• **maxPerStageDescriptorStorageBuffers** is the maximum number of storage buffers that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Storage Buffer and Dynamic Storage Buffer.

• **maxPerStageDescriptorSampledImages** is the maximum number of sampled images that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Combined Image Sampler, Sampled Image, and Uniform Texel Buffer.

• **maxPerStageDescriptorStorageImages** is the maximum number of storage images that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. See Storage Image, and Storage Texel Buffer.

• **maxPerStageDescriptorInputAttachments** is the maximum number of input attachments that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. A descriptor is accessible to a pipeline shader stage when the `stageFlags` member of the `VkDescriptorSetLayoutBinding` structure has the bit for that shader stage set. These are only supported for the fragment stage. See Input Attachment.

• **maxPerStageResources** is the maximum number of resources that can be accessible to a single shader stage in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER`, `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER`, `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER`, or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. For the fragment shader stage the framebuffer color attachments also count against this limit.

• **maxDescriptorSetSamplers** is the maximum number of samplers that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_SAMPLER` or `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See
**Sampler** and **Combined Image Sampler**.

- **maxDescriptorSetUniformBuffers** is the maximum number of uniform buffers that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Uniform Buffer and Dynamic Uniform Buffer.

- **maxDescriptorSetUniformBuffersDynamic** is the maximum number of dynamic uniform buffers that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Dynamic Uniform Buffer.

- **maxDescriptorSetStorageBuffers** is the maximum number of storage buffers that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Storage Buffer and Dynamic Storage Buffer.

- **maxDescriptorSetStorageBuffersDynamic** is the maximum number of dynamic storage buffers that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Dynamic Storage Buffer.

- **maxDescriptorSetSampledImages** is the maximum number of sampled images that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER`, `VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE`, or `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Combined Image Sampler, Sampled Image, and Uniform Texel Buffer.

- **maxDescriptorSetStorageImages** is the maximum number of storage images that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_STORAGE_IMAGE`, or `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Storage Image, and Storage Texel Buffer.

- **maxDescriptorSetInputAttachments** is the maximum number of input attachments that can be included in a pipeline layout. Descriptors with a type of `VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT` count against this limit. Only descriptors in descriptor set layouts created without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set count against this limit. See Input Attachment.

- **maxVertexInputAttributes** is the maximum number of vertex input attributes that can be specified for a graphics pipeline. These are described in the array of `VkVertexInputAttributeDescription` structures that are provided at graphics pipeline creation time via the `pVertexAttributeDescriptions` member of the `VkPipelineVertexInputStateCreateInfo`.
structure. See Vertex Attributes and Vertex Input Description.

- **maxVertexInputBindings** is the maximum number of vertex buffers that can be specified for providing vertex attributes to a graphics pipeline. These are described in the array of VkVertexInputBindingDescription structures that are provided at graphics pipeline creation time via the pVertexBindingDescriptions member of the VkPipelineVertexInputStateCreateInfo structure. The binding member of VkVertexInputBindingDescription must be less than this limit. See Vertex Input Description.

- **maxVertexInputAttributeOffset** is the maximum vertex input attribute offset that can be added to the vertex input binding stride. The offset member of the VkVertexInputAttributeDescription structure must be less than or equal to this limit. See Vertex Input Description.

- **maxVertexInputBindingStride** is the maximum vertex input binding stride that can be specified in a vertex input binding. The stride member of the VkVertexInputBindingDescription structure must be less than or equal to this limit. See Vertex Input Description.

- **maxVertexOutputComponents** is the maximum number of components of output variables which can be output by a vertex shader. See Vertex Shaders.

- **maxTessellationGenerationLevel** is the maximum tessellation generation level supported by the fixed-function tessellation primitive generator. See Tessellation.

- **maxTessellationPatchSize** is the maximum patch size, in vertices, of patches that can be processed by the tessellation control shader and tessellation primitive generator. The patchControlPoints member of the VkPipelineTessellationStateCreateInfo structure specified at pipeline creation time and the value provided in the OutputVertices execution mode of shader modules must be less than or equal to this limit. See Tessellation.

- **maxTessellationControlPerVertexInputComponents** is the maximum number of components of input variables which can be provided as per-vertex inputs to the tessellation control shader stage.

- **maxTessellationControlPerVertexOutputComponents** is the maximum number of components of per-vertex output variables which can be output from the tessellation control shader stage.

- **maxTessellationControlPerPatchOutputComponents** is the maximum number of components of per-patch output variables which can be output from the tessellation control shader stage.

- **maxTessellationControlTotalOutputComponents** is the maximum total number of components of per-vertex and per-patch output variables which can be output from the tessellation control shader stage.

- **maxTessellationEvaluationInputComponents** is the maximum number of components of input variables which can be provided as per-vertex inputs to the tessellation evaluation shader stage.

- **maxTessellationEvaluationOutputComponents** is the maximum number of components of per-vertex output variables which can be output from the tessellation evaluation shader stage.

- **maxGeometryShaderInvocations** is the maximum invocation count supported for instanced geometry shaders. The value provided in the Invocations execution mode of shader modules must be less than or equal to this limit. See Geometry Shading.

- **maxGeometryInputComponents** is the maximum number of components of input variables which can be provided as inputs to the geometry shader stage.
• **maxGeometryOutputComponents** is the maximum number of components of output variables which can be output from the geometry shader stage.

• **maxGeometryOutputVertices** is the maximum number of vertices which can be emitted by any geometry shader.

• **maxGeometryTotalOutputComponents** is the maximum total number of components of output variables, across all emitted vertices, which can be output from the geometry shader stage.

• **maxFragmentInputComponents** is the maximum number of components of input variables which can be provided as inputs to the fragment shader stage.

• **maxFragmentOutputAttachments** is the maximum number of output attachments which can be written to by the fragment shader stage.

• **maxFragmentDualSrcAttachments** is the maximum number of output attachments which can be written to by the fragment shader stage when blending is enabled and one of the dual source blend modes is in use. See Dual-Source Blending and dualSrcBlend.

• **maxFragmentCombinedOutputResources** is the total number of storage buffers, storage images, and output Location decorated color attachments (described in Fragment Output Interface) which can be used in the fragment shader stage.

• **maxComputeSharedMemorySize** is the maximum total storage size, in bytes, available for variables declared with the Workgroup storage class in shader modules (or with the shared storage qualifier in GLSL) in the compute shader stage.

• **maxComputeWorkGroupCount[3]** is the maximum number of local workgroups that can be dispatched by a single dispatching command. These three values represent the maximum number of local workgroups for the X, Y, and Z dimensions, respectively. The workgroup count parameters to the dispatching commands must be less than or equal to the corresponding limit. See Dispatching Commands.

• **maxComputeWorkGroupInvocations** is the maximum total number of compute shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the LocalSize or LocalSizeId execution mode in shader modules or by the object decorated by the WorkgroupSize decoration, must be less than or equal to this limit.

• **maxComputeWorkGroupSize[3]** is the maximum size of a local compute workgroup, per dimension. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, must be less than or equal to the corresponding limit.

• **subPixelPrecisionBits** is the number of bits of subpixel precision in framebuffer coordinates $x_f$ and $y_f$. See Rasterization.

• **subTexelPrecisionBits** is the number of bits of precision in the division along an axis of an image used for minification and magnification filters. $2^{\text{subTexelPrecisionBits}}$ is the actual number of divisions along each axis of the image represented. Sub-texel values calculated during image sampling will snap to these locations when generating the filtered results.

• **mipmapPrecisionBits** is the number of bits of division that the LOD calculation for mipmap fetching get snapped to when determining the contribution from each mip level to the mip filtered results. $2^{\text{mipmapPrecisionBits}}$ is the actual number of divisions.
• **maxDrawIndexedIndexValue** is the maximum index value that can be used for indexed draw calls when using 32-bit indices. This excludes the primitive restart index value of 0xFFFFFFFF. See fullDrawIndexUint32.

• **maxDrawIndirectCount** is the maximum draw count that is supported for indirect drawing calls. See multiDrawIndirect.

• **maxSamplerLodBias** is the maximum absolute sampler LOD bias. The sum of the mipLodBias member of the VkSamplerCreateInfo structure and the Bias operand of image sampling operations in shader modules (or 0 if no Bias operand is provided to an image sampling operation) are clamped to the range \([-\text{maxSamplerLodBias},+\text{maxSamplerLodBias}]\). See [samplers-mipLodBias].

• **maxSamplerAnisotropy** is the maximum degree of sampler anisotropy. The maximum degree of anisotropic filtering used for an image sampling operation is the minimum of the maxAnisotropy member of the VkSamplerCreateInfo structure and this limit. See [samplers-maxAnisotropy].

• **maxViewports** is the maximum number of active viewports. The viewportCount member of the VkPipelineViewportStateCreateInfo structure that is provided at pipeline creation must be less than or equal to this limit.

• **maxViewportDimensions[2]** are the maximum viewport dimensions in the X (width) and Y (height) dimensions, respectively. The maximum viewport dimensions must be greater than or equal to the largest image which can be created and used as a framebuffer attachment. See Controlling the Viewport.

• **viewportBoundsRange[2]** is the \([\text{minimum}, \text{maximum}]\) range that the corners of a viewport must be contained in. This range must be at least \([-2 \times \text{size}, 2 \times \text{size} - 1]\), where \(\text{size} = \max(\text{maxViewportDimensions}[0], \text{maxViewportDimensions}[1])\). See Controlling the Viewport.

  **Note**
  The intent of the viewportBoundsRange limit is to allow a maximum sized viewport to be arbitrarily shifted relative to the output target as long as at least some portion intersects. This would give a bounds limit of \([-\text{size} + 1, 2 \times \text{size} - 1]\) which would allow all possible non-empty-set intersections of the output target and the viewport. Since these numbers are typically powers of two, picking the signed number range using the smallest possible number of bits ends up with the specified range.

• **viewportSubPixelBits** is the number of bits of subpixel precision for viewport bounds. The subpixel precision that floating-point viewport bounds are interpreted at is given by this limit.

• **minMemoryMapAlignment** is the minimum required alignment, in bytes, of host visible memory allocations within the host address space. When mapping a memory allocation with vkMapMemory, subtracting offset bytes from the returned pointer will always produce an integer multiple of this limit. See Host Access to Device Memory Objects. The value must be a power of two.

• **minTexelBufferOffsetAlignment** is the minimum required alignment, in bytes, for the offset member of the VkBufferViewCreateInfo structure for texel buffers. The value must be a power of two. If texelBufferAlignment is enabled, this limit is equivalent to the maximum of the uniformTexelBufferOffsetAlignmentBytes and storageTexelBufferOffsetAlignmentBytes members.
of `VkPhysicalDeviceTexelBufferAlignmentProperties`, but smaller alignment is optionally allowed by `storageTexelBufferOffsetSingleTexelAlignment` and `uniformTexelBufferOffsetSingleTexelAlignment`. If `texelBufferAlignment` is not enabled, `VkBufferViewCreateInfo::offset` must be a multiple of this value.

- `minUniformBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for uniform buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER` or `VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER_DYNAMIC` is updated, the `offset` must be an integer multiple of this limit. Similarly, dynamic offsets for uniform buffers must be multiples of this limit. The value must be a power of two.

- `minStorageBufferOffsetAlignment` is the minimum **required** alignment, in bytes, for the `offset` member of the `VkDescriptorBufferInfo` structure for storage buffers. When a descriptor of type `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER` or `VK_DESCRIPTOR_TYPE_STORAGE_BUFFER_DYNAMIC` is updated, the `offset` must be an integer multiple of this limit. Similarly, dynamic offsets for storage buffers must be multiples of this limit. The value must be a power of two.

- `minTexelOffset` is the minimum offset value for the `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.

- `maxTexelOffset` is the maximum offset value for the `ConstOffset` image operand of any of the `OpImageSample*` or `OpImageFetch*` image instructions.

