi-planar image can have the **VK_IMAGE_CREATE_DISJOINT_BIT** set during image creation. An implementation must not set **VK_FORMAT_FEATURE_DISJOINT_BIT** for *single-plane formats*.

- **VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT** specifies that an image view can be used as a fragment density map attachment.

- **VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR** specifies that an image view can be used as a fragment shading rate attachment. An implementation must not set this feature for formats with a numeric format other than **UINT**, or set it as a buffer feature.

- **VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR** specifies that an image view with this format can be used as a *decode output picture* in video decode operations.

- **VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video decode operations.

- **VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR** specifies that an image view with this format can be used as an *encode input picture* in video encode operations.

- **VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video encode operations.

---

**Note**

Specific video profiles may have additional restrictions on the format and other image creation parameters corresponding to image views used by video coding operations that can be enumerated using the **vkGetPhysicalDeviceVideoFormatPropertiesKHR** command.

The following bits may be set in **bufferFeatures**, specifying that the features are supported by buffers or buffer views created with the queried **vkGetPhysicalDeviceFormatProperties::format**:

- **VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT** specifies that the format can be used to create a buffer view that can be bound to a **VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER** descriptor.

- **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT** specifies that the format can be used to create a buffer view that can be bound to a **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** descriptor.

- **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT** specifies that atomic operations are supported on **VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER** with this format.

- **VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT** specifies that the format can be used as a vertex attribute format (**VkVertexInputAttributeDescription::format**).

- **VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR** specifies that the format can be used as the vertex format when creating an acceleration structure (**VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat**). This format can also be used as the vertex format in host memory when doing host acceleration structure builds.
VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT and VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT are only intended to be advertised for single-component formats, since SPIR-V atomic operations require a scalar type.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkFormatFeatureFlags;
```

VkFormatFeatureFlags is a bitmask type for setting a mask of zero or more VkFormatFeatureFlagBits.

To query supported format features which are properties of the physical device, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFormatProperties2(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkFormatProperties2* pFormatProperties);
```

or the equivalent command

```c
// Provided by VK_KHR_get_physical_device_properties2
void vkGetPhysicalDeviceFormatProperties2KHR(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkFormatProperties2* pFormatProperties);
```

- **physicalDevice** is the physical device from which to query the format properties.
- **format** is the format whose properties are queried.
- **pFormatProperties** is a pointer to a VkFormatProperties2 structure in which physical device properties for **format** are returned.

vkGetPhysicalDeviceFormatProperties2 behaves similarly to vkGetPhysicalDeviceFormatProperties, with the ability to return extended information in a pNext chain of output structures.

### Valid Usage (Implicit)

- **VUID-vkGetPhysicalDeviceFormatProperties2-physicalDevice-parameter**
  physicalDevice must be a valid VkPhysicalDevice handle
- **VUID-vkGetPhysicalDeviceFormatProperties2-format-parameter**
  format must be a valid VkFormat value
- **VUID-vkGetPhysicalDeviceFormatProperties2-pFormatProperties-parameter**
  pFormatProperties must be a valid pointer to a VkFormatProperties2 structure
The `VkFormatProperties2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkFormatProperties2 {
    VkStructureType       sType;
    void*                 pNext;
    VkFormatProperties    formatProperties;
} VkFormatProperties2;
```

or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkFormatProperties2 VkFormatProperties2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatProperties` is a `VkFormatProperties` structure describing features supported by the requested format.

### Valid Usage (Implicit)

- VUID-VkFormatProperties2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_2`

- VUID-VkFormatProperties2-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkDrmFormatModifierPropertiesList2EXT`, `VkDrmFormatModifierPropertiesListEXT`, `VkFormatProperties3`, or `VkSubpassResolvePerformanceQueryEXT`

- VUID-VkFormatProperties2-sType-unique
  The `sType` value of each struct in the `pNext` chain must be unique

To obtain the list of Linux DRM format modifiers compatible with a `VkFormat`, add a `VkDrmFormatModifierPropertiesListEXT` structure to the `pNext` chain of `VkFormatProperties2`.

The `VkDrmFormatModifierPropertiesListEXT` structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesListEXT {
    VkStructureType       sType;
    void*                 pNext;
    uint32_t              drmFormatModifierCount;
    VkDrmFormatModifierPropertiesEXT* pDrmFormatModifierProperties;
} VkDrmFormatModifierPropertiesListEXT;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **drmFormatModifierCount** is an inout parameter related to the number of modifiers compatible with the `format`, as described below.

• **pDrmFormatModifierProperties** is either `NULL` or a pointer to an array of `VkDrmFormatModifierPropertiesEXT` structures.

If `pDrmFormatModifierProperties` is `NULL`, then the function returns in `drmFormatModifierCount` the number of modifiers compatible with the queried `format`. Otherwise, the application **must** set `drmFormatModifierCount` to the length of the array `pDrmFormatModifierProperties`; the function will write at most `drmFormatModifierCount` elements to the array, and will return in `drmFormatModifierCount` the number of elements written.

Among the elements in array `pDrmFormatModifierProperties`, each returned `drmFormatModifier` must be unique.

### Valid Usage (Implicit)

• VUID-VkDrmFormatModifierPropertiesListEXT-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_EXT`

The `VkDrmFormatModifierPropertiesEXT` structure describes properties of a `VkFormat` when that format is combined with a **Linux DRM format modifier**. These properties, like those of `VkFormatProperties2`, are independent of any particular image.

The `VkDrmFormatModifierPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesEXT {
    uint64_t drmFormatModifier;
    uint32_t drmFormatModifierPlaneCount;
    VkFormatFeatureFlags drmFormatModifierTilingFeatures;
} VkDrmFormatModifierPropertiesEXT;
```

• `drmFormatModifier` is a **Linux DRM format modifier**.

• `drmFormatModifierPlaneCount` is the number of *memory planes* in any image created with `format` and `drmFormatModifier`. An image's *memory plane count* is distinct from its *format plane count*, as explained below.

• `drmFormatModifierTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` that are supported by any image created with `format` and `drmFormatModifier`.

The returned `drmFormatModifierTilingFeatures` **must** contain at least one bit.

The implementation **must** not return `DRM_FORMAT_MOD_INVALID` in `drmFormatModifier`.

An image's *memory plane count* (as returned by `drmFormatModifierPlaneCount`) is distinct from its
format planecount (in the sense of multi-planar Y’C_bC_r formats). In VkImageAspectFlags, each
VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT represents a memory plane and each
VK_IMAGE_ASPECT_PLANE_i_BIT a format plane.

An image’s set of format planes is an ordered partition of the image’s content into separable groups
of format components. The ordered partition is encoded in the name of each VkFormat. For example,
VK_FORMAT_G8_B8R8_2PLANE_420_UNORM contains two format planes; the first plane contains
the green component and the second plane contains the blue component and red component. If the
format name does not contain PLANE, then the format contains a single plane; for example,
VK_FORMAT_R8G8B8A8_UNORM. Some commands, such as vkCmdCopyBufferToImage, do not operate on
all format components in the image, but instead operate only on the format planes explicitly chosen
by the application and operate on each format plane independently.

An image’s set of memory planes is an ordered partition of the image’s memory rather than the
image’s content. Each memory plane is a contiguous range of memory. The union of an image’s
memory planes is not necessarily contiguous.

If an image is linear, then the partition is the same for memory planes and for format planes. Therefore,
if the returned drmFormatModifier is DRM_FORMAT_MOD_LINEAR, then
drmFormatModifierPlaneCount must equal the format planecount, and
drmFormatModifierTilingFeatures must be identical to the VkFormatProperties2::linearTilingFeatures returned in the same pNext chain.

If an image is non-linear, then the partition of the image’s memory into memory planes is
implementation-specific and may be unrelated to the partition of the image’s content into format planes. For example, consider an image whose format is VK_FORMAT_G8_B8_B8_3PLANE_420_UNORM,
tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, whose
drmFormatModifier is not DRM_FORMAT_MOD_LINEAR, and flags lacks VK_IMAGE_CREATE_DISJOINT_BIT. The image has 3 format
planes, and commands such vkCmdCopyBufferToImage act on each format plane independently as
if the data of each format plane were separable from the data of the other planes. In a
straightforward implementation, the implementation may store the image’s content in 3 adjacent
memory planes where each memory plane corresponds exactly to a format plane. However, the
implementation may also store the image’s content in a single memory plane where all format
components are combined using an implementation-private block-compressed format; or the
implementation may store the image’s content in a collection of 7 adjacent memory planes using an
implementation-private sharding technique. Because the image is non-linear and non-disjoint, the
implementation has much freedom when choosing the image’s placement in memory.

The memory planecount applies to function parameters and structures only when the API specifies
an explicit requirement on drmFormatModifierPlaneCount. In all other cases, the memory planecount
is ignored.

The list of Linux DRM format modifiers compatible with a VkFormat can be obtained by adding a
VkDrmFormatModifierPropertiesList2EXT structure to the pNext chain of VkFormatProperties2.

The VkDrmFormatModifierPropertiesList2EXT structure is defined as:

```c
// Provided by VK_KHR_format_feature_flags2 with VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesList2EXT {
```
• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `drmFormatModifierCount` is an inout parameter related to the number of modifiers compatible with the format, as described below.
• `pDrmFormatModifierProperties` is either `NULL` or a pointer to an array of `VkDrmFormatModifierProperties2EXT` structures.

If `pDrmFormatModifierProperties` is `NULL`, the number of modifiers compatible with the queried format is returned in `drmFormatModifierCount`. Otherwise, the application must set `drmFormatModifierCount` to the length of the array `pDrmFormatModifierProperties`; the function will write at most `drmFormatModifierCount` elements to the array, and will return in `drmFormatModifierCount` the number of elements written.

Among the elements in array `pDrmFormatModifierProperties`, each returned `drmFormatModifier` must be unique.

Among the elements in array `pDrmFormatModifierProperties`, the bits reported in `drmFormatModifierTilingFeatures` must include the bits reported in the corresponding element of `VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties`.

**Valid Usage (Implicit)**

- `VUID-VkDrmFormatModifierPropertiesList2EXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_2_EXT`  
  
The `VkDrmFormatModifierProperties2EXT` structure describes properties of a `VkFormat` when that format is combined with a Linux DRM format modifier. These properties, like those of `VkFormatProperties2`, are independent of any particular image.

The `VkDrmFormatModifierPropertiesEXT` structure is defined as:

```c
// Provided by VK_KHR_format_feature_flags2 with VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierProperties2EXT {
    uint64_t     drmFormatModifier;
    uint32_t     drmFormatModifierPlaneCount;
    VkFormatFeatureFlags2 drmFormatModifierTilingFeatures;
} VkDrmFormatModifierProperties2EXT;
```

- `drmFormatModifier` is a Linux `DRM format modifier`.
- `drmFormatModifierPlaneCount` is the number of `memory planes` in any image created with `format`
and drmFormatModifier. An image's memory planecount is distinct from its format planecount, as explained below.

- drmFormatModifierTilingFeatures is a bitmask of VkFormatFeatureFlagBits2 that are supported by any image created with format and drmFormatModifier.

To query supported format extended features which are properties of the physical device, add VkFormatProperties3 structure to the pNext chain of VkFormatProperties2.

The VkFormatProperties3 structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkFormatProperties3 {
    VkStructureType sType;
    void* pNext;
    VkFormatFeatureFlags2 linearTilingFeatures;
    VkFormatFeatureFlags2 optimalTilingFeatures;
    VkFormatFeatureFlags2 bufferFeatures;
} VkFormatProperties3;
```

or the equivalent

```c
// Provided by VK_KHR_format_feature_flags2
typedef VkFormatProperties3 VkFormatProperties3KHR;
```

- linearTilingFeatures is a bitmask of VkFormatFeatureFlagBits2 specifying features supported by images created with a tiling parameter of VK_IMAGE_TILING_LINEAR.
- optimalTilingFeatures is a bitmask of VkFormatFeatureFlagBits2 specifying features supported by images created with a tiling parameter of VK_IMAGE_TILING_OPTIMAL.
- bufferFeatures is a bitmask of VkFormatFeatureFlagBits2 specifying features supported by buffers.

The bits reported in linearTilingFeatures, optimalTilingFeatures and bufferFeatures must include the bits reported in the corresponding fields of VkFormatProperties2::formatProperties.

**Valid Usage (Implicit)**

- VUID-VkFormatProperties3-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_3

Bits which can be set in the VkFormatProperties3 features linearTilingFeatures, optimalTilingFeatures, and bufferFeatures are:

```c
// Provided by VK_VERSION_1_3
// Flag bits for VkFormatFeatureFlagBits2
typedef VkFlags64 VkFormatFeatureFlagBits2;
```
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT = 0x00000001ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT_KHR = 0x00000001ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_IMAGE_BIT = 0x00000002ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_IMAGE_BIT_KHR = 0x00000002ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_IMAGE_ATOMIC_BIT = 0x00000004ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_IMAGE_ATOMIC_BIT_KHR = 0x00000004ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_UNIFORM_TEXEL_BUFFER_BIT = 0x00000008ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_UNIFORM_TEXEL_BUFFER_BIT_KHR = 0x00000008ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_BIT = 0x00000010ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_BIT_KHR = 0x00000010ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_ATOMIC_BIT = 0x00000020ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_ATOMIC_BIT_KHR = 0x00000020ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_VERTEX_BUFFER_BIT = 0x00000040ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_VERTEX_BUFFER_BIT_KHR = 0x00000040ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BIT = 0x00000080ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BIT_KHR = 0x00000080ULL;

// Provided by VK_KHR_format_feature_flags2 with VK_QCOM_image_processing
The following bits may be set in `linearTilingFeatures` and `optimalTilingFeatures`, specifying that the features are supported by images or image views or sampler Y’CₘCₖ conversion objects created with the queried `vkGetPhysicalDeviceFormatProperties2::format`

- `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT` specifies that an image view can be sampled from.
- `VK_FORMAT_FEATURE_2_STORAGE_IMAGE_BIT` specifies that an image view can be used as a storage image.
- `VK_FORMAT_FEATURE_2_STORAGE_IMAGE_ATOMIC_BIT` specifies that an image view can be used as storage image that supports atomic operations.
- `VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BIT` specifies that an image view can be used as a framebuffer color attachment and as an input attachment.
- `VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BLEND_BIT` specifies that an image view can be used as a framebuffer color attachment that supports blending.
- `VK_FORMAT_FEATURE_2_DEPTH_STENCIL_ATTACHMENT_BIT` specifies that an image view can be used as a framebuffer depth/stencil attachment and as an input attachment.
- `VK_FORMAT_FEATURE_2_BLIT_SRC_BIT` specifies that an image can be used as the srcImage for `vkCmdBlitImage2` and `vkCmdBlitImage`.
- `VK_FORMAT_FEATURE_2_BLIT_DST_BIT` specifies that an image can be used as the dstImage for `vkCmdBlitImage2` and `vkCmdBlitImage`.
- `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_LINEAR_BIT` specifies that if `VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT` is also set, an image view can be used with a sampler that has either of magFilter or minFilter set to `VK_FILTER_LINEAR`, or mipmapMode set to `VK_SAMPLER_MIPMAP_MODE_LINEAR`. If `VK_FORMAT_FEATURE_2_BLIT_SRC_BIT` is also set, an image can be used as the srcImage for `vkCmdBlitImage2` and `vkCmdBlitImage` with a filter of `VK_FILTER_LINEAR`. 

or the equivalent

```c
typedef VkFormatFeatureFlagBits2 VkFormatFeatureFlagBits2KHR;
```
This bit must only be exposed for formats that also support the
VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT or VK_FORMAT_FEATURE_2_BLIT_SRC_BIT.

If the format being queried is a depth/stencil format, this bit only specifies that the depth aspect
(not the stencil aspect) of an image of this format supports linear filtering. Where depth
comparison is supported it may be linear filtered whether this bit is present or not, but where
this bit is not present the filtered value may be computed in an implementation-dependent
manner which differs from the normal rules of linear filtering. The resulting value must be in
the range [0,1] and should be proportional to, or a weighted average of, the number of
comparison passes or failures.

- **VK_FORMAT_FEATURE_2_TRANSFER_SRC_BIT** specifies that an image can be used as a source image for
  copy commands.
- **VK_FORMAT_FEATURE_2_TRANSFER_DST_BIT** specifies that an image can be used as a destination
  image for copy commands and clear commands.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_MINMAX_BIT** specifies VkImage can be used as a
  sampled image with a min or max VkSamplerReductionMode. This bit must only be exposed for
  formats that also support the VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_CUBIC_BIT** specifies that VkImage can be used with a
  sampler that has either of magFilter or minFilter set to VK_FILTER_CUBIC_EXT, or be the source
  image for a blit with filter set to VK_FILTER_CUBIC_EXT. This bit must only be exposed for
  formats that also support the VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT. If the format being
  queried is a depth/stencil format, this only specifies that the depth aspect is cubic filterable.
- **VK_FORMAT_FEATURE_2_MIDPOINT_CHROMA_SAMPLES_BIT** specifies that an application can define a
  sampler Y’C_B_C_R conversion using this format as a source, and that an image of this format can be
  used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of
  VK_CHROMA_LOCATION_MIDPOINT. Otherwise both xChromaOffset and yChromaOffset must be
  VK_CHROMA_LOCATION_COSITED_EVEN. If a format does not incorporate chroma downsampling (it is
  not a “422” or “420” format) but the implementation supports sampler Y’C_B_C_R conversion for this
  format, the implementation must set VK_FORMAT_FEATURE_2_MIDPOINT_CHROMA_SAMPLES_BIT.
- **VK_FORMAT_FEATURE_2_COSITED_CHROMA_SAMPLES_BIT** specifies that an application can define a
  sampler Y’C_B_C_R conversion using this format as a source, and that an image of this format can be
  used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of
  VK_CHROMA_LOCATION_COSITED_EVEN. If neither **VK_FORMAT_FEATURE_2_COSITED_CHROMA_SAMPLES_BIT**
  nor **VK_FORMAT_FEATURE_2_MIDPOINT_CHROMA_SAMPLES_BIT** is set, the application must not define a
  sampler Y’C_B_C_R conversion using this format as a source.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT** specifies that an
  application can define a sampler Y’C_A_C_R conversion using this format as a source with
  chromaFilter set to VK_FILTER_LINEAR.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT**
  specifies that the format can have different chroma, min, and mag filters.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT**
  specifies that reconstruction is explicit, as described in Chroma Reconstruction. If this bit is not
  present, reconstruction is implicit by default.
• **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT** specifies that reconstruction can be forcibly made explicit by setting `VkSamplerYcbcrConversionCreateInfo::forceExplicitReconstruction` to `VK_TRUE`. If the format being queried supports **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT** it must also support **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT**.

• **VK_FORMAT_FEATURE_2_DISJOINT_BIT** specifies that a multi-planar image can have the **VK_IMAGE_CREATE_DISJOINT_BIT** set during image creation. An implementation must not set **VK_FORMAT_FEATURE_2_DISJOINT_BIT** for single-plane formats.

• **VK_FORMAT_FEATURE_2_FRAGMENT_DENSITY_MAP_BIT_EXT** specifies that an image view can be used as a fragment density map attachment.

• **VK_FORMAT_FEATURE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR** specifies that an image view can be used as a fragment shading rate attachment. An implementation must not set this feature for formats with a numeric format other than `UINT`, or set it as a buffer feature.

• **VK_FORMAT_FEATURE_2_VIDEO_DECODE_OUTPUT_BIT_KHR** specifies that an image view with this format can be used as a decode output picture in video decode operations.

• **VK_FORMAT_FEATURE_2_VIDEO_DECODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video decode operations.

• **VK_FORMAT_FEATURE_2_VIDEO_ENCODE_INPUT_BIT_KHR** specifies that an image view with this format can be used as an encode input picture in video encode operations.

• **VK_FORMAT_FEATURE_2_VIDEO_ENCODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video encode operations.

• **VK_FORMAT_FEATURE_2_STORAGE_READWITHOUT_FORMAT_BIT** specifies that image views or buffer views created with this format can be used as storage images or storage texel buffers respectively for read operations without specifying a format.

• **VK_FORMAT_FEATURE_2_STORAGE_WRITEWITHOUT_FORMAT_BIT** specifies that image views or buffer views created with this format can be used as storage images or storage texel buffers respectively for write operations without specifying a format.

• **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT** specifies that image views created with this format can be used for depth comparison performed by `OpImage*Dref*` instructions.

• **VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV** specifies that the format is supported as a renderable **Linear Color Attachment**. This bit will be set for renderable color formats in the **linearTilingFeatures**. This must not be set in the **optimalTilingFeatures** or **bufferFeatures**.

---

**Note**

Specific video profiles may have additional restrictions on the format and other image creation parameters corresponding to image views used by video coding operations that can be enumerated using the `vkGetPhysicalDeviceVideoFormatPropertiesKHR` command.
members.

- `VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM` specifies that image views created with this format can be used as the weight image input to weight image sampling operations.
- `VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM` specifies that image views created with this format can be sampled in weight image sampling operations.
- `VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM` specifies that image views created with this format can be used in block matching operations.
- `VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM` specifies that image views created with this format can be sampled in box filter sampling operations.
- `VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT_EXT` specifies that an image can be created with `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT`.

The following bits may be set in bufferFeatures, specifying that the features are supported by buffers or buffer views created with the queried `vkGetPhysicalDeviceFormatProperties2::format`:

- `VK_FORMAT_FEATURE_2_UNIFORM_TEXEL_BUFFER_BIT` specifies that the format can be used to create a buffer view that can be bound to a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.
- `VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_BIT` specifies that the format can be used to create a buffer view that can be bound to a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.
- `VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_ATOMIC_BIT` specifies that atomic operations are supported on `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` with this format.
- `VK_FORMAT_FEATURE_2_VERTEX_BUFFER_BIT` specifies that the format can be used as a vertex attribute format (`VkVertexInputAttributeDescription::format`).
- `VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR` specifies that the format can be used as the vertex format when creating an acceleration structure (`VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`). This format can also be used as the vertex format in host memory when doing host acceleration structure builds.
- `VK_FORMAT_FEATURE_2_STORAGE_READWITHOUT_FORMAT_BIT` specifies that buffer views created with this format can be used as storage texel buffers for read operations without specifying a format.
- `VK_FORMAT_FEATURE_2_STORAGE_WRITEWITHOUT_FORMAT_BIT` specifies that buffer views created with this format can be used as storage texel buffers for write operations without specifying a format.
- `VK_FORMAT_FEATURE_2_OPTICAL_FLOW_IMAGE_BIT_NV` specifies that an image view with this format can be used as an input or reference to optical flow operations.
- `VK_FORMAT_FEATURE_2_OPTICAL_FLOW_VECTOR_BIT_NV` specifies that an image view with this format can be used as a flow vector map (either as hint, output or global flow) for optical flow operations.
- `VK_FORMAT_FEATURE_2_OPTICAL_FLOW_COST_BIT_NV` specifies that an image view with this format can be used as an output cost map for optical flow operations.

```cpp
// Provided by VK_VERSION_1_3
typedef VkFlags64 VkFormatFeatureFlags2;
```
or the equivalent

```c
// Provided by VK_KHR_format_feature_flags2
typedef VkFormatFeatureFlags2 VkFormatFeatureFlags2KHR;
```

`VkFormatFeatureFlags2` is a bitmask type for setting a mask of zero or more `VkFormatFeatureFlagBits2`.

To query the performance characteristics of a subpass resolve operation for an attachment with a `VkFormat`, add a `VkSubpassResolvePerformanceQueryEXT` structure to the `pNext` chain of `VkFormatProperties2`.

The `VkSubpassResolvePerformanceQueryEXT` structure is defined as:

```c
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkSubpassResolvePerformanceQueryEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 optimal;
} VkSubpassResolvePerformanceQueryEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `optimal` specifies that a subpass resolve operation is optimally performed.

If `optimal` is `VK_FALSE` for a `VkFormat`, using a subpass resolve operation on a multisampled attachment with this format can incur additional costs, including additional memory bandwidth usage and a higher memory footprint. If an attachment with such a format is used in a multisampled-render-to-single-sampled subpass, the additional memory and memory bandwidth usage can nullify the benefits of using the `VK_EXT_multisampled_render_to_single_sampled` extension.

**Valid Usage (Implicit)**

- `VUID-VkSubpassResolvePerformanceQueryEXT-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_SUBPASS_RESOLVE_PERFORMANCE_QUERY_EXT`

### 49.2.1. Potential Format Features

Some valid usage conditions depend on the format features supported by a `VkImage` whose `VkImageTiling` is unknown. In such cases the exact `VkFormatFeatureFlagBits` supported by the `VkImage` cannot be determined, so the valid usage conditions are expressed in terms of the potential format features of the `VkImage` format.

The potential format features of a `VkFormat` are defined as follows:

- The union of `VkFormatFeatureFlagBits` and `VkFormatFeatureFlagBits2`, supported when the
### 49.3. Required Format Support

Implementations **must** support at least the following set of features on the listed formats. For images, these features **must** be supported for every `VkImageType` (including arrayed and cube variants) unless otherwise noted. These features are supported on existing formats without needing to advertise an extension or needing to explicitly enable them. Support for additional functionality beyond the requirements listed here is queried using the `vkGetPhysicalDeviceFormatProperties` command.

**Note**

Unless otherwise excluded below, the required formats are supported for all `VkImageCreateFlags` values as long as those flag values are otherwise allowed.

The following tables show which feature bits **must** be supported for each format. Formats that are required to support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` **must** also support `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT` and `VK_FORMAT_FEATURE_TRANSFER_DST_BIT`.

</tbody>
</table>

Format features marked † must be supported for optimalTilingFeatures with VkImageType VK_IMAGE_TYPE_2D if the VkPhysicalDevice supports the VkPhysicalDeviceSamplerYcbcrConversionFeatures feature.

Formats marked ‡ do not require a sampler Y′C′B′R conversion for VK_IMAGE_ASPECT_COLOR_BIT image views if the VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT::formatRgba10x6WithoutYCbCrSampler feature is enabled.

Implementations are not required to support the VK_IMAGE_CREATE_SPARSE_BINDING_BIT, VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT, or VK_IMAGE_CREATE_SPARSE_ALIASED_BIT VkImageCreateFlags for the above formats that require sampler Y′C′B′R conversion. To determine whether the implementation supports sparse image creation flags with these formats use vkGetPhysicalDeviceImageFormatProperties or vkGetPhysicalDeviceImageFormatProperties2.

**VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT** must be supported for the following formats if the fragmentDensityMap feature is enabled:

- VK_FORMAT_R8G8_UNORM

**VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR** must be supported in bufferFeatures for the following formats if the accelerationStructure feature is supported:

- VK_FORMAT_R32G32_SFLOAT
- VK_FORMAT_R32G32B32_SFLOAT
- VK_FORMAT_R16G16_SFLOAT
- VK_FORMAT_R16G16B16A16_SFLOAT
- VK_FORMAT_R16G16_SNORM
- VK_FORMAT_R16G16B16A16_SNORM

**VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR** must be supported for the following formats if the attachmentFragmentShadingRate feature is supported:

- VK_FORMAT_R8_UINT
If `VK_EXT_host_image_copy` is supported and `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` is supported in `optimalTilingFeatures` or `linearTilingFeatures` for a color format, `VK_FORMAT_FEATURE_2_HOST_IMAGE_TRANSFER_BIT_EXT` must also be supported in `optimalTilingFeatures` or `linearTilingFeatures` respectively.

### 49.3.1. Formats Without Shader Storage Format

The device-level features for using a storage image or a storage texel buffer with an image format of `Unknown`, `shaderStorageImageReadWithoutFormat` and `shaderStorageImageWriteWithoutFormat`, only apply to the following formats:

- `VK_FORMAT_R8G8B8A8_UNORM`
- `VK_FORMAT_R8G8B8A8_SNORM`
- `VK_FORMAT_R8G8B8A8_UINT`
- `VK_FORMAT_R8G8B8A8_SINT`
- `VK_FORMAT_R32_UINT`
- `VK_FORMAT_R32_SINT`
- `VK_FORMAT_R32_SFLOAT`
- `VK_FORMAT_R32G32_UINT`
- `VK_FORMAT_R32G32_SINT`
- `VK_FORMAT_R32G32_SFLOAT`
- `VK_FORMAT_R32G32B32A32_UINT`
- `VK_FORMAT_R32G32B32A32_SINT`
- `VK_FORMAT_R32G32B32A32_SFLOAT`
- `VK_FORMAT_R16G16B16A16_UINT`
- `VK_FORMAT_R16G16B16A16_SINT`
- `VK_FORMAT_R16G16B16A16_SFLOAT`
- `VK_FORMAT_R16G16_SFLOAT`
- `VK_FORMAT_B10G11R11_UFLOAT_PACK32`
- `VK_FORMAT_R16_SFLOAT`
- `VK_FORMAT_R16G16B16A16_UNIFORM`
- `VK_FORMAT_A2B10G10R10_UNORM_PACK32`
- `VK_FORMAT_R16G16_UNORM`
- `VK_FORMAT_R8G8_UNORM`
- `VK_FORMAT_R16_UNORM`
- `VK_FORMAT_R8_UNORM`
- `VK_FORMAT_R16G16B16A16_SNORM`
- `VK_FORMAT_R16G16B16A16_SFLOAT`

3902
• VK_FORMAT_R8G8_SNORM
• VK_FORMAT_R16_SNORM
• VK_FORMAT_R8_SNORM
• VK_FORMAT_R16G16_SINT
• VK_FORMAT_R8G8_SINT
• VK_FORMAT_R16_SINT
• VK_FORMAT_R8_SINT
• VK_FORMAT_A2B10G10R10_UINT_PACK32
• VK_FORMAT_R16G16_UINT
• VK_FORMAT_R8G8_UINT
• VK_FORMAT_R16_UINT
• VK_FORMAT_R8_UINT
• VK_FORMAT_A8_UNORM_KHR

Note
This list of formats is the union of required storage formats from Required Format Support section and formats listed in shaderStorageImageExtendedFormats.

An implementation that supports VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT for any format from the given list of formats and supports shaderStorageImageReadWithoutFormat must support VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT for that same format if Vulkan 1.3 or the VK_KHR_format_feature_flags2 extension is supported.

An implementation that supports VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT for any format from the given list of formats and supports shaderStorageImageWriteWithoutFormat must support VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT for that same format if Vulkan 1.3 or the VK_KHR_format_feature_flags2 extension is supported.

49.3.2. Depth Comparison Format Support

If Vulkan 1.3 or the VK_KHR_format_feature_flags2 extension is supported, a depth/stencil format with a depth component supporting VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT must support VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT.

49.3.3. Format Feature Dependent Usage Flags

Certain resource usage flags depend on support for the corresponding format feature flag for the format in question. The following tables list the VkBufferUsageFlagBits and VkImageUsageFlagBits that have such dependencies, and the format feature flags they depend on. Additional restrictions, including, but not limited to, further required format feature flags specific to the particular use of the resource may apply, as described in the respective sections of this specification.

Chapter 50. Additional Capabilities

This chapter describes additional capabilities beyond the minimum capabilities described in the Limits and Formats chapters, including:

- Additional Image Capabilities
- Additional Buffer Capabilities
- Optional Semaphore Capabilities
- Optional Fence Capabilities
- Timestamp Calibration Capabilities

50.1. Additional Image Capabilities

Additional image capabilities, such as larger dimensions or additional sample counts for certain image types, or additional capabilities for linear tiling format images, are described in this section.

To query additional capabilities specific to image types, call:

```c
// Provided by VK_VERSION_1_0
VkResult vkGetPhysicalDeviceImageFormatProperties(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkImageType type,
    VkImageTiling tiling,
    VkImageUsageFlags usage,
    VkImageCreateFlags flags,
    VkImageFormatProperties* pImageFormatProperties);
```

- `physicalDevice` is the physical device from which to query the image capabilities.
- `format` is a `VkFormat` value specifying the image format, corresponding to `VkImageCreateInfo::format`.
- `type` is a `VkImageType` value specifying the image type, corresponding to `VkImageCreateInfo::imageType`.
- `tiling` is a `VkImageTiling` value specifying the image tiling, corresponding to `VkImageCreateInfo::tiling`.
- `usage` is a bitmask of `VkImageUsageFlagBits` specifying the intended usage of the image, corresponding to `VkImageCreateInfo::usage`.
- `flags` is a bitmask of `VkImageCreateFlagBits` specifying additional parameters of the image, corresponding to `VkImageCreateInfo::flags`.
- `pImageFormatProperties` is a pointer to a `VkImageFormatProperties` structure in which capabilities are returned.

The `format`, `type`, `tiling`, `usage`, and `flags` parameters correspond to parameters that would be
consumed by `vkCreateImage` (as members of `VkImageCreateInfo`).

If `format` is not a supported image format, or if the combination of `format`, `type`, `tiling`, `usage`, and `flags` is not supported for images, then `vkGetPhysicalDeviceImageFormatProperties` returns `VK_ERROR_FORMAT_NOT_SUPPORTED`.

The limitations on an image format that are reported by `vkGetPhysicalDeviceImageFormatProperties` have the following property: if `usage1` and `usage2` of type `VkImageUsageFlags` are such that the bits set in `usage1` are a subset of the bits set in `usage2`, and `flags1` and `flags2` of type `VkImageCreateFlags` are such that the bits set in `flags1` are a subset of the bits set in `flags2`, then the limitations for `usage1` and `flags1` must be no more strict than the limitations for `usage2` and `flags2`, for all values of `format`, `type`, and `tiling`.

If `VK_EXT_host_image_copy` is supported, `usage` includes `VK_IMAGE_USAGE_SAMPLED_BIT`, and `flags` does not include either of `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT`, then the result of calls to `vkGetPhysicalDeviceImageFormatProperties` with identical parameters except for the inclusion of `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` in `usage` must be identical.

### Valid Usage

- VUID-vkGetPhysicalDeviceImageFormatProperties-tiling-02248
  - `tiling` must not be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`. (Use `vkGetPhysicalDeviceImageFormatProperties2` instead)

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceImageFormatProperties-physicalDevice-parameter
  - `physicalDevice` must be a valid `VkPhysicalDevice` handle

- VUID-vkGetPhysicalDeviceImageFormatProperties-format-parameter
  - `format` must be a valid `VkFormat` value

- VUID-vkGetPhysicalDeviceImageFormatProperties-type-parameter
  - `type` must be a valid `VkImageType` value

- VUID-vkGetPhysicalDeviceImageFormatProperties-tiling-parameter
  - `tiling` must be a valid `VkImageTiling` value

- VUID-vkGetPhysicalDeviceImageFormatProperties-usage-parameter
  - `usage` must be a valid combination of `VkImageUsageFlagBits` values

- VUID-vkGetPhysicalDeviceImageFormatProperties-usage-requiredbitmap
  - `usage` must not be 0

- VUID-vkGetPhysicalDeviceImageFormatProperties-flags-parameter
  - `flags` must be a valid combination of `VkImageCreateFlagBits` values

  - `pImageFormatProperties` must be a valid pointer to a `VkImageFormatProperties` structure
Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OFDEVICE_MEMORY
- VK_ERROR_FORMAT_NOT_SUPPORTED

The VkImageFormatProperties structure is defined as:

```
// Provided by VK_VERSION_1_0
typedef struct VkImageFormatProperties {
    VkExtent3D maxExtent;
    uint32_t maxMipLevels;
    uint32_t maxArrayLayers;
    VkSampleCountFlags sampleCounts;
    VkDeviceSize maxResourceSize;
} VkImageFormatProperties;
```

- **maxExtent** are the maximum image dimensions. See the Allowed Extent Values section below for how these values are constrained by type.

- **maxMipLevels** is the maximum number of mipmap levels. maxMipLevels must be equal to the number of levels in the complete mipmap chain based on the maxExtent.width, maxExtent.height, and maxExtent.depth, except when one of the following conditions is true, in which case it may instead be 1:
  - vkGetPhysicalDeviceImageFormatProperties::tiling was VK_IMAGE_TILING_LINEAR
  - VkPhysicalDeviceImageFormatInfo2::tiling was VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT
  - the VkPhysicalDeviceImageFormatInfo2::pNext chain included a VkPhysicalDeviceExternalImageFormatInfo structure with a handle type included in the handleTypes member for which mipmap image support is not required
  - image format is one of the formats that require a sampler Y’CbCr conversion
  - flags contains VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT

- **maxArrayLayers** is the maximum number of array layers. maxArrayLayers must be no less than VkPhysicalDeviceLimits::maxImageArrayLayers, except when one of the following conditions is true, in which case it may instead be 1:
  - tiling is VK_IMAGE_TILING_LINEAR
  - tiling is VK_IMAGE_TILING_OPTIMAL and type is VK_IMAGE_TYPE_3D
  - format is one of the formats that require a sampler Y’CbCr conversion

- If tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, then maxArrayLayers must not be 0.
• **sampleCounts** is a bitmask of **VkSampleCountFlagBits** specifying all the supported sample counts for this image as described below.

• **maxResourceSize** is an upper bound on the total image size in bytes, inclusive of all image subresources. Implementations **may** have an address space limit on total size of a resource, which is advertised by this property. **maxResourceSize** **must** be at least $2^{31}$.

  **Note**
  
  There is no mechanism to query the size of an image before creating it, to compare that size against **maxResourceSize**. If an application attempts to create an image that exceeds this limit, the creation will fail and **vkCreateImage** will return **VK_ERROR_OUT_OF_DEVICE_MEMORY**. While the advertised limit must be at least $2^{31}$, it may not be possible to create an image that approaches that size, particularly for **VK_IMAGE_TYPE_1D**.

If the combination of parameters to **vkGetPhysicalDeviceImageFormatProperties** is not supported by the implementation for use in **vkCreateImage**, then all members of **VkImageFormatProperties** will be filled with zero.

  **Note**
  
  Filling **VkImageFormatProperties** with zero for unsupported formats is an exception to the usual rule that output structures have undefined contents on error. This exception was unintentional, but is preserved for backwards compatibility.

To determine the image capabilities compatible with an external memory handle type, call:

```c
// Provided by VK_NV_external_memory_capabilities
VkResult vkGetPhysicalDeviceExternalImageFormatPropertiesNV(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkImageType type,
    VkImageTiling tiling,
    VkImageUsageFlags usage,
    VkImageCreateFlags flags,
    VkExternalMemoryHandleTypeFlagsNV externalHandleType,
    VkExternalImageFormatPropertiesNV* pExternalImageFormatProperties);
```

• **physicalDevice** is the physical device from which to query the image capabilities

• **format** is the image format, corresponding to **VkImageCreateInfo::format**.

• **type** is the image type, corresponding to **VkImageCreateInfo::imageType**.

• **tiling** is the image tiling, corresponding to **VkImageCreateInfo::tiling**.

• **usage** is the intended usage of the image, corresponding to **VkImageCreateInfo::usage**.

• **flags** is a bitmask describing additional parameters of the image, corresponding to **VkImageCreateInfo::flags**.

• **externalHandleType** is either one of the bits from **VkExternalMemoryHandleTypeFlagBitsNV**, or
• `pExternalImageFormatProperties` is a pointer to a `VkExternalImageFormatPropertiesNV` structure in which capabilities are returned.

If `externalHandleType` is 0, `pExternalImageFormatProperties->imageFormatProperties` will return the same values as a call to `vkGetPhysicalDeviceImageFormatProperties`, and the other members of `pExternalImageFormatProperties` will all be 0. Otherwise, they are filled in as described for `VkExternalImageFormatPropertiesNV`.

---

**Valid Usage**

- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-externalHandleType-07721 `externalHandleType` must not have more than one bit set

---

**Valid Usage (Implicit)**

- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-format-parameter `format` must be a valid `VkFormat` value
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-type-parameter `type` must be a valid `VkImageType` value
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-tiling-parameter `tiling` must be a valid `VkImageTiling` value
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-usage-parameter `usage` must be a valid combination of `VkImageUsageFlagBits` values
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-usage-requiredbitmask `usage` must not be 0
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-flags-parameter `flags` must be a valid combination of `VkImageCreateFlagBits` values
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-externalHandleType-parameter `externalHandleType` must be a valid combination of `VkExternalMemoryHandleTypeFlagBitsNV` values
The `VkExternalImageFormatPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_external_memory_capabilities
typedef struct VkExternalImageFormatPropertiesNV {
    VkImageFormatProperties imageFormatProperties;
    VkExternalMemoryFeatureFlagsNV externalMemoryFeatures;
    VkExternalMemoryHandleTypeFlagsNV exportFromImportedHandleTypes;
    VkExternalMemoryHandleTypeFlagsNV compatibleHandleTypes;
} VkExternalImageFormatPropertiesNV;
```

- `imageFormatProperties` will be filled in as when calling `vkGetPhysicalDeviceImageFormatProperties`, but the values returned may vary depending on the external handle type requested.
- `externalMemoryFeatures` is a bitmask of `VkExternalMemoryFeatureFlagBitsNV`, indicating properties of the external memory handle type (`vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType`) being queried, or 0 if the external memory handle type is 0.
- `exportFromImportedHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` containing a bit set for every external handle type that may be used to create memory from which the handles of the type specified in `vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType` can be exported, or 0 if the external memory handle type is 0.
- `compatibleHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` containing a bit set for every external handle type that may be specified simultaneously with the handle type specified by `vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType` when calling `vkAllocateMemory`, or 0 if the external memory handle type is 0. `compatibleHandleTypes` will always contain `vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType` Bits which can be set in `VkExternalImageFormatPropertiesNV::externalMemoryFeatures`, indicating properties of the external memory handle type, are:

```c
// Provided by VK_NV_external_memory_capabilities
typedef enum VkExternalMemoryFeatureFlagBitsNV {
    VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_NV = 0x00000001,
};
```
VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_NV = 0x00000002,
VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_NV = 0x00000004,
} VkExternalMemoryFeatureFlagBitsNV;

• VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_NV specifies that external memory of the specified type must be created as a dedicated allocation when used in the manner specified.
• VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_NV specifies that the implementation supports exporting handles of the specified type.
• VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_NV specifies that the implementation supports importing handles of the specified type.

// Provided by VK_NV_external_memory_capabilities
typedef VkFlags VkExternalMemoryFeatureFlagsNV;

VkExternalMemoryFeatureFlagsNV is a bitmask type for setting a mask of zero or more VkExternalMemoryFeatureFlagBitsNV.

To query additional capabilities specific to image types, call:

// Provided by VK_VERSION_1_1
VkResult vkGetPhysicalDeviceImageFormatProperties2(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceImageFormatInfo2* pImageFormatInfo,
    VkImageFormatProperties2* pImageFormatProperties);

or the equivalent command

// Provided by VK_KHR_get_physical_device_properties2
VkResult vkGetPhysicalDeviceImageFormatProperties2KHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceImageFormatInfo2* pImageFormatInfo,
    VkImageFormatProperties2* pImageFormatProperties);

• physicalDevice is the physical device from which to query the image capabilities.
• pImageFormatInfo is a pointer to a VkPhysicalDeviceImageFormatInfo2 structure describing the parameters that would be consumed by vkCreateImage.
• pImageFormatProperties is a pointer to a VkImageFormatProperties2 structure in which capabilities are returned.

vkGetPhysicalDeviceImageFormatProperties2 behaves similarly to vkGetPhysicalDeviceImageFormatProperties, with the ability to return extended information in apNext chain of output structures.

If the pNext chain of pImageFormatInfo includes a VkVideoProfileListInfoKHR structure with a profileCount member greater than 0, then this command returns format capabilities specific to
image types used in conjunction with the specified video profiles. In this case, this command will return one of the video-profile-specific error codes if any of the profiles specified via VkVideoProfileListInfoKHR::pProfiles are not supported. Furthermore, if VkPhysicalDeviceImageFormatInfo2::usage includes any image usage flag not supported by the specified video profiles, then this command returns VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR.

Valid Usage

- VUID-vkGetPhysicalDeviceImageFormatProperties2-pNext-01868
  If the pNext chain of pImageFormatProperties includes a VkAndroidHardwareBufferUsageANDROID structure, the pNext chain of pImageFormatInfo must include a VkPhysicalDeviceExternalImageFormatInfo structure with handleType set to VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID

- VUID-vkGetPhysicalDeviceImageFormatProperties2-pNext-09004
  If the pNext chain of pImageFormatProperties includes a VkHostImageCopyDevicePerformanceQueryEXT structure, pImageFormatInfo->usage must contain VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceImageFormatProperties2-physicalDevice-parameter
  physicalDevice must be a valid VkPhysicalDevice handle

- VUID-vkGetPhysicalDeviceImageFormatProperties2-pImageFormatInfo-parameter
  pImageFormatInfo must be a valid pointer to a valid VkPhysicalDeviceImageFormatInfo2 structure

  pImageFormatProperties must be a valid pointer to a VkImageFormatProperties2 structure

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_FORMAT_NOT_SUPPORTED
- VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR
- VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR
The `VkPhysicalDeviceImageFormatInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceImageFormatInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkFormat format;
    VkImageType type;
    VkImageTiling tiling;
    VkImageUsageFlags usage;
    VkImageCreateFlags flags;
} VkPhysicalDeviceImageFormatInfo2;
```

or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkPhysicalDeviceImageFormatInfo2 VkPhysicalDeviceImageFormatInfo2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure. The `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` is used to provide additional image parameters to `vkGetPhysicalDeviceImageFormatProperties2`.
- `format` is a `VkFormat` value indicating the image format, corresponding to `VkImageCreateInfo::format`.
- `type` is a `VkImageType` value indicating the image type, corresponding to `VkImageCreateInfo::imageType`.
- `tiling` is a `VkImageTiling` value indicating the image tiling, corresponding to `VkImageCreateInfo::tiling`.
- `usage` is a bitmask of `VkImageUsageFlagBits` indicating the intended usage of the image, corresponding to `VkImageCreateInfo::usage`.
- `flags` is a bitmask of `VkImageCreateFlagBits` indicating additional parameters of the image, corresponding to `VkImageCreateInfo::flags`.

The members of `VkPhysicalDeviceImageFormatInfo2` correspond to the arguments to `vkGetPhysicalDeviceImageFormatProperties`, with `sType` and `pNext` added for extensibility.

### Valid Usage

- **VUID-VkPhysicalDeviceImageFormatInfo2-tiling-02249**
  
  `tiling` must be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` if and only if the `pNext` chain includes `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`.

- **VUID-VkPhysicalDeviceImageFormatInfo2-tiling-02313**

  If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and `flags` contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, then the `pNext` chain must include a
VkImageFormatListCreateInfo structure with non-zero `viewFormatCount`

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageFormatInfo2-sType-sType
  *sType* must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_INFO_2`

- VUID-VkPhysicalDeviceImageFormatInfo2-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkImageCompressionControlEXT`, `VkImageFormatListCreateInfo`, `VkImageStencilUsageCreateInfo`, `VkOpticalFlowImageFormatInfoNV`, `VkPhysicalDeviceExternalImageFormatInfo`, `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`, `VkPhysicalDeviceImageViewImageFormatInfoEXT`, or `VkVideoProfileListInfoKHR`

- VUID-VkPhysicalDeviceImageFormatInfo2-sType-unique
  The *sType* value of each struct in the `pNext` chain must be unique

- VUID-VkPhysicalDeviceImageFormatInfo2-format-parameter
  *format* must be a valid `VkFormat` value

- VUID-VkPhysicalDeviceImageFormatInfo2-type-parameter
  *type* must be a valid `VkImageType` value

- VUID-VkPhysicalDeviceImageFormatInfo2-tiling-parameter
  *tiling* must be a valid `VkImageTiling` value

- VUID-VkPhysicalDeviceImageFormatInfo2-usage-parameter
  *usage* must be a valid combination of `VkImageUsageFlagBits` values

- VUID-VkPhysicalDeviceImageFormatInfo2-usage-requiredbitmask
  *usage* must not be 0

- VUID-VkPhysicalDeviceImageFormatInfo2-flags-parameter
  *flags* must be a valid combination of `VkImageCreateFlagBits` values

The `VkImageFormatProperties2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkImageFormatProperties2 {
    VkStructureType sType;
    void* pNext;
    VkImageFormatProperties imageFormatProperties;
} VkImageFormatProperties2;
```

or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkImageFormatProperties2 VkImageFormatProperties2KHR;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure. The **pNext** chain of `VkImageFormatProperties2` is used to allow the specification of additional capabilities to be returned from `vkGetPhysicalDeviceImageFormatProperties2`.

• **imageFormatProperties** is a `VkImageFormatProperties` structure in which capabilities are returned.

If the combination of parameters to `vkGetPhysicalDeviceImageFormatProperties2` is not supported by the implementation for use in `vkCreateImage`, then all members of `imageFormatProperties` will be filled with zero.

**Note**

Filling `imageFormatProperties` with zero for unsupported formats is an exception to the usual rule that output structures have undefined contents on error. This exception was unintentional, but is preserved for backwards compatibility. This exception only applies to `imageFormatProperties`, not `sType`, `pNext`, or any structures chained from `pNext`.

---

**Valid Usage (Implicit)**

- VUID-VkImageFormatProperties2-sType-sType  
  `sType` must be `VK_STRUCTURE_TYPE_IMAGE_FORMAT_PROPERTIES_2`

- VUID-VkImageFormatProperties2-pNext-pNext  
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either **NULL** or a pointer to a valid instance of `VkAndroidHardwareBufferUsageANDROID`, `VkExternalImageFormatProperties`, `VkFilterCubicImageViewImageFormatPropertiesEXT`, `VkHostImageCopyDevicePerformanceQueryEXT`, `VkImageCompressionPropertiesEXT`, `VkSamplerYcbcrConversionImageFormatProperties`, or `VkTextureLODGatherFormatPropertiesAMD`

- VUID-VkImageFormatProperties2-sType-unique  
  The `sType` value of each struct in the `pNext` chain must be unique

To determine if texture gather functions that take explicit LOD and/or bias argument values can be used with a given image format, add a `VkTextureLODGatherFormatPropertiesAMD` structure to the `pNext` chain of the `VkImageFormatProperties2` structure in a call to `vkGetPhysicalDeviceImageFormatProperties2`.

The `VkTextureLODGatherFormatPropertiesAMD` structure is defined as:

```c
// Provided by VK_AMD_texture_gather_bias_lod
typedef struct VkTextureLODGatherFormatPropertiesAMD {
    VkStructureType sType;
    void* pNext;
    VkBool32 supportsTextureGatherLODBiasAMD;
};
```
• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `supportsTextureGatherLODBiasAMD` tells if the image format can be used with texture gather bias/LOD functions, as introduced by the `VK_AMD_texture_gather_bias_lod` extension. This field is set by the implementation. User-specified value is ignored.

### Valid Usage (Implicit)

- `VUID-VkTextureLODGatherFormatPropertiesAMD-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_TEXTURE_LOD_GATHER_FORMAT_PROPERTIES_AMD`

To determine the image capabilities compatible with an external memory handle type, add a `VkPhysicalDeviceExternalImageFormatInfo` structure to the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure and a `VkExternalImageFormatProperties` structure to the `pNext` chain of the `VkImageFormatProperties2` structure.

The `VkPhysicalDeviceExternalImageFormatInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalImageFormatInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalImageFormatInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkPhysicalDeviceExternalImageFormatInfo
VkPhysicalDeviceExternalImageFormatInfoKHR;
```

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the memory handle type that will be used with the memory associated with the image.

If `handleType` is 0, `vkGetPhysicalDeviceImageFormatProperties2` will behave as if `VkPhysicalDeviceExternalImageFormatInfo` was not present, and `VkExternalImageFormatProperties` will be ignored.

If `handleType` is not compatible with the `format`, `type`, `tiling`, `usage`, and `flags` specified in `VkPhysicalDeviceImageFormatInfo2`, then `vkGetPhysicalDeviceImageFormatProperties2` returns
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalImageFormatInfo-sType-sType  
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_IMAGE_FORMAT_INFO

- VUID-VkPhysicalDeviceExternalImageFormatInfo-handleType-parameter  
  If handleType is not 0, handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

Possible values of VkPhysicalDeviceExternalImageFormatInfo::handleType, specifying an external memory handle type, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkExternalMemoryHandleTypeFlagBits {
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT = 0x00000008,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT = 0x00000010,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT = 0x00000020,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT = 0x00000040,
    // Provided by VK_EXT_external_memory_dma_buf
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT = 0x00000200,
    // Provided by VK_ANDROID_external_memory_android_hardware_buffer
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID = 0x00000400,
    // Provided by VK_EXT_external_memory_host
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT = 0x00000800,
    // Provided by VK_EXT_external_memory_host
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT = 0x00001000,
    // Provided by VK_FUCHSIA_external_memory
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA = 0x00002000,
    // Provided by VK_NV_external_memory_rdma
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV = 0x00004000,
    // Provided by VK_QNX_external_memory_screen_buffer
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX = 0x00008000,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT,
};
```
or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryHandleTypeFlagBits VkExternalMemoryHandleTypeFlagBitsKHR;
```

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT** specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it must be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT** specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT** specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying memory resource represented by its Vulkan memory object, and will therefore become invalid when all Vulkan memory objects associated with it are destroyed.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT** specifies an NT handle returned by `IDXGIResource1::CreateSharedHandle` referring to a Direct3D 10 or 11 texture resource. It owns a reference to the memory used by the Direct3D resource.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT** specifies a global share handle returned by `IDXGIResource::GetSharedHandle` referring to a Direct3D 10 or 11 texture resource. It does not own a reference to the underlying Direct3D resource, and will therefore become invalid when all Vulkan memory objects and Direct3D resources associated with it are destroyed.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT** specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 heap resource. It owns a reference to the resources used by the Direct3D heap.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT** specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 committed resource. It owns a reference to the memory used by the Direct3D resource.
• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT** specifies a host pointer returned by a host memory allocation command. It does not own a reference to the underlying memory resource, and will therefore become invalid if the host memory is freed.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT** specifies a host pointer to host mapped foreign memory. It does not own a reference to the underlying memory resource, and will therefore become invalid if the foreign memory is unmapped or otherwise becomes no longer available.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT** is a file descriptor for a Linux dma_buf. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** specifies an AHardwareBuffer object defined by the Android NDK. See Android Hardware Buffers for more details of this handle type.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA** is a Zircon handle to a virtual memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV** is a handle to an allocation accessible by remote devices. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX** specifies a _screen_buffer object defined by the QNX SDP. See QNX Screen Buffer for more details of this handle type.
Some external memory handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

**Table 83. External memory handle types compatibility**

<table>
<thead>
<tr>

</tbody>
</table>

**Note**

The above table does not restrict the drivers and devices with which **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT** and **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST-muted_FOREIGN_MEMORY_BIT_EXT** may be shared, as these handle types inherently mean memory that does not come from the same device, as they import memory from the host or a foreign device, respectively.

**Note**

Even though the above table does not restrict the drivers and devices with which
VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT may be shared, query mechanisms exist in the Vulkan API that prevent the import of incompatible dma-bufs (such as vkGetMemoryFdPropertiesKHR) and that prevent incompatible usage of dma-bufs (such as VkPhysicalDeviceExternalBufferInfo and VkPhysicalDeviceExternalImageFormatInfo).

```c
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalMemoryHandleTypeFlags;
```
or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryHandleTypeFlags VkExternalMemoryHandleTypeFlagsKHR;
```

VkExternalMemoryHandleTypeFlags is a bitmask type for setting a mask of zero or more VkExternalMemoryHandleTypeFlagBits.

The VkExternalImageFormatProperties structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkExternalImageFormatProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalMemoryProperties externalMemoryProperties;
} VkExternalImageFormatProperties;
```
or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalImageFormatProperties VkExternalImageFormatPropertiesKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **externalMemoryProperties** is a VkExternalMemoryProperties structure specifying various capabilities of the external handle type when used with the specified image creation parameters.

**Valid Usage (Implicit)**

- VUID-VkExternalImageFormatProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_IMAGE_FORMAT_PROPERTIES

The VkExternalMemoryProperties structure is defined as:
`typedef struct VkExternalMemoryProperties {
    VkExternalMemoryFeatureFlags externalMemoryFeatures;
    VkExternalMemoryHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalMemoryHandleTypeFlags compatibleHandleTypes;
} VkExternalMemoryProperties;`

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryProperties VkExternalMemoryPropertiesKHR;
```

- `externalMemoryFeatures` is a bitmask of `VkExternalMemoryFeatureFlagBits` specifying the features of `handleType`.
- `exportFromImportedHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying which types of imported handle `handleType` can be exported from.
- `compatibleHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying handle types which can be specified at the same time as `handleType` when creating an image compatible with external memory. `compatibleHandleTypes` must include at least `handleType`. Inclusion of a handle type in `compatibleHandleTypes` does not imply the values returned in `VkImageFormatProperties2` will be the same when `VkPhysicalDeviceExternalImageFormatInfo::handleType` is set to that type. The application is responsible for querying the capabilities of all handle types intended for concurrent use in a single image and intersecting them to obtain the compatible set of capabilities.

Bits which may be set in `VkExternalMemoryProperties::externalMemoryFeatures`, specifying features of an external memory handle type, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VK_VERSION_1_1
    VkExternalMemoryFeatureFlagBits {
        VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT = 0x00000001,
        VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT = 0x00000002,
        VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT = 0x00000004,
        // Provided by VK_KHR_external_memory_capabilities
        VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_KHR = VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT,
        // Provided by VK_KHR_external_memory_capabilities
        VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_KHR = VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT,
        // Provided by VK_KHR_external_memory_capabilities
        VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_KHR = VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT,
    } VkExternalMemoryFeatureFlagBits;
```

or the equivalent
• **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** specifies that images or buffers created with the specified parameters and handle type **must** use the mechanisms defined by `VkMemoryDedicatedRequirements` and `VkMemoryDedicatedAllocateInfo` to create (or import) a dedicated allocation for the image or buffer.

• **VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT** specifies that handles of this type **can** be exported from Vulkan memory objects.

• **VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT** specifies that handles of this type **can** be imported as Vulkan memory objects.

Because their semantics in external APIs roughly align with that of an image or buffer with a dedicated allocation in Vulkan, implementations are **required** to report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for the following external handle types:

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT**

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT**

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** for images only

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX** for images only

Implementations **must** not report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for buffers with external handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID**. Implementations **must** not report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for buffers with external handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX**. Implementations **must** not report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for images or buffers with external handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT**, or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT**.

To query the image capabilities that are compatible with a **Linux DRM format modifier**, set `VkPhysicalDeviceImageFormatInfo2::tiling` to **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT** and add a `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure to the `pNext` chain of

```plaintext
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryFeatureFlagBits VkExternalMemoryFeatureFlagBitsKHR;
```

```plaintext
• **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** specifies that images or buffers created with the specified parameters and handle type **must** use the mechanisms defined by `VkMemoryDedicatedRequirements` and `VkMemoryDedicatedAllocateInfo` to create (or import) a dedicated allocation for the image or buffer.

• **VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT** specifies that handles of this type **can** be exported from Vulkan memory objects.

• **VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT** specifies that handles of this type **can** be imported as Vulkan memory objects.

Because their semantics in external APIs roughly align with that of an image or buffer with a dedicated allocation in Vulkan, implementations are **required** to report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for the following external handle types:

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT**

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT**

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT**

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** for images only

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX** for images only

Implementations **must** not report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for buffers with external handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID**. Implementations **must** not report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for buffers with external handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX**. Implementations **must** not report **VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT** for images or buffers with external handle type **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT**, or **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT**.

```plaintext
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalMemoryFeatureFlags;
```

or the equivalent

```plaintext
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryFeatureFlags VkExternalMemoryFeatureFlagsKHR;
```

**VkExternalMemoryFeatureFlags** is a bitmask type for setting a mask of zero or more **VkExternalMemoryFeatureFlagBits**.

To query the image capabilities that are compatible with a **Linux DRM format modifier**, set `VkPhysicalDeviceImageFormatInfo2::tiling` to **VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT** and add a `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure to the `pNext` chain of
The `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkPhysicalDeviceImageDrmFormatModifierInfoEXT {
    VkStructureType sType;
    const void* pNext;
    uint64_t drmFormatModifier;
    VkSharingMode sharingMode;
    uint32_t queueFamilyIndexCount;
    const uint32_t* pQueueFamilyIndices;
} VkPhysicalDeviceImageDrmFormatModifierInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` is the image's Linux DRM format modifier, corresponding to `VkImageDrmFormatModifierExplicitCreateInfoEXT::modifier` or to `VkImageDrmFormatModifierListCreateInfoEXT::pModifiers`.
- `sharingMode` specifies how the image will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of `queueFamilyIndexCount` `uint32_t` values.

If the `drmFormatModifier` is incompatible with the parameters specified in `VkPhysicalDeviceImageFormatInfo2` and its `pNext` chain, then `vkGetPhysicalDeviceImageFormatProperties2` returns `VK_ERROR_FORMAT_NOT_SUPPORTED`. The implementation must support the query of any `drmFormatModifier`, including unknown and invalid modifier values.

## Valid Usage

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02314
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `pQueueFamilyIndices` must be a valid pointer to an array of `queueFamilyIndexCount uint32_t` values.

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02315
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` must be greater than 1.

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02316
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` must be unique and must be less than the `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create device.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_DRM_FORMAT_MODIFIER_INFO_EXT

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-parameter
  sharingMode must be a valid VkSharingMode value

To determine the number of combined image samplers required to support a multi-planar format, add VkSamplerYcbcrConversionImageFormatProperties to the pNext chain of the VkImageFormatProperties2 structure in a call to vkGetPhysicalDeviceImageFormatProperties2.

The VkSamplerYcbcrConversionImageFormatProperties structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionImageFormatProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t combinedImageSamplerDescriptorCount;
} VkSamplerYcbcrConversionImageFormatProperties;
```

or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversionImageFormatProperties
VkSamplerYcbcrConversionImageFormatPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- combinedImageSamplerDescriptorCount is the number of combined image sampler descriptors that the implementation uses to access the format.

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionImageFormatProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_IMAGE_FORMAT_PROPERTIES

combinedImageSamplerDescriptorCount is a number between 1 and the number of planes in the format. A descriptor set layout binding with immutable Y′C_bC_r conversion samplers will have a maximum combinedImageSamplerDescriptorCount which is the maximum across all formats supported by its samplers of the combinedImageSamplerDescriptorCount for each format. Descriptor sets with that layout will internally use that maximum combinedImageSamplerDescriptorCount descriptors for each descriptor in the binding. This expanded number of descriptors will be consumed from the descriptor pool when a descriptor set is allocated, and counts towards the
maxDescriptorSetSamplers, maxDescriptorSetSampledImages, maxPerStageDescriptorSamplers, and maxPerStageDescriptorSampledImages limits.

**Note**

All descriptors in a binding use the same maximum combinedImageSamplerDescriptorCount descriptors to allow implementations to use a uniform stride for dynamic indexing of the descriptors in the binding.

For example, consider a descriptor set layout binding with two descriptors and immutable samplers for multi-planar formats that have VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount values of 2 and 3 respectively. There are two descriptors in the binding and the maximum combinedImageSamplerDescriptorCount is 3, so descriptor sets with this layout consume 6 descriptors from the descriptor pool. To create a descriptor pool that allows allocating four descriptor sets with this layout, descriptorCount must be at least 24.

To obtain optimal Android hardware buffer usage flags for specific image creation parameters, add a VkAndroidHardwareBufferUsageANDROID structure to the pNext chain of a VkImageFormatProperties2 structure passed to vkGetPhysicalDeviceImageFormatProperties2. This structure is defined as:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferUsageANDROID {
    VkStructureType sType;
    void* pNext;
    uint64_t androidHardwareBufferUsage;
} VkAndroidHardwareBufferUsageANDROID;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **androidHardwareBufferUsage** returns the Android hardware buffer usage flags.

The androidHardwareBufferUsage field must include Android hardware buffer usage flags listed in the AHardwareBuffer Usage Equivalence table when the corresponding Vulkan image usage or image creation flags are included in the usage or flags fields of VkPhysicalDeviceImageFormatInfo2. It must include at least one GPU usage flag (AHardwareBuffer_usage_gpu_*), even if none of the corresponding Vulkan usages or flags are requested.

**Note**

Requiring at least one GPU usage flag ensures that Android hardware buffer memory will be allocated in a memory pool accessible to the Vulkan implementation, and that specializing the memory layout based on usage flags does not prevent it from being compatible with Vulkan. Implementations may avoid unnecessary restrictions caused by this requirement by using vendor usage flags to indicate that only the Vulkan uses indicated in VkImageFormatProperties2...
Valid Usage (Implicit)

- **VUID-VkAndroidHardwareBufferUsageANDROID-sType-sType**
  
sType must be `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_USAGE_ANDROID`

To query if using `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` has a negative impact on device performance when accessing an image, add `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` to `VkPhysicalDeviceImageFormatInfo2::usage`, and add a `VkHostImageCopyDevicePerformanceQueryEXT` structure to the `pNext` chain of a `VkImageFormatProperties2` structure passed to `vkGetPhysicalDeviceImageFormatProperties2`. This structure is defined as:

```c
typedef struct VkHostImageCopyDevicePerformanceQueryEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 optimalDeviceAccess;
    VkBool32 identicalMemoryLayout;
} VkHostImageCopyDevicePerformanceQueryEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **optimalDeviceAccess** returns `VK_TRUE` if use of host image copy has no adverse effect on device access performance, compared to an image that is created with exact same creation parameters, and bound to the same `VkDeviceMemory`, except that `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` is replaced with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and `VK_IMAGE_USAGE_TRANSFER_DST_BIT`.
- **identicalMemoryLayout** returns `VK_TRUE` if use of host image copy has no impact on memory layout compared to an image that is created with exact same creation parameters, and bound to the same `VkDeviceMemory`, except that `VK_IMAGE_USAGE_HOST_TRANSFER_BIT_EXT` is replaced with `VK_IMAGE_USAGE_TRANSFER_SRC_BIT` and `VK_IMAGE_USAGE_TRANSFER_DST_BIT`.

The implementation may return `VK_FALSE` in `optimalDeviceAccess` if `identicalMemoryLayout` is `VK_FALSE`. If `identicalMemoryLayout` is `VK_TRUE`, `optimalDeviceAccess` must be `VK_TRUE`.

The implementation may return `VK_TRUE` in `optimalDeviceAccess` while `identicalMemoryLayout` is `VK_FALSE`. In this situation, any device performance impact should not be measurable.

If `VkPhysicalDeviceImageFormatInfo2::format` is a block-compressed format and `vkGetPhysicalDeviceImageFormatProperties2` returns `VK_SUCCESS`, the implementation must return `VK_TRUE` in `optimalDeviceAccess`.

**Note**

Applications can make use of `optimalDeviceAccess` to determine their resource copying strategy. If a resource is expected to be accessed more on device than on
the host, and the implementation considers the resource sub-optimally accessed, it is likely better to use device copies instead.

**Note**

Layout not being identical yet still considered optimal for device access could happen if the implementation has different memory layout patterns, some of which are easier to access on the host.

**Note**

The most practical reason for `optimalDeviceAccess` to be `VK_FALSE` is that host image access may disable framebuffer compression where it would otherwise have been enabled. This represents far more efficient host image access since no compression algorithm is required to read or write to the image, but it would impact device access performance. Some implementations may only set `optimalDeviceAccess` to `VK_FALSE` if certain conditions are met, such as specific image usage flags or creation flags.

---

**Valid Usage (Implicit)**

- `VUID-VkHostImageCopyDevicePerformanceQueryEXT-sType-sType`
  
  * `sType` must be `VK_STRUCTURE_TYPE_HOST_IMAGE_COPY_DEVICE_PERFORMANCE_QUERY_EXT`

To determine if cubic filtering can be used with a given image format and a given image view type add a `VkPhysicalDeviceImageViewImageFormatInfoEXT` structure to the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure, and a `VkFilterCubicImageViewImageFormatPropertiesEXT` structure to the `pNext` chain of the `VkImageFormatProperties2` structure.

The `VkPhysicalDeviceImageViewImageFormatInfoEXT` structure is defined as:

```
// Provided by VK_EXT_filter_cubic
typedef struct VkPhysicalDeviceImageViewImageFormatInfoEXT {
  VkStructureType sType;
  void* pNext;
  VkImageViewType imageViewType;
} VkPhysicalDeviceImageViewImageFormatInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `imageViewType` is a `VkImageViewType` value specifying the type of the image view.

---

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceImageViewImageFormatInfoEXT-sType-sType`
**sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_IMAGE_FORMAT_INFO_EXT`

- **VUID-VkPhysicalDeviceImageViewImageFormatInfoEXT-imageViewType-parameter**
  
  **imageViewType** must be a valid **VkImageViewType** value

The **VkFilterCubicImageViewImageFormatPropertiesEXT** structure is defined as:

```c
// Provided by VK_EXT_filter_cubic
typedef struct VkFilterCubicImageViewImageFormatPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 filterCubic;
    VkBool32 filterCubicMinmax;
} VkFilterCubicImageViewImageFormatPropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **filterCubic** tells if image format, image type and image view type can be used with cubic filtering. This field is set by the implementation. User-specified value is ignored.
- **filterCubicMinmax** tells if image format, image type and image view type can be used with cubic filtering and minmax filtering. This field is set by the implementation. User-specified value is ignored.

**Valid Usage (Implicit)**

- **VUID-VkFilterCubicImageViewImageFormatPropertiesEXT-sType-sType**
  
  **sType** must be `VK_STRUCTURE_TYPE_FILTER_CUBIC_IMAGE_VIEW_IMAGE_FORMAT_PROPERTIES_EXT`

**Valid Usage**

- **VUID-VkFilterCubicImageViewImageFormatPropertiesEXT-pNext-02627**
  
  If the **pNext** chain of the **VkImageFormatProperties2** structure includes a **VkFilterCubicImageViewImageFormatPropertiesEXT** structure, the **pNext** chain of the **VkPhysicalDeviceImageFormatInfo2** structure must include a **VkPhysicalDeviceImageViewImageFormatInfoEXT** structure with an **imageViewType** that is compatible with **imageType**

50.1.1. Supported Sample Counts

**vkGetPhysicalDeviceImageFormatProperties** returns a bitmask of **VkSampleCountFlagBits** in **sampleCounts** specifying the supported sample counts for the image parameters.

**sampleCounts** will be set to `VK_SAMPLE_COUNT_1_BIT` if at least one of the following conditions is true:

- tiling is `VK_IMAGE_TILING_LINEAR`
• type is not VK_IMAGE_TYPE_2D

• flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT

• Neither the VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT flag nor the VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT flag in VkFormatProperties::optimalTilingFeatures returned by vkGetPhysicalDeviceFormatProperties is set

• VkPhysicalDeviceExternalImageFormatInfo::handleType is an external handle type for which multisampled image support is not required.

• format is one of the formats that require a sampler Y’C_bC_r conversion

• usage contains VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

• usage contains VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT

Otherwise, the bits set in sampleCounts will be the sample counts supported for the specified values of usage and format. For each bit set in usage, the supported sample counts relate to the limits in VkPhysicalDeviceLimits as follows:

• If usage includes VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT and format is a floating- or fixed-point color format, a superset of VkPhysicalDeviceLimits::framebufferColorSampleCounts

• If usage includes VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT and format is an integer format, a superset of VkPhysicalDeviceVulkan12Properties::framebufferIntegerColorSampleCounts

• If usage includes VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and format includes a depth component, a superset of VkPhysicalDeviceLimits::framebufferDepthSampleCounts

• If usage includes VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and format includes a stencil component, a superset of VkPhysicalDeviceLimits::framebufferStencilSampleCounts

• If usage includes VK_IMAGE_USAGE_SAMPLED_BIT, and format includes a color component, a superset of VkPhysicalDeviceLimits::sampledImageColorSampleCounts

• If usage includes VK_IMAGE_USAGE_SAMPLED_BIT, and format includes a depth component, a superset of VkPhysicalDeviceLimits::sampledImageDepthSampleCounts

• If usage includes VK_IMAGE_USAGE_SAMPLED_BIT, and format is an integer format, a superset of VkPhysicalDeviceLimits::sampledImageIntegerSampleCounts

• If usage includes VK_IMAGE_USAGE_STORAGE_BIT, a superset of VkPhysicalDeviceLimits::storageImageSampleCounts

If multiple bits are set in usage, sampleCounts will be the intersection of the per-usage values described above.

If none of the bits described above are set in usage, then there is no corresponding limit in VkPhysicalDeviceLimits. In this case, sampleCounts must include at least VK_SAMPLE_COUNT_1_BIT.

50.1.2. Allowed Extent Values Based on Image Type

Implementations may support extent values larger than the required minimum/maximum values for certain types of images. VkImageFormatProperties::maxExtent for each type is subject to the constraints below.
Note
Implementations must support images with dimensions up to the required minimum/maximum values for all types of images. It follows that the query for additional capabilities must return extent values that are at least as large as the required values.

For VK_IMAGE_TYPE_1D:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimension1D
- maxExtent.height = 1
- maxExtent.depth = 1

For VK_IMAGE_TYPE_2D when flags does not contain VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimension2D
- maxExtent.height ≥ VkPhysicalDeviceLimits::maxImageDimension2D
- maxExtent.depth = 1

For VK_IMAGE_TYPE_2D when flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimensionCube
- maxExtent.height ≥ VkPhysicalDeviceLimits::maxImageDimensionCube
- maxExtent.depth = 1

For VK_IMAGE_TYPE_3D:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimension3D
- maxExtent.height ≥ VkPhysicalDeviceLimits::maxImageDimension3D
- maxExtent.depth ≥ VkPhysicalDeviceLimits::maxImageDimension3D

50.2. Additional Buffer Capabilities

To query the external handle types supported by buffers, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalBufferProperties(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
    VkExternalBufferProperties* pExternalBufferProperties);
```

or the equivalent command

```c
// Provided by VK_KHR_external_memory_capabilities
void vkGetPhysicalDeviceExternalBufferPropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
    VkExternalBufferPropertiesKHR* pExternalBufferPropertiesKHR);
```
const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
VkExternalBufferProperties* pExternalBufferProperties);

- `physicalDevice` is the physical device from which to query the buffer capabilities.
- `pExternalBufferInfo` is a pointer to a `VkPhysicalDeviceExternalBufferInfo` structure describing the parameters that would be consumed by `vkCreateBuffer`.
- `pExternalBufferProperties` is a pointer to a `VkExternalBufferProperties` structure in which capabilities are returned.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalBufferProperties-physicalDevice-parameter
  `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceExternalBufferProperties-pExternalBufferInfo-parameter
  `pExternalBufferInfo` must be a valid pointer to a valid `VkPhysicalDeviceExternalBufferInfo` structure
- VUID-vkGetPhysicalDeviceExternalBufferProperties-pExternalBufferProperties-parameter
  `pExternalBufferProperties` must be a valid pointer to a `VkExternalBufferProperties` structure

The `VkPhysicalDeviceExternalBufferInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalBufferInfo {
    VkStructureType sType;
    const void* pNext;
    VkBufferCreateFlags flags;
    VkBufferUsageFlags usage;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalBufferInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkPhysicalDeviceExternalBufferInfo VkPhysicalDeviceExternalBufferInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkBufferCreateFlagBits` describing additional parameters of the buffer, corresponding to `VkBufferCreateInfo::flags`.
- `usage` is a bitmask of `VkBufferUsageFlagBits` describing the intended usage of the buffer, corresponding to `VkBufferCreateInfo::usage`.

3932
• `handleType` is a `VkExternalMemoryHandleTypeFlagBits` value specifying the memory handle type that will be used with the memory associated with the buffer.

Only usage flags representable in `VkBufferUsageFlagsBits` are returned in this structure’s `usage`. If a `VkBufferUsageFlags2CreateInfoKHR` structure is present in the `pNext` chain, all usage flags of the buffer are returned in `VkBufferUsageFlags2CreateInfoKHR::usage`.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceExternalBufferInfo-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_BUFFER_INFO`

- **VUID-VkPhysicalDeviceExternalBufferInfo-pNext-pNext**
  - `pNext` must be `NULL` or a pointer to a valid instance of `VkBufferUsageFlags2CreateInfoKHR`

- **VUID-VkPhysicalDeviceExternalBufferInfo-sType-unique**
  - The `sType` value of each struct in the `pNext` chain must be unique

- **VUID-VkPhysicalDeviceExternalBufferInfo-flags-parameter**
  - `flags` must be a valid combination of `VkBufferCreateFlagBits` values

- **VUID-VkPhysicalDeviceExternalBufferInfo-usage-parameter**
  - `usage` must be a valid combination of `VkBufferUsageFlagBits` values

- **VUID-VkPhysicalDeviceExternalBufferInfo-usage-requiredbitsetmask**
  - `usage` must not be 0

- **VUID-VkPhysicalDeviceExternalBufferInfo-handleType-parameter**
  - `handleType` must be a valid `VkExternalMemoryHandleTypeFlagBits` value

The `VkExternalBufferProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkExternalBufferProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalMemoryProperties externalMemoryProperties;
} VkExternalBufferProperties;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalBufferProperties VkExternalBufferPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalMemoryProperties` is a `VkExternalMemoryProperties` structure specifying various capabilities of the external handle type when used with the specified buffer creation parameters.
50.3. Optional Semaphore Capabilities

Semaphores may support import and export of their payload to external handles. To query the external handle types supported by semaphores, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalSemaphoreProperties(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalSemaphoreInfo* pExternalSemaphoreInfo,
    VkExternalSemaphoreProperties* pExternalSemaphoreProperties);
```

or the equivalent command

```c
// Provided by VK_KHR_external_semaphore_capabilities
void vkGetPhysicalDeviceExternalSemaphorePropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalSemaphoreInfo* pExternalSemaphoreInfo,
    VkExternalSemaphoreProperties* pExternalSemaphoreProperties);
```

- **physicalDevice** is the physical device from which to query the semaphore capabilities.
- **pExternalSemaphoreInfo** is a pointer to a `VkPhysicalDeviceExternalSemaphoreInfo` structure describing the parameters that would be consumed by `vkCreateSemaphore`.
- **pExternalSemaphoreProperties** is a pointer to a `VkExternalSemaphoreProperties` structure in which capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-physicalDevice-parameter **physicalDevice** must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-pExternalSemaphoreInfo-parameter **pExternalSemaphoreInfo** must be a valid pointer to a valid `VkPhysicalDeviceExternalSemaphoreInfo` structure
- VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-pExternalSemaphoreProperties-parameter **pExternalSemaphoreProperties** must be a valid pointer to a
The **VkPhysicalDeviceExternalSemaphoreInfo** structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalSemaphoreInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalSemaphoreHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalSemaphoreInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_semaphore_capabilities
typedef VkPhysicalDeviceExternalSemaphoreInfo
VkPhysicalDeviceExternalSemaphoreInfoKHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **handleType** is a `VkExternalSemaphoreHandleTypeFlagBits` value specifying the external semaphore handle type for which capabilities will be returned.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-sType-sType
  The **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_SEMAPHORE_INFO`

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-pNext-pNext
  The **pNext** must be `NULL` or a pointer to a valid instance of `VkSemaphoreTypeCreateInfo`

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-sType-unique
  The **sType** value of each struct in the **pNext** chain must be unique

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-handleType-parameter
  The **handleType** must be a valid `VkExternalSemaphoreHandleTypeFlagBits` value

Bits which may be set in **VkPhysicalDeviceExternalSemaphoreInfo::handleType**, specifying an external semaphore handle type, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkExternalSemaphoreHandleTypeFlagBits {
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_fence_BIT = 0x00000008,
    VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT = 0x00000010,
}
```

---

3935
or the equivalent

```c
// Provided by VK_KHR_external_semaphore_capabilities
typedef VkExternalSemaphoreHandleTypeFlagBits
    VkExternalSemaphoreHandleTypeFlagBitsKHR;
```

- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT` specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it must be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying synchronization primitive represented by its Vulkan semaphore object.

- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT` specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying synchronization primitive represented by its Vulkan semaphore object.

- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT` specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying synchronization primitive represented by its Vulkan semaphore object, and will therefore become invalid when all Vulkan semaphore objects associated with it are destroyed.

- `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT` specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 fence, or `ID3D11Device5::CreateFence` referring to a Direct3D 11 fence. It owns a reference to the underlying synchronization primitive associated with the Direct3D fence.
• **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D11_FENCE_BIT** is an alias of **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT** with the same meaning. It is provided for convenience and code clarity when interacting with D3D11 fences.

• **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT** specifies a POSIX file descriptor handle to a Linux Sync File or Android Fence object. It can be used with any native API accepting a valid sync file or fence as input. It owns a reference to the underlying synchronization primitive associated with the file descriptor. Implementations which support importing this handle type **must** accept any type of sync or fence FD supported by the native system they are running on.

• **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_ZIRCON_EVENT_BIT_FUCHSIA** specifies a handle to a Zircon event object. It can be used with any native API that accepts a Zircon event handle. Zircon event handles are created with **ZX_RIGHTS_BASIC** and **ZX_RIGHTS_SIGNAL** rights. Vulkan on Fuchsia uses only the **ZX_EVENT_SIGNALED** bit when signaling or waiting.

---

**Note**

Handles of type **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT** generated by the implementation may represent either Linux Sync Files or Android Fences at the implementation's discretion. Applications **should** only use operations defined for both types of file descriptors, unless they know via means external to Vulkan the type of the file descriptor, or are prepared to deal with the system-defined operation failures resulting from using the wrong type.
Some external semaphore handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

### Table 84. External semaphore handle types compatibility

// Provided by VK_VERSION_1_1

```c
typedef VkFlags VkExternalSemaphoreHandleTypeFlags;
```

or the equivalent

// Provided by VK_KHR_external_semaphore_capabilities

```c
typedef VkExternalSemaphoreHandleTypeFlags VkExternalSemaphoreHandleTypeFlagsKHR;
```

`VkExternalSemaphoreHandleTypeFlags` is a bitmask type for setting a mask of zero or more `VkExternalSemaphoreHandleTypeFlagBits`.

The `VkExternalSemaphoreProperties` structure is defined as:

// Provided by VK_VERSION_1_1

```c
typedef struct VkExternalSemaphoreProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalSemaphoreHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalSemaphoreHandleTypeFlags compatibleHandleTypes;
    VkExternalSemaphoreFeatureFlags externalSemaphoreFeatures;
} VkExternalSemaphoreProperties;
```

or the equivalent

// Provided by VK_KHR_external_semaphore_capabilities

```c
typedef VkExternalSemaphoreProperties VkExternalSemaphorePropertiesKHR;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **exportFromImportedHandleTypes** is a bitmask of `VkExternalSemaphoreHandleTypeFlagBits` specifying which types of imported handle `handleType` can be exported from.

• **compatibleHandleTypes** is a bitmask of `VkExternalSemaphoreHandleTypeFlagBits` specifying handle types which can be specified at the same time as `handleType` when creating a semaphore.

• **externalSemaphoreFeatures** is a bitmask of `VkExternalSemaphoreFeatureFlagBits` describing the features of `handleType`.

If `handleType` is not supported by the implementation, then `VkExternalSemaphoreProperties::externalSemaphoreFeatures` will be set to zero.

### Valid Usage (Implicit)

• VUID-VkExternalSemaphoreProperties-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_EXTERNAL_SEMAPHORE_PROPERTIES`.

• VUID-VkExternalSemaphoreProperties-pNext-pNext
  
  `pNext` **must** be NULL.

Bits which may be set in `VkExternalSemaphoreProperties::externalSemaphoreFeatures`, specifying the features of an external semaphore handle type, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkExternalSemaphoreFeatureFlagBits {
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT = 0x00000001,
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT = 0x00000002,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT_KHR =
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT,
    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT_KHR =
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT,
} VkExternalSemaphoreFeatureFlagBits;
```

or the equivalent

```c
// Provided by VK_KHR_external_semaphore_capabilities
typedef VkExternalSemaphoreFeatureFlagBits VkExternalSemaphoreFeatureFlagBitsKHR;
```

• **VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT** specifies that handles of this type can be exported from Vulkan semaphore objects.

• **VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT** specifies that handles of this type can be imported as Vulkan semaphore objects.
typedef VkFlags VkExternalSemaphoreFeatureFlags;

or the equivalent

or the equivalent command

VkExternalSemaphoreFeatureFlags is a bitmask type for setting a mask of zero or more VkExternalSemaphoreFeatureFlagBits.

50.4. Optional Fence Capabilities

Fences may support import and export of their payload to external handles. To query the external handle types supported by fences, call:

void vkGetPhysicalDeviceExternalFenceProperties(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalFenceInfo* pExternalFenceInfo,
    VkExternalFenceProperties* pExternalFenceProperties);

or the equivalent command

void vkGetPhysicalDeviceExternalFencePropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalFenceInfo* pExternalFenceInfo,
    VkExternalFenceProperties* pExternalFenceProperties);

- physicalDevice is the physical device from which to query the fence capabilities.
- pExternalFenceInfo is a pointer to a VkPhysicalDeviceExternalFenceInfo structure describing the parameters that would be consumed by vkCreateFence.
- pExternalFenceProperties is a pointer to a VkExternalFenceProperties structure in which capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalFenceProperties-physicalDevice-parameter physicalDevice must be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceExternalFenceProperties-pExternalFenceInfo-parameter pExternalFenceInfo must be a valid pointer to a valid VkPhysicalDeviceExternalFenceInfo structure
pExternalFenceProperties must be a valid pointer to a VkExternalFenceProperties structure.

The VkPhysicalDeviceExternalFenceInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalFenceInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalFenceHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalFenceInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_fence_capabilities
typedef VkPhysicalDeviceExternalFenceInfo VkPhysicalDeviceExternalFenceInfoKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- handleType is a VkExternalFenceHandleTypeFlagBits value specifying an external fence handle type for which capabilities will be returned.

**Note**

Handles of type VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT generated by the implementation may represent either Linux Sync Files or Android Fences at the implementation's discretion. Applications should only use operations defined for both types of file descriptors, unless they know via means external to Vulkan the type of the file descriptor, or are prepared to deal with the system-defined operation failures resulting from using the wrong type.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceExternalFenceInfo-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FENCE_INFO
- VUID-VkPhysicalDeviceExternalFenceInfo-pNext-pNext must be NULL
- VUID-VkPhysicalDeviceExternalFenceInfo-handleType-parameter handleType must be a valid VkExternalFenceHandleTypeFlagBits value

Bits which may be set in

- VkPhysicalDeviceExternalFenceInfo::handleType
• **VkExternalFenceProperties::exportFromImportedHandleTypes**

• **VkExternalFenceProperties::compatibleHandleTypes**

indicate external fence handle types, and are:

```c
typedef enum VkExternalFenceHandleTypeFlagBits {
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT = 0x00000008,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT
} VkExternalFenceHandleTypeFlagBits;
```

or the equivalent

```c
typedef VkExternalFenceHandleTypeFlagBits VkExternalFenceHandleTypeFlagBitsKHR;
```

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT** specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it must be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying synchronization primitive represented by its Vulkan fence object.

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT** specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying synchronization primitive represented by its Vulkan fence object.

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT** specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying synchronization primitive represented by its Vulkan fence object, and will therefore become invalid when all Vulkan fence objects associated with it are destroyed.

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT** specifies a POSIX file descriptor handle to a Linux 3942
Sync File or Android Fence. It can be used with any native API accepting a valid sync file or fence as input. It owns a reference to the underlying synchronization primitive associated with the file descriptor. Implementations which support importing this handle type must accept any type of sync or fence FD supported by the native system they are running on.
Some external fence handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

Table 85. External fence handle types compatibility

<table>
<thead>
<tr>
<th>Handle type</th>
<th>VkPhysicalDeviceIDProperties::driverUUID</th>
<th>VkPhysicalDeviceIDProperties::deviceUUID</th>
</tr>
</thead>
<tbody>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT</td>

<td>Must match</td>
<td>Must match</td>
</tr>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT</td>
<td>Must match</td>
<td>Must match</td>
</tr>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT</td>
<td>No restriction</td>
<td>No restriction</td>
</tr>
</tbody>
</table>

// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalFenceHandleTypeFlags;

or the equivalent

// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceHandleTypeFlags VkExternalFenceHandleTypeFlagsKHR;

VkExternalFenceHandleTypeFlags is a bitmask type for setting a mask of zero or more VkExternalFenceHandleTypeFlagBits.

The VkExternalFenceProperties structure is defined as:

// Provided by VK_VERSION_1_1
typedef struct VkExternalFenceProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalFenceHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalFenceHandleTypeFlags compatibleHandleTypes;
    VkExternalFenceFeatureFlags externalFenceFeatures;
} VkExternalFenceProperties;

or the equivalent

// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceProperties VkExternalFencePropertiesKHR;

• exportFromImportedHandleTypes is a bitmask of VkExternalFenceHandleTypeFlagBits indicating which types of imported handle handleType can be exported from.
compatibleHandleTypes is a bitmask of VkExternalFenceHandleTypeFlagBits specifying handle types which can be specified at the same time as handleType when creating a fence.

externalFenceFeatures is a bitmask of VkExternalFenceFeatureFlagBits indicating the features of handleType.

If handleType is not supported by the implementation, then VkExternalFenceProperties::externalFenceFeatures will be set to zero.

Valid Usage (Implicit)

- VUID-VkExternalFenceProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_FENCE_PROPERTIES
- VUID-VkExternalFenceProperties-pNext-pNext
  pNext must be NULL

Bits which may be set in VkExternalFenceProperties::externalFenceFeatures, indicating features of a fence external handle type, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkExternalFenceFeatureFlagBits {
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT = 0x00000001,
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT = 0x00000002,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT_KHR = VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT_KHR = VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT,
} VkExternalFenceFeatureFlagBits;
```

or the equivalent

```c
// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceFeatureFlagBits VkExternalFenceFeatureFlagBitsKHR;
```

- VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT specifies handles of this type can be exported from Vulkan fence objects.
- VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT specifies handles of this type can be imported to Vulkan fence objects.

```c
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalFenceFeatureFlags;
```

or the equivalent
// Provided by VK_KHR_external_fence_capabilities

typedef VkExternalFenceFeatureFlags VkExternalFenceFeatureFlagsKHR;

VkExternalFenceFeatureFlags is a bitmask type for setting a mask of zero or more
VkExternalFenceFeatureFlagBits.

50.5. Timestamp Calibration Capabilities

To query the set of time domains for which a physical device supports timestamp calibration, call:

// Provided by VK_EXT_calibrated_timestamps

VkResult vkGetPhysicalDeviceCalibrateableTimeDomainsEXT(
    VkPhysicalDevice physicalDevice,
    uint32_t* pTimeDomainCount,
    VkTimeDomainEXT* pTimeDomains);

• physicalDevice is the physical device from which to query the set of calibrateable time domains.
• pTimeDomainCount is a pointer to an integer related to the number of calibrateable time domains
  available or queried, as described below.
• pTimeDomains is either NULL or a pointer to an array of VkTimeDomainEXT values, indicating the
  supported calibrateable time domains.

If pTimeDomains is NULL, then the number of calibrateable time domains supported for the given
physicalDevice is returned in pTimeDomainCount. Otherwise, pTimeDomainCount must point to a
variable set by the user to the number of elements in the pTimeDomains array, and on return the
variable is overwritten with the number of values actually written to pTimeDomains. If the value of
pTimeDomainCount is less than the number of calibrateable time domains supported, at most
pTimeDomainCount values will be written to pTimeDomains, and VK_INCOMPLETE will be returned instead
of VK_SUCCESS, to indicate that not all the available time domains were returned.

Valid Usage (Implicit)

• VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsEXT-physicalDevice-parameter
  physicalDevice must be a valid VkPhysicalDevice handle

• VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsEXT-pTimeDomainCount-parameter
  pTimeDomainCount must be a valid pointer to a uint32_t value

• VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsEXT-pTimeDomains-parameter
  If the value referenced by pTimeDomainCount is not 0, and pTimeDomains is not NULL,
  pTimeDomains must be a valid pointer to an array of pTimeDomainCount VkTimeDomainEXT
  values
Return Codes

Success
• VK_SUCCESS
• VK_INCOMPLETE

Failure
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_OUT_OF_DEVICE_MEMORY
Chapter 51. Debugging

To aid developers in tracking down errors in the application’s use of Vulkan, particularly in combination with an external debugger or profiler, debugging extensions may be available.

The `VkObjectType` enumeration defines values, each of which corresponds to a specific Vulkan handle type. These values can be used to associate debug information with a particular type of object through one or more extensions.

```c
// Provided by VK_VERSION_1_0
typedef enum VkObjectType {
    VK_OBJECT_TYPE_UNKNOWN = 0,
    VK_OBJECT_TYPE_INSTANCE = 1,
    VK_OBJECT_TYPE_PHYSICAL_DEVICE = 2,
    VK_OBJECT_TYPE_DEVICE = 3,
    VK_OBJECT_TYPE_QUEUE = 4,
    VK_OBJECT_TYPE_SEMAPHORE = 5,
    VK_OBJECT_TYPE_COMMAND_BUFFER = 6,
    VK_OBJECT_TYPE_FENCE = 7,
    VK_OBJECT_TYPE_DEVICE_MEMORY = 8,
    VK_OBJECT_TYPE_BUFFER = 9,
    VK_OBJECT_TYPE_IMAGE = 10,
    VK_OBJECT_TYPE_IMAGE_VIEW = 11,
    VK_OBJECT_TYPE_SHADER_MODULE = 12,
    VK_OBJECT_TYPE_PIPELINE_CACHE = 13,
    VK_OBJECT_TYPE_PIPELINE_LAYOUT = 14,
    VK_OBJECT_TYPE_RENDER_PASS = 15,
    VK_OBJECT_TYPE_PIPELINE = 16,
    VK_OBJECT_TYPE_DESCRIPTOR_SET_LAYOUT = 17,
    VK_OBJECT_TYPE_DESCRIPTOR_POOL = 18,
    VK_OBJECT_TYPE_DESCRIPTOR_SET = 19,
    VK_OBJECT_TYPE_FRAMEBUFFER = 20,
    VK_OBJECT_TYPE_COMMAND_POOL = 21,
    VK_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION = 1000156000,
} VkObjectType;
```

```c
// Provided by VK_VERSION_1_1
VK_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION = 1000156000,
```

```c
// Provided by VK_VERSION_1_1
VK_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE = 1000085000,
```

```c
// Provided by VK_KHR_surface
VK_OBJECT_TYPE_SURFACE_KHR = 1000000000,
```

```c
// Provided by VK_KHR_swapchain
VK_OBJECT_TYPE_SWAPCHAIN_KHR = 1000001000,
```

```c
// Provided by VK_KHR_display
VK_OBJECT_TYPE_DISPLAY_KHR = 1000002000,
```

If this Specification was generated with any such extensions included, they will be described in the remainder of this chapter.

### 51.1. Debug Utilities

Vulkan provides flexible debugging utilities for debugging an application.

The **Object Debug Annotation** section describes how to associate either a name or binary data with a specific Vulkan object.

The **Queue Labels** section describes how to annotate and group the work submitted to a queue.

The **Command Buffer Labels** section describes how to associate logical elements of the scene with commands in a VkCommandBuffer.

The **Debug Messengers** section describes how to create debug messenger objects associated with an application supplied callback to capture debug messages from a variety of Vulkan components.

#### 51.1.1. Object Debug Annotation

It can be useful for an application to provide its own content relative to a specific Vulkan object.

The following commands allow application developers to associate user-defined information with Vulkan objects. These commands are device-level commands but they may reference instance-level
objects (such as VkInstance) and physical device-level objects (such as VkPhysicalDevice) with a few restrictions: * The data for the corresponding object may still be available after the VkDevice used in the corresponding API call to set it is destroyed, but access to this data is not guaranteed and should be avoided. * Subsequent calls to change the data of the same object across multiple VkDevice objects, may result in the data being changed to the most recent version for all VkDevice objects and not just the VkDevice used in the most recent API call.

**Object Naming**

An object can be provided a user-defined name by calling vkSetDebugUtilsObjectNameEXT as defined below.

```
// Provided by VK_EXT_debug_utils
VkResult vkSetDebugUtilsObjectNameEXT(
    VkDevice device,
    const VkDebugUtilsObjectNameInfoEXT* pNameInfo);
```

- **device** is the device that is associated with the named object passed in via `objectHandle`.
- **pNameInfo** is a pointer to a VkDebugUtilsObjectNameInfoEXT structure specifying parameters of the name to set on the object.

**Valid Usage**

- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-02587
  `pNameInfo->objectType` must not be `VK_OBJECT_TYPE_UNKNOWN`
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-02588
  `pNameInfo->objectHandle` must not be `VK_NULL_HANDLE`
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07872
  If `pNameInfo->objectHandle` is the valid handle of an instance-level object, the `VkDevice` identified by `device` must be a descendent of the same `VkInstance` as the object identified by `pNameInfo->objectHandle`
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07873
  If `pNameInfo->objectHandle` is the valid handle of a physical-device-level object, the `VkDevice` identified by `device` must be a descendent of the same `VkPhysicalDevice` as the object identified by `pNameInfo->objectHandle`
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07874
  If `pNameInfo->objectHandle` is the valid handle of a device-level object, that object must be a descendent of the `VkDevice` identified by `device`

**Valid Usage (Implicit)**

- VUID-vkSetDebugUtilsObjectNameEXT-device-parameter
  `device` must be a valid `VkDevice` handle
- VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-parameter
  `pNameInfo` must not be `NULL`
**pNameInfo** must be a valid pointer to a valid `VkDebugUtilsObjectNameInfoEXT` structure.

---

### Host Synchronization

- Host access to `pNameInfo->objectHandle` must be externally synchronized.

---

### Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

---

The `VkDebugUtilsObjectNameInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsObjectNameInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkObjectType objectType;
    uint64_t objectHandle;
    const char* pObjectName;
} VkDebugUtilsObjectNameInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **objectType** is a `VkObjectType` specifying the type of the object to be named.
- **objectHandle** is the object to be named.
- **pObjectName** is either **NULL** or a null-terminated UTF-8 string specifying the name to apply to `objectHandle`.

Applications may change the name associated with an object simply by calling `vkSetDebugUtilsObjectNameEXT` again with a new string. If `pObjectName` is either **NULL** or an empty string, then any previously set name is removed.

The **graphicsPipelineLibrary** feature allows the specification of pipelines without the creation of `VkShaderModule` objects beforehand. In order to continue to allow naming these shaders independently, `VkDebugUtilsObjectNameInfoEXT` can be included in the `pNext` chain of `VkPipelineShaderStageCreateInfo`, which associates a static name with that particular shader.
Valid Usage

- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-02589
  If `objectType` is `VK_OBJECT_TYPE_UNKNOWN`, `objectHandle` must not be `VK_NULL_HANDLE`

- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-02590
  If `objectType` is not `VK_OBJECT_TYPE_UNKNOWN`, `objectHandle` must be `VK_NULL_HANDLE` or a valid Vulkan handle of the type associated with `objectType` as defined in the `VkObjectType` and Vulkan Handle Relationship table

Valid Usage (Implicit)

- VUID-VkDebugUtilsObjectNameInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_NAME_INFO_EXT`

- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-parameter
  `objectType` must be a valid `VkObjectType` value

- VUID-VkDebugUtilsObjectNameInfoEXT-pObjectName-parameter
  If `pObjectName` is not NULL, `pObjectName` must be a null-terminated UTF-8 string

Object Data Association

In addition to setting a name for an object, debugging and validation layers may have uses for additional binary data on a per-object basis that have no other place in the Vulkan API.

For example, a `VkShaderModule` could have additional debugging data attached to it to aid in offline shader tracing.

Additional data can be attached to an object by calling `vkSetDebugUtilsObjectTagEXT` as defined below.

```c
// Provided by VK_EXT_debug_utils
VkResult vkSetDebugUtilsObjectTagEXT(
  VkDevice device,
  const VkDebugUtilsObjectTagInfoEXT* pTagInfo);
```

- `device` is the device that created the object.
- `pTagInfo` is a pointer to a `VkDebugUtilsObjectTagInfoEXT` structure specifying parameters of the tag to attach to the object.

Valid Usage

- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07875
  If `pNameInfo->objectHandle` is the valid handle of an instance-level object, the `VkDevice` identified by `device` must be a descendent of the same `VkInstance` as the object identified
If `pNameInfo->objectHandle` is the valid handle of a physical-device-level object, the `VkDevice` identified by `device` must be a descendant of the same `VkPhysicalDevice` as the object identified by `pNameInfo->objectHandle`.

If `pNameInfo->objectHandle` is the valid handle of a device-level object, that object must be a descendent of the `VkDevice` identified by `device`.

Valid Usage (Implicit)

- VUID-vkSetDebugUtilsObjectTagEXT-device-parameter
  `device` must be a valid `VkDevice` handle.

- VUID-vkSetDebugUtilsObjectTagEXT-pTagInfo-parameter
  `pTagInfo` must be a valid pointer to a valid `VkDebugUtilsObjectTagInfoEXT` structure.

Host Synchronization

- Host access to `pTagInfo->objectHandle` must be externally synchronized.

Return Codes

Success

- `VK_SUCCESS`

Failure

- `VK_ERROR_OUT_OF_HOST_MEMORY`

- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkDebugUtilsObjectTagInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsObjectTagInfoEXT {
    VkStructureType      sType;
    const void*           pNext;
    VkObjectType          objectType;
    uint64_t              objectHandle;
    uint64_t              tagName;
    size_t                tagSize;
    const void*           pTag;
} VkDebugUtilsObjectTagInfoEXT;
```
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **objectType** is a `VkObjectType` specifying the type of the object to be named.
• **objectHandle** is the object to be tagged.
• **tagName** is a numerical identifier of the tag.
• **tagSize** is the number of bytes of data to attach to the object.
• **pTag** is a pointer to an array of `tagSize` bytes containing the data to be associated with the object.

The **tagName** parameter gives a name or identifier to the type of data being tagged. This can be used by debugging layers to easily filter for only data that can be used by that implementation.

### Valid Usage

- **VUID-VkDebugUtilsObjectTagInfoEXT-objectType-01908**
  - `objectType` must not be `VK_OBJECT_TYPE_UNKNOWN`

- **VUID-VkDebugUtilsObjectTagInfoEXT-objectHandle-01910**
  - `objectHandle` must be a valid Vulkan handle of the type associated with `objectType` as defined in the `VkObjectType` and Vulkan Handle Relationship table

### Valid Usage (Implicit)

- **VUID-VkDebugUtilsObjectTagInfoEXT-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_TAG_INFO_EXT`

- **VUID-VkDebugUtilsObjectTagInfoEXT-pNext-pNext**
  - `pNext` must be `NULL`

- **VUID-VkDebugUtilsObjectTagInfoEXT-objectType-parameter**
  - `objectType` must be a valid `VkObjectType` value

- **VUID-VkDebugUtilsObjectTagInfoEXT-pTag-parameter**
  - `pTag` must be a valid pointer to an array of `tagSize` bytes

- **VUID-VkDebugUtilsObjectTagInfoEXT-tagSize-arraylength**
  - `tagSize` must be greater than 0

### 51.1.2. Queue Labels

All Vulkan work must be submitted using queues. It is possible for an application to use multiple queues, each containing multiple command buffers, when performing work. It can be useful to identify which queue, or even where in a queue, something has occurred.

To begin identifying a region using a debug label inside a queue, you may use the `vkQueueBeginDebugUtilsLabelEXT` command.

Then, when the region of interest has passed, you may end the label region using
Additionally, a single debug label may be inserted at any time using `vkQueueInsertDebugUtilsLabelEXT`.

A queue debug label region is opened by calling:

```c
// Provided by VK_EXT_debug_utils
void vkQueueBeginDebugUtilsLabelEXT(
    VkQueue queue,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- `queue` is the queue in which to start a debug label region.
- `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label region to open.

### Valid Usage (Implicit)

- VUID-vkQueueBeginDebugUtilsLabelEXT-queue-parameter `queue` must be a valid `VkQueue` handle
- VUID-vkQueueBeginDebugUtilsLabelEXT-pLabelInfo-parameter `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>-</td>
<td>-</td>
<td>-</td>
<td>Any</td>
<td>-</td>
</tr>
</tbody>
</table>

The `VkDebugUtilsLabelEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsLabelEXT {
    VkStructureType sType;
    const void* pNext;
    const char* pLabelName;
    float color[4];
} VkDebugUtilsLabelEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pLabelName` is a pointer to a null-terminated UTF-8 string containing the name of the label.
color is an optional RGBA color value that can be associated with the label. A particular implementation may choose to ignore this color value. The values contain RGBA values in order, in the range 0.0 to 1.0. If all elements in color are set to 0.0 then it is ignored.

Valid Usage (Implicit)

- VUID-VkDebugUtilsLabelEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT

- VUID-VkDebugUtilsLabelEXT-pNext-pNext
  pNext must be NULL

- VUID-VkDebugUtilsLabelEXT-pLabelName-parameter
  pLabelName must be a null-terminated UTF-8 string

A queue debug label region is closed by calling:

```c
// Provided by VK_EXT_debug_utils
void vkQueueEndDebugUtilsLabelEXT(
    VkQueue queue);
```

queue is the queue in which a debug label region should be closed.

The calls to vkQueueBeginDebugUtilsLabelEXT and vkQueueEndDebugUtilsLabelEXT must be matched and balanced.

Valid Usage

- VUID-vkQueueEndDebugUtilsLabelEXT-None-01911
  There must be an outstanding vkQueueBeginDebugUtilsLabelEXT command prior to the vkQueueEndDebugUtilsLabelEXT on the queue

Valid Usage (Implicit)

- VUID-vkQueueEndDebugUtilsLabelEXT-queue-parameter
  queue must be a valid VkQueue handle

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>-</td>
<td>-</td>
<td>-</td>
<td>Any</td>
<td>-</td>
</tr>
</tbody>
</table>

A single label can be inserted into a queue by calling:
void vkQueueInsertDebugUtilsLabelEXT(
    VkQueue queue, 
    const VkDebugUtilsLabelEXT* pLabelInfo);

- `queue` is the queue into which a debug label will be inserted.
- `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label to insert.

### Valid Usage (Implicit)

- `VUID-vkQueueInsertDebugUtilsLabelEXT-queue-parameter`  
  `queue must be a valid VkQueue handle`

- `VUID-vkQueueInsertDebugUtilsLabelEXT-pLabelInfo-parameter`  
  `pLabelInfo must be a valid pointer to a valid VkDebugUtilsLabelEXT structure`

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>-</td>
<td>-</td>
<td>-</td>
<td>Any</td>
<td>-</td>
</tr>
</tbody>
</table>

### 51.1.3. Command Buffer Labels

Typical Vulkan applications will submit many command buffers in each frame, with each command buffer containing a large number of individual commands. Being able to logically annotate regions of command buffers that belong together as well as hierarchically subdivide the frame is important to a developer's ability to navigate the commands viewed holistically.

To identify the beginning of a debug label region in a command buffer, `vkCmdBeginDebugUtilsLabelEXT` can be used as defined below.

To indicate the end of a debug label region in a command buffer, `vkCmdEndDebugUtilsLabelEXT` can be used.

To insert a single command buffer debug label inside of a command buffer, `vkCmdInsertDebugUtilsLabelEXT` can be used as defined below.

A command buffer debug label region can be opened by calling:

```c
// Provided by VK_EXT_debug_utils
void vkCmdBeginDebugUtilsLabelEXT( 
    VkCommandBuffer commandBuffer, 
```
const VkDebugUtilsLabelEXT* pLabelInfo);

- `commandBuffer` is the command buffer into which the command is recorded.
- `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label region to open.

### Valid Usage (Implicit)

- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdBeginDebugUtilsLabelEXT-pLabelInfo-parameter
  `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure
- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-recording
  `commandBuffer` must be in the recording state
- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations
- VUID-vkCmdBeginDebugUtilsLabelEXT-videocoding
  This command must only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>Action, State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A command buffer label region can be closed by calling:

```c
// Provided by VK_EXT_debug_utils
void vkCmdEndDebugUtilsLabelEXT(
    VkCommandBuffer commandBuffer);
```

- `commandBuffer` is the command buffer into which the command is recorded.
An application may open a debug label region in one command buffer and close it in another, or otherwise split debug label regions across multiple command buffers or multiple queue submissions. When viewed from the linear series of submissions to a single queue, the calls to `vkCmdBeginDebugUtilsLabelEXT` and `vkCmdEndDebugUtilsLabelEXT` must be matched and balanced.

There can be problems reporting command buffer debug labels during the recording process because command buffers may be recorded out of sequence with the resulting execution order. Since the recording order may be different, a solitary command buffer may have an inconsistent view of the debug label regions by itself. Therefore, if an issue occurs during the recording of a command buffer, and the environment requires returning debug labels, the implementation may return only those labels it is aware of. This is true even if the implementation is aware of only the debug labels within the command buffer being actively recorded.

**Valid Usage**

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-01912**
  There must be an outstanding `vkCmdBeginDebugUtilsLabelEXT` command prior to the `vkCmdEndDebugUtilsLabelEXT` on the queue that `commandBuffer` is submitted to.

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-01913**
  If `commandBuffer` is a secondary command buffer, there must be an outstanding `vkCmdBeginDebugUtilsLabelEXT` command recorded to `commandBuffer` that has not previously been ended by a call to `vkCmdEndDebugUtilsLabelEXT`.

**Valid Usage (Implicit)**

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-recording**
  `commandBuffer` must be in the recording state.

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-cmdpool**
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations.

- **VUID-vkCmdEndDebugUtilsLabelEXT-videocoding**
  This command must only be called outside of a video coding scope.

**Host Synchronization**

- Host access to `commandBuffer` must be externally synchronized.

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.
### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>Action State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A single debug label can be inserted into a command buffer by calling:

```c
// Provided by VK_EXT_debug_utils
void vkCmdInsertDebugUtilsLabelEXT(
    VkCommandBuffer commandBuffer,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label to insert.

### Valid Usage (Implicit)

- **VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-parameter**
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- **VUID-vkCmdInsertDebugUtilsLabelEXT-pLabelInfo-parameter**
  `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure

- **VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-recording**
  `commandBuffer` must be in the recording state

- **VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-cmdpool**
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- **VUID-vkCmdInsertDebugUtilsLabelEXT-videocoding**
  This command must only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized
51.1.4. Debug Messengers

Vulkan allows an application to register multiple callbacks with any Vulkan component wishing to report debug information. Some callbacks may log the information to a file, others may cause a debug break point or other application defined behavior. A primary producer of callback messages are the validation layers. An application can register callbacks even when no validation layers are enabled, but they will only be called for the Vulkan loader and, if implemented, other layer and driver events.

A VkDebugUtilsMessengerEXT is a messenger object which handles passing along debug messages to a provided debug callback.

```c
// Provided by VK_EXT_debug_utils
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDebugUtilsMessengerEXT)
```

The debug messenger will provide detailed feedback on the application's use of Vulkan when events of interest occur. When an event of interest does occur, the debug messenger will submit a debug message to the debug callback that was provided during its creation. Additionally, the debug messenger is responsible with filtering out debug messages that the callback is not interested in and will only provide desired debug messages.

A debug messenger triggers a debug callback with a debug message when an event of interest occurs. To create a debug messenger which will trigger a debug callback, call:

```c
// Provided by VK_EXT_debug_utils
VkResult vkCreateDebugUtilsMessengerEXT(
    VkInstance instance,           // Required
    const VkDebugUtilsMessengerCreateInfoEXT* pCreateInfo,    // Required
    const VkAllocationCallbacks* pAllocator,    // Optional
    VkDebugUtilsMessengerEXT* pMessenger);      // Required
```

- **instance** is the instance the messenger will be used with.
- **pCreateInfo** is a pointer to a VkDebugUtilsMessengerCreateInfoEXT structure containing the callback pointer, as well as defining conditions under which this messenger will trigger the callback.
- **pAllocator** controls host memory allocation as described in the Memory Allocation chapter.
- **pMessenger** is a pointer to a VkDebugUtilsMessengerEXT handle in which the created object is
Valid Usage (Implicit)

- **VUID-vkCreateDebugUtilsMessengerEXT-instance-parameter**
  
  `instance` **must** be a valid `VkInstance` handle.

- **VUID-vkCreateDebugUtilsMessengerEXT-pCreateInfo-parameter**
  
  `pCreateInfo` **must** be a valid pointer to a valid `VkDebugUtilsMessengerCreateInfoEXT` structure.

- **VUID-vkCreateDebugUtilsMessengerEXT-pAllocator-parameter**
  
  If `pAllocator` is not `NULL`, `pAllocator` **must** be a valid pointer to a valid `VkAllocationCallbacks` structure.

- **VUID-vkCreateDebugUtilsMessengerEXT-pMessenger-parameter**
  
  `pMessenger` **must** be a valid pointer to a `VkDebugUtilsMessengerEXT` handle.

Return Codes

**Success**

- **VK_SUCCESS**

**Failure**

- **VK_ERROR_OUT_OF_HOST_MEMORY**

The application **must** ensure that `vkCreateDebugUtilsMessengerEXT` is not executed in parallel with any Vulkan command that is also called with `instance` or child of `instance` as the dispatchable argument.

The definition of `VkDebugUtilsMessengerCreateInfoEXT` is:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsMessengerCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugUtilsMessengerCreateFlagsEXT flags;
    VkDebugUtilsMessageSeverityFlagsEXT messageSeverity;
    VkDebugUtilsMessageTypeFlagsEXT messageType;
    PFN_vkDebugUtilsMessengerCallbackEXT pfnUserCallback;
    void* pUserData;
} VkDebugUtilsMessengerCreateInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is 0 and is reserved for future use.
- **messageSeverity** is a bitmask of `VkDebugUtilsMessageSeverityFlagBitsEXT` specifying which
severity of event(s) will cause this callback to be called.

- `messageType` is a bitmask of `VkDebugUtilsMessageTypeFlagBitsEXT` specifying which type of event(s) will cause this callback to be called.
- `pfnUserCallback` is the application callback function to call.
- `pUserData` is user data to be passed to the callback.

For each `VkDebugUtilsMessengerEXT` that is created the `VkDebugUtilsMessengerCreateInfoEXT::messageSeverity` and `VkDebugUtilsMessengerCreateInfoEXT::messageType` determine when that `VkDebugUtilsMessengerCreateInfoEXT::pfnUserCallback` is called. The process to determine if the user's `pfnUserCallback` is triggered when an event occurs is as follows:

1. The implementation will perform a bitwise AND of the event's `VkDebugUtilsMessageSeverityFlagBitsEXT` with the `messageSeverity` provided during creation of the `VkDebugUtilsMessengerEXT` object.
   a. If the value is 0, the message is skipped.
2. The implementation will perform bitwise AND of the event's `VkDebugUtilsMessageTypeFlagBitsEXT` with the `messageType` provided during the creation of the `VkDebugUtilsMessengerEXT` object.
   a. If the value is 0, the message is skipped.
3. The callback will trigger a debug message for the current event

The callback will come directly from the component that detected the event, unless some other layer intercepts the calls for its own purposes (filter them in a different way, log to a system error log, etc.).

An application can receive multiple callbacks if multiple `VkDebugUtilsMessengerEXT` objects are created. A callback will always be executed in the same thread as the originating Vulkan call.

A callback can be called from multiple threads simultaneously (if the application is making Vulkan calls from multiple threads).

---

**Valid Usage**

- VUID-VkDebugUtilsMessengerCreateInfoEXT-pfnUserCallback-01914
  
  `pfnUserCallback` must be a valid `PFN_vkDebugUtilsMessengerCallbackEXT`.

---

**Valid Usage (Implicit)**

- VUID-VkDebugUtilsMessengerCreateInfoEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT`.

- VUID-VkDebugUtilsMessengerCreateInfoEXT-messageSeverity-parameter
  
  `messageSeverity` must be a valid combination of.
**VkDebugUtilsMessageSeverityFlagBitsEXT values**

- VUID-VkDebugUtilsMessengerCreateInfoEXT-messageSeverity-requiredbitmask
  
  `messageSeverity must not be 0`

- VUID-VkDebugUtilsMessengerCreateInfoEXT-messageType-parameter
  
  `messageType must be a valid combination of VkDebugUtilsMessageTypeFlagBitsEXT values`

- VUID-VkDebugUtilsMessengerCreateInfoEXT-messageType-requiredbitmask
  
  `messageType must not be 0`

- VUID-VkDebugUtilsMessengerCreateInfoEXT-pfnUserCallback-parameter
  
  `pfnUserCallback must be a valid PFN_vkDebugUtilsMessengerCallbackEXT value`

---

// Provided by VK_EXT_debug_utils

typedef VkFlags VkDebugUtilsMessengerCreateFlagsEXT;

---

`VkDebugUtilsMessengerCreateFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

Bits which can be set in `VkDebugUtilsMessengerCreateInfoEXT::messageSeverity`, specifying event severities which cause a debug messenger to call the callback, are:

---

// Provided by VK_EXT_debug_utils

typedef enum VkDebugUtilsMessageSeverityFlagBitsEXT {
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_VERBOSE_BIT_EXT = 0x00000001,
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT = 0x00000010,
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT = 0x00000100,
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT = 0x00001000,
} VkDebugUtilsMessageSeverityFlagBitsEXT;

---

- **VK_DEBUG_UTILS_MESSAGE_SEVERITY_VERBOSE_BIT_EXT** specifies the most verbose output indicating all diagnostic messages from the Vulkan loader, layers, and drivers should be captured.

- **VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT** specifies an informational message such as resource details that may be handy when debugging an application.

- **VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT** specifies use of Vulkan that may expose an app bug. Such cases may not be immediately harmful, such as a fragment shader outputting to a location with no attachment. Other cases may point to behavior that is almost certainly bad when unintended such as using an image whose memory has not been filled. In general if you see a warning but you know that the behavior is intended/desired, then simply ignore the warning.

- **VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT** specifies that the application has violated a valid usage condition of the specification.

---

**Note**

The values of `VkDebugUtilsMessageSeverityFlagBitsEXT` are sorted based on severity. The higher the flag value, the more severe the message. This allows for
simple boolean operation comparisons when looking at \texttt{VkDebugUtilsMessageSeverityFlagBitsEXT} values.

For example:

```c
if (messageSeverity >=
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT) {
    // Do something for warnings and errors
}
```

In addition, space has been left between the enums to allow for later addition of new severities in between the existing values.

```c
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessageSeverityFlagsEXT;
```

\texttt{VkDebugUtilsMessageSeverityFlagsEXT} is a bitmask type for setting a mask of zero or more \texttt{VkDebugUtilsMessageSeverityFlagBitsEXT}.

Bits which can be set in \texttt{VkDebugUtilsMessengerCreateInfoEXT::messageType}, specifying event types which cause a debug messenger to call the callback, are:

```c
// Provided by VK_EXT_debug_utils
typedef enum VkDebugUtilsMessageTypeFlagBitsEXT {
    VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT = 0x00000001,
    VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT = 0x00000002,
    VK_DEBUG_UTILS_MESSAGE_TYPE_PERFORMANCE_BIT_EXT = 0x00000004,
    // Provided by VK_EXT_device_address_binding_report
    VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT = 0x00000008,
} VkDebugUtilsMessageTypeFlagBitsEXT;
```

- \texttt{VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT} specifies that some general event has occurred. This is typically a non-specification, non-performance event.
- \texttt{VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT} specifies that something has occurred during validation against the Vulkan specification that may indicate invalid behavior.
- \texttt{VK_DEBUG_UTILS_MESSAGE_TYPE_PERFORMANCE_BIT_EXT} specifies a potentially non-optimal use of Vulkan, e.g. using \texttt{vkCmdClearColorImage} when setting \texttt{VkAttachmentDescription::loadOp} to \texttt{VK_ATTACHMENT_LOAD_OP_CLEAR} would have worked.
- \texttt{VK_DEBUG_UTILS_MESSAGE_TYPEDEVICE_ADDRESS_BINDING_BIT_EXT} specifies that the implementation has modified the set of GPU-visible virtual addresses associated with a Vulkan object.

```c
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessageTypeFlagsEXT;
```
VkDebugUtilsMessageTypeFlagsEXT is a bitmask type for setting a mask of zero or more
VkDebugUtilsMessageTypeFlagsEXT.

The prototype for the VkDebugUtilsMessengerCreateInfoEXT::pUserCallback function
implemented by the application is:

```c
// Provided by VK_EXT_debug_utils
typedef VkBool32 (VKAPI_PTR *PFN_vkDebugUtilsMessengerCallbackEXT)(
    VkDebugUtilsMessageSeverityFlagBitsEXT messageSeverity,
    VkDebugUtilsMessageTypeFlagsEXT messageTypes,
    const VkDebugUtilsMessengerCallbackDataEXT* pCallbackData,
    void* pUserData);
```

- `messageSeverity` specifies the VkDebugUtilsMessageSeverityFlagBitsEXT that triggered this
callback.
- `messageTypes` is a bitmask of VkDebugUtilsMessageTypeFlagBitsEXT specifying which type of
event(s) triggered this callback.
- `pCallbackData` contains all the callback related data in the
  VkDebugUtilsMessengerCallbackDataEXT structure.
- `pUserData` is the user data provided when the VkDebugUtilsMessengerEXT was created.

The callback returns a VkBool32, which is interpreted in a layer-specified manner. The application
should always return VK_FALSE. The VK_TRUE value is reserved for use in layer development.

Valid Usage

- VUID-PFN_vkDebugUtilsMessengerCallbackEXT-None-04769
  The callback must not make calls to any Vulkan commands

The definition of VkDebugUtilsMessengerCallbackDataEXT is:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsMessengerCallbackDataEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugUtilsMessageSeverityFlagBitsEXT flags;
    const char* pMessageIdName;
    int32_t messageIdNumber;
    const char* pMessage;
    uint32_t queueLabelCount;
    const VkDebugUtilsLabelEXT* pQueueLabels;
    uint32_t cmdBufLabelCount;
    const VkDebugUtilsLabelEXT* pCmdBufLabels;
    uint32_t objectCount;
    const VkDebugUtilsObjectNameInfoEXT* pObjects;
} VkDebugUtilsMessengerCallbackDataEXT;
```
• **sType** is a `VkStructureType` value identifying this structure.
• **pNext** is `NULL` or a pointer to a structure extending this structure.
• **flags** is `0` and is reserved for future use.
• **pMessageIdName** is a null-terminated string that identifies the particular message ID that is associated with the provided message. If the message corresponds to a validation layer message, then this string may contain the portion of the Vulkan specification that is believed to have been violated.
• **messageIdNumber** is the ID number of the triggering message. If the message corresponds to a validation layer message, then this number is related to the internal number associated with the message being triggered.
• **pMessage** is a null-terminated string detailing the trigger conditions.
• **queueLabelCount** is a count of items contained in the `pQueueLabels` array.
• **pQueueLabels** is `NULL` or a pointer to an array of `VkDebugUtilsLabelEXT` active in the current `VkQueue` at the time the callback was triggered. Refer to Queue Labels for more information.
• **cmdBufLabelCount** is a count of items contained in the `pCmdBufLabels` array.
• **pCmdBufLabels** is `NULL` or a pointer to an array of `VkDebugUtilsLabelEXT` active in the current `VkCommandBuffer` at the time the callback was triggered. Refer to Command Buffer Labels for more information.
• **objectCount** is a count of items contained in the `pObjects` array.
• **pObjects** is a pointer to an array of `VkDebugUtilsObjectNameInfoEXT` objects related to the detected issue. The array is roughly in order of importance, but the 0th element is always guaranteed to be the most important object for this message.

**Note**
This structure should only be considered valid during the lifetime of the triggered callback.

Since adding queue and command buffer labels behaves like pushing and popping onto a stack, the order of both `pQueueLabels` and `pCmdBufLabels` is based on the order the labels were defined. The result is that the first label in either `pQueueLabels` or `pCmdBufLabels` will be the first defined (and therefore the oldest) while the last label in each list will be the most recent.

**Note**
`pQueueLabels` will only be non-NULL if one of the objects in `pObjects` can be related directly to a defined `VkQueue` which has had one or more labels associated with it.

Likewise, `pCmdBufLabels` will only be non-NULL if one of the objects in `pObjects` can be related directly to a defined `VkCommandBuffer` which has had one or more labels associated with it. Additionally, while command buffer labels allow for beginning and ending across different command buffers, the debug messaging framework cannot guarantee that labels in `pCmdBufLabels` will contain those defined outside of
the associated command buffer. This is partially due to the fact that the association of one command buffer with another may not have been defined at the time the debug message is triggered.

Valid Usage (Implicit)

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-sType-sType**
  sType must be VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CALLBACK_DATA_EXT

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-pNext-pNext**
  pNext must be NULL or a pointer to a valid instance of VkDeviceAddressBindingCallbackDataEXT

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-sType-unique**
  The sType value of each struct in the pNext chain must be unique

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-flags-zerobitmask**
  flags must be 0

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-pMessageIdName-parameter**
  If pMessageIdName is not NULL, pMessageIdName must be a null-terminated UTF-8 string

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-pMessage-parameter**
  pMessage must be a null-terminated UTF-8 string

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-pQueueLabels-parameter**
  If queueLabelCount is not 0, pQueueLabels must be a valid pointer to an array of queueLabelCount valid VkDebugUtilsLabelEXT structures

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-pCmdBufLabels-parameter**
  If cmdBufLabelCount is not 0, pCmdBufLabels must be a valid pointer to an array of cmdBufLabelCount valid VkDebugUtilsLabelEXT structures

- **VUID-VkDebugUtilsMessengerCallbackDataEXT-pObjects-parameter**
  If objectCount is not 0, pObjects must be a valid pointer to an array of objectCount valid VkDebugUtilsObjectNameInfoEXT structures

// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessengerCallbackDataFlagsEXT;

VkDebugUtilsMessengerCallbackDataFlagsEXT is a bitmask type for setting a mask, but is currently reserved for future use.

The definition of VkDeviceAddressBindingCallbackDataEXT is:

// Provided by VK_EXT_device_address_binding_report
typedef struct VkDeviceAddressBindingCallbackDataEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceAddressBindingFlagsEXT flags;
    VkDeviceAddress baseAddress;
}
VkDeviceSize size;
VkDeviceAddressBindingTypeEXT bindingType;
} VkDeviceAddressBindingCallbackDataEXT;

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **flags** is a bitmask of VkDeviceAddressBindingFlagBitsEXT specifying additional information about the binding event that caused the callback to be called.
- **baseAddress** is a GPU-accessible virtual address identifying the start of a region of the virtual address space associated with a Vulkan object, as identified by the pObjects member of VkDebugUtilsMessengerCallbackDataEXT.
- **size** is the size in bytes of a region of GPU-accessible virtual address space.
- **bindingType** is a VkDeviceAddressBindingTypeEXT specifying the type of binding event that caused the callback to be called.

If the reportAddressBinding feature is enabled and the implementation binds or unbinds a region of virtual address space associated with a Vulkan object, the implementation **must** submit a debug message with the following properties:

- `messageSeverity` equal to VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT
- `messageType` equal to VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT
- `VkDebugUtilsMessengerCallbackDataEXT::pObjects` **must** identify the associated Vulkan object
- `VkDeviceAddressBindingCallbackDataEXT` **must** be included in the `pNext` chain of `VkDebugUtilsMessengerCallbackDataEXT`

These debug messages **must** be emitted both for GPU virtual address space regions that are explicitly bound to a Vulkan object via the `vkBind*Memory/vkBind*Memory2` functions, and for those that are implicitly generated via memory allocation or importing external memory.

An implementation **may** report binding events associated with a Vulkan object via VkDebugUtilsMessengerEXT prior to the object becoming visible to an application via other Vulkan commands. For example, object creation functions **may** report binding events that occur during an objects creation. In such cases, `VkDeviceAddressBindingCallbackDataEXT::flags` **must** include VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT.

Object handles reported in this manner are not valid object handles, and **must** not be used as an input parameter to any Vulkan command.

Any valid object handle returned by an object creation function **must** match the handle specified via any previously reported binding events associated with the object's creation.

**Valid Usage (Implicit)**

- VUID-VkDeviceAddressBindingCallbackDataEXT-sType-sType
  sType **must** be VK_STRUCTURE_TYPE_DEVICE_ADDRESS_BINDING_CALLBACK_DATA_EXT
• VUID-VkDeviceAddressBindingCallbackDataEXT-flags-parameter
  flags must be a valid combination of VkDeviceAddressBindingFlagBitsEXT values

• VUID-VkDeviceAddressBindingCallbackDataEXT-bindingType-parameter
  bindingType must be a valid VkDeviceAddressBindingTypeEXT value

Bits which can be set in VkDeviceAddressBindingCallbackDataEXT::flags specifying additional information about a binding event are:

```c
// Provided by VK_EXT_device_address_binding_report
typedef enum VkDeviceAddressBindingFlagBitsEXT {
    VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT = 0x00000001,
} VkDeviceAddressBindingFlagBitsEXT;
```

- **VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT** specifies that VkDeviceAddressBindingCallbackDataEXT describes a Vulkan object that has not been made visible to the application via a Vulkan command.

```c
// Provided by VK_EXT_device_address_binding_report
typedef VkFlags VkDeviceAddressBindingFlagsEXT;
```

VkDeviceAddressBindingFlagsEXT is a bitmask type for setting a mask of zero or more VkDeviceAddressBindingFlagBitsEXT.

The VkDeviceAddressBindingTypeEXT enum is defined as:

```c
// Provided by VK_EXT_device_address_binding_report
typedef enum VkDeviceAddressBindingTypeEXT {
    VKDeviceAddressBindingTypeBind_EXT = 0,
    VKDeviceAddressBindingTypeUnbind_EXT = 1,
} VkDeviceAddressBindingTypeEXT;
```

- **VK_DEVICE_ADDRESS_BINDING_TYPE_BIND_EXT** specifies that a new GPU-accessible virtual address range has been bound.
- **VK_DEVICE_ADDRESS_BINDING_TYPE_UNBIND_EXT** specifies that a GPU-accessible virtual address range has been unbound.

There may be times that a user wishes to intentionally submit a debug message. To do this, call:

```c
// Provided by VK_EXT_debug_utils
void vkSubmitDebugUtilsMessageEXT(
    VkInstance instance,
    VkDebugUtilsMessageSeverityFlagBitsEXT messageSeverity,
    VkDebugUtilsMessageTypeFlagsEXT messageTypes,
    const VkDebugUtilsMessengerCallbackDataEXT* pCallbackData);
```
• **instance** is the debug stream's VkInstance.

• **messageSeverity** is a VkDebugUtilsMessageSeverityFlagBitsEXT value specifying the severity of this event/message.

• **messageTypes** is a bitmask of VkDebugUtilsMessageTypeFlagBitsEXT specifying which type of event(s) to identify with this message.

• **pCallbackData** contains all the callback related data in the VkDebugUtilsMessengerCallbackDataEXT structure.

The call will propagate through the layers and generate callback(s) as indicated by the message’s flags. The parameters are passed on to the callback in addition to the **pUserData** value that was defined at the time the messenger was registered.

---

**Valid Usage**

- VUID-vkSubmitDebugUtilsMessageEXT-objectType-02591
  The *objectType* member of each element of pCallbackData->pObjects must not be VK_OBJECT_TYPE_UNKNOWN

**Valid Usage (Implicit)**

- VUID-vkSubmitDebugUtilsMessageEXT-instance-parameter
  instance must be a valid VkInstance handle

- VUID-vkSubmitDebugUtilsMessageEXT-messageSeverity-parameter
  messageSeverity must be a valid VkDebugUtilsMessageSeverityFlagBitsEXT value

- VUID-vkSubmitDebugUtilsMessageEXT-messageTypes-parameter
  messageTypes must be a valid combination of VkDebugUtilsMessageTypeFlagBitsEXT values

- VUID-vkSubmitDebugUtilsMessageEXT-messageTypes-requiredbitmask
  messageTypes must not be 0

- VUID-vkSubmitDebugUtilsMessageEXT-pCallbackData-parameter
  pCallbackData must be a valid pointer to a valid VkDebugUtilsMessengerCallbackDataEXT structure

---

To destroy a VkDebugUtilsMessengerEXT object, call:

```c
// Provided by VK_EXT_debug_utils
void vkDestroyDebugUtilsMessengerEXT(
    VkInstance instance,
    VkDebugUtilsMessengerEXT messenger,
    const VkAllocationCallbacks* pAllocator);
```

• **instance** is the instance where the callback was created.
• **messenger** is the **VkDebugUtilsMessengerEXT** object to destroy. **messenger** is an externally synchronized object and **must** not be used on more than one thread at a time. This means that **vkDestroyDebugUtilsMessengerEXT** **must** not be called when a callback is active.

• **pAllocator** controls host memory allocation as described in the **Memory Allocation** chapter.

### Valid Usage

- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-01915
  If **VkAllocationCallbacks** were provided when **messenger** was created, a compatible set of callbacks **must** be provided here.

- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-01916
  If no **VkAllocationCallbacks** were provided when **messenger** was created, **pAllocator** **must** be **NULL**.

### Valid Usage (Implicit)

- VUID-vkDestroyDebugUtilsMessengerEXT-instance-parameter
  **instance** **must** be a valid **VkInstance** handle.

- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-parameter
  If **messenger** is not **VK_NULL_HANDLE**, **messenger** **must** be a valid **VkDebugUtilsMessengerEXT** handle.

- VUID-vkDestroyDebugUtilsMessengerEXT-pAllocator-parameter
  If **pAllocator** is not **NULL**, **pAllocator** **must** be a valid pointer to a valid **VkAllocationCallbacks** structure.

- VUID-vkDestroyDebugUtilsMessengerEXT-messenger-parent
  If **messenger** is a valid handle, it **must** have been created, allocated, or retrieved from **instance**.

### Host Synchronization

- Host access to **messenger** **must** be externally synchronized.

The application **must** ensure that **vkDestroyDebugUtilsMessengerEXT** is not executed in parallel with any Vulkan command that is also called with **instance** or child of **instance** as the dispatchable argument.

### 51.2. Debug Markers

Debug markers provide a flexible way for debugging and validation layers to receive annotation and debug information.

The **Object Annotation** section describes how to associate a name or binary data with a Vulkan object.
The Command Buffer Markers section describes how to associate logical elements of the scene with commands in the command buffer.

### 51.2.1. Object Annotation

The commands in this section allow application developers to associate user-defined information with Vulkan objects at will.

An object can be given a user-friendly name by calling:

```c
// Provided by VK_EXT_debug_marker
VkResult vkDebugMarkerSetObjectNameEXT(
    VkDevice device,
    const VkDebugMarkerObjectNameInfoEXT* pNameInfo);
```

- `device` is the device that created the object.
- `pNameInfo` is a pointer to a `VkDebugMarkerObjectNameInfoEXT` structure specifying the parameters of the name to set on the object.

#### Valid Usage (Implicit)

- VUID-vkDebugMarkerSetObjectNameEXT-device-parameter
  
  `device` must be a valid `VkDevice` handle

- VUID-vkDebugMarkerSetObjectNameEXT-pNameInfo-parameter
  
  `pNameInfo` must be a valid pointer to a valid `VkDebugMarkerObjectNameInfoEXT` structure

#### Host Synchronization

- Host access to `pNameInfo->object` must be externally synchronized

#### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkDebugMarkerObjectNameInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_marker
```
typedef struct VkDebugMarkerObjectNameInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugReportObjectTypeEXT objectType;
    uint64_t object;
    const char* pObjectName;
} VkDebugMarkerObjectNameInfoEXT;

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- objectType is a VkDebugReportObjectTypeEXT specifying the type of the object to be named.
- object is the object to be named.
- pObjectName is a null-terminated UTF-8 string specifying the name to apply to object.