- `minTexelGatherOffset` is the minimum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.

- `maxTexelGatherOffset` is the maximum offset value for the `Offset`, `ConstOffset`, or `ConstOffsets` image operands of any of the `OpImage*Gather` image instructions.

- `minInterpolationOffset` is the base minimum (inclusive) negative offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.

- `maxInterpolationOffset` is the base maximum (inclusive) positive offset value for the `Offset` operand of the `InterpolateAtOffset` extended instruction.

- `subPixelInterpolationOffsetBits` is the number of fractional bits that the `x` and `y` offsets to the `InterpolateAtOffset` extended instruction may be rounded to as fixed-point values.

- `maxFramebufferWidth` is the maximum width for a framebuffer. The `width` member of the `VkFramebufferCreateInfo` structure must be less than or equal to this limit.

- `maxFramebufferHeight` is the maximum height for a framebuffer. The `height` member of the `VkFramebufferCreateInfo` structure must be less than or equal to this limit.

- `maxFramebufferLayers` is the maximum layer count for a layered framebuffer. The `layers` member of the `VkFramebufferCreateInfo` structure must be less than or equal to this limit.

- `framebufferColorSampleCounts` is a bitmask\(^1\) of `VkSampleCountFlagBits` indicating the color sample counts that are supported for all framebuffer color attachments with floating- or fixed-point formats. For color attachments with integer formats, see `framebufferIntegerColorSampleCounts`.

- `framebufferDepthSampleCounts` is a bitmask\(^1\) of `VkSampleCountFlagBits` indicating the supported depth sample counts for all framebuffer depth/stencil attachments, when the format includes a depth component.

- `framebufferStencilSampleCounts` is a bitmask\(^1\) of `VkSampleCountFlagBits` indicating the
supported stencil sample counts for all framebuffer depth/stencil attachments, when the format includes a stencil component.

- **framebufferNoAttachmentsSampleCounts** is a bitmask of `VkSampleCountFlagBits` indicating the supported sample counts for a subpass which uses no attachments.

- **maxColorAttachments** is the maximum number of color attachments that **can** be used by a subpass in a render pass. The `colorAttachmentCount` member of the `VkSubpassDescription` or `VkSubpassDescription2` structure must be less than or equal to this limit.

- **sampledImageColorSampleCounts** is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and a non-integer color format.

- **sampledImageIntegerSampleCounts** is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and an integer color format.

- **sampledImageDepthSampleCounts** is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and a depth format.

- **sampledImageStencilSampleCounts** is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, `usage` containing `VK_IMAGE_USAGE_SAMPLED_BIT`, and a stencil format.

- **storageImageSampleCounts** is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supported for all 2D images created with `VK_IMAGE_TILING_OPTIMAL`, and `usage` containing `VK_IMAGE_USAGE_STORAGE_BIT`.

- **maxSampleMaskWords** is the maximum number of array elements of a variable decorated with the `SampleMask` built-in decoration.

- **timestampComputeAndGraphics** specifies support for timestamps on all graphics and compute queues. If this limit is set to `VK_TRUE`, all queues that advertise the `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT` in the `VkQueueFamilyProperties::queueFlags` support `VkQueueFamilyProperties::timestampValidBits` of at least 36. See Timestamp Queries.

- **timestampPeriod** is the number of nanoseconds required for a timestamp query to be incremented by 1. See Timestamp Queries.

- **maxClipDistances** is the maximum number of clip distances that **can** be used in a single shader stage. The size of any array declared with the `ClipDistance` built-in decoration in a shader module must be less than or equal to this limit.

- **maxCullDistances** is the maximum number of cull distances that **can** be used in a single shader stage. The size of any array declared with the `CullDistance` built-in decoration in a shader module must be less than or equal to this limit.

- **maxCombinedClipAndCullDistances** is the maximum combined number of clip and cull distances that **can** be used in a single shader stage. The sum of the sizes of any pair of arrays declared with the `ClipDistance` and `CullDistance` built-in decoration used by a single shader stage in a shader module must be less than or equal to this limit.

- **discreteQueuePriorities** is the number of discrete priorities that **can** be assigned to a queue based on the value of each member of `VkDeviceQueueCreateInfo::pQueuePriorities`. This **must**
be at least 2, and levels must be spread evenly over the range, with at least one level at 1.0, and another at 0.0. See Queue Priority.

- **pointSizeRange**[2] is the range [minimum, maximum] of supported sizes for points. Values written to variables decorated with the PointSize built-in decoration are clamped to this range.

- **lineWidthRange**[2] is the range [minimum, maximum] of supported widths for lines. Values specified by the lineWidth member of the VkPipelineRasterizationStateCreateInfo or the lineWidth parameter to vkCmdSetLineWidth are clamped to this range.

- **pointSizeGranularity** is the granularity of supported point sizes. Not all point sizes in the range defined by pointSizeRange are supported. This limit specifies the granularity (or increment) between successive supported point sizes.

- **lineWidthGranularity** is the granularity of supported line widths. Not all line widths in the range defined by lineWidthRange are supported. This limit specifies the granularity (or increment) between successive supported line widths.

- **strictLines** specifies whether lines are rasterized according to the preferred method of rasterization. If set to VK_FALSE, lines may be rasterized under a relaxed set of rules. If set to VK_TRUE, lines are rasterized as per the strict definition. See Basic Line Segment Rasterization.

- **standardSampleLocations** specifies whether rasterization uses the standard sample locations as documented in Multisampling. If set to VK_TRUE, the implementation uses the documented sample locations. If set to VK_FALSE, the implementation may use different sample locations.

- **optimalBufferCopyOffsetAlignment** is the optimal buffer offset alignment in bytes for vkCmdCopyBufferToImage2, vkCmdCopyBufferToImage, vkCmdCopyImageToBuffer2, and vkCmdCopyImageToBuffer. The per texel alignment requirements are enforced, but applications should use the optimal alignment for optimal performance and power use. The value must be a power of two.

- **optimalBufferCopyRowPitchAlignment** is the optimal buffer row pitch alignment in bytes for vkCmdCopyBufferToImage2, vkCmdCopyBufferToImage, vkCmdCopyImageToBuffer2, and vkCmdCopyImageToBuffer. Row pitch is the number of bytes between texels with the same X coordinate in adjacent rows (Y coordinates differ by one). The per texel alignment requirements are enforced, but applications should use the optimal alignment for optimal performance and power use. The value must be a power of two.

- **nonCoherentAtomSize** is the size and alignment in bytes that bounds concurrent access to host-mapped device memory. The value must be a power of two.

1 For all bitmasks of VkSampleCountFlagBits, the sample count limits defined above represent the minimum supported sample counts for each image type. Individual images may support additional sample counts, which are queried using vkGetPhysicalDeviceImageFormatProperties as described in Supported Sample Counts.

Bits which may be set in the sample count limits returned by VkPhysicalDeviceLimits, as well as in other queries and structures representing image sample counts, are:

```
// Provided by VK_VERSION_1_0
typedef enum VkSampleCountFlagBits {
```
VK_SAMPLE_COUNT_1_BIT = 0x00000001,
VK_SAMPLE_COUNT_2_BIT = 0x00000002,
VK_SAMPLE_COUNT_4_BIT = 0x00000004,
VK_SAMPLE_COUNT_8_BIT = 0x00000008,
VK_SAMPLE_COUNT_16_BIT = 0x00000010,
VK_SAMPLE_COUNT_32_BIT = 0x00000020,
VK_SAMPLE_COUNT_64_BIT = 0x00000040,
} VkSampleCountFlagBits;

- **VK_SAMPLE_COUNT_1_BIT** specifies an image with one sample per pixel.
- **VK_SAMPLE_COUNT_2_BIT** specifies an image with 2 samples per pixel.
- **VK_SAMPLE_COUNT_4_BIT** specifies an image with 4 samples per pixel.
- **VK_SAMPLE_COUNT_8_BIT** specifies an image with 8 samples per pixel.
- **VK_SAMPLE_COUNT_16_BIT** specifies an image with 16 samples per pixel.
- **VK_SAMPLE_COUNT_32_BIT** specifies an image with 32 samples per pixel.
- **VK_SAMPLE_COUNT_64_BIT** specifies an image with 64 samples per pixel.

```c
// Provided by VK_VERSION_1_0
typedef VkFlags VkSampleCountFlags;
```

**VkSampleCountFlags** is a bitmask type for setting a mask of zero or more **VkSampleCountFlagBits**.

The **VkPhysicalDevicePushDescriptorPropertiesKHR** structure is defined as:

```c
// Provided by VK_KHR_push_descriptor
typedef struct VkPhysicalDevicePushDescriptorPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t maxPushDescriptors;
} VkPhysicalDevicePushDescriptorPropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxPushDescriptors** is the maximum number of descriptors that can be used in a descriptor set layout created with **VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR** set.

If the **VkPhysicalDevicePushDescriptorPropertiesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDevicePushDescriptorPropertiesKHR-sType-sType
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PUSH_DESCRIPTOR_PROPERTIES_KHR

The VkPhysicalDeviceMultiviewProperties structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMultiviewProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxMultiviewViewCount;
    uint32_t           maxMultiviewInstanceIndex;
} VkPhysicalDeviceMultiviewProperties;
```

or the equivalent

```c
// Provided by VK_KHR_multiview
typedef VkPhysicalDeviceMultiviewProperties VkPhysicalDeviceMultiviewPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxMultiviewViewCount is one greater than the maximum view index that can be used in a subpass.
- maxMultiviewInstanceIndex is the maximum valid value of instance index allowed to be generated by a drawing command recorded within a subpass of a multiview render pass instance.

If the VkPhysicalDeviceMultiviewProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceMultiviewProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PROPERTIES

The VkPhysicalDeviceFloatControlsProperties structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceFloatControlsProperties {
    VkStructureType sType;
    void*           pNext;
    VkShaderFloatControlsIndependence denormBehaviorIndependence;
    VkShaderFloatControlsIndependence roundingModeIndependence;
    VkBool32        shaderSignedZeroInfNanPreserveFloat16;
    VkBool32        shaderSignedZeroInfNanPreserveFloat32;
} VkPhysicalDeviceFloatControlsProperties;
```
• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `denormBehaviorIndependence` is a `VkShaderFloatControlsIndependence` value indicating whether, and how, denorm behavior can be set independently for different bit widths.
• `roundingModeIndependence` is a `VkShaderFloatControlsIndependence` value indicating whether, and how, rounding modes can be set independently for different bit widths.
• `shaderSignedZeroInfNanPreserveFloat16` is a boolean value indicating whether sign of a zero, Nans and ±∞ can be preserved in 16-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode can be used for 16-bit floating-point types.
• `shaderSignedZeroInfNanPreserveFloat32` is a boolean value indicating whether sign of a zero, Nans and ±∞ can be preserved in 32-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode can be used for 32-bit floating-point types.
• `shaderSignedZeroInfNanPreserveFloat64` is a boolean value indicating whether sign of a zero, Nans and ±∞ can be preserved in 64-bit floating-point computations. It also indicates whether the `SignedZeroInfNanPreserve` execution mode can be used for 64-bit floating-point types.
• `shaderDenormPreserveFloat16` is a boolean value indicating whether denormals can be preserved in 16-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode can be used for 16-bit floating-point types.
• `shaderDenormPreserveFloat32` is a boolean value indicating whether denormals can be preserved in 32-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode can be used for 32-bit floating-point types.
• `shaderDenormPreserveFloat64` is a boolean value indicating whether denormals can be preserved in 64-bit floating-point computations. It also indicates whether the `DenormPreserve` execution mode can be used for 64-bit floating-point types.
mode can be used for 64-bit floating-point types.

- `shaderDenormFlushToZeroFloat16` is a boolean value indicating whether denormals can be flushed to zero in 16-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode can be used for 16-bit floating-point types.

- `shaderDenormFlushToZeroFloat32` is a boolean value indicating whether denormals can be flushed to zero in 32-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode can be used for 32-bit floating-point types.

- `shaderDenormFlushToZeroFloat64` is a boolean value indicating whether denormals can be flushed to zero in 64-bit floating-point computations. It also indicates whether the `DenormFlushToZero` execution mode can be used for 64-bit floating-point types.

- `shaderRoundingModeRTEFloat16` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode can be used for 16-bit floating-point types.

- `shaderRoundingModeRTEFloat32` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode can be used for 32-bit floating-point types.

- `shaderRoundingModeRTEFloat64` is a boolean value indicating whether an implementation supports the round-to-nearest-even rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTE` execution mode can be used for 64-bit floating-point types.

- `shaderRoundingModeRTZFloat16` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 16-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode can be used for 16-bit floating-point types.

- `shaderRoundingModeRTZFloat32` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 32-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode can be used for 32-bit floating-point types.

- `shaderRoundingModeRTZFloat64` is a boolean value indicating whether an implementation supports the round-towards-zero rounding mode for 64-bit floating-point arithmetic and conversion instructions. It also indicates whether the `RoundingModeRTZ` execution mode can be used for 64-bit floating-point types.

If the `VkPhysicalDeviceFloatControlsProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFloatControlsProperties-sType-sType

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES`
Values which may be returned in the `denormBehaviorIndependence` and `roundingModeIndependence` fields of `VkPhysicalDeviceFloatControlsProperties` are:

```c
// Provided by VK_VERSION_1_2
typedef enum VkShaderFloatControlsIndependence {
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY = 0,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL = 1,
    VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE = 2,
} VkShaderFloatControlsIndependence;
```

or the equivalent

```c
// Provided by VK_KHR_shader_float_controls
typedef VkShaderFloatControlsIndependence VkShaderFloatControlsIndependenceKHR;
```

• `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY` specifies that shader float controls for 32-bit floating point can be set independently; other bit widths must be set identically to each other.

• `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL` specifies that shader float controls for all bit widths can be set independently.

• `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE` specifies that shader float controls for all bit widths must be set identically.

The `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_discard_rectangles
typedef struct VkPhysicalDeviceDiscardRectanglePropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxDiscardRectangles;
} VkPhysicalDeviceDiscardRectanglePropertiesEXT;
```

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is NULL or a pointer to a structure extending this structure.

• `maxDiscardRectangles` is the maximum number of active discard rectangles that can be specified.

If the `VkPhysicalDeviceDiscardRectanglePropertiesEXT` structure is included in the `pNext` chain of the
The `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceDiscardRectanglePropertiesEXT-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISCARD_RECTANGLE_PROPERTIES_EXT`

The `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_sample_locations
typedef struct VkPhysicalDeviceSampleLocationsPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkSampleCountFlags sampleLocationSampleCounts;
    VkExtent2D maxSampleLocationGridSize;
    float sampleLocationCoordinateRange[2];
    uint32_t sampleLocationSubPixelBits;
    VkBool32 variableSampleLocations;
} VkPhysicalDeviceSampleLocationsPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `sampleLocationSampleCounts` is a bitmask of `VkSampleCountFlagBits` indicating the sample counts supporting custom sample locations.
- `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations can vary that is supported for all sample counts in `sampleLocationSampleCounts`.
- `sampleLocationCoordinateRange[2]` is the range of supported sample location coordinates.
- `sampleLocationSubPixelBits` is the number of bits of subpixel precision for sample locations.
- `variableSampleLocations` specifies whether the sample locations used by all pipelines that will be bound to a command buffer during a subpass **must** match. If set to `VK_TRUE`, the implementation supports variable sample locations in a subpass. If set to `VK_FALSE`, then the sample locations **must** stay constant in each subpass.

If the `VkPhysicalDeviceSampleLocationsPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceSampleLocationsPropertiesEXT-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLE_LOCATIONS_PROPERTIES_EXT`

The `VkPhysicalDeviceExternalMemoryHostPropertiesEXT` structure is defined as:
// Provided by VK_EXT_external_memory_host
typedef struct VkPhysicalDeviceExternalMemoryHostPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize minImportedHostPointerAlignment;
} VkPhysicalDeviceExternalMemoryHostPropertiesEXT;

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **minImportedHostPointerAlignment** is the minimum **required** alignment, in bytes, for the base address and size of host pointers that **can** be imported to a Vulkan memory object. The value **must** be a power of two.

If the **VkPhysicalDeviceExternalMemoryHostPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

---

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceExternalMemoryHostPropertiesEXT-sType-sType
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_HOST_PROPERTIES_EXT**

---

The **VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX** structure is defined as:

// Provided by VK_NVX_multiview_per_view_attributes
typedef struct VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX {
    VkStructureType sType;
    void* pNext;
    VkBool32 perViewPositionAllComponents;
} VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX;

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **perViewPositionAllComponents** is **VK_TRUE** if the implementation supports per-view position values that differ in components other than the X component.

If the **VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

---

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX-sType-sType
  **sType** must be
The `VkPhysicalDevicePointClippingProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDevicePointClippingProperties {
    VkStructureType sType;
    void* pNext;
    VkPointClippingBehavior pointClippingBehavior;
} VkPhysicalDevicePointClippingProperties;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance2
typedef VkPhysicalDevicePointClippingProperties
    VkPhysicalDevicePointClippingPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `pointClippingBehavior` is a `VkPointClippingBehavior` value specifying the point clipping behavior supported by the implementation.

If the `VkPhysicalDevicePointClippingProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePointClippingProperties-sType-sType`  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICALDEVICE_POINTCLIPPING_PROPERTIES`

The `VkPhysicalDeviceSubgroupProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceSubgroupProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t subgroupSize;
    VkShaderStageFlags supportedStages;
    VkSubgroupFeatureFlags supportedOperations;
    VkBool32 quadOperationsInAllStages;
} VkPhysicalDeviceSubgroupProperties;
```

- `sType` is a `VkStructureType` value identifying this structure.
• \( \text{pNext} \) is NULL or a pointer to a structure extending this structure.

• subgroupSize is the default number of invocations in each subgroup. subgroupSize is at least 1 if any of the physical device’s queues support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT. subgroupSize is a power-of-two.

• supportedStages is a bitfield of VkShaderStageFlagBits describing the shader stages that group operations with subgroup scope are supported in. supportedStages will have the VK_SHADER_STAGE_COMPUTE_BIT bit set if any of the physical device’s queues support VK_QUEUE_COMPUTE_BIT.

• supportedOperations is a bitmask of VkSubgroupFeatureFlagBits specifying the sets of group operations with subgroup scope supported on this device. supportedOperations will have the VK_SUBGROUP_FEATURE_BASIC_BIT bit set if any of the physical device’s queues support VK_QUEUE_GRAPHICS_BIT or VK_QUEUE_COMPUTE_BIT.

• quadOperationsInAllStages is a boolean specifying whether quad group operations are available in all stages, or are restricted to fragment and compute stages.

If the VkPhysicalDeviceSubgroupProperties structure is included in the \( \text{pNext} \) chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

If supportedOperations includes VK_SUBGROUP_FEATURE_QUAD_BIT, or shaderSubgroupUniformControlFlow is enabled, subgroupSize must be greater than or equal to 4.

---

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceSubgroupProperties-sType-sType
  
  \( \text{sType} \) must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_PROPERTIES

Bits which can be set in VkPhysicalDeviceSubgroupProperties::supportedOperations and VkPhysicalDeviceVulkan11Properties::subgroupSupportedOperations to specify supported group operations with subgroup scope are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkSubgroupFeatureFlagBits {
    VK_SUBGROUP_FEATURE_BASIC_BIT = 0x00000001,
    VK_SUBGROUP_FEATURE_VOTE_BIT = 0x00000002,
    VK_SUBGROUP_FEATURE_ARITHMETIC_BIT = 0x00000004,
    VK_SUBGROUP_FEATURE_BALLOT_BIT = 0x00000008,
    VK_SUBGROUP_FEATURE_SHUFFLE_BIT = 0x00000010,
    VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT = 0x00000020,
    VK_SUBGROUP_FEATURE_CLUSTERED_BIT = 0x00000040,
    VK_SUBGROUP_FEATURE_QUAD_BIT = 0x00000080,
    // Provided by VK_NV_shader_subgroup_partitioned
    VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV = 0x00000100,
} VkSubgroupFeatureFlagBits;
```
• **VK_SUBGROUP_FEATURE_BASIC_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniform` capability.

• **VK_SUBGROUP_FEATURE_VOTE_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformVote` capability.

• **VK_SUBGROUP_FEATURE_ARITHMETIC_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformArithmetic` capability.

• **VK_SUBGROUP_FEATURE_BALLOT_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformBallot` capability.

• **VK_SUBGROUP_FEATURE_SHUFFLE_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformShuffle` capability.

• **VK_SUBGROUP_FEATURE_SHUFFLE_RELATIVE_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformShuffleRelative` capability.

• **VK_SUBGROUP_FEATURE_CLUSTERED_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformClustered` capability.

• **VK_SUBGROUP_FEATURE_QUAD_BIT** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformQuad` capability.

• **VK_SUBGROUP_FEATURE_PARTITIONED_BIT_NV** specifies the device will accept SPIR-V shader modules containing the `GroupNonUniformPartitionedNV` capability.

```c
// Provided by VK_VERSION_1_1
typedef VkFlags VkSubgroupFeatureFlags;
```

`VkSubgroupFeatureFlags` is a bitmask type for setting a mask of zero or more `VkSubgroupFeatureFlagBits`.

The **VkPhysicalDeviceSubgroupSizeControlProperties** structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceSubgroupSizeControlProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t minSubgroupSize;
    uint32_t maxSubgroupSize;
    uint32_t maxComputeWorkgroupSubgroups;
    VkShaderStageFlags requiredSubgroupSizeStages;
} VkPhysicalDeviceSubgroupSizeControlProperties;
```

or the equivalent

```c
// Provided by VK_EXT_subgroup_size_control
typedef VkPhysicalDeviceSubgroupSizeControlProperties
VkPhysicalDeviceSubgroupSizeControlPropertiesEXT;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **minSubgroupSize** is the minimum subgroup size supported by this device. **minSubgroupSize** is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. **minSubgroupSize** is a power-of-two. **minSubgroupSize** is less than or equal to **maxSubgroupSize**. **minSubgroupSize** is less than or equal to **subgroupSize**.

• **maxSubgroupSize** is the maximum subgroup size supported by this device. **maxSubgroupSize** is at least one if any of the physical device's queues support `VK_QUEUE_GRAPHICS_BIT` or `VK_QUEUE_COMPUTE_BIT`. **maxSubgroupSize** is a power-of-two. **maxSubgroupSize** is greater than or equal to **minSubgroupSize**. **maxSubgroupSize** is greater than or equal to **subgroupSize**.

• **maxComputeWorkgroupSubgroups** is the maximum number of subgroups supported by the implementation within a workgroup.

• **requiredSubgroupSizeStages** is a bitfield of what shader stages support having a required subgroup size specified.

If the `VkPhysicalDeviceSubgroupSizeControlProperties` structure is included in the **pNext** chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `VkPhysicalDeviceSubgroupProperties::supportedOperations` includes `VK_SUBGROUP_FEATURE_QUAD_BIT`, **minSubgroupSize** must be greater than or equal to 4.

---

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceSubgroupSizeControlProperties-sType-sType**

  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBGROUP_SIZE_CONTROL_PROPERTIES`

The `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_blend_operation_advanced
typedef struct VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT {
  VkStructureType sType;
  void* pNext;
  uint32_t advancedBlendMaxColorAttachments;
  VkBool32 advancedBlendIndependentBlend;
  VkBool32 advancedBlendNonPremultipliedSrcColor;
  VkBool32 advancedBlendNonPremultipliedDstColor;
  VkBool32 advancedBlendCorrelatedOverlap;
  VkBool32 advancedBlendAllOperations;
} VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT;
```

• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **advancedBlendMaxColorAttachments** is one greater than the highest color attachment index that
can be used in a subpass, for a pipeline that uses an advanced blend operation.