Applications may change the name associated with an object simply by calling vkDebugMarkerSetObjectNameEXT again with a new string. To remove a previously set name, pObjectName should be set to an empty string.

**Valid Usage**

- VUID-VkDebugMarkerObjectNameInfoEXT-objectType-01490
  objectType must not be VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT

- VUID-VkDebugMarkerObjectNameInfoEXT-object-01491
  object must not be VK_NULL_HANDLE

- VUID-VkDebugMarkerObjectNameInfoEXT-object-01492
  object must be a Vulkan object of the type associated with objectType as defined in VkDebugReportObjectTypeEXT and Vulkan Handle Relationship

**Valid Usage (Implicit)**

- VUID-VkDebugMarkerObjectNameInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DEBUG_MARKER_OBJECT_NAME_INFO_EXT

- VUID-VkDebugMarkerObjectNameInfoEXT-pNext-pNext
  pNext must be NULL

- VUID-VkDebugMarkerObjectNameInfoEXT-objectType-parameter
  objectType must be a valid VkDebugReportObjectTypeEXT value

- VUID-VkDebugMarkerObjectNameInfoEXT-pObjectName-parameter
  pObjectName must be a null-terminated UTF-8 string

In addition to setting a name for an object, debugging and validation layers may have uses for additional binary data on a per-object basis that has no other place in the Vulkan API. For example, a VkShaderModule could have additional debugging data attached to it to aid in offline shader tracing.
To attach data to an object, call:

```c
// Provided by VK_EXT_debug_marker
VkResult vkDebugMarkerSetObjectTagEXT(
    VkDevice device,
    const VkDebugMarkerObjectTagInfoEXT* pTagInfo);
```

- `device` is the device that created the object.
- `pTagInfo` is a pointer to a `VkDebugMarkerObjectTagInfoEXT` structure specifying the parameters of the tag to attach to the object.

### Valid Usage (Implicit)

- VUID-vkDebugMarkerSetObjectTagEXT-device-parameter
  
  `device` must be a valid `VkDevice` handle

- VUID-vkDebugMarkerSetObjectTagEXT-pTagInfo-parameter
  
  `pTagInfo` must be a valid pointer to a valid `VkDebugMarkerObjectTagInfoEXT` structure

### Host Synchronization

- Host access to `pTagInfo->object` must be externally synchronized

### Return Codes

**Success**

- `VK_SUCCESS`

**Failure**

- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`

The `VkDebugMarkerObjectTagInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_marker
typedef struct VkDebugMarkerObjectTagInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugReportObjectTypeEXT objectType;
    uint64_t object;
    uint64_t tagName;
    size_t tagSize;
    const void* pTag;
} VkDebugMarkerObjectTagInfoEXT;
```
- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **objectType** is a `VkDebugReportObjectTypeEXT` specifying the type of the object to be named.
- **object** is the object to be tagged.
- **tagName** is a numerical identifier of the tag.
- **tagSize** is the number of bytes of data to attach to the object.
- **pTag** is a pointer to an array of `tagSize` bytes containing the data to be associated with the object.

The **tagName** parameter gives a name or identifier to the type of data being tagged. This can be used by debugging layers to easily filter for only data that can be used by that implementation.

### Valid Usage

- VUID-VkDebugMarkerObjectTagInfoEXT-objectType-01493
  objectType **must** not be `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT`

- VUID-VkDebugMarkerObjectTagInfoEXT-object-01494
  object **must** not be `VK_NULL_HANDLE`

- VUID-VkDebugMarkerObjectTagInfoEXT-object-01495
  object **must** be a Vulkan object of the type associated with `objectType` as defined in `VkDebugReportObjectTypeEXT` and Vulkan Handle Relationship

### Valid Usage (Implicit)

- VUID-VkDebugMarkerObjectTagInfoEXT-sType-sType
  sType **must** be `VK_STRUCTURE_TYPE_DEBUG_MARKER_OBJECT_TAG_INFO_EXT`

- VUID-VkDebugMarkerObjectTagInfoEXT-pNext-pNext
  pNext **must** be NULL

- VUID-VkDebugMarkerObjectTagInfoEXT-objectType-parameter
  objectType **must** be a valid `VkDebugReportObjectTypeEXT` value

- VUID-VkDebugMarkerObjectTagInfoEXT-pTag-parameter
  pTag **must** be a valid pointer to an array of `tagSize` bytes

- VUID-VkDebugMarkerObjectTagInfoEXT-tagSize-arraylength
  tagSize **must** be greater than 0

### 51.2.2. Command Buffer Markers

Typical Vulkan applications will submit many command buffers in each frame, with each command buffer containing a large number of individual commands. Being able to logically annotate regions of command buffers that belong together as well as hierarchically subdivide the frame is important to a developer’s ability to navigate the commands viewed holistically.
The marker commands `vkCmdDebugMarkerBeginEXT` and `vkCmdDebugMarkerEndEXT` define regions of a series of commands that are grouped together, and they can be nested to create a hierarchy. The `vkCmdDebugMarkerInsertEXT` command allows insertion of a single label within a command buffer.

A marker region can be opened by calling:

```c
// Provided by VK_EXT_debug_marker
void vkCmdDebugMarkerBeginEXT(
    VkCommandBuffer commandBuffer,
    const VkDebugMarkerMarkerInfoEXT* pMarkerInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pMarkerInfo` is a pointer to a `VkDebugMarkerMarkerInfoEXT` structure specifying the parameters of the marker region to open.

### Valid Usage (Implicit)

- VUID-vkCmdDebugMarkerBeginEXT-commandBuffer-parameter `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdDebugMarkerBeginEXT-pMarkerInfo-parameter `pMarkerInfo` must be a valid pointer to a valid `VkDebugMarkerMarkerInfoEXT` structure
- VUID-vkCmdDebugMarkerBeginEXT-commandBuffer-recording `commandBuffer` must be in the recording state
- VUID-vkCmdDebugMarkerBeginEXT-commandBuffer-cmdpool The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations
- VUID-vkCmdDebugMarkerBeginEXT-videocoding This command must only be called outside of a video coding scope

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The `VkDebugMarkerMarkerInfoEXT` structure is defined as:

```
// Provided by VK_EXT_debug_marker
typedef struct VkDebugMarkerMarkerInfoEXT {
    VkStructureType sType;
    const void* pNext;
    const char* pMarkerName;
    float color[4];
} VkDebugMarkerMarkerInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pMarkerName` is a pointer to a null-terminated UTF-8 string containing the name of the marker.
- `color` is an optional RGBA color value that can be associated with the marker. A particular implementation may choose to ignore this color value. The values contain RGBA values in order, in the range 0.0 to 1.0. If all elements in `color` are set to 0.0 then it is ignored.

**Valid Usage (Implicit)**

- VUID-VkDebugMarkerMarkerInfoEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_DEBUG_MARKER_MARKER_INFO_EXT`
- VUID-VkDebugMarkerMarkerInfoEXT-pNext-pNext
  `pNext` must be `NULL`
- VUID-VkDebugMarkerMarkerInfoEXT-pMarkerName-parameter
  `pMarkerName` must be a null-terminated UTF-8 string

A marker region can be closed by calling:

```
// Provided by VK_EXT_debug_marker
void vkCmdDebugMarkerEndEXT(
    VkCommandBuffer commandBuffer);
```

- `commandBuffer` is the command buffer into which the command is recorded.

An application may open a marker region in one command buffer and close it in another, or otherwise split marker regions across multiple command buffers or multiple queue submissions. When viewed from the linear series of submissions to a single queue, the calls to `vkCmdDebugMarkerBeginEXT` and `vkCmdDebugMarkerEndEXT` must be matched and balanced.

**Valid Usage**

- VUID-vkCmdDebugMarkerEndEXT-commandBuffer-01239
  There must be an outstanding `vkCmdDebugMarkerBeginEXT` command prior to the `vkCmdDebugMarkerEndEXT` on the queue that `commandBuffer` is submitted to
If `commandBuffer` is a secondary command buffer, there **must** be an outstanding `vkCmdDebugMarkerBeginEXT` command recorded to `commandBuffer` that has not previously been ended by a call to `vkCmdDebugMarkerEndEXT`.

### Valid Usage (Implicit)

- **VUID-vkCmdDebugMarkerEndEXT-commandBuffer-parameter**
  - `commandBuffer` **must** be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdDebugMarkerEndEXT-commandBuffer-recording**
  - `commandBuffer` **must** be in the recording state.

- **VUID-vkCmdDebugMarkerEndEXT-commandBuffer-cmdpool**
  - The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations.

- **VUID-vkCmdDebugMarkerEndEXT-videocoding**
  - This command **must** only be called outside of a video coding scope.

### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized.

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized.

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

A single marker label can be inserted into a command buffer by calling:

```c
// Provided by VK_EXT_debug_marker
void vkCmdDebugMarkerInsertEXT(
    VkCommandBuffer commandBuffer,
    const VkDebugMarkerMarkerInfoEXT* pMarkerInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pMarkerInfo` is a pointer to a `VkDebugMarkerMarkerInfoEXT` structure specifying the parameters of the marker to insert.
Valid Usage (Implicit)

- VUID-vkCmdDebugMarkerInsertEXT-commandBuffer-parameter
  The `commandBuffer` must be a valid `VkCommandBuffer` handle.

- VUID-vkCmdDebugMarkerInsertEXT-pMarkerInfo-parameter
  The `pMarkerInfo` must be a valid pointer to a valid `VkDebugMarkerMarkerInfoEXT` structure.

- VUID-vkCmdDebugMarkerInsertEXT-commandBuffer-recording
  The `commandBuffer` must be in the recording state.

- VUID-vkCmdDebugMarkerInsertEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations.

- VUID-vkCmdDebugMarkerInsertEXT-videocoding
  This command must only be called outside of a video coding scope.

Host Synchronization

- Host access to `commandBuffer` must be externally synchronized.

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.

51.3. Debug Report Callbacks

Debug report callbacks are represented by `VkDebugReportCallbackEXT` handles:

```c
// Provided by VK_EXT_debug_report
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDebugReportCallbackEXT)
```

Debug report callbacks give more detailed feedback on the application's use of Vulkan when events of interest occur.

To register a debug report callback, an application uses `vkCreateDebugReportCallbackEXT`:

```c
// Provided by VK_EXT_debug_report
```
VkResult vkCreateDebugReportCallbackEXT(
    VkInstance instance, 
    const VkDebugReportCallbackCreateInfoEXT* pCreateInfo, 
    const VkAllocationCallbacks* pAllocator, 
    VkDebugReportCallbackEXT* pCallback);

- `instance` is the instance the callback will be logged on.
- `pCreateInfo` is a pointer to a `VkDebugReportCallbackCreateInfoEXT` structure defining the conditions under which this callback will be called.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pCallback` is a pointer to a `VkDebugReportCallbackEXT` handle in which the created object is returned.

**Valid Usage (Implicit)**

- VUID-vkCreateDebugReportCallbackEXT-instance-parameter
  instance must be a valid `VkInstance` handle
- VUID-vkCreateDebugReportCallbackEXT-pCreateInfo-parameter
  `pCreateInfo` must be a valid pointer to a valid `VkDebugReportCallbackCreateInfoEXT` structure
- VUID-vkCreateDebugReportCallbackEXT-pAllocator-parameter
  If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDebugReportCallbackEXT-pCallback-parameter
  `pCallback` must be a valid pointer to a `VkDebugReportCallbackEXT` handle

**Return Codes**

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The definition of `VkDebugReportCallbackCreateInfoEXT` is:

```c
// Provided by VK_EXT_debug_report
typedef struct VkDebugReportCallbackCreateInfoEXT { 
    VkStructureType sType;
    const void* pNext;
    VkDebugReportFlagsEXT flags;
    PFN_vkDebugReportCallbackEXT pfnCallback;
    void* pUserData;
} VkDebugReportCallbackCreateInfoEXT;
```
 VkDebugReportCallbackCreateInfoEXT;

• **sType** is a *VkStructureType* value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **flags** is a bitmask of *VkDebugReportFlagBitsEXT* specifying which event(s) will cause this callback to be called.
• **PFNCallback** is the application callback function to call.
• **pUserData** is user data to be passed to the callback.

For each *VkDebugReportCallbackEXT* that is created the *VkDebugReportCallbackCreateInfoEXT::flags* determine when that *VkDebugReportCallbackCreateInfoEXT::PFNCallback* is called. When an event happens, the implementation will do a bitwise AND of the event's *VkDebugReportFlagBitsEXT* flags to each *VkDebugReportCallbackEXT* object's flags. For each non-zero result the corresponding callback will be called. The callback will come directly from the component that detected the event, unless some other layer intercepts the calls for its own purposes (filter them in a different way, log to a system error log, etc.).

An application **may** receive multiple callbacks if multiple *VkDebugReportCallbackEXT* objects were created. A callback will always be executed in the same thread as the originating Vulkan call.

A callback may be called from multiple threads simultaneously (if the application is making Vulkan calls from multiple threads).

### Valid Usage (Implicit)

- **VUID-VkDebugReportCallbackCreateInfoEXT-sType-sType**
  
  **sType** **must** be `VK_STRUCTURE_TYPE_DEBUG_REPORT_CALLBACK_CREATE_INFO_EXT`

- **VUID-VkDebugReportCallbackCreateInfoEXT-flags-parameter**
  
  **flags** **must** be a valid combination of *VkDebugReportFlagBitsEXT* values

- **VUID-VkDebugReportCallbackCreateInfoEXT-PFNCallback-parameter**
  
  **PFNCallback** **must** be a valid `PFN_vkDebugReportCallbackEXT` value

Bits which **can** be set in *VkDebugReportCallbackCreateInfoEXT::flags*, specifying events which cause a debug report, are:

```c
// Provided by VK_EXT_debug_report
typedef enum VkDebugReportFlagBitsEXT {
    VK_DEBUG_REPORT_INFORMATION_BIT_EXT = 0x00000001,
    VK_DEBUG_REPORT_WARNING_BIT_EXT = 0x00000002,
    VK_DEBUG_REPORT_PERFORMANCE_WARNING_BIT_EXT = 0x00000004,
    VK_DEBUG_REPORT_ERROR_BIT_EXT = 0x00000008,
    VK_DEBUG_REPORT_DEBUG_BIT_EXT = 0x00000010,
} VkDebugReportFlagBitsEXT;
```
• **VK_DEBUG_REPORT_ERROR_BIT_EXT** specifies that the application has violated a valid usage condition of the specification.

• **VK_DEBUG_REPORT_WARNING_BIT_EXT** specifies use of Vulkan that may expose an app bug. Such cases may not be immediately harmful, such as a fragment shader outputting to a location with no attachment. Other cases may point to behavior that is almost certainly bad when unintended such as using an image whose memory has not been filled. In general if you see a warning but you know that the behavior is intended/desired, then simply ignore the warning.

• **VK_DEBUG_REPORT_PERFORMANCE_WARNING_BIT_EXT** specifies a potentially non-optimal use of Vulkan, e.g. using `vkCmdClearColorImage` when setting `VkAttachmentDescription::loadOp` to `VK_ATTACHMENT_LOAD_OP_CLEAR` would have worked.

• **VK_DEBUG_REPORT_INFORMATION_BIT_EXT** specifies an informational message such as resource details that may be handy when debugging an application.

• **VK_DEBUG_REPORT_DEBUG_BIT_EXT** specifies diagnostic information from the implementation and layers.

```c
// Provided by VK_EXT_debug_report
typedef VkFlags VkDebugReportFlagsEXT;
```

**VkDebugReportFlagsEXT** is a bitmask type for setting a mask of zero or more **VkDebugReportFlagBitsEXT**.

The prototype for the **VkDebugReportCallbackCreateInfoEXT::PFNCallback** function implemented by the application is:

```c
// Provided by VK_EXT_debug_report
typedef VkBool32 (VKAPI_PTR *PFN_vkDebugReportCallbackEXT)(
    VkDebugReportFlagsEXT flags,
    VkDebugReportObjectTypeEXT objectType,
    uint64_t object,
    size_t location,
    int32_t messageCode,
    const char* pLayerPrefix,
    const char* pMessage,
    void* pUserData);
```

• **flags** specifies the **VkDebugReportFlagBitsEXT** that triggered this callback.

• **objectType** is a **VkDebugReportObjectTypeEXT** value specifying the type of object being used or created at the time the event was triggered.

• **object** is the object where the issue was detected. If **objectType** is `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT`, **object** is undefined.

• **location** is a component (layer, driver, loader) defined value specifying the location of the trigger. This is an **optional** value.

• **messageCode** is a layer-defined value indicating what test triggered this callback.
• `pLayerPrefix` is a null-terminated string that is an abbreviation of the name of the component making the callback. `pLayerPrefix` is only valid for the duration of the callback.

• `pMessage` is a null-terminated string detailing the trigger conditions. `pMessage` is only valid for the duration of the callback.

• `pUserData` is the user data given when the `VkDebugReportCallbackEXT` was created.

The callback **must** not call `vkDestroyDebugReportCallbackEXT`.

The callback returns a `VkBool32`, which is interpreted in a layer-specified manner. The application **should** always return `VK_FALSE`. The `VK_TRUE` value is reserved for use in layer development.

`object` **must** be a Vulkan object or `VK_NULL_HANDLE`. If `objectType` is not `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT` and `object` is not `VK_NULL_HANDLE`, `object` **must** be a Vulkan object of the corresponding type associated with `objectType` as defined in `VkDebugReportObjectTypeEXT` and Vulkan Handle Relationship.

Possible values passed to the `objectType` parameter of the callback function specified by `VkDebugReportCallbackCreateInfoEXT::pfnCallback`, specifying the type of object handle being reported, are:

```c
// Provided by VK_EXT_debug_marker, VK_EXT_debug_report
typedef enum VkDebugReportObjectTypeEXT {
    VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT = 0,
    VK_DEBUG_REPORT_OBJECT_TYPE_INSTANCE_EXT = 1,
    VK_DEBUG_REPORT_OBJECT_TYPE_PHYSICAL_DEVICE_EXT = 2,
    VK_DEBUG_REPORT_OBJECT_TYPE_DEVICE_EXT = 3,
    VK_DEBUG_REPORT_OBJECT_TYPE_QUEUE_EXT = 4,
    VK_DEBUG_REPORT_OBJECT_TYPE_SEMAPHORE_EXT = 5,
    VK_DEBUG_REPORT_OBJECT_TYPE_COMMAND_BUFFER_EXT = 6,
    VK_DEBUG_REPORT_OBJECT_TYPE_FENCE_EXT = 7,
    VK_DEBUG_REPORT_OBJECT_TYPE_DEVICE_MEMORY_EXT = 8,
    VK_DEBUG_REPORT_OBJECT_TYPE_BUFFER_EXT = 9,
    VK_DEBUG_REPORT_OBJECT_TYPE_IMAGE_EXT = 10,
    VK_DEBUG_REPORT_OBJECT_TYPE_EVENT_EXT = 11,
    VK_DEBUG_REPORT_OBJECT_TYPE_QUERY_POOL_EXT = 12,
    VK_DEBUG_REPORT_OBJECT_TYPE_BUFFER_VIEW_EXT = 13,
    VK_DEBUG_REPORT_OBJECT_TYPE_IMAGE_VIEW_EXT = 14,
    VK_DEBUG_REPORT_OBJECT_TYPE_SHADER_MODULE_EXT = 15,
    VK_DEBUG_REPORT_OBJECT_TYPE_PIPELINE_CACHE_EXT = 16,
    VK_DEBUG_REPORT_OBJECT_TYPE_PIPELINE_LAYOUT_EXT = 17,
    VK_DEBUG_REPORT_OBJECT_TYPE_RENDER_PASS_EXT = 18,
    VK_DEBUG_REPORT_OBJECT_TYPE_PIPELINE_EXT = 19,
    VK_DEBUG_REPORT_OBJECT_TYPE_DESCRIPTOR_SET_LAYOUT_EXT = 20,
    VK_DEBUG_REPORT_OBJECT_TYPE_SAMPLER_EXT = 21,
    VK_DEBUG_REPORT_OBJECT_TYPE_DESCRIPTOR_POOL_EXT = 22,
    VK_DEBUG_REPORT_OBJECT_TYPE_DESCRIPTOR_SET_EXT = 23,
    VK_DEBUG_REPORT_OBJECT_TYPE_FRAMEBUFFER_EXT = 24,
    VK_DEBUG_REPORT_OBJECT_TYPE_COMMAND_POOL_EXT = 25,
    VK_DEBUG_REPORT_OBJECT_TYPE_SURFACE_KHR_EXT = 26
};
```
VK_DEBUG_REPORT_OBJECT_TYPE_SWAPCHAIN_KHR_EXT = 27,
VK_DEBUG_REPORT_OBJECT_TYPE_DEBUG_REPORT_CALLBACK_EXT_EXT = 28,
VK_DEBUG_REPORT_OBJECT_TYPE_DISPLAY_KHR_EXT = 29,
VK_DEBUG_REPORT_OBJECT_TYPE_DISPLAY_MODE_KHR_EXT = 30,
VK_DEBUG_REPORT_OBJECT_TYPE_VALIDATION_CACHE_EXT_EXT = 33,
// Provided by VK_VERSION_1_1 with VK_EXT_debug_report
VK_KHR_sampler_ycbcr_conversion with VK_EXT_debug_report
VK_DEBUG_REPORT_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION_EXT = 1000156000,

**Note**

The primary expected use of **VK_ERROR_VALIDATION_FAILED_EXT** is for validation layer testing. It is not expected that an application would see this error code during
To inject its own messages into the debug stream, call:

```c
// Provided by VK_EXT_debug_report
void vkDebugReportMessageEXT(
    VkInstance           instance,
    VkDebugReportFlagsEXT flags,
    VkDebugReportObjectTypeEXT objectType,
    uint64_t object,
    size_t location,
    int32_t messageCode,
    const char* pLayerPrefix,
    const char* pMessage);
```

- instance is the debug stream’s VkInstance.
- flags specifies the VkDebugReportFlagBitsEXT classification of this event/message.
- objectType is a VkDebugReportObjectTypeEXT specifying the type of object being used or created at the time the event was triggered.
- object is the object where the issue was detected. object can be VK_NULL_HANDLE if there is no object associated with the event.
- location is an application defined value.
- messageCode is an application defined value.
- pLayerPrefix is the abbreviation of the component making this event/message.
- pMessage is a null-terminated string detailing the trigger conditions.

The call will propagate through the layers and generate callback(s) as indicated by the message’s flags. The parameters are passed on to the callback in addition to the pUserData value that was defined at the time the callback was registered.

### Valid Usage

- VUID-vkDebugReportMessageEXT-object-01241
  object must be a Vulkan object or VK_NULL_HANDLE

- VUID-vkDebugReportMessageEXT-objectType-01498
  If objectType is not VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT and object is not VK_NULL_HANDLE, object must be a Vulkan object of the corresponding type associated with objectType as defined in VkDebugReportObjectTypeEXT and Vulkan Handle Relationship

### Valid Usage (Implicit)

- VUID-vkDebugReportMessageEXT-instance-parameter
  instance must be a valid VkInstance handle
• **VUID-vkDebugReportMessageEXT-flags-parameter**
  - `flags` **must** be a valid combination of `VkDebugReportFlagBitsEXT` values

• **VUID-vkDebugReportMessageEXT-flags-required bitmask**
  - `flags` **must** not be 0

• **VUID-vkDebugReportMessageEXT-objectType-parameter**
  - `objectType` **must** be a valid `VkDebugReportObjectTypeEXT` value

• **VUID-vkDebugReportMessageEXT-pLayerPrefix-parameter**
  - `pLayerPrefix` **must** be a null-terminated UTF-8 string

• **VUID-vkDebugReportMessageEXT-pMessage-parameter**
  - `pMessage` **must** be a null-terminated UTF-8 string

To destroy a `VkDebugReportCallbackEXT` object, call:

```c
// Provided by VK_EXT_debug_report
void vkDestroyDebugReportCallbackEXT(
  VkInstance instance,
  VkDebugReportCallbackEXT callback,
  const VkAllocationCallbacks* pAllocator);
```

- `instance` is the instance where the callback was created.
- `callback` is the `VkDebugReportCallbackEXT` object to destroy. `callback` is an externally synchronized object and **must** not be used on more than one thread at a time. This means that `vkDestroyDebugReportCallbackEXT` **must** not be called when a callback is active.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

### Valid Usage

- **VUID-vkDestroyDebugReportCallbackEXT-instance-01242**
  - If `VkAllocationCallbacks` were provided when `callback` was created, a compatible set of callbacks **must** be provided here

- **VUID-vkDestroyDebugReportCallbackEXT-instance-01243**
  - If no `VkAllocationCallbacks` were provided when `callback` was created, `pAllocator` **must** be NULL

### Valid Usage (Implicit)

- **VUID-vkDestroyDebugReportCallbackEXT-instance-parameter**
  - `instance` **must** be a valid `VkInstance` handle

- **VUID-vkDestroyDebugReportCallbackEXT-callback-parameter**
  - If `callback` is not `VK_NULL_HANDLE`, `callback` **must** be a valid `VkDebugReportCallbackEXT` handle

- **VUID-vkDestroyDebugReportCallbackEXT-pAllocator-parameter**
If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure.

- VUID-vkDestroyDebugReportCallbackEXT-callback-parent
  If `callback` is a valid handle, it must have been created, allocated, or retrieved from instance

**Host Synchronization**

- Host access to `callback` must be externally synchronized

### 51.4. Device Loss Debugging

#### 51.4.1. Device Diagnostic Checkpoints

Device execution progress can be tracked for the purposes of debugging a device loss by annotating the command stream with application-defined diagnostic checkpoints.

Device diagnostic checkpoints are inserted into the command stream by calling `vkCmdSetCheckpointNV`.

```c
// Provided by VK_NV_device_diagnostic_checkpoints
void vkCmdSetCheckpointNV(
    VkCommandBuffer commandBuffer,    // Provided by VK_NV_device_diagnostic_checkpoints
    const void* pCheckpointMarker);   // Provided by VK_NV_device_diagnostic_checkpoints
```

- `commandBuffer` is the command buffer that will receive the marker
- `pCheckpointMarker` is an opaque application-provided value that will be associated with the checkpoint.

**Valid Usage (Implicit)**

- VUID-vkCmdSetCheckpointNV-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdSetCheckpointNV-commandBuffer-recording
  `commandBuffer` must be in the recording state
- VUID-vkCmdSetCheckpointNV-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, or transfer operations
- VUID-vkCmdSetCheckpointNV-videocoding
  This command must only be called outside of a video coding scope
### Host Synchronization

- Host access to `commandBuffer` **must** be externally synchronized
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics Compute Transfer</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note that `pCheckpointMarker` is treated as an opaque value. It does not need to be a valid pointer and will not be dereferenced by the implementation.

If the device encounters an error during execution, the implementation will return a `VK_ERROR_DEVICE_LOST` error to the application at some point during host execution. When this happens, the application can call `vkGetQueueCheckpointData2NV` to retrieve information on the most recent diagnostic checkpoints that were executed by the device.

```c
// Provided by VK_KHR_synchronization2 with VK_NV_device_diagnostic_checkpoints
void vkGetQueueCheckpointData2NV(
    VkQueue queue,
    uint32_t* pCheckpointDataCount,
    VkCheckpointData2NV* pCheckpointData);
```

- `queue` is the `VkQueue` object the caller would like to retrieve checkpoint data for
- `pCheckpointDataCount` is a pointer to an integer related to the number of checkpoint markers available or queried, as described below.
- `pCheckpointData` is either `NULL` or a pointer to an array of `VkCheckpointData2NV` structures.

If `pCheckpointData` is `NULL`, then the number of checkpoint markers available is returned in `pCheckpointDataCount`. Otherwise, `pCheckpointDataCount` **must** point to a variable set by the user to the number of elements in the `pCheckpointData` array, and on return the variable is overwritten with the number of structures actually written to `pCheckpointData`.

If `pCheckpointDataCount` is less than the number of checkpoint markers available, at most `pCheckpointDataCount` structures will be written.
Valid Usage

• VUID-vkGetQueueCheckpointData2NV-queue-03892
  The device that queue belongs to must be in the lost state

Valid Usage (Implicit)

• VUID-vkGetQueueCheckpointData2NV-queue-parameter
  queue must be a valid VkQueue handle

• VUID-vkGetQueueCheckpointData2NV-pCheckpointDataCount-parameter
  pCheckpointDataCount must be a valid pointer to a uint32_t value

• VUID-vkGetQueueCheckpointData2NV-pCheckpointData-parameter
  If the value referenced by pCheckpointDataCount is not 0, and pCheckpointData is not NULL,
  pCheckpointData must be a valid pointer to an array of pCheckpointDataCount
  VkCheckpointData2NV structures

The VkCheckpointData2NV structure is defined as:

```c
// Provided by VK_KHR_synchronization2 with VK_NV_device_diagnostic_checkpoints
typedef struct VkCheckpointData2NV {
    VkStructureType sType;
    void* pNext;
    VkPipelineStageFlags2 stage;
    void* pCheckpointMarker;
} VkCheckpointData2NV;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• stage indicates a single pipeline stage which the checkpoint marker data refers to.
• pCheckpointMarker contains the value of the last checkpoint marker executed in the stage that stage refers to.

Valid Usage (Implicit)

• VUID-VkCheckpointData2NV-sType-sType
  sType must be VK_STRUCTURE_TYPE_CHECKPOINT_DATA_2_NV

• VUID-VkCheckpointData2NV-pNext-pNext
  pNext must be NULL

The stages at which a checkpoint marker can be executed are implementation-defined and can be queried by calling vkGetPhysicalDeviceQueueFamilyProperties2.
If the device encounters an error during execution, the implementation will return a `VK_ERROR_DEVICE_LOST` error to the application at a certain point during host execution. When this happens, the application can call `vkGetQueueCheckpointDataNV` to retrieve information on the most recent diagnostic checkpoints that were executed by the device.

```c
// Provided by VK_NV_device_diagnostic_checkpoints
void vkGetQueueCheckpointDataNV(
    VkQueue queue,
    uint32_t* pCheckpointDataCount,
    VkCheckpointDataNV* pCheckpointData);
```

- `queue` is the `VkQueue` object the caller would like to retrieve checkpoint data for.
- `pCheckpointDataCount` is a pointer to an integer related to the number of checkpoint markers available or queried, as described below.
- `pCheckpointData` is either `NULL` or a pointer to an array of `VkCheckpointDataNV` structures.

If `pCheckpointData` is `NULL`, then the number of checkpoint markers available is returned in `pCheckpointDataCount`.

Otherwise, `pCheckpointDataCount` must point to a variable set by the user to the number of elements in the `pCheckpointData` array, and on return the variable is overwritten with the number of structures actually written to `pCheckpointData`.

If `pCheckpointDataCount` is less than the number of checkpoint markers available, at most `pCheckpointDataCount` structures will be written.

### Valid Usage

- **VUID-vkGetQueueCheckpointDataNV-queue-02025**
  The device that `queue` belongs to must be in the lost state

### Valid Usage (Implicit)

- **VUID-vkGetQueueCheckpointDataNV-queue-parameter**
  `queue` must be a valid `VkQueue` handle

- **VUID-vkGetQueueCheckpointDataNV-pCheckpointDataCount-parameter**
  `pCheckpointDataCount` must be a valid pointer to a `uint32_t` value

- **VUID-vkGetQueueCheckpointDataNV-pCheckpointData-parameter**
  If the value referenced by `pCheckpointDataCount` is not `0`, and `pCheckpointData` is not `NULL`, `pCheckpointData` must be a valid pointer to an array of `pCheckpointDataCount` `VkCheckpointDataNV` structures

The `VkCheckpointDataNV` structure is defined as:
typedef struct VkCheckpointDataNV {
    VkStructureType sType;
    void* pNext;
    VkPipelineStageFlagBits stage;
    void* pCheckpointMarker;
} VkCheckpointDataNV;

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `stage` is a `VkPipelineStageFlagBits` value specifying which pipeline stage the checkpoint marker data refers to.
- `pCheckpointMarker` contains the value of the last checkpoint marker executed in the stage that `stage` refers to.

The stages at which a checkpoint marker can be executed are implementation-defined and can be queried by calling `vkGetPhysicalDeviceQueueFamilyProperties2`.

### Valid Usage (Implicit)

- VUID-VkCheckpointDataNV-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_CHECKPOINT_DATA_NV`
- VUID-VkCheckpointDataNV-pNext-pNext
  - `pNext` must be `NULL`

### 51.4.2. Device Fault Diagnosis

To retrieve diagnostic information about faults that may have caused device loss, call:

```c
// Provided by VK_EXT_device_fault
VkResult vkGetDeviceFaultInfoEXT(
    VkDevice device,
    VkDeviceFaultCountsEXT* pFaultCounts,
    VkDeviceFaultInfoEXT* pFaultInfo);
```

- `device` is the logical device from which to query the diagnostic fault information.
- `pFaultCounts` is a pointer to a `VkDeviceFaultCountsEXT` structure in which counts for structures describing additional fault information are returned.
- `pFaultInfo` is `NULL` or a pointer to a `VkDeviceFaultInfoEXT` structure in which fault information is returned.

If `pFaultInfo` is `NULL`, then the counts of corresponding additional fault information structures available are returned in the `addressInfoCount` and `vendorInfoCount` members of `pFaultCounts`. Additionally, the size of any vendor-specific binary crash dump is returned in the `vendorBinarySize`.
member of pFaultCounts.

If pFaultInfo is not NULL, pFaultCounts must point to a VkDeviceFaultCountsEXT structure with each structure count or size member (addressInfoCount, vendorInfoCount, vendorBinarySize) set by the user to the number of elements in the corresponding output array member of pFaultInfo (pAddressInfos and pVendorInfos), or to the size of the output buffer in bytes (pVendorBinaryData). On return, each structure count member is overwritten with the number of structures actually written to the corresponding output array member of pFaultInfo. Similarly, vendorBinarySize is overwritten with the number of bytes actually written to the pVendorBinaryData member of pFaultInfo.

If the vendor-specific crash dumps feature is not enabled, then implementations must set pFaultCounts->vendorBinarySize to zero and must not modify pFaultInfo->pVendorBinaryData.

If any pFaultCounts structure count member is less than the number of corresponding fault properties available, at most structure count (addressInfoCount, vendorInfoCount) elements will be written to the associated pFaultInfo output array. Similarly, if vendorBinarySize is less than the size in bytes of the available crash dump data, at most vendorBinarySize elements will be written to pVendorBinaryData.

If pFaultInfo is NULL, then subsequent calls to vkGetDeviceFaultInfoEXT for the same device must return identical values in the addressInfoCount, vendorInfoCount and vendorBinarySize members of pFaultCounts.

If pFaultInfo is not NULL, then subsequent calls to vkGetDeviceFaultInfoEXT for the same device must return identical values in the output members of pFaultInfo (pAddressInfos, pVendorInfos, pVendorBinaryData), up to the limits described by the structure count and buffer size members of pFaultCounts (addressInfoCount, vendorInfoCount, vendorBinarySize). If the sizes of the output members of pFaultInfo increase for a subsequent call to vkGetDeviceFaultInfoEXT, then supplementary information may be returned in the additional available space.

If any pFaultCounts structure count member is smaller than the number of corresponding fault properties available, or if pFaultCounts->vendorBinarySize is smaller than the size in bytes of the generated binary crash dump data, VK_INCOMPLETE will be returned instead of VK_SUCCESS, to indicate that not all the available properties were returned.

If pFaultCounts->vendorBinarySize is less than what is necessary to store the binary crash dump header, nothing will be written to pFaultInfo->pVendorBinaryData and zero will be written to pFaultCounts->vendorBinarySize.

Valid Usage

- VUID-vkGetDeviceFaultInfoEXT-device-07336
device must be in the lost state

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07337
If the value referenced by pFaultCounts->addressInfoCount is not 0, and pFaultInfo->pAddressInfos is not NULL, pFaultInfo->pAddressInfos must be a valid pointer to an array of pFaultCounts->addressInfoCount VkDeviceFaultAddressInfoEXT structures

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07338
If the value referenced by `pFaultCounts->vendorInfoCount` is not 0, and `pFaultInfo->pVendorInfos` is not NULL, `pFaultInfo->pVendorInfos` must be a valid pointer to an array of `VkDeviceFaultVendorInfoEXT` structures.

### VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07339
If the value referenced by `pFaultCounts->vendorBinarySize` is not 0, and `pFaultInfo->pVendorBinaryData` is not NULL, `pFaultInfo->pVendorBinaryData` must be a valid pointer to an array of `pFaultCounts->vendorBinarySize` bytes.

### Valid Usage (Implicit)

- **VUID-vkGetDeviceFaultInfoEXT-device-parameter**
  - `device` must be a valid `VkDevice` handle

- **VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-parameter**
  - `pFaultCounts` must be a valid pointer to a `VkDeviceFaultCountsEXT` structure

- **VUID-vkGetDeviceFaultInfoEXT-pFaultInfo-parameter**
  - If `pFaultInfo` is not NULL, `pFaultInfo` must be a valid pointer to a `VkDeviceFaultInfoEXT` structure

### Return Codes

**Success**
- `VK_SUCCESS`
- `VK_INCOMPLETE`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkDeviceFaultCountsEXT` structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultCountsEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t addressInfoCount;
    uint32_t vendorInfoCount;
    VkDeviceSize vendorBinarySize;
} VkDeviceFaultCountsEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `addressInfoCount` is the number of `VkDeviceFaultAddressInfoEXT` structures describing either memory accesses which may have caused a page fault, or the addresses of active instructions at
the time of the fault.

- **vendorInfoCount** is the number of \texttt{VkDeviceFaultVendorInfoEXT} structures describing vendor-specific fault information.
- **vendorBinarySize** is the size in bytes of a vendor-specific binary crash dump, which may provide additional information when imported into external tools.

### Valid Usage (Implicit)

- **VUID-VkDeviceFaultCountsEXT-sType-sType**
  
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_DEVICE_FAULT_COUNTS_EXT}

- **VUID-VkDeviceFaultCountsEXT-pNext-pNext**
  
  \texttt{pNext} must be \texttt{NULL}

The ```VkDeviceFaultInfoEXT``` structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultInfoEXT {
    VkStructureType sType;
    void* pNext;
    char description[VK_MAX_DESCRIPTION_SIZE];
    VkDeviceFaultAddressInfoEXT* pAddressInfos;
    VkDeviceFaultVendorInfoEXT* pVendorInfos;
    void* pVendorBinaryData;
} VkDeviceFaultInfoEXT;
```

- **sType** is a \texttt{VkStructureType} value identifying this structure.
- **pNext** is \texttt{NULL} or a pointer to a structure extending this structure.
- **description** is an array of \texttt{VK_MAX_DESCRIPTION_SIZE} char containing a null-terminated UTF-8 string which is a human readable description of the fault.
- **pAddressInfos** is \texttt{NULL} or a pointer to an array of \texttt{VkDeviceFaultAddressInfoEXT} structures describing either memory accesses which may have caused a page fault, or describing active instruction pointers at the time of the fault. If not \texttt{NULL}, each element of \texttt{pAddressInfos} describes the a bounded region of GPU virtual address space containing either the GPU virtual address accessed, or the value of an active instruction pointer.
- **pVendorInfos** is \texttt{NULL} or a pointer to an array of \texttt{VkDeviceFaultVendorInfoEXT} structures describing vendor-specific fault information.
- **pVendorBinaryData** is \texttt{NULL} or a pointer to \texttt{vendorBinarySize} number of bytes of data, which will be populated with a vendor-specific binary crash dump, as described in \text{Vendor Binary Crash Dumps}.

An implementation **should** populate as many members of \texttt{VkDeviceFaultInfoEXT} as possible, given the information available at the time of the fault and the constraints of the implementation itself.

Due to hardware limitations, \texttt{pAddressInfos} describes ranges of GPU virtual address space, rather
than precise addresses. The precise memory address accessed or the precise value of the instruction pointer must lie within the region described.

Note
Each element of pAddressInfos describes either:

- A memory access which may have triggered a page fault and may have contributed to device loss
- The value of an active instruction pointer at the time a fault occurred. This value may be indicative of the active pipeline or shader at the time of device loss

Comparison of the GPU virtual addresses described by pAddressInfos to GPU virtual address ranges reported by the VK_EXT_device_address_binding_report extension may allow applications to correlate between these addresses and Vulkan objects. Applications should be aware that these addresses may also correspond to resources internal to an implementation, which will not be reported via the VK_EXT_device_address_binding_report extension.

Valid Usage (Implicit)

- VUID-VkDeviceFaultInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DEVICE_FAULT_INFO_EXT
- VUID-VkDeviceFaultInfoEXT-pNext-pNext
  pNext must be NULL
- VUID-VkDeviceFaultInfoEXT-pAddressInfos-parameter
  If pAddressInfos is not NULL, pAddressInfos must be a valid pointer to a VkDeviceFaultAddressInfoEXT structure
- VUID-VkDeviceFaultInfoEXT-pVendorInfos-parameter
  If pVendorInfos is not NULL, pVendorInfos must be a valid pointer to a VkDeviceFaultVendorInfoEXT structure

The VkDeviceFaultAddressInfoEXT structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultAddressInfoEXT {
    VkDeviceFaultAddressTypeEXT addressType;
    VkDeviceAddress reportedAddress;
    VkDeviceSize addressPrecision;
} VkDeviceFaultAddressInfoEXT;
```

- `addressType` is either the type of memory operation that triggered a page fault, or the type of association between an instruction pointer and a fault.
- `reportedAddress` is the GPU virtual address recorded by the device.
• **addressPrecision** is a power of two value that specifies how precisely the device can report the address.

The combination of **reportedAddress** and **addressPrecision** allow the possible range of addresses to be calculated, such that:

\[
\text{lower_address} = (\text{pInfo->reportedAddress} \& \sim (\text{pInfo->addressPrecision}-1))
\]

\[
\text{upper_address} = (\text{pInfo->reportedAddress} \mid (\text{pInfo->addressPrecision}-1))
\]

**Note**

It is valid for the **reportedAddress** to contain a more precise address than indicated by **addressPrecision**. In this case, the value of **reportedAddress** should be treated as an additional hint as to the value of the address that triggered the page fault, or to the value of an instruction pointer.

**Valid Usage (Implicit)**

- VUID-VkDeviceFaultAddressInfoEXT-addressType-parameter
  addressType must be a valid VkDeviceFaultAddressTypeEXT value

Possible values of **VkDeviceFaultAddressInfoEXT::addressType** are:

```c
// Provided by VK_EXT_device_fault
typedef enum VkDeviceFaultAddressTypeEXT {
    VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_EXT = 0,
    VK_DEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_EXT = 1,
    VK_DEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_EXT = 2,
    VK_DEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_EXT = 3,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_EXT = 4,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_EXT = 5,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_EXT = 6,
} VkDeviceFaultAddressTypeEXT;
```

- **VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_EXT** specifies that **VkDeviceFaultAddressInfoEXT** does not describe a page fault, or an instruction address.
- **VK_DEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_EXT** specifies that **VkDeviceFaultAddressInfoEXT** describes a page fault triggered by an invalid read operation.
- **VK DEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_EXT** specifies that **VkDeviceFaultAddressInfoEXT** describes a page fault triggered by an invalid write operation.
- **VK DEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_EXT** describes a page fault triggered by an attempt to execute non-executable memory.
- **VK DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_EXT** specifies an instruction pointer value at the time the fault occurred. This may or may not be related to a fault.
• **VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_EXT** specifies an instruction pointer value associated with an invalid instruction fault.

• **VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_EXT** specifies an instruction pointer value associated with a fault.

**Note**

The instruction pointer values recorded may not identify the specific instruction(s) that triggered the fault. The relationship between the instruction pointer reported and triggering instruction will be vendor-specific.

The **VkDeviceFaultVendorInfoEXT** structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultVendorInfoEXT {
    char description[VK_MAX_DESCRIPTION_SIZE];
    uint64_t vendorFaultCode;
    uint64_t vendorFaultData;
} VkDeviceFaultVendorInfoEXT;
```

• **description** is an array of **VK_MAX_DESCRIPTION_SIZE** char containing a null-terminated UTF-8 string which is a human readable description of the fault.

• **vendorFaultCode** is the vendor-specific fault code for this fault.

• **vendorFaultData** is the vendor-specific fault data associated with this fault.

**Vendor Binary Crash Dumps**

Applications can store the vendor-specific binary crash dump data retrieved by calling **vkGetDeviceFaultInfoEXT** for later analysis using external tools.

However, the format of this data may depend on the vendor ID, device ID, driver version, and other details of the device. To enable external applications to identify the original device from which a crash dump was generated, the initial bytes written to **VkDeviceFaultInfoEXT**::pVendorBinaryData must begin with a valid crash dump header.

Version one of the crash dump header is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultVendorBinaryHeaderVersionOneEXT {
    uint32_t headerSize;
    VkDeviceFaultVendorBinaryHeaderVersionEXT headerVersion;
    uint32_t vendorID;
    uint32_t deviceID;
    uint32_t driverVersion;
    uint8_t pipelineCacheUUID[VK_UUID_SIZE];
    uint32_t applicationNameOffset;
    uint32_t applicationVersion;
    uint32_t engineNameOffset;
} VkDeviceFaultVendorBinaryHeaderVersionOneEXT;
```
uint32_t engineVersion;
uint32_t apiVersion;
} VkDeviceFaultVendorBinaryHeaderVersionOneEXT;

• headerSize is the length in bytes of the crash dump header.
• headerVersion is a VkDeviceFaultVendorBinaryHeaderVersionOneEXT enum value specifying the version of the header. A consumer of the crash dump should use the header version to interpret the remainder of the header.
• vendorID is the VkPhysicalDeviceProperties::vendorID of the implementation.
• deviceID is the VkPhysicalDeviceProperties::deviceID of the implementation.
• driverVersion is the VkPhysicalDeviceProperties::driverVersion of the implementation.
• pipelineCacheUUID is an array of VK_UUID_SIZE uint8_t values matching the VkPhysicalDeviceProperties::pipelineCacheUUID property of the implementation.
• applicationNameOffset is zero, or an offset from the base address of the crash dump header to a null-terminated UTF-8 string containing the name of the application. If applicationNameOffset is non-zero, this string must match the application name specified via VkApplicationInfo::pApplicationName during instance creation.
• applicationVersion must be zero or the value specified by VkApplicationInfo::applicationVersion during instance creation.
• engineNameOffset is zero, or an offset from the base address of the crash dump header to a null-terminated UTF-8 string containing the name of the engine (if any) used to create the application. If engineNameOffset is non-zero, this string must match the engine name specified via VkApplicationInfo::pEngineName during instance creation.
• engineVersion must be zero or the value specified by VkApplicationInfo::engineVersion during instance creation.
• apiVersion must be zero or the value specified by VkApplicationInfo::apiVersion during instance creation.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure, and the intended size of the structure is 56 bytes. If a compiler produces code that diverges from that pattern, applications must employ another method to set values at the correct offsets.

Valid Usage

• VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerSize-07340
  headerSize must be 56

• VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerVersion-07341
  headerVersion must be VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT
Valid Usage (Implicit)

- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerVersion-parameter headerVersion must be a valid VkDeviceFaultVendorBinaryHeaderVersionEXT value

Possible values of the headerVersion value of the crash dump header are:

```c
// Provided by VK_EXT_device_fault
typedef enum VkDeviceFaultVendorBinaryHeaderVersionEXT {
    VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT = 1,
} VkDeviceFaultVendorBinaryHeaderVersionEXT;
```

- VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT specifies version one of the binary crash dump header.

### 51.5. Active Tooling Information

Information about tools providing debugging, profiling, or similar services, active for a given physical device, can be obtained by calling:

```c
// Provided by VK_VERSION_1_3
VkResult vkGetPhysicalDeviceToolProperties(
    VkPhysicalDevice physicalDevice,
    uint32_t* pToolCount,
    VkPhysicalDeviceToolProperties* pToolProperties);
```

or the equivalent command

```c
// Provided by VK_EXT_tooling_info
VkResult vkGetPhysicalDeviceToolPropertiesEXT(
    VkPhysicalDevice physicalDevice,
    uint32_t* pToolCount,
    VkPhysicalDeviceToolProperties* pToolProperties);
```

- physicalDevice is the handle to the physical device to query for active tools.
- pToolCount is a pointer to an integer describing the number of tools active on physicalDevice.
- pToolProperties is either NULL or a pointer to an array of VkPhysicalDeviceToolProperties structures.

If pToolProperties is NULL, then the number of tools currently active on physicalDevice is returned in pToolCount. Otherwise, pToolCount must point to a variable set by the user to the number of elements in the pToolProperties array, and on return the variable is overwritten with the number of structures actually written to pToolProperties. If pToolCount is less than the number of currently active tools, at most pToolCount structures will be written.
The count and properties of active tools may change in response to events outside the scope of the specification. An application should assume these properties might change at any given time.

### Valid Usage (Implicit)

- **VUID-vkGetPhysicalDeviceToolProperties-physicalDevice-parameter**
  - *physicalDevice must be a valid VkPhysicalDevice handle*

- **VUID-vkGetPhysicalDeviceToolProperties-pToolCount-parameter**
  - *pToolCount must be a valid pointer to a uint32_t value*

- **VUID-vkGetPhysicalDeviceToolProperties-pToolProperties-parameter**
  - If the value referenced by pToolCount is not 0, and pToolProperties is not NULL, pToolProperties must be a valid pointer to an array of VkPhysicalDeviceToolProperties structures

### Return Codes

**Success**

- **VK_SUCCESS**
- **VK_INCOMPLETE**

**Failure**

- **VK_ERROR_OUT_OF_HOST_MEMORY**

The **VkPhysicalDeviceToolProperties** structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceToolProperties {
    VkStructureType     sType;
    void*                pNext;
    char name[VK_MAX_EXTENSION_NAME_SIZE];
    char version[VK_MAX_EXTENSION_NAME_SIZE];
    VkToolPurposeFlags  purposes;
    char description[VK_MAX_DESCRIPTION_SIZE];
    char layer[VK_MAX_EXTENSION_NAME_SIZE];
} VkPhysicalDeviceToolProperties;
```

or the equivalent

```c
// Provided by VK_EXT_tooling_info
typedef VkPhysicalDeviceToolProperties VkPhysicalDeviceToolPropertiesEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
• **name** is a null-terminated UTF-8 string containing the name of the tool.

• **version** is a null-terminated UTF-8 string containing the version of the tool.

• **purposes** is a bitmask of `VkToolPurposeFlagBits` which is populated with purposes supported by the tool.

• **description** is a null-terminated UTF-8 string containing a description of the tool.

• **layer** is a null-terminated UTF-8 string containing the name of the layer implementing the tool, if the tool is implemented in a layer - otherwise it may be an empty string.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceToolProperties-sType-sType
  
  *sType* must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TOOL_PROPERTIES**

- VUID-VkPhysicalDeviceToolProperties-pNext-pNext
  
  *pNext* must be **NULL**

Bits which can be set in `VkPhysicalDeviceToolProperties::purposes`, specifying the purposes of an active tool, are:

```c
// Provided by VK_VERSION_1_3
typedef enum VkToolPurposeFlagBits {
    VK_TOOL_PURPOSE_VALIDATION_BIT = 0x00000001,
    VK_TOOL_PURPOSE_PROFILING_BIT = 0x00000002,
    VK_TOOL_PURPOSE_TRACING_BIT = 0x00000004,
    VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT = 0x00000008,
    VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT = 0x00000010,
    // Provided by VK_EXT_debug_report with VK_EXT_tooling_info, VK_EXT_debug_utils with
    VK_EXT_tooling_info
    VK_TOOL_PURPOSE_DEBUG_REPORTING_BIT_EXT = 0x00000020,
    // Provided by VK_EXT_debug_marker with VK_EXT_tooling_info, VK_EXT_debug_utils with
    VK_EXT_tooling_info
    VK_TOOL_PURPOSE_DEBUG_MARKERS_BIT_EXT = 0x00000040,
    VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT_EXT = VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT,
    VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT_EXT = VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT,
} VkToolPurposeFlagBits;
```

or the equivalent

```c
// Provided by VK_EXT_tooling_info
typedef VkToolPurposeFlagBits VkToolPurposeFlagBitsEXT;
```
• **VK_TOOL_PURPOSE_VALIDATION_BIT** specifies that the tool provides validation of API usage.

• **VK_TOOL_PURPOSE_PROFILING_BIT** specifies that the tool provides profiling of API usage.

• **VK_TOOL_PURPOSE_TRACING_BIT** specifies that the tool is capturing data about the application’s API usage, including anything from simple logging to capturing data for later replay.

• **VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT** specifies that the tool provides additional API features/extensions on top of the underlying implementation.

• **VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT** specifies that the tool modifies the API features/limits/extensions presented to the application.

• **VK_TOOL_PURPOSE_DEBUG_REPORTING_BIT_EXT** specifies that the tool reports additional information to the application via callbacks specified by `vkCreateDebugReportCallbackEXT` or `vkCreateDebugUtilsMessengerEXT`.

• **VK_TOOL_PURPOSE_DEBUG_MARKERS_BIT_EXT** specifies that the tool consumes debug markers or object debug annotation, queue labels, or command buffer labels.

```c
// Provided by VK_VERSION_1_3
typedef VkFlags VkToolPurposeFlags;
```

or the equivalent

```c
// Provided by VK_EXT_tooling_info
typedef VkToolPurposeFlags VkToolPurposeFlagsEXT;
```

**VkToolPurposeFlags** is a bitmask type for setting a mask of zero or more **VkToolPurposeFlagBits**.

### 51.6. Frame Boundary

The **VkFrameBoundaryEXT** structure is defined as:

```c
// Provided by VK_EXT_frame_boundary
typedef struct VkFrameBoundaryEXT {
    VkStructureType sType;
    const void* pNext;
    VkFrameBoundaryFlagsEXT flags;
    uint64_t frameID;
    uint32_t imageCount;
    const VkImage* pImages;
    uint32_t bufferCount;
    const VkBuffer* pBuffers;
    uint64_t tagName;
    size_t tagSize;
    const void* pTag;
} VkFrameBoundaryEXT;
```
• **sType** is a VkStructureType value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **flags** is a bitmask of VkFrameBoundaryFlagBitsEXT that can flag the last submission of a frame identifier.

• **frameID** is the frame identifier.

• **imageCount** is the number of images that store frame results.

• **pImages** is a pointer to an array of VkImage objects with imageCount entries.

• **bufferCount** is the number of buffers the store the frame results.

• **pBuffers** is a pointer to an array of VkBuffer objects with bufferCount entries.

• **tagName** is a numerical identifier for tag data.

• **tagSize** is the number of bytes of tag data.

• **pTag** is a pointer to an array of tagSize bytes containing tag data.

The application **can** associate frame boundary information to a queue submission call by adding a VkFrameBoundaryEXT structure to the **pNext** chain of queue submission, VkPresentInfoKHR, or VkBindSparseInfo.

The frame identifier is used to associate one or more queue submission to a frame, it is thus meant to be unique within a frame lifetime, i.e. it is possible (but not recommended) to reuse frame identifiers, as long as any two frames with any chance of having overlapping queue submissions (as in the example above) use two different frame identifiers.

**Note**
Since the concept of frame is application-dependent, there is no way to validate the use of frame identifier. It is good practice to use a monotonically increasing counter as the frame identifier and not reuse identifiers between frames.

The **pImages** and **pBuffers** arrays contain a list of images and buffers which store the "end result" of the frame. As the concept of frame is application-dependent, not all frames may produce their results in images or buffers, yet this is a sufficiently common case to be handled by VkFrameBoundaryEXT. Note that no extra information, such as image layout is being provided, since the images are meant to be used by tools which would already be tracking this required information. Having the possibility of passing a list of end-result images makes VkFrameBoundaryEXT as expressive as vkQueuePresentKHR, which is often the default frame boundary delimiter.

The application **can** also associate arbitrary extra information via tag data using **tagName**, **tagSize** and **pTag**. This extra information is typically tool-specific.

### Valid Usage (Implicit)

- **VUID-VkFrameBoundaryEXT-sType-sType**
  
  *sType* **must** be VK_STRUCTURE_TYPE_FRAME_BOUNDARY_EXT

- **VUID-VkFrameBoundaryEXT-flags-parameter**
  
  *flags* **must** be a valid combination of VkFrameBoundaryFlagBitsEXT values
• VUID-VkFrameBoundaryEXT-pImages-parameter
  If `imageCount` is not 0, and `pImages` is not `NULL`, `pImages` must be a valid pointer to an array of `imageCount` valid `VkImage` handles.

• VUID-VkFrameBoundaryEXT-pBuffers-parameter
  If `bufferCount` is not 0, and `pBuffers` is not `NULL`, `pBuffers` must be a valid pointer to an array of `bufferCount` valid `VkBuffer` handles.

• VUID-VkFrameBoundaryEXT-pTag-parameter
  If `tagSize` is not 0, and `pTag` is not `NULL`, `pTag` must be a valid pointer to an array of `tagSize` bytes.

• VUID-VkFrameBoundaryEXT-commonparent
  Both of the elements of `pBuffers`, and the elements of `pImages` that are valid handles of non-ignored parameters must have been created, allocated, or retrieved from the same `VkDevice`.

The bit which can be set in `VkFrameBoundaryEXT::flags` is:

```c
// Provided by VK_EXT_frame_boundary
typedef enum VkFrameBoundaryFlagBitsEXT {
    VK_FRAME_BOUNDARY_FRAME_END_BIT_EXT = 0x00000001,
} VkFrameBoundaryFlagBitsEXT;
```

• `VK_FRAME_BOUNDARY_FRAME_END_BIT_EXT` specifies that this queue submission is the last one for this frame, i.e. once this queue submission has terminated, then the work for this frame is completed.

Note that in the presence of timeline semaphores, the last queue submission might not be the last one to be submitted, as timeline semaphores allow for wait-before-signal submissions. In the context of frame boundary, the queue submission that should be done flagged as the last one is the one that is meant to be executed last, even if it may not be the last one to be submitted.

```c
// Provided by VK_EXT_frame_boundary
typedef VkFlags VkFrameBoundaryFlagsEXT;
```

`VkFrameBoundaryFlagsEXT` is a bitmask type for setting a mask of zero or more `VkFrameBoundaryFlagBitsEXT`.

4008
Appendix A: Vulkan Environment for SPIR-V

Shaders for Vulkan are defined by the Khronos SPIR-V Specification as well as the Khronos SPIR-V Extended Instructions for GLSL Specification. This appendix defines additional SPIR-V requirements applying to Vulkan shaders.

Versions and Formats

A Vulkan 1.3 implementation must support the 1.0, 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6 versions of SPIR-V and the 1.0 version of the SPIR-V Extended Instructions for GLSL.

A SPIR-V module passed into `vkCreateShaderModule` is interpreted as a series of 32-bit words in host endianness, with literal strings packed as described in section 2.2 of the SPIR-V Specification. The first few words of the SPIR-V module must be a magic number and a SPIR-V version number, as described in section 2.3 of the SPIR-V Specification.

Capabilities

The table below lists the set of SPIR-V capabilities that may be supported in Vulkan implementations. The application must not use any of these capabilities in SPIR-V passed to `vkCreateShaderModule` unless one of the following conditions is met for the `VkDevice` specified in the device parameter of `vkCreateShaderModule`:

- The corresponding field in the table is blank.
- Any corresponding Vulkan feature is enabled.
- Any corresponding Vulkan extension is enabled.
- Any corresponding Vulkan property is supported.
- The corresponding core version is supported (as returned by `VkPhysicalDeviceProperties::apiVersion`).

The application **must** not pass a SPIR-V module containing any of the following to `vkCreateShaderModule`: 

---

4018
• any OpCapability not listed above,
• an unsupported capability, or
• a capability which corresponds to a Vulkan feature or extension which has not been enabled.

SPIR-V Extensions

The following table lists SPIR-V extensions that implementations may support. The application must not pass a SPIR-V module to vkCreateShaderModule that uses the following SPIR-V extensions unless one of the following conditions is met for the VkDevice specified in the device parameter of vkCreateShaderModule:

• Any corresponding Vulkan extension is enabled.
• The corresponding core version is supported (as returned by VkPhysicalDeviceProperties::apiVersion).

---

**Validation Rules Within a Module**

A SPIR-V module passed to `vkCreateShaderModule` **must** conform to the following rules:
**Standalone SPIR-V Validation**

The following rules **can** be validated with only the SPIR-V module itself. They do not depend on knowledge of the implementation and its capabilities or knowledge of runtime information, such as enabled features.

### Valid Usage

- **VUID-StandaloneSpirv-None-04633**
  Every entry point **must** have no return value and accept no arguments

- **VUID-StandaloneSpirv-None-04634**
  The static function-call graph for an entry point **must** not contain cycles; that is, static recursion is not allowed

- **VUID-StandaloneSpirv-None-04635**
  The Logical or PhysicalStorageBuffer64 addressing model **must** be selected

- **VUID-StandaloneSpirv-None-04636**
  Scope for execution **must** be limited to Workgroup or Subgroup

- **VUID-StandaloneSpirv-None-04637**
  If the Scope for execution is Workgroup, then it **must** only be used in the task, mesh, tessellation control, or compute Execution Model

- **VUID-StandaloneSpirv-None-04638**
  Scope for memory **must** be limited to Device, QueueFamily, Workgroup, ShaderCallKHR, Subgroup, or Invocation

- **VUID-StandaloneSpirv-ExecutionModel-07320**
  If the Execution Model is TessellationControl, and the MemoryModel is GLSL450, the Scope for memory **must** not be Workgroup

- **VUID-StandaloneSpirv-None-07321**
  If the Scope for memory is Workgroup, then it **must** only be used in the task, mesh, tessellation control, or compute Execution Model

- **VUID-StandaloneSpirv-None-04640**
  If the Scope for memory is ShaderCallKHR, then it **must** only be used in ray generation, intersection, closest hit, any-hit, miss, and callable Execution Model

- **VUID-StandaloneSpirv-None-04641**
  If the Scope for memory is Invocation, then memory semantics **must** be None

- **VUID-StandaloneSpirv-None-04642**
  Scope for group operations **must** be limited to Subgroup

- **VUID-StandaloneSpirv-SubgroupVoteKHR-07951**
  If none of the SubgroupVoteKHR, GroupNonUniform, or SubgroupBallotKHR capabilities are declared, Scope for memory **must** not be Subgroup

- **VUID-StandaloneSpirv-None-04643**
  Storage Class **must** be limited to UniformConstant, Input, Uniform, Output, Workgroup, Private, Function, PushConstant, Image, StorageBuffer, RayPayloadKHR, IncomingRayPayloadKHR, HitAttributeKHR, CallableDataKHR, IncomingCallableDataKHR, ShaderRecordBufferKHR, ShaderRecordBufferKHR, 4024
PhysicalStorageBuffer, or TileImageEXT

- VUID-StandaloneSpirv-None-04644
  If the Storage Class is Output, then it must not be used in the GlCompute, RayGenerationKHR, IntersectionKHR, AnyHitKHR, ClosestHitKHR, MissKHR, or CallableKHR Execution Model

- VUID-StandaloneSpirv-None-04645
  If the Storage Class is Workgroup, then it must only be used in the task, mesh, or compute Execution Model

- VUID-StandaloneSpirv-None-08720
  If the Storage Class is TileImageEXT, then it must only be used in the fragment execution model

- VUID-StandaloneSpirv-OpAtomicStore-04730
  OpAtomicStore must not use Acquire, AcquireRelease, or SequentiallyConsistent memory semantics

- VUID-StandaloneSpirv-OpAtomicLoad-04731
  OpAtomicLoad must not use Release, AcquireRelease, or SequentiallyConsistent memory semantics

- VUID-StandaloneSpirv-OpMemoryBarrier-04732
  OpMemoryBarrier must use one of Acquire, Release, AcquireRelease, or SequentiallyConsistent memory semantics

- VUID-StandaloneSpirv-OpMemoryBarrier-04733
  OpMemoryBarrier must include at least one Storage Class

- VUID-StandaloneSpirv-OpControlBarrier-04650
  If the semantics for OpControlBarrier includes one of Acquire, Release, AcquireRelease, or SequentiallyConsistent memory semantics, then it must include at least one Storage Class

- VUID-StandaloneSpirv-OpVariable-04651
  Any OpVariable with an Initializer operand must have Output, Private, Function, or Workgroup as its Storage Class operand

- VUID-StandaloneSpirv-OpVariable-04734
  Any OpVariable with an Initializer operand and Workgroup as its Storage Class operand must use OpConstantNull as the initializer

- VUID-StandaloneSpirv-OpReadClockKHR-04652
  Scope for OpReadClockKHR must be limited to Subgroup or Device

- VUID-StandaloneSpirv-OriginLowerLeft-04653
  The OriginLowerLeft Execution Mode must not be used; fragment entry points must declare OriginUpperLeft

- VUID-StandaloneSpirv-PixelCenterInteger-04654
  The PixelCenterInteger Execution Mode must not be used (pixels are always centered at half-integer coordinates)

- VUID-StandaloneSpirv-UniformConstant-04655
  Any variable in the UniformConstant Storage Class must be typed as either OpTypeImage, OpTypeSampler, OpTypeSampledImage, OpTypeAccelerationStructureKHR, or an array of one of these types
• VUID-StandaloneSpirv-Uniform-06807
  Any variable in the Uniform or StorageBuffer Storage Class must be typed as OpTypeStruct or an array of this type

• VUID-StandaloneSpirv-PushConstant-06808
  Any variable in the PushConstant Storage Class must be typed as OpTypeStruct

• VUID-StandaloneSpirv-OpTypeImage-04656
  OpTypeImage must declare a scalar 32-bit float, 64-bit integer, or 32-bit integer type for the “Sampled Type” (RelaxedPrecision can be applied to a sampling instruction and to the variable holding the result of a sampling instruction)

• VUID-StandaloneSpirv-OpTypeImage-04657
  OpTypeImage must have a “Sampled” operand of 1 (sampled image) or 2 (storage image)

• VUID-StandaloneSpirv-OpTypeSampledImage-06671
  OpTypeSampledImage must have a OpTypeImage with a “Sampled” operand of 1 (sampled image)

• VUID-StandaloneSpirv-Image-04965
  The SPIR-V Type of the Image Format operand of an OpTypeImage must match the Sampled Type, as defined in Image Format and Type Matching

• VUID-StandaloneSpirv-OpImageTexelPointer-04658
  If an OpImageTexelPointer is used in an atomic operation, the image type of the image parameter to OpImageTexelPointer must have an image format of R64i, R64ui, R32f, R32i, or R32ui

• VUID-StandaloneSpirv-OpImageQuerySizeLod-04659
  OpImageQuerySizeLod, OpImageQueryLod, and OpImageQueryLevels must only consume an “Image” operand whose type has its “Sampled” operand set to 1

• VUID-StandaloneSpirv-OpTypeImage-06214
  An OpTypeImage with a “Dim” operand of SubpassData must have an “Arrayed” operand of 0 (non-arrayed) and a “Sampled” operand of 2 (storage image)

• VUID-StandaloneSpirv-SubpassData-04660
  The (u,v) coordinates used for a SubpassData must be the <id> of a constant vector (0,0), or if a layer coordinate is used, must be a vector that was formed with constant 0 for the u and v components

• VUID-StandaloneSpirv-OpTypeImage-06924
  Objects of types OpTypeImage, OpTypeSampler, OpTypeSampledImage, OpTypeAccelerationStructureKHR, and arrays of these types must not be stored to or modified

• VUID-StandaloneSpirv-Uniform-06925
  Any variable in the Uniform Storage Class decorated as Block must not be stored to or modified

• VUID-StandaloneSpirv-Offset-04663
  Image operand Offset must only be used with OpImage*Gather instructions

• VUID-StandaloneSpirv-Offset-04865
  Any image instruction which uses an Offset, ConstOffset, or ConstOffsets image operand, must only consume a “Sampled Image” operand whose type has its “Sampled” operand set
The “Component” operand of OpImageGather, and OpImageSparseGather must be the <id> of a constant instruction.

OpImage*Dref* instructions must not consume an image whose Dim is 3D.

Structure types must not contain opaque types.

Any BuiltIn decoration not listed in Built-In Variables must not be used.

The Location or Component decorations must only be used with the Input, Output, RayPayloadKHR, IncomingRayPayloadKHR, HitAttributeKHR, HitObjectAttributeNV, CallableDataKHR, IncomingCallableDataKHR, or ShaderRecordBufferKHR storage classes.

The Location or Component decorations must not be used with BuiltIn.

The Location decorations must be used on user-defined variables.

If a user-defined variable is not a pointer to a Block decorated OpTypeStruct, then the OpVariable must have a Location decoration.

If a user-defined variable has a Location decoration, and the variable is a pointer to a OpTypeStruct, then the members of that structure must not have Location decorations.

If a user-defined variable does not have a Location decoration, and the variable is a pointer to a Block decorated OpTypeStruct, then each member of the struct must have a Location decoration.

The Component decoration value must not be greater than 3.

If the Component decoration is used on an OpVariable that has a OpTypeVector type with a Component Type with a Width that is less than or equal to 32, the sum of its Component Count and the Component decoration value must be less than or equal to 4.

If the Component decoration is used on an OpVariable that has a OpTypeVector type with a Component Type with a Width that is equal to 64, the sum of two times its Component Count and the Component decoration value must be less than or equal to 4.

The Component decorations value must not be 1 or 3 for scalar or two-component 64-bit data types.

Component decoration value must not be 1 or 3 for scalar or two-component 64-bit data types.
The Component decorations must not be used with any type that is not a scalar or vector, or an array of such a type

- VUID-StandaloneSpirv-Component-07703
  The Component decorations must not be used for a 64-bit vector type with more than two components

- VUID-StandaloneSpirv-GLSLShared-04669
  The GLSLShared and GLSLPacked decorations must not be used

- VUID-StandaloneSpirv-Flat-04670
  The Flat, NoPerspective, Sample, and Centroid decorations must only be used on variables with the Output or Input Storage Class

- VUID-StandaloneSpirv-Flat-06201
  The Flat, NoPerspective, Sample, and Centroid decorations must not be used on variables with the Output storage class in a fragment shader

- VUID-StandaloneSpirv-Flat-06202
  The Flat, NoPerspective, Sample, and Centroid decorations must not be used on variables with the Input storage class in a vertex shader

- VUID-StandaloneSpirv-PerVertexKHR-06777
  The PerVertexKHR decoration must only be used on variables with the Input Storage Class in a fragment shader

- VUID-StandaloneSpirv-Flat-04744
  Any variable with integer or double-precision floating-point type and with Input Storage Class in a fragment shader, must be decorated Flat

- VUID-StandaloneSpirv-ViewportRelativeNV-04672
  The ViewportRelativeNV decoration must only be used on a variable decorated with Layer in the vertex, tessellation evaluation, or geometry shader stages

- VUID-StandaloneSpirv-ViewportRelativeNV-04673
  The ViewportRelativeNV decoration must not be used unless a variable decorated with one of ViewportIndex or ViewportMaskNV is also statically used by the same OpEntryPoint

- VUID-StandaloneSpirv-ViewportMaskNV-04674
  The ViewportMaskNV and ViewportIndex decorations must not both be statically used by one or more OpEntryPoint’s that form the pre-rasterization shader stages of a graphics pipeline

- VUID-StandaloneSpirv-FPRoundingMode-04675
  Rounding modes other than round-to-nearest-even and round-towards-zero must not be used for the FPRoundingMode decoration

- VUID-StandaloneSpirv-Invariant-04677
  Variables decorated with Invariant and variables with structure types that have any members decorated with Invariant must be in the Output or Input Storage Class, Invariant used on an Input Storage Class variable or structure member has no effect

- VUID-StandaloneSpirv-VulkanMemoryModel-04678
  If the VulkanMemoryModel capability is not declared, the Volatile decoration must be used on any variable declaration that includes one of the SMIDNV, WarpIDNV, SubgroupSize, SubgroupLocalInvocationId, SubgroupEqMask, SubgroupGeMask, SubgroupGtMask, SubgroupLeMask, or SubgroupLtMask BuiltIn decorations when used in the ray generation, closest hit, miss,
intersection, or callable shaders, or with the `RayTmaxKHR BuiltIn` decoration when used in an intersection shader

- **VUID-StandaloneSpirv-VulkanMemoryModel-04679**
  If the `VulkanMemoryModel` capability is declared, the `OpLoad` instruction must use the `Volatile` memory semantics when it accesses into any variable that includes one of the `SMIDNV`, `WarpIDNV`, `SubgroupSize`, `SubgroupLocalInvocationId`, `SubgroupEqMask`, `SubgroupGeMask`, `SubgroupGtMask`, `SubgroupLeMask`, or `SubgroupLtMask BuiltIn` decorations when used in the ray generation, closest hit, miss, intersection, or callable shaders, or with the `RayTmaxKHR BuiltIn` decoration when used in an intersection shader

- **VUID-StandaloneSpirv-OpTypeRuntimeArray-04680**
  `OpTypeRuntimeArray` must only be used for:
  1. the last member of a `Block`-decorated `OpTypeStruct` in `StorageBuffer` or `PhysicalStorageBuffer` storage `Storage Class`
  2. `BufferBlock`-decorated `OpTypeStruct` in the `Uniform` storage `Storage Class`
  3. the outermost dimension of an arrayed variable in the `StorageBuffer`, `Uniform`, or `UniformConstant` storage `Storage Class`
  4. variables in the `NodePayloadAMDX` storage `Storage Class` when the `CoalescingAMDX Execution Mode` is specified

- **VUID-StandaloneSpirv-Function-04681**
  A type $T$ that is an array sized with a specialization constant must neither be, nor be contained in, the type $T_2$ of a variable $V$, unless either: a) $T$ is equal to $T_2$, b) $V$ is declared in the `Function`, or `Private Storage Class`, c) $V$ is a non-Block variable in the `Workgroup Storage Class`, or d) $V$ is an interface variable with an additional level of arrayness, as described in interface matching, and $T$ is the member type of the array type $T_2$

- **VUID-StandaloneSpirv-OpControlBarrier-04682**
  If `OpControlBarrier` is used in ray generation, intersection, any-hit, closest hit, miss, fragment, vertex, tessellation evaluation, or geometry shaders, the execution Scope must be `Subgroup`

- **VUID-StandaloneSpirv-LocalSize-06426**
  For each compute shader entry point, either a `LocalSize` or `LocalSizeId` `Execution Mode`, or an object decorated with the `WorkgroupSize` decoration must be specified

- **VUID-StandaloneSpirv-DerivativeGroupQuadsNV-04684**
  For compute shaders using the `DerivativeGroupQuadsNV` execution mode, the first two dimensions of the local workgroup size must be a multiple of two

- **VUID-StandaloneSpirv-DerivativeGroupLinearNV-04778**
  For compute shaders using the `DerivativeGroupLinearNV` execution mode, the product of the dimensions of the local workgroup size must be a multiple of four

- **VUID-StandaloneSpirv-OpGroupNonUniformBallotBitCount-04685**
  If `OpGroupNonUniformBallotBitCount` is used, the group operation must be limited to `Reduce`, `InclusiveScan`, or `ExclusiveScan`

- **VUID-StandaloneSpirv-None-04686**
  The `Pointer` operand of all atomic instructions must have a `Storage Class` limited to `Uniform`, `Workgroup`, `Image`, `StorageBuffer`, `PhysicalStorageBuffer`, or `TaskPayloadWorkgroupEXT`
Output variables or block members decorated with `Offset` that have a 64-bit type, or a composite type containing a 64-bit type, **must** specify an `Offset` value aligned to a 8 byte boundary.

The size of any output block containing any member decorated with `Offset` that is a 64-bit type **must** be a multiple of 8.

The first member of an output block specifying a `Offset` decoration **must** specify a `Offset` value that is aligned to an 8 byte boundary if that block contains any member decorated with `Offset` and is a 64-bit type.

Output variables or block members decorated with `Offset` that have a 32-bit type, or a composite type contains a 32-bit type, **must** specify an `Offset` value aligned to a 4 byte boundary.

Output variables, blocks or block members decorated with `Offset` **must** only contain base types that have components that are either 32-bit or 64-bit in size.

Only variables or block members in the output interface decorated with `Offset` **can** be captured for transform feedback, and those variables or block members **must** also be decorated with `XfbBuffer` and `XfbStride`, or inherit `XfbBuffer` and `XfbStride` decorations from a block containing them.

All variables or block members in the output interface of the entry point being compiled decorated with a specific `XfbBuffer` value **must** all be decorated with identical `XfbStride` values.

If any variables or block members in the output interface of the entry point being compiled are decorated with `Stream`, then all variables belonging to the same `XfbBuffer` **must** specify the same `Stream` value.

For any two variables or block members in the output interface of the entry point being compiled with the same `XfbBuffer` value, the ranges determined by the `Offset` decoration and the size of the type **must** not overlap.

All block members in the output interface of the entry point being compiled that are in the same block and have a declared or inherited `XfbBuffer` decoration **must** specify the same `XfbBuffer` value.

RayPayloadKHR Storage Class **must** only be used in ray generation, closest hit or miss shaders.

All variables or block members in the output interface decorated with `Offset` **must** be a multiple of 8.

The first member of an output block specifying a `Offset` decoration **must** specify a `Offset` value that is aligned to an 8 byte boundary if that block contains any member decorated with `Offset` and is a 64-bit type.

Output variables or block members decorated with `Offset` that have a 32-bit type, or a composite type contains a 32-bit type, **must** specify an `Offset` value aligned to a 4 byte boundary.

Output variables, blocks or block members decorated with `Offset` **must** only contain base types that have components that are either 32-bit or 64-bit in size.

Only variables or block members in the output interface decorated with `Offset` **can** be captured for transform feedback, and those variables or block members **must** also be decorated with `XfbBuffer` and `XfbStride`, or inherit `XfbBuffer` and `XfbStride` decorations from a block containing them.

All variables or block members in the output interface of the entry point being compiled decorated with a specific `XfbBuffer` value **must** all be decorated with identical `XfbStride` values.

If any variables or block members in the output interface of the entry point being compiled are decorated with `Stream`, then all variables belonging to the same `XfbBuffer` **must** specify the same `Stream` value.

For any two variables or block members in the output interface of the entry point being compiled with the same `XfbBuffer` value, the ranges determined by the `Offset` decoration and the size of the type **must** not overlap.

All block members in the output interface of the entry point being compiled that are in the same block and have a declared or inherited `XfbBuffer` decoration **must** specify the same `XfbBuffer` value.

RayPayloadKHR Storage Class **must** only be used in ray generation, closest hit or miss shaders.

All variables or block members in the output interface decorated with `Offset` **must** be a multiple of 8.

The first member of an output block specifying a `Offset` decoration **must** specify a `Offset` value that is aligned to an 8 byte boundary if that block contains any member decorated with `Offset` and is a 64-bit type.

Output variables or block members decorated with `Offset` that have a 32-bit type, or a composite type contains a 32-bit type, **must** specify an `Offset` value aligned to a 4 byte boundary.

Output variables, blocks or block members decorated with `Offset` **must** only contain base types that have components that are either 32-bit or 64-bit in size.

Only variables or block members in the output interface decorated with `Offset` **can** be captured for transform feedback, and those variables or block members **must** also be decorated with `XfbBuffer` and `XfbStride`, or inherit `XfbBuffer` and `XfbStride` decorations from a block containing them.

All variables or block members in the output interface of the entry point being compiled decorated with a specific `XfbBuffer` value **must** all be decorated with identical `XfbStride` values.

If any variables or block members in the output interface of the entry point being compiled are decorated with `Stream`, then all variables belonging to the same `XfbBuffer` **must** specify the same `Stream` value.

For any two variables or block members in the output interface of the entry point being compiled with the same `XfbBuffer` value, the ranges determined by the `Offset` decoration and the size of the type **must** not overlap.

All block members in the output interface of the entry point being compiled that are in the same block and have a declared or inherited `XfbBuffer` decoration **must** specify the same `XfbBuffer` value.
IncomingRayPayloadKHR Storage Class must only be used in closest hit, any-hit, or miss shaders

- VUID-StandaloneSpirv-IncomingRayPayloadKHR-04700
  There must be at most one variable with the IncomingRayPayloadKHR Storage Class in the input interface of an entry point

- VUID-StandaloneSpirv-HitAttributeKHR-04701
  HitAttributeKHR Storage Class must only be used in intersection, any-hit, or closest hit shaders

- VUID-StandaloneSpirv-HitAttributeKHR-04702
  There must be at most one variable with the HitAttributeKHR Storage Class in the input interface of an entry point

- VUID-StandaloneSpirv-HitAttributeKHR-04703
  A variable with HitAttributeKHR Storage Class must only be written to in an intersection shader

- VUID-StandaloneSpirv-CallableDataKHR-04704
  CallableDataKHR Storage Class must only be used in ray generation, closest hit, miss, and callable shaders

- VUID-StandaloneSpirv-CallableDataKHR-04705
  IncomingCallableDataKHR Storage Class must only be used in callable shaders

- VUID-StandaloneSpirv-CallableDataKHR-04706
  There must be at most one variable with the IncomingCallableDataKHR Storage Class in the input interface of an entry point

- VUID-StandaloneSpirv-ShaderRecordBufferKHR-07119
  ShaderRecordBufferKHR Storage Class must only be used in ray generation, intersection, any-hit, closest hit, callable, or miss shaders

- VUID-StandaloneSpirv-Base-07650
  The Base operand of OpPtrAccessChain must have a storage class of Workgroup, StorageBuffer, or PhysicalStorageBuffer

- VUID-StandaloneSpirv-Base-07651
  If the Base operand of OpPtrAccessChain has a Workgroup Storage Class, then the VariablePointers capability must be declared

- VUID-StandaloneSpirv-Base-07652
  If the Base operand of OpPtrAccessChain has a StorageBuffer Storage Class, then the VariablePointers or VariablePointersStorageBuffer capability must be declared

- VUID-StandaloneSpirv-PhysicalStorageBuffer64-04708
  If the PhysicalStorageBuffer64 addressing model is enabled, all instructions that support memory access operands and that use a physical pointer must include the Aligned operand

- VUID-StandaloneSpirv-PhysicalStorageBuffer64-04709
  If the PhysicalStorageBuffer64 addressing model is enabled, any access chain instruction that accesses into a RowMajor matrix must only be used as the Pointer operand to OpLoad or OpStore
• VUID-StandaloneSpirv-PhysicalStorageBuffer64-04710
  If the PhysicalStorageBuffer64 addressing model is enabled, OpConvertUToPtr and OpConvertPtrToU must use an integer type whose Width is 64

• VUID-StandaloneSpirv-OpTypeForwardPointer-04711
  OpTypeForwardPointer must have a Storage Class of PhysicalStorageBuffer

• VUID-StandaloneSpirv-None-04745
  All block members in a variable with a Storage Class of PushConstant declared as an array must only be accessed by dynamically uniform indices

• VUID-StandaloneSpirv-OpVariable-06673
  There must not be more than one OpVariable in the PushConstant Storage Class listed in the Interface for each OpEntryPoint

• VUID-StandaloneSpirv-OpEntryPoint-06674
  Each OpEntryPoint must not statically use more than one OpVariable in the PushConstant Storage Class

• VUID-StandaloneSpirv-OpEntryPoint-08721
  Each OpEntryPoint must not have more than one Input variable assigned the same Component word inside a Location slot, either explicitly or implicitly

• VUID-StandaloneSpirv-OpEntryPoint-08722
  Each OpEntryPoint must not have more than one Output variable assigned the same Component word inside a Location slot, either explicitly or implicitly

• VUID-StandaloneSpirv-Result-04780
  The Result Type operand of any OpImageRead or OpImageSparseRead instruction must be a vector of four components

• VUID-StandaloneSpirv-Base-04781
  The Base operand of any OpBitCount, OpBitReverse, OpBitFieldInsert, OpBitFieldSExtract, or OpBitFieldUExtract instruction must be a 32-bit integer scalar or a vector of 32-bit integers

• VUID-StandaloneSpirv-PushConstant-06675
  Any variable in the PushConstant or StorageBuffer storage class must be decorated as Block

• VUID-StandaloneSpirv-Uniform-06676
  Any variable in the Uniform Storage Class must be decorated as Block or BufferBlock

• VUID-StandaloneSpirv-UniformConstant-06677
  Any variable in the UniformConstant, StorageBuffer, or Uniform Storage Class must be decorated with DescriptorSet and Binding

• VUID-StandaloneSpirv-InputAttachmentIndex-06678
  Variables decorated with InputAttachmentIndex must be in the UniformConstant Storage Class

• VUID-StandaloneSpirv-DescriptorSet-06491
  If a variable is decorated by DescriptorSet or Binding, the Storage Class must correspond to an entry in Shader Resource and Storage Class Correspondence

• VUID-StandaloneSpirv-Input-06778
  Variables with a Storage Class of Input in a fragment shader stage that are decorated with
**PerVertexKHR must** be declared as arrays

- **VUID-StandaloneSpirv-MeshEXT-07102**
  The module **must** not contain both an entry point that uses the TaskEXT or MeshEXT Execution Model and an entry point that uses the TaskNV or MeshNV Execution Model

- **VUID-StandaloneSpirv-MeshEXT-07106**
  In mesh shaders using the MeshEXT Execution Model OpSetMeshOutputsEXT **must** be called before any outputs are written

- **VUID-StandaloneSpirv-MeshEXT-07107**
  In mesh shaders using the MeshEXT Execution Model all variables declared as output **must** not be read from

- **VUID-StandaloneSpirv-MeshEXT-07108**
  In mesh shaders using the MeshEXT Execution Model **OpSetMeshOutputsEXT** must be called before any outputs are written

- **VUID-StandaloneSpirv-MeshEXT-07109**
  In mesh shaders using the MeshEXT Execution Model variables decorated with PrimitivePointIndicesEXT, PrimitiveLineIndicesEXT, or PrimitiveTriangleIndicesEXT declared as an array **must** not be accessed by indices that depend on ViewIndex

- **VUID-StandaloneSpirv-MeshEXT-07110**
  In mesh shaders using the MeshEXT Execution Model any values stored in variables decorated with PrimitivePointIndicesEXT, PrimitiveLineIndicesEXT, or PrimitiveTriangleIndicesEXT **must** not depend on ViewIndex

- **VUID-StandaloneSpirv-MeshEXT-07111**
  In mesh shaders using the MeshEXT Execution Model variables in workgroup or private Storage Class declared as or containing a composite type **must** not be accessed by indices that depend on ViewIndex

- **VUID-StandaloneSpirv-MeshEXT-07330**
  In mesh shaders using the MeshEXT Execution Model the OutputVertices Execution Mode **must** be greater than 0

- **VUID-StandaloneSpirv-MeshEXT-07331**
  In mesh shaders using the MeshEXT Execution Model the OutputPrimitivesEXT Execution Mode **must** be greater than 0

- **VUID-StandaloneSpirv-Input-07290**
  Variables with a Storage Class of Input or Output and a type of OpTypeBool **must** be decorated with the BuiltIn decoration

- **VUID-StandaloneSpirv-TileImageEXT-08723**
  The tile image variable declarations **must** obey the constraints on the TileImageEXT Storage Class and the Location decoration described in Fragment Tile Image Interface

- **VUID-StandaloneSpirv-None-08724**
  The TileImageEXT Storage Class **must** only be used for declaring tile image variables.

- **VUID-StandaloneSpirv-Pointer-08973**
  The Storage Class of the Pointer operand to OpCooperativeMatrixLoadKHR or OpCooperativeMatrixStoreKHR **must** be limited to Workgroup, StorageBuffer, or PhysicalStorageBuffer.
Runtime SPIR-V Validation

The following rules must be validated at runtime. These rules depend on knowledge of the implementation and its capabilities and knowledge of runtime information, such as enabled features.

Valid Usage

- **VUID-RuntimeSpirv-vulkanMemoryModel-06265** If `vulkanMemoryModel` is enabled and `vulkanMemoryModelDeviceScope` is not enabled, Device memory scope must not be used.
- **VUID-RuntimeSpirv-vulkanMemoryModel-06266** If `vulkanMemoryModel` is not enabled, QueueFamily memory scope must not be used.
- **VUID-RuntimeSpirv-shaderSubgroupClock-06267** If `shaderSubgroupClock` is not enabled, the Subgroup scope must not be used for `OpReadClockKHR`.
- **VUID-RuntimeSpirv-shaderDeviceClock-06268** If `shaderDeviceClock` is not enabled, the Device scope must not be used for `OpReadClockKHR`.
- **VUID-RuntimeSpirv-apiVersion-07954** If `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.3, the `VK_KHR_format_feature_flags2` extension is not supported, and `shaderStorageImageWriteWithoutFormat` is not enabled, any variable created with a “Type” of `OpTypeImage` that has a “Sampled” operand of 2 and an “Image Format” operand of `Unknown` must be decorated with `NonWritable`.
- **VUID-RuntimeSpirv-apiVersion-07955** If `VkPhysicalDeviceProperties::apiVersion` is less than Vulkan 1.3, the `VK_KHR_format_feature_flags2` extension is not supported, and `shaderStorageImageReadWithoutFormat` is not enabled, any variable created with a “Type” of `OpTypeImage` that has a “Sampled” operand of 2 and an “Image Format” operand of `Unknown` must be decorated with `NonReadable`.
- **VUID-RuntimeSpirv-OpImageWrite-07112** `OpImageWrite` to any `Image` whose `Image Format` is not `Unknown` must have the Texel operand contain at least as many components as the corresponding `VkFormat` as given in the SPIR-V Image Format compatibility table.
- **VUID-RuntimeSpirv-Location-06272** The sum of `Location` and the number of locations the variable it decorates consumes must be less than or equal to the value for the matching `Execution Model` defined in Shader Input and Output Locations.
- **VUID-RuntimeSpirv-Location-06428** The maximum number of storage buffers, storage images, and output `Location` decorated color attachments written to in the `Fragment Execution Model` must be less than or equal to `maxFragmentCombinedOutputResources`.
- **VUID-RuntimeSpirv-NonUniform-06274** If an instruction loads from or stores to a resource (including atomics and image
instructions) and the resource descriptor being accessed is not dynamically uniform, then
the operand corresponding to that resource (e.g. the pointer or sampled image operand)
**must** be decorated with **NonUniform**

- **VUID-RuntimeSpirv-None-06275**
  *shaderSubgroupExtendedTypes** must be enabled for **group operations** to use 8-bit integer,
  16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types

- **VUID-RuntimeSpirv-subgroupBroadcastDynamicId-06276**
  If subgroupBroadcastDynamicId is **VK_TRUE**, and the shader module version is 1.5 or higher,
  the “Index” for **OpGroupNonUniformQuadBroadcast** must be dynamically uniform within the
  derivative group. Otherwise, “Index” must be a constant

- **VUID-RuntimeSpirv-subgroupBroadcastDynamicId-06277**
  If subgroupBroadcastDynamicId is **VK_TRUE**, and the shader module version is 1.5 or higher,
  the “Id” for **OpGroupNonUniformBroadcast** must be dynamically uniform within the
  subgroup. Otherwise, “Id” must be a constant

- **VUID-RuntimeSpirv-None-06278**
  *shaderBufferInt64Atomics** must be enabled for 64-bit integer atomic operations to be
  supported on a **Pointer** with a **Storage Class** of **StorageBuffer** or **Uniform**

- **VUID-RuntimeSpirv-None-06279**
  *shaderSharedInt64Atomics** must be enabled for 64-bit integer atomic operations to be
  supported on a **Pointer** with a **Storage Class** of **Workgroup**

- **VUID-RuntimeSpirv-None-06284**
  shaderBufferFloat32Atomics, or shaderBufferFloat32AtomicAdd, or
  shaderBufferFloat64Atomics, or shaderBufferFloat64AtomicAdd, or
  shaderBufferFloat16Atomics, or shaderBufferFloat16AtomicAdd, or
  shaderBufferFloat16AtomicMinMax, or shaderBufferFloat32AtomicMinMax, or
  shaderBufferFloat64AtomicMinMax must be enabled for floating-point atomic operations to
  be supported on a **Pointer** with a **Storage Class** of **StorageBuffer**

- **VUID-RuntimeSpirv-None-06285**
  shaderSharedFloat32Atomics, or shaderSharedFloat32AtomicAdd, or
  shaderSharedFloat64Atomics, or shaderSharedFloat64AtomicAdd, or
  shaderSharedFloat16Atomics, or shaderSharedFloat16AtomicAdd, or
  shaderSharedFloat16AtomicMinMax, or shaderSharedFloat32AtomicMinMax, or
  shaderSharedFloat64AtomicMinMax must be enabled for floating-point atomic operations to
  be supported on a **Pointer** with a **Storage Class** of **Workgroup**

- **VUID-RuntimeSpirv-None-06286**
  shaderImageFloat32Atomics, or shaderImageFloat32AtomicAdd, or
  shaderImageFloat32AtomicMinMax must be enabled for 32-bit floating-point atomic
  operations to be supported on a **Pointer** with a **Storage Class** of **Image**

- **VUID-RuntimeSpirv-None-06287**
  sparseImageFloat32Atomics, or sparseImageFloat32AtomicAdd, or
  sparseImageFloat32AtomicMinMax must be enabled for 32-bit floating-point atomic to be
  supported on sparse images

- **VUID-RuntimeSpirv-None-06288**
  shaderImageInt64Atomics must be enabled for 64-bit integer atomic operations to be
supported on a Pointer with a Storage Class of Image

- **VUID-RuntimeSpirv-denormBehaviorIndependence-06289**
  If denormBehaviorIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY, then the entry point must use the same denormals Execution Mode for both 16-bit and 64-bit floating-point types

- **VUID-RuntimeSpirv-denormBehaviorIndependence-06290**
  If denormBehaviorIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE, then the entry point must use the same denormals Execution Mode for all floating-point types

- **VUID-RuntimeSpirv-roundingModeIndependence-06291**
  If roundingModeIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY, then the entry point must use the same rounding Execution Mode for both 16-bit and 64-bit floating-point types

- **VUID-RuntimeSpirv-roundingModeIndependence-06292**
  If roundingModeIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE, then the entry point must use the same rounding Execution Mode for all floating-point types

- **VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat16-06293**
  If shaderSignedZeroInfNanPreserveFloat16 is VK_FALSE, then SignedZeroInfNanPreserve for 16-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat32-06294**
  If shaderSignedZeroInfNanPreserveFloat32 is VK_FALSE, then SignedZeroInfNanPreserve for 32-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat64-06295**
  If shaderSignedZeroInfNanPreserveFloat64 is VK_FALSE, then SignedZeroInfNanPreserve for 64-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderDenormPreserveFloat16-06296**
  If shaderDenormPreserveFloat16 is VK_FALSE, then DenormPreserve for 16-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderDenormPreserveFloat32-06297**
  If shaderDenormPreserveFloat32 is VK_FALSE, then DenormPreserve for 32-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderDenormPreserveFloat64-06298**
  If shaderDenormPreserveFloat64 is VK_FALSE, then DenormPreserve for 64-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat16-06299**
  If shaderDenormFlushToZeroFloat16 is VK_FALSE, then DenormFlushToZero for 16-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat32-06300**
  If shaderDenormFlushToZeroFloat32 is VK_FALSE, then DenormFlushToZero for 32-bit floating-point type must not be used

- **VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat64-06301**
  If shaderDenormFlushToZeroFloat64 is VK_FALSE, then DenormFlushToZero for 64-bit floating-point type must not be used
If shaderRoundingModeRTEFloat16 is VK_FALSE, then RoundingModeRTE for 16-bit floating-point type must not be used.

If shaderRoundingModeRTEFloat32 is VK_FALSE, then RoundingModeRTE for 32-bit floating-point type must not be used.

If shaderRoundingModeRTEFloat64 is VK_FALSE, then RoundingModeRTE for 64-bit floating-point type must not be used.

If shaderRoundingModeRTZFloat16 is VK_FALSE, then RoundingModeRTZ for 16-bit floating-point type must not be used.

If shaderRoundingModeRTZFloat32 is VK_FALSE, then RoundingModeRTZ for 32-bit floating-point type must not be used.

If shaderRoundingModeRTZFloat64 is VK_FALSE, then RoundingModeRTZ for 64-bit floating-point type must not be used.

The Offset plus size of the type of each variable, in the output interface of the entry point being compiled, decorated with XfbBuffer must not be greater than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataSize.

For any given XfbBuffer value, define the buffer data size to be smallest number of bytes such that, for all outputs decorated with the same XfbBuffer value, the size of the output interface variable plus the Offset is less than or equal to the buffer data size. For a given Stream, the sum of all the buffer data sizes for all buffers writing to that stream the must not exceed VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreamDataSize.

The Stream value to Op Emit Stream Vertex and Op End Stream Primitive must be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams.

If the geometry shader emits to more than one vertex stream and VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackStreamsLinesTriangles is VK_FALSE, then Execution Mode must be OutputPoints.

The stream number value to Stream must be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams.

The XFB Stride value to XfbStride must be less than or equal to VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataStride.
If the `PhysicalStorageBuffer64` addressing model is enabled any load or store through a physical pointer type must be aligned to a multiple of the size of the largest scalar type in the pointed-to type.

If the `PhysicalStorageBuffer64` addressing model is enabled the pointer value of a memory access instruction must be at least as aligned as specified by the Aligned memory access operand.

For `OpTypeCooperativeMatrixNV`, the component type, scope, number of rows, and number of columns must match one of the matrices in any of the supported `VkCooperativeMatrixPropertiesNV`.

For `OpCooperativeMatrixMulAddNV`, the type of `A` must have `VkCooperativeMatrixPropertiesNV::MSize` rows and `VkCooperativeMatrixPropertiesNV::KSize` columns and have a component type that matches `VkCooperativeMatrixPropertiesNV::AType`.

For `OpCooperativeMatrixMulAddNV`, the type of `B` must have `VkCooperativeMatrixPropertiesNV::KSize` rows and `VkCooperativeMatrixPropertiesNV::NSize` columns and have a component type that matches `VkCooperativeMatrixPropertiesNV::BType`.

For `OpCooperativeMatrixMulAddNV`, the type of `C` must have `VkCooperativeMatrixPropertiesNV::MSize` rows and `VkCooperativeMatrixPropertiesNV::NSize` columns and have a component type that matches `VkCooperativeMatrixPropertiesNV::CType`.

For `OpCooperativeMatrixMulAddNV`, the type of `Result` must have `VkCooperativeMatrixPropertiesNV::MSize` rows and `VkCooperativeMatrixPropertiesNV::NSize` columns and have a component type that matches `VkCooperativeMatrixPropertiesNV::DType`.

For `OpCooperativeMatrixMulAddNV`, the type of `A`, `B`, `C`, and `Result` must all have a scope.

`OpTypeCooperativeMatrixNV` and `OpCooperativeMatrix*` instructions must not be used in shader stages not included in `VkPhysicalDeviceCooperativeMatrixPropertiesNV::cooperativeMatrixSupportedStages`.

For `OpTypeCooperativeMatrixKHR`, the component type, scope, number of rows, and number of columns must match one of the matrices in any of the supported `VkCooperativeMatrixPropertiesKHR`.

• VUID-RuntimeSpirv-PhysicalStorageBuffer64-06314
• VUID-RuntimeSpirv-PhysicalStorageBuffer64-06315
• VUID-RuntimeSpirv-OpTypeCooperativeMatrixNV-06316
• VUID-RuntimeSpirv-OpTypeCooperativeMatrixMulAddNV-06317
• VUID-RuntimeSpirv-OpTypeCooperativeMatrixMulAddNV-06318
• VUID-RuntimeSpirv-OpTypeCooperativeMatrixMulAddNV-06319

• VUID-RuntimeSpirv-OpTypeCooperativeMatrixMulAddNV-06321
• VUID-RuntimeSpirv-OpTypeCooperativeMatrixMulAddNV-06322
• VUID-RuntimeSpirv-OpTypeCooperativeMatrixKHR-08974
• VUID-RuntimeSpirv-MSize-08975
For \textbf{OpCooperativeMatrixMulAddKHR}, the type of \textit{A} \textbf{must} have \texttt{VkCooperativeMatrixPropertiesKHR::MSize} rows and \texttt{VkCooperativeMatrixPropertiesKHR::KSize} columns and have a component type that matches \texttt{VkCooperativeMatrixPropertiesKHR::AType}.

- \textbf{VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-08976}
  For \textbf{OpCooperativeMatrixMulAddKHR}, when the component type of \textit{A} is a signed integer type, the \texttt{MatrixASignedComponents} cooperative matrix operand \textbf{must} be present.

- \textbf{VUID-RuntimeSpirv-KSize-08977}
  For \textbf{OpCooperativeMatrixMulAddKHR}, the type of \textit{B} \textbf{must} have \texttt{VkCooperativeMatrixPropertiesKHR::KSize} rows and \texttt{VkCooperativeMatrixPropertiesKHR::NSize} columns and have a component type that matches \texttt{VkCooperativeMatrixPropertiesKHR::BType}.

- \textbf{VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-08978}
  For \textbf{OpCooperativeMatrixMulAddKHR}, when the component type of \textit{B} is a signed integer type, the \texttt{MatrixBSignedComponents} cooperative matrix operand \textbf{must} be present.

- \textbf{VUID-RuntimeSpirv-MSize-08979}
  For \textbf{OpCooperativeMatrixMulAddKHR}, the type of \textit{C} \textbf{must} have \texttt{VkCooperativeMatrixPropertiesKHR::MSize} rows and \texttt{VkCooperativeMatrixPropertiesKHR::NSize} columns and have a component type that matches \texttt{VkCooperativeMatrixPropertiesKHR::CType}.

- \textbf{VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-08980}
  For \textbf{OpCooperativeMatrixMulAddKHR}, when the component type of \textit{C} is a signed integer type, the \texttt{MatrixCSignedComponents} cooperative matrix operand \textbf{must} be present.

- \textbf{VUID-RuntimeSpirv-MSize-08981}
  For \textbf{OpCooperativeMatrixMulAddKHR}, the type of \textit{Result} \textbf{must} have \texttt{VkCooperativeMatrixPropertiesKHR::MSize} rows and \texttt{VkCooperativeMatrixPropertiesKHR::NSize} columns and have a component type that matches \texttt{VkCooperativeMatrixPropertiesKHR::ResultType}.

- \textbf{VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-08982}
  For \textbf{OpCooperativeMatrixMulAddKHR}, when the component type of \textit{Result} is a signed integer type, the \texttt{MatrixResultSignedComponents} cooperative matrix operand \textbf{must} be present.

- \textbf{VUID-RuntimeSpirv-saturatingAccumulation-08983}
  For \textbf{OpCooperativeMatrixMulAddKHR}, the \texttt{SaturatingAccumulation} cooperative matrix operand \textbf{must} be present if and only if \texttt{VkCooperativeMatrixPropertiesKHR::saturatingAccumulation} is \texttt{VK_TRUE}.

- \textbf{VUID-RuntimeSpirv-scope-08984}
  For \textbf{OpCooperativeMatrixMulAddKHR}, the type of \textit{A, B, C}, and \textit{Result} \textbf{must} all have a scope of \texttt{scope}.

- \textbf{VUID-RuntimeSpirv-cooperativeMatrixSupportedStages-08985}
  \texttt{OpTypeCooperativeMatrixKHR} and \texttt{OpCooperativeMatrix*} instructions \textbf{must} not be used in shader stages not included in \texttt{VkPhysicalDeviceCooperativeMatrixPropertiesKHR::cooperativeMatrixSupportedStages}.

- \textbf{VUID-RuntimeSpirv-DescriptorSet-06323}
DescriptorSet and Binding decorations must obey the constraints on Storage Class, type, and descriptor type described in DescriptorSet and Binding Assignment.

- VUID-RuntimeSpirv-OpCooperativeMatrixLoadNV-06324
  For OpCooperativeMatrixLoadNV and OpCooperativeMatrixStoreNV instructions, the Pointer and Stride operands must be aligned to at least the lesser of 16 bytes or the natural alignment of a row or column (depending on ColumnMajor) of the matrix (where the natural alignment is the number of columns/rows multiplied by the component size).

- VUID-RuntimeSpirv-MeshNV-07113
  For mesh shaders using the MeshNV Execution Model the OutputVertices OpExecutionMode must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesNV::maxMeshOutputVertices.

- VUID-RuntimeSpirv-MeshNV-07114
  For mesh shaders using the MeshNV Execution Model the OutputPrimitivesNV OpExecutionMode must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesNV::maxMeshOutputPrimitives.

- VUID-RuntimeSpirv-MeshEXT-07115
  For mesh shaders using the MeshEXT Execution Model the OutputVertices OpExecutionMode must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshOutputVertices.

- VUID-RuntimeSpirv-MeshEXT-07332
  For mesh shaders using the MeshEXT Execution Model the “Vertex Count” operand of OpSetMeshOutputsEXT must be less than or equal to OutputVertices OpExecutionMode.

- VUID-RuntimeSpirv-MeshEXT-07116
  For mesh shaders using the MeshEXT Execution Model the OutputPrimitivesEXT OpExecutionMode must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshOutputPrimitives.

- VUID-RuntimeSpirv-MeshEXT-07333
  For mesh shaders using the MeshEXT Execution Model the “Primitive Count” operand of OpSetMeshOutputsEXT must be less than or equal to OutputPrimitivesEXT OpExecutionMode.

- VUID-RuntimeSpirv-TaskEXT-07117
  In task shaders using the TaskEXT Execution Model OpEmitMeshTasksEXT must be called exactly once under dynamically uniform conditions.

- VUID-RuntimeSpirv-MeshEXT-07118
  In mesh shaders using the MeshEXT Execution Model OpSetMeshOutputsEXT must be called at most once under dynamically uniform conditions.

- VUID-RuntimeSpirv-TaskEXT-07291
  In task shaders using the TaskEXT Execution Model the x size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupSize[0].

- VUID-RuntimeSpirv-TaskEXT-07292
  In task shaders using the TaskEXT Execution Model the y size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupSize[1].
In task shaders using the TaskEXT Execution Model the z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupSize[2]

In task shaders using the TaskEXT Execution Model the product of x size, y size, and z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxTaskWorkGroupInvocations

For mesh shaders using the MeshEXT Execution Model the x size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize[0]

For mesh shaders using the MeshEXT Execution Model the y size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize[1]

For mesh shaders using the MeshEXT Execution Model the z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize[2]

For mesh shaders using the MeshEXT Execution Model the product of x size, y size, and z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupInvocations

In task shaders using the TaskEXT Execution Model the value of the “Group Count X” operand of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount[0]

In task shaders using the TaskEXT Execution Model the value of the “Group Count Y” operand of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount[1]

In task shaders using the TaskEXT Execution Model the value of the “Group Count Z” operand of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount[2]

In task shaders using the TaskEXT Execution Model the product of the “Group Count” operands of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupTotalCount

The sum of size in bytes for variables and padding in the Workgroup Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshSharedMemorySize
The sum of size in bytes for variables and padding in the TaskPayloadWorkgroupEXT or Workgroup Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshPayloadAndSharedMemorySize.

The sum of size in bytes for variables in the Output Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshOutputMemorySize according to the formula in Mesh Shader Output.

The sum of size in bytes for variables and padding in the TaskPayloadWorkgroupEXT or Output Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshPayloadAndOutputMemorySize according to the formula in Mesh Shader Output.

The sum of size in bytes for variables and in the TaskPayloadWorkgroupEXT Storage Class in the TaskEXT Execution Model must be less than or equal to maxTaskPayloadSize.

The sum of size in bytes for variables and padding in the Workgroup Storage Class in the TaskEXT Execution Model must be less than or equal to maxTaskSharedMemorySize.

The sum of size in bytes for variables and padding in the TaskPayloadWorkgroupEXT or Workgroup Storage Class in the TaskEXT Execution Model must be less than or equal to maxTaskPayloadAndSharedMemorySize according to the formula in Mesh Shader Output.

For OpCooperativeMatrixLoadKHR and OpCooperativeMatrixStoreKHR instructions, the Pointer and Stride operands must be aligned to at least the lesser of 16 bytes or the natural alignment of a row or column (depending on ColumnMajor) of the matrix (where the natural alignment is the number of columns/rows multiplied by the component size).

If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::shaderSampleRateInterpolationFunctions is VK_FALSE, then GLSL.std.450 fragment interpolation functions are not supported by the implementation and OpCapability must not be set to InterpolationFunction.

If tessellationShader is enabled, and the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationIsolines is VK_FALSE, then OpExecutionMode must not be set to Isolines.

If tessellationShader is enabled, and the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationPointMode is VK_FALSE, then OpExecutionMode must not be set to PointMode.

If storageBuffer8BitAccess is VK_FALSE, then objects containing an 8-bit integer element must not have Storage Class of StorageBuffer, ShaderRecordBufferKHR, or PhysicalStorageBuffer.
• VUID-RuntimeSpirv-uniformAndStorageBuffer8BitAccess-06329
  If `uniformAndStorageBuffer8BitAccess` is `VK_FALSE`, then objects in the Uniform Storage Class with the Block decoration must not have an 8-bit integer member.

• VUID-RuntimeSpirv-storagePushConstant8-06330
  If `storagePushConstant8` is `VK_FALSE`, then objects containing an 8-bit integer element must not have Storage Class of PushConstant.

• VUID-RuntimeSpirv-storageBuffer16BitAccess-06331
  If `storageBuffer16BitAccess` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements must not have Storage Class of StorageBuffer, ShaderRecordBufferKHR, or PhysicalStorageBuffer.

• VUID-RuntimeSpirv-uniformAndStorageBuffer16BitAccess-06332
  If `uniformAndStorageBuffer16BitAccess` is `VK_FALSE`, then objects in the Uniform Storage Class with the Block decoration must not have 16-bit integer or 16-bit floating-point members.

• VUID-RuntimeSpirv-storagePushConstant16-06333
  If `storagePushConstant16` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements must not have Storage Class of PushConstant.

• VUID-RuntimeSpirv-storageInputOutput16-06334
  If `storageInputOutput16` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements must not have Storage Class of Input or Output.

• VUID-RuntimeSpirv-None-06337
  `shaderBufferFloat16AtomicAdd`, or `shaderBufferFloat16AtomicMinMax`, or `shaderSharedFloat16AtomicAdd`, or `shaderSharedFloat16AtomicMinMax` must be enabled for 16-bit floating point atomic operations.

• VUID-RuntimeSpirv-None-06338
  `shaderBufferFloat32AtomicAdd`, or `shaderBufferFloat32AtomicMinMax`, or `shaderSharedFloat32AtomicAdd`, or `shaderSharedFloat32AtomicMinMax`, or `shaderImageFloat32AtomicAdd`, or `shaderImageFloat32AtomicMinMax` must be enabled for 32-bit floating point atomic operations.

• VUID-RuntimeSpirv-None-06339
  `shaderBufferFloat64AtomicAdd`, or `shaderBufferFloat64AtomicMinMax`, or `shaderSharedFloat64AtomicAdd`, or `shaderSharedFloat64AtomicMinMax`, must be enabled for 64-bit floating point atomic operations.

• VUID-RuntimeSpirv-NonWritable-06340
  If `fragmentStoresAndAtomics` is not enabled, then all storage image, storage texel buffer, and storage buffer variables in the fragment stage must be decorated with the NonWritable decoration.

• VUID-RuntimeSpirv-NonWritable-06341
  If `vertexPipelineStoresAndAtomics` is not enabled, then all storage image, storage texel buffer, and storage buffer variables in the vertex, tessellation, and geometry stages must be decorated with the NonWritable decoration.
If `subgroupQuadOperationsInAllStages` is `VK_FALSE`, then quad subgroup operations must not be used except for in fragment and compute stages.

Group operations with subgroup scope must not be used if the shader stage is not in `subgroupSupportedStages`.

The first element of the `Offset` operand of `InterpolateAtOffset` must be greater than or equal to:

\[
\text{frag} \times \text{minInterpolationOffset}
\]

where `frag` is the width of the current fragment in pixels.

The first element of the `Offset` operand of `InterpolateAtOffset` must be less than or equal to:

\[
\text{frag} \times (\text{maxInterpolationOffset} + \text{ULP}) - \text{ULP}
\]

where `frag` is the width of the current fragment in pixels and `ULP = 1 / 2^{\text{subPixelInterpolationOffsetBits}}`.

The second element of the `Offset` operand of `InterpolateAtOffset` must be greater than or equal to:

\[
\text{frag} \times \text{minInterpolationOffset}
\]

where `frag` is the height of the current fragment in pixels.

The second element of the `Offset` operand of `InterpolateAtOffset` must be less than or equal to:

\[
\text{frag} \times (\text{maxInterpolationOffset} + \text{ULP}) - \text{ULP}
\]

where `frag` is the height of the current fragment in pixels and `ULP = 1 / 2^{\text{subPixelInterpolationOffsetBits}}`.

For `OpRayQueryInitializeKHR` instructions, all components of the `RayOrigin` and `RayDirection` operands must be finite floating-point values.

For `OpRayQueryInitializeKHR` instructions, the `RayTmin` and `RayTmax` operands must be non-negative floating-point values.

For `OpRayQueryInitializeKHR` instructions, the `RayTmin` operand must be less than or equal to the `RayTmax` operand.

For `OpRayQueryInitializeKHR` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands must not contain NaNs.

For `OpRayQueryInitializeKHR` instructions, Acceleration Structure must be an acceleration structure built as a top-level acceleration structure.
For **OpRayQueryInitializeKHR** instructions, the **Rayflags** operand *must* not contain both **SkipTrianglesKHR** and **SkipAABBsKHR**

For **OpRayQueryInitializeKHR** instructions, the **Rayflags** operand *must* not contain more than one of **SkipTrianglesKHR**, **CullBackFacingTrianglesKHR**, and **CullFrontFacingTrianglesKHR**

For **OpRayQueryInitializeKHR** instructions, the **Rayflags** operand *must* not contain more than one of **OpaqueKHR**, **NoOpaqueKHR**, **CullOpaqueKHR**, and **CullNoOpaqueKHR**

For **OpRayQueryGenerateIntersectionKHR** instructions, **Hit T** must satisfy the condition \[ \text{RayTmin} \leq \text{Hit T} \leq \text{RayTmax} \], where **RayTmin** is equal to the value returned by **OpRayQueryGetRayTMinKHR** with the same ray query object, and **RayTmax** is equal to the value of **OpRayQueryGetIntersectionTKHR** for the current committed intersection with the same ray query object

For **OpRayQueryGenerateIntersectionKHR** instructions, Acceleration Structure *must* not be built with **VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV** in flags

For **OpRayQueryGetIntersectionTriangleVertexPositionsKHR** instructions, Acceleration Structure *must* have been built with **VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR** in flags

For **OpTraceRayKHR** instructions, all components of the **RayOrigin** and **RayDirection** operands *must* be finite floating-point values

For **OpTraceRayKHR** instructions, the **RayTmin** and **RayTmax** operands *must* be non-negative floating-point values

For **OpTraceRayKHR** instructions, the **Rayflags** operand *must* not contain both **SkipTrianglesKHR** and **SkipAABBsKHR**

For **OpTraceRayKHR** instructions, the **Rayflags** operand *must* not contain more than one of **SkipTrianglesKHR**, **CullBackFacingTrianglesKHR**, and **CullFrontFacingTrianglesKHR**

For **OpTraceRayKHR** instructions, the **Rayflags** operand *must* not contain more than one of **OpaqueKHR**, **NoOpaqueKHR**, **CullOpaqueKHR**, and **CullNoOpaqueKHR**

For **OpTraceRayKHR** instructions, if the **Rayflags** operand contains **SkipTrianglesKHR**, the pipeline *must* not have been created with **VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR** set

For **OpTraceRayKHR** instructions, the **Rayflags** operand *must* not contain both **SkipTrianglesKHR** and **SkipAABBsKHR**
For `OpTraceRayKHR` instructions, if the `Rayflags` operand contains `SkipAABBsKHR`, the pipeline must not have been created with `VK_PIPELINE_CREATERAY_TRACING_SKIP_TRIANGLES_BIT_KHR` set.

- VUID-RuntimeSpirv-OpTraceRayKHR-06357
  For `OpTraceRayKHR` instructions, the `RayTmin` operand must be less than or equal to the `RayTmax` operand.

- VUID-RuntimeSpirv-OpTraceRayKHR-06358
  For `OpTraceRayKHR` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands must not contain NaNs.

- VUID-RuntimeSpirv-OpTraceRayKHR-06359
  For `OpTraceRayKHR` instructions, `Acceleration Structure` must be an acceleration structure built as a top-level acceleration structure.

- VUID-RuntimeSpirv-OpReportIntersectionKHR-06998
  The value of the “Hit Kind” operand of `OpReportIntersectionKHR` must be in the range [0,127].

- VUID-RuntimeSpirv-OpTraceRayKHR-06360
  For `OpTraceRayKHR` instructions, if `Acceleration Structure` was built with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags, the pipeline must have been created with `VK_PIPELINE_CREATERAY_TRACING_ALLOW_MOTION_BIT_NV` set.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06361
  For `OpTraceRayMotionNV` instructions, all components of the `RayOrigin` and `RayDirection` operands must be finite floating-point values.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06362
  For `OpTraceRayMotionNV` instructions, the `RayTmin` and `RayTmax` operands must be non-negative floating-point values.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06363
  For `OpTraceRayMotionNV` instructions, the `RayTmin` operand must be less than or equal to the `RayTmax` operand.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06364
  For `OpTraceRayMotionNV` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands must not contain NaNs.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06365
  For `OpTraceRayMotionNV` instructions, `Acceleration Structure` must be an acceleration structure built as a top-level acceleration structure with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06366
  For `OpTraceRayMotionNV` instructions, the `time` operand must be between 0.0 and 1.0.

- VUID-RuntimeSpirv-OpTraceRayMotionNV-06367
  For `OpTraceRayMotionNV` instructions, the pipeline must have been created with `VK_PIPELINECREATERAY_TRACING_ALLOW_MOTION_BIT_NV` set.

- VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07704
  For `OpHitObjectTraceRayMotionNV` instructions, if `Acceleration Structure` was built with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags, the pipeline must have been...
created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` set

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07705**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, all components of the `RayOrigin` and `RayDirection` operands must be finite floating-point values

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07706**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `RayTmin` and `RayTmax` operands must be non-negative floating-point values

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07707**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `RayTmin` operand must be less than or equal to the `RayTmax` operand

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07708**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands must not contain NaNs

- **VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07709**
  For `OpHitObjectTraceRayMotionNV` instructions, an acceleration structure must be an acceleration structure built as a top-level acceleration structure with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07710**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions the time operand must be between 0.0 and 1.0

- **VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07711**
  For `OpHitObjectTraceRayMotionNV` instructions the pipeline must have been created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` set

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07712**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `Rayflags` operand must not contain both `SkipTrianglesKHR` and `SkipAABBsKHR`

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07713**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `Rayflags` operand must not contain more than one of `SkipTrianglesKHR`, `CullBackFacingTrianglesKHR`, and `CullFrontFacingTrianglesKHR`

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07714**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `Rayflags` operand must not contain more than one of `OpaqueKHR`, `NoOpaqueKHR`, `CullOpaqueKHR`, and `CullNoOpaqueKHR`

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07715**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, if the `Rayflags` operand contains `SkipTrianglesKHR`, the pipeline must not have been created with `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR` set

- **VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07716**
  For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, if the `Rayflags` operand contains `SkipAABBsKHR`, the pipeline must not have been created with `VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR` set

- **VUID-RuntimeSpirv-x-06429**
In compute shaders using the GLCompute Execution Model the x size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]

• VUID/RuntimeSpirv-y-06430
  In compute shaders using the GLCompute Execution Model the y size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1]

• VUID/RuntimeSpirv-z-06431
  In compute shaders using the GLCompute Execution Model the z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2]

• VUID/RuntimeSpirv-x-06432
  In compute shaders using the GLCompute Execution Model the product of x size, y size, and z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0]:maxComputeWorkGroupInvocations

• VUID/RuntimeSpirv-LocalSizeId-06434
  If Execution Mode LocalSizeId is used, maintenance4 must be enabled

• VUID/RuntimeSpirv-maintenance4-06817
  If maintenance4 is not enabled, any OpTypeVector output interface variables must not have a higher Component Count than a matching OpTypeVector input interface variable

• VUID/RuntimeSpirv-OpEntryPoint-08743
  Any user-defined variables shared between the OpEntryPoint of two shader stages, and declared with Input as its Storage Class for the subsequent shader stage, must have all Location slots and Component words declared in the preceding shader stage’s OpEntryPoint with Output as the Storage Class

• VUID/RuntimeSpirv-OpEntryPoint-07754
  Any user-defined variables between the OpEntryPoint of two shader stages must have the same type and width for each Component

• VUID/RuntimeSpirv-OpVariable-08746
  Any OpVariable, Block-decorated OpTypeStruct, or Block-decorated OpTypeStruct members shared between the OpEntryPoint of two shader stages must have matching decorations as defined in interface matching

• VUID/RuntimeSpirv-Workgroup-06530
  The sum of size in bytes for variables and padding in the Workgroup Storage Class in the GLCompute Execution Model must be less than or equal to maxComputeSharedMemorySize

• VUID/RuntimeSpirv-shaderZeroInitializeWorkgroupMemory-06372
  If shaderZeroInitializeWorkgroupMemory is not enabled, any OpVariable with Workgroup as its Storage Class must not have an Initializer operand

• VUID/RuntimeSpirv-OpImage-06376
  If an OpImage*Gather operation has an image operand of Offset, ConstOffset, or ConstOffsets the offset value must be greater than or equal to minTexelGatherOffset

• VUID/RuntimeSpirv-OpImage-06377
  If an OpImage*Gather operation has an image operand of Offset, ConstOffset, or
ConstOffsets the offset value must be less than or equal to maxTexelGatherOffset

- **VUID-RuntimeSpirv-OpImageSample-06435**
  If an OpImageSample* or OpImageFetch* operation has an image operand of ConstOffset then the offset value must be greater than or equal to minTexelOffset

- **VUID-RuntimeSpirv-OpImageSample-06436**
  If an OpImageSample* or OpImageFetch* operation has an image operand of ConstOffset then the offset value must be less than or equal to maxTexelOffset

- **VUID-RuntimeSpirv-samples-08725**
  If an OpTypeImage has an MS operand 0, its bound image must have been created with VkImageCreateInfo::samples as VK_SAMPLE_COUNT_1_BIT

- **VUID-RuntimeSpirv-samples-08726**
  If an OpTypeImage has an MS operand 1, its bound image must not have been created with VkImageCreateInfo::samples as VK_SAMPLE_COUNT_1_BIT

- **VUID-RuntimeSpirv-SubgroupUniformControlFlowKHR-06379**
  The Execution Mode SubgroupUniformControlFlowKHR must not be applied to an entry point unless shaderSubgroupUniformControlFlow is enabled and the corresponding shader stage bit is set in subgroup supportedStages and the entry point does not execute any invocation repack instructions

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06767**
  If shaderEarlyAndLateFragmentTests is not enabled, the EarlyAndLateFragmentTestsEXT Execution Mode must not be used

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06768**
  If shaderEarlyAndLateFragmentTests feature is not enabled, the StencilRefUnchangedFrontEXT Execution Mode must not be used

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06769**
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefUnchangedBackEXT Execution Mode must not be used

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06770**
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefGreaterFrontEXT Execution Mode must not be used

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06771**
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefGreaterBackEXT Execution Mode must not be used

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06772**
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefLessFrontEXT Execution Mode must not be used

- **VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06773**
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefLessBackEXT Execution Mode must not be used
If an OpImageWeightedSampleQCOM operation is used, then the Texture Sampled Image and Weight Image parameters must both be dynamically uniform for the quad.

If an OpImageWeightedSampleQCOM operation is used, then the Weight Image parameter must be of Storage Class UniformConstant and type OpTypeImage with Depth=0, Dim=2D, Arrayed=1, MS=0, and Sampled=1.

If an OpImageWeightedSampleQCOM operation is used, then the Weight Image parameter must be decorated with WeightTextureQCOM.

If an OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM operation is used, then the target sampled image, reference sampled image, and Block Size parameters must both be dynamically uniform for the quad.

If an OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM operation is used, then the target sampled image and reference sampled image parameters must be of storage class UniformConstant and type OpTypeImage with Depth=0, Dim=2D, Arrayed=0, MS=0, and Sampled=1.

If an OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM operation is used, then the target sampled image and reference sampled image parameters must have been created using an identical sampler object.

If an OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM operation is used, then the target sampled image and reference sampled image parameters must have been created with a sampler object with unnormalizedCoordinates equal to VK_TRUE.

If an OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM operation is used, then Block Size less than or equal to maxBlockMatchRegion.

If an OpImageBoxFilterQCOM operation is used, then Box Size.y must be equal to or greater than 1.0 and less than or equal to maxBoxFilterBlockSize.height.

If an OpImageBoxFilterQCOM operation is used, then Sampled Texture Image and Box Size parameters must be dynamically uniform.
Each OpEntryPoint must not have more than one variable decorated with InputAttachmentIndex per image aspect of the attachment image bound to it, either explicitly or implicitly as described by input attachment interface.

If shaderTileImageColorReadAccess is not enabled, OpColorAttachmentReadEXT operation must not be used.

If shaderTileImageDepthReadAccess is not enabled, OpDepthAttachmentReadEXT operation must not be used.

If shaderTileImageStencilReadAccess is not enabled, OpStencilAttachmentReadEXT operation must not be used.

If sample shading is enabled and minSampleShading is 1.0, the sample operand of any OpColorAttachmentReadEXT, OpDepthAttachmentReadEXT, or OpStencilAttachmentReadEXT operation must evaluate to the value of the coverage index for any given fragment invocation.

If sample shading is enabled and any of the OpColorAttachmentReadEXT, OpDepthAttachmentReadEXT, or OpStencilAttachmentReadEXT operations are used, then minSampleShading must be 1.0.

In mesh shaders using the MeshEXT or MeshNV Execution Model and the OutputPoints Execution Mode, if maintenance5 is not enabled, and if the number of output points is greater than 0, a PointSize decorated variable must be written to for each output point.

If maintenance5 is enabled and a PointSize decorated variable is written to, all execution paths must write to a PointSize decorated variable.

The ShaderEnqueueAMDX capability must only be used in shaders with the GLCompute execution model.

Variables in the NodePayloadAMDX storage class must only be declared in the GLCompute execution model.

Variables declared in the NodePayloadAMDX storage class must not be larger than the maxExecutionGraphShaderPayloadSize limit.

Variables declared in the NodeOutputPayloadAMDX storage class must not be larger than the maxExecutionGraphShaderPayloadSize limit.

For a given entry point, the sum of the size of any variable in the NodePayloadAMDX storage class must not exceed the maxExecutionGraphShaderPayloadSize limit.
class, and the combined size of all statically initialized variables in the
NodeOutputPayloadAMDX storage class must not be greater than
maxExecutionGraphShaderPayloadSize

• VUID-RuntimeSpirv-maxExecutionGraphShaderPayloadCount-09196
  Shaders must not statically initialize more than maxExecutionGraphShaderPayloadCount
  variables in the NodeOutputPayloadAMDX storage class

• VUID-RuntimeSpirv-maxExecutionGraphShaderOutputNodes-09197
  Shaders must not include more than maxExecutionGraphShaderOutputNodes instances of
  OpInitializeNodePayloadsAMDX

• VUID-RuntimeSpirv-OpImageBlockMatchWindow-09219
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM operation is used, then
  the target sampled image, reference sampled image, and Block Size parameters must both be
dynamically uniform for the quad

• VUID-RuntimeSpirv-OpImageBlockMatchWindow-09220
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM operation is used, then
target sampled image and reference sampled image parameters must be of storage class
UniformConstant and type OpTypeImage with Depth=0, Dim=2D, Arrayed=0, MS=0, and Sampled=1

• VUID-RuntimeSpirv-OpImageBlockMatchWindow-09221
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM operation is used, then
  target sampled image and reference sampled image parameters must have been created
  using an identical sampler object

• VUID-RuntimeSpirv-OpImageBlockMatchWindow-09222
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM operation is used, then
  target sampled image and reference sampled image parameters must have been created with
  a sampler object with unnormalizedCoordinates equal to VK_TRUE

• VUID-RuntimeSpirv-OpImageBlockMatchWindow-09223
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM operation is used, then
  target sampled image and reference sampled image parameters must have been created with
  sampler object with unnormalizedCoordinates equal to VK_TRUE

• VUID-RuntimeSpirv-maxBlockMatchRegion-09224
  If a OpImageBlockMatchWindow*QCOM or OpImageBlockMatchGather*QCOM operation is used, then
  Block Size less than or equal to maxBlockMatchRegion

• VUID-RuntimeSpirv-pNext-09226
  If a OpImageBlockMatchWindow*QCOM operation is used, then target sampled image must have
  been created using a sampler object that included VkSamplerBlockMatchWindowCreateInfoQCOM in the pNext chain.
Precision and Operation of SPIR-V Instructions

The following rules apply to half, single, and double-precision floating point instructions:

- Positive and negative infinities and positive and negative zeros are generated as dictated by IEEE 754, but subject to the precisions allowed in the following table.
- Dividing a non-zero by a zero results in the appropriately signed IEEE 754 infinity.
- Signaling NaNs are not required to be generated and exceptions are never raised. Signaling NaN may be converted to quiet NaNs values by any floating point instruction.
- By default, the implementation may perform optimizations on half, single, or double-precision floating-point instructions that ignore sign of a zero, or assume that arguments and results are not NaNs or infinities. If the entry point is declared with the SignedZeroInfNanPreserve Execution Mode, then NaNs, infinities, and the sign of zero must not be ignored.
- Denormalized values are supported.
  - By default, any half, single, or double-precision denormalized value input into a shader or potentially generated by any instruction (except those listed above) or any extended instructions for GLSL in a shader may be flushed to zero.
  - If the entry point is declared with the DenormFlushToZero Execution Mode then for the affected instructions the denormalized result must be flushed to zero and the denormalized operands may be flushed to zero. Denormalized values obtained via unpacking an integer into a vector of values with smaller bit width and interpreting those values as floating-point numbers must be flushed to zero.

The precision of double-precision instructions is at least that of single precision.

The precision of individual operations is defined in Precision of Individual Operations. Subject to the constraints below, however, implementations may reorder or combine operations, resulting in expressions exhibiting different precisions than might be expected from the constituent operations.

Evaluation of Expressions

Implementations may rearrange floating-point operations using any of the mathematical properties governing the expressions in precise arithmetic, even where the floating-point operations do not share these properties. This includes, but is not limited to, associativity and distributivity, and may involve a different number of rounding steps than would occur if the operations were not rearranged. In shaders that use the SignedZeroInfNanPreserve Execution Mode the values must be preserved if they are generated after any rearrangement but the Execution Mode does not change which rearrangements are valid. This rearrangement can be prevented for particular operations by using the NoContraction decoration.

Note

For example, in the absence of the NoContraction decoration implementations are allowed to implement $a + b - a$ and $\frac{a \cdot b}{a}$ as $b$. The SignedZeroInfNanPreserve does not prevent these transformations, even though they may overflow to infinity or NaN when evaluated in floating-point.

If the NoContraction decoration is applied then operations may not be rearranged, so, for example, $a + a - a$ must account for possible overflow to infinity. If infinities are not preserved then the expression may be replaced with $a$, since the replacement is exact when overflow does not occur and infinities may be replaced with undefined values. If both NoContraction and SignedZeroInfNanPreserve are used then the result must be infinity for sufficiently large $a$.

Precision of Individual Operations

The precision of individual operations is defined either in terms of rounding (correctly rounded), as an error bound in ULP, or as inherited from a formula as follows:

Correctly Rounded

Operations described as “correctly rounded” will return the infinitely precise result, $x$, rounded so
as to be representable in floating-point. The rounding mode is not specified, unless the entry point is declared with the \texttt{RoundingModeRTE} or the \texttt{RoundingModeRTZ} Execution Mode. These execution modes affect only correctly rounded SPIR-V instructions. These execution modes do not affect \texttt{OpQuantizeToF16}. If the rounding mode is not specified then this rounding is implementation specific, subject to the following rules. If \( x \) is exactly representable then \( x \) will be returned. Otherwise, either the floating-point value closest to and no less than \( x \) or the value closest to and no greater than \( x \) will be returned.

\textit{ULP}

Where an error bound of \( n \) ULP (units in the last place) is given, for an operation with infinitely precise result \( x \) the value returned \textbf{must} be in the range \([x - n \times \text{ulp}(x), x + n \times \text{ulp}(x)]\). The function \text{ulp}(x)\text{ is defined as follows:

\[
\text{ulp}(x) = \begin{cases} 
\min_{a, b} |b - a| & \text{if there exist non-equal, finite floating-point numbers } a \text{ and } b \text{ such that } a \leq x \leq b \\
\text{the difference between the two non-equal, finite floating-point numbers nearest to } x & \text{otherwise}
\end{cases}
\]

Where the range of allowed return values includes any value of magnitude larger than that of the largest representable finite floating-point number, operations \textbf{may}, additionally, return either an infinity of the appropriate sign or the finite number with the largest magnitude of the appropriate sign. If the infinitely precise result of the operation is not mathematically defined then the value returned is undefined.

\textit{Inherited From ...}

Where an operation's precision is described as being inherited from a formula, the result returned \textbf{must} be at least as accurate as the result of computing an approximation to \( x \) using a formula equivalent to the given formula applied to the supplied inputs. Specifically, the formula given may be transformed using the mathematical associativity, commutativity and distributivity of the operators involved to yield an equivalent formula. The SPIR-V precision rules, when applied to each such formula and the given input values, define a range of permitted values. If NaN is one of the permitted values then the operation may return any result, otherwise let the largest permitted value in any of the ranges be \( F_{\max} \) and the smallest be \( F_{\min} \). The operation \textbf{must} return a value in the range \([x - E, x + E]\) where \( E = \max(|x - F_{\min}|, |x - F_{\max}|) \). If the entry point is declared with the \texttt{DenormFlushToZero} execution mode, then any intermediate denormal value(s) while evaluating the formula \textbf{may} be flushed to zero. Denormal final results \textbf{must} be flushed to zero. If the entry point is declared with the \texttt{DenormPreserve} Execution Mode, then denormals \textbf{must} be preserved throughout the formula.

For half- (16 bit) and single- (32 bit) precision instructions, precisions are \textbf{required} to be at least as follows:

\begin{table}[!h]

<td></td>
</tr>
<tr>
<td>conversions between types</td>
<td>Correctly rounded.</td>
<td></td>
</tr>
</tbody>
</table>

**Note**

The OpFRem and OpFMod instructions use cheap approximations of remainder, and the error can be large due to the discontinuity in trunc() and floor(). This can produce mathematically unexpected results in some cases, such as FMod(x,x) computing x rather than 0, and can also cause the result to have a different sign than the infinitely precise result.

GLSL.std.450 extended instructions specifically defined in terms of the above instructions inherit the above errors. GLSL.std.450 extended instructions not listed above and not defined in terms of the above have undefined precision.

For the `OpSRem` and `OpSMod` instructions, if either operand is negative the result is undefined.

**Note**

While the `OpSRem` and `OpSMod` instructions are supported by the Vulkan environment, they require non-negative values and thus do not enable additional functionality beyond what `OpUMod` provides.

- `OpCooperativeMatrixMulAddNV` performs its operations in an implementation-dependent order and internal precision.
- `OpCooperativeMatrixMulAddKHR` performs its operations in an implementation-dependent order and internal precision.

**Signedness of SPIR-V Image Accesses**

SPIR-V associates a signedness with all integer image accesses. This is required in certain parts of the SPIR-V and the Vulkan image access pipeline to ensure defined results. The signedness is determined from a combination of the access instruction’s Image Operands and the underlying image’s Sampled Type as follows:
1. If the instruction’s Image Operands contains the SignExtend operand then the access is signed.
2. If the instruction’s Image Operands contains the ZeroExtend operand then the access is unsigned.
3. Otherwise, the image accesses signedness matches that of the Sampled Type of the OpTypeImage being accessed.

**Image Format and Type Matching**

When specifying the Image Format of an OpTypeImage, the converted bit width and type, as shown in the table below, must match the Sampled Type. The signedness must match the signedness of any access to the image.

![Note](image.png)

Note: Formatted accesses are always converted from a shader readable type to the resource’s format or vice versa via Format Conversion for reads and Texel Output Format Conversion for writes. As such, the bit width and format below do not necessarily match 1:1 with what might be expected for some formats.

For a given Image Format, the Sampled Type must be the type described in the Type column of the below table, with its Literal Width set to that in the Bit Width column. Every access that is made to the image must have a signedness equal to that in the Signedness column (where applicable).

**Ray Query Precision and Operation**

The values returned by `OpRayQueryGetIntersectionTriangleVertexPositionsKHR` are transformed by
the geometry transform, which is performed at standard floating point precision, but without a specifically defined order of floating point operations to perform the matrix multiplication.
Appendix B: Memory Model

Note
This memory model describes synchronizations provided by all implementations; however, some of the synchronizations defined require extra features to be supported by the implementation. See VkPhysicalDeviceVulkanMemoryModelFeatures.

Agent

Operation is a general term for any task that is executed on the system.

Note
An operation is by definition something that is executed. Thus if an instruction is skipped due to control flow, it does not constitute an operation.

Each operation is executed by a particular agent. Possible agents include each shader invocation, each host thread, and each fixed-function stage of the pipeline.

Memory Location

A memory location identifies unique storage for 8 bits of data. Memory operations access a set of memory locations consisting of one or more memory locations at a time, e.g. an operation accessing a 32-bit integer in memory would read/write a set of four memory locations. Memory operations that access whole aggregates may access any padding bytes between elements or members, but no padding bytes at the end of the aggregate. Two sets of memory locations overlap if the intersection of their sets of memory locations is non-empty. A memory operation must not affect memory at a memory location not within its set of memory locations.

Memory locations for buffers and images are explicitly allocated in VkDeviceMemory objects, and are implicitly allocated for SPIR-V variables in each shader invocation.

Variables with Workgroup storage class that point to a block-decorated type share a set of memory locations.

Allocation

The values stored in newly allocated memory locations are determined by a SPIR-V variable’s initializer, if present, or else are undefined. At the time an allocation is created there have been no memory operations to any of its memory locations. The initialization is not considered to be a memory operation.

Note
For tessellation control shader output variables, a consequence of initialization not being considered a memory operation is that some implementations may need to
insert a barrier between the initialization of the output variables and any reads of those variables.

**Memory Operation**

For an operation A and memory location M:

- A *reads* M if and only if the data stored in M is an input to A.
- A *writes* M if and only if the data output from A is stored to M.
- A *accesses* M if and only if it either reads or writes (or both) M.

*Note*

A write whose value is the same as what was already in those memory locations is still considered to be a write and has all the same effects.

**Reference**

A *reference* is an object that a particular agent can use to access a set of memory locations. On the host, a reference is a host virtual address. On the device, a reference is:

- The descriptor that a variable is bound to, for variables in Image, Uniform, or StorageBuffer storage classes. If the variable is an array (or array of arrays, etc.) then each element of the array may be a unique reference.
- The address range for a buffer in PhysicalStorageBuffer storage class, where the base of the address range is queried with vkGetBufferDeviceAddress and the length of the range is the size of the buffer.
- A single common reference for all variables with Workgroup storage class that point to a block-decorated type.
- The variable itself for non-block-decorated type variables in Workgroup storage class.
- The variable itself for variables in other storage classes.

Two memory accesses through distinct references may require availability and visibility operations as defined below.

**Program-Order**

A *dynamic instance* of an instruction is defined in SPIR-V (https://registry.khronos.org/spir-v/specs/unified1/SPIRV.html#DynamicInstance) as a way of referring to a particular execution of a static instruction. Program-order is an ordering on dynamic instances of instructions executed by a single shader invocation:

- (Basic block): If instructions A and B are in the same basic block, and A is listed in the module before B, then the n'th dynamic instance of A is program-ordered before the n'th dynamic instance of B.
• (Branch): The dynamic instance of a branch or switch instruction is program-ordered before the dynamic instance of the OpLabel instruction to which it transfers control.

• (Call entry): The dynamic instance of an OpFunctionCall instruction is program-ordered before the dynamic instances of the OpFunctionParameter instructions and the body of the called function.

• (Call exit): The dynamic instance of the instruction following an OpFunctionCall instruction is program-ordered after the dynamic instance of the return instruction executed by the called function.

• (Transitive Closure): If dynamic instance A of any instruction is program-ordered before dynamic instance B of any instruction and B is program-ordered before dynamic instance C of any instruction then A is program-ordered before C.

• (Complete definition): No other dynamic instances are program-ordered.

For instructions executed on the host, the source language defines the program-order relation (e.g. as “sequenced-before”).

**Shader Call Related**

Shader-call-related is an equivalence relation on invocations defined as the symmetric and transitive closure of:

• A is shader-call-related to B if A is created by an invocation repack instruction executed by B.

**Shader Call Order**

Shader-call-order is a partial order on dynamic instances of instructions executed by invocations that are shader-call-related:

• (Program order): If dynamic instance A is program-ordered before B, then A is shader-call-ordered before B.

• (Shader call entry): If A is a dynamic instance of an invocation repack instruction and B is a dynamic instance executed by an invocation that is created by A, then A is shader-call-ordered before B.

• (Shader call exit): If A is a dynamic instance of an invocation repack instruction, B is the next dynamic instance executed by the same invocation, and C is a dynamic instance executed by an invocation that is created by A, then C is shader-call-ordered before B.