- **advancedBlendIndependentBlend** specifies whether advanced blend operations can vary per-attachment.

- **advancedBlendNonPremultipliedSrcColor** specifies whether the source color can be treated as non-premultiplied. If this is VK_FALSE, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::srcPremultiplied` must be VK_TRUE.

- **advancedBlendNonPremultipliedDstColor** specifies whether the destination color can be treated as non-premultiplied. If this is VK_FALSE, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::dstPremultiplied` must be VK_TRUE.

- **advancedBlendCorrelatedOverlap** specifies whether the overlap mode can be treated as correlated. If this is VK_FALSE, then `VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap` must be VK_BLEND_OVERLAP_UNCORRELATED_EXT.

- **advancedBlendAllOperations** specifies whether all advanced blend operation enums are supported. See the valid usage of `VkPipelineColorBlendAttachmentState`.

If the `VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT-sType-sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BLEND_OPERATION_ADVANCED_PROPERTIES_EXT

The `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_vertex_attribute_divisor
typedef struct VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxVertexAttribDivisor;
} VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.

- **pNext** is NULL or a pointer to a structure extending this structure.

- **maxVertexAttribDivisor** is the maximum value of the number of instances that will repeat the value of vertex attribute data when instanced rendering is enabled.

If the `VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES_EXT`

The `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceSamplerFilterMinmaxProperties {
    VkStructureType sType;
    void* pNext;
    VkBool32 filterMinmaxSingleComponentFormats;
    VkBool32 filterMinmaxImageComponentMapping;
} VkPhysicalDeviceSamplerFilterMinmaxProperties;
```

or the equivalent

```c
// Provided by VK_EXT_sampler_filter_minmax
typedef VkPhysicalDeviceSamplerFilterMinmaxProperties
    VkPhysicalDeviceSamplerFilterMinmaxPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `filterMinmaxSingleComponentFormats` is a boolean value indicating whether a minimum set of required formats support min/max filtering.
- `filterMinmaxImageComponentMapping` is a boolean value indicating whether the implementation supports non-identity component mapping of the image when doing min/max filtering.

If the `VkPhysicalDeviceSamplerFilterMinmaxProperties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

If `filterMinmaxSingleComponentFormats` is `VK_TRUE`, the following formats **must** support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT` feature with `VK_IMAGE_TILING_OPTIMAL`, if they support `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT`:

- `VK_FORMAT_R8_UNORM`
- `VK_FORMAT_R8_SNORM`
- `VK_FORMAT_R16_UNORM`
- `VK_FORMAT_R16_SNORM`
- `VK_FORMAT_R16_SFLOAT`
- `VK_FORMAT_R32_SFLOAT`
• VK_FORMAT_D16_UNORM
• VK_FORMAT_X8_D24_UNORM_PACK32
• VK_FORMAT_D32_SFLOAT
• VK_FORMAT_D16_UNORM_S8_UINT
• VK_FORMAT_D24_UNORM_S8_UINT
• VK_FORMAT_D32_SFLOAT_S8_UINT

If the format is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports min/max filtering, and that min/max filtering of the depth aspect is supported when depth compare is disabled in the sampler.

If filterMinmaxImageComponentMapping is VK_FALSE the component mapping of the image view used with min/max filtering must have been created with the r component set to the identity swizzle. Only the r component of the sampled image value is defined and the other component values are undefined. If filterMinmaxImageComponentMapping is VK_TRUE this restriction does not apply and image component mapping works as normal.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceSamplerFilterMinmaxProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SAMPLER_FILTER_MINMAX_PROPERTIES

The VkPhysicalDeviceProtectedMemoryProperties structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceProtectedMemoryProperties {
    VkStructureType sType;
    void* pNext;
    VkBool32 protectedNoFault;
} VkPhysicalDeviceProtectedMemoryProperties;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• protectedNoFault specifies how an implementation behaves when an application attempts to write to unprotected memory in a protected queue operation, read from protected memory in an unprotected queue operation, or perform a query in a protected queue operation. If this limit is VK_TRUE, such writes will be discarded or have undefined values written, reads and queries will return undefined values. If this limit is VK_FALSE, applications must not perform these operations. See Protected Memory Access Rules for more information.

If the VkPhysicalDeviceProtectedMemoryProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceProtectedMemoryProperties-sType-sType
  
  *sType* must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROTECTED_MEMORY_PROPERTIES**

The *VkPhysicalDeviceMaintenance3Properties* structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceMaintenance3Properties {
    VkStructureType sType;
    void* pNext;
    uint32_t maxPerSetDescriptors;
    VkDeviceSize maxMemoryAllocationSize;
} VkPhysicalDeviceMaintenance3Properties;
```

or the equivalent

```c
// Provided by VK_KHR_maintenance3
typedef VkPhysicalDeviceMaintenance3Properties VkPhysicalDeviceMaintenance3PropertiesKHR;
```

- *sType* is a **VkStructureType** value identifying this structure.
- *pNext* is **NULL** or a pointer to a structure extending this structure.
- *maxPerSetDescriptors* is a maximum number of descriptors (summed over all descriptor types) in a single descriptor set that is guaranteed to satisfy any implementation-dependent constraints on the size of a descriptor set itself. Applications can query whether a descriptor set that goes beyond this limit is supported using *vkGetDescriptorSetLayoutSupport*.
- *maxMemoryAllocationSize* is the maximum size of a memory allocation that can be created, even if there is more space available in the heap.

If the *VkPhysicalDeviceMaintenance3Properties* structure is included in the *pNext* chain of the *VkPhysicalDeviceProperties2* structure passed to *vkGetPhysicalDeviceProperties2*, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMaintenance3Properties-sType-sType
  
  *sType* must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_3_PROPERTIES**

The *VkPhysicalDeviceMaintenance4Properties* structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceMaintenance4Properties {
```
or the equivalent

```c
// Provided by VK_KHR_maintenance4
typedef VkPhysicalDeviceMaintenance4Properties
    VkPhysicalDeviceMaintenance4PropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxBufferSize` is the maximum size `VkBuffer` that can be created.

If the `VkPhysicalDeviceMaintenance4Properties` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceMaintenance4Properties-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_PROPERTIES`

The `VkPhysicalDeviceMeshShaderPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesNV {
    VkStructureType     sType;
    void*               pNext;
    uint32_t            maxDrawMeshTasksCount;
    uint32_t            maxTaskWorkGroupInvocations;
    uint32_t            maxTaskWorkGroupSize[3];
    uint32_t            maxTaskTotalMemorySize;
    uint32_t            maxTaskOutputCount;
    uint32_t            maxMeshWorkGroupInvocations;
    uint32_t            maxMeshWorkGroupSize[3];
    uint32_t            maxMeshTotalMemorySize;
    uint32_t            maxMeshOutputVertices;
    uint32_t            maxMeshOutputPrimitives;
    uint32_t            maxMeshMultiviewViewCount;
    uint32_t            meshOutputPerVertexGranularity;
    uint32_t            meshOutputPerPrimitiveGranularity;
} VkPhysicalDeviceMeshShaderPropertiesNV;
```
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is `NULL` or a pointer to a structure extending this structure.

• **maxDrawMeshTasksCount** is the maximum number of local workgroups that can be launched by a single draw mesh tasks command. See Programmable Mesh Shading.

• **maxTaskWorkGroupInvocations** is the maximum total number of task shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the LocalSize or LocalSizeId execution mode in shader modules or by the object decorated by the WorkgroupSize decoration, must be less than or equal to this limit.

• **maxTaskWorkGroupSize[3]** is the maximum size of a local task workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, must be less than or equal to the corresponding limit.

• **maxTaskTotalMemorySize** is the maximum number of bytes that the task shader can use in total for shared and output memory combined.

• **maxTaskOutputCount** is the maximum number of output tasks a single task shader workgroup can emit.

• **maxMeshWorkGroupInvocations** is the maximum total number of mesh shader invocations in a single local workgroup. The product of the X, Y, and Z sizes, as specified by the LocalSize or LocalSizeId execution mode in shader modules or by the object decorated by the WorkgroupSize decoration, must be less than or equal to this limit.

• **maxMeshWorkGroupSize[3]** is the maximum size of a local mesh workgroup. These three values represent the maximum local workgroup size in the X, Y, and Z dimensions, respectively. The x, y, and z sizes, as specified by the LocalSize or LocalSizeId execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, must be less than or equal to the corresponding limit.

• **maxMeshTotalMemorySize** is the maximum number of bytes that the mesh shader can use in total for shared and output memory combined.

• **maxMeshOutputVertices** is the maximum number of vertices a mesh shader output can store.

• **maxMeshOutputPrimitives** is the maximum number of primitives a mesh shader output can store.

• **maxMeshMultiviewViewCount** is the maximum number of multiview views a mesh shader can use.

• **meshOutputPerVertexGranularity** is the granularity with which mesh vertex outputs are allocated. The value can be used to compute the memory size used by the mesh shader, which must be less than or equal to maxMeshTotalMemorySize.

• **meshOutputPerPrimitiveGranularity** is the granularity with which mesh outputs qualified as per-primitive are allocated. The value can be used to compute the memory size used by the mesh shader, which must be less than or equal to maxMeshTotalMemorySize.

If the `VkPhysicalDeviceMeshShaderPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMeshShaderPropertiesNV-sType-sType
  - sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_NV