• (Transitive closure): If A is shader-call-ordered-before B and B is shader-call-ordered-before C, then A is shader-call-ordered-before C.

• (Complete definition): No other dynamic instances are shader-call-ordered.

**Scope**

Atomic and barrier instructions include scopes which identify sets of shader invocations that must obey the requested ordering and atomicity rules of the operation, as defined below.
The various scopes are described in detail in the Shaders chapter.

**Atomic Operation**

An *atomic operation* on the device is any SPIR-V operation whose name begins with `OpAtomic`. An atomic operation on the host is any operation performed with an std::atomic typed object.

Each atomic operation has a memory *scope* and a *semantics*. Informally, the scope determines which other agents it is atomic with respect to, and the semantics constrains its ordering against other memory accesses. Device atomic operations have explicit scopes and semantics. Each host atomic operation implicitly uses the `CrossDevice` scope, and uses a memory semantics equivalent to a C++ std::memory_order value of relaxed, acquire, release, acq_rel, or seq_cst.

Two atomic operations A and B are *potentially-mutually-ordered* if and only if all of the following are true:

- They access the same set of memory locations.
- They use the same reference.
- A is in the instance of B's memory scope.
- B is in the instance of A's memory scope.
- A and B are not the same operation (irreflexive).

Two atomic operations A and B are *mutually-ordered* if and only if they are potentially-mutually-ordered and any of the following are true:

- A and B are both device operations.
- A and B are both host operations.
- A is a device operation, B is a host operation, and the implementation supports concurrent host- and device-atomics.

**Note**

If two atomic operations are not mutually-ordered, and if their sets of memory locations overlap, then each **must** be synchronized against the other as if they were non-atomic operations.

**Scoped Modification Order**

For a given atomic write A, all atomic writes that are mutually-ordered with A occur in an order known as A's *scoped modification order*. A's scoped modification order relates no other operations.

**Note**

Invocations outside the instance of A's memory scope **may** observe the values at A's set of memory locations becoming visible to it in an order that disagrees with the scoped modification order.
Note

It is valid to have non-atomic operations or atomics in a different scope instance to the same set of memory locations, as long as they are synchronized against each other as if they were non-atomic (if they are not, it is treated as a data race). That means this definition of A’s scoped modification order could include atomic operations that occur much later, after intervening non-atomics. That is a bit non-intuitive, but it helps to keep this definition simple and non-circular.

Memory Semantics

Non-atomic memory operations, by default, may be observed by one agent in a different order than they were written by another agent.

Atomics and some synchronization operations include memory semantics, which are flags that constrain the order in which other memory accesses (including non-atomic memory accesses and availability and visibility operations) performed by the same agent can be observed by other agents, or can observe accesses by other agents.

Device instructions that include semantics are OpAtomic*, OpControlBarrier, OpMemoryBarrier, and OpMemoryNamedBarrier. Host instructions that include semantics are some std::atomic methods and memory fences.

SPIR-V supports the following memory semantics:

- Relaxed: No constraints on order of other memory accesses.
- Acquire: A memory read with this semantic performs an acquire operation. A memory barrier with this semantic is an acquire barrier.
- Release: A memory write with this semantic performs a release operation. A memory barrier with this semantic is a release barrier.
- AcquireRelease: A memory read-modify-write operation with this semantic performs both an acquire operation and a release operation, and inherits the limitations on ordering from both of those operations. A memory barrier with this semantic is both a release and acquire barrier.

Note

SPIR-V does not support “consume” semantics on the device.

The memory semantics operand also includes storage class semantics which indicate which storage classes are constrained by the synchronization. SPIR-V storage class semantics include:

- UniformMemory
- WorkgroupMemory
- ImageMemory
- OutputMemory

Each SPIR-V memory operation accesses a single storage class. Semantics in synchronization
operations can include a combination of storage classes.

The UniformMemory storage class semantic applies to accesses to memory in the PhysicalStorageBuffer, ShaderRecordBufferKHR, Uniform and StorageBuffer storage classes. The WorkgroupMemory storage class semantic applies to accesses to memory in the Workgroup storage class. The ImageMemory storage class semantic applies to accesses to memory in the Image storage class. The OutputMemory storage class semantic applies to accesses to memory in the Output storage class.

**Note**
Informally, these constraints limit how memory operations can be reordered, and these limits apply not only to the order of accesses as performed in the agent that executes the instruction, but also to the order the effects of writes become visible to all other agents within the same instance of the instruction’s memory scope.

**Note**
Release and acquire operations in different threads can act as synchronization operations, to guarantee that writes that happened before the release are visible after the acquire. (This is not a formal definition, just an Informative forward reference.)

**Note**
The OutputMemory storage class semantic is only useful in tessellation control shaders, which is the only execution model where output variables are shared between invocations.

The memory semantics operand can also include availability and visibility flags, which apply availability and visibility operations as described in availability and visibility. The availability/visibility flags are:

- **MakeAvailable**: Semantics must be Release or AcquireRelease. Performs an availability operation before the release operation or barrier.

- **MakeVisible**: Semantics must be Acquire or AcquireRelease. Performs a visibility operation after the acquire operation or barrier.

The specifics of these operations are defined in Availability and Visibility Semantics.

Host atomic operations may support a different list of memory semantics and synchronization operations, depending on the host architecture and source language.

**Release Sequence**

After an atomic operation A performs a release operation on a set of memory locations M, the release sequence headed by A is the longest continuous subsequence of A's scoped modification order that consists of:

- the atomic operation A as its first element
atomic read-modify-write operations on M by any agent

**Note**
The atomics in the last bullet must be mutually-ordered with A by virtue of being in A's scoped modification order.

**Note**
This intentionally omits “atomic writes to M performed by the same agent that performed A”, which is present in the corresponding C++ definition.

**Synchronizes-With**

*Synchronizes-with* is a relation between operations, where each operation is either an atomic operation or a memory barrier (aka fence on the host).

If A and B are atomic operations, then A synchronizes-with B if and only if all of the following are true:

- A performs a release operation
- B performs an acquire operation
- A and B are mutually-ordered
- B reads a value written by A or by an operation in the release sequence headed by A

*OpControlBarrier, OpMemoryBarrier, and OpMemoryNamedBarrier* are *memory barrier* instructions in SPIR-V.

If A is a release barrier and B is an atomic operation that performs an acquire operation, then A synchronizes-with B if and only if all of the following are true:

- there exists an atomic write X (with any memory semantics)
- A is program-ordered before X
- X and B are mutually-ordered
- B reads a value written by X or by an operation in the release sequence headed by X
  - If X is relaxed, it is still considered to head a hypothetical release sequence for this rule
  - A and B are in the instance of each other's memory scopes
  - X's storage class is in A's semantics.

If A is an atomic operation that performs a release operation and B is an acquire barrier, then A synchronizes-with B if and only if all of the following are true:

- there exists an atomic read X (with any memory semantics)
- X is program-ordered before B
- X and A are mutually-ordered
• X reads a value written by A or by an operation in the release sequence headed by A
• A and B are in the instance of each other’s memory scopes
• X’s storage class is in B’s semantics.

If A is a release barrier and B is an acquire barrier, then A synchronizes-with B if all of the following are true:

• there exists an atomic write X (with any memory semantics)
• A is program-ordered before X
• there exists an atomic read Y (with any memory semantics)
• Y is program-ordered before B
• X and Y are mutually-ordered
• Y reads the value written by X or by an operation in the release sequence headed by X
  ◦ If X is relaxed, it is still considered to head a hypothetical release sequence for this rule
• A and B are in the instance of each other’s memory scopes
• X’s and Y’s storage class is in A’s and B’s semantics.
  ◦ NOTE: X and Y must have the same storage class, because they are mutually ordered.

If A is a release barrier, B is an acquire barrier, and C is a control barrier (where A can equal C, and B can equal C), then A synchronizes-with B if all of the following are true:

• A is program-ordered before (or equals) C
• C is program-ordered before (or equals) B
• A and B are in the instance of each other’s memory scopes
• A and B are in the instance of C’s execution scope

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>This is similar to the barrier-barrier synchronization above, but with a control barrier filling the role of the relaxed atomics.</td>
</tr>
</tbody>
</table>

Let F be an ordering of fragment shader invocations, such that invocation F₁ is ordered before invocation F₂ if and only if F₁ and F₂ overlap as described in Fragment Shader Interlock and F₁ executes the interlocked code before F₂.

If A is an OpEndInvocationInterlockEXT instruction and B is an OpBeginInvocationInterlockEXT instruction, then A synchronizes-with B if the agent that executes A is ordered before the agent that executes B in F. A and B are both considered to have FragmentInterlock memory scope and semantics of UniformMemory and ImageMemory, and A is considered to have Release semantics and B is considered to have Acquire semantics.

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>OpBeginInvocationInterlockEXT and OpBeginInvocationInterlockEXT do not perform implicit availability or visibility operations. Usually, shaders using fragment</td>
</tr>
</tbody>
</table>
Shader interlock will declare the relevant resources as coherent to get implicit per-instruction availability and visibility operations.

If A is a release barrier and B is an acquire barrier, then A synchronizes-with B if all of the following are true:

- A is shader-call-ordered-before B
- A and B are in the instance of each other’s memory scopes

No other release and acquire barriers synchronize-with each other.

**System-Synchronizes-With**

*System-synchronizes-with* is a relation between arbitrary operations on the device or host. Certain operations system-synchronize-with each other, which informally means the first operation occurs before the second and that the synchronization is performed without using application-visible memory accesses.

If there is an execution dependency between two operations A and B, then the operation in the first synchronization scope system-synchronizes-with the operation in the second synchronization scope.

**Note**

This covers all Vulkan synchronization primitives, including device operations executing before a synchronization primitive is signaled, wait operations happening before subsequent device operations, signal operations happening before host operations that wait on them, and host operations happening before `vkQueueSubmit`. The list is spread throughout the synchronization chapter, and is not repeated here.

System-synchronizes-with implicitly includes all storage class semantics and has CrossDevice scope.

If A system-synchronizes-with B, we also say A is *system-synchronized-before* B and B is *system-synchronized-after* A.

**Private vs. Non-Private**

By default, non-atomic memory operations are treated as private, meaning such a memory operation is not intended to be used for communication with other agents. Memory operations with the NonPrivatePointer/NonPrivateTexel bit set are treated as non-private, and are intended to be used for communication with other agents.

More precisely, for private memory operations to be Location-Ordered between distinct agents requires using system-synchronizes-with rather than shader-based synchronization. Private memory operations still obey program-order.

Atomic operations are always considered non-private.
Inter-Thread-Happens-Before

Let SC be a non-empty set of storage class semantics. Then (using template syntax) operation A \( \text{happens-before}^{<SC>} \) operation B if and only if any of the following is true:

- A system-synchronizes-with B
- A synchronizes-with B, and both A and B have all of SC in their semantics
- A is an operation on memory in a storage class in SC or that has all of SC in its semantics, B is a release barrier or release atomic with all of SC in its semantics, and A is program-ordered before B
- A is an acquire barrier or acquire atomic with all of SC in its semantics, B is an operation on memory in a storage class in SC or that has all of SC in its semantics, and A is program-ordered before B
- A and B are both host operations and A \( \text{happens-before}^{<SC>} \) B as defined in the host language specification
- A \( \text{happens-before}^{<SC>} \) some X and X \( \text{happens-before}^{<SC>} \) B

Happens-Before

Operation A \( \text{happens-before} \) operation B if and only if any of the following is true:

- A is program-ordered before B
- A \( \text{happens-before}^{<SC>} \) B for some set of storage classes SC

\( \text{Happens-after} \) is defined similarly.

Note

Unlike C++, happens-before is not always sufficient for a write to be visible to a read. Additional \textit{availability} and \textit{visibility} operations may be required for writes to be \textit{visible-to} other memory accesses.

Note

Happens-before is not transitive, but each of program-order and inter-thread-happens-before\( ^{<SC>} \) are transitive. These can be thought of as covering the “single-threaded” case and the “multi-threaded” case, and it is not necessary (and not valid) to form chains between the two.

Availability and Visibility

\textit{Availability} and \textit{visibility} are states of a write operation, which (informally) track how far the write has permeated the system, i.e. which agents and references are able to observe the write. Availability state is per \textit{memory domain}. Visibility state is per (agent,reference) pair. Availability and visibility states are per-memory location for each write.
Memory domains are named according to the agents whose memory accesses use the domain. Domains used by shader invocations are organized hierarchically into multiple smaller memory domains which correspond to the different scopes. Each memory domain is considered the dual of a scope, and vice versa. The memory domains defined in Vulkan include:

- **host** - accessible by host agents
- **device** - accessible by all device agents for a particular device
- **shader** - accessible by shader agents for a particular device, corresponding to the Device scope
- **queue family instance** - accessible by shader agents in a single queue family, corresponding to the QueueFamily scope.
- **fragment interlock instance** - accessible by fragment shader agents that overlap, corresponding to the FragmentInterlock scope.
- **shader call instance** - accessible by shader agents that are shader-call-related, corresponding to the ShaderCallKHR scope.
- **workgroup instance** - accessible by shader agents in the same workgroup, corresponding to the Workgroup scope.
- **subgroup instance** - accessible by shader agents in the same subgroup, corresponding to the Subgroup scope.

The memory domains are nested in the order listed above, except for shader call instance domain, with memory domains later in the list nested in the domains earlier in the list. The shader call instance domain is at an implementation-dependent location in the list, and is nested according to that location. The shader call instance domain is not broader than the queue family instance domain.

---

**Note**

Memory domains do not correspond to storage classes or device-local and host-local VkDeviceMemory allocations, rather they indicate whether a write can be made visible only to agents in the same subgroup, same workgroup, overlapping fragment shader invocation, shader-call-related ray tracing invocation, in any shader invocation, or anywhere on the device, or host. The shader, queue family instance, fragment interlock instance, shader call instance, workgroup instance, and subgroup instance domains are only used for shader-based availability/visibility operations, in other cases writes can be made available from/visible to the shader via the device domain.

*Availability operations, visibility operations, and memory domain operations* alter the state of the write operations that happen-before them, and which are included in their source scope to be available or visible to their destination scope.

- For an availability operation, the source scope is a set of (agent, reference, memory location) tuples, and the destination scope is a set of memory domains.
- For a memory domain operation, the source scope is a memory domain and the destination scope is a memory domain.
- For a visibility operation, the source scope is a set of memory domains and the destination
scope is a set of (agent,reference,memory location) tuples.

How the scopes are determined depends on the specific operation. Availability and memory domain operations expand the set of memory domains to which the write is available. Visibility operations expand the set of (agent,reference,memory location) tuples to which the write is visible.

Recall that availability and visibility states are per-memory location, and let W be a write operation to one or more locations performed by agent A via reference R. Let L be one of the locations written. (W,L) (the write W to L), is initially not available to any memory domain and only visible to (A,R,L). An availability operation AV that happens-after W and that includes (A,R,L) in its source scope makes (W,L) available to the memory domains in its destination scope.

A memory domain operation DOM that happens-after AV and for which (W,L) is available in the source scope makes (W,L) available in the destination memory domain.

A visibility operation VIS that happens-after AV (or DOM) and for which (W,L) is available in any domain in the source scope makes (W,L) visible to all (agent,reference,L) tuples included in its destination scope.

If write W₂ happens-after W, and their sets of memory locations overlap, then W will not be available/visible to all agents/references for those memory locations that overlap (and future AV/DOM/VIS ops cannot revive W’s write to those locations).

Availability, memory domain, and visibility operations are treated like other non-atomic memory accesses for the purpose of memory semantics, meaning they can be ordered by release-acquire sequences or memory barriers.

An availability chain is a sequence of availability operations to increasingly broad memory domains, where element N+1 of the chain is performed in the dual scope instance of the destination memory domain of element N and element N happens-before element N+1. An example is an availability operation with destination scope of the workgroup instance domain that happens-before an availability operation to the shader domain performed by an invocation in the same workgroup. An availability chain AVC that happens-after W and that includes (A,R,L) in the source scope makes (W,L) available to the memory domains in its final destination scope. An availability chain with a single element is just the availability operation.

Similarly, a visibility chain is a sequence of visibility operations from increasingly narrow memory domains, where element N of the chain is performed in the dual scope instance of the source memory domain of element N+1 and element N happens-before element N+1. An example is a visibility operation with source scope of the shader domain that happens-before a visibility operation with source scope of the workgroup instance domain performed by an invocation in the same workgroup. A visibility chain VISC that happens-after AVC (or DOM) and for which (W,L) is available in any domain in the source scope makes (W,L) visible to all (agent,reference,L) tuples included in its final destination scope. A visibility chain with a single element is just the visibility operation.

**Availability, Visibility, and Domain Operations**

The following operations generate availability, visibility, and domain operations. When multiple
availability/visibility/domain operations are described, they are system-synchronized with each other in the order listed.

An operation that performs a **memory dependency** generates:

- If the source access mask includes `VK_ACCESS_HOST_WRITE_BIT`, then the dependency includes a memory domain operation from host domain to device domain.
- An availability operation with source scope of all writes in the first **access scope** of the dependency and a destination scope of the device domain.
- A visibility operation with source scope of the device domain and destination scope of the second access scope of the dependency.
- If the destination access mask includes `VK_ACCESS_HOST_READ_BIT` or `VK_ACCESS_HOST_WRITE_BIT`, then the dependency includes a memory domain operation from device domain to host domain.

`vkFlushMappedMemoryRanges` performs an availability operation, with a source scope of `(agents,references) = (all host threads, all mapped memory ranges passed to the command)`, and destination scope of the host domain.

`vkInvalidateMappedMemoryRanges` performs a visibility operation, with a source scope of the host domain and a destination scope of `(agents,references) = (all host threads, all mapped memory ranges passed to the command)`.

`vkQueueSubmit` performs a memory domain operation from host to device, and a visibility operation with source scope of the device domain and destination scope of all agents and references on the device.

**Availability and Visibility Semantics**

A memory barrier or atomic operation via agent A that includes MakeAvailable in its semantics performs an availability operation whose source scope includes agent A and all references in the storage classes in that instruction's storage class semantics, and all memory locations, and whose destination scope is a set of memory domains selected as specified below. The implicit availability operation is program-ordered between the barrier or atomic and all other operations program-ordered before the barrier or atomic.

A memory barrier or atomic operation via agent A that includes MakeVisible in its semantics performs a visibility operation whose source scope is a set of memory domains selected as specified below, and whose destination scope includes agent A and all references in the storage classes in that instruction's storage class semantics, and all memory locations. The implicit visibility operation is program-ordered between the barrier or atomic and all other operations program-ordered after the barrier or atomic.

The memory domains are selected based on the memory scope of the instruction as follows:

- **Device** scope uses the shader domain
- **QueueFamily** scope uses the queue family instance domain
- **FragmentInterlock** scope uses the fragment interlock instance domain
• **ShaderCallKHR** scope uses the shader call instance domain
• **Workgroup** scope uses the workgroup instance domain
• **Subgroup** uses the subgroup instance domain
• **Invocation** perform no availability/visibility operations.

When an availability operation performed by an agent A includes a memory domain D in its destination scope, where D corresponds to scope instance S, it also includes the memory domains that correspond to each smaller scope instance S' that is a subset of S and that includes A. Similarly for visibility operations.

### Per-Instruction Availability and Visibility Semantics

A memory write instruction that includes MakePointerAvailable, or an image write instruction that includes MakeTexelAvailable, performs an availability operation whose source scope includes the agent and reference used to perform the write and the memory locations written by the instruction, and whose destination scope is a set of memory domains selected by the Scope operand specified in **Availability and Visibility Semantics**. The implicit availability operation is program-ordered between the write and all other operations program-ordered after the write.

A memory read instruction that includes MakePointerVisible, or an image read instruction that includes MakeTexelVisible, performs a visibility operation whose source scope is a set of memory domains selected by the Scope operand as specified in **Availability and Visibility Semantics**, and whose destination scope includes the agent and reference used to perform the read and the memory locations read by the instruction. The implicit visibility operation is program-ordered between read and all other operations program-ordered before the read.

**Note**

Although reads with per-instruction visibility only perform visibility ops from the shader or fragment interlock instance or shader call instance or workgroup instance or subgroup instance domain, they will also see writes that were made visible via the device domain, i.e. those writes previously performed by non-shader agents and made visible via API commands.

**Note**

It is expected that all invocations in a subgroup execute on the same processor with the same path to memory, and thus availability and visibility operations with subgroup scope can be expected to be “free”.

### Location-Ordered

Let X and Y be memory accesses to overlapping sets of memory locations M, where X \( \neq \) Y. Let \((A_X,R_X)\) be the agent and reference used for X, and \((A_Y,R_Y)\) be the agent and reference used for Y. For now, let “\( \rightarrow \)” denote happens-before and “\( \rightarrow_{rcpo} \)” denote the reflexive closure of program-ordered before.

If \(D_1\) and \(D_2\) are different memory domains, then let \(DOM(D_1,D_2)\) be a memory domain operation from \(D_1\) to \(D_2\). Otherwise, let \(DOM(D,D)\) be a placeholder such that \(X \rightarrow DOM(D,D) \rightarrow Y\) if and only if
X \rightarrow Y.

X is location-ordered before Y for a location L in M if and only if any of the following is true:

- \( A_X = A_Y \) and \( R_X = R_Y \) and \( X \rightarrow Y \)
  - \text{NOTE: this case means no availability/visibility ops are required when it is the same (agent,reference).}
- X is a read, both X and Y are non-private, and \( X \rightarrow Y \)
- X is a read, and X (transitively) system-synchronizes with Y
- If \( R_X = R_Y \) and \( A_X \) and \( A_Y \) access a common memory domain D (e.g. are in the same workgroup instance if D is the workgroup instance domain), and both X and Y are non-private:
  - X is a write, Y is a write, \( AVC(A_X,R_X,D,L) \) is an availability chain making (X,L) available to domain D, and \( X \rightarrow \text{rcpo} AVC(A_X,R_X,D,L) \rightarrow Y \)
  - X is a write, Y is a read, \( AVC(A_X,R_X,D,L) \) is an availability chain making (X,L) available to domain D, \( VISC(A_Y,R_Y,D,L) \) is a visibility chain making writes to L available in domain D visible to Y, and \( X \rightarrow \text{rcpo} AVC(A_X,R_X,D,L) \rightarrow VISC(A_Y,R_Y,D,L) \rightarrow \text{rcpo} Y \)
  - If \( \text{VkPhysicalDeviceVulkanMemoryModelFeatures} ::\text{vulkanMemoryModelAvailabilityVisibilityChains} \) is \( \text{VK_FALSE} \), then \( AVC \) and \( VISC \) must each only have a single element in the chain, in each sub-bullet above.
- Let \( D_X \) and \( D_Y \) each be either the device domain or the host domain, depending on whether \( A_X \) and \( A_Y \) execute on the device or host:
  - X is a write and Y is a write, and \( X \rightarrow AV(A_X,R_X,D_X,L) \rightarrow \text{DOM}(D_X,D_Y) \rightarrow Y \)
  - X is a write and Y is a read, and \( X \rightarrow AV(A_X,R_X,D_X,L) \rightarrow \text{DOM}(D_X,D_Y) \rightarrow \text{VIS}(A_Y,R_Y,D_Y,L) \rightarrow Y \)

\[ \text{Note} \]

The final bullet (synchronization through device/host domain) requires API-level synchronization operations, since the device/host domains are not accessible via shader instructions. And “device domain” is not to be confused with “device scope”, which synchronizes through the “shader domain”.

\[ \text{Data Race} \]

Let X and Y be operations that access overlapping sets of memory locations M, where X \(!=\ Y\), and at least one of X and Y is a write, and X and Y are not mutually-ordered atomic operations. If there does not exist a location-ordered relation between X and Y for each location in M, then there is a data race.

Applications must ensure that no data races occur during the execution of their application.

\[ \text{Note} \]

Data races can only occur due to instructions that are actually executed. For example, an instruction skipped due to control flow must not contribute to a data race.
Visible-To

Let X be a write and Y be a read whose sets of memory locations overlap, and let M be the set of memory locations that overlap. Let M₂ be a non-empty subset of M. Then X is visible-to Y for memory locations M₂ if and only if all of the following are true:

• X is location-ordered before Y for each location L in M₂.
• There does not exist another write Z to any location L in M₂ such that X is location-ordered before Z for location L and Z is location-ordered before Y for location L.

If X is visible-to Y, then Y reads the value written by X for locations M₂.

Note

It is possible for there to be a write between X and Y that overwrites a subset of the memory locations, but the remaining memory locations (M₂) will still be visible-to Y.

Acyclicity

Reads-from is a relation between operations, where the first operation is a write, the second operation is a read, and the second operation reads the value written by the first operation. From-reads is a relation between operations, where the first operation is a read, the second operation is a write, and the first operation reads a value written earlier than the second operation in the second operation’s scoped modification order (or the first operation reads from the initial value, and the second operation is any write to the same locations).

Then the implementation must guarantee that no cycles exist in the union of the following relations:

• location-ordered
• scoped modification order (over all atomic writes)
• reads-from
• from-reads

Note

This is a “consistency” axiom, which informally guarantees that sequences of operations cannot violate causality.

Scoped Modification Order Coherence

Let A and B be mutually-ordered atomic operations, where A is location-ordered before B. Then the following rules are a consequence of acyclicity:

• If A and B are both reads and A does not read the initial value, then the write that A takes its value from must be earlier in its own scoped modification order than (or the same as) the write that B takes its value from (no cycles between location-order, reads-from, and from-reads).
• If A is a read and B is a write and A does not read the initial value, then A must take its value from a write earlier than B in B’s scoped modification order (no cycles between location-order, scope modification order, and reads-from).

• If A is a write and B is a read, then B must take its value from A or a write later than A in A’s scoped modification order (no cycles between location-order, scoped modification order, and from-reads).

• If A and B are both writes, then A must be earlier than B in A’s scoped modification order (no cycles between location-order and scoped modification order).

• If A is a write and B is a read-modify-write and B reads the value written by A, then B comes immediately after A in A’s scoped modification order (no cycles between scoped modification order and from-reads).

Shader I/O

If a shader invocation A in a shader stage other than Vertex performs a memory read operation X from an object in storage class CallableDataKHR, IncomingCallableDataKHR, RayPayloadKHR, HitAttributeKHR, IncomingRayPayloadKHR, or Input, then X is system-synchronized-after all writes to the corresponding CallableDataKHR, IncomingCallableDataKHR, RayPayloadKHR, HitAttributeKHR, IncomingRayPayloadKHR, or Output storage variable(s) in the shader invocation(s) that contribute to generating invocation A, and those writes are all visible-to X.

Note

It is not necessary for the upstream shader invocations to have completed execution, they only need to have generated the output that is being read.

Deallocation

A call to vkFreeMemory must happen-after all memory operations on all memory locations in that VkDeviceMemory object.

Note

Normally, device memory operations in a given queue are synchronized with vkFreeMemory by having a host thread wait on a fence signaled by that queue, and the wait happens-before the call to vkFreeMemory on the host.

The deallocation of SPIR-V variables is managed by the system and happens-after all operations on those variables.

Descriptions (Informative)

This subsection offers more easily understandable consequences of the memory model for app/compiler developers.

Let SC be the storage class(es) specified by a release or acquire operation or barrier.
• An atomic write with release semantics must not be reordered against any read or write to SC that is program-ordered before it (regardless of the storage class the atomic is in).

• An atomic read with acquire semantics must not be reordered against any read or write to SC that is program-ordered after it (regardless of the storage class the atomic is in).

• Any write to SC program-ordered after a release barrier must not be reordered against any read or write to SC program-ordered before that barrier.

• Any read from SC program-ordered before an acquire barrier must not be reordered against any read or write to SC program-ordered after the barrier.

A control barrier (even if it has no memory semantics) must not be reordered against any memory barriers.

This memory model allows memory accesses with and without availability and visibility operations, as well as atomic operations, all to be performed on the same memory location. This is critical to allow it to reason about memory that is reused in multiple ways, e.g. across the lifetime of different shader invocations or draw calls. While GLSL (and legacy SPIR-V) applies the “coherent” decoration to variables (for historical reasons), this model treats each memory access instruction as having optional implicit availability/visibility operations. GLSL to SPIR-V compilers should map all (non-atomic) operations on a coherent variable to Make{Pointer,Texel}{Available}{Visible} flags in this model.

Atomic operations implicitly have availability/visibility operations, and the scope of those operations is taken from the atomic operation’s scope.

### Tessellation Output Ordering

For SPIR-V that uses the Vulkan Memory Model, the `OutputMemory` storage class is used to synchronize accesses to tessellation control output variables. For legacy SPIR-V that does not enable the Vulkan Memory Model via `OpMemoryModel`, tessellation outputs can be ordered using a control barrier with no particular memory scope or semantics, as defined below.

Let X and Y be memory operations performed by shader invocations $A_X$ and $A_Y$. Operation X is **tessellation-output-ordered** before operation Y if and only if all of the following are true:

- There is a dynamic instance of an `OpControlBarrier` instruction C such that X is program-ordered before C in $A_X$ and C is program-ordered before Y in $A_Y$.
- $A_X$ and $A_Y$ are in the same instance of C’s execution scope.

If shader invocations $A_X$ and $A_Y$ in the **TessellationControl** execution model execute memory operations X and Y, respectively, on the `Output` storage class, and X is tessellation-output-ordered before Y with a scope of `Workgroup`, then X is location-ordered before Y, and if X is a write and Y is a read then X is visible-to Y.

### Cooperative Matrix Memory Access

For each dynamic instance of a cooperative matrix load or store instruction (`OpCooperativeMatrixLoadNV` or `OpCooperativeMatrixStoreNV`), a single implementation-dependent
invocation within the instance of the matrix's scope performs a non-atomic load or store (respectively) to each memory location that is defined to be accessed by the instruction.
Appendix C: Compressed Image Formats

The compressed texture formats used by Vulkan are described in the specifically identified sections of the Khronos Data Format Specification, version 1.3.

Unless otherwise described, the quantities encoded in these compressed formats are treated as normalized, unsigned values.

Those formats listed as sRGB-encoded have in-memory representations of R, G and B components which are nonlinearly-encoded as R', G', and B'; any alpha component is unchanged. As part of filtering, the nonlinear R', G', and B' values are converted to linear R, G, and B components; any alpha component is unchanged. The conversion between linear and nonlinear encoding is performed as described in the “KHR_DFTRANSFER_SRGB” section of the Khronos Data Format Specification.
Block-Compressed Image Formats

BC1, BC2 and BC3 formats are described in “S3TC Compressed Texture Image Formats” chapter of the Khronos Data Format Specification. BC4 and BC5 are described in the “RGTC Compressed Texture Image Formats” chapter. BC6H and BC7 are described in the “BPTC Compressed Texture Image Formats” chapter.

<tr>
<td>VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK</td>
<td>12 × 12</td>
<td>HDR</td>
</tr>
</tbody>
</table>

ASTC textures containing HDR block encodings **should** be passed to the API using an ASTC SFLOAT texture format.

**Note**

An HDR block in a texture passed using a LDR UNORM format will return the appropriate ASTC error color if the implementation supports only the ASTC LDR profile, but may result in either the error color or a decompressed HDR color if the implementation supports HDR decoding.

### ASTC Decode Mode

If the VK_EXT_astc_decode_mode extension is enabled, the decode mode is determined as follows:

**Table 96. Mapping of Vulkan ASTC decoding format to ASTC decoding modes**

<table>
<thead>
<tr>
<th>VkFormat</th>
<th>Decoding mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>VK_FORMAT_R16G16B16A16_SFLOAT</td>
<td>decode_float16</td>
</tr>
<tr>
<td>VK_FORMAT_R8G8B8A8_UNORM</td>
<td>decode_unorm8</td>
</tr>
<tr>
<td>VK_FORMAT_E5B9G9R9_UFLOAT_PACK32</td>
<td>decode_rgb9e5</td>
</tr>
</tbody>
</table>

Otherwise, the ASTC decode mode is decode_float16.
Note that an implementation **may** use HDR mode when linear LDR mode is requested unless the decode mode is decode_unorm8.
**PVRCRT Compressed Image Formats**

PVRCRT formats are described in the “PVRCRT Compressed Texture Image Formats” chapter of the Khronos Data Format Specification.

*Table 97. Mapping of Vulkan PVRCRT formats to descriptions*

<td>Yes</td>
</tr>
<tr>
<td>VK_FORMAT_PVRTC2_4BPP_SRGB_BLOCK_IMG</td>
<td>4 × 4</td>
<td>Yes</td>
</tr>
</tbody>
</table>
Appendix D: Core Revisions (Informative)

New minor versions of the Vulkan API are defined periodically by the Khronos Vulkan Working Group. These consist of some amount of additional functionality added to the core API, potentially including both new functionality and functionality promoted from extensions.

It is possible to build the specification for earlier versions, but to aid readability of the latest versions, this appendix gives an overview of the changes as compared to earlier versions.

Version 1.3

Vulkan Version 1.3 promoted a number of key extensions into the core API:

- VK_KHR_copy_commands2
- VK_KHR_dynamic_rendering
- VK_KHR_format_feature_flags2
- VK_KHR_maintenance4
- VK_KHR_shader_integer_dot_product
- VK_KHR_shader_non_semantic_info
- VK_KHR_shader_terminate_invocation
- VK_KHR_synchronization2
- VK_KHR_zero_initialize_workgroup_memory
- VK_EXT_4444_formats
- VK_EXT_extended_dynamic_state
- VK_EXT_extended_dynamic_state2
- VK_EXT_image_robustness
- VK_EXT_inline_uniform_block
- VK_EXT_pipeline_creation_cache_control
- VK_EXT_pipeline_creation_feedback
- VK_EXT_private_data
- VK_EXT_shader_demote_to_helper_invocation
- VK_EXT_shader_size_control
- VK_EXT_texel_buffer_alignment
• VK_EXT_texture_compression_astc_hdr

• VK_EXT_tooling_info

• VK_EXT_ycbcr_2plane_444_formats

All differences in behavior between these extensions and the corresponding Vulkan 1.3 functionality are summarized below.

**Differences Relative to VK_EXT_4444_formats**

If the VK_EXT_4444_formats extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDevice4444FormatsFeaturesEXT structure.

**Differences Relative to VK_EXT_extendedDynamicState**

All dynamic state enumerants and entry points defined by VK_EXT_extendedDynamicState are required in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceExtendedDynamicStateFeaturesEXT structure.

**Differences Relative to VK_EXT_extendedDynamicState2**

The optional dynamic state enumerants and entry points defined by VK_EXT_extendedDynamicState2 for patch control points and logic op are not promoted in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceExtendedDynamicState2FeaturesEXT structure.

**Differences Relative to VK_EXT_texelBufferAlignment**

The more specific alignment requirements defined by VkPhysicalDeviceTexelBufferAlignmentProperties are required in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT structure. The texelBufferAlignment feature is enabled if using a Vulkan 1.3 instance.

**Differences Relative to VK_EXT_texture_compression_astc_hdr**

If the VK_EXT_texture_compression_astc_hdr extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. The textureCompressionASTC_HDR member of VkPhysicalDeviceVulkan13Features indicates whether a Vulkan 1.3 implementation supports these formats.

**Differences Relative to VK_EXT_ycbcr_2plane_444_formats**

If the VK_EXT_ycbcr_2plane_444_formats extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure.
Additional Vulkan 1.3 Feature Support

In addition to the promoted extensions described above, Vulkan 1.3 added required support for:

- SPIR-V version 1.6
  - SPIR-V 1.6 deprecates (but does not remove) the WorkgroupSize decoration.
- The bufferDeviceAddress feature which indicates support for accessing memory in shaders as storage buffers via vkGetBufferDeviceAddress.
- The vulkanMemoryModel and vulkanMemoryModelDeviceScope features, which indicate support for the corresponding Vulkan Memory Model capabilities.
- The maxInlineUniformTotalSize limit is added to provide the total size of all inline uniform block bindings in a pipeline layout.

New Macros

- VK_API_VERSION_1_3

New Base Types

- VkFlags64

New Object Types

- VkPrivateDataSlot

New Commands

- vkCmdBeginRendering
- vkCmdBindVertexBuffer2
- vkCmdBlitImage2
- vkCmdCopyBuffer2
- vkCmdCopyBufferToImage2
- vkCmdCopyImage2
- vkCmdCopyImageToBuffer2
- vkCmdEndRendering
- vkCmdPipelineBarrier2
- vkCmdResetEvent2
- vkCmdResolveImage2
- vkCmdSetCullMode
- vkCmdSetDepthBiasEnable
- vkCmdSetDepthBoundsTestEnable
- vkCmdSetDepthCompareOp
- vkCmdSetDepthCompareOp
- vkCmdSetDepthTestEnable
- vkCmdSetDepthWriteEnable
- vkCmdSetEvent2
- vkCmdSetFrontFace
- vkCmdSetPrimitiveRestartEnable
- vkCmdSetPrimitiveTopology
- vkCmdSetRasterizerDiscardEnable
- vkCmdSetScissorWithCount
- vkCmdSetStencilOp
- vkCmdSetStencilTestEnable
- vkCmdSetViewportWithCount
- vkCmdWaitEvents2
- vkCmdWriteTimestamp2
- vkCreatePrivateDataSlot
- vkDestroyPrivateDataSlot
- vkGetDeviceBufferMemoryRequirements
- vkGetDeviceImageMemoryRequirements
- vkGetDeviceImageSparseMemoryRequirements
- vkGetPhysicalDeviceToolProperties
- vkGetPrivateData
- vkQueueSubmit2
- vkSetPrivateData

**New Structures**

- VkBlitImageInfo2
- VkBufferCopy2
- VkBufferImageCopy2
- VkBufferMemoryBarrier2
- VkCommandBufferSubmitInfo
- VkCopyBufferInfo2
- VkCopyBufferToImageInfo2

**Version 1.2**

Vulkan Version 1.2 **promoted** a number of key extensions into the core API:

- VK_KHR_8bit_storage
- VK_KHR_buffer_device_address
- VK_KHR_create_renderpass2
- VK_KHR_depth_stencil_resolve
- VK_KHR_draw_indirect_count
- VK_KHR_driver_properties
- VK_KHR_image_format_list
- VK_KHR_imageless_framebuffer
- VK_KHR_sampler_mirror_clamp_to_edge
- VK_KHR_separate_depth_stencil_layouts
All differences in behavior between these extensions and the corresponding Vulkan 1.2 functionality are summarized below.

**Differences Relative to VK_KHR_8bit_storage**

If the `VK_KHR_8bit_storage` extension is not supported, support for the SPIR-V `storageBuffer8BitAccess` capability in shader modules is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::storageBuffer8BitAccess` when queried via `vkGetPhysicalDeviceFeatures2`.

**Differences Relative to VK_KHR_draw_indirect_count**

If the `VK_KHR_draw_indirect_count` extension is not supported, support for the entry points `vkCmdDrawIndirectCount` and `vkCmdDrawIndexedIndirectCount` is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::drawIndirectCount` when queried via `vkGetPhysicalDeviceFeatures2`.

**Differences Relative to VK_KHR_sampler_mirror_clamp_to_edge**

If the `VK_KHR_sampler_mirror_clamp_to_edge` extension is not supported, support for the `VkSamplerAddressMode VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::samplerMirrorClampToEdge` when queried via `vkGetPhysicalDeviceFeatures2`.
Differences Relative to VK_EXT_descriptor_indexing

If the VK_EXT_descriptor_indexing extension is not supported, support for the descriptorIndexing feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::descriptorIndexing when queried via vkGetPhysicalDeviceFeatures2.

Differences Relative to VK_EXT_scalar_block_layout

If the VK_EXT_scalar_block_layout extension is not supported, support for the scalarBlockLayout feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::scalarBlockLayout when queried via vkGetPhysicalDeviceFeatures2.

Differences Relative to VK_EXT_shader_viewport_index_layer

The ShaderViewportIndexLayerEXT SPIR-V capability was replaced with the ShaderViewportIndex and ShaderLayer capabilities. Declaring both is equivalent to declaring ShaderViewportIndexLayerEXT. If the VK_EXT_shader_viewport_index_layer extension is not supported, support for the ShaderViewportIndexLayerEXT SPIR-V capability is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::shaderOutputViewportIndex and VkPhysicalDeviceVulkan12Features::shaderOutputLayer when queried via vkGetPhysicalDeviceFeatures2.

Differences Relative to VK_KHR_buffer_device_address

If the VK_KHR_buffer_device_address extension is not supported, support for the bufferDeviceAddress feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::bufferDeviceAddress when queried via vkGetPhysicalDeviceFeatures2.

Differences Relative to VK_KHR_shader_atomic_int64

If the VK_KHR_shader_atomic_int64 extension is not supported, support for the shaderBufferInt64Atomics feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::shaderBufferInt64Atomics when queried via vkGetPhysicalDeviceFeatures2.

Differences Relative to VK_KHR_shader_float16_int8

If the VK_KHR_shader_float16_int8 extension is not supported, support for the shaderFloat16 and shaderInt8 features is optional. Support for these features are defined by VkPhysicalDeviceVulkan12Features::shaderFloat16 and VkPhysicalDeviceVulkan12Features::shaderInt8 when queried via vkGetPhysicalDeviceFeatures2.

Differences Relative to VK_KHR_vulkan_memory_model

If the VK_KHR_vulkan_memory_model extension is not supported, support for the vulkanMemoryModel feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::vulkanMemoryModel when queried via vkGetPhysicalDeviceFeatures2.
Additional Vulkan 1.2 Feature Support

In addition to the promoted extensions described above, Vulkan 1.2 added support for:

- SPIR-V version 1.4.
- SPIR-V version 1.5.
- The `samplerMirrorClampToEdge` feature which indicates whether the implementation supports the `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` sampler address mode.
- The `ShaderNonUniform` capability in SPIR-V version 1.5.
- The `shaderOutputViewportIndex` feature which indicates that the `ShaderViewportIndex` capability can be used.
- The `shaderOutputLayer` feature which indicates that the `ShaderLayer` capability can be used.
- The `subgroupBroadcastDynamicId` feature which allows the “Id” operand of `OpGroupNonUniformBroadcast` to be dynamically uniform within a subgroup, and the “Index” operand of `OpGroupNonUniformQuadBroadcast` to be dynamically uniform within a derivative group, in shader modules of version 1.5 or higher.
- The `drawIndirectCount` feature which indicates whether the `vkCmdDrawIndirectCount` and `vkCmdDrawIndexedIndirectCount` functions can be used.
- The `descriptorIndexing` feature which indicates the implementation supports the minimum number of descriptor indexing features as defined in the Feature Requirements section.
- The `samplerFilterMinmax` feature which indicates whether the implementation supports the minimum number of image formats that support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature bit as defined by the `filterMinmaxSingleComponentFormats` property minimum requirements.
- The `framebufferIntegerColorSampleCounts` limit which indicates the color sample counts that are supported for all framebuffer color attachments with integer formats.

New Macros

- `VK_API_VERSION_1_2`

New Commands

- `vkCmdBeginRenderPass2`
- `vkCmdDrawIndexedIndirectCount`
- `vkCmdDrawIndirectCount`
- `vkCmdEndRenderPass2`
- `vkCmdNextSubpass2`
- `vkCreateRenderPass2`
- `vkGetBufferDeviceAddress`
- `vkGetBufferOpaqueCaptureAddress`

Version 1.1

Vulkan Version 1.1 promoted a number of key extensions into the core API:

• VK_KHR_16bit_storage
• VK_KHR_bind_memory2
• VK_KHR_dedicated_allocation
• VK_KHR_descriptor_update_template
• VK_KHR_device_group
• VK_KHR_device_group_creation
• VK_KHR_external_fence
• VK_KHR_external_fence_capabilities
• VK_KHR_external_memory
• VK_KHR_external_memory_capabilities
• VK_KHR_external_semaphore
• VK_KHR_external_semaphore_capabilities
• VK_KHR_get_memory_requirements2
• VK_KHR_get_physical_device_properties2
• VK_KHR_maintenance1
• VK_KHR_maintenance2
• VK_KHR_maintenance3
• VK_KHR_multiview
• VK_KHR_relaxed_block_layout
• VK_KHR_sampler_ycbcr_conversion
• VK_KHR_shader_draw_parameters
• VK_KHR_storage_buffer_storage_class
• VK_KHR_variable_pointers

All differences in behavior between these extensions and the corresponding Vulkan 1.1 functionality are summarized below.

**Differences Relative to VK_KHR_16bit_storage**

If the VK_KHR_16bit_storage extension is not supported, support for the `storageBuffer16BitAccess` feature is optional. Support for this feature is defined by `VkPhysicalDevice16BitStorageFeatures::storageBuffer16BitAccess` or `VkPhysicalDeviceVulkan11Features::storageBuffer16BitAccess` when queried via `vkGetPhysicalDeviceFeatures2`. 
Differences Relative to **VK_KHR_sampler_ycbcr_conversion**

If the **VK_KHR_sampler_ycbcr_conversion** extension is not supported, support for the **samplerYcbcrConversion** feature is optional. Support for this feature is defined by `VkPhysicalDeviceSamplerYcbcrConversionFeatures::samplerYcbcrConversion` or `VkPhysicalDeviceVulkan11Features::samplerYcbcrConversion` when queried via `vkGetPhysicalDeviceFeatures2`.

Differences Relative to **VK_KHR_shader_draw_parameters**

If the **VK_KHR_shader_draw_parameters** extension is not supported, support for the **SPV_KHR_shader_draw_parameters** SPIR-V extension is optional. Support for this feature is defined by `VkPhysicalDeviceShaderDrawParametersFeatures::shaderDrawParameters` or `VkPhysicalDeviceVulkan11Features::shaderDrawParameters` when queried via `vkGetPhysicalDeviceFeatures2`.

Differences Relative to **VK_KHR_variable_pointers**

If the **VK_KHR_variable_pointers** extension is not supported, support for the **variablePointersStorageBuffer** feature is optional. Support for this feature is defined by `VkPhysicalDeviceVariablePointersFeatures::variablePointersStorageBuffer` or `VkPhysicalDeviceVulkan11Features::variablePointersStorageBuffer` when queried via `vkGetPhysicalDeviceFeatures2`.

Additional Vulkan 1.1 Feature Support

In addition to the promoted extensions described above, Vulkan 1.1 added support for:

- The **group operations** and **subgroup scope**.
- The **protected memory** feature.
- A new command to enumerate the instance version: `vkEnumerateInstanceVersion`.
- The **VkPhysicalDeviceShaderDrawParametersFeatures** feature query struct (where the **VK_KHR_shader_draw_parameters** extension did not have one).

New Macros

- **VK_API_VERSION_1_1**

New Object Types

- **VkDescriptorUpdateTemplate**
- **VkSamplerYcbcrConversion**

New Commands

- `vkBindBufferMemory2`
- `vkBindImageMemory2`
• vkCmdDispatchBase
• vkCmdSetDeviceMask
• vkCreateDescriptorUpdateTemplate
• vkCreateSamplerYcbcrConversion
• vkDestroyDescriptorUpdateTemplate
• vkDestroySamplerYcbcrConversion
• vkEnumerateInstanceVersion
• vkEnumeratePhysicalDeviceGroups
• vkGetBufferMemoryRequirements2
• vkGetDescriptorSetLayoutSupport
• vkGetDeviceGroupPeerMemoryFeatures
• vkGetDeviceQueue2
• vkGetImageMemoryRequirements2
• vkGetImageSparseMemoryRequirements2
• vkGetPhysicalDeviceExternalBufferProperties
• vkGetPhysicalDeviceExternalFenceProperties
• vkGetPhysicalDeviceExternalSemaphoreProperties
• vkGetPhysicalDeviceFeatures2
• vkGetPhysicalDeviceFormatProperties2
• vkGetPhysicalDeviceImageFormatProperties2
• vkGetPhysicalDeviceMemoryProperties2
• vkGetPhysicalDeviceProperties2
• vkGetPhysicalDeviceQueueFamilyProperties2
• vkGetPhysicalDeviceSparseImageFormatProperties2
• vkTrimCommandPool
• vkUpdateDescriptorSetWithTemplate

New Structures

• VkBindBufferMemoryInfo
• VkBindImageMemoryInfo
• VkBufferMemoryRequirementsInfo2
• VkDescriptorSetLayoutSupport
• VkDescriptorUpdateTemplateCreateInfo
• VkDescriptorUpdateTemplateEntry
• VkDeviceQueueInfo2
• VkExternalBufferProperties
• VkExternalFenceProperties
• VkExternalMemoryProperties
• VkExternalSemaphoreProperties

  - Extending `VkImageViewCreateInfo`:
    - `VkImageViewUsageCreateInfo`
  - Extending `VkMemoryAllocateInfo`:
    - `VkExportMemoryAllocateInfo`
    - `VkMemoryAllocateFlagsInfo`
    - `VkMemoryDedicatedAllocateInfo`
  - Extending `VkMemoryRequirements2`:
    - `VkMemoryDedicatedRequirements`
  - Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
    - `VkPhysicalDevice16BitStorageFeatures`
    - `VkPhysicalDeviceMultiviewFeatures`
    - `VkPhysicalDeviceProtectedMemoryFeatures`
    - `VkPhysicalDeviceSamplerYcbcrConversionFeatures`
    - `VkPhysicalDeviceShaderDrawParameterFeatures`
    - `VkPhysicalDeviceShaderDrawParametersFeatures`
    - `VkPhysicalDeviceVariablePointerFeatures`
    - `VkPhysicalDeviceVariablePointersFeatures`
  - Extending `VkPhysicalDeviceImageFormatInfo2`:
    - `VkPhysicalDeviceExternalImageFormatInfo`
  - Extending `VkPhysicalDeviceProperties2`:
    - `VkPhysicalDeviceIDProperties`
    - `VkPhysicalDeviceMaintenance3Properties`
    - `VkPhysicalDeviceMultiviewProperties`
    - `VkPhysicalDevicePointClippingProperties`
    - `VkPhysicalDeviceProtectedMemoryProperties`
• `VkPhysicalDeviceSubgroupProperties`

**Extending `VkPipelineTessellationStateCreateInfo`:**
• `VkPipelineTessellationDomainOriginStateCreateInfo`

**Extending `VkRenderPassBeginInfo`, `VkRenderingInfo`:**
• `VkDeviceGroupRenderPassBeginInfo`

**Extending `VkRenderPassCreateInfo`:**
• `VkDeviceGroupRenderPassBeginInfo`
  • `VkRenderPassInputAttachmentAspectCreateInfo`
  • `VkRenderPassMultiviewCreateInfo`

**Extending `VkSamplerCreateInfo`, `VkImageViewCreateInfo`:**
• `VkSamplerYcbcrConversionInfo`

**Extending `VkSemaphoreCreateInfo`:**
• `VkExportSemaphoreCreateInfo`

**Extending `VkSubmitInfo`:**
• `VkDeviceGroupSubmitInfo`
  • `VkProtectedSubmitInfo`

**New Enums**
• `VkChromaLocation`
• `VkDescriptorUpdateTemplateType`
• `VkDeviceQueueCreateFlagBits`
• `VkExternalFenceFeatureFlagBits`
• `VkExternalFenceHandleTypeFlagBits`
• `VkExternalMemoryFeatureFlagBits`
• `VkExternalMemoryHandleTypeFlagBits`
• `VkExternalSemaphoreFeatureFlagBits`
• `VkExternalSemaphoreHandleTypeFlagBits`
• `VkFenceImportFlagBits`
• `VkMemoryAllocateFlagBits`
• `VkPeerMemoryFeatureFlagBits`
• `VkPointClippingBehavior`
• `VkSamplerYcbcrModelConversion`
• `VkSamplerYcbcrRange`
• `VkSemaphoreImportFlagBits`
• `VkSubgroupFeatureFlagBits`
• `VkTessellationDomainOrigin`
New Bitmasks

- VkCommandPoolTrimFlags
- VkDescriptorUpdateTemplateCreateFlags
- VkExternalFenceFeatureFlags
- VkExternalFenceHandleTypeFlags
- VkExternalMemoryFeatureFlags
- VkExternalMemoryHandleTypeFlags
- VkExternalSemaphoreFeatureFlags
- VkExternalSemaphoreHandleTypeFlags
- VkFenceImportFlags
- VkMemoryAllocateFlags
- VkPeerMemoryFeatureFlags
- VkSemaphoreImportFlags
- VkSubgroupFeatureFlags

New Enum Constants

- VK_LUID_SIZE
- VK_MAX_DEVICE_GROUP_SIZE
- VK_QUEUE_FAMILY_EXTERNAL

Extending VkBufferCreateFlagBits:
  - VK_BUFFER_CREATE_PROTECTED_BIT

Extending VkCommandPoolCreateFlagBits:
  - VK_COMMAND_POOL_CREATE_PROTECTED_BIT

Extending VkDependencyFlagBits:
  - VK_DEPENDENCY_DEVICE_GROUP_BIT
  - VK_DEPENDENCY_VIEW_LOCAL_BIT

Extending VkDeviceQueueCreateFlagBits:
  - VK_DEVICE_QUEUE_CREATE_PROTECTED_BIT

Extending VkFormat:
  - VK_FORMAT_B10X6G10X6R10X6G10X6_422_UNORM_4PACK16
  - VK_FORMAT_B12X4G12X4R12X4G12X4_422_UNORM_4PACK16

Appendix E: Layers & Extensions (Informative)

Extensions to the Vulkan API can be defined by authors, groups of authors, and the Khronos Vulkan Working Group. In order not to compromise the readability of the Vulkan Specification, the core Specification does not incorporate most extensions. The online Registry of extensions is available at URL

https://registry.khronos.org/vulkan/

and allows generating versions of the Specification incorporating different extensions.

Authors creating extensions and layers must follow the mandatory procedures described in the Vulkan Documentation and Extensions document when creating extensions and layers.

The remainder of this appendix documents a set of extensions chosen when this document was built. Versions of the Specification published in the Registry include:

- Core API + mandatory extensions required of all Vulkan implementations.
- Core API + all registered and published Khronos (KHR) extensions.
- Core API + all registered and published extensions.

Extensions are grouped as Khronos KHR, multivendor EXT, and then alphabetically by author ID. Within each group, extensions are listed in alphabetical order by their name.

Extension Dependencies

Extensions which have dependencies on specific core versions or on other extensions will list such dependencies.

For core versions, the specified version must be supported at runtime. All extensions implicitly require support for Vulkan 1.0.

For a device extension, use of any device-level functionality defined by that extension requires that any extensions that extension depends on be enabled.

For any extension, use of any instance-level functionality defined by that extension requires only that any extensions that extension depends on be supported at runtime.

Extension Interactions

Some extensions define APIs which are only supported when other extensions or core versions are supported at runtime. Such interactions are noted as “API Interactions”.
List of Current Extensions

Description

In order to be efficient, rendering techniques such as ray tracing need a quick way to identify which primitives may be intersected by a ray traversing the geometries. Acceleration structures are the most common way to represent the geometry spatially sorted, in order to quickly identify such potential intersections.

This extension adds new functionalities:

- Acceleration structure objects and build commands
- Structures to describe geometry inputs to acceleration structure builds
- Acceleration structure copy commands

New Object Types

- VkAccelerationStructureKHR

New Commands

- vkBuildAccelerationStructuresKHR
- vkCmdBuildAccelerationStructuresIndirectKHR
- vkCmdBuildAccelerationStructuresKHR
- vkCmdCopyAccelerationStructureKHR
- vkCmdCopyAccelerationStructureToMemoryKHR
- vkCmdCopyMemoryToAccelerationStructureKHR
- vkCmdWriteAccelerationStructuresPropertiesKHR
- vkCopyAccelerationStructureKHR
- vkCopyAccelerationStructureToMemoryKHR
- vkCopyMemoryToAccelerationStructureKHR
- vkCreateAccelerationStructureKHR
- vkDestroyAccelerationStructureKHR
- vkGetAccelerationStructureBuildSizesKHR
- vkGetAccelerationStructureDeviceAddressKHR
- vkGetDeviceAccelerationStructureCompatibilityKHR
- vkWriteAccelerationStructuresPropertiesKHR

New Structures

- VkAabbPositionsKHR
- VkAccelerationStructureBuildGeometryInfoKHR
- VkAccelerationStructureBuildRangeInfoKHR
• VkAccelerationStructureBuildSizesInfoKHR
• VkAccelerationStructureCreateInfoKHR
• VkAccelerationStructureDeviceAddressInfoKHR
• VkAccelerationStructureGeometryAabbsDataKHR
• VkAccelerationStructureGeometryInstancesDataKHR
• VkAccelerationStructureGeometryKHR
• VkAccelerationStructureGeometryTrianglesDataKHR
• VkAccelerationStructureInstanceKHR
• VkAccelerationStructureVersionInfoKHR
• VkCopyAccelerationStructureInfoKHR
• VkCopyAccelerationStructureToDeviceMemoryInfoKHR
• VkCopyMemoryToDeviceStructureInfoKHR
• VkTransformMatrixKHR
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceAccelerationStructureFeaturesKHR
• Extending VkPhysicalDeviceProperties2:
  ◦ VkPhysicalDeviceAccelerationStructurePropertiesKHR
• Extending VkWriteDescriptorSet:
  ◦ VkWriteDescriptorSetAccelerationStructureKHR

New Unions
• VkAccelerationStructureGeometryDataKHR
• VkDeviceOrHostAddressConstKHR
• VkDeviceOrHostAddressKHR

New Enums
• VkAccelerationStructureBuildTypeKHR
• VkAccelerationStructureCompatibilityKHR
• VkAccelerationStructureCreateFlagBitsKHR
• VkAccelerationStructureTypeKHR
• VkBuildAccelerationStructureFlagBitsKHR
• VkBuildAccelerationStructureModeKHR
• VkCopyAccelerationStructureModeKHR
• VkGeometryFlagBitsKHR
• VkGeometryInstanceFlagBitsKHR
• VkGeometryInstanceFlagBitsKHR
• VkGeometryTypeKHR

New Bitmasks

• VkAccelerationStructureCreateFlagsKHR
• VkBuildAccelerationStructureFlagsKHR
• VkGeometryFlagsKHR
• VkGeometryInstanceFlagsKHR

New Enum Constants

• VK_KHR_ACCELERATION_STRUCTURE_EXTENSION_NAME
• VK_KHR_ACCELERATION_STRUCTURE_SPEC_VERSION

Extending VkAccessFlagBits:

◦ VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR
◦ VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR

Extending VkBufferUsageFlagBits:

◦ VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR
◦ VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR

Extending VkDescriptorType:

◦ VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR

Extending VkFormatFeatureFlagBits:

◦ VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR

Extending VkIndexType:

◦ VK_INDEX_TYPE_NONE_KHR

Extending VkObjectType:

◦ VK_OBJECT_TYPE_ACCELERATION_STRUCTURE_KHR

Extending VkPipelineStageFlagBits:

◦ VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR

Extending VkQueryType:

◦ VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR
◦ VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR

Extending VkStructureType:

◦ VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR
◦ VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR
◦ VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_KHR
◦ VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_DEVICE_ADDRESS_INFO_KHR
If **VK_EXT_debug_report** is supported:

- Extending `VkDebugReportObjectTypeEXT`:
  - `VK_DEBUG_REPORT_OBJECT_TYPE_ACCELERATION_STRUCTURE_KHR_EXT`

If **VK_KHR_format_feature_flags2** is supported:

- Extending `VkFormatFeatureFlagBits2`:
  - `VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR`

**Issues**

(1) How does this extension differ from **VK_NV_ray_tracing**?

**DISCUSSION:**

The following is a summary of the main functional differences between **VK_KHR_acceleration_structure** and **VK_NV_ray_tracing**:

- added acceleration structure serialization / deserialization
  - `VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR`,
  - `VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR`,
  - `vkCmdCopyAccelerationStructureToMemoryKHR`,
  - `vkCmdCopyMemoryToAccelerationStructureKHR`

- added inactive primitives and instances

- added `VkPhysicalDeviceAccelerationStructureFeaturesKHR` structure

- added indirect and batched acceleration structure builds
  - `vkCmdBuildAccelerationStructuresIndirectKHR`

- added host acceleration structure commands

- reworked geometry structures so they could be better shared between device, host, and indirect builds
• explicitly made \texttt{VkAccelerationStructureKHR} use device addresses
• added acceleration structure compatibility check function (\texttt{vkGetDeviceAccelerationStructureCompatibilityKHR})
• add parameter for requesting memory requirements for host and/or device build
• added format feature for acceleration structure build vertex formats (\texttt{VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR})

(2) Can you give a more detailed comparison of differences and similarities between \texttt{VK_NV_ray_tracing} and \texttt{VK_KHR_acceleration_structure}?

**DISCUSSION:**

The following is a more detailed comparison of which commands, structures, and enums are aliased, changed, or removed.

• Aliased functionality — enums, structures, and commands that are considered equivalent:
  ◦ \texttt{VkGeometryTypeNV} \leftrightarrow \texttt{VkGeometryTypeKHR}
  ◦ \texttt{VkAccelerationStructureTypeNV} \leftrightarrow \texttt{VkAccelerationStructureTypeKHR}
  ◦ \texttt{VkCopyAccelerationStructureModeNV} \leftrightarrow \texttt{VkCopyAccelerationStructureModeKHR}
  ◦ \texttt{VkGeometryFlagsNV} \leftrightarrow \texttt{VkGeometryFlagsKHR}
  ◦ \texttt{VkGeometryFlagBitsNV} \leftrightarrow \texttt{VkGeometryFlagBitsKHR}
  ◦ \texttt{VkGeometryInstanceFlagsNV} \leftrightarrow \texttt{VkGeometryInstanceFlagsKHR}
  ◦ \texttt{VkGeometryInstanceFlagBitsNV} \leftrightarrow \texttt{VkGeometryInstanceFlagBitsKHR}
  ◦ \texttt{VkBuildAccelerationStructureFlagsNV} \leftrightarrow \texttt{VkBuildAccelerationStructureFlagsKHR}
  ◦ \texttt{VkBuildAccelerationStructureFlagBitsNV} \leftrightarrow \texttt{VkBuildAccelerationStructureFlagBitsKHR}
  ◦ \texttt{VkTransformMatrixNV} \leftrightarrow \texttt{VkTransformMatrixKHR} (added to \texttt{VK_NV_ray_tracing} for descriptive purposes)
  ◦ \texttt{VkAabbPositionsNV} \leftrightarrow \texttt{VkAabbPositionsKHR} (added to \texttt{VK_NV_ray_tracing} for descriptive purposes)
  ◦ \texttt{VkAccelerationStructureInstanceNV} \leftrightarrow \texttt{VkAccelerationStructureInstanceKHR} (added to\texttt{VK_NV_ray_tracing} for descriptive purposes)

• Changed enums, structures, and commands:
  ◦ renamed \texttt{VK_GEOMETRY_INSTANCE_TRIANGLE_CULL_DISABLE_BIT_NV} \leftrightarrow \texttt{VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR} in \texttt{VkGeometryInstanceFlagBitsKHR}
  ◦ \texttt{VkGeometryTrianglesNV} \leftrightarrow \texttt{VkAccelerationStructureGeometryTrianglesDataKHR} (device or host address instead of buffer+offset)
  ◦ \texttt{VkGeometryAABBNV} \leftrightarrow \texttt{VkAccelerationStructureGeometryAabbsDataKHR} (device or host address instead of buffer+offset)
  ◦ \texttt{VkGeometryDataNV} \leftrightarrow \texttt{VkAccelerationStructureGeometryDataKHR} (union of triangle/aabbs/instances)
- **VkGeometryNV** → **VkAccelerationStructureGeometryKHR** (changed type of geometry)
- **VkAccelerationStructureCreateInfoNV** → **VkAccelerationStructureCreateInfoKHR** (reshuffle geometry layout/information)
- **VkPhysicalDeviceRayTracingPropertiesNV** → **VkPhysicalDeviceAccelerationStructurePropertiesKHR** (for acceleration structure properties, renamed `maxTriangleCount` to `maxPrimitiveCount`, added per stage and update after bind limits) and **VkPhysicalDeviceRayTracingPipelinePropertiesKHR** (for ray tracing pipeline properties)
- **VkAccelerationStructureMemoryRequirementsInfoNV** (deleted - replaced by allocating on top of **VkBuffer**)
- **VkWriteDescriptorSetAccelerationStructureNV** → **VkWriteDescriptorSetAccelerationStructureKHR** (different acceleration structure type)
- **vkCreateAccelerationStructureNV** → **vkCreateAccelerationStructureKHR** (device address, different geometry layout/information)
- **vkGetAccelerationStructureMemoryRequirementsNV** (deleted - replaced by allocating on top of **VkBuffer**)
- **vkCmdBuildAccelerationStructureNV** → **vkCmdBuildAccelerationStructuresKHR** (params moved to structs, layout differences)
- **vkCmdCopyAccelerationStructureNV** → **vkCmdCopyAccelerationStructureKHR** (params to struct, extendable)
- **vkGetAccelerationStructureHandleNV** → **vkGetAccelerationStructureDeviceAddressKHR** (device address instead of handle)
- **VkAccelerationStructureMemoryRequirementsTypeNV** → **size queries for scratch space moved to vkGetAccelerationStructureBuildSizesKHR**
- **vkDestroyAccelerationStructureNV** → **vkDestroyAccelerationStructureKHR** (different acceleration structure types)
- **vkCmdWriteAccelerationStructuresPropertiesNV** → **vkCmdWriteAccelerationStructuresPropertiesKHR** (different acceleration structure types)

- Added enums, structures and commands:
  - **VK_GEOMETRY_TYPE_INSTANCES_KHR** to **VkGeometryTypeKHR** enum
  - **VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR, VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR** to **VkCopyAccelerationStructureModeKHR** enum
  - **VkPhysicalDeviceAccelerationStructureFeaturesKHR** structure
  - **VkAccelerationStructureBuildTypeKHR** enum
  - **VkBuildAccelerationStructureModeKHR** enum
  - **VkDeviceOrHostAddressKHR** and **VkDeviceOrHostAddressConstKHR** unions
  - **VkAccelerationStructureBuildRangeInfoKHR** struct
  - **VkAccelerationStructureGeometryInstancesDataKHR** struct
(3) What are the changes between the public provisional (VK_KHR_ray_tracing v8) release and the internal provisional (VK_KHR_ray_tracing v9) release?

- added `geometryFlags` to `VkAccelerationStructureCreateGeometryTypeInfoKHR` (later reworked to obsolete this)
- added `minAccelerationStructureScratchOffsetAlignment` property to `VkPhysicalDeviceRayTracingPropertiesKHR``
- fix naming and return enum from `vkGetDeviceAccelerationStructureCompatibilityKHR`
  - renamed `VkAccelerationStructureVersionKHR` to `VkAccelerationStructureVersionInfoKHR`
  - renamed `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_KHR` to `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_INFO_KHR`
  - removed `VK_ERROR_INCOMPATIBLE_VERSION_KHR`
  - added `VkAccelerationStructureCompatibilityKHR` enum
  - remove return value from `vkGetDeviceAccelerationStructureCompatibilityKHR` and added return enum parameter
- Require Vulkan 1.1
- added creation time capture and replay flags
  - added `VkAccelerationStructureCreateFlagBitsKHR` and `VkAccelerationStructureCreateFlagsKHR`
  - renamed the `flags` member of `VkAccelerationStructureCreateInfoKHR` to `buildFlags` (later removed) and added the `createFlags` member
- change `vkCmdBuildAccelerationStructuresIndirectKHR` to use buffer device address for indirect parameter
• make `VK_KHR_deferred_host_operations` an interaction instead of a required extension (later went back on this)

• renamed `VkAccelerationStructureBuildOffsetInfoKHR` to `VkAccelerationStructureBuildRangeInfoKHR`
  ◦ renamed the `ppOffsetInfos` parameter of `vkCmdBuildAccelerationStructuresKHR` to `ppBuildRangeInfos`

• Re-unify geometry description between build and create
  ◦ remove `VkAccelerationStructureCreateGeometryTypeInfoKHR` and `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_GEOMETRY_TYPE_INFO_KHR`
  ◦ added `VkAccelerationStructureCreateSizeInfoKHR` structure (later removed)
  ◦ change type of the `pGeometryInfos` member of `VkAccelerationStructureCreateInfoKHR` from `VkAccelerationStructureCreateGeometryTypeInfoKHR` to `VkAccelerationStructureGeometryKHR` (later removed)
  ◦ added `pCreateSizeInfos` member to `VkAccelerationStructureCreateInfoKHR` (later removed)

• Fix `ppGeometries` ambiguity, add `pGeometries`
  ◦ remove `geometryArrayOfPointers` member of `VkAccelerationStructureBuildGeometryInfoKHR`
  ◦ disambiguate two meanings of `ppGeometries` by explicitly adding `pGeometries` to the `VkAccelerationStructureBuildGeometryInfoKHR` structure and require one of them be `NULL`

• added `nullDescriptor` support for acceleration structures

• changed the `update` member of `VkAccelerationStructureBuildGeometryInfoKHR` from a bool to the `mode` `VkBuildAccelerationStructureStructureModeKHR` enum which allows future extensibility in update types

• Clarify deferred host ops for pipeline creation
  ◦ `VkDeferredOperationKHR` is now a top-level parameter for `vkBuildAccelerationStructuresKHR`, `vkCreateRayTracingPipelinesKHR`, `vkCopyAccelerationStructureToMemoryKHR`, `vkCopyAccelerationStructureKHR`, and `vkCopyMemoryToAccelerationStructureKHR`
  ◦ removed `VkDeferredOperationInfoKHR` structure
  ◦ change deferred host creation/return parameter behavior such that the implementation can modify such parameters until the deferred host operation completes
  ◦ `VK_KHR_deferred_host_operations` is required again

• Change acceleration structure build to always be sized
  ◦ de-alias `VkAccelerationStructureMemoryRequirementsTypeNV` and `VkAccelerationStructureMemoryRequirementsTypeKHR`, `VkAccelerationStructureMemoryRequirementsTypeKHR`
  ◦ add `vkGetAccelerationStructureBuildSizesKHR` command and `VkAccelerationStructureBuildSizesInfoKHR` structure and `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR` enum to query sizes for acceleration structures and scratch storage
- move size queries for scratch space to `vkGetAccelerationStructureBuildSizesKHR`
- remove `compactedSize`, `buildFlags`, `maxGeometryCount`, `pGeometryInfos`, `pCreateSizeInfos` members of `VkAccelerationStructureCreateInfoKHR` and add the `size` member
- add `maxVertex` member to `VkAccelerationStructureGeometryTrianglesDataKHR` structure
- remove `VkAccelerationStructureCreateInfoKHR` structure

(4) What are the changes between the internal provisional (VK_KHR_ray_tracing v9) release and the final (VK_KHR_acceleration_structure v11) release?

- refactor VK_KHR_ray_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - `VK_KHR_acceleration_structure` (for acceleration structure operations)
  - `VK_KHR_ray_tracing_pipeline` (for ray tracing pipeline and shader stages)
  - `VK_KHR_ray_query` (for ray queries in existing shader stages)
- clarify buffer usage flags for ray tracing
  - `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` is left alone in `VK_NV_ray_tracing` (required on scratch and `instanceData`)
  - `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` is added as an alias of `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` in `VK_KHR_ray_tracing_pipeline` and is required on shader binding table buffers
  - `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` is added in `VK_KHR_acceleration_structure` for all vertex, index, transform, aabb, and instance buffer data referenced by device build commands
  - `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` is used for `scratchData`
- add max primitive counts (`ppMaxPrimitiveCounts`) to `vkCmdBuildAccelerationStructuresIndirectKHR`
- Allocate acceleration structures from `VkBuffers` and add a mode to constrain the device address
  - de-alias `VkBindAccelerationStructureMemoryInfoNV` and `vkBindAccelerationStructureMemoryNV`, and remove `VkBindAccelerationStructureMemoryInfoKHR`, `VkAccelerationStructureMemoryRequirementsInfoKHR`, and `vkGetAccelerationStructureMemoryRequirementsKHR`
  - acceleration structures now take a `VkBuffer` and offset at creation time for memory placement
  - add a new `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` buffer usage for such buffers
  - add a new `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` acceleration structure type for layering
- move `VK_GEOMETRY_TYPE_INSTANCES_KHR` to main enum instead of being added via extension
- make build commands more consistent - all now build multiple acceleration structures and are named plurally (`vkCmdBuildAccelerationStructuresIndirectKHR`, `vkCmdBuildAccelerationStructuresKHR`, `vkBuildAccelerationStructuresKHR`)
• add interactions with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` for acceleration structures, including a new feature
  (descriptorBindingAccelerationStructureUpdateAfterBind) and 3 new properties
  (maxPerStageDescriptorAccelerationStructures,
  maxPerStageDescriptorUpdateAfterBindAccelerationStructures,
  maxDescriptorSetUpdateAfterBindAccelerationStructures)

• extension is no longer provisional
• define synchronization requirements for builds, traces, and copies
• define synchronization requirements for AS build inputs and indirect build buffer

(5) What is `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` for?

**RESOLVED:** It is primarily intended for API layering. In DXR, the acceleration structure is basically just a buffer in a special layout, and you do not know at creation time whether it will be used as a top or bottom level acceleration structure. We thus added a generic acceleration structure type whose type is unknown at creation time, but is specified at build time instead. Applications which are written directly for Vulkan should not use it.

**Version History**

• Revision 1, 2019-12-05 (Members of the Vulkan Ray Tracing TSG)
  ◦ Internal revisions (forked from VK_NV_ray_tracing)

• Revision 2, 2019-12-20 (Daniel Koch, Eric Werness)
  ◦ Add const version of DeviceOrHostAddress (!3515)
  ◦ Add VU to clarify that only handles in the current pipeline are valid (!3518)
  ◦ Restore some missing VUs and add in-place update language (#1902, !3522)
  ◦ rename VkAccelerationStructureInstanceKHR member from accelerationStructure to accelerationStructureReference to better match its type (!3523)
  ◦ Allow VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS for pipeline creation if shader group handles cannot be reused (!3523)
  ◦ update documentation for the VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS error code and add missing documentation for new return codes from VK_KHR_deferred_host_operations (!3523)
  ◦ list new query types for VK_KHR_ray_tracing (!3523)
  ◦ Fix VU statements for VkAccelerationStructureGeometryKHR referring to correct union members and update to use more current wording (!3523)

• Revision 3, 2020-01-10 (Daniel Koch, Jon Leech, Christoph Kubisch)
  ◦ Fix ‘instance of’ and ‘that/which contains/defines’ markup issues (!3528)
  ◦ factor out VK_KHR_pipeline_library as stand-alone extension (!3540)
  ◦ Resolve Vulkan-hpp issues (!3543)
    ▪ add missing require for VkGeometryInstanceFlagsKHR
• de-alias VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_NV since the
  KHR structure is no longer equivalent
• add len to pDataSize attribute for vkWriteAccelerationStructuresPropertiesKHR

• Revision 4, 2020-01-23 (Daniel Koch, Eric Werness)
  ◦ Improve vkWriteAccelerationStructuresPropertiesKHR, add return value and VUs (#1947)
  ◦ Clarify language to allow multiple raygen shaders (#1959)
  ◦ Various editorial feedback (!3556)
  ◦ Add language to help deal with looped self-intersecting fans (#1901)
  ◦ Change vkCmdTraceRays{,Indirect}KHR args to pointers (!3559)
  ◦ Add scratch address validation language (#1941, !3551)
  ◦ Fix definition and add hierarchy information for shader call scope (#1977, !3571)

• Revision 5, 2020-02-04 (Eric Werness, Jeff Bolz, Daniel Koch)
  ◦ remove vestigial accelerationStructureUUID (!3582)
  ◦ update definition of repack instructions and improve memory model interactions (#1910, #1913, !3584)
  ◦ Fix wrong sType for VkPhysicalDeviceRayTracingFeaturesKHR (#1988)
  ◦ Use provisional SPIR-V capabilities (#1987)
  ◦ require rayTraversalPrimitiveCulling if rayQuery is supported (#1927)
  ◦ Miss shaders do not have object parameters (!3592)
  ◦ Fix missing required types in XML (!3592)
  ◦ clarify matching conditions for update (!3592)
  ◦ add goal that host and device builds be similar (!3592)
  ◦ clarify that maxPrimitiveCount limit should apply to triangles and AABBs (!3592)
  ◦ Require alignment for instance arrayOfPointers (!3592)
  ◦ Zero is a valid value for instance flags (!3592)
  ◦ Add some alignment VUs that got lost in refactoring (!3592)
  ◦ Recommend TMin epsilon rather than culling (!3592)
  ◦ Get angle from dot product not cross product (!3592)
  ◦ Clarify that AH can access the payload and attributes (!3592)
  ◦ Match DXR behavior for inactive primitive definition (!3592)
  ◦ Use a more generic term than degenerate for inactive to avoid confusion (!3592)

• Revision 6, 2020-02-20 (Daniel Koch)
  ◦ fix some dangling NV references (#1996)
  ◦ rename VkCmdTraceRaysIndirectCommandKHR to VkTraceRaysIndirectCommandKHR (!3607)
- update contributor list (!3611)
- use uint64_t instead of VkAccelerationStructureReferenceKHR in VkAccelerationStructureInstanceKHR (#2004)

**Revision 7, 2020-02-28 (Tobias Hector)**
- remove HitTKHR SPIR-V builtin (spirv/spirv-extensions#7)

**Revision 8, 2020-03-06 (Tobias Hector, Dae Kim, Daniel Koch, Jeff Bolz, Eric Werness)**
- explicitly state that Tmax is updated when new closest intersection is accepted (#2020,!3536)
- Made references to min and max t values consistent (!3644)
- finish enumerating differences relative to VK_NV_ray_tracing in issues (1) and (2) (#1974,!3642)
- fix formatting in some math equations (!3642)
- Restrict the Hit Kind operand of OpReportIntersectionKHR to 7-bits (spirv/spirv-extensions#8,!3646)
- Say ray tracing 'should' be watertight (#2008,!3631)
- Clarify memory requirements for ray tracing buffers (#2005,!3649)
- Add callable size limits (#1997,!3652)

**Revision 9, 2020-04-15 (Eric Werness, Daniel Koch, Tobias Hector, Joshua Barczak)**
- Add geometry flags to acceleration structure creation (!3672)
- add build scratch memory alignment (minAccelerationStructureScratchOffsetAlignment) (#2065,!3725)
- fix naming and return enum from vkGetDeviceAccelerationStructureCompatibilityKHR (#2051,!3726)
- require SPIR-V 1.4 (#2096,!3777)
- added creation time capture/replay flags (#2104,!3774)
- require Vulkan 1.1 (#2133,!3806)
- use device addresses instead of VkBuffers for ray tracing commands (#2074,!3815)
- add interactions with Vulkan 1.2 and VK_KHR_vulkan_memory_model (#2133,!3830)
- make VK_KHR_pipeline_library an interaction instead of required (#2045,#2108,!3830)
- make VK_KHR_deferred_host_operations an interaction instead of required (#2045,!3830)
- removed maxCallableSize and added explicit stack size management for ray pipelines (#1997,!3817,!3772,!3844)
- improved documentation for VkAccelerationStructureVersionInfoKHR (#2135,3835)
- rename VkAccelerationStructureBuildOffsetInfoKHR to VkAccelerationStructureBuildRangeInfoKHR (#2058,!3754)
- Re-unify geometry description between build and create (!3754)
- Fix ppGeometries ambiguity, add pGeometries (#2032,!3811)
- add interactions with VK_EXT_robustness2 and allow nullDescriptor support for
acceleration structures (#1920,!3848)
- added future extensibility for AS updates (#2114,!3849)
- Fix VU for dispatchrays and add a limit on the size of the full grid (#2160,!3851)
- Add shaderGroupHandleAlignment property (#2180,!3875)
- Clarify deferred host ops for pipeline creation (#2067,!3813)
- Change acceleration structure build to always be sized (#2131,#2197,#2198,!3854,#3883,#3880)

- Revision 10, 2020-07-03 (Mathieu Robart, Daniel Koch, Eric Werness, Tobias Hector)
  - Decomposition of the specification, from VK_KHR_ray_tracing to VK_KHR_acceleration_structure (#1918,!3912)
  - clarify buffer usage flags for ray tracing (#2181,!3939)
  - add max primitive counts to build indirect command (#2233,!3944)
  - Allocate acceleration structures from VkBuffers and add a mode to constrain the device address (#2131,!3936)
  - Move VK_GEOMETRY_TYPE_INSTANCES_KHR to main enum (#2243,!3952)
  - make build commands more consistent (#2247,!3958)
  - add interactions with UPDATE_AFTER_BIND (#2128,!3986)
  - correct and expand build command VUs (!4020)
  - fix copy command VUs (14018)
  - added various alignment requirements (#2229,!3943)
  - fix valid usage for arrays of geometryCount items (#2198,!4010)
  - define what is allowed to change on RTAS updates and relevant VUs (#2177,!3961)

- Revision 11, 2020-11-12 (Eric Werness, Josh Barczak, Daniel Koch, Tobias Hector)
  - de-alias NV and KHR acceleration structure types and associated commands (#2271,!4035)
  - specify alignment for host copy commands (#2273,!4037)
  - document VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR
  - specify that acceleration structures are non-linear (#2289,!4068)
  - add several missing VUs for strides, vertexFormat, and indexType (#2315,!4069)
  - restore VUs for VkAccelerationStructureBuildGeometryInfoKHR (#2337,!4098)
  - ban multi-instance memory for host operations (#2324,!4102)
  - allow dstAccelerationStructure to be null for vkGetAccelerationStructureBuildSizesKHR (#2330,!4111)
  - more build VU cleanup (#2138,#4130)
  - specify host endianness for AS serialization (#2261,!4136)
  - add invertible transform matrix VU (#1710,!4140)
  - require geometryCount to be 1 for TLAS builds (!4145)
- improved validity conditions for build addresses (#4142)
- add single statement SPIR-V VUs, build limit VUs (#4158)
- document limits for vertex and aabb strides (#2390,#4184)
- specify that `VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR` applies to AS copies (#2382,#4173)
- define sync for AS build inputs and indirect buffer (#2407,#4208)

- Revision 12, 2021-08-06 (Samuel Bourasseau)
  - rename `VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR` to `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` (keep previous as alias).
  - Clarify description and add note.

- Revision 13, 2021-09-30 (Jon Leech)
  - Add interaction with `VK_KHR_format_feature_flags2` to `vk.xml`

Description

The `VK_KHR_android_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an `ANativeWindow`, Android's native surface type. The `ANativeWindow` represents the producer endpoint of any buffer queue, regardless of consumer endpoint. Common consumer endpoints for `ANativeWindows` are the system window compositor, video encoders, and application-specific compositors importing the images through a `SurfaceTexture`.

New Base Types

- `ANativeWindow`

New Commands

- `vkCreateAndroidSurfaceKHR`

New Structures

- `VkAndroidSurfaceCreateInfoKHR`

New Bitmasks

- `VkAndroidSurfaceCreateFlagsKHR`
New Enum Constants

- VK_KHR_ANDROID_SURFACE_EXTENSION_NAME
- VK_KHR_ANDROID_SURFACE_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_ANDROID_SURFACE_CREATE_INFO_KHR

Issues

1) Does Android need a way to query for compatibility between a particular physical device (and queue family?) and a specific Android display?

**RESOLVED**: No. Currently on Android, any physical device is expected to be able to present to the system compositor, and all queue families must support the necessary image layout transitions and synchronization operations.

Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft.
- Revision 2, 2015-10-26 (Ian Elliott)
  - Renamed from VK_EXT_KHR_android_surface to VK_KHR_android_surface.
- Revision 3, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to surface creation function.
- Revision 4, 2015-11-10 (Jesse Hall)
  - Removed VK_ERROR_INVALID_ANDROID_WINDOW_KHR.
- Revision 5, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a pCreateInfo structure.
- Revision 6, 2016-01-14 (James Jones)
  - Moved VK_ERROR_NATIVE_WINDOW_IN_USE_KHR from the VK_KHR_android_surface to the VK_KHR_surface extension.

Interactions and External Dependencies
  • This extension provides API support for GLSL_KHR_cooperative_matrix

Contributors
  • Jeff Bolz, NVIDIA
  • Markus Tavenrath, NVIDIA
  • Daniel Koch, NVIDIA
  • Kevin Petit, Arm Ltd.
  • Boris Zanin, AMD

Description
This extension adds support for using cooperative matrix types in SPIR-V. Cooperative matrix types are medium-sized matrices that are primarily supported in compute shaders, where the storage for the matrix is spread across all invocations in some scope (usually a subgroup) and those invocations cooperate to efficiently perform matrix multiplies.

Cooperative matrix types are defined by the SPV_KHR_cooperative_matrix SPIR-V extension and can be used with the GLSL_KHR_cooperative_matrix GLSL extension.

This extension includes support for enumerating the matrix types and dimensions that are supported by the implementation.

New Commands
  • vkGetPhysicalDeviceCooperativeMatrixPropertiesKHR
New Structures

- VkCooperativeMatrixPropertiesKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceCooperativeMatrixFeaturesKHR
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceCooperativeMatrixPropertiesKHR

New Enums

- VkComponentTypeKHR
- VkScopeKHR

New Enum Constants

- VK_KHR_COOPERATIVE_MATRIX_EXTENSION_NAME
- VK_KHR_COOPERATIVE_MATRIX_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_COOPERATIVE_MATRIX_PROPERTIES_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_PROPERTIES_KHR

New SPIR-V Capabilities

- CooperativeMatrixKHR

Description
The VK_KHR_deferred_host_operations extension defines the infrastructure and usage patterns for deferrable commands, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands must not be deferred unless the deferral is specifically allowed by another extension which depends on VK_KHR_deferred_host_operations.
New Object Types

- VkDeferredOperationKHR

New Commands

- vkCreateDeferredOperationKHR
- vkDeferredOperationJoinKHR
- vkDestroyDeferredOperationKHR
- vkGetDeferredOperationMaxConcurrencyKHR
- vkGetDeferredOperationResultKHR

New Enum Constants

- VK_KHR_DEFERRED_HOST_OPERATIONS_EXTENSION_NAME
- VK_KHR_DEFERRED_HOST_OPERATIONS_SPEC_VERSION

Extending VkObjectType:
- VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR

Extending VkResult:
- VK_OPERATION_DEFERRED_KHR
- VK_OPERATION_NOT_DEFERRED_KHR
- VK_THREAD_DONE_KHR
- VK_THREAD_IDLE_KHR

Code Examples

The following examples will illustrate the concept of deferrable operations using a hypothetical example. The command `vkDoSomethingExpensive` denotes a deferrable command.

The following example illustrates how a vulkan application might request deferral of an expensive operation:

```c
// create a deferred operation
VkDeferredOperationKHR hOp;
VkResult result = vkCreateDeferredOperationKHR(device, pCallbacks, &hOp);
assert(result == VK_SUCCESS);

result = vkDoSomethingExpensive(device, hOp, ...);
assert( result == VK_OPERATION_DEFERRED_KHR );

// operation was deferred. Execute it asynchronously
std::async::launch(
    [ hOp ] ( )
{ ...
```
vkDeferredOperationJoinKHR(device, hOp);

result = vkGetDeferredOperationResultKHR(device, hOp);

// deferred operation is now complete. 'result' indicates success or failure
vkDestroyDeferredOperationKHR(device, hOp, pCallbacks);
}
);

The following example illustrates extracting concurrency from a single deferred operation:

// create a deferred operation
VkDeferredOperationKHR hOp;
VkResult result = vkCreateDeferredOperationKHR(device, pCallbacks, &hOp);
assert(result == VK_SUCCESS);
result = vkDoSomethingExpensive(device, hOp, ...);
assert(result == VK_OPERATION_DEFERRED_KHR);

// Query the maximum amount of concurrency and clamp to the desired maximum
uint32_t numLaunches = std::min(vkGetDeferredOperationMaxConcurrencyKHR(device, hOp), maxThreads);

std::vector<std::future<void>> joins;

for (uint32_t i = 0; i < numLaunches; i++) {
    joins.emplace_back(std::async::launch(
            [hOp]() {
                vkDeferredOperationJoinKHR(device, hOp);
                // in a job system, a return of VK_THREAD_IDLE_KHR should queue
                another
                        // job, but it is not functionally required
                }));
}

for (auto &f: joins) {
    f.get();
}

result = vkGetDeferredOperationResultKHR(device, hOp);

// deferred operation is now complete. 'result' indicates success or failure
vkDestroyDeferredOperationKHR(device, hOp, pCallbacks);

The following example shows a subroutine which guarantees completion of a deferred operation,
in the presence of multiple worker threads, and returns the result of the operation.

```c
VkResult FinishDeferredOperation(VkDeferredOperationKHR hOp)
{
    // Attempt to join the operation until the implementation indicates that we should stop

    VkResult result = vkDeferredOperationJoinKHR(device, hOp);
    while( result == VK_THREAD_IDLE_KHR )
    {
        std::this_thread::yield();
        result = vkDeferredOperationJoinKHR(device, hOp);
    }

    switch( result )
    {
        case VK_SUCCESS:
        {
            // deferred operation has finished. Query its result
            result = vkGetDeferredOperationResultKHR(device, hOp);
        }
        break;

        case VK_THREAD_DONE_KHR:
        {
            // deferred operation is being wrapped up by another thread
            // wait for that thread to finish
            do
            {
                std::this_thread::yield();
                result = vkGetDeferredOperationResultKHR(device, hOp);
            } while( result == VK_NOT_READY );
        }
        break;

        default:
        {
            assert(false); // other conditions are illegal.
            break;
        }
    }

    return result;
}
```

**Issues**

1. Should this extension have a VkPhysicalDevice*FeaturesKHR structure?

**RESOLVED**: No. This extension does not add any functionality on its own and requires a dependent extension to actually enable functionality and thus there is no value in adding a feature structure.
If necessary, any dependent extension could add a feature boolean if it wanted to indicate that it is adding optional deferral support.

**Version History**

- **Revision 1, 2019-12-05 (Josh Barczak, Daniel Koch)**
  - Initial draft.

- **Revision 2, 2020-03-06 (Daniel Koch, Tobias Hector)**
  - Add missing `VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR` enum
  - fix sample code
  - Clarified deferred operation parameter lifetimes (#2018,!3647)

- **Revision 3, 2020-05-15 (Josh Barczak)**
  - Clarify behavior of `vkGetDeferredOperationMaxConcurrencyKHR`, allowing it to return 0 if the operation is complete (#2036,!3850)

- **Revision 4, 2020-11-12 (Tobias Hector, Daniel Koch)**
  - Remove `VkDeferredOperationInfoKHR` and change return value semantics when deferred host operations are in use (#2067,3813)
  - clarify return value of `vkGetDeferredOperationResultKHR` (#2339,!4110)

**VK_KHR_display**

Description
This extension provides the API to enumerate displays and available modes on a given device.

New Object Types
• VkDisplayKHR
• VkDisplayModeKHR

New Commands
• vkCreateDisplayModeKHR
• vkCreateDisplayPlaneSurfaceKHR
• vkGetDisplayModePropertiesKHR
• vkGetDisplayPlaneCapabilitiesKHR
• vkGetDisplayPlaneSupportedDisplaysKHR
• vkGetPhysicalDeviceDisplayPlanePropertiesKHR
• vkGetPhysicalDeviceDisplayPropertiesKHR

New Structures
• VkDisplayModeCreateInfoKHR
• VkDisplayModeParametersKHR
• VkDisplayModePropertiesKHR
• VkDisplayPlaneCapabilitiesKHR
• VkDisplayPlanePropertiesKHR
• VkDisplayPropertiesKHR
• VkDisplaySurfaceCreateInfoKHR
New Enums

- VkDisplayPlaneAlphaFlagBitsKHR

New Bitmasks

- VkDisplayModeCreateFlagsKHR
- VkDisplayPlaneAlphaFlagsKHR
- VkDisplaySurfaceCreateFlagsKHR
- VkSurfaceTransformFlagsKHR

New Enum Constants

- VK_KHR_DISPLAY_EXTENSION_NAME
- VK_KHR_DISPLAY_SPEC_VERSION

Extending VkObjectType:

- VK_OBJECT_TYPE_DISPLAY_KHR
- VK_OBJECT_TYPE_DISPLAY_MODE_KHR

Extending VkStructureType:

- VK_STRUCTURE_TYPE_DISPLAY_MODE_CREATE_INFO_KHR
- VK_STRUCTURE_TYPE_DISPLAY_SURFACE_CREATE_INFO_KHR

Issues

1) Which properties of a mode should be fixed in the mode information vs. settable in some other function when setting the mode? E.g., do we need to double the size of the mode pool to include both stereo and non-stereo modes? YUV and RGB scanout even if they both take RGB input images? BGR vs. RGB input? etc.

RESOLVED: Many modern displays support at most a handful of resolutions and timings natively. Other “modes” are expected to be supported using scaling hardware on the display engine or GPU. Other properties, such as rotation and mirroring should not require duplicating hardware modes just to express all combinations. Further, these properties may be implemented on a per-display or per-overlay granularity.

To avoid the exponential growth of modes as mutable properties are added, as was the case with EGL/Config/WGL pixel formats/GLX/Config, this specification should separate out hardware properties and configurable state into separate objects. Modes and overlay planes will express capabilities of the hardware, while a separate structure will allow applications to configure scaling, rotation, mirroring, color keys, LUT values, alpha masks, etc. for a given swapchain independent of the mode in use. Constraints on these settings will be established by properties of the immutable objects.

Note the resolution of this issue may affect issue 5 as well.
2) What properties of a display itself are useful?

RESOLVED: This issue is too broad. It was meant to prompt general discussion, but resolving this issue amounts to completing this specification. All interesting properties should be included. The issue will remain as a placeholder since removing it would make it hard to parse existing discussion notes that refer to issues by number.

3) How are multiple overlay planes within a display or mode enumerated?

RESOLVED: They are referred to by an index. Each display will report the number of overlay planes it contains.

4) Should swapchains be created relative to a mode or a display?

RESOLVED: When using this extension, swapchains are created relative to a mode and a plane. The mode implies the display object the swapchain will present to. If the specified mode is not the display's current mode, the new mode will be applied when the first image is presented to the swapchain, and the default operating system mode, if any, will be restored when the swapchain is destroyed.

5) Should users query generic ranges from displays and construct their own modes explicitly using those constraints rather than querying a fixed set of modes (Most monitors only have one real “mode” these days, even though many support relatively arbitrary scaling, either on the monitor side or in the GPU display engine, making “modes” something of a relic/compatibility construct).

RESOLVED: Expose both. Display information structures will expose a set of predefined modes, as well as any attributes necessary to construct a customized mode.

6) Is it fine if we return the display and display mode handles in the structure used to query their properties?

RESOLVED: Yes.

7) Is there a possibility that not all displays of a device work with all of the present queues of a device? If yes, how do we determine which displays work with which present queues?

RESOLVED: No known hardware has such limitations, but determining such limitations is supported automatically using the existing VK_KHR_surface and VK_KHR_swapchain query mechanisms.

8) Should all presentation need to be done relative to an overlay plane, or can a display mode + display be used alone to target an output?

RESOLVED: Require specifying a plane explicitly.

9) Should displays have an associated window system display, such as an HDC or Display*?

RESOLVED: No. Displays are independent of any windowing system in use on the system. Further, neither HDC nor Display* refer to a physical display object.

10) Are displays queried from a physical GPU or from a device instance?

RESOLVED: Developers prefer to query modes directly from the physical GPU so they can use
display information as an input to their device selection algorithms prior to device creation. This avoids the need to create placeholder device instances to enumerate displays.

This preference must be weighed against the extra initialization that must be done by driver vendors prior to device instance creation to support this usage.

11) Should displays and/or modes be dispatchable objects? If functions are to take displays, overlays, or modes as their first parameter, they must be dispatchable objects as defined in Khronos bug 13529. If they are not added to the list of dispatchable objects, functions operating on them must take some higher-level object as their first parameter. There is no performance case against making them dispatchable objects, but they would be the first extension objects to be dispatchable.

**RESOLVED:** Do not make displays or modes dispatchable. They will dispatch based on their associated physical device.

12) Should hardware cursor capabilities be exposed?

**RESOLVED:** Defer. This could be a separate extension on top of the base WSI specs.

13) How many display objects should be enumerated for “tiled” display devices? There are ongoing design discussions among lower-level display API authors regarding how to expose displays if they are one physical display device to an end user, but may internally be implemented as two side-by-side displays using the same display engine (and sometimes cabling) resources as two physically separate display devices.

**RESOLVED:** Tiled displays will appear as a single display object in this API.

14) Should the raw EDID data be included in the display information?

**RESOLVED:** No. A future extension could be added which reports the EDID if necessary. This may be complicated by the outcome of issue 13.

15) Should min and max scaling factor capabilities of overlays be exposed?

**RESOLVED:** Yes. This is exposed indirectly by allowing applications to query the min/max position and extent of the source and destination regions from which image contents are fetched by the display engine when using a particular mode and overlay pair.

16) Should devices be able to expose planes that can be moved between displays? If so, how?

**RESOLVED:** Yes. Applications can determine which displays a given plane supports using `vkGetDisplayPlaneSupportedDisplaysKHR`.

17) Should there be a way to destroy display modes? If so, does it support destroying “built in” modes?

**RESOLVED:** Not in this extension. A future extension could add this functionality.

18) What should the lifetime of display and built-in display mode objects be?

**RESOLVED:** The lifetime of the instance. These objects cannot be destroyed. A future extension may
be added to expose a way to destroy these objects and/or support display hotplug.

19) Should persistent mode for smart panels be enabled/disabled at swapchain creation time, or on a per-present basis.

RESOLVED: On a per-present basis.

Examples

Note

The example code for the VK_KHR_display and VK_KHR_display_swapchain extensions was removed from the appendix after revision 1.0.43. The display enumeration example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c).

Version History

- Revision 1, 2015-02-24 (James Jones)
  - Initial draft
- Revision 2, 2015-03-12 (Norbert Nopper)
  - Added overlay enumeration for a display.
- Revision 3, 2015-03-17 (Norbert Nopper)
  - Fixed typos and namings as discussed in Bugzilla.
  - Reordered and grouped functions.
  - Added functions to query count of display, mode and overlay.
  - Added native display handle, which may be needed on some platforms to create a native Window.
- Revision 4, 2015-03-18 (Norbert Nopper)
  - Removed primary and virtualPostion members (see comment of James Jones in Bugzilla).
  - Added native overlay handle to information structure.
  - Replaced , with ; in struct.
- Revision 6, 2015-03-18 (Daniel Rakos)
  - Added WSI extension suffix to all items.
  - Made the whole API more “Vulkanish”.
  - Replaced all functions with a single vkGetDisplayInfoKHR function to better match the rest of the API.
  - Made the display, display mode, and overlay objects be first class objects, not subclasses of VkBaseObject as they do not support the common functions anyways.
  - Renamed *Info structures to *Properties.
- Removed overlayIndex field from VkOverlayProperties as there is an implicit index already as a result of moving to a “Vulkanish” API.
- Displays are not get through device, but through physical GPU to match the rest of the Vulkan API. Also this is something ISVs explicitly requested.
- Added issue (6) and (7).

- Revision 7, 2015-03-25 (James Jones)
  - Added an issues section
  - Added rotation and mirroring flags

- Revision 8, 2015-03-25 (James Jones)
  - Combined the duplicate issues sections introduced in last change.
  - Added proposed resolutions to several issues.

- Revision 9, 2015-04-01 (Daniel Rakos)
  - Rebased extension against Vulkan 0.82.0

- Revision 10, 2015-04-01 (James Jones)
  - Added issues (10) and (11).
  - Added more straw-man issue resolutions, and cleaned up the proposed resolution for issue (4).
  - Updated the rotation and mirroring enums to have proper bitmask semantics.

- Revision 11, 2015-04-15 (James Jones)
  - Added proposed resolution for issues (1) and (2).
  - Added issues (12), (13), (14), and (15)
  - Removed pNativeHandle field from overlay structure.
  - Fixed small compilation errors in example code.

- Revision 12, 2015-07-29 (James Jones)
  - Rewrote the guts of the extension against the latest WSI swapchain specifications and the latest Vulkan API.
  - Address overlay planes by their index rather than an object handle and refer to them as “planes” rather than “overlays” to make it slightly clearer that even a display with no “overlays” still has at least one base “plane” that images can be displayed on.
  - Updated most of the issues.
  - Added an “extension type” section to the specification header.
  - Reused the VK_EXT_KHR_surface surface transform enumerations rather than redefining them here.
  - Updated the example code to use the new semantics.

- Revision 13, 2015-08-21 (Ian Elliott)
  - Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.

- Revision 14, 2015-09-01 (James Jones)
  - Restore single-field revision number.

- Revision 15, 2015-09-08 (James Jones)
  - Added alpha flags enum.
  - Added premultiplied alpha support.

- Revision 16, 2015-09-08 (James Jones)
  - Added description section to the spec.
  - Added issues 16 - 18.

- Revision 17, 2015-10-02 (James Jones)
  - Planes are now a property of the entire device rather than individual displays. This allows planes to be moved between multiple displays on devices that support it.
  - Added a function to create a VkSurfaceKHR object describing a display plane and mode to align with the new per-platform surface creation conventions.
  - Removed detailed mode timing data. It was agreed that the mode extents and refresh rate are sufficient for current use cases. Other information could be added back in as an extension if it is needed in the future.
  - Added support for smart/persistent/buffered display devices.

- Revision 18, 2015-10-26 (Ian Elliott)
  - Renamed from VK_EXT_KHR_display to VK_KHR_display.

- Revision 19, 2015-11-02 (James Jones)
  - Updated example code to match revision 17 changes.

- Revision 20, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to creation functions.

- Revision 21, 2015-11-10 (Jesse Hall)
  - Added VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR, and use VkDisplayPlaneAlphaFlagBitsKHR for VkDisplayPlanePropertiesKHR::alphaMode instead of VkDisplayPlaneAlphaFlagsKHR, since it only represents one mode.
  - Added reserved flags bitmask to VkDisplayPlanePropertiesKHR.
  - Use VkSurfaceTransformFlagBitsKHR instead of obsolete VkSurfaceTransformKHR.
  - Renamed vkGetDisplayPlaneSupportedDisplaysKHR parameters for clarity.

- Revision 22, 2015-12-18 (James Jones)
  - Added missing “planeIndex” parameter to vkGetDisplayPlaneSupportedDisplaysKHR()

- Revision 23, 2017-03-13 (James Jones)
  - Closed all remaining issues. The specification and implementations have been shipping with the proposed resolutions for some time now.
• Removed the sample code and noted it has been integrated into the official Vulkan SDK cube demo.

**Description**

This extension provides an API to create a swapchain directly on a device’s display without any underlying window system.
New Commands

- vkCreateSharedSwapchainsKHR

New Structures

- Extending VkPresentInfoKHR:
  - VkDisplayPresentInfoKHR

New Enum Constants

- VK_KHR_DISPLAY_SWAPCHAIN_EXTENSION_NAME
- VK_KHR_DISPLAY_SWAPCHAIN_SPEC_VERSION

- Extending VkResult:
  - VK_ERROR_INCOMPATIBLE_DISPLAY_KHR

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR

Issues

1) Should swapchains sharing images each hold a reference to the images, or should it be up to the application to destroy the swapchains and images in an order that avoids the need for reference counting?

**RESOLVED:** Take a reference. The lifetime of presentable images is already complex enough.

2) Should the `srcRect` and `dstRect` parameters be specified as part of the presentation command, or at swapchain creation time?

**RESOLVED:** As part of the presentation command. This allows moving and scaling the image on the screen without the need to respecify the mode or create a new swapchain and presentable images.

3) Should `srcRect` and `dstRect` be specified as rects, or separate offset/extent values?

**RESOLVED:** As rects. Specifying them separately might make it easier for hardware to expose support for one but not the other, but in such cases applications must just take care to obey the reported capabilities and not use non-zero offsets or extents that require scaling, as appropriate.

4) How can applications create multiple swapchains that use the same images?

**RESOLVED:** By calling `vkCreateSharedSwapchainsKHR`.

An earlier resolution used `vkCreateSwapchainKHR`, chaining multiple `VkSwapchainCreateInfoKHR` structures through `pNext`. In order to allow each swapchain to also allow other extension structs, a level of indirection was used: `VkSwapchainCreateInfoKHR::pNext` pointed to a different structure, which had both `sType` and `pNext` members for additional extensions, and also had a pointer to the next `VkSwapchainCreateInfoKHR` structure. The number of swapchains to be created could only be found by walking this linked list of alternating structures, and the `pSwapchains` out parameter was
reinterpreted to be an array of VkSwapchainKHR handles.

Another option considered was a method to specify a “shared” swapchain when creating a new swapchain, such that groups of swapchains using the same images could be built up one at a time. This was deemed unusable because drivers need to know all of the displays an image will be used on when determining which internal formats and layouts to use for that image.

Examples

Note
The example code for the VK_KHR_display and VK_KHR_display_swapchain extensions was removed from the appendix after revision 1.0.43. The display swapchain creation example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c).

Version History

• Revision 1, 2015-07-29 (James Jones)
  ◦ Initial draft
• Revision 2, 2015-08-21 (Ian Elliott)
  ◦ Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  ◦ Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.
• Revision 3, 2015-09-01 (James Jones)
  ◦ Restore single-field revision number.
• Revision 4, 2015-09-08 (James Jones)
  ◦ Allow creating multiple swapchains that share the same images using a single call to vkCreateSwapchainKHR().
• Revision 5, 2015-09-10 (Alon Or-bach)
  ◦ Removed underscores from SWAP_CHAIN in two enums.
• Revision 6, 2015-10-02 (James Jones)
  ◦ Added support for smart panels/buffered displays.
• Revision 7, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_display_swapchain to VK_KHR_display_swapchain.
• Revision 8, 2015-11-03 (Daniel Rakos)
  ◦ Updated sample code based on the changes to VK_KHR_swapchain.
• Revision 9, 2015-11-10 (Jesse Hall)
  ◦ Replaced VkDisplaySwapchainCreateInfoKHR with vkCreateSharedSwapchainsKHR, changing resolution of issue #4.
• Revision 10, 2017-03-13 (James Jones)
  ◦ Closed all remaining issues. The specification and implementations have been shipping with
    the proposed resolutions for some time now.
  ◦ Removed the sample code and noted it has been integrated into the official Vulkan SDK cube
demo.

Description
An application using external memory may wish to synchronize access to that memory using fences. This extension enables an application to export fence payload to and import fence payload from Windows handles.

New Commands
• vkGetFenceWin32HandleKHR
• vkImportFenceWin32HandleKHR

New Structures
• VkFenceGetWin32HandleInfoKHR
• VkImportFenceWin32HandleInfoKHR
• Extending VkFenceCreateInfo:
  • VkExportFenceWin32HandleInfoKHR
New Enum Constants

- VK_KHR_EXTERNAL_FENCE_WIN32_EXTENSION_NAME
- VK_KHR_EXTERNAL_FENCE_WIN32_SPEC_VERSION

Extending VkStructureType:

- VK_STRUCTURE_TYPE_EXPORT_FENCE_WIN32_HANDLE_INFO_KHR
- VK_STRUCTURE_TYPE_FENCE_GET_WIN32_HANDLE_INFO_KHR
- VK_STRUCTURE_TYPE_IMPORT_FENCE_WIN32_HANDLE_INFO_KHR

Issues

This extension borrows concepts, semantics, and language from VK_KHR_external_semaphore_win32. That extension’s issues apply equally to this extension.

1) Should D3D12 fence handle types be supported, like they are for semaphores?

**RESOLVED:** No. Doing so would require extending the fence signal and wait operations to provide values to signal / wait for, like VkD3D12FenceSubmitInfoKHR does. A D3D12 fence can be signaled by importing it into a VkSemaphore instead of a VkFence, and applications can check status or wait on the D3D12 fence using non-Vulkan APIs. The convenience of being able to do these operations on VkFence objects does not justify the extra API complexity.

Version History

- Revision 1, 2017-05-08 (Jesse Hall)
  - Initial revision

**VK_KHR_external_memory_fd**

Name String

VK_KHR_external_memory_fd

Extension Type

Device extension

Registered Extension Number

75

Revision

1

Ratification Status

Ratified

Extension and Version Dependencies

VK_KHR_external_memory
Description

An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export POSIX file descriptor handles from Vulkan memory objects and to import Vulkan memory objects from POSIX file descriptor handles exported from other Vulkan memory objects or from similar resources in other APIs.

New Commands

- vkGetMemoryFdKHR
- vkGetMemoryFdPropertiesKHR

New Structures

- VkMemoryFdPropertiesKHR
- VkMemoryGetFdInfoKHR
- Extending VkMemoryAllocateInfo:
  - VkImportMemoryFdInfoKHR

New Enum Constants

- VK_KHR_EXTERNAL_MEMORY_FD_EXTENSION_NAME
- VK_KHR_EXTERNAL_MEMORY_FD_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_IMPORT_MEMORY_FD_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_FD_PROPERTIES_KHR
Issues

1) Does the application need to close the file descriptor returned by `vkGetMemoryFdKHR`?

**RESOLVED:** Yes, unless it is passed back in to a driver instance to import the memory. A successful get call transfers ownership of the file descriptor to the application, and a successful import transfers it back to the driver. Destroying the original memory object will not close the file descriptor or remove its reference to the underlying memory resource associated with it.

2) Do drivers ever need to expose multiple file descriptors per memory object?

**RESOLVED:** No. This would indicate there are actually multiple memory objects, rather than a single memory object.

3) How should the valid size and memory type for POSIX file descriptor memory handles created outside of Vulkan be specified?

**RESOLVED:** The valid memory types are queried directly from the external handle. The size will be specified by future extensions that introduce such external memory handle types.

Description
An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export Windows handles from Vulkan memory objects and to import Vulkan memory objects from Windows handles exported from other Vulkan memory objects or from similar resources in other APIs.

New Commands
- vkGetMemoryWin32HandleKHR
- vkGetMemoryWin32HandlePropertiesKHR

New Structures
- VkMemoryGetWin32HandleInfoKHR
- VkMemoryWin32HandlePropertiesKHR
- Extending VkMemoryAllocateInfo:
  - VkExportMemoryWin32HandleInfoKHR
  - VkImportMemoryWin32HandleInfoKHR

New Enum Constants
- VK_KHR_EXTERNAL_MEMORY_WIN32_EXTENSION_NAME
- VK_KHR_EXTERNAL_MEMORY_WIN32_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_KHR
  - VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_GET_WIN32_HANDLE_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_WIN32_HANDLE_PROPERTIES_KHR
Issues

1) Do applications need to call CloseHandle() on the values returned from vkGetMemoryWin32HandleKHR when handleType is VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR?

RESOLVED: Yes, unless it is passed back in to another driver instance to import the object. A successful get call transfers ownership of the handle to the application. Destroying the memory object will not destroy the handle or the handle’s reference to the underlying memory resource.

2) Should the language regarding KMT/Windows 7 handles be moved to a separate extension so that it can be deprecated over time?

RESOLVED: No. Support for them can be deprecated by drivers if they choose, by no longer returning them in the supported handle types of the instance level queries.

3) How should the valid size and memory type for windows memory handles created outside of Vulkan be specified?

RESOLVED: The valid memory types are queried directly from the external handle. The size is determined by the associated image or buffer memory requirements for external handle types that require dedicated allocations, and by the size specified when creating the object from which the handle was exported for other external handle types.

Description

An application using external memory may wish to synchronize access to that memory using semaphores. This extension enables an application to export semaphore payload to and import semaphore payload from Windows handles.

New Commands

- `vkGetSemaphoreWin32HandleKHR`
- `vkImportSemaphoreWin32HandleKHR`

New Structures

- `VkImportSemaphoreWin32HandleInfoKHR`
- `VkSemaphoreGetWin32HandleInfoKHR`
- Extending `VkSemaphoreCreateInfo`:
  - `VkExportSemaphoreWin32HandleInfoKHR`
- Extending `VkSubmitInfo`:
  - `VkD3D12FenceSubmitInfoKHR`

New Enum Constants

- `VK_KHR_EXTERNAL_SEMAPHORE_WIN32_EXTENSION_NAME`
- `VK_KHR_EXTERNAL_SEMAPHORE_WIN32_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_D3D12_FENCE_SUBMIT_INFO_KHR`
  - `VK_STRUCTURE_TYPE_EXPORT_SEMAPHORE_WIN32_HANDLE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_IMPORT_SEMAPHORE_WIN32_HANDLE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_SEMAPHORE_GET_WIN32_HANDLE_INFO_KHR`

Issues

1) Do applications need to call `CloseHandle()` on the values returned from `vkGetSemaphoreWin32HandleKHR` when `handleType` is `VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR`?

**RESOLVED:** Yes, unless it is passed back in to another driver instance to import the object. A successful get call transfers ownership of the handle to the application. Destroying the semaphore object will not destroy the handle or the handle’s reference to the underlying semaphore resource.

2) Should the language regarding KMT/Windows 7 handles be moved to a separate extension so that it can be deprecated over time?
RESOLVED: No. Support for them can be deprecated by drivers if they choose, by no longer returning them in the supported handle types of the instance level queries.

3) Should applications be allowed to specify additional object attributes for shared handles?

RESOLVED: Yes. Applications will be allowed to provide similar attributes to those they would to any other handle creation API.

4) How do applications communicate the desired fence values to use with D3D12_FENCE-based Vulkan semaphores?

RESOLVED: There are a couple of options. The values for the signaled and reset states could be communicated up front when creating the object and remain static for the life of the Vulkan semaphore, or they could be specified using auxiliary structures when submitting semaphore signal and wait operations, similar to what is done with the keyed mutex extensions. The latter is more flexible and consistent with the keyed mutex usage, but the former is a much simpler API.

Since Vulkan tends to favor flexibility and consistency over simplicity, a new structure specifying D3D12 fence acquire and release values is added to the vkQueueSubmit function.

Interactions and External Dependencies
  • This extension provides API support for GL_EXT_fragment_shader_barycentric

Contributors
  • Stu Smith, AMD
  • Tobias Hector, AMD
  • Graeme Leese, Broadcom
  • Jan-Harald Fredriksen, Arm
  • Slawek Grajewski, Intel
  • Pat Brown, NVIDIA
  • Hans-Kristian Arntzen, Valve
  • Contributors to the VK_NV_fragment_shader_barycentric specification

Description
This extension is based on the VK_NV_fragment_shader_barycentric extension, and adds support for the following SPIR-V extension in Vulkan:

  • SPV_KHR_fragment_shader_barycentric

The extension provides access to three additional fragment shader variable decorations in SPIR-V:

  • PerVertexKHR, which indicates that a fragment shader input will not have interpolated values, but instead must be accessed with an extra array index that identifies one of the vertices of the primitive producing the fragment
  • BaryCoordKHR, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using perspective interpolation
  • BaryCoordNoPerspKHR, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using linear interpolation

When using GLSL source-based shader languages, the following variables from GL_EXT_fragment_shader_barycentric map to these SPIR-V built-in decorations:
GLSL variables declared using the `pervertexEXT` GLSL qualifier are expected to be decorated with `PerVertexKHR` in SPIR-V.

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR`

**New Enum Constants**

- `VK_KHR_FRAGMENT_SHADER_BARYCENTRIC_EXTENSION_NAME`
- `VK_KHR_FRAGMENT_SHADER_BARYCENTRIC_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR`

**New Built-In Variables**

- `BaryCoordKHR`
- `BaryCoordNoPerspKHR`

**New SPIR-V Decorations**

- `PerVertexKHR`

**New SPIR-V Capabilities**

- `FragmentBarycentricKHR`

**Issues**

1) What are the interactions with MSAA and how are `BaryCoordKHR` and `BaryCoordNoPerspKHR` interpolated?

**RESOLVED**: The inputs decorated with `BaryCoordKHR` or `BaryCoordNoPerspKHR` may also be decorated with the `Centroid` or `Sample` qualifiers to specify interpolation, like any other fragment shader input. If `shaderSampleRateInterpolationFunctions` is enabled, the extended instructions `InterpolateAtCentroid`, `InterpolateAtOffset`, and `InterpolateAtSample` from the GLSL.std.450 may also be used with inputs decorated with `BaryCoordKHR` or `BaryCoordNoPerspKHR`.

- Contributors to the VK_NV_shading_rate_image specification
- Contributors to the VK_EXT_fragment_density_map specification

Description

This extension adds the ability to change the rate at which fragments are shaded. Rather than the usual single fragment invocation for each pixel covered by a primitive, multiple pixels can be shaded by a single fragment shader invocation.

Up to three methods are available to the application to change the fragment shading rate:

- **Pipeline Fragment Shading Rate**, which allows the specification of a rate per-draw.
- **Primitive Fragment Shading Rate**, which allows the specification of a rate per primitive, specified during shading.
- **Attachment Fragment Shading Rate**, which allows the specification of a rate per-region of the framebuffer, specified in a specialized image attachment.

Additionally, these rates can all be specified and combined in order to adjust the overall detail in the image at each point.

This functionality can be used to focus shading efforts where higher levels of detail are needed in some parts of a scene compared to others. This can be particularly useful in high resolution rendering, or for XR contexts.

This extension also adds support for the SPV_KHR_fragment_shading_rate extension which enables setting the primitive fragment shading rate, and allows querying the final shading rate from a fragment shader.

New Commands

- vkCmdSetFragmentShadingRateKHR
• vkGetPhysicalDeviceFragmentShadingRatesKHR

New Structures

• VkPhysicalDeviceFragmentShadingRateKHR

• Extending VkGraphicsPipelineCreateInfo:
  ◦ VkPipelineFragmentShadingRateStateCreateInfoKHR

• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceFragmentShadingRateFeaturesKHR

• Extending VkPhysicalDeviceProperties2:
  ◦ VkPhysicalDeviceFragmentShadingRatePropertiesKHR

Description

This extension provides new queries for device display properties and capabilities that can be easily extended by other extensions, without introducing any further queries. This extension can be considered the \texttt{VK_KHR_display} equivalent of the \texttt{VK_KHR_get_physical_device_properties2} extension.

New Commands

• \texttt{vkGetDisplayModeProperties2KHR}
• \texttt{vkGetDisplayPlaneCapabilities2KHR}
• \texttt{vkGetPhysicalDeviceDisplayPlaneProperties2KHR}
• \texttt{vkGetPhysicalDeviceDisplayProperties2KHR}

New Structures

• \texttt{VkDisplayModeProperties2KHR}
• \texttt{VkDisplayPlaneCapabilities2KHR}
• \texttt{VkDisplayPlaneInfo2KHR}
• \texttt{VkDisplayPlaneProperties2KHR}
• \texttt{VkDisplayProperties2KHR}

New Enum Constants

• \texttt{VK_KHR_GET_DISPLAY_PROPERTIES_2_EXTENSION_NAME}
• \texttt{VK_KHR_GET_DISPLAY_PROPERTIES_2_SPEC_VERSION}
• Extending \texttt{VkStructureType}:
  ◦ \texttt{VK_STRUCTURE_TYPE_DISPLAY_MODE_PROPERTIES_2_KHR}
  ◦ \texttt{VK_STRUCTURE_TYPE_DISPLAY_PLANE_CAPABILITIES_2_KHR}
  ◦ \texttt{VK_STRUCTURE_TYPE_DISPLAY_PLANE_INFO_2_KHR}
  ◦ \texttt{VK_STRUCTURE_TYPE_DISPLAY_PLANE_PROPERTIES_2_KHR}
  ◦ \texttt{VK_STRUCTURE_TYPE_DISPLAY_PROPERTIES_2_KHR}

Issues

1) What should this extension be named?

\textbf{RESOLVED: VK_KHR_get_display_properties2.} Other alternatives:

• \texttt{VK_KHR_display2}
• One extension, combined with `VK_KHR_surface_capabilities2`.

2) Should extensible input structs be added for these new functions:

RESOLVED:

• `vkGetPhysicalDeviceDisplayProperties2KHR`: No. The only current input is a `VkPhysicalDevice`. Other inputs would not make sense.

• `vkGetPhysicalDeviceDisplayPlaneProperties2KHR`: No. The only current input is a `VkPhysicalDevice`. Other inputs would not make sense.

• `vkGetDisplayModeProperties2KHR`: No. The only current inputs are a `VkPhysicalDevice` and a `VkDisplayModeKHR`. Other inputs would not make sense.

3) Should additional display query functions be extended?

RESOLVED:

• `vkGetDisplayPlaneSupportedDisplaysKHR`: No. Extensions should instead extend `vkGetDisplayPlaneCapabilitiesKHR()`.

**Version History**

• Revision 1, 2017-02-21 (James Jones)
  ◦ Initial draft.

**Description**

This extension provides new queries for device surface capabilities that can be easily extended by other extensions, without introducing any further queries. This extension can be considered the `VK_KHR_surface` equivalent of the `VK_KHR_get_physical_device_properties2` extension.

**New Commands**

- `vkGetPhysicalDeviceSurfaceCapabilities2KHR`
- `vkGetPhysicalDeviceSurfaceFormats2KHR`

**New Structures**

- `VkPhysicalDeviceSurfaceInfo2KHR`
- `VkSurfaceCapabilities2KHR`
- `VkSurfaceFormat2KHR`

**New Enum Constants**

- `VK_KHR_GET_SURFACE_CAPABILITIES_2_EXTENSION_NAME`
- `VK_KHR_GET_SURFACE_CAPABILITIES_2_SPEC_VERSION`

Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SURFACE_INFO_2_KHR`
- `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_2_KHR`
- `VK_STRUCTURE_TYPE_SURFACE_FORMAT_2_KHR`

**Issues**

1) What should this extension be named?

**RESOLVED:** `VK_KHR_get_surface_capabilities2`. Other alternatives:
One extension, combining a separate display-specific query extension.

2) Should additional WSI query functions be extended?

RESOLVED:

- `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`: Yes. The need for this motivated the extension.
- `vkGetPhysicalDeviceSurfaceSupportKHR`: No. Currently only has boolean output. Extensions should instead extend `vkGetPhysicalDeviceSurfaceCapabilities2KHR`.
- `vkGetPhysicalDeviceSurfaceFormatsKHR`: Yes.
- `vkGetPhysicalDeviceSurfacePresentModesKHR`: No. Recent discussion concluded this introduced too much variability for applications to deal with. Extensions should instead extend `vkGetPhysicalDeviceSurfaceCapabilities2KHR`.
- `vkGetPhysicalDeviceXlibPresentationSupportKHR`: Not in this extension.
- `vkGetPhysicalDeviceXcbPresentationSupportKHR`: Not in this extension.
- `vkGetPhysicalDeviceWaylandPresentationSupportKHR`: Not in this extension.
- `vkGetPhysicalDeviceWin32PresentationSupportKHR`: Not in this extension.

`VK_KHR_get_physical_device_properties2`
Description

In Vulkan, users can specify device-scope queue priorities. In some cases it may be useful to extend this concept to a system-wide scope. This device extension allows applications to query the global queue priorities supported by a queue family, and then set a priority when creating queues. The default queue priority is `VK_QUEUE_GLOBAL_PRIORITY_MEDIUM_EXT`.

Implementations can report which global priority levels are treated differently by the implementation. It is intended primarily for use in system integration along with certain platform-specific priority enforcement rules.

The driver implementation will attempt to skew hardware resource allocation in favour of the higher-priority task. Therefore, higher-priority work may retain similar latency and throughput characteristics even if the system is congested with lower priority work.

The global priority level of a queue shall take precedence over the per-process queue priority (`VkDeviceQueueCreateInfo::pQueuePriorities`).

Abuse of this feature may result in starving the rest of the system from hardware resources. Therefore, the driver implementation may deny requests to acquire a priority above the default priority (`VK_QUEUE_GLOBAL_PRIORITY_MEDIUM_EXT`) if the caller does not have sufficient privileges. In this scenario `VK_ERROR_NOT_PERMITTED_EXT` is returned.

The driver implementation may fail the queue allocation request if resources required to complete the operation have been exhausted (either by the same process or a different process). In this scenario `VK_ERROR_INITIALIZATION_FAILED` is returned.

New Structures

- Extending `VkDeviceQueueCreateInfo`:
  - `VkDeviceQueueGlobalPriorityCreateInfoKHR`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR`
- Extending `VkQueueFamilyProperties2`:
New Enums

• VkQueueFamilyGlobalPriorityPropertiesKHR

New Enum Constants

• VK_KHR_GLOBAL_PRIORITY_EXTENSION_NAME
• VK_KHR_GLOBAL_PRIORITY_SPEC_VERSION
• VK_MAX_GLOBAL_PRIORITY_SIZE_KHR

Extending VkResult:

• VK_ERROR_NOT_PERMITTED_KHR

Extending VkStructureType:

• VK_STRUCTURE_TYPE_DEVICE_QUEUE_GLOBAL_PRIORITY_CREATE_INFO_KHR
• VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES_KHR
• VK_STRUCTURE_TYPE_QUEUE_FAMILY_GLOBAL_PRIORITY_PROPERTIES_KHR

Issues

1) Can we additionally query whether a caller is permitted to acquire a specific global queue priority in this extension?

**RESOLVED:** No. Whether a caller has enough privilege goes with the OS, and the Vulkan driver cannot really guarantee that the privilege will not change in between this query and the actual queue creation call.

2) If more than 1 queue using global priority is requested, is there a good way to know which queue is failing the device creation?

**RESOLVED:** No. There is not a good way at this moment, and it is also not quite actionable for the applications to know that because the information may not be accurate. Queue creation can fail because of runtime constraints like insufficient privilege or lack of resource, and the failure is not necessarily tied to that particular queue configuration requested.

Description
This device extension extends `vkQueuePresentKHR`, from the `VK_KHR_swapchain` extension, allowing an application to specify a list of rectangular, modified regions of each image to present. This should be used in situations where an application is only changing a small portion of the presentable images within a swapchain, since it enables the presentation engine to avoid wasting time presenting parts of the surface that have not changed.
This extension is leveraged from the `EGL_KHR_swap_buffers_with_damage` extension.

**New Structures**

- `VkPresentRegionKHR`
- `VkRectLayerKHR`
- Extending `VkPresentInfoKHR`:
  - `VkPresentRegionsKHR`

**New Enum Constants**

- `VK_KHR_INCREMENTAL_PRESENT_EXTENSION_NAME`
- `VK_KHR_INCREMENTAL_PRESENT_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR`

**Issues**

1) How should we handle stereo-3D swapchains? We need to add a layer for each rectangle. One approach is to create another struct containing the `VkRect2D` plus layer, and have `VkPresentRegionsKHR` point to an array of that struct. Another approach is to have two parallel arrays, `pRectangles` and `pLayers`, where `pRectangles[i]` and `pLayers[i]` must be used together. Which approach should we use, and if the array of a new structure, what should that be called?

**RESOLVED:** Create a new structure, which is a `VkRect2D` plus a layer, and will be called `VkRectLayerKHR`.

2) Where is the origin of the `VkRectLayerKHR`?

**RESOLVED:** The upper left corner of the presentable image(s) of the swapchain, per the definition of framebuffer coordinates.

3) Does the rectangular region, `VkRectLayerKHR`, specify pixels of the swapchain’s image(s), or of the surface?

**RESOLVED:** Of the image(s). Some presentation engines may scale the pixels of a swapchain’s image(s) to the size of the surface. The size of the swapchain’s image(s) will be consistent, where the size of the surface may vary over time.

4) What if all of the rectangles for a given swapchain contain a width and/or height of zero?

**RESOLVED:** The application is indicating that no pixels changed since the last present. The presentation engine may use such a hint and not update any pixels for the swapchain. However, all other semantics of `vkQueuePresentKHR` must still be honored, including waiting for semaphores to signal.

5) When the swapchain is created with `VkSwapchainCreateInfoKHR::preTransform` set to a value other than `VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR`, should the rectangular region, `VkRectLayerKHR`, be
transformed to align with the `preTransform`?

**RESOLVED**: No. The rectangular region in `VkRectLayerKHR` should not be transformed. As such, it may not align with the extents of the swapchain’s image(s). It is the responsibility of the presentation engine to transform the rectangular region. This matches the behavior of the Android presentation engine, which set the precedent.

### Version History

- Revision 1, 2016-11-02 (Ian Elliott)
  - Internal revisions
- Revision 2, 2021-03-18 (Ian Elliott)
  - Clarified alignment of rectangles for presentation engines that support transformed swapchains.

Description

VK_KHR_maintenance5 adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

- A new VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR format
- A new VK_FORMAT_A8_UNORM_KHR format
- A property to indicate that multisample coverage operations are performed after sample counting in EarlyFragmentTests mode
- Relax VkBufferView creation requirements by allowing subsets of the associated VkBuffer usage using VkBufferUsageFlags2CreateInfoKHR
- A new entry point vkCmdBindIndexBuffer2KHR, allowing a range of memory to be bound as an index buffer
- vkGetDeviceProcAddr must return NULL for supported core functions beyond the version requested by the application.
- A property to indicate that the sample mask test is performed after sample counting in EarlyFragmentTests mode
- vkCmdBindVertexBuffers2 now supports using VK_WHOLE_SIZE in the pSizes parameter.
- A default size of 1.0 is used if PointSize is not written
- Shader modules are deprecated - applications can now pass VkShaderModuleCreateInfo as a chained struct to pipeline creation via VkPipelineShaderStageCreateInfo
- A function vkGetRenderingAreaGranularityKHR to query the optimal render area for a dynamic rendering instance.
- A property to indicate that depth/stencil texturing operations with VK_COMPONENT_SWIZZLE_ONE have defined behavior
- Add vkgetImageSubresourceLayout2KHR and a new function vkGetDeviceImageSubresourceLayoutKHR to allow the application to query the image memory layout without having to create an image object and query it.
- Allow VK_REMAINING_ARRAY_LAYERS as the layerCount member of VkImageSubresourceLayers
- Adds stronger guarantees for propagation of VK_ERROR_DEVICE_LOST return values
• A property to indicate whether `PointSize` controls the final rasterization of polygons if `polygon mode` is `VK_POLYGON_MODE_POINT`.

• Two properties to indicate the non-strict line rasterization algorithm used.

• Two new flags words `VkPipelineCreateFlagBits2KHR` and `VkBufferUsageFlagBits2KHR`.

• Physical-device-level functions can now be called with any value in the valid range for a type beyond the defined enumerants, such that applications can avoid checking individual features, extensions, or versions before querying supported properties of a particular enumerant.

• Clarification that copies between images of any type are allowed, treating 1D images as 2D images with a height of 1.

**New Commands**

- `vkCmdBindIndexBuffer2KHR`
- `vkGetDeviceImageSubresourceLayoutKHR`
- `vkGetImageSubresourceLayout2KHR`
- `vkGetRenderingAreaGranularityKHR`

**New Structures**

- `VkDeviceImageSubresourceInfoKHR`
- `VkImageSubresource2KHR`
- `VkRenderingAreaInfoKHR`
- `VkSubresourceLayout2KHR`

- Extending `VkBufferViewCreateInfo`, `VkBufferCreateInfo`, `VkPhysicalDeviceExternalBufferInfo`, `VkDescriptorBufferBindingInfoEXT`:
  - `VkBufferUsageFlags2CreateInfoKHR`

- Extending `VkComputePipelineCreateInfo`, `VkGraphicsPipelineCreateInfo`, `VkRayTracingPipelineCreateInfoNV`, `VkRayTracingPipelineCreateInfoKHR`:
  - `VkPipelineCreateFlags2CreateInfoKHR`

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceMaintenance5FeaturesKHR`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceMaintenance5PropertiesKHR`

**New Enums**

- `VkBufferUsageFlagBits2KHR`
- `VkPipelineCreateFlagBits2KHR`
New Bitmasks

- VkBufferUsageFlags2KHR
- VkPipelineCreateFlags2KHR

New Enum Constants

- VK_KHR_MAINTENANCE_5_EXTENSION_NAME
- VK_KHR_MAINTENANCE_5_SPEC_VERSION

Extending VkFormat:

- VK_FORMAT_A1B5G5R5_UNORM_PACK16_KHR
- VK_FORMAT_A8_UNORM_KHR

Extending VkStructureType:

- VK_STRUCTURE_TYPE_BUFFER_USAGE_FLAGS_2_CREATE_INFO_KHR
- VK_STRUCTURE_TYPE_DEVICE_IMAGE_SUBRESOURCE_INFO_KHR
- VK_STRUCTURE_TYPE_IMAGE_SUBRESOURCE_2_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_FEATURES_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_5_PROPERTIES_KHR
- VK_STRUCTURE_TYPE_PIPELINE_CREATE_FLAGS_2_CREATE_INFO_KHR
- VK_STRUCTURE_TYPE_RENDERING_AREA_INFO_KHR
- VK_STRUCTURE_TYPE_SUBRESOURCE_LAYOUT_2_KHR

If VK_EXT_attachment_feedback_loop_layout is supported:

- Extending VkPipelineCreateFlagBits2KHR:
  - VK_PIPELINE_CREATE_2_COLOR_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT
  - VK_PIPELINE_CREATE_2_DEPTH_STENCIL_ATTACHMENT_FEEDBACK_LOOP_BIT_EXT

If VK_EXT_conditional_rendering is supported:

- Extending VkBufferUsageFlagBits2KHR:
  - VK_BUFFER_USAGE_2_CONDITIONAL_RENDERING_BIT_EXT

If VK_EXT_descriptor_buffer is supported:

- Extending VkBufferUsageFlagBits2KHR:
  - VK_BUFFER_USAGE_2_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT
  - VK_BUFFER_USAGE_2_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT
  - VK_BUFFER_USAGE_2_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT

- Extending VkPipelineCreateFlagBits2KHR:
  - VK_PIPELINE_CREATE_2_DESCRIPTOR_BUFFER_BIT_EXT
If `VK_EXT_graphics_pipeline_library` is supported:

- Extending `VkPipelineCreateFlagBits2KHR`:
  - `VK_PIPELINE_CREATE_2_LINK_TIME_OPTIMIZATION_BIT_EXT`
  - `VK_PIPELINE_CREATE_2_RETAIN_LINK_TIME_OPTIMIZATION_INFO_BIT_EXT`

If `VK_EXT_opacity_micromap` is supported:

- Extending `VkBufferUsageFlagBits2KHR`:
  - `VK_BUFFER_USAGE_2_MICROMAP_BUILD_INPUT_READ_ONLY_BIT_EXT`
  - `VK_BUFFER_USAGE_2_MICROMAP_STORAGE_BIT_EXT`

- Extending `VkPipelineCreateFlagBits2KHR`:
  - `VK_PIPELINE_CREATE_2_RAY_TRACING_OPACITY_MICROMAP_BIT_EXT`

If `VK_EXT_pipeline_protected_access` is supported:

- Extending `VkPipelineCreateFlagBits2KHR`:
  - `VK_PIPELINE_CREATE_2_NO_PROTECTED_ACCESS_BIT_EXT`
  - `VK_PIPELINE_CREATE_2_PROTECTED_ACCESS_ONLY_BIT_EXT`

If `VK_EXT_transform_feedback` is supported:

- Extending `VkBufferUsageFlagBits2KHR`:
  - `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`
  - `VK_BUFFER_USAGE_2_TRANSFORM_FEEDBACK_COUNTER_BUFFER_BIT_EXT`

If `VK_KHR_acceleration_structure` is supported:

- Extending `VkBufferUsageFlagBits2KHR`:
  - `VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR`
  - `VK_BUFFER_USAGE_2_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR`

If `VK_KHR_dynamic_rendering` and `VK_EXT_fragment_density_map` is supported:

- Extending `VkPipelineCreateFlagBits2KHR`:
  - `VK_PIPELINE_CREATE_2_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT`

If `VK_KHR_dynamic_rendering` and `VK_KHR_fragment_shading_rate` is supported:

- Extending `VkPipelineCreateFlagBits2KHR`:
  - `VK_PIPELINE_CREATE_2_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR`

If `VK_KHR_pipeline_executable_properties` is supported:

- Extending `VkPipelineCreateFlagBits2KHR`:
If **VK_KHR_pipeline_library** is supported:

- Extending **VkPipelineCreateFlagBits2KHR**:
  - **VK_PIPELINE_CREATE_2_LIBRARY_BIT_KHR**

If **VK_KHR_ray_tracing_pipeline** is supported:

- Extending **VkBufferUsageFlagBits2KHR**:
  - **VK_BUFFER_USAGE_2_SHADER_BINDING_TABLE_BIT_KHR**

- Extending **VkPipelineCreateFlagBits2KHR**:
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR**
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR**
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR**
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR**
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR**
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_AABBS_BIT_KHR**
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR**

If **VK_KHR_video_decode_queue** is supported:

- Extending **VkBufferUsageFlagBits2KHR**:
  - **VK_BUFFER_USAGE_2_VIDEO_DECODE_DST_BIT_KHR**
  - **VK_BUFFER_USAGE_2_VIDEO_DECODE_SRC_BIT_KHR**

If **VK_KHR_video_encode_queue** is supported:

- Extending **VkBufferUsageFlagBits2KHR**:
  - **VK_BUFFER_USAGE_2_VIDEO_ENCODE_DST_BIT_KHR**
  - **VK_BUFFER_USAGE_2_VIDEO_ENCODE_SRC_BIT_KHR**

If **VK_NV_device_generated_commands** is supported:

- Extending **VkPipelineCreateFlagBits2KHR**:
  - **VK_PIPELINE_CREATE_2_INDIRECT_BINDABLE_BIT_NV**

If **VK_NV_displacement_micromap** is supported:

- Extending **VkPipelineCreateFlagBits2KHR**:
  - **VK_PIPELINE_CREATE_2_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV**

If **VK_NV_ray_tracing** is supported:
• Extending `VkBufferUsageFlagBits2KHR`:
  ◦ `VK_BUFFER_USAGE_2_RAY_TRACING_BIT_NV`

• Extending `VkPipelineCreateFlagBits2KHR`:
  ◦ `VK_PIPELINE_CREATE_2_DEFER_COMPILE_BIT_NV`

If `VK_NV_ray_tracing_motion_blur` is supported:

• Extending `VkPipelineCreateFlagBits2KHR`:
  ◦ `VK_PIPELINE_CREATE_2_RAY_TRACING_ALLOW_MOTION_BIT_NV`

If Version 1.1 or `VK_KHR_device_group` is supported:

• Extending `VkPipelineCreateFlagBits2KHR`:
  ◦ `VK_PIPELINE_CREATE_2_DISPATCH_BASE_BIT_KHR`
  ◦ `VK_PIPELINE_CREATE_2_VIEW_INDEX_FROM_DEVICE_INDEX_BIT_KHR`

If Version 1.2 or `VK_KHR_buffer_device_address` or `VK_EXT_buffer_device_address` is supported:

• Extending `VkBufferUsageFlagBits2KHR`:
  ◦ `VK_BUFFER_USAGE_2_SHADER_DEVICE_ADDRESS_BIT_KHR`

If Version 1.3 or `VK_EXT_pipeline_creation_cache_control` is supported:

• Extending `VkPipelineCreateFlagBits2KHR`:
  ◦ `VK_PIPELINE_CREATE_2_EARLY_RETURN_ON_FAILURE_BIT_KHR`
  ◦ `VK_PIPELINE_CREATE_2_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_KHR`

Description

This extension provides extensible versions of the Vulkan memory map and unmap entry points. The new entry points are functionally identical to the core entry points, except that their parameters are specified using extensible structures that can be used to pass extension-specific information.

New Commands

• vkMapMemory2KHR
• vkUnmapMemory2KHR

New Structures

• VkMemoryMapInfoKHR
• VkMemoryUnmapInfoKHR

New Bitmasks

• VkMemoryUnmapFlagsKHR
New Enum Constants

- VK_KHR_MAP_MEMORY_2_EXTENSION_NAME
- VK_KHR_MAP_MEMORY_2_SPEC_VERSION

Extending VkStructureType:
- VK_STRUCTURE_TYPE_MEMORY_MAP_INFO_KHR
- VK_STRUCTURE_TYPE_MEMORY_UNMAP_INFO_KHR

Other Extension Metadata
Description

The `VK_KHR_performance_query` extension adds a mechanism to allow querying of performance counters for use in applications and by profiling tools.

Each queue family may expose counters that can be enabled on a queue of that family. We extend `VkQueryType` to add a new query type for performance queries, and chain a structure on `VkQueryPoolCreateInfo` to specify the performance queries to enable.

New Commands

- `vkAcquireProfilingLockKHR`
- `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR`
- `vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR`
- `vkReleaseProfilingLockKHR`

New Structures

- `VkAcquireProfilingLockInfoKHR`
- `VkPerformanceCounterDescriptionKHR`
• VkPerformanceCounterKHR
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDevicePerformanceQueryFeaturesKHR
• Extending VkPhysicalDeviceProperties2:
  ◦ VkPhysicalDevicePerformanceQueryPropertiesKHR
• Extending VkQueryPoolCreateInfo:
  ◦ VkQueryPoolPerformanceCreateInfoKHR
• Extending VkSubmitInfo, VkSubmitInfo2:
  ◦ VkPerformanceQuerySubmitInfoKHR

New Unions
• VkPerformanceCounterResultKHR

New Enums
• VkAcquireProfilingLockFlagBitsKHR
• VkPerformanceCounterDescriptionFlagBitsKHR
• VkPerformanceCounterScopeKHR
• VkPerformanceCounterStorageKHR
• VkPerformanceCounterUnitKHR

New Bitmasks
• VkAcquireProfilingLockFlagsKHR
• VkPerformanceCounterDescriptionFlagsKHR

New Enum Constants
• VK_KHR_PERFORMANCE_QUERY_EXTENSION_NAME
• VK_KHR_PERFORMANCE_QUERY_SPEC_VERSION
• Extending VkQueryType:
  ◦ VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_PERFORMANCE_COUNTER_DESCRIPTION_KHR
  ◦ VK_STRUCTURE_TYPE_PERFORMANCE_COUNTER_KHR
  ◦ VK_STRUCTURE_TYPE_PERFORMANCE_QUERY_SUBMIT_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_FEATURES_KHR
Issues

1) Should this extension include a mechanism to begin a query in command buffer $A$ and end the query in command buffer $B$?

**RESOLVED** No - queries are tied to command buffer creation and thus have to be encapsulated within a single command buffer.

2) Should this extension include a mechanism to begin and end queries globally on the queue, not using the existing command buffer commands?

**RESOLVED** No - for the same reasoning as the resolution of 1).

3) Should this extension expose counters that require multiple passes?

**RESOLVED** Yes - users should re-submit a command buffer with the same commands in it multiple times, specifying the pass to count as the query parameter in VkPerformanceQuerySubmitInfoKHR.

4) How to handle counters across parallel workloads?

**RESOLVED** In the spirit of Vulkan, a counter description flag VK_PERFORMANCE_COUNTER_DESCRIPTION_CONCURRENTLY_IMPACTED_BIT_KHR denotes that the accuracy of a counter result is affected by parallel workloads.

5) How to handle secondary command buffers?

**RESOLVED** Secondary command buffers inherit any counter pass index specified in the parent primary command buffer. Note: this is no longer an issue after change from issue 10 resolution.

6) What commands does the profiling lock have to be held for?

**RESOLVED** For any command buffer that is being queried with a performance query pool, the profiling lock must be held while that command buffer is in the recording, executable, or pending state.

7) Should we support vkCmdCopyQueryPoolResults?

**RESOLVED** Yes.

8) Should we allow performance queries to interact with multiview?

**RESOLVED** Yes, but the performance queries must be performed once for each pass per view.

9) Should a queryCount > 1 be usable for performance queries?

**RESOLVED** Yes. Some vendors will have costly performance counter query pool creation, and would rather if a certain set of counters were to be used multiple times that a queryCount > 1 can be used to amortize the instantiation cost.
10) Should we introduce an indirect mechanism to set the counter pass index?

**RESOLVED** Specify the counter pass index at submit time instead, to avoid requiring re-recording of command buffers when multiple counter passes are needed.

**Examples**

The following example shows how to find what performance counters a queue family supports, setup a query pool to record these performance counters, how to add the query pool to the command buffer to record information, and how to get the results from the query pool.