The `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_mesh_shader
typedef struct VkPhysicalDeviceMeshShaderPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxTaskWorkGroupTotalCount;
    uint32_t maxTaskWorkGroupCount[3];
    uint32_t maxTaskWorkGroupInvocations;
    uint32_t maxTaskWorkGroupSize[3];
    uint32_t maxTaskPayloadSize;
    uint32_t maxTaskSharedMemorySize;
    uint32_t maxTaskPayloadAndSharedMemorySize;
    uint32_t maxMeshWorkGroupTotalCount;
    uint32_t maxMeshWorkGroupCount[3];
    uint32_t maxMeshWorkGroupInvocations;
    uint32_t maxMeshWorkGroupSize[3];
    uint32_t maxMeshSharedMemorySize;
    uint32_t maxMeshPayloadAndSharedMemorySize;
    uint32_t maxMeshPayloadAndOutputMemorySize;
    uint32_t maxMeshOutputMemorySize;
    uint32_t maxMeshOutputComponents;
    uint32_t maxMeshOutputVertices;
    uint32_t maxMeshOutputPrimitives;
    uint32_t maxMeshOutputLayers;
    uint32_t maxMeshMultiviewViewCount;
    uint32_t meshOutputPerVertexGranularity;
    uint32_t meshOutputPerPrimitiveGranularity;
    uint32_t maxPreferredTaskWorkGroupInvocations;
    uint32_t maxPreferredMeshWorkGroupInvocations;
    VkBool32 prefersLocalInvocationVertexOutput;
    VkBool32 prefersLocalInvocationPrimitiveOutput;
    VkBool32 prefersCompactVertexOutput;
    VkBool32 prefersCompactPrimitiveOutput;
} VkPhysicalDeviceMeshShaderPropertiesEXT;
```

The members of the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure describe the following implementation-dependent limits:

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- maxTaskWorkGroupTotalCount is the maximum number of total local workgroups that can be
launched by a single mesh tasks drawing command. See Programmable Mesh Shading.

- \texttt{maxTaskWorkGroupCount}\[3\] is the maximum number of local workgroups that can be launched by a single mesh tasks drawing command. These three values represent the maximum number of local workgroups for the \(X\), \(Y\), and \(Z\) dimensions, respectively. The workgroup count parameters to the drawing commands must be less than or equal to the corresponding limit. The product of these dimensions must be less than or equal to \texttt{maxTaskWorkGroupTotalCount}.

- \texttt{maxTaskWorkGroupInvocations} is the maximum total number of task shader invocations in a single local workgroup. The product of the \(X\), \(Y\), and \(Z\) sizes, as specified by the \texttt{LocalSize} or \texttt{LocalSizeId} execution mode in shader modules or by the object decorated by the \texttt{WorkgroupSize} decoration, must be less than or equal to this limit.

- \texttt{maxTaskWorkGroupSize}\[3\] is the maximum size of a local task workgroup, per dimension. These three values represent the maximum local workgroup size in the \(X\), \(Y\), and \(Z\) dimensions, respectively. The \(x\), \(y\), and \(z\) sizes, as specified by the \texttt{LocalSize} or \texttt{LocalSizeId} execution mode or by the object decorated by the \texttt{WorkgroupSize} decoration in shader modules, must be less than or equal to the corresponding limit.

- \texttt{maxTaskPayloadSize} is the maximum total storage size, in bytes, available for variables declared with the \texttt{TaskPayloadWorkgroupEXT} storage class in shader modules in the task shader stage.

- \texttt{maxTaskSharedMemorySize} is the maximum total storage size, in bytes, available for variables declared with the \texttt{Workgroup} storage class in shader modules in the task shader stage.

- \texttt{maxTaskPayloadAndSharedMemorySize} is the maximum total storage size, in bytes, available for variables that are declared with the \texttt{TaskPayloadWorkgroupEXT} or \texttt{Workgroup} storage class, in shader modules in the task shader stage.

- \texttt{maxMeshWorkGroupTotalCount} is the maximum number of local output tasks a single task shader workgroup can emit.

- \texttt{maxMeshWorkGroupCount}\[3\] is the maximum number of local output tasks a single task shader workgroup can emit, per dimension. These three values represent the maximum number of local output tasks for the \(X\), \(Y\), and \(Z\) dimensions, respectively. The workgroup count parameters to the \texttt{OpEmitMeshTasksEXT} must be less than or equal to the corresponding limit. The product of these dimensions must be less than or equal to \texttt{maxMeshWorkGroupTotalCount}.

- \texttt{maxMeshWorkGroupInvocations} is the maximum total number of mesh shader invocations in a single local workgroup. The product of the \(X\), \(Y\), and \(Z\) sizes, as specified by the \texttt{LocalSize} or \texttt{LocalSizeId} execution mode in shader modules or by the object decorated by the \texttt{WorkgroupSize} decoration, must be less than or equal to this limit.

- \texttt{maxMeshWorkGroupSize}\[3\] is the maximum size of a local mesh workgroup, per dimension. These three values represent the maximum local workgroup size in the \(X\), \(Y\), and \(Z\) dimensions, respectively. The \(x\), \(y\), and \(z\) sizes, as specified by the \texttt{LocalSize} or \texttt{LocalSizeId} execution mode or by the object decorated by the \texttt{WorkgroupSize} decoration in shader modules, must be less than or equal to the corresponding limit.

- \texttt{maxMeshSharedMemorySize} is the maximum total storage size, in bytes, available for variables declared with the \texttt{Workgroup} storage class in shader modules in the mesh shader stage.

- \texttt{maxMeshPayloadAndSharedMemorySize} is the maximum total storage size, in bytes, available for variables that are declared with the \texttt{TaskPayloadWorkgroupEXT} or \texttt{Workgroup} storage class in shader modules in the mesh shader stage.
• `maxMeshOutputMemorySize` is the maximum total storage size, in bytes, available for output variables in shader modules in the mesh shader stage, according to the formula in Mesh Shader Output.

• `maxMeshPayloadAndOutputMemorySize` is the maximum total storage size, in bytes, available for variables that are declared with the `TaskPayloadWorkgroupEXT` storage class, or output variables in shader modules in the mesh shader stage, according to the formula in Mesh Shader Output.

• `maxMeshOutputComponents` is the maximum number of components of output variables which can be output from the mesh shader stage.

• `maxMeshOutputVertices` is the maximum number of vertices which can be emitted by a single mesh shader workgroup.

• `maxMeshOutputPrimitives` is the maximum number of primitives which can be emitted by a single mesh shader workgroup.

• `maxMeshOutputLayers` is one greater than the maximum layer index that can be output from the mesh shader stage.

• `maxMeshMultiviewViewCount` is one greater than the maximum view index that can be used by any mesh shader.

• `meshOutputPerVertexGranularity` is the granularity of vertex allocation. The number of output vertices allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which must be less than or equal to `maxMeshOutputMemorySize`.

• `meshOutputPerPrimitiveGranularity` is the granularity of primitive allocation. The number of output primitives allocated for the mesh shader stage is padded to a multiple of this number. The value can be used to calculate the required storage size for output variables in shader modules in the mesh shader stage, which must be less than or equal to `maxMeshOutputMemorySize`.

• `maxPreferredTaskWorkGroupInvocations` is the maximum number of task shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the task shader stage.

• `maxPreferredMeshWorkGroupInvocations` is the maximum number of mesh shader invocations in a single workgroup that is preferred by the implementation for optimal performance. The value is guaranteed to be a multiple of a supported subgroup size for the mesh shader stage.

• `prefersLocalInvocationVertexOutput` specifies whether writes to the vertex output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.

• `prefersLocalInvocationPrimitiveOutput` specifies whether writes to the primitive output array in a mesh shader yield best performance when the array index matches `LocalInvocationIndex`.

• `prefersCompactVertexOutput` specifies whether output vertices should be compacted after custom culling in the mesh shader for best performance, otherwise keeping the vertices at their original location may be better.

• `prefersCompactPrimitiveOutput` specifies whether output primitives should be compacted after custom culling in the mesh shader for best performance, otherwise the use of `CullPrimitiveEXT` may be better.

If the `VkPhysicalDeviceMeshShaderPropertiesEXT` structure is included in the `pNext` chain of
VkPhysicalDeviceProperties2, it is filled with the implementation-dependent limits.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceMeshShaderPropertiesEXT-sType-sType**
  
  *sType* must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT**

The *VkPhysicalDeviceDescriptorIndexingProperties* structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDescriptorIndexingProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t maxUpdateAfterBindDescriptorsInAllPools;
    VkBool32 shaderUniformBufferArrayNonUniformIndexingNative;
    VkBool32 shaderSampledImageArrayNonUniformIndexingNative;
    VkBool32 shaderStorageBufferArrayNonUniformIndexingNative;
    VkBool32 shaderStorageImageArrayNonUniformIndexingNative;
    VkBool32 shaderInputAttachmentArrayNonUniformIndexingNative;
    VkBool32 robustBufferAccessUpdateAfterBind;
    VkBool32 quadDivergentImplicitLod;
    uint32_t maxPerStageDescriptorUpdateAfterBindSamplers;
    uint32_t maxPerStageDescriptorUpdateAfterBindUniformBuffers;
    uint32_t maxPerStageDescriptorUpdateAfterBindStorageBuffers;
    uint32_t maxPerStageDescriptorUpdateAfterBindSampledImages;
    uint32_t maxPerStageDescriptorUpdateAfterBindInputAttachments;
    uint32_t maxPerStageUpdateAfterBindResources;
    uint32_t maxDescriptorSetUpdateAfterBindSamplers;
    uint32_t maxDescriptorSetUpdateAfterBindUniformBuffers;
    uint32_t maxDescriptorSetUpdateAfterBindUniformBuffersDynamic;
    uint32_t maxDescriptorSetUpdateAfterBindStorageBuffers;
    uint32_t maxDescriptorSetUpdateAfterBindStorageBuffersDynamic;
    uint32_t maxDescriptorSetUpdateAfterBindSampledImages;
    uint32_t maxDescriptorSetUpdateAfterBindStorageImages;
    uint32_t maxDescriptorSetUpdateAfterBindInputAttachments;
} VkPhysicalDeviceDescriptorIndexingProperties;
```

or the equivalent

```c
// Provided by VK_EXT_descriptor_indexing
typedef VkPhysicalDeviceDescriptorIndexingProperties
    VkPhysicalDeviceDescriptorIndexingPropertiesEXT;
```

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
• `maxUpdateAfterBindDescriptorsInAllPools` is the maximum number of descriptors (summed over all descriptor types) that can be created across all pools that are created with the `VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT` bit set. Pool creation may fail when this limit is exceeded, or when the space this limit represents is unable to satisfy a pool creation due to fragmentation.

• `shaderUniformBufferArrayNonUniformIndexingNative` is a boolean value indicating whether uniform buffer descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of uniform buffers may execute multiple times in order to access all the descriptors.

• `shaderSampledImageArrayNonUniformIndexingNative` is a boolean value indicating whether sampler and image descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of samplers or images may execute multiple times in order to access all the descriptors.

• `shaderStorageBufferArrayNonUniformIndexingNative` is a boolean value indicating whether storage buffer descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of storage buffers may execute multiple times in order to access all the descriptors.

• `shaderStorageImageArrayNonUniformIndexingNative` is a boolean value indicating whether storage image descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of storage images may execute multiple times in order to access all the descriptors.

• `shaderInputAttachmentArrayNonUniformIndexingNative` is a boolean value indicating whether input attachment descriptors natively support nonuniform indexing. If this is `VK_FALSE`, then a single dynamic instance of an instruction that nonuniformly indexes an array of input attachments may execute multiple times in order to access all the descriptors.

• `robustBufferAccessUpdateAfterBind` is a boolean value indicating whether robustBufferAccess can be enabled on a device simultaneously with `descriptorBindingUniformBufferUpdateAfterBind`, `descriptorBindingStorageBufferUpdateAfterBind`, `descriptorBindingUniformTexelBufferUpdateAfterBind`, and/or `descriptorBindingStorageTexelBufferUpdateAfterBind`. If this is `VK_FALSE`, then either robustBufferAccess must be disabled or all of these update-after-bind features must be disabled.

• `quadDivergentImplicitLod` is a boolean value indicating whether implicit LOD calculations for image operations have well-defined results when the image and/or sampler objects used for the instruction are not uniform within a quad. See Derivative Image Operations.

• `maxPerStageDescriptorUpdateAfterBindSamplers` is similar to `maxPerStageDescriptorSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxPerStageDescriptorUpdateAfterBindUniformBuffers` is similar to `maxPerStageDescriptorUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxPerStageDescriptorUpdateAfterBindStorageBuffers` is similar to `maxPerStageDescriptorStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.
• `maxPerStageDescriptorUpdateAfterBindSampledImages` is similar to `maxPerStageDescriptorSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxPerStageDescriptorUpdateAfterBindStorageImages` is similar to `maxPerStageDescriptorStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxPerStageDescriptorUpdateAfterBindInputAttachments` is similar to `maxPerStageDescriptorInputAttachments` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxPerStageUpdateAfterBindResources` is similar to `maxPerStageResources` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxDescriptorSetUpdateAfterBindSamplers` is similar to `maxDescriptorSetSamplers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxDescriptorSetUpdateAfterBindUniformBuffers` is similar to `maxDescriptorSetUniformBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application can allocate dynamic uniform buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors must not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.

• `maxDescriptorSetUpdateAfterBindStorageBuffers` is similar to `maxDescriptorSetStorageBuffers` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxDescriptorSetUpdateAfterBindUniformBuffersDynamic` is similar to `maxDescriptorSetUniformBuffersDynamic` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set. While an application can allocate dynamic storage buffer descriptors from a pool created with the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT`, bindings for these descriptors must not be present in any descriptor set layout that includes bindings created with `VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT`.