```c
// A previously created physical device
VkPhysicalDevice physicalDevice;

// One of the queue families our device supports
uint32_t queueFamilyIndex;

uint32_t counterCount;

// Get the count of counters supported
vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR(
    physicalDevice, 
    queueFamilyIndex, 
    &counterCount, 
    NULL, 
    NULL);

VkPerformanceCounterKHR* counters = 
    malloc(sizeof(VkPerformanceCounterKHR) * counterCount);
VkPerformanceCounterDescriptionKHR* counterDescriptions = 
    malloc(sizeof(VkPerformanceCounterDescriptionKHR) * counterCount);

// Get the counters supported
vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR(
    physicalDevice, 
    queueFamilyIndex, 
    &counterCount, 
    counters, 
    counterDescriptions);

// Try to enable the first 8 counters
uint32_t enabledCounters[8];

const uint32_t enabledCounterCount = min(counterCount, 8));

for (uint32_t i = 0; i < enabledCounterCount; i++) {
    enabledCounters[i] = i;
}

// A previously created device that had the performanceCounterQueryPools feature
```
// set to VK_TRUE
VkDevice device;

VkQueryPoolPerformanceCreateInfoKHR performanceQueryCreateInfo = {
    .sType = VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR,
    .pNext = NULL,
};

// Specify the queue family that this performance query is performed on
.queueFamilyIndex = queueFamilyIndex,

// The number of counters to enable
.counterIndexCount = enabledCounterCount,

// The array of indices of counters to enable
.pCounterIndices = enabledCounters
};

// Get the number of passes our counters will require.
uint32_t numPasses;

vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    physicalDevice,
    &performanceQueryCreateInfo,
    &numPasses);

VkQueryPoolCreateInfo queryPoolCreateInfo = {
    .sType = VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO,
    .pNext = &performanceQueryCreateInfo,
    .flags = 0,
    // Using our new query type here
    .queryType = VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR,
    .queryCount = 1,
    .pipelineStatistics = 0
};

VkQueryPool queryPool;

VkResult result = vkCreateQueryPool(
    device,
    &queryPoolCreateInfo,
    NULL,
    &queryPool);

assert(VK_SUCCESS == result);

// A queue from queueFamilyIndex
VkQueue queue;

// A command buffer we want to record counters on
VkCommandBuffer commandBuffer;
VkCommandBufferBeginInfo commandBufferBeginInfo = {
    .sType = VK_STRUCTURE_TYPE_COMMAND_BUFFER_BEGIN_INFO,
    .pNext = NULL,
    .flags = 0,

**Description**

When a pipeline is created, its state and shaders are compiled into zero or more device-specific executables, which are used when executing commands against that pipeline. This extension adds a mechanism to query properties and statistics about the different executables produced by the pipeline compilation process. This is intended to be used by debugging and performance tools to allow them to provide more detailed information to the user. Certain compile time shader statistics provided through this extension may be useful to developers for debugging or performance analysis.

**New Commands**

- vkGetPipelineExecutableInternalRepresentationsKHR
- vkGetPipelineExecutablePropertiesKHR
- vkGetPipelineExecutableStatisticsKHR

**New Structures**

- VkPipelineExecutableInfoKHR
- VkPipelineExecutableInternalRepresentationKHR
• VkPipelineExecutablePropertiesKHR

  ◦ VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_PROPERTIES_KHR
  ◦ VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_STATISTIC_KHR
  ◦ VK_STRUCTURE_TYPE_PIPELINE_INFO_KHR

Issues

1) What should we call the pieces of the pipeline which are produced by the compilation process and about which you can query properties and statistics?

Resolved: Call them “executables”. The name “binary” was used in early drafts of the extension but it was determined that “pipeline binary” could have a fairly broad meaning (such as a binary serialized form of an entire pipeline) and was too big of a namespace for the very specific needs of this extension.

Description
A pipeline library is a special pipeline that cannot be bound, instead it defines a set of shaders and shader groups which can be linked into other pipelines. This extension defines the infrastructure for pipeline libraries, but does not specify the creation or usage of pipeline libraries. This is left to additional dependent extensions.

Interactions and External Dependencies

- Interacts with `VK_KHR_portability_subset`

Contributors

- Lenny Komow, LunarG
- Charles Giessen, LunarG

Description

This extension allows applications to control whether devices that expose the `VK_KHR_portability_subset` extension are included in the results of physical device enumeration. Since devices which support the `VK_KHR_portability_subset` extension are not fully conformant Vulkan implementations, the Vulkan loader does not report those devices unless the application explicitly asks for them. This prevents applications which may not be aware of non-conformant devices from accidentally using them, as any device which supports the `VK_KHR_portability_subset` extension mandates that the extension must be enabled if that device is used.

This extension is implemented in the loader.

New Enum Constants

- `VK_KHR_PORTABILITY_ENUMERATION_EXTENSION_NAME`
- `VK_KHR_PORTABILITY_ENUMERATION_SPEC_VERSION`
- Extending `VkInstanceCreateFlagBits`:
  - `VK_INSTANCE_CREATE_ENUMERATE_PORTABILITY_BIT_KHR`

Version History

Description

This device extension allows an application that uses the VK_KHR_swapchain extension to provide an identifier for present operations on a swapchain. An application can use this to reference specific present operations in other extensions.

New Structures

• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDevicePresentIdFeaturesKHR

• Extending VkPresentInfoKHR:
  ◦ VkPresentIdKHR

New Enum Constants

• VK_KHR_PRESENT_ID_EXTENSION_NAME
• VK_KHR_PRESENT_ID_SPEC_VERSION

• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_ID_FEATURES_KHR
  ◦ VK_STRUCTURE_TYPE_PRESENT_ID_KHR
Issues
None.

Description

This device extension allows an application that uses the \texttt{VK_KHR_swapchain} extension to wait for present operations to complete. An application can use this to monitor and control the pacing of the application by managing the number of outstanding images yet to be presented.

New Commands

- \texttt{vkWaitForPresentKHR}

New Structures

- Extending \texttt{VkPhysicalDeviceFeatures2, VkDeviceCreateInfo}:
  - \texttt{VkPhysicalDevicePresentWaitFeaturesKHR}

New Enum Constants

- \texttt{VK_KHR_PRESENT_WAIT_EXTENSION_NAME}
- \texttt{VK_KHR_PRESENT_WAIT_SPEC_VERSION}
- Extending \texttt{VkStructureType}:
  - \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_WAIT_FEATURES_KHR}

Issues

1) When does the wait finish?

\textbf{RESOLVED}. The wait will finish when the present is visible to the user. There is no requirement for any precise timing relationship between the presentation of the image to the user, but implementations \textbf{should} signal the wait as close as possible to the presentation of the first pixel in the new image to the user.

2) Should this use fences or other existing synchronization mechanism.

\textbf{RESOLVED}. Because display and rendering are often implemented in separate drivers, this extension will provide a separate synchronization API.

3) Should this extension share present identification with other extensions?

\textbf{RESOLVED}. Yes. A new extension, \texttt{VK_KHR_present_id}, should be created to provide a shared structure for presentation identifiers.

4) What happens when presentations complete out of order wrt calls to \texttt{vkQueuePresent}? This could happen if the semaphores for the presentations were ready out of order.

\textbf{OPTION A}: Require that when a PresentId is set that the driver ensure that images are always
presented in the order of calls to vkQueuePresent.

**OPTION B**: Finish both waits when the earliest present completes. This will complete the later present wait earlier than the actual presentation. This should be the easiest to implement as the driver need only track the largest present ID completed. This is also the ‘natural’ consequence of interpreting the existing vkWaitForPresentKHR specification.

**OPTION C**: Finish both waits when both have completed. This will complete the earlier presentation later than the actual presentation time. This is allowed by the current specification as there is no precise timing requirement for when the presentId value is updated. This requires slightly more complexity in the driver as it will need to track all outstanding presentId values.

**Examples**

Description
This extension allows descriptors to be written into the command buffer, while the implementation is responsible for managing their memory. Push descriptors may enable easier porting from older APIs and in some cases can be more efficient than writing descriptors into descriptor sets.

New Commands
- `vkCmdPushDescriptorSetKHR`

If `VK_KHR_descriptor_update_template` is supported:
- `vkCmdPushDescriptorSetWithTemplateKHR`

If Version 1.1 is supported:
- `vkCmdPushDescriptorSetWithTemplateKHR`

New Structures
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDevicePushDescriptorPropertiesKHR`

New Enum Constants
- `VK_KHR_PUSH_DESCRIPTOR_EXTENSION_NAME`
- `VK_KHR_PUSH_DESCRIPTOR_SPEC_VERSION`
- Extending `VkDescriptorSetLayoutCreateFlagBits`:
  - `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_DESCRIPTOR_PROPERTIES_KHR`

If `VK_KHR_descriptor_update_template` is supported:
- Extending `VkDescriptorUpdateTemplateType`:
If Version 1.1 is supported:

- Extending VkDescriptorUpdateTemplateType:
  - VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORS_KHR

Version History

Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

Ray queries are available to all shader types, including graphics, compute and ray tracing pipelines. Ray queries are not able to launch additional shaders, instead returning traversal results to the calling shader.

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_KHR_ray_query

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceRayQueryFeaturesKHR

New Enum Constants

- VK_KHR_RAY_QUERY_EXTENSION_NAME
- VK_KHR_RAY_QUERY_SPEC_VERSION

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR

New SPIR-V Capabilities

- RayQueryKHR
- RayTraversalPrimitiveCullingKHR
Sample Code

Example of ray query in a GLSL shader, illustrating how to use ray queries to determine whether a given position (at ray origin) is in shadow or not, by tracing a ray towards the light, and checking for any intersections with geometry occluding the light.

```glsl
rayQueryEXT rq;
rayQueryInitializeEXT(rq, accStruct, gl_RayFlagsTerminateOnFirstHitEXT, cullMask, origin, tMin, direction, tMax);

// Traverse the acceleration structure and store information about the first intersection (if any)
rayQueryProceedEXT(rq);

if (rayQueryGetIntersectionTypeEXT(rq, true) == gl_RayQueryCommittedIntersectionNoneEXT) {
    // Not in shadow
}
```

Issues

(1) What are the changes between the public provisional (VK_KHR_ray_tracing v8) release and the final (VK_KHR_acceleration_structure v11 / VK_KHR_ray_query v1) release?

- refactor VK_KHR_ray_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - VK_KHR_acceleration_structure (for acceleration structure operations)
  - VK_KHR_ray_tracing_pipeline (for ray tracing pipeline and shader stages)
  - VK_KHR_ray_query (for ray queries in existing shader stages)
- Update SPIRV capabilities to use RayQueryKHR
- extension is no longer provisional

Version History

- Revision 1, 2020-11-12 (Mathieu Robart, Daniel Koch, Andrew Garrard)
  - Decomposition of the specification, from VK_KHR_ray_tracing to VK_KHR_ray_query (#1918,!3912)
  - update to use RayQueryKHR SPIR-V capability
  - add numerical limits for ray parameters (#2235,!3960)
  - relax formula for ray intersection candidate determination (#2322,!4080)
  - restrict traces to TLAS (#2239,!4141)
  - require HitT to be in ray interval for OpRayQueryGenerateIntersectionKHR (#2359,!4146)
add ray query shader stages for AS read bit (#2407,#4203)

- Tobias Hector, AMD
- Marius Bjorge, Arm
- Tom Olson, Arm
Description

VK_KHR_ray_tracing_maintenance1 adds a collection of minor ray tracing features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Adds support for the SPV_KHR_ray_cull_mask SPIR-V extension in Vulkan. This extension provides access to built-in CullMaskKHR shader variable which contains the value of the OpTrace* Cull Mask parameter. This new shader variable is accessible in the intersection, any-hit, closest-hit and miss shader stages.
- Adds support for a new pipeline stage and access mask built on top of VK_KHR_synchronization2:
  - VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR to specify execution of acceleration structure copy commands
  - VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR to specify read access to a shader binding table in any shader pipeline stage
- Adds two new acceleration structure query parameters:
  - VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR to query the acceleration structure size on the device timeline
  - VK_QUERY_TYPE_ACCELERATION_STRUCTURE.Serialization_BOTTOM_LEVEL_POINTERS_KHR to query the number of bottom level acceleration structure pointers for serialization
- Adds an optional new indirect ray tracing dispatch command, vkCmdTraceRaysIndirect2KHR, which sources the shader binding table parameters as well as the dispatch dimensions from the device. The rayTracingPipelineTraceRaysIndirect2 feature indicates whether this functionality is supported.

New Commands

If VK_KHR_ray_tracing_pipeline is supported:

- vkCmdTraceRaysIndirect2KHR
New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR`

If `VK_KHR_ray_tracing_pipeline` is supported:

- `VkTraceRaysIndirectCommand2KHR`

New Enum Constants

- `VK_KHR_RAY_TRACING_MAINTENANCE_1_EXTENSION_NAME`
- `VK_KHR_RAY_TRACING_MAINTENANCE_1_SPEC_VERSION`

- Extending `VkQueryType`:
  - `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
  - `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MAINTENANCE_1_FEATURES_KHR`

If `VK_KHR_synchronization2` is supported:

- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`

If `VK_KHR_synchronization2` and `VK_KHR_ray_tracing_pipeline` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR`

New Built-In Variables

- `CullMaskKHR`

New SPIR-V Capabilities

- `RayCullMaskKHR`

Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

To enable ray tracing, this extension adds a few different categories of new functionality:

- A new ray tracing pipeline type with new shader domains: ray generation, intersection, any-hit, closest hit, miss, and callable
- A shader binding indirection table to link shader groups with acceleration structure items
- Ray tracing commands which initiate the ray pipeline traversal and invocation of the various new shader domains depending on which traversal conditions are met

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_KHR_ray_tracing

New Commands

- vkCmdSetRayTracingPipelineStackSizeKHR
- vkCmdTraceRaysIndirectKHR
- vkCmdTraceRaysKHR
- vkCreateRayTracingPipelinesKHR
- vkGetRayTracingCaptureReplayShaderGroupHandlesKHR
- vkGetRayTracingShaderGroupHandlesKHR
- vkGetRayTracingShaderGroupStackSizeKHR

New Structures

- VkRayTracingPipelineCreateInfoKHR
- VkRayTracingPipelineInterfaceCreateInfoKHR
- VkRayTracingShaderGroupCreateInfoKHR
- VkStridedDeviceAddressRegionKHR
- VkTraceRaysIndirectCommandKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceRayTracingPipelineFeaturesKHR
- Extending VkPhysicalDeviceProperties2:
New Enums

- VkPhysicalDeviceRayTracingPipelinePropertiesKHR

New Enums

- VkRayTracingShaderGroupTypeKHR
- VkShaderGroupShaderKHR

New Enum Constants

- VK_KHR_RAY_TRACING_PIPELINE_EXTENSION_NAME
- VK_KHR_RAY_TRACING_PIPELINE_SPEC_VERSION
- VK_SHADER_UNUSED_KHR

Extending VkBufferUsageFlagBits:

- VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR

Extending VkDynamicState:

- VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR

Extending VkPipelineBindPoint:

- VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR

Extending VkPipelineCreateFlagBits:

- VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR
- VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR
- VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR
- VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR
- VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR
- VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR
- VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR

Extending VkPipelineStageFlagBits:

- VK_PIPELINE_STAGE_RAY_TRACING_SHADER_BIT_KHR

Extending VkShaderStageFlagBits:

- VK_SHADER_STAGE_ANY_HIT_BIT_KHR
- VK_SHADER_STAGE_CALLABLE_BIT_KHR
- VK_SHADER_STAGE_CLOSEST_HIT_BIT_KHR
- VK_SHADER_STAGE_INTERSECTION_BIT_KHR
- VK_SHADER_STAGE_MISS_BIT_KHR
- VK_SHADER_STAGE_RAYGEN_BIT_KHR

Extending VkStructureType:

- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_FEATURES_KHR
New or Modified Built-In Variables

- LaunchIdKHR

- HitKindKHR
- IncomingRayFlagsKHR
- RayGeometryIndexKHR
- (modified)PrimitiveId

New SPIR-V Capabilities

- RayTracingKHR
- RayTraversalPrimitiveCullingKHR

Issues

(1) How does this extension differ from VK_NV_ray_tracing?

DISCUSSION:

The following is a summary of the main functional differences between VK_KHR_ray_tracing_pipeline and VK_NV_ray_tracing:

- added support for indirect ray tracing (vkCmdTraceRaysIndirectKHR)
- uses SPV_KHR_ray_tracing instead of SPV_NV_ray_tracing
  - refer to KHR SPIR-V enums instead of NV SPIR-V enums (which are functionally equivalent
and aliased to the same values).
- added RayGeometryIndexKHR built-in
- removed vkCompileDeferredNV compilation functionality and replaced with deferred host operations interactions for ray tracing
- added VkPhysicalDeviceRayTracingPipelineFeaturesKHR structure
- extended VkPhysicalDeviceRayTracingPipelinePropertiesKHR structure
  - renamed maxRecursionDepth to maxRayRecursionDepth and it has a minimum of 1 instead of 31
  - require shaderGroupHandleSize to be 32 bytes
  - added maxRayDispatchInvocationCount, shaderGroupHandleAlignment and maxRayHitAttributeSize
- reworked geometry structures so they could be better shared between device, host, and indirect builds
- changed SBT parameters to a structure and added size (VkStridedDeviceAddressRegionKHR)
- add parameter for requesting memory requirements for host and/or device build
- added pipeline library support for ray tracing
- added watertightness guarantees
- added no-null-shader pipeline flags (VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_*_SHADERS_BIT_KHR)
- added memory model interactions with ray tracing and define how subgroups work and can be repacked

(2) Can you give a more detailed comparison of differences and similarities between VK_NV_ray_tracing and VK_KHR_ray_tracing_pipeline?

DISCUSSION:

The following is a more detailed comparison of which commands, structures, and enums are aliased, changed, or removed.

- Aliased functionality — enums, structures, and commands that are considered equivalent:
  - VkRayTracingShaderGroupTypeNV ↔ VkRayTracingShaderGroupTypeKHR
  - vkGetRayTracingShaderGroupHandlesNV ↔ vkGetRayTracingShaderGroupHandlesKHR

- Changed enums, structures, and commands:
  - VkRayTracingShaderGroupCreateInfoNV → VkRayTracingShaderGroupCreateInfoKHR (added pShaderGroupCaptureReplayHandle)
  - VkRayTracingPipelineCreateInfoNV → VkRayTracingPipelineCreateInfoKHR (changed type of pGroups, added libraries, pLibraryInterface, and pDynamicState)
  - VkPhysicalDeviceRayTracingPropertiesNV → VkPhysicalDeviceRayTracingPropertiesKHR (renamed maxTriangleCount to maxPrimitiveCount, added shaderGroupHandleCaptureReplaySize)
  - vkCmdTraceRaysNV → vkCmdTraceRaysKHR (params to struct)
  - vkCreateRayTracingPipelinesNV → vkCreateRayTracingPipelinesKHR (different struct,
changed functionality)

• Added enums, structures and commands:
  ◦ `VK_PIPELINE_CREATE Ray Tracing No Null Any Hit Shaders Bit KHR`
  ◦ `VK_PIPELINE_CREATE Ray Tracing No Null Closest Hit Shaders Bit KHR`
  ◦ `VK_PIPELINE_CREATE Ray Tracing No Null Miss Shaders Bit KHR`
  ◦ `VK_PIPELINE_CREATE Ray Tracing No Null Intersection Shaders Bit KHR`
  ◦ `VK_PIPELINE_CREATE Ray Tracing Skip Triangles Bit KHR`
  ◦ `VK_PIPELINE_CREATE Ray Tracing Skip AABBS Bit KHR` to `VkPipelineCreateFlagBits`
  ◦ `VkPhysicalDeviceRayTracingPipelineFeaturesKHR` structure
  ◦ `VkDeviceOrHostAddressKHR` and `VkDeviceOrHostAddressConstKHR` unions
  ◦ `VkPipelineLibraryCreateInfoKHR` struct
  ◦ `VkRayTracingPipelineInterfaceCreateInfoKHR` struct
  ◦ `VkStridedDeviceAddressRegionKHR` struct
  ◦ `vkCmdTraceRaysIndirectKHR` command and `VkTraceRaysIndirectCommandKHR` struct
  ◦ `vkGetRayTracingCaptureReplayShaderGroupHandlesKHR` (shader group capture/replay)
  ◦ `vkCmdSetRayTracingPipelineStackSizeKHR` and `vkGetRayTracingShaderGroupStackSizeKHR` commands for stack size control

• Functionality removed:
  ◦ `VK_PIPELINE_CREATE DEFER_COMPILE_BIT_NV`
  ◦ `vkCompileDeferredNV` command (replaced with `VK_KHR_deferred_host_operations`)

(3) What are the changes between the public provisional (VK_KHR_ray_tracing v8) release and the internal provisional (VK_KHR_ray_tracing v9) release?

• Require Vulkan 1.1 and SPIR-V 1.4
• Added interactions with Vulkan 1.2 and `VK_KHR_vulkan_memory_model`
• added creation time capture and replay flags
  ◦ added `VK_PIPELINE_CREATE Ray Tracing Shader Group Handle Capture Replay Bit KHR` to `VkPipelineCreateFlagBits`
• replace `VkStridedBufferRegionKHR` with `VkStridedDeviceAddressRegionKHR` and change `vkCmdTraceRaysKHR`, `vkCmdTraceRaysIndirectKHR`, to take these for the shader binding table and use device addresses instead of buffers.
• require the shader binding table buffers to have the `VK_BUFFER_USAGE_RAY_TRACING_BIT_KHR` set
• make `VK_KHR_pipeline_library` an interaction instead of required extension
• rename the `libraries` member of `VkRayTracingPipelineCreateInfoKHR` to `pLibraryInfo` and make it a pointer
• make `VK_KHR_deferred_host_operations` an interaction instead of a required extension (later went back on this)
• added explicit stack size management for ray tracing pipelines
- removed the `maxCallableSize` member of `VkRayTracingPipelineInterfaceCreateInfoKHR`
- added the `pDynamicState` member to `VkRayTracingPipelineCreateInfoKHR`
- added `VK_DYNAMIC_STATE_RAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state for ray tracing pipelines
- added `vkGetRayTracingShaderGroupStackSizeKHR` and `vkCmdSetRayTracingPipelineStackSizeKHR` commands
- added `VkShaderGroupShaderKHR` enum
- Added `maxRayDispatchInvocationCount` limit to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Added `shaderGroupHandleAlignment` property to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Added `maxRayHitAttributeSize` property to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`

Clarity deferred host ops for pipeline creation

- `VkDeferredOperationKHR` is now a top-level parameter for `vkCreateRayTracingPipelinesKHR`
- removed `VkDeferredOperationInfoKHR` structure
- change deferred host creation/return parameter behavior such that the implementation can modify such parameters until the deferred host operation completes
- `VK_KHR_deferred_host_operations` is required again

(4) What are the changes between the internal provisional (VK_KHR_ray_tracing v9) release and the final (VK_KHR_acceleration_structure v11 / VK_KHR_ray_tracing_pipeline v1) release?

- refactor VK_KHR_ray_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - `VK_KHR_acceleration_structure` (for acceleration structure operations)
  - `VK_KHR_ray_tracing_pipeline` (for ray tracing pipeline and shader stages)
  - `VK_KHR_ray_query` (for ray queries in existing shader stages)
- Require `Volatile` for the following builtins in the ray generation, closest hit, miss, intersection, and callable shader stages:
  - `SubgroupSize`, `SubgroupLocalInvocationId`, `SubgroupEqMask`, `SubgroupGeMask`, `SubgroupGtMask`, `SubgroupLeMask`, `SubgroupLtMask`, `SMIDNV`, `WarpIDNV`
- clarify buffer usage flags for ray tracing
  - `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` is added as an alias of `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` and is required on shader binding table buffers
  - `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` is used in `VK_KHR_acceleration_structure` for `scratchData`
- rename `maxRecursionDepth` to `maxRayPipelineRecursionDepth` (pipeline creation) and `maxRayRecursionDepth` (limit) to reduce confusion
• Add queryable `maxRayHitAttributeSize` limit and rename members of `VkRayTracingPipelineInterfaceCreateInfoKHR` to `maxPipelineRayPayloadSize` and `maxPipelineRayHitAttributeSize` for clarity

• Update SPIRV capabilities to use `RayTracingKHR`

• extension is no longer provisional

• define synchronization requirements for indirect trace rays and indirect buffer

(5) This extension adds `gl_InstanceID` for the intersection, any-hit, and closest hit shaders, but in `KHR_vulkan_glsl`, `gl_InstanceID` is replaced with `gl_InstanceIndex`. Which should be used for Vulkan in this extension?

RESOLVED: This extension uses `gl_InstanceID` and maps it to `InstanceId` in SPIR-V. It is acknowledged that this is different than other shader stages in Vulkan. There are two main reasons for the difference here:

• symmetry with `gl_PrimitiveID` which is also available in these shaders

• there is no “baseInstance” relevant for these shaders, and so ID makes it more obvious that this is zero-based.

(6) Why is `VK_KHR_pipeline_library` an interaction instead of a required dependency, particularly when the “Feature Requirements” section says it is required to be supported anyhow?

RESOLVED: If `VK_KHR_pipeline_library` were a required extension dependency, then every application would need to enable the extension whether or not they actually want to use the pipeline library functionality. Developers found this to be annoying and unfriendly behavior. We do wish to require all implementations to support it though, and thus it is listed in the feature requirements section.

Sample Code

Example ray generation GLSL shader

```glsl
#version 450 core
#extension GL_EXT_ray_tracing : require
layout(set = 0, binding = 0, rgba8) uniform image2D image;
layout(set = 0, binding = 1) uniform accelerationStructureEXT as;
layout(location = 0) rayPayloadEXT float payload;

void main()
{
    vec4 col = vec4(0, 0, 0, 1);

    vec3 origin = vec3(float(gl_LaunchIDEXT.x)/float(gl_LaunchSizeEXT.x), float(gl_LaunchIDEXT.y)/float(gl_LaunchSizeEXT.y), 1.0);
    vec3 dir = vec3(0.0, 0.0, -1.0);