• `maxDescriptorSetUpdateAfterBindSampledImages` is similar to `maxDescriptorSetSampledImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxDescriptorSetUpdateAfterBindStorageImages` is similar to `maxDescriptorSetStorageImages` but counts descriptors from descriptor sets created with or without the `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` bit set.

• `maxDescriptorSetUpdateAfterBindInputAttachments` is similar to `maxDescriptorSetInputAttachments` but counts descriptors from descriptor sets created with or without the
VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

If the VkPhysicalDeviceDescriptorIndexingProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceDescriptorIndexingProperties-sType-sType
  
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES

The VkPhysicalDeviceInlineUniformBlockProperties structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceInlineUniformBlockProperties {
    VkStructureType    sType;
    void*              pNext;
    uint32_t           maxInlineUniformBlockSize;
    uint32_t           maxPerStageDescriptorInlineUniformBlocks;
    uint32_t           maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks;
    uint32_t           maxDescriptorSetInlineUniformBlocks;
    uint32_t           maxDescriptorSetUpdateAfterBindInlineUniformBlocks;
} VkPhysicalDeviceInlineUniformBlockProperties;
```

or the equivalent

```c
// Provided by VK_EXT_inline_uniform_block
typedef VkPhysicalDeviceInlineUniformBlockProperties VkPhysicalDeviceInlineUniformBlockPropertiesEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxInlineUniformBlockSize** is the maximum size in bytes of an inline uniform block binding.
- **maxPerStageDescriptorInlineUniformBlock** is the maximum number of inline uniform block bindings that can be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.
- **maxPerStageDescriptorUpdateAfterBindInlineUniformBlocks** is similar to maxPerStageDescriptorInlineUniformBlocks but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.
- **maxDescriptorSetInlineUniformBlocks** is the maximum number of inline uniform block bindings that can be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of
VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK count against this limit. Only descriptor bindings in descriptor set layouts created without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set count against this limit.

- maxDescriptorSetUpdateAfterBindInlineUniformBlocks is similar to maxDescriptorSetInlineUniformBlocks but counts descriptor bindings from descriptor sets created with or without the VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT bit set.

If the VkPhysicalDeviceInlineUniformBlockProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceInlineUniformBlockProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_PROPERTIES

The VkPhysicalDeviceConservativeRasterizationPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_conservative_rasterization
typedef struct VkPhysicalDeviceConservativeRasterizationPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    float primitiveOverestimationSize;
    float maxExtraPrimitiveOverestimationSize;
    float extraPrimitiveOverestimationSizeGranularity;
    VkBool32 primitiveUnderestimation;
    VkBool32 conservativePointAndLineRasterization;
    VkBool32 degenerateTrianglesRasterized;
    VkBool32 degenerateLinesRasterized;
    VkBool32 fullyCoveredFragmentShaderInputVariable;
    VkBool32 conservativeRasterizationPostDepthCoverage;
} VkPhysicalDeviceConservativeRasterizationPropertiesEXT;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- primitiveOverestimationSize is the size in pixels the generating primitive is increased at each of its edges during conservative rasterization overestimation mode. Even with a size of 0.0, conservative rasterization overestimation rules still apply and if any part of the pixel rectangle is covered by the generating primitive, fragments are generated for the entire pixel. However implementations may make the pixel coverage area even more conservative by increasing the size of the generating primitive.
- maxExtraPrimitiveOverestimationSize is the maximum size in pixels of extra overestimation the implementation supports in the pipeline state. A value of 0.0 means the implementation does not support any additional overestimation of the generating primitive during conservative rasterization. A value above 0.0 allows the application to further increase the size of the
generating primitive during conservative rasterization overestimation.

- **extraPrimitiveOverestimationSizeGranularity** is the granularity of extra overestimation that can be specified in the pipeline state between 0.0 and **maxExtraPrimitiveOverestimationSize** inclusive. A value of 0.0 means the implementation can use the smallest representable non-zero value in the screen space pixel fixed-point grid.

- **primitiveUnderestimation** is **VK_TRUE** if the implementation supports the **VK_CONSERVATIVE_RASTERIZATION_MODE_UNDERESTIMATE_EXT** conservative rasterization mode in addition to **VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT**. Otherwise the implementation only supports **VK_CONSERVATIVE_RASTERIZATION_MODE_OVERESTIMATE_EXT**.

- **conservativePointAndLineRasterization** is **VK_TRUE** if the implementation supports conservative rasterization of point and line primitives as well as triangle primitives. Otherwise the implementation only supports triangle primitives.

- **degenerateTrianglesRasterized** is **VK_FALSE** if the implementation culls primitives generated from triangles that become zero area after they are quantized to the fixed-point rasterization pixel grid. **degenerateTrianglesRasterized** is **VK_TRUE** if these primitives are not culled and the provoking vertex attributes and depth value are used for the fragments. The primitive area calculation is done on the primitive generated from the clipped triangle if applicable. Zero area primitives are backfacing and the application can enable backface culling if desired.

- **degenerateLinesRasterized** is **VK_FALSE** if the implementation culls lines that become zero length after they are quantized to the fixed-point rasterization pixel grid. **degenerateLinesRasterized** is **VK_TRUE** if zero length lines are not culled and the provoking vertex attributes and depth value are used for the fragments.

- **fullyCoveredFragmentShaderInputVariable** is **VK_TRUE** if the implementation supports the SPIR-V builtin fragment shader input variable **FullyCoveredEXT** specifying that conservative rasterization is enabled and the fragment area is fully covered by the generating primitive.

- **conservativeRasterizationPostDepthCoverage** is **VK_TRUE** if the implementation supports conservative rasterization with the **PostDepthCoverage** execution mode enabled. Otherwise the **PostDepthCoverage** execution mode must not be used when conservative rasterization is enabled.

If the **VkPhysicalDeviceConservativeRasterizationPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

---

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceConservativeRasterizationPropertiesEXT-sType-sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONSERVATIVE_RASTERIZATION_PROPERTIES_EXT**

The **VkPhysicalDeviceFragmentDensityMapPropertiesEXT** structure is defined as:

```c
// Provided by VK_EXT_fragment_density_map
typedef struct VkPhysicalDeviceFragmentDensityMapPropertiesEXT {
```
VkStructureType sType;
void* pNext;
VkExtent2D minFragmentDensityTexelSize;
VkExtent2D maxFragmentDensityTexelSize;
VkBool32 fragmentDensityInvocations;
} VkPhysicalDeviceFragmentDensityMapPropertiesEXT;

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **minFragmentDensityTexelSize** is the minimum fragment density texel size.
- **maxFragmentDensityTexelSize** is the maximum fragment density texel size.
- **fragmentDensityInvocations** specifies whether the implementation may invoke additional fragment shader invocations for each covered sample.

If the *VkPhysicalDeviceFragmentDensityMapPropertiesEXT* structure is included in the **pNext** chain of the *VkPhysicalDeviceProperties2* structure passed to *vkGetPhysicalDeviceProperties2*, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFragmentDensityMapPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_PROPERTIES_EXT

The *VkPhysicalDeviceFragmentDensityMap2PropertiesEXT* structure is defined as:

// Provided by VK_EXT_fragment_density_map2
typedef struct VkPhysicalDeviceFragmentDensityMap2PropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 subsampledLoads;
    VkBool32 subsampledCoarseReconstructionEarlyAccess;
    uint32_t maxSubsampledArrayLayers;
    uint32_t maxDescriptorSetSubsampledSamplers;
} VkPhysicalDeviceFragmentDensityMap2PropertiesEXT;

- **sType** is a *VkStructureType* value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **subsampledLoads** specifies if performing image data read with load operations on subsampled attachments will be resampled to the fragment density of the render pass.
- **subsampledCoarseReconstructionEarlyAccess** specifies if performing image data read with samplers created with flags containing VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT in fragment shader will trigger additional reads during VK_PIPELINE_STAGE_VERTEX_SHADER_BIT.
- **maxSubsampledArrayLayers** is the maximum number of *VkImageView* array layers for usages.
supporting subsampled samplers

- `maxDescriptorSetSubsampledSamplers` is the maximum number of subsampled samplers that can be included in a `VkPipelineLayout`.

If the `VkPhysicalDeviceFragmentDensityMap2PropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFragmentDensityMap2PropertiesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_2_PROPERTIES_EXT`.

The `VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM` structure is defined as:

```c
// Provided by VK_QCOM_fragment_density_map_offset
typedef struct VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM {
    VkStructureType sType;
    void* pNext;
    VkExtent2D fragmentDensityOffsetGranularity;
} VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `fragmentDensityOffsetGranularity` is the granularity for fragment density offsets.

If the `VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_PROPERTIES_QCOM`.

The `VkPhysicalDeviceShaderCorePropertiesAMD` structure is defined as:

    uint32_t shaderEngineCount;
    uint32_t shaderArraysPerEngineCount;
    uint32_t computeUnitsPerShaderArray;
} VkPhysicalDeviceShaderCorePropertiesAMD;
```
- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderEngineCount` is an unsigned integer value indicating the number of shader engines found inside the shader core of the physical device.
- `shaderArraysPerEngineCount` is an unsigned integer value indicating the number of shader arrays inside a shader engine. Each shader array has its own scan converter, set of compute units, and a render back end (color and depth attachments). Shader arrays within a shader engine share shader processor input (wave launcher) and shader export (export buffer) units. Currently, a shader engine can have one or two shader arrays.
- `computeUnitsPerShaderArray` is an unsigned integer value indicating the physical number of compute units within a shader array. The active number of compute units in a shader array may be lower. A compute unit houses a set of SIMDs along with a sequencer module and a local data store.
- `simdPerComputeUnit` is an unsigned integer value indicating the number of SIMDs inside a compute unit. Each SIMD processes a single instruction at a time.
- `wavefrontSize` is an unsigned integer value indicating the maximum size of a subgroup.
- `sgprsPerSimd` is an unsigned integer value indicating the number of physical Scalar General-Purpose Registers (SGPRs) per SIMD.
- `minSgprAllocation` is an unsigned integer value indicating the minimum number of SGPRs allocated for a wave.
- `maxSgprAllocation` is an unsigned integer value indicating the maximum number of SGPRs allocated for a wave.
- `sgprAllocationGranularity` is an unsigned integer value indicating the granularity of SGPR allocation for a wave.
- `vgprsPerSimd` is an unsigned integer value indicating the number of physical Vector General-Purpose Registers (VGPRs) per SIMD.
- `minVgprAllocation` is an unsigned integer value indicating the minimum number of VGPRs allocated for a wave.
- `maxVgprAllocation` is an unsigned integer value indicating the maximum number of VGPRs allocated for a wave.
• **vgprAllocationGranularity** is an unsigned integer value indicating the granularity of VGPR allocation for a wave.