    traceRayEXT(as, 0, 0xff, 0, 1, 0, origin, 0.0, dir, 1000.0, 0);
}
```
col.y = payload;

imageStore(image, ivec2(gl_LaunchIDEXT.xy), col);
}

**Version History**

- Revision 1, 2020-11-12 (Mathieu Robart, Daniel Koch, Eric Werness, Tobias Hector)
  - Decomposition of the specification, from VK_KHR_ray_tracing to VK_KHR_ray_tracing_pipeline (#1918,#3912)
  - require certain subgroup and sm_shader_builtin shader builtins to be decorated as volatile in the ray generation, closest hit, miss, intersection, and callable stages (#1924,#3903,#3954)
  - clarify buffer usage flags for ray tracing (#2181,#3939)
  - rename maxRecursionDepth to maxRayPipelineRecursionDepth and maxRayRecursionDepth (#2203,#3937)
  - add queryable maxRayHitAttributeSize and rename members of VkRayTracingPipelineInterfaceCreateInfoKHR (#2102,#3966)
  - update to use RayTracingKHR SPIR-V capability
  - add VUs for matching hit group type against geometry type (#2245,#3994)
  - require RayTMaxKHR be volatile in intersection shaders (#2268,#4030)
  - add numerical limits for ray parameters (#2235,#3960)
  - fix SBT indexing rules for device addresses (#2308,#4079)
  - relax formula for ray intersection candidate determination (#2322,#4080)
  - add more details on ShaderRecordBufferKHR variables (#2230,#4083)
  - clarify valid bits for InstanceCustomIndexKHR (GLSL/GLSL#19,#4128)
  - allow at most one IncomingRayPayloadKHR, IncomingCallableDataKHR, and HitAttributeKHR (!4129)
  - add minimum for maxShaderGroupStride (#2353,#4131)
  - require VK_KHR_pipeline_library extension to be supported (#2348,#4135)
  - clarify meaning of 'geometry index' (#2272,#4137)
  - restrict traces to TLAS (#2239,#4141)
  - add note about maxPipelineRayPayloadSize (#2383,#4172)
  - do not require raygen shader in pipeline libraries (!4185)
  - define sync for indirect trace rays and indirect buffer (#2407,#4208)

Description

`VK_KHR_ray_tracing_position_fetch` adds the ability to fetch the vertex positions in the shader from a hit triangle as stored in the acceleration structure.

An application adds `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR` to the acceleration structure at build time. Then, if the hit is a triangle geometry, the shader (any-hit or closest hit for ray pipelines or using ray query) can fetch the three, three-component vertex positions in object space, of the triangle which was hit.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR`

New Enum Constants

- `VK_KHR_RAY_TRACING_POSITION_FETCH_EXTENSION_NAME`
- `VK_KHR_RAY_TRACING_POSITION_FETCH_SPEC_VERSION`
- Extending `VkBuildAccelerationStructureFlagBitsKHR`:
  - `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR`

New Built-In Variables

- `HitTriangleVertexPositionsKHR`

New SPIR-V Capabilities

- `RayTracingPositionFetchKHR`

Issues

Interactions and External Dependencies
• This extension provides API support for GL_ARB_shader_clock and GL_EXT_shader_realtime_clock

Contributors
• Aaron Hagan, AMD
• Daniel Koch, NVIDIA

Description

This extension advertises the SPIR-V ShaderClockKHR capability for Vulkan, which allows a shader to query a real-time or monotonically incrementing counter at the subgroup level or across the device level. The two valid SPIR-V scopes for OpReadClockKHR are Subgroup and Device.

When using GLSL source-based shading languages, the clockRealtime*EXT() timing functions map to
the `OpReadClockKHR` instruction with a scope of `Device`, and the `clock*ARB()` timing functions map to the `OpReadClockKHR` instruction with a scope of `Subgroup`.

Interactions and External Dependencies

- Requires SPIR-V 1.3.
- This extension provides API support for GL_EXT_subgroupuniform_qualifier

Contributors

- Alan Baker, Google
- Jeff Bolz, NVIDIA

Description

This extension allows the use of the SPV_KHR_subgroup_uniform_control_flow SPIR-V extension in shader modules. SPV_KHR_subgroup_uniform_control_flow provides stronger guarantees that diverged subgroups will reconverge.

Developers should utilize this extension if they use subgroup operations to reduce the work performed by a uniform subgroup. This extension will guarantee that uniform subgroup will reconverge in the same manner as invocation groups (see “Uniform Control Flow” in the Khronos SPIR-V Specification).

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceShaderSubgroupUniformControlFlowFeaturesKHR

New Enum Constants

- VK_KHR_SHADER_SUBGROUP_UNIFORM_CONTROL_FLOW_EXTENSION_NAME
- VK_KHR_SHADER_SUBGROUP_UNIFORM_CONTROL_FLOW_SPEC_VERSION
- Extending VkStructureType:

    • James Jones, NVIDIA
Description

This extension extends `VK_KHR_swapchain` to enable creation of a shared presentable image. This allows the application to use the image while the presentation engine is accessing it, in order to reduce the latency between rendering and presentation.

New Commands

- `vkGetSwapchainStatusKHR`

New Structures

- Extending `VkSurfaceCapabilities2KHR`:
  - `VkSharedPresentSurfaceCapabilitiesKHR`

New Enum Constants

- `VK_KHR_SHARED_PRESENTABLE_IMAGE_EXTENSION_NAME`
- `VK_KHR_SHARED_PRESENTABLE_IMAGE_SPEC_VERSION`
- Extending `VkImageLayout`:
  - `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- Extending `VkPresentModeKHR`:
  - `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`
  - `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_KHR`

Issues

1) Should we allow a Vulkan WSI swapchain to toggle between normal usage and shared presentation usage?

**RESOLVED:** No. WSI swapchains are typically recreated with new properties instead of having their properties changed. This can also save resources, assuming that fewer images are needed for shared presentation, and assuming that most VR applications do not need to switch between normal and shared usage.
2) Should we have a query for determining how the presentation engine refresh is triggered?

**RESOLVED:** Yes. This is done via which presentation modes a surface supports.

3) Should the object representing a shared presentable image be an extension of a `VkSwapchainKHR` or a separate object?

**RESOLVED:** Extension of a swapchain due to overlap in creation properties and to allow common functionality between shared and normal presentable images and swapchains.

4) What should we call the extension and the new structures it creates?

**RESOLVED:** Shared presentable image / shared present.

5) Should the `minImageCount` and `presentMode` values of the `VkSwapchainCreateInfoKHR` be ignored, or required to be compatible values?

**RESOLVED:** `minImageCount` must be set to 1, and `presentMode` should be set to either `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR` or `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`.

6) What should the layout of the shared presentable image be?

**RESOLVED:** After acquiring the shared presentable image, the application must transition it to the `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR` layout prior to it being used. After this initial transition, any image usage that was requested during swapchain creation can be performed on the image without layout transitions being performed.

7) Do we need a new API for the trigger to refresh new content?

**RESOLVED:** `vkQueuePresentKHR` to act as API to trigger a refresh, as will allow combination with other compatible extensions to `vkQueuePresentKHR`.

8) How should an application detect a `VK_ERROR_OUT_OF_DATE_KHR` error on a swapchain using the `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR` present mode?

**RESOLVED:** Introduce `vkGetSwapchainStatusKHR` to allow applications to query the status of a swapchain using a shared presentation mode.

9) What should subsequent calls to `vkQueuePresentKHR` for `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR` swapchains be defined to do?

**RESOLVED:** State that implementations may use it as a hint for updated content.

10) Can the ownership of a shared presentable image be transferred to a different queue?

**RESOLVED:** No. It is not possible to transfer ownership of a shared presentable image obtained from a swapchain created using `VK_SHARING_MODE_EXCLUSIVE` after it has been presented.

11) How should `vkQueueSubmit` behave if a command buffer uses an image from a `VK_ERROR_OUT_OF_DATE_KHR` swapchain?

**RESOLVED:** `vkQueueSubmit` is expected to return the `VK_ERROR_DEVICE_LOST` error.
12) Can Vulkan provide any guarantee on the order of rendering, to enable beam chasing?

**RESOLVED:** This could be achieved via use of render passes to ensure strip rendering.

Description

The `VK_KHR_surface` extension is an instance extension. It introduces `VkSurfaceKHR` objects, which abstract native platform surface or window objects for use with Vulkan. It also provides a way to determine whether a queue family in a physical device supports presenting to particular surface.

Separate extensions for each platform provide the mechanisms for creating `VkSurfaceKHR` objects, but once created they may be used in this and other platform-independent extensions, in particular the `VK_KHR_swapchain` extension.

New Object Types

- `VkSurfaceKHR`

New Commands

- `vkDestroySurfaceKHR`
- `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`
- `vkGetPhysicalDeviceSurfaceFormatsKHR`
- `vkGetPhysicalDeviceSurfacePresentModesKHR`
- `vkGetPhysicalDeviceSurfaceSupportKHR`

New Structures

- `VkSurfaceCapabilitiesKHR`
- `VkSurfaceFormatKHR`

New Enums

- `VkColorSpaceKHR`
- `VkCompositeAlphaFlagBitsKHR`
- `VkPresentModeKHR`
- `VkSurfaceTransformFlagBitsKHR`
New Bitmasks

- VkCompositeAlphaFlagsKHR

New Enum Constants

- VK_KHR_SURFACE_EXTENSION_NAME
- VK_KHR_SURFACE_SPEC_VERSION

Extending VkObjectType:
  - VK_OBJECT_TYPE_SURFACE_KHR

Extending VkResult:
  - VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
  - VK_ERROR_SURFACE_LOST_KHR

Examples

Note

The example code for the VK_KHR_surface and VK_KHR_swapchain extensions was removed from the appendix after revision 1.0.29. This WSI example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c).

Issues

1) Should this extension include a method to query whether a physical device supports presenting to a specific window or native surface on a given platform?

**RESOLVED:** Yes. Without this, applications would need to create a device instance to determine whether a particular window can be presented to. Knowing that a device supports presentation to a platform in general is not sufficient, as a single machine might support multiple seats, or instances of the platform that each use different underlying physical devices. Additionally, on some platforms, such as the X Window System, different drivers and devices might be used for different windows depending on which section of the desktop they exist on.

2) Should the vkGetPhysicalDeviceSurfaceCapabilitiesKHR, vkGetPhysicalDeviceSurfaceFormatsKHR, and vkGetPhysicalDeviceSurfacePresentModesKHR functions be in this extension and operate on physical devices, rather than being in VK_KHR_swapchain (i.e. device extension) and being dependent on VkDevice?

**RESOLVED:** Yes. While it might be useful to depend on VkDevice (and therefore on enabled extensions and features) for the queries, Vulkan was released only with the VkPhysicalDevice versions. Many cases can be resolved by a Valid Usage statement, and/or by a separate pNext chain version of the query struct specific to a given extension or parameters, via extensible versions of the queries: vkGetPhysicalDeviceSurfacePresentModes2EXT, vkGetPhysicalDeviceSurfaceCapabilities2KHR, and vkGetPhysicalDeviceSurfaceFormats2KHR.
3) Should Vulkan support Xlib or XCB as the API for accessing the X Window System platform?

**RESOLVED:** Both. XCB is a more modern and efficient API, but Xlib usage is deeply ingrained in many applications and likely will remain in use for the foreseeable future. Not all drivers necessarily need to support both, but including both as options in the core specification will probably encourage support, which should in turn ease adoption of the Vulkan API in older codebases. Additionally, the performance improvements possible with XCB likely will not have a measurable impact on the performance of Vulkan presentation and other minimal window system interactions defined here.

4) Should the GBM platform be included in the list of platform enums?

**RESOLVED:** Deferred, and will be addressed with a platform-specific extension to be written in the future.

**Version History**

- **Revision 1, 2015-05-20 (James Jones)**
  - Initial draft, based on LunarG KHR spec, other KHR specs, patches attached to bugs.

- **Revision 2, 2015-05-22 (Ian Elliott)**
  - Created initial Description section.
  - Removed query for whether a platform requires the use of a queue for presentation, since it was decided that presentation will always be modeled as being part of the queue.
  - Fixed typos and other minor mistakes.

- **Revision 3, 2015-05-26 (Ian Elliott)**
  - Improved the Description section.

- **Revision 4, 2015-05-27 (James Jones)**
  - Fixed compilation errors in example code.

- **Revision 5, 2015-06-01 (James Jones)**
  - Added issues 1 and 2 and made related spec updates.

- **Revision 6, 2015-06-01 (James Jones)**
  - Merged the platform type mappings table previously removed from VK_KHR_swapchain with the platform description table in this spec.
  - Added issues 3 and 4 documenting choices made when building the initial list of native platforms supported.

- **Revision 7, 2015-06-11 (Ian Elliott)**
  - Updated table 1 per input from the KHR TSG.
  - Updated issue 4 (GBM) per discussion with Daniel Stone. He will create a platform-specific extension sometime in the future.

- **Revision 8, 2015-06-17 (James Jones)**
  - Updated enum-extending values using new convention.
• Fixed the value of VK_SURFACE_PLATFORM_INFO_TYPE_SUPPORTED_KHR.

• Revision 9, 2015-06-17 (James Jones)
  • Rebased on Vulkan API version 126.

• Revision 10, 2015-06-18 (James Jones)
  • Marked issues 2 and 3 resolved.

• Revision 11, 2015-06-23 (Ian Elliott)
  • Examples now show use of function pointers for extension functions.
  • Eliminated extraneous whitespace.

• Revision 12, 2015-07-07 (Daniel Rakos)
  • Added error section describing when each error is expected to be reported.
  • Replaced the term “queue node index” with “queue family index” in the spec as that is the agreed term to be used in the latest version of the core header and spec.
  • Replaced bool32_t with VkBool32.

• Revision 13, 2015-08-06 (Daniel Rakos)
  • Updated spec against latest core API header version.

• Revision 14, 2015-08-20 (Ian Elliott)
  • Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  • Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.
  • Did miscellaneous cleanup, etc.

• Revision 15, 2015-08-20 (Ian Elliott—porting a 2015-07-29 change from James Jones)
  • Moved the surface transform enums here from VK_KHR_swapchain so they could be reused by VK_KHR_display.

• Revision 16, 2015-09-01 (James Jones)
  • Restore single-field revision number.

• Revision 17, 2015-09-01 (James Jones)
  • Fix example code compilation errors.

• Revision 18, 2015-09-26 (Jesse Hall)
  • Replaced VkSurfaceDescriptionKHR with the VkSurfaceKHR object, which is created via layered extensions. Added VkDestroySurfaceKHR.

• Revision 19, 2015-09-28 (Jesse Hall)
  • Renamed from VK_EXT_KHR_swapchain to VK_KHR_surface.

• Revision 20, 2015-09-30 (Jeff Vigil)
  • Add error result VK_ERROR_SURFACE_LOST_KHR.

• Revision 21, 2015-10-15 (Daniel Rakos)
• Updated the resolution of issue #2 and include the surface capability queries in this extension.
• Renamed SurfaceProperties to SurfaceCapabilities as it better reflects that the values returned are the capabilities of the surface on a particular device.
• Other minor cleanup and consistency changes.

• Revision 22, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_surface to VK_KHR_surface.

• Revision 23, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to vkDestroySurfaceKHR.

• Revision 24, 2015-11-10 (Jesse Hall)
  ◦ Removed VkSurfaceTransformKHR. Use VkSurfaceTransformFlagBitsKHR instead.
  ◦ Rename VkSurfaceCapabilitiesKHR member maxImageArraySize to maxImageArrayLayers.

• Revision 25, 2016-01-14 (James Jones)
  ◦ Moved VK_ERROR_NATIVE_WINDOW_IN_USE_KHR from the VK_KHR_android_surface to the VK_KHR_surface extension.

• 2016-08-23 (Ian Elliott)
  ◦ Update the example code, to not have so many characters per line, and to split out a new example to show how to obtain function pointers.

• 2016-08-25 (Ian Elliott)
  ◦ A note was added at the beginning of the example code, stating that it will be removed from future versions of the appendix.

**Extension and Version Dependencies**

Version 1.1 and
Description

This extension extends VkSurfaceCapabilities2KHR, providing applications a way to query whether swapchains can be created with the VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR flag set.

Vulkan 1.1 added (optional) support for protect memory and protected resources including buffers (VK_BUFFER_CREATE_PROTECTED_BIT), images (VK_IMAGE_CREATE_PROTECTED_BIT), and swapchains (VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR). However, on implementations which support multiple windowing systems, not all window systems may be able to provide a protected display path.

This extension provides a way to query if a protected swapchain created for a surface (and thus a specific windowing system) can be displayed on screen. It extends the existing VkSurfaceCapabilities2KHR structure with a new VkSurfaceProtectedCapabilitiesKHR structure from which the application can obtain information about support for protected swapchain creation through vkGetPhysicalDeviceSurfaceCapabilities2KHR.

New Structures

Description

The VK_KHR_swapchain extension is the device-level companion to the VK_KHR_surface extension. It introduces VkSwapchainKHR objects, which provide the ability to present rendering results to a surface.

New Object Types

- VkSwapchainKHR

New Commands

- vkAcquireNextImageKHR
- vkCreateSwapchainKHR
- vkDestroySwapchainKHR
- vkGetSwapchainImagesKHR
- vkQueuePresentKHR
If Version 1.1 is supported:

- vkAcquireNextImage2KHR
- vkGetDeviceGroupPresentCapabilitiesKHR
- vkGetDeviceGroupSurfacePresentModesKHR
- vkGetPhysicalDevicePresentRectanglesKHR

New Structures

- VkPresentInfoKHR
• VkSwapchainCreateInfoKHR

If Version 1.1 is supported:

• VkAcquireNextImageInfoKHR
• VkDeviceGroupPresentCapabilitiesKHR
• Extending VkBindImageMemoryInfo:
  ◦ VkBindImageMemorySwapchainInfoKHR
• Extending VkImageCreateInfo:
  ◦ VkImageSwapchainCreateInfoKHR
• Extending VkPresentInfoKHR:
  ◦ VkDeviceGroupPresentInfoKHR
• Extending VkSwapchainCreateInfoKHR:
  ◦ VkDeviceGroupSwapchainCreateInfoKHR

New Enums

• VkSwapchainCreateFlagBitsKHR

If Version 1.1 is supported:

• VkDeviceGroupPresentModeFlagBitsKHR

New Bitmasks

• VkSwapchainCreateFlagsKHR

If Version 1.1 is supported:

• VkDeviceGroupPresentModeFlagsKHR

New Enum Constants

• VK_KHR_SWAPCHAIN_EXTENSION_NAME
• VK_KHR_SWAPCHAIN_SPEC_VERSION
• Extending VkImageLayout:
  ◦ VK_IMAGE_LAYOUT_PRESENT_SRC_KHR
• Extending VkObjectType:
  ◦ VK_OBJECT_TYPE_SWAPCHAIN_KHR
• Extending VkResult:
  ◦ VK_ERROR_OUT_OF_DATE_KHR
  ◦ VK_SUBOPTIMAL_KHR
• Extending VkStructureType:
If **Version 1.1** is supported:

- **Extending VkStructureType:**
  - VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR
  - VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR
  - VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR
  - VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR
  - VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR
  - VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR

- **Extending VkSwapchainCreateFlagBitsKHR:**
  - VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR
  - VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR

**Issues**

1) Does this extension allow the application to specify the memory backing of the presentable images?

**RESOLVED:** No. Unlike standard images, the implementation will allocate the memory backing of the presentable image.

2) What operations are allowed on presentable images?

**RESOLVED:** This is determined by the image usage flags specified when creating the presentable image's swapchain.

3) Does this extension support MSAA presentable images?

**RESOLVED:** No. Presentable images are always single-sampled. Multi-sampled rendering must use regular images. To present the rendering results the application must manually resolve the multi-sampled image to a single-sampled presentable image prior to presentation.

4) Does this extension support stereo/multi-view presentable images?

**RESOLVED:** Yes. The number of views associated with a presentable image is determined by the `imageArrayLayers` specified when creating a swapchain. All presentable images in a given swapchain use the same array size.

5) Are the layers of stereo presentable images half-sized?

**RESOLVED:** No. The image extents always match those requested by the application.

6) Do the “present” and “acquire next image” commands operate on a queue? If not, do they need to include explicit semaphore objects to interlock them with queue operations?
RESOLVED: The present command operates on a queue. The image ownership operation it represents happens in order with other operations on the queue, so no explicit semaphore object is required to synchronize its actions.

Applications may want to acquire the next image in separate threads from those in which they manage their queue, or in multiple threads. To make such usage easier, the acquire next image command takes a semaphore to signal as a method of explicit synchronization. The application must later queue a wait for this semaphore before queuing execution of any commands using the image.

7) Does `vkAcquireNextImageKHR` block if no images are available?

RESOLVED: The command takes a timeout parameter. Special values for the timeout are 0, which makes the call a non-blocking operation, and `UINT64_MAX`, which blocks indefinitely. Values in between will block for up to the specified time. The call will return when an image becomes available or an error occurs. It may, but is not required to, return before the specified timeout expires if the swapchain becomes out of date.

8) Can multiple presents be queued using one `vkQueuePresentKHR` call?

RESOLVED: Yes. `VkPresentInfoKHR` contains a list of swapchains and corresponding image indices that will be presented. When supported, all presentations queued with a single `vkQueuePresentKHR` call will be applied atomically as one operation. The same swapchain must not appear in the list more than once. Later extensions may provide applications stronger guarantees of atomicity for such present operations, and/or allow them to query whether atomic presentation of a particular group of swapchains is possible.

9) How do the presentation and acquire next image functions notify the application the targeted surface has changed?

RESOLVED: Two new result codes are introduced for this purpose:

- **VK_SUBOPTIMAL_KHR** - Presentation will still succeed, subject to the window resize behavior, but the swapchain is no longer configured optimally for the surface it targets. Applications should query updated surface information and recreate their swapchain at the next convenient opportunity.
- **VK_ERROR_OUT_OF_DATE_KHR** - Failure. The swapchain is no longer compatible with the surface it targets. The application must query updated surface information and recreate the swapchain before presentation will succeed.

These can be returned by both `vkAcquireNextImageKHR` and `vkQueuePresentKHR`.

10) Does the `vkAcquireNextImageKHR` command return a semaphore to the application via an output parameter, or accept a semaphore to signal from the application as an object handle parameter?

RESOLVED: Accept a semaphore to signal as an object handle. This avoids the need to specify whether the application must destroy the semaphore or whether it is owned by the swapchain, and if the latter, what its lifetime is and whether it can be reused for other operations once it is received from `vkAcquireNextImageKHR`. 
11) What types of swapchain queuing behavior should be exposed? Options include swap interval specification, mailbox/most recent vs. FIFO queue management, targeting specific vertical blank intervals or absolute times for a given present operation, and probably others. For some of these, whether they are specified at swapchain creation time or as per-present parameters needs to be decided as well.

**RESOLVED:** The base swapchain extension will expose 3 possible behaviors (of which, FIFO will always be supported):

- **Immediate present:** Does not wait for vertical blanking period to update the current image, likely resulting in visible tearing. No internal queue is used. Present requests are applied immediately.

- **Mailbox queue:** Waits for the next vertical blanking period to update the current image. No tearing should be observed. An internal single-entry queue is used to hold pending presentation requests. If the queue is full when a new presentation request is received, the new request replaces the existing entry, and any images associated with the prior entry become available for reuse by the application.

- **FIFO queue:** Waits for the next vertical blanking period to update the current image. No tearing should be observed. An internal queue containing \( \text{numSwapchainImages} - 1 \) entries is used to hold pending presentation requests. New requests are appended to the end of the queue, and one request is removed from the beginning of the queue and processed during each vertical blanking period in which the queue is non-empty.

Not all surfaces will support all of these modes, so the modes supported will be returned using a surface information query. All surfaces must support the FIFO queue mode. Applications must choose one of these modes up front when creating a swapchain. Switching modes can be accomplished by recreating the swapchain.

12) Can `VK_PRESENT_MODE_MAILBOX_KHR` provide non-blocking guarantees for `vkAcquireNextImageKHR`? If so, what is the proper criteria?

**RESOLVED:** Yes. The difficulty is not immediately obvious here. Naively, if at least 3 images are requested, mailbox mode should always have an image available for the application if the application does not own any images when the call to `vkAcquireNextImageKHR` was made. However, some presentation engines may have more than one “current” image, and would still need to block in some cases. The right requirement appears to be that if the application allocates the surface's minimum number of images + 1 then it is guaranteed non-blocking behavior when it does not currently own any images.

13) Is there a way to create and initialize a new swapchain for a surface that has generated a `VK_SUBOPTIMAL_KHR` return code while still using the old swapchain?

**RESOLVED:** Not as part of this specification. This could be useful to allow the application to create an “optimal” replacement swapchain and rebuild all its command buffers using it in a background thread at a low priority while continuing to use the “suboptimal” swapchain in the main thread. It could probably use the same “atomic replace” semantics proposed for recreating direct-to-device swapchains without incurring a mode switch. However, after discussion, it was determined some platforms probably could not support concurrent swapchains for the same surface though, so this...
will be left out of the base KHR extensions. A future extension could add this for platforms where it is supported.

14) Should there be a special value for **VkSurfaceCapabilitiesKHR::maxImageCount** to indicate there are no practical limits on the number of images in a swapchain?

RESOLVED: Yes. There will often be cases where there is no practical limit to the number of images in a swapchain other than the amount of available resources (i.e., memory) in the system. Trying to derive a hard limit from things like memory size is prone to failure. It is better in such cases to leave it to applications to figure such soft limits out via trial/failure iterations.

15) Should there be a special value for **VkSurfaceCapabilitiesKHR::currentExtent** to indicate the size of the platform surface is undefined?

RESOLVED: Yes. On some platforms (Wayland, for example), the surface size is defined by the images presented to it rather than the other way around.

16) Should there be a special value for **VkSurfaceCapabilitiesKHR::maxImageExtent** to indicate there is no practical limit on the surface size?

RESOLVED: No. It seems unlikely such a system would exist. 0 could be used to indicate the platform places no limits on the extents beyond those imposed by Vulkan for normal images, but this query could just as easily return those same limits, so a special “unlimited” value does not seem useful for this field.

17) How should surface rotation and mirroring be exposed to applications? How do they specify rotation and mirroring transforms applied prior to presentation?

RESOLVED: Applications can query both the supported and current transforms of a surface. Both are specified relative to the device’s “natural” display rotation and direction. The supported transforms indicate which orientations the presentation engine accepts images in. For example, a presentation engine that does not support transforming surfaces as part of presentation, and which is presenting to a surface that is displayed with a 90-degree rotation, would return only one supported transform bit: **VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR**. Applications must transform their rendering by the transform they specify when creating the swapchain in **preTransform** field.

18) Can surfaces ever not support **VK_MIRROR_NONE**? Can they support vertical and horizontal mirroring simultaneously? Relatedly, should **VK_MIRROR_NONE[_BIT]** be zero, or bit one, and should applications be allowed to specify multiple pre and current mirror transform bits, or exactly one?

RESOLVED: Since some platforms may not support presenting with a transform other than the native window’s current transform, and prerotation/mirroring are specified relative to the device’s natural rotation and direction, rather than relative to the surface’s current rotation and direction, it is necessary to express lack of support for no mirroring. To allow this, the **MIRROR_NONE** enum must occupy a bit in the flags. Since **MIRROR_NONE** must be a bit in the bitmask rather than a bitmask with no values set, allowing more than one bit to be set in the bitmask would make it possible to describe undefined transforms such as **VK_MIRROR_NONE_BIT** | **VK_MIRROR_HORIZONTAL_BIT**, or a transform that includes both “no mirroring” and “horizontal mirroring” simultaneously. Therefore, it is desirable to allow specifying all supported mirroring transforms using only one bit. The question then becomes, should there be a **VK_MIRROR_HORIZONTAL_AND_VERTICAL_BIT** to represent a
simultaneous horizontal and vertical mirror transform? However, such a transform is equivalent to a 180 degree rotation, so presentation engines and applications that wish to support or use such a transform can express it through rotation instead. Therefore, 3 exclusive bits are sufficient to express all needed mirroring transforms.

19) Should support for sRGB be required?

**RESOLVED:** In the advent of UHD and HDR display devices, proper color space information is vital to the display pipeline represented by the swapchain. The app can discover the supported format/color-space pairs and select a pair most suited to its rendering needs. Currently only the sRGB color space is supported, future extensions may provide support for more color spaces. See issues 23 and 24.

20) Is there a mechanism to modify or replace an existing swapchain with one targeting the same surface?

**RESOLVED:** Yes. This is described above in the text.

21) Should there be a way to set prerotation and mirroring using native APIs when presenting using a Vulkan swapchain?

**RESOLVED:** Yes. The transforms that can be expressed in this extension are a subset of those possible on native platforms. If a platform exposes a method to specify the transform of presented images for a given surface using native methods and exposes more transforms or other properties for surfaces than Vulkan supports, it might be impossible, difficult, or inconvenient to set some of those properties using Vulkan KHR extensions and some using the native interfaces. To avoid overwriting properties set using native commands when presenting using a Vulkan swapchain, the application can set the pretransform to “inherit”, in which case the current native properties will be used, or if none are available, a platform-specific default will be used. Platforms that do not specify a reasonable default or do not provide native mechanisms to specify such transforms should not include the inherit bits in the **supportedTransforms** bitmask they return in **VkSurfaceCapabilitiesKHR**.

22) Should the content of presentable images be clipped by objects obscuring their target surface?

**RESOLVED:** Applications can choose which behavior they prefer. Allowing the content to be clipped could enable more efficient presentation methods on some platforms, but some applications might rely on the content of presentable images to perform techniques such as partial updates or motion blurs.

23) What is the purpose of specifying a **VkColorSpaceKHR** along with **VkFormat** when creating a swapchain?

**RESOLVED:** While Vulkan itself is color space agnostic (e.g. even the meaning of R, G, B and A can be freely defined by the rendering application), the swapchain eventually will have to present the images on a display device with specific color reproduction characteristics. If any color space transformations are necessary before an image can be displayed, the color space of the presented image must be known to the swapchain. A swapchain will only support a restricted set of color format and -space pairs. This set can be discovered via **vkGetPhysicalDeviceSurfaceFormatsKHR**. As it can be expected that most display devices support the sRGB color space, at least one format/color-
space pair has to be exposed, where the color space is VK_COLOR_SPACE_SRGB_NONLINEAR_KHR.

24) How are sRGB formats and the sRGB color space related?

**RESOLVED:** While Vulkan exposes a number of SRGB texture formats, using such formats does not guarantee working in a specific color space. It merely means that the hardware can directly support applying the non-linear transfer functions defined by the sRGB standard color space when reading from or writing to images of those formats. Still, it is unlikely that a swapchain will expose a *_SRGB format along with any color space other than VK_COLOR_SPACE_SRGB_NONLINEAR_KHR.

On the other hand, non-*_SRGB formats will be very likely exposed in pair with a SRGB color space. This means, the hardware will not apply any transfer function when reading from or writing to such images, yet they will still be presented on a device with sRGB display characteristics. In this case the application is responsible for applying the transfer function, for instance by using shader math.

25) How are the lifetimes of surfaces and swapchains targeting them related?

**RESOLVED:** A surface must outlive any swapchains targeting it. A VkSurfaceKHR owns the binding of the native window to the Vulkan driver.

26) How can the client control the way the alpha component of swapchain images is treated by the presentation engine during compositing?

**RESOLVED:** We should add new enum values to allow the client to negotiate with the presentation engine on how to treat image alpha values during the compositing process. Since not all platforms can practically control this through the Vulkan driver, a value of VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR is provided like for surface transforms.

27) Is vkCreateSwapchainKHR the right function to return VK_ERROR_NATIVE_WINDOW_IN_USE_KHR, or should the various platform-specific VkSurfaceKHR factory functions catch this error earlier?

**RESOLVED:** For most platforms, the VkSurfaceKHR structure is a simple container holding the data that identifies a native window or other object representing a surface on a particular platform. For the surface factory functions to return this error, they would likely need to register a reference on the native objects with the native display server somehow, and ensure no other such references exist. Surfaces were not intended to be that heavyweight.

Swapchains are intended to be the objects that directly manipulate native windows and communicate with the native presentation mechanisms. Swapchains will already need to communicate with the native display server to negotiate allocation and/or presentation of presentable images for a native surface. Therefore, it makes more sense for swapchain creation to be the point at which native object exclusivity is enforced. Platforms may choose to enforce further restrictions on the number of VkSurfaceKHR objects that may be created for the same native window if such a requirement makes sense on a particular platform, but a global requirement is only sensible at the swapchain level.

**Examples**
The example code for the `VK_KHR_surface` and `VK_KHR_swapchain` extensions was removed from the appendix after revision 1.0.29. This WSI example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c).

### Version History

- **Revision 1, 2015-05-20 (James Jones)**
  - Initial draft, based on LunarG KHR spec, other KHR specs, patches attached to bugs.

- **Revision 2, 2015-05-22 (Ian Elliott)**
  - Made many agreed-upon changes from 2015-05-21 KHR TSG meeting. This includes using only a queue for presentation, and having an explicit function to acquire the next image.
  - Fixed typos and other minor mistakes.

- **Revision 3, 2015-05-26 (Ian Elliott)**
  - Improved the Description section.
  - Added or resolved issues that were found in improving the Description. For example, pSurfaceDescription is used consistently, instead of sometimes using pSurface.

- **Revision 4, 2015-05-27 (James Jones)**
  - Fixed some grammatical errors and typos
  - Filled in the description of imageUseFlags when creating a swapchain.
  - Added a description of swapInterval.
  - Replaced the paragraph describing the order of operations on a queue for image ownership and presentation.

- **Revision 5, 2015-05-27 (James Jones)**
  - Imported relevant issues from the (abandoned) `vk_wsi_persistent_swapchain_images` extension.
  - Added issues 6 and 7, regarding behavior of the acquire next image and present commands with respect to queues.
  - Updated spec language and examples to align with proposed resolutions to issues 6 and 7.

- **Revision 6, 2015-05-27 (James Jones)**
  - Added issue 8, regarding atomic presentation of multiple swapchains
  - Updated spec language and examples to align with proposed resolution to issue 8.

- **Revision 7, 2015-05-27 (James Jones)**
  - Fixed compilation errors in example code, and made related spec fixes.

- **Revision 8, 2015-05-27 (James Jones)**
  - Added issue 9, and the related `VK_SUBOPTIMAL_KHR` result code.
  - Renamed `VK_OUT_OF_DATE_KHR` to `VK_ERROR_OUT_OF_DATE_KHR`. 

4272
Revision 9, 2015-05-27 (James Jones)
  ◦ Added inline proposed resolutions (marked with [JRJ]) to some XXX questions/issues. These should be moved to the issues section in a subsequent update if the proposals are adopted.

Revision 10, 2015-05-28 (James Jones)
  ◦ Converted vkAcquireNextImageKHR back to a non-queue operation that uses a VkSemaphore object for explicit synchronization.
  ◦ Added issue 10 to determine whether vkAcquireNextImageKHR generates or returns semaphores, or whether it operates on a semaphore provided by the application.

Revision 11, 2015-05-28 (James Jones)
  ◦ Marked issues 6, 7, and 8 resolved.
  ◦ Renamed VkSurfaceCapabilityPropertiesKHR to VkSurfacePropertiesKHR to better convey the mutable nature of the information it contains.

Revision 12, 2015-05-28 (James Jones)
  ◦ Added issue 11 with a proposed resolution, and the related issue 12.
  ◦ Updated various sections of the spec to match the proposed resolution to issue 11.

Revision 13, 2015-06-01 (James Jones)
  ◦ Moved some structures to VK_EXT_KHR_swap_chain to resolve the specification’s issues 1 and 2.

Revision 14, 2015-06-01 (James Jones)
  ◦ Added code for example 4 demonstrating how an application might make use of the two different present and acquire next image KHR result codes.
  ◦ Added issue 13.

Revision 15, 2015-06-01 (James Jones)
  ◦ Added issues 14 - 16 and related spec language.
  ◦ Fixed some spelling errors.
  ◦ Added language describing the meaningful return values for vkAcquireNextImageKHR and vkQueuePresentKHR.

Revision 16, 2015-06-02 (James Jones)
  ◦ Added issues 17 and 18, as well as related spec language.
  ◦ Removed some erroneous text added by mistake in the last update.

Revision 17, 2015-06-15 (Ian Elliott)
  ◦ Changed special value from “-1” to “0” so that the data types can be unsigned.

Revision 18, 2015-06-15 (Ian Elliott)
  ◦ Clarified the values of VkSurfacePropertiesKHR::minImageCount and the timeout parameter of the vkAcquireNextImageKHR function.

Revision 19, 2015-06-17 (James Jones)
  ◦ Misc. cleanup. Removed resolved inline issues and fixed typos.
• Fixed clarification of vkSurfacePropertiesKHR::minImageCount made in version 18.
  • Added a brief “Image Ownership” definition to the list of terms used in the spec.

Revision 20, 2015-06-17 (James Jones)
  • Updated enum-extending values using new convention.

Revision 21, 2015-06-17 (James Jones)
  • Added language describing how to use VK_IMAGE_LAYOUT_PRESENT_SOURCE_KHR.
  • Cleaned up an XXX comment regarding the description of which queues
    vkQueuePresentKHR can be used on.

Revision 22, 2015-06-17 (James Jones)
  • Rebased on Vulkan API version 126.

Revision 23, 2015-06-18 (James Jones)
  • Updated language for issue 12 to read as a proposed resolution.
  • Marked issues 11, 12, 13, 16, and 17 resolved.
  • Temporarily added links to the relevant bugs under the remaining unresolved issues.
  • Added issues 19 and 20 as well as proposed resolutions.

Revision 24, 2015-06-19 (Ian Elliott)
  • Changed special value for VkSurfacePropertiesKHR::currentExtent back to “-1” from “0”.
    This value will never need to be unsigned, and “0” is actually a legal value.

Revision 25, 2015-06-23 (Ian Elliott)
  • Examples now show use of function pointers for extension functions.
  • Eliminated extraneous whitespace.

Revision 26, 2015-06-25 (Ian Elliott)
  • Resolved Issues 9 & 10 per KHR TSG meeting.

Revision 27, 2015-06-25 (James Jones)
  • Added oldSwapchain member to VkSwapchainCreateInfoKHR.

Revision 28, 2015-06-25 (James Jones)
  • Added the “inherit” bits to the rotation and mirroring flags and the associated issue 21.

Revision 29, 2015-06-25 (James Jones)
  • Added the “clipped” flag to VkSwapchainCreateInfoKHR, and the associated issue 22.
  • Specified that presenting an image does not modify it.

Revision 30, 2015-06-25 (James Jones)
  • Added language to the spec that clarifies the behavior of vkCreateSwapchainKHR() when
    the oldSwapchain field of VkSwapchainCreateInfoKHR is not NULL.

Revision 31, 2015-06-26 (Ian Elliott)
  • Example of new VkSwapchainCreateInfoKHR members, “oldSwapchain” and “clipped”.

4274
Example of using VkSurfacePropertiesKHR::{min|max}ImageCount to set VkSwapchainCreateInfoKHR::minImageCount.

Rename vkGetSurfaceInfoKHR()'s 4th parameter to “pDataSize”, for consistency with other functions.

Add macro with C-string name of extension (just to header file).

• Revision 32, 2015-06-26 (James Jones)
  ◦ Minor adjustments to the language describing the behavior of “oldSwapchain”
  ◦ Fixed the version date on my previous two updates.

• Revision 33, 2015-06-26 (Jesse Hall)
  ◦ Add usage flags to VkSwapchainCreateInfoKHR

• Revision 34, 2015-06-26 (Ian Elliott)
  ◦ Rename vkQueuePresentKHR()'s 2nd parameter to “pPresentInfo”, for consistency with other functions.

• Revision 35, 2015-06-26 (Faith Ekstrand)
  ◦ Merged the VkRotationFlagBitsKHR and VkMirrorFlagBitsKHR enums into a single VkSurfaceTransformFlagBitsKHR enum.

• Revision 36, 2015-06-26 (Faith Ekstrand)
  ◦ Added a VkSurfaceTransformKHR enum that is not a bitmask. Each value in VkSurfaceTransformKHR corresponds directly to one of the bits in VkSurfaceTransformFlagBitsKHR so transforming from one to the other is easy. Having a separate enum means that currentTransform and preTransform are now unambiguous by definition.

• Revision 37, 2015-06-29 (Ian Elliott)
  ◦ Corrected one of the signatures of vkAcquireNextImageKHR, which had the last two parameters switched from what it is elsewhere in the specification and header files.

• Revision 38, 2015-06-30 (Ian Elliott)
  ◦ Corrected a typo in description of the vkGetSwapchainInfoKHR() function.
  ◦ Corrected a typo in header file comment for VkPresentInfoKHR::sType.

• Revision 39, 2015-07-07 (Daniel Rakos)
  ◦ Added error section describing when each error is expected to be reported.
  ◦ Replaced bool32_t with VkBool32.

• Revision 40, 2015-07-10 (Ian Elliott)
  ◦ Updated to work with version 138 of the vulkan.h header. This includes declaring the VkSwapchainKHR type using the new VK_DEFINE_NONDISP_HANDLE macro, and no longer extending VkObjectType (which was eliminated).

• Revision 41 2015-07-09 (Mathias Heyer)
  ◦ Added color space language.

• Revision 42, 2015-07-10 (Daniel Rakos)
Updated query mechanism to reflect the convention changes done in the core spec.

- Removed “queue” from the name of VK_STRUCTURE_TYPE_QUEUE_PRESENT_INFO_KHR to be consistent with the established naming convention.
- Removed reference to the no longer existing VkObjectType enum.

Revision 43, 2015-07-17 (Daniel Rakos)
- Added support for concurrent sharing of swapchain images across queue families.
- Updated sample code based on recent changes

Revision 44, 2015-07-27 (Ian Elliott)
- Noted that support for VK_PRESENT_MODE_FIFO_KHR is required. That is ICDs may optionally support IMMEDIATE and MAILBOX, but must support FIFO.

Revision 45, 2015-08-07 (Ian Elliott)
- Corrected a typo in spec file (type and variable name had wrong case for the imageColorSpace member of the VkSwapchainCreateInfoKHR struct).
- Corrected a typo in header file (last parameter in PFN_vkGetSurfacePropertiesKHR was missing “KHR” at the end of type: VkSurfacePropertiesKHR).

Revision 46, 2015-08-20 (Ian Elliott)
- Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
- Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.
- Made improvements to several descriptions.
- Changed the status of several issues from PROPOSED to RESOLVED, leaving no unresolved issues.
- Resolved several TODOs, did miscellaneous cleanup, etc.

Revision 47, 2015-08-20 (Ian Elliott—porting a 2015-07-29 change from James Jones)
- Moved the surface transform enums to VK_WSI_swapchain so they could be reused by VK_WSI_display.

Revision 48, 2015-09-01 (James Jones)
- Various minor cleanups.

Revision 49, 2015-09-01 (James Jones)
- Restore single-field revision number.

Revision 50, 2015-09-01 (James Jones)
- Update Example #4 to include code that illustrates how to use the oldSwapchain field.

Revision 51, 2015-09-01 (James Jones)
- Fix example code compilation errors.

Revision 52, 2015-09-08 (Matthaeus G. Chajdas)
- Corrected a typo.
Revision 53, 2015-09-10 (Alon Or-bach)
  ◦ Removed underscore from SWAP_CHAIN left in VK_STRUCTURE_TYPE_SWAPCHAIN_CREATE_INFO_KHR.

Revision 54, 2015-09-11 (Jesse Hall)
  ◦ Described the execution and memory coherence requirements for image transitions to and from VK_IMAGE_LAYOUT_PRESENT_SOURCE_KHR.

Revision 55, 2015-09-11 (Ray Smith)
  ◦ Added errors for destroying and binding memory to presentable images

Revision 56, 2015-09-18 (James Jones)
  ◦ Added fence argument to vkAcquireNextImageKHR
  ◦ Added example of how to meter a host thread based on presentation rate.

Revision 57, 2015-09-26 (Jesse Hall)
  ◦ Replace VkSurfaceDescriptionKHR with VkSurfaceKHR.
  ◦ Added issue 25 with agreed resolution.

Revision 58, 2015-09-28 (Jesse Hall)
  ◦ Renamed from VK_EXT_KHR_device_swapchain to VK_EXT_KHR_swapchain.

Revision 59, 2015-09-29 (Ian Elliott)
  ◦ Changed vkDestroySwapchainKHR() to return void.

Revision 60, 2015-10-01 (Jeff Vigil)
  ◦ Added error result VK_ERROR_SURFACE_LOST_KHR.

Revision 61, 2015-10-05 (Faith Ekstrand)
  ◦ Added the VkCompositeAlpha enum and corresponding structure fields.

Revision 62, 2015-10-12 (Daniel Rakos)
  ◦ Added VK_PRESENT_MODE_FIFO_RELAXED_KHR.

Revision 63, 2015-10-15 (Daniel Rakos)
  ◦ Moved surface capability queries to VK_EXT_KHR_surface.

Revision 64, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_swapchain to VK_KHR_swapchain.

Revision 65, 2015-10-28 (Ian Elliott)
  ◦ Added optional pResult member to VkPresentInfoKHR, so that per-swapchain results can be obtained from vkQueuePresentKHR().

Revision 66, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to create and destroy functions.
  ◦ Updated resource transition language.
  ◦ Updated sample code.
• Revision 67, 2015-11-10 (Jesse Hall)
  ◦ Add reserved flags bitmask to VkSwapchainCreateInfoKHR.
  ◦ Modify naming and member ordering to match API style conventions, and so the
    VkSwapchainCreateInfoKHR image property members mirror corresponding
    VkImageCreateInfo members but with an 'image' prefix.
  ◦ Make VkPresentInfoKHR::pResults non-const; it is an output array parameter.
  ◦ Make pPresentInfo parameter to vkQueuePresentKHR const.

• Revision 68, 2016-04-05 (Ian Elliott)
  ◦ Moved the “validity” include for vkAcquireNextImage to be in its proper place, after the
    prototype and list of parameters.
  ◦ Clarified language about presentable images, including how they are acquired, when
    applications can and cannot use them, etc. As part of this, removed language about
    “ownership” of presentable images, and replaced it with more-consistent language about
    presentable images being “acquired” by the application.

• 2016-08-23 (Ian Elliott)
  ◦ Update the example code, to use the final API command names, to not have so many
    characters per line, and to split out a new example to show how to obtain function pointers.
    This code is more similar to the LunarG “cube” demo program.

• 2016-08-25 (Ian Elliott)
  ◦ A note was added at the beginning of the example code, stating that it will be removed from
    future versions of the appendix.

• Revision 69, 2017-09-07 (Tobias Hector)
  ◦ Added interactions with Vulkan 1.1

• Revision 70, 2017-10-06 (Ian Elliott)
  ◦ Corrected interactions with Vulkan 1.1

---

Description

This extension allows processing of swapchain images as different formats to that used by the window system, which is particularly useful for switching between sRGB and linear RGB formats.

It adds a new swapchain creation flag that enables creating image views from presentable images with a different format than the one used to create the swapchain.

New Enum Constants

• VK_KHR_SWAPCHAIN_MUTABLE_FORMAT_EXTENSION_NAME
• VK_KHR_SWAPCHAIN_MUTABLE_FORMAT_SPEC_VERSION
• Extending VkSwapchainCreateFlagBitsKHR:
  • VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR
Issues

1) Are there any new capabilities needed?

RESOLVED: No. It is expected that all implementations exposing this extension support swapchain image format mutability.

2) Do we need a separate VK_SWAPCHAIN_CREATE_EXTENDED_USAGE_BIT_KHR?

RESOLVED: No. This extension requires VK_KHR_maintenance2 and presentable images of swapchains created with VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR are created internally in a way equivalent to specifying both VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT and VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR.

3) Do we need a separate structure to allow specifying an image format list for swapchains?

RESOLVED: No. We simply use the same VkImageFormatListCreateInfoKHR structure introduced by VK_KHR_image_format_list. The structure is required to be included in the pNext chain of VkSwapchainCreateInfoKHR for swapchains created with VK_SWAPCHAINCREATE_MUTABLE_FORMAT_BIT_KHR.

**Extension Proposal**

`VK_KHR_video_decode_h264`

---

**Other Extension Metadata**

**Last Modified Date**

2022-09-29

**IP Status**

No known IP claims.

---

**Contributors**

- Ahmed Abdelkhalek, AMD
- Chunbo Chen, Intel
- HoHin Lau, AMD
- Jake Beju, AMD
- Peter Fang, AMD
- Ping Liu, Intel
- Srinath Kumarapuram, NVIDIA
- Tony Zlatinski, NVIDIA
- Daniel Rakos, RasterGrid

---

**Description**

This extension builds upon the `VK_KHR_video_decode_queue` extension by adding support for decoding elementary video stream sequences compliant with the H.264/AVC video compression standard.

---

**Note**

This extension was promoted to `KHR` from the provisional extension `VK_EXT_video_decode_h264`.

---

**New Structures**

- Extending `VkVideoCapabilitiesKHR`:
  - `VkVideoDecodeH264CapabilitiesKHR`

- Extending `VkVideoDecodeInfoKHR`:
  - `VkVideoDecodeH264PictureInfoKHR`

- Extending `VkVideoProfileInfoKHR`, `VkQueryPoolCreateInfo`:
  - `VkVideoDecodeH264ProfileInfoKHR`

- Extending `VkVideoReferenceSlotInfoKHR`:
  - `VkVideoDecodeH264DpbSlotInfoKHR`
Extending \texttt{VkVideoSessionParametersCreateInfoKHR}:

\begin{itemize}
  \item \texttt{VkVideoDecodeH264SessionParametersCreateInfoKHR}
\end{itemize}

Extending \texttt{VkVideoSessionParametersUpdateInfoKHR}:

\begin{itemize}
  \item \texttt{VkVideoDecodeH264SessionParametersAddInfoKHR}
\end{itemize}

New Enums

\begin{itemize}
  \item \texttt{VkVideoDecodeH264PictureLayoutFlagBitsKHR}
\end{itemize}

New Bitmasks

\begin{itemize}
  \item \texttt{VkVideoDecodeH264PictureLayoutFlagsKHR}
\end{itemize}

New Enum Constants

\begin{itemize}
  \item \texttt{VK_KHR_VIDEO_DECODE_H264_EXTENSION_NAME}
  \item \texttt{VK_KHR_VIDEO_DECODE_H264_SPEC_VERSION}
  \item Extending \texttt{VkStructureType}:
    \begin{itemize}
      \item \texttt{VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_CAPABILITIES_KHR}
      \item \texttt{VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_DPB_SLOT_INFO_KHR}
      \item \texttt{VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PICTURE_INFO_KHR}
      \item \texttt{VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_PROFILE_INFO_KHR}
      \item \texttt{VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_ADD_INFO_KHR}
      \item \texttt{VK_STRUCTURE_TYPE_VIDEO_DECODE_H264_SESSION_PARAMETERS_CREATE_INFO_KHR}
    \end{itemize}
  \item Extending \texttt{VkVideoCodecOperationFlagBitsKHR}:
    \begin{itemize}
      \item \texttt{VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR}
    \end{itemize}
\end{itemize}

Version History

\begin{itemize}
  \item Revision 1, 2018-6-11 (Peter Fang)
    \begin{itemize}
      \item Initial draft
    \end{itemize}
  \item Revision 2, March 29 2021 (Tony Zlatinski)
    \begin{itemize}
      \item Spec and API Updates
    \end{itemize}
  \item Revision 3, August 1 2021 (Srinath Kumarapuram)
    \begin{itemize}
      \item Rename \texttt{VkVideoDecodeH264FieldLayoutFlagBitsEXT} to \texttt{VkVideoDecodeH264PictureLayoutFlagBitsEXT}, \texttt{VkVideoDecodeH264FieldLayoutFlagBitsEXT} to \texttt{VkVideoDecodeH264PictureLayoutFlagBitsEXT} (along with the names of enumerants it defines), and \texttt{VkVideoDecodeH264ProfileEXT.fieldLayout} to \texttt{VkVideoDecodeH264ProfileEXT.pictureLayout}, following Vulkan naming conventions.
    \end{itemize}
  \item Revision 4, 2022-03-16 (Ahmed Abdelkhalek)
\end{itemize}
- Relocate Std header version reporting/requesting from this extension to VK_KHR_video_queue extension.
- Remove the now empty VkVideoDecodeH264SessionCreateInfoEXT.

Revision 5, 2022-03-31 (Ahmed Abdelkhalek)
- Use type StdVideoH264Level for VkVideoDecodeH264Capabilities.maxLevel

Revision 6, 2022-08-09 (Daniel Rakos)
- Rename VkVideoDecodeH264ProfileEXT to VkVideoDecodeH264ProfileInfoEXT
- Rename VkVideoDecodeH264MvcEXT to VkVideoDecodeH264MvcInfoEXT

Revision 7, 2022-09-18 (Daniel Rakos)
- Change type of VkVideoDecodeH264ProfileInfoEXT::pictureLayout to VkVideoDecodeH264PictureLayoutFlagBitsEXT
- Remove MVC support and related VkVideoDecodeH264 MvcInfoEXT structure
- Rename spsStdCount, pSpsStd, ppsStdCount, and pPpsStd to stdSPSCount, stdSPSSs, stdPPSCount, and stdPPSSs, respectively, in VkVideoDecodeH264SessionParametersAddInfoEXT
- Rename maxSpsStdCount and maxPpsStdCount to maxStdSPSCount and maxStdPPSCount, respectively, in VkVideoDecodeH264SessionParametersCreateInfoEXT
- Rename slicesCount and pSlicesDataOffsets to sliceCount and pSliceOffsets, respectively, in VkVideoDecodeH264PictureInfoEXT

Revision 8, 2022-09-29 (Daniel Rakos)
- Change extension from EXT to KHR
- Extension is no longer provisional

Description

This extension builds upon the VK_KHR_video_decode_queue extension by adding support for decoding elementary video stream sequences compliant with the H.265/HEVC video compression standard.

Note
  This extension was promoted to KHR from the provisional extension VK_EXT_video_decode_h265.

New Structures

• Extending VkVideoCapabilitiesKHR:
  ◦ VkVideoDecodeH265CapabilitiesKHR

• Extending VkVideoDecodeInfoKHR:
  ◦ VkVideoDecodeH265PictureInfoKHR

• Extending VkVideoProfileInfoKHR, VkQueryPoolCreateInfo:
  ◦ VkVideoDecodeH265ProfileInfoKHR

• Extending VkVideoReferenceSlotInfoKHR:
- `VkVideoDecodeH265DpbSlotInfoKHR`

  - **Extending `VkVideoSessionParametersCreateInfoKHR`:**
    - `VkVideoDecodeH265SessionParametersCreateInfoKHR`

  - **Extending `VkVideoSessionParametersUpdateInfoKHR`:**
    - `VkVideoDecodeH265SessionParametersAddInfoKHR`

### New Enum Constants

- `VK_KHR_VIDEO_DECODE_H265_EXTENSION_NAME`
- `VK_KHR_VIDEO_DECODE_H265_SPEC_VERSION`

- **Extending `VkStructureType`:**
  - `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_CAPABILITIES_KHR`
  - `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_DPB_SLOT_INFO_KHR`
  - `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PICTURE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_PROFILE_INFO_KHR`
  - `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_ADD_INFO_KHR`
  - `VK_STRUCTURE_TYPE_VIDEO_DECODE_H265_SESSION_PARAMETERS_CREATE_INFO_KHR`

- **Extending `VkVideoCodecOperationFlagBitsKHR`:**
  - `VK_VIDEO_CODEC_OPERATION_DECODE_H265_BIT_KHR`

### Version History

- **Revision 1, 2018-6-11 (Peter Fang)**
  - Initial draft

- **Revision 1.6, March 29 2021 (Tony Zlatinski)**
  - Spec and API updates.

- **Revision 2, 2022-03-16 (Ahmed Abdelkhalek)**
  - Relocate Std header version reporting/requesting from this extension to `VK_KHR_video_queue` extension.
  - Remove the now empty `VkVideoDecodeH265SessionCreateInfoEXT`.

- **Revision 3, 2022-03-31 (Ahmed Abdelkhalek)**
  - Use type `StdVideoH265Level` for `VkVideoDecodeH265Capabilities.maxLevel`

- **Revision 4, 2022-08-09 (Daniel Rakos)**
  - Rename `VkVideoDecodeH265ProfileEXT` to `VkVideoDecodeH265ProfileInfoEXT`

- **Revision 5, 2022-09-18 (Daniel Rakos)**
  - Rename `vpsStdCount`, `pVpsStd`, `spsStdCount`, `pSpsStd`, `ppsStdCount`, and `pPpsStd` to `stdVPSCount`, `pStdVPSs`, `stdSPSCount`, `pStdSPSs`, `stdPPSCount`, and `pStdPPSs`, respectively, in `VkVideoDecodeH265SessionParametersAddInfoEXT`
- Rename `maxVpsStdCount`, `maxSpsStdCount`, and `maxPpsStdCount` to `maxStdVPSCount`, `maxStdSPSCount`, and `maxStdPPSCount`, respectively, in `VkVideoDecodeH265SessionParametersCreateInfoEXT`.
- Rename `slicesCount` and `pSlicesDataOffsets` to `sliceCount` and `pSliceOffsets`, respectively, in `VkVideoDecodeH265PictureInfoEXT`.

- Revision 6, 2022-11-14 (Daniel Rakos)
  - Rename `slice` to `sliceSegment` in the APIs for better clarity.
- Revision 7, 2022-11-14 (Daniel Rakos)
  - Change extension from `EXT` to `KHR`.
  - Extension is no longer provisional.

Description
This extension builds upon the VK_KHR_video_queue extension by adding common APIs specific to video decoding and thus enabling implementations to expose queue families supporting video decode operations.

More specifically, it adds video decode specific capabilities and a new command buffer command that allows recording video decode operations against a video session.

This extension is to be used in conjunction with other codec specific video decode extensions that enable decoding video sequences of specific video compression standards.

New Commands
- vkCmdDecodeVideoKHR

New Structures
- VkVideoDecodeInfoKHR
- Extending VkVideoCapabilitiesKHR:
  - VkVideoDecodeCapabilitiesKHR
- Extending VkVideoProfileInfoKHR, VkQueryPoolCreateInfo:
  - VkVideoDecodeUsageInfoKHR

New Enums
- VkVideoDecodeCapabilityFlagBitsKHR
- VkVideoDecodeUsageFlagBitsKHR
New Bitmasks

- VkVideoDecodeCapabilityFlagsKHR
- VkVideoDecodeFlagsKHR
- VkVideoDecodeUsageFlagsKHR

New Enum Constants

- VK_KHR_VIDEO_DECODE_QUEUE_EXTENSION_NAME
- VK_KHR_VIDEO_DECODE_QUEUE_SPEC_VERSION

Extending VkAccessFlagBits2:

- VK_ACCESS_2_VIDEO_DECODE_READ_BIT_KHR
- VK_ACCESS_2_VIDEO_DECODE_WRITE_BIT_KHR

Extending VkBufferUsageFlagBits:

- VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR
- VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR

Extending VkFormatFeatureFlagBits:

- VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR
- VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR

Extending VkImageLayout:

- VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR
- VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR
- VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR

Extending VkImageUsageFlagBits:

- VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR

Extending VkPipelineStageFlagBits2:

- VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR

Extending VkQueueFlagBits:

- VK_QUEUE_VIDEO_DECODE_BIT_KHR

Extending VkStructureType:

- VK_STRUCTURE_TYPE_VIDEO_DECODE_CAPABILITIES_KHR
- VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_DECODE_USAGE_INFO_KHR

If VK_KHR_format_feature_flags2 is supported:
• Extending **VkFormatFeatureFlagBits2**:
  ◦ **VK_FORMAT_FEATURE_2_VIDEO_DECODE_DPB_BIT_KHR**
  ◦ **VK_FORMAT_FEATURE_2_VIDEO_DECODE_OUTPUT_BIT_KHR**

**Version History**

• Revision 1, 2018-6-11 (Peter Fang)
  ◦ Initial draft

• Revision 1.5, Nov 09 2018 (Tony Zlatinski)
  ◦ API Updates

• Revision 1.6, Jan 08 2020 (Tony Zlatinski)
  ◦ API unify with the video_encode_queue spec

• Revision 1.7, March 29 2021 (Tony Zlatinski)
  ◦ Spec and API updates.

• Revision 2, September 30 2021 (Jon Leech)
  ◦ Add interaction with **VK_KHR_format_feature_flags2** to **vk.xml**

• Revision 3, 2022-02-25 (Ahmed Abdelkhalek)
  ◦ Add **VkVideoDecodeCapabilitiesKHR** with new flags to report support for decode DPB and output coinciding in the same image, or in distinct images.

• Revision 4, 2022-03-31 (Ahmed Abdelkhalek)
  ◦ Remove redundant **VkVideoDecodeInfoKHR.coded{Offset|Extent}**

• Revision 5, 2022-07-18 (Daniel Rakos)
  ◦ Remove **VkVideoDecodeFlagBitsKHR** as it contains no defined flags for now

• Revision 6, 2022-08-12 (Daniel Rakos)
  ◦ Add **VkVideoDecodeUsageInfoKHR** structure and related flags

• Revision 7, 2022-09-29 (Daniel Rakos)
  ◦ Extension is no longer provisional

• Daniel Rakos, RasterGrid

Description
This extension provides common APIs to enable exposing queue families with support for video codec operations by introducing the following new object types and related functionalities:

• Video session objects that represent and maintain the state needed to perform video codec operations.
• Video session parameters objects that act as a container for codec specific parameters.

In addition, it also introduces query commands that allow applications to determine video coding related capabilities, and command buffer commands that enable recording video coding operations...
against a video session.

This extension is to be used in conjunction with other extensions that enable specific video coding operations.

New Object Types

- VkVideoSessionKHR
- VkVideoSessionParametersKHR

New Commands

- vkBindVideoSessionMemoryKHR
- vkCmdBeginVideoCodingKHR
- vkCmdControlVideoCodingKHR
- vkCmdEndVideoCodingKHR
- vkCreateVideoSessionKHR
- vkCreateVideoSessionParametersKHR
- vkDestroyVideoSessionKHR
- vkDestroyVideoSessionParametersKHR
- vkGetPhysicalDeviceVideoCapabilitiesKHR
- vkGetPhysicalDeviceVideoFormatPropertiesKHR
- vkGetVideoSessionMemoryRequirementsKHR
- vkUpdateVideoSessionParametersKHR

New Structures

- VkBindVideoSessionMemoryInfoKHR
- VkPhysicalDeviceVideoFormatInfoKHR
- VkVideoBeginCodingInfoKHR
- VkVideoCapabilitiesKHR
- VkVideoCodingControlInfoKHR
- VkVideoEndCodingInfoKHR
- VkVideoFormatPropertiesKHR
- VkVideoPictureResourceInfoKHR
- VkVideoReferenceSlotInfoKHR
- VkVideoSessionCreateInfoKHR
- VkVideoSessionMemoryRequirementsKHR
- VkVideoSessionParametersCreateInfoKHR
• VkVideoSessionParametersUpdateInfoKHR

• Extending VkPhysicalDeviceImageFormatInfo2, VkPhysicalDeviceVideoFormatInfoKHR, VkImageCreateInfo, VkBufferCreateInfo:
  ◦ VkVideoProfileListInfoKHR

• Extending VkQueryPoolCreateInfo:
  ◦ VkVideoProfileInfoKHR

• Extending VkQueueFamilyProperties2:
  ◦ VkQueueFamilyQueryResultStatusPropertiesKHR
  ◦ VkQueueFamilyVideoPropertiesKHR

**New Enums**

• VkQueryResultStatusKHR
• VkVideoCapabilityFlagBitsKHR
• VkVideoChromaSubsamplingFlagBitsKHR
• VkVideoCodecOperationFlagBitsKHR
• VkVideoCodingControlFlagBitsKHR
• VkVideoComponentBitDepthFlagBitsKHR
• VkVideoSessionCreateFlagBitsKHR

**New Bitmasks**

• VkVideoBeginCodingFlagsKHR
• VkVideoCapabilityFlagsKHR
• VkVideoChromaSubsamplingFlagsKHR
• VkVideoCodecOperationFlagsKHR
• VkVideoCodingControlFlagsKHR
• VkVideoComponentBitDepthFlagsKHR
• VkVideoEndCodingFlagsKHR
• VkVideoSessionCreateFlagsKHR
• VkVideoSessionParametersCreateFlagsKHR

**New Enum Constants**

• VK_KHR_VIDEO_QUEUE_EXTENSION_NAME
• VK_KHR_VIDEO_QUEUE_SPEC_VERSION

• Extending VkObjectType:
  ◦ VK_OBJECT_TYPE_VIDEO_SESSION_KHR

4292
• VK_OBJECT_TYPE_VIDEO_SESSION_PARAMETERS_KHR

• Extending VkQueryResultFlagBits:
  • VK_QUERY_RESULT_WITH_STATUS_BIT_KHR

• Extending VkQueryType:
  • VK_QUERY_TYPE_RESULT_STATUS_ONLY_KHR

• Extending VkResult:
  • VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR
  • VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR
  • VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR
  • VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR
  • VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR
  • VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR

• Extending VkStructureType:
  • VK_STRUCTURE_TYPE_BIND_VIDEO_SESSION_MEMORY_INFO_KHR
  • VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_FORMAT_INFO_KHR
  • VK_STRUCTURE_TYPE_QUEUE_FAMILY_QUERY_RESULT_STATUS_PROPERTIES_KHR
  • VK_STRUCTURE_TYPE_QUEUE_FAMILY_VIDEO_PROPERTIES_KHR
  • VK_STRUCTURE_TYPE_VIDEO_BEGIN_CODING_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_CAPABILITIES_KHR
  • VK_STRUCTURE_TYPE_VIDEO_CODING_CONTROL_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_END_CODING_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_FORMAT_PROPERTIES_KHR
  • VK_STRUCTURE_TYPE_VIDEO_PICTURE_RESOURCE_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_PROFILE_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_PROFILE_LIST_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_REFERENCE_SLOT_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_SESSION_CREATE_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_SESSION_MEMORY_REQUIREMENTS_KHR
  • VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_CREATE_INFO_KHR
  • VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_UPDATE_INFO_KHR

Version History

• Revision 0.1, 2019-11-21 (Tony Zlatinski)
  • Initial draft

• Revision 0.2, 2019-11-27 (Tony Zlatinski)
• Make vulkan video core common between decode and encode

Revision 1, March 29 2021 (Tony Zlatinski)
  • Spec and API updates.

Revision 2, August 1 2021 (Srinath Kumarapuram)
  • Rename `VkVideoCapabilitiesFlagBitsKHR` to `VkVideoCapabilityFlagBitsKHR` (along with the names of enumerants it defines) and `VkVideoCapabilitiesFlagsKHR` to `VkVideoCapabilityFlagsKHR`, following Vulkan naming conventions.

Revision 3, 2022-03-16 (Ahmed Abdelkhalek)
  • Relocate Std header version reporting/requesting from codec-operation specific extensions to this extension.
  • Make Std header versions codec-operation specific instead of only codec-specific.

Revision 4, 2022-05-30 (Daniel Rakos)
  • Refactor the video format query APIs and related language
  • Extend VkResult with video-specific error codes

Revision 5, 2022-08-11 (Daniel Rakos)
  • Add `VkVideoSessionParametersCreateFlagsKHR`
  • Remove `VkVideoCodingQualityPresetFlagsKHR`
  • Rename `VkQueueFamilyQueryResultStatusProperties2KHR` to `VkQueueFamilyQueryResultStatusPropertiesKHR`
  • Rename `VkVideoQueueFamilyProperties2KHR` to `VkVideoProfileInfoKHR`
  • Rename `VkVideoProfilesKHR` to `VkVideoProfileListInfoKHR`
  • Rename `VkVideoGetMemoryPropertiesKHR` to `VkVideoSessionMemoryRequirementsKHR`
  • Rename `VkVideoBindMemoryKHR` to `VkBindVideoSessionMemoryInfoKHR`
  • Fix `pNext` constness of `VkPhysicalDeviceVideoFormatInfoKHR` and `VkVideoSessionMemoryRequirementsKHR`
  • Fix incorrectly named value enums in bit enum types `VkVideoCodecOperationFlagBitsKHR` and `VkVideoChromaSubsamplingFlagBitsKHR`
  • Remove unnecessary default values from `VkVideoSessionCreateFlagBitsKHR` and `VkVideoCodingControlFlagBitsKHR`
  • Eliminate nested pointer in `VkVideoSessionMemoryRequirementsKHR`
  • Rename `VkVideoPictureResourceKHR` to `VkVideoPictureResourceInfoKHR`
  • Rename `VkVideoReferenceSlotKHR` to `VkVideoReferenceSlotInfoKHR`

Revision 6, 2022-09-18 (Daniel Rakos)
  • Rename the `maxReferencePicturesSlotsCount` and `maxReferencePicturesActiveCount` fields of `VkVideoCapabilitiesKHR` and `VkVideoSessionCreateInfoKHR` to `maxDpbSlots` and `maxActiveReferencePictures`, respectively, to clarify their meaning
- Rename capabilityFlags to flags in VkVideoCapabilitiesKHR
- Rename videoPictureExtentGranularity to pictureAccessGranularity in VkVideoCapabilitiesKHR
- Rename minExtent and maxExtent to minCodedExtent and maxCodedExtent, respectively, in VkVideoCapabilitiesKHR
- Rename referencePicturesFormat to referencePictureFormat in VkVideoSessionCreateInfoKHR

- Revision 7, 2022-09-26 (Daniel Rakos)
  - Change type of VkVideoReferenceSlotInfoKHR::slotIndex from int8_t to int32_t
- Revision 8, 2022-09-29 (Daniel Rakos)
  - Extension is no longer provisional

Description

The `VK_KHR_wayland_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to a Wayland `wl_surface`, as well as a query to determine support for rendering to a Wayland compositor.

New Commands

- `vkCreateWaylandSurfaceKHR`
- `vkGetPhysicalDeviceWaylandPresentationSupportKHR`

New Structures

- `VkWaylandSurfaceCreateInfoKHR`

New Bitmasks

- `VkWaylandSurfaceCreateFlagsKHR`

New Enum Constants

- `VK_KHR_WAYLAND_SURFACE_EXTENSION_NAME`
- `VK_KHR_WAYLAND_SURFACE_SPEC_VERSION`

Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_WAYLAND_SURFACE_CREATE_INFO_KHR`
Issues

1) Does Wayland need a way to query for compatibility between a particular physical device and a specific Wayland display? This would be a more general query than `vkGetPhysicalDeviceSurfaceSupportKHR`: if the Wayland-specific query returned `VK_TRUE` for a `(VkPhysicalDevice, struct wl_display*)` pair, then the physical device could be assumed to support presentation to any `VkSurfaceKHR` for surfaces on the display.

**RESOLVED:** Yes. `vkGetPhysicalDeviceWaylandPresentationSupportKHR` was added to address this issue.

2) Should we require surfaces created with `vkCreateWaylandSurfaceKHR` to support the `VK_PRESENT_MODE_MAILBOX_KHR` present mode?

**RESOLVED:** Yes. Wayland is an inherently mailbox window system and mailbox support is required for some Wayland compositor interactions to work as expected. While handling these interactions may be possible with `VK_PRESENT_MODE_FIFO_KHR`, it is much more difficult to do without deadlock and requiring all Wayland applications to be able to support implementations which only support `VK_PRESENT_MODE_FIFO_KHR` would be an onerous restriction on application developers.

Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of VK_EXT_KHR_swapchain (later renamed VK_EXT_KHR_surface).
- Revision 2, 2015-10-02 (James Jones)
  - Added `vkGetPhysicalDeviceWaylandPresentationSupportKHR()` to resolve issue #1.
  - Adjusted wording of issue #1 to match the agreed-upon solution.
  - Renamed “window” parameters to “surface” to match Wayland conventions.
- Revision 3, 2015-10-26 (Ian Elliott)
  - Renamed from VK_EXT_KHR_wayland_surface to VK_KHR_wayland_surface.
- Revision 4, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to `vkCreateWaylandSurfaceKHR`.
- Revision 5, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a pCreateInfo structure.
- Revision 6, 2017-02-08 (Faith Ekstranad)
  - Added the requirement that implementations support `VK_PRESENT_MODE_MAILBOX_KHR`.
  - Added wording about interactions between `vkQueuePresentKHR` and the Wayland requests sent to the compositor.

Description

Applications that wish to import Direct3D 11 memory objects into the Vulkan API may wish to use the native keyed mutex mechanism to synchronize access to the memory between Vulkan and Direct3D. This extension provides a way for an application to access the keyed mutex associated with an imported Vulkan memory object when submitting command buffers to a queue.

New Structures

• Extending VkSubmitInfo, VkSubmitInfo2:
  • VkWin32KeyedMutexAcquireReleaseInfoKHR
New Enum Constants

- VK_KHR_WIN32_KEYED_MUTEX_EXTENSION_NAME
- VK_KHR_WIN32_KEYED_MUTEX_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_WIN32_KEYED_MUTEX_ACQUIRE_RELEASE_INFO_KHR

Description

The VK_KHR_win32_surface extension is an instance extension. It provides a mechanism to create a VkSurfaceKHR object (defined by the VK_KHR_surface extension) that refers to a Win32 HWND, as well as a query to determine support for rendering to the windows desktop.

New Commands

- vkCreateWin32SurfaceKHR
- vkGetPhysicalDeviceWin32PresentationSupportKHR

New Structures

- VkWin32SurfaceCreateInfoKHR

New Bitmasks

- VkWin32SurfaceCreateFlagsKHR

New Enum Constants

- VK_KHR_WIN32_SURFACE_EXTENSION_NAME
- VK_KHR_WIN32_SURFACE_SPEC_VERSION

Extending VkStructureType:

- VK_STRUCTURE_TYPE_WIN32_SURFACE_CREATE_INFO_KHR
Issues

1) Does Win32 need a way to query for compatibility between a particular physical device and a specific screen? Compatibility between a physical device and a window generally only depends on what screen the window is on. However, there is not an obvious way to identify a screen without already having a window on the screen.

RESOLVED: No. While it may be useful, there is not a clear way to do this on Win32. However, a method was added to query support for presenting to the windows desktop as a whole.

2) If a native window object (HWND) is used by one graphics API, and then is later used by a different graphics API (one of which is Vulkan), can these uses interfere with each other?

RESOLVED: Yes.

Uses of a window object by multiple graphics APIs results in undefined behavior. Such behavior may succeed when using one Vulkan implementation but fail when using a different Vulkan implementation. Potential failures include:

- Creating then destroying a flip presentation model DXGI swapchain on a window object can prevent vkCreateSwapchainKHR from succeeding on the same window object.
- Creating then destroying a VkSwapchainKHR on a window object can prevent creation of a bitblt model DXGI swapchain on the same window object.
- Creating then destroying a VkSwapchainKHR on a window object can effectively SetPixelFormat to a different format than the format chosen by an OpenGL application.
- Creating then destroying a VkSwapchainKHR on a window object on one VkPhysicalDevice can prevent vkCreateSwapchainKHR from succeeding on the same window object, but on a different VkPhysicalDevice that is associated with a different Vulkan ICD.

In all cases the problem can be worked around by creating a new window object.

Technical details include:

- Creating a DXGI swapchain over a window object can alter the object for the remainder of its lifetime. The alteration persists even after the DXGI swapchain has been destroyed. This alteration can make it impossible for a conformant Vulkan implementation to create a VkSwapchainKHR over the same window object. Mention of this alteration can be found in the remarks section of the MSDN documentation for DXGI_SWAP_EFFECT.
- Calling GDI’s SetPixelFormat (needed by OpenGL’s WGL layer) on a window object alters the object for the remainder of its lifetime. The MSDN documentation for SetPixelFormat explains that a window object’s pixel format can be set only one time.
- Creating a VkSwapchainKHR over a window object can alter the object for its remaining lifetime. Either of the above alterations may occur as a side effect of vkCreateSwapchainKHR.

Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of VK_EXT_KHR_swapchain (later renamed
• Revision 2, 2015-10-02 (James Jones)
  ◦ Added presentation support query for win32 desktops.

• Revision 3, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_win32_surface to VK_KHR_win32_surface.

• Revision 4, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to vkCreateWin32SurfaceKHR.

• Revision 5, 2015-11-28 (Daniel Rakos)
  ◦ Updated the surface create function to take a pCreateInfo structure.

• Revision 6, 2017-04-24 (Jeff Juliano)
  ◦ Add issue 2 addressing reuse of a native window object in a different Graphics API, or by a different Vulkan ICD.

- Graeme Leese, Broadcom
- Faith Ekstrand, Intel
- Daniel Koch, NVIDIA

**Description**
This extension adds Vulkan support for the `SPV_KHR_workgroup_memory_explicit_layout` SPIR-V extension, which allows shaders to explicitly define the layout of workgroup storage class memory and create aliases between variables from that storage class in a compute shader.

The aliasing feature allows different “views” on the same data, so the shader can bulk copy data from another storage class using one type (e.g. an array of large vectors), and then use the data with a more specific type. It also enables reducing the amount of workgroup memory consumed by allowing the shader to alias data whose lifetimes do not overlap.

The explicit layout support and some form of aliasing is also required for layering OpenCL on top of Vulkan.

**New Structures**
- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR`

**New Enum Constants**
- `VK_KHR_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_EXTENSION_NAME`
- `VK_KHR_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_FEATURES_KHR`

**New SPIR-V Capabilities**
- `WorkgroupMemoryExplicitLayoutKHR`
- `WorkgroupMemoryExplicitLayout8BitAccessKHR`
- `WorkgroupMemoryExplicitLayout16BitAccessKHR`
**Version History**

- Revision 1, 2020-06-01 (Caio Marcelo de Oliveira Filho)

Description

The `VK_KHR_xcb_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an X11 Window, using the XCB client-side library, as well as a query to determine support for rendering via XCB.

New Commands

- `vkCreateXcbSurfaceKHR`
- `vkGetPhysicalDeviceXcbPresentationSupportKHR`

New Structures

- `VkXcbSurfaceCreateInfoKHR`

New Bitmasks

- `VkXcbSurfaceCreateFlagsKHR`

New Enum Constants

- `VK_KHR_XCB_SURFACE_EXTENSION_NAME`
- `VK_KHR_XCB_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_XCB_SURFACE_CREATE_INFO_KHR`

Issues

1) Does XCB need a way to query for compatibility between a particular physical device and a specific screen? This would be a more general query than `vkGetPhysicalDeviceSurfaceSupportKHR`: If it returned `VK_TRUE`, then the physical device could be assumed to support presentation to any window on that screen.

**RESOLVED**: Yes, this is needed for toolkits that want to create a `VkDevice` before creating a window.
To ensure the query is reliable, it must be made against a particular X visual rather than the screen in general.

**Version History**

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of VK_EXT_KHR_swapchain (later renamed VK_EXT_KHR_surface).
- Revision 2, 2015-10-02 (James Jones)
  - Added presentation support query for an (xcb_connection_t*, xcb_visualid_t) pair.
  - Removed “root” parameter from CreateXcbSurfaceKHR(), as it is redundant when a window on the same screen is specified as well.
  - Adjusted wording of issue #1 and added agreed upon resolution.
- Revision 3, 2015-10-14 (Ian Elliott)
  - Removed “root” parameter from CreateXcbSurfaceKHR() in one more place.
- Revision 4, 2015-10-26 (Ian Elliott)
  - Renamed from VK_EXT_KHR_xcb_surface to VK_KHR_xcb_surface.
- Revision 5, 2015-10-23 (Daniel Rakos)
  - Added allocation callbacks to vkCreateXcbSurfaceKHR.
- Revision 6, 2015-11-28 (Daniel Rakos)
  - Updated the surface create function to take a pCreateInfo structure.

Description

This extension allows an application to take exclusive control on a display currently associated with an X11 screen. When control is acquired, the display will be deassociated from the X11 screen until control is released or the specified display connection is closed. Essentially, the X11 screen will behave as if the monitor has been unplugged until control is released.

New Commands

- `vkAcquireXlibDisplayEXT`
- `vkGetRandROutputDisplayEXT`

New Enum Constants

- `VK_EXT_ACQUIRE_XLIB_DISPLAY_EXTENSION_NAME`
- `VK_EXT_ACQUIRE_XLIB_DISPLAY_SPEC_VERSION`

Issues

1) Should `vkAcquireXlibDisplayEXT` take an RandR display ID, or a Vulkan display handle as input?

**RESOLVED:** A Vulkan display handle. Otherwise there would be no way to specify handles to displays that had been prevented from being included in the X11 display list by some native platform or vendor-specific mechanism.

2) How does an application figure out which RandR display corresponds to a Vulkan display?

**RESOLVED:** A new function, `vkGetRandROutputDisplayEXT`, is introduced for this purpose.

3) Should `vkGetRandROutputDisplayEXT` be part of this extension, or a general Vulkan / RandR or Vulkan / Xlib extension?

**RESOLVED:** To avoid yet another extension, include it in this extension.

Description
The existing specification requires that low dynamic range (LDR) ASTC textures are decompressed to FP16 values per component. In many cases, decompressing LDR textures to a lower precision intermediate result gives acceptable image quality. Source material for LDR textures is typically authored as 8-bit UNORM values, so decoding to FP16 values adds little value. On the other hand, reducing precision of the decoded result reduces the size of the decompressed data, potentially improving texture cache performance and saving power.

The goal of this extension is to enable this efficiency gain on existing ASTC texture data. This is achieved by giving the application the ability to select the intermediate decoding precision.

Three decoding options are provided:

• Decode to VK_FORMAT_R16G16B16A16_SFLOAT precision: This is the default, and matches the required behavior in the core API.
• Decode to `VK_FORMAT_R8G8B8A8_UNORM` precision: This is provided as an option in LDR mode.
• Decode to `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32` precision: This is provided as an option in both LDR and HDR mode. In this mode, negative values cannot be represented and are clamped to zero. The alpha component is ignored, and the results are as if alpha was 1.0. This decode mode is optional and support can be queried via the physical device properties.

New Structures

• Extending `VkImageViewCreateInfo`:
  ◦ `VkImageViewASTCDecodeModeEXT`

• Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceASTCDecodeFeaturesEXT`

New Enum Constants

• `VK_EXT_ASTC_DECODE_MODE_EXTENSION_NAME`
• `VK_EXT_ASTC_DECODE_MODE_SPEC_VERSION`
• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT`
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT`

Issues

1) Are implementations allowed to decode at a higher precision than what is requested?

RESOLUTION: No.
If we allow this, then this extension could be exposed on all implementations that support ASTC.
But developers would have no way of knowing what precision was actually used, and thus whether the image quality is sufficient at reduced precision.

2) Should the decode mode be image view state and/or sampler state?

RESOLUTION: Image view state only.
Some implementations treat the different decode modes as different texture formats.

Example

Create an image view that decodes to `VK_FORMAT_R8G8B8A8_UNORM` precision:

```cpp
VkImageViewASTCDecodeModeEXT decodeMode =
```
```c

VkImageViewCreateInfo createInfo = {
    .sType = VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO,
    .pNext = &decodeMode,
    // flags, image, viewType set to application-desired values
    .format = VK_FORMAT_ASTC_8x8_UNORM_BLOCK,
    // components, subresourceRange set to application-desired values
};

VkImageView imageView;
VkResult result = vkCreateImageView(
    device,
    &createInfo,
    NULL,
    &imageView);
```

Description
This extension adds a number of “advanced” blending operations that can be used to perform new color blending operations, many of which are more complex than the standard blend modes provided by unextended Vulkan. This extension requires different styles of usage, depending on the level of hardware support and the enabled features:

• If VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT::advancedBlendCoherentOperations is VK_FALSE, the new blending operations are supported, but a memory dependency must separate each advanced blend operation on a given sample. VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT is used to synchronize reads using advanced blend operations.

• If VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT::advancedBlendCoherentOperations is VK_TRUE, advanced blend operations obey primitive order just like basic blend operations.

In unextended Vulkan, the set of blending operations is limited, and can be expressed very simply. The VK_BLEND_OP_MIN and VK_BLEND_OP_MAX blend operations simply compute component-wise minimums or maximums of source and destination color components. The VK_BLEND_OP_ADD, VK_BLEND_OP_SUBTRACT, and VK_BLEND_OP_REVERSE_SUBTRACT modes multiply the source and destination colors by source and destination factors and either add the two products together or subtract one...
from the other. This limited set of operations supports many common blending operations but precludes the use of more sophisticated transparency and blending operations commonly available in many dedicated imaging APIs.

This extension provides a number of new “advanced” blending operations. Unlike traditional blending operations using `VK_BLEND_OP_ADD`, these blending equations do not use source and destination factors specified by `VkBlendFactor`. Instead, each blend operation specifies a complete equation based on the source and destination colors. These new blend operations are used for both RGB and alpha components; they must not be used to perform separate RGB and alpha blending (via different values of color and alpha `VkBlendOp`).

These blending operations are performed using premultiplied colors, where RGB colors can be considered premultiplied or non-premultiplied by alpha, according to the `srcPremultiplied` and `dstPremultiplied` members of `VkPipelineColorBlendAdvancedStateCreateInfoEXT`. If a color is considered non-premultiplied, the (R,G,B) color components are multiplied by the alpha component prior to blending. For non-premultiplied color components in the range [0,1], the corresponding premultiplied color component would have values in the range [0 \times A, 1 \times A].

Many of these advanced blending equations are formulated where the result of blending source and destination colors with partial coverage have three separate contributions: from the portions covered by both the source and the destination, from the portion covered only by the source, and from the portion covered only by the destination. The blend parameter `VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap` can be used to specify a correlation between source and destination pixel coverage. If set to `VK_BLEND_OVERLAP_CONJOINT_EXT`, the source and destination are considered to have maximal overlap, as would be the case if drawing two objects on top of each other. If set to `VK_BLEND_OVERLAP_DISJOINT_EXT`, the source and destination are considered to have minimal overlap, as would be the case when rendering a complex polygon tessellated into individual non-intersecting triangles. If set to `VK_BLEND_OVERLAP_UNCORRELATED_EXT`, the source and destination coverage are assumed to have no spatial correlation within the pixel.

In addition to the coherency issues on implementations not supporting `advancedBlendCoherentOperations`, this extension has several limitations worth noting. First, the new blend operations have a limit on the number of color attachments they can be used with, as indicated by `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::advancedBlendMaxColorAttachments`. Additionally, blending precision may be limited to 16-bit floating-point, which may result in a loss of precision and dynamic range for framebuffer formats with 32-bit floating-point components, and in a loss of precision for formats with 12- and 16-bit signed or unsigned normalized integer components.

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT`
- Extending `VkPipelineColorBlendStateCreateInfo`:
New Enums

- VkBlendOverlapEXT

New Enum Constants

- VK_EXT_BLEND_OPERATION_ADVANCED_EXTENSION_NAME
- VK_EXT_BLEND_OPERATION_ADVANCED_SPEC_VERSION

Extending VkAccessFlagBits:

Description
After the publication of VK_EXT_custom_border_color, it was discovered that some implementations had undefined behavior when combining a sampler that uses a custom border color with image views whose component mapping is not the identity mapping.
Since VK_EXT_custom_border_color has already shipped, this new extension VK_EXT_border_color_swizzle was created to define the interaction between custom border colors and non-identity image view swizzles, and provide a work-around for implementations that must pre-swizzle the sampler border color to match the image view component mapping it is combined with.

This extension also defines the behavior between samplers with an opaque black border color and image views with a non-identity component swizzle, which was previously left undefined.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceBorderColorSwizzleFeaturesEXT
- Extending VkSamplerCreateInfo:
  - VkSamplerBorderColorComponentMappingCreateInfoEXT

New Enum Constants

- VK_EXT_BORDER_COLOR_SWIZZLE_EXTENSION_NAME
- VK_EXT_BORDER_COLOR_SWIZZLE_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BORDER_COLOR_SWIZZLE_FEATURES_EXT
  - VK_STRUCTURE_TYPE_SAMPLER_BORDER_COLOR_COMPONENT_MAPPING_CREATE_INFO_EXT

Description

This extension allows for selectively enabling and disabling writes to output color attachments via a pipeline dynamic state.

The intended use cases for this new state are mostly identical to those of colorWriteMask, such as selectively disabling writes to avoid feedback loops between subpasses or bandwidth savings for unused outputs. By making the state dynamic, one additional benefit is the ability to reduce pipeline counts and pipeline switching via shaders that write a superset of the desired data of which subsets are selected dynamically. The reason for a new state, colorWriteEnable, rather than making colorWriteMask dynamic is that, on many implementations, the more flexible per-component semantics of the colorWriteMask state cannot be made dynamic in a performant manner.

New Commands

- `vkCmdSetColorWriteEnableEXT`

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceColorWriteEnableFeaturesEXT`
- Extending `VkPipelineColorBlendStateCreateInfo`:
  - `VkPipelineColorWriteCreateInfoEXT`

New Enum Constants

- `VK_EXT_COLOR_WRITE_ENABLE_EXTENSION_NAME`
- `VK_EXT_COLOR_WRITE_ENABLE_SPEC_VERSION`
- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COLOR_WRITE_ENABLE_FEATURES_EXT`

**Description**

This extension allows the execution of one or more rendering commands to be conditional on a value in buffer memory. This may help an application reduce the latency by conditionally discarding rendering commands without application intervention. The conditional rendering commands are limited to draws, compute dispatches and clearing attachments within a conditional rendering block.

**New Commands**

- `vkCmdBeginConditionalRenderingEXT`
- `vkCmdEndConditionalRenderingEXT`

**New Structures**

- `VkConditionalRenderingBeginInfoEXT`
- Extending `VkCommandBufferInheritanceInfo`:
  - `VkCommandBufferInheritanceConditionalRenderingInfoEXT`
- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceConditionalRenderingFeaturesEXT`

**New Enums**

- `VkConditionalRenderingFlagBitsEXT`

**New Bitmasks**

- `VkConditionalRenderingFlagsEXT`

**New Enum Constants**

- `VK_EXT_CONDITIONAL_RENDERING_EXTENSION_NAME`
- `VK_EXT_CONDITIONAL_RENDERING_SPEC_VERSION`
- Extending `VkAccessFlagBits`:
  - `VK_ACCESS_CONDITIONAL_RENDERING_READ_BIT_EXT`
- Extending `VkBufferUsageFlagBits`:
  - `VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT`
- Extending `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_COMMAND_BUFFER_INHERITANCE_CONDITIONAL_RENDERING_INFO_EXT`
  - `VK_STRUCTURE_TYPE_CONDITIONAL_RENDERING_BEGIN_INFO_EXT`
Issues

1) Should conditional rendering affect copy and blit commands?

RESOLVED: Conditional rendering should not affect copies and blits.

2) Should secondary command buffers be allowed to execute while conditional rendering is active in the primary command buffer?

RESOLVED: The rendering commands in secondary command buffer will be affected by an active conditional rendering in primary command buffer if the conditionalRenderingEnable is set to Vk_TRUE. Conditional rendering must not be active in the primary command buffer if conditionalRenderingEnable is Vk_FALSE.

Examples

None.

Version History

- Revision 1, 2018-04-19 (Vikram Kushwaha)
  - First Version
- Revision 2, 2018-05-21 (Vikram Kushwaha)
  - Add new pipeline stage, access flags and limit conditional rendering to a subpass or entire render pass.

Description

This extension adds a new rasterization mode called conservative rasterization. There are two modes of conservative rasterization; overestimation and underestimation.

When overestimation is enabled, if any part of the primitive, including its edges, covers any part of the rectangular pixel area, including its sides, then a fragment is generated with all coverage samples turned on. This extension allows for some variation in implementations by accounting for differences in overestimation, where the generating primitive size is increased at each of its edges by some sub-pixel amount to further increase conservative pixel coverage. Implementations can allow the application to specify an extra overestimation beyond the base overestimation the implementation already does. It also allows implementations to either cull degenerate primitives or rasterize them.

When underestimation is enabled, fragments are only generated if the rectangular pixel area is fully covered by the generating primitive. If supported by the implementation, when a pixel
rectangle is fully covered the fragment shader input variable builtin called FullyCoveredEXT is set to true. The shader variable works in either overestimation or underestimation mode.

Implementations can process degenerate triangles and lines by either discarding them or generating conservative fragments for them. Degenerate triangles are those that end up with zero area after the rasterizer quantizes them to the fixed-point pixel grid. Degenerate lines are those with zero length after quantization.

New Structures

- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceConservativeRasterizationPropertiesEXT

- Extending VkPipelineRasterizationStateCreateInfo:
  - VkPipelineRasterizationConservativeStateCreateInfoEXT

New Enums

- VkConservativeRasterizationModeEXT

New Bitmasks

- VkPipelineRasterizationConservativeStateCreateFlagsEXT

New Enum Constants