If the `VkPhysicalDeviceShaderCorePropertiesAMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCorePropertiesAMD-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_AMD`

The `VkPhysicalDeviceShaderCoreProperties2AMD` structure is defined as:

```c
// Provided by VK_AMD_shader_core_properties2
typedef struct VkPhysicalDeviceShaderCoreProperties2AMD {
    VkStructureType sType;
    void* pNext;
    VkShaderCorePropertiesFlagsAMD shaderCoreFeatures;
    uint32_t activeComputeUnitCount;
} VkPhysicalDeviceShaderCoreProperties2AMD;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **shaderCoreFeatures** is a bitmask of `VkShaderCorePropertiesFlagBitsAMD` indicating the set of features supported by the shader core.
- **activeComputeUnitCount** is an unsigned integer value indicating the number of compute units that have been enabled.

If the `VkPhysicalDeviceShaderCoreProperties2AMD` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreProperties2AMD-sType-sType
  
  **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_2_AMD`

Bits for this type may be defined by future extensions, or new versions of the `VK_AMD_shader_core_properties2` extension. Possible values of the **flags** member of `VkShaderCorePropertiesFlagsAMD` are:

```c
// Provided by VK_AMD_shader_core_properties2
typedef enum VkShaderCorePropertiesFlagBitsAMD {
```

3442
VkShaderCorePropertiesFlagBitsAMD is a bitmask type for providing zero or more VkShaderCorePropertiesFlagBitsAMD.

The VkPhysicalDeviceDepthStencilResolveProperties structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceDepthStencilResolveProperties {
    VkStructureType sType;
    void* pNext;
    VkResolveModeFlags supportedDepthResolveModes;
    VkResolveModeFlags supportedStencilResolveModes;
    VkBool32 independentResolveNone;
    VkBool32 independentResolve;
} VkPhysicalDeviceDepthStencilResolveProperties;
```

or the equivalent

```c
// Provided by VK_KHR_depth_stencil_resolve
typedef VkPhysicalDeviceDepthStencilResolveProperties
    VkPhysicalDeviceDepthStencilResolvePropertiesKHR;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `supportedDepthResolveModes` is a bitmask of VkResolveModeFlagBits indicating the set of supported depth resolve modes. VK_RESOLVE_MODE_SAMPLE_ZERO_BIT must be included in the set but implementations may support additional modes.
- `supportedStencilResolveModes` is a bitmask of VkResolveModeFlagBits indicating the set of supported stencil resolve modes. VK_RESOLVE_MODE_SAMPLE_ZERO_BIT must be included in the set but implementations may support additional modes. VK_RESOLVE_MODE_AVERAGE_BIT must not be included in the set.
- `independentResolveNone` is VK_TRUE if the implementation supports setting the depth and stencil resolve modes to different values when one of those modes is VK_RESOLVE_MODE_NONE. Otherwise the implementation only supports setting both modes to the same value.
- `independentResolve` is VK_TRUE if the implementation supports all combinations of the supported depth and stencil resolve modes, including setting either depth or stencil resolve mode to VK_RESOLVE_MODE_NONE. An implementation that supports independentResolve must also support independentResolveNone.
If the \texttt{VkPhysicalDeviceDepthStencilResolveProperties} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

\begin{Verbatim}
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDepthStencilResolveProperties-sType-sType
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEPTH_STENCIL_RESOLVE_PROPERTIES}
\end{Verbatim}

The \texttt{VkPhysicalDevicePerformanceQueryPropertiesKHR} structure is defined as:

\begin{Verbatim}
// Provided by VK_KHR_performance_query
typedef struct VkPhysicalDevicePerformanceQueryPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 allowCommandBufferQueryCopies;
} VkPhysicalDevicePerformanceQueryPropertiesKHR;
\end{Verbatim}

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \texttt{allowCommandBufferQueryCopies} is \texttt{VK_TRUE} if the performance query pools are allowed to be used with \texttt{vkCmdCopyQueryPoolResults}.

If the \texttt{VkPhysicalDevicePerformanceQueryPropertiesKHR} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

\begin{Verbatim}
Valid Usage (Implicit)

- VUID-VkPhysicalDevicePerformanceQueryPropertiesKHR-sType-sType
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PERFORMANCE_QUERY_PROPERTIES_KHR}
\end{Verbatim}

The \texttt{VkPhysicalDeviceShadingRateImagePropertiesNV} structure is defined as:

\begin{Verbatim}
// Provided by VK_NV_shading_rate_image
typedef struct VkPhysicalDeviceShadingRateImagePropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkExtent2D shadingRateTexelSize;
    uint32_t shadingRatePaletteSize;
    uint32_t shadingRateMaxCoarseSamples;
} VkPhysicalDeviceShadingRateImagePropertiesNV;
\end{Verbatim}

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `shadingRateTexelSize` indicates the width and height of the portion of the framebuffer corresponding to each texel in the shading rate image.

• `shadingRatePaletteSize` indicates the maximum number of palette entries supported for the shading rate image.

• `shadingRateMaxCoarseSamples` specifies the maximum number of coverage samples supported in a single fragment. If the product of the fragment size derived from the base shading rate and the number of coverage samples per pixel exceeds this limit, the final shading rate will be adjusted so that its product does not exceed the limit.

If the `VkPhysicalDeviceShadingRateImagePropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to the shading rate image feature.

Valid Usage (Implicit)

• `VUID-VkPhysicalDeviceShadingRateImagePropertiesNV-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADING_RATE_IMAGE_PROPERTIES_NV`

The `VkPhysicalDeviceMemoryDecompressionPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_memory_decompression
typedef struct VkPhysicalDeviceMemoryDecompressionPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkMemoryDecompressionMethodFlagsNV decompressionMethods;
    uint64_t maxDecompressionIndirectCount;
} VkPhysicalDeviceMemoryDecompressionPropertiesNV;
```

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `decompressionMethods` is a bitmask of `VkMemoryDecompressionMethodFlagBitsNV` specifying memory decompression methods supported by the implementation.

• `maxDecompressionIndirectCount` specifies the maximum supported count value in the `countBuffer` of `vkCmdDecompressMemoryIndirectCountNV`.

If the `VkPhysicalDeviceMemoryDecompressionPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceMemoryDecompressionPropertiesNV-sType-sType**
  - **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_DECOMPRESSION_PROPERTIES_NV**

The **VkPhysicalDeviceTransformFeedbackPropertiesEXT** structure is defined as:

```c
// Provided by VK_EXT_transform_feedback
typedef struct VkPhysicalDeviceTransformFeedbackPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxTransformFeedbackStreams;
    uint32_t maxTransformFeedbackBuffers;
    VkDeviceSize maxTransformFeedbackBufferSize;
    uint32_t maxTransformFeedbackStreamDataSize;
    uint32_t maxTransformFeedbackBufferDataSize;
    uint32_t maxTransformFeedbackBufferDataStride;
    VkBool32 transformFeedbackQueries;
    VkBool32 transformFeedbackStreamsLinesTriangles;
    VkBool32 transformFeedbackRasterizationStreamSelect;
    VkBool32 transformFeedbackDraw;
} VkPhysicalDeviceTransformFeedbackPropertiesEXT;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxTransformFeedbackStreams** is the maximum number of vertex streams that can be output from geometry shaders declared with the **GeometryStreams** capability. If the implementation does not support **VkPhysicalDeviceTransformFeedbackFeaturesEXT::geometryStreams** then **maxTransformFeedbackStreams** must be set to 1.
- **maxTransformFeedbackBuffers** is the maximum number of transform feedback buffers that can be bound for capturing shader outputs from the last pre-rasterization shader stage.
- **maxTransformFeedbackBufferSize** is the maximum size that can be specified when binding a buffer for transform feedback in **vkCmdBindTransformFeedbackBuffersEXT**.
- **maxTransformFeedbackStreamDataSize** is the maximum amount of data in bytes for each vertex that captured to one or more transform feedback buffers associated with a specific vertex stream.
- **maxTransformFeedbackBufferDataSize** is the maximum amount of data in bytes for each vertex that can be captured to a specific transform feedback buffer.
- **maxTransformFeedbackBufferDataStride** is the maximum stride between each capture of vertex data to the buffer.
- **transformFeedbackQueries** is **VK_TRUE** if the implementation supports the **VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT** query type. **transformFeedbackQueries** is **VK_FALSE** if queries of this type cannot be created.
• **transformFeedbackStreamsLinesTriangles** is **VK_TRUE** if the implementation supports the geometry shader **OpExecutionMode** of **OutputLineStrip** and **OutputTriangleStrip** in addition to **OutputPoints** when more than one vertex stream is output. If **transformFeedbackStreamsLinesTriangles** is **VK_FALSE** the implementation only supports an **OpExecutionMode** of **OutputPoints** when more than one vertex stream is output from the geometry shader.

• **transformFeedbackRasterizationStreamSelect** is **VK_TRUE** if the implementation supports the **GeometryStreams** SPIR-V capability and the application can use **VkPipelineRasterizationStateStreamCreateInfoEXT** to modify which vertex stream output is used for rasterization. Otherwise vertex stream 0 **must** always be used for rasterization.

• **transformFeedbackDraw** is **VK_TRUE** if the implementation supports the **vkCmdDrawIndirectByteCountEXT** function otherwise the function **must** not be called.

If the **VkPhysicalDeviceTransformFeedbackPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTransformFeedbackPropertiesEXT-sType-sType
  
sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT**

---

The **VkPhysicalDeviceCopyMemoryIndirectPropertiesNV** structure is defined as:

```c
// Provided by VK_NV_copy_memory_indirect
typedef struct VkPhysicalDeviceCopyMemoryIndirectPropertiesNV {
    VkStructureType       sType;
    void*                 pNext;
    VkQueueFlags          supportedQueues;
} VkPhysicalDeviceCopyMemoryIndirectPropertiesNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **supportedQueues** is a bitmask of **VkQueueFlagBits** indicating the queues on which indirect copy commands are supported.

If the **indirectCopy** feature is supported, **supportedQueues must** return at least one supported queue.

If the **VkPhysicalDeviceCopyMemoryIndirectPropertiesNV** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCopyMemoryIndirectPropertiesNV-sType-sType
  
sType **must** be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COPY_MEMORY_INDIRECT_PROPERTIES_NV**
The `VkPhysicalDeviceRayTracingPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_ray_tracing
typedef struct VkPhysicalDeviceRayTracingPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t shaderGroupHandleSize;
    uint32_t maxRecursionDepth;
    uint32_t maxShaderGroupStride;
    uint32_t shaderGroupBaseAlignment;
    uint64_t maxGeometryCount;
    uint64_t maxInstanceCount;
    uint64_t maxTriangleCount;
    uint32_t maxDescriptorSetAccelerationStructures;
} VkPhysicalDeviceRayTracingPropertiesNV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `shaderGroupHandleSize` is the size in bytes of the shader header.
- `maxRecursionDepth` is the maximum number of levels of recursion allowed in a trace command.
- `maxShaderGroupStride` is the maximum stride in bytes allowed between shader groups in the shader binding table.
- `shaderGroupBaseAlignment` is the required alignment in bytes for the base of the shader binding table.
- `maxGeometryCount` is the maximum number of geometries in the bottom level acceleration structure.
- `maxInstanceCount` is the maximum number of instances in the top level acceleration structure.
- `maxTriangleCount` is the maximum number of triangles in all geometries in the bottom level acceleration structure.
- `maxDescriptorSetAccelerationStructures` is the maximum number of acceleration structure descriptors that are allowed in a descriptor set.

Due to the fact that the geometry, instance, and triangle counts are specified at acceleration structure creation as 32-bit values, `maxGeometryCount`, `maxInstanceCount`, and `maxTriangleCount` must not exceed $2^{32} - 1$.

If the `VkPhysicalDeviceRayTracingPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure must match those specified with the same name in `VkPhysicalDeviceAccelerationStructurePropertiesKHR` and `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`. 
Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceRayTracingPropertiesNV-sType-sType**
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PROPERTIES_NV**

The *VkPhysicalDeviceAccelerationStructurePropertiesKHR* structure is defined as:

```c
// Provided by VK_KHR_acceleration_structure
typedef struct VkPhysicalDeviceAccelerationStructurePropertiesKHR {
    VkStructureType   sType;
    void*             pNext;
    uint64_t          maxGeometryCount;
    uint64_t          maxInstanceCount;
    uint64_t          maxPrimitiveCount;
    uint32_t          maxPerStageDescriptorAccelerationStructures;
    uint32_t          maxPerStageDescriptorUpdateAfterBindAccelerationStructures;
    uint32_t          maxDescriptorSetAccelerationStructures;
    uint32_t          maxDescriptorSetUpdateAfterBindAccelerationStructures;
    uint32_t          minAccelerationStructureScratchOffsetAlignment;
} VkPhysicalDeviceAccelerationStructurePropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxGeometryCount** is the maximum number of geometries in the bottom level acceleration structure.
- **maxInstanceCount** is the maximum number of instances in the top level acceleration structure.
- **maxPrimitiveCount** is the maximum number of triangles or AABBs in all geometries in the bottom level acceleration structure.
- **maxPerStageDescriptorAccelerationStructures** is the maximum number of acceleration structure bindings that can be accessible to a single shader stage in a pipeline layout. Descriptor bindings with a descriptor type of **VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR** count against this limit. Only descriptor bindings in descriptor set layouts created without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set count against this limit.
- **maxPerStageDescriptorUpdateAfterBindAccelerationStructures** is similar to **maxPerStageDescriptorAccelerationStructures** but counts descriptor bindings from descriptor sets created with or without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set.
- **maxDescriptorSetAccelerationStructures** is the maximum number of acceleration structure descriptors that can be included in descriptor bindings in a pipeline layout across all pipeline shader stages and descriptor set numbers. Descriptor bindings with a descriptor type of **VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR** count against this limit. Only descriptor bindings in descriptor set layouts created without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set count against this limit.
• **maxDescriptorSetUpdateAfterBindAccelerationStructures** is similar to **maxDescriptorSetAccelerationStructures** but counts descriptor bindings from descriptor sets created with or without the **VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT** bit set.

• **minAccelerationStructureScratchOffsetAlignment** is the minimum required alignment, in bytes, for scratch data passed in to an acceleration structure build command. The value must be a power of two.

Due to the fact that the geometry, instance, and primitive counts are specified at acceleration structure creation as 32-bit values, **maxGeometryCount**, **maxInstanceCount**, and **maxPrimitiveCount** must not exceed \(2^{32}-1\).

If the **VkPhysicalDeviceAccelerationStructurePropertiesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure must match those specified with the same name in **VkPhysicalDeviceRayTracingPropertiesNV**.

---

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceAccelerationStructurePropertiesKHR-sType-sType**
  - **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ACCELERATION_STRUCTURE_PROPERTIES_KHR**

The **VkPhysicalDeviceRayTracingPipelinePropertiesKHR** structure is defined as:

```c
// Provided by VK_KHR_ray_tracing_pipeline
typedef struct VkPhysicalDeviceRayTracingPipelinePropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t shaderGroupHandleSize;
    uint32_t maxRayRecursionDepth;
    uint32_t maxShaderGroupStride;
    uint32_t shaderGroupBaseAlignment;
    uint32_t shaderGroupHandleCaptureReplaySize;
    uint32_t maxRayDispatchInvocationCount;
    uint32_t shaderGroupHandleAlignment;
    uint32_t maxRayHitAttributeSize;
} VkPhysicalDeviceRayTracingPipelinePropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **shaderGroupHandleSize** is the size in bytes of the shader header.
- **maxRayRecursionDepth** is the maximum number of levels of ray recursion allowed in a trace command.
- **maxShaderGroupStride** is the maximum stride in bytes allowed between shader groups in the
shader binding table.

- **shaderGroupBaseAlignment** is the **required** alignment in bytes for the base of the shader binding table.

- **shaderGroupHandleCaptureReplaySize** is the number of bytes for the information required to do capture and replay for shader group handles.

- **maxRayDispatchInvocationCount** is the maximum number of ray generation shader invocations which **may** be produced by a single `vkCmdTraceRaysIndirectKHR` or `vkCmdTraceRaysKHR` command.

- **shaderGroupHandleAlignment** is the **required** alignment in bytes for each shader binding table entry. The value **must** be a power of two.

- **maxRayHitAttributeSize** is the maximum size in bytes for a ray attribute structure

If the `VkPhysicalDeviceRayTracingPipelinePropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Limits specified by this structure **must** match those specified with the same name in `VkPhysicalDeviceRayTracingPropertiesNV`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRayTracingPipelinePropertiesKHR-sType-sType

  sType **must** be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_PIPELINE_PROPERTIES_KHR`

The `VkPhysicalDeviceCooperativeMatrixPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesNV;
```

- **sType** is a `VkStructureType` value identifying this structure.

- **pNext** is NULL or a pointer to a structure extending this structure.

- **cooperativeMatrixSupportedStages** is a bitfield of `VkShaderStageFlagBits` describing the shader stages that cooperative matrix instructions are supported in. `cooperativeMatrixSupportedStages` will have the `VK_SHADER_STAGE_COMPUTE_BIT` bit set if any of the physical device's queues support `VK_QUEUE_COMPUTE_BIT`.

If the `VkPhysicalDeviceCooperativeMatrixPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixPropertiesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_PROPERTIES_NV

The VkPhysicalDeviceCooperativeMatrixPropertiesKHR structure is defined as:

```c
// Provided by VK_KHR_cooperative_matrix
typedef struct VkPhysicalDeviceCooperativeMatrixPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkShaderStageFlags cooperativeMatrixSupportedStages;
} VkPhysicalDeviceCooperativeMatrixPropertiesKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **cooperativeMatrixSupportedStages** is a bitfield of VkShaderStageFlagBits describing the shader stages that cooperative matrix instructions are supported in. cooperativeMatrixSupportedStages will have the VK_SHADER_STAGE_COMPUTE_BIT bit set if any of the physical device’s queues support VK_QUEUE_COMPUTE_BIT.

If the VkPhysicalDeviceCooperativeMatrixPropertiesKHR structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCooperativeMatrixPropertiesKHR-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_PROPERTIES_KHR

The VkPhysicalDeviceShaderSMBuiltinsPropertiesNV structure is defined as:

```c
// Provided by VK_NV_shader_sm_builtins
typedef struct VkPhysicalDeviceShaderSMBuiltinsPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t shaderSMCount;
    uint32_t shaderWarpsPerSM;
} VkPhysicalDeviceShaderSMBuiltinsPropertiesNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **shaderSMCount** is the number of SMs on the device.
• shaderWarpsPerSM is the maximum number of simultaneously executing warps on an SM.

If the VkPhysicalDeviceShaderSMBuiltinsPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceShaderSMBuiltinsPropertiesNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_PROPERTIES_NV

The VkPhysicalDeviceTexelBufferAlignmentProperties structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceTexelBufferAlignmentProperties {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize storageTexelBufferOffsetAlignmentBytes;
    VkBool32 storageTexelBufferOffsetSingleTexelAlignment;
    VkDeviceSize uniformTexelBufferOffsetAlignmentBytes;
    VkBool32 uniformTexelBufferOffsetSingleTexelAlignment;
} VkPhysicalDeviceTexelBufferAlignmentProperties;
```

or the equivalent

```c
// Provided by VK_EXT_texel_buffer_alignment
typedef VkPhysicalDeviceTexelBufferAlignmentProperties
  VkPhysicalDeviceTexelBufferAlignmentPropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.

• pNext is NULL or a pointer to a structure extending this structure.

• storageTexelBufferOffsetAlignmentBytes is a byte alignment that is sufficient for a storage texel buffer of any format. The value must be a power of two.

• storageTexelBufferOffsetSingleTexelAlignment indicates whether single texel alignment is sufficient for a storage texel buffer of any format.

• uniformTexelBufferOffsetAlignmentBytes is a byte alignment that is sufficient for a uniform texel buffer of any format. The value must be a power of two.

• uniformTexelBufferOffsetSingleTexelAlignment indicates whether single texel alignment is sufficient for a uniform texel buffer of any format.

If the VkPhysicalDeviceTexelBufferAlignmentProperties structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.
If the single texel alignment property is **VK_FALSE**, then the buffer view’s offset **must** be aligned to the corresponding byte alignment value. If the single texel alignment property is **VK_TRUE**, then the buffer view’s offset **must** be aligned to the lesser of the corresponding byte alignment value or the size of a single texel, based on `VkBufferViewCreateInfo::format`. If the size of a single texel is a multiple of three bytes, then the size of a single component of the format is used instead.

These limits **must** not advertise a larger alignment than the required maximum minimum value of `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`, for any format that supports use as a texel buffer.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTexelBufferAlignmentProperties-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES**

---

The `VkPhysicalDeviceTimelineSemaphoreProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_2
typedef struct VkPhysicalDeviceTimelineSemaphoreProperties {
    VkStructureType sType;
    void* pNext;
    uint64_t maxTimelineSemaphoreValueDifference;
} VkPhysicalDeviceTimelineSemaphoreProperties;
```

or the equivalent

```c
// Provided by VK_KHR_timeline_semaphore
typedef VkPhysicalDeviceTimelineSemaphoreProperties
    VkPhysicalDeviceTimelineSemaphorePropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **maxTimelineSemaphoreValueDifference** indicates the maximum difference allowed by the implementation between the current value of a timeline semaphore and any pending signal or wait operations.

If the `VkPhysicalDeviceTimelineSemaphoreProperties` structure is included in the **pNext** chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceTimelineSemaphoreProperties-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_PROPERTIES**

---

3454
The `VkPhysicalDeviceLineRasterizationPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_line_rasterization
typedef struct VkPhysicalDeviceLineRasterizationPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t lineSubPixelPrecisionBits;
} VkPhysicalDeviceLineRasterizationPropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `lineSubPixelPrecisionBits` is the number of bits of subpixel precision in framebuffer coordinates \( x_f \) and \( y_f \) when rasterizing line segments.

If the `VkPhysicalDeviceLineRasterizationPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceLineRasterizationPropertiesEXT-sType-sType` `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_PROPERTIES_EXT`

The `VkPhysicalDeviceRobustness2PropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_robustness2
typedef struct VkPhysicalDeviceRobustness2PropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceSize robustStorageBufferAccessSizeAlignment;
    VkDeviceSize robustUniformBufferAccessSizeAlignment;
} VkPhysicalDeviceRobustness2PropertiesEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `robustStorageBufferAccessSizeAlignment` is the number of bytes that the range of a storage buffer descriptor is rounded up to when used for bounds-checking when the `robustBufferAccess2` feature is enabled. This value must be either 1 or 4.
- `robustUniformBufferAccessSizeAlignment` is the number of bytes that the range of a uniform buffer descriptor is rounded up to when used for bounds-checking when the `robustBufferAccess2` feature is enabled. This value must be a power of two in the range \([1, 256]\).

If the `VkPhysicalDeviceRobustness2PropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with
each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceRobustness2PropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_PROPERTIES_EXT

The VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV structure is defined as:

```c
// Provided by VK_NV_device_generated_commands
typedef struct VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV {
    VkStructureType sType;
    void* pNext;
    uint32_t maxGraphicsShaderGroupCount;
    uint32_t maxIndirectSequenceCount;
    uint32_t maxIndirectCommandsTokenCount;
    uint32_t maxIndirectCommandsStreamCount;
    uint32_t maxIndirectCommandsTokenOffset;
    uint32_t maxIndirectCommandsStreamStride;
    uint32_t minSequencesCountBufferOffsetAlignment;
    uint32_t minSequencesIndexBufferOffsetAlignment;
    uint32_t minIndirectCommandsBufferOffsetAlignment;
} VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **maxGraphicsShaderGroupCount** is the maximum number of shader groups in VkGraphicsPipelineShaderGroupsCreateInfoNV.
- **maxIndirectSequenceCount** is the maximum number of sequences in VkGeneratedCommandsInfoNV and in VkGeneratedCommandsMemoryRequirementsInfoNV.
- **maxIndirectCommandsTokenCount** is the maximum number of tokens in VkIndirectCommandsLayoutCreateInfoNV.
- **maxIndirectCommandsStreamCount** is the maximum number of streams in VkIndirectCommandsLayoutCreateInfoNV.
- **maxIndirectCommandsTokenOffset** is the maximum offset in VkIndirectCommandsLayoutTokenNV.
- **maxIndirectCommandsStreamStride** is the maximum stream stride in VkIndirectCommandsLayoutCreateInfoNV.
- **minSequencesCountBufferOffsetAlignment** is the minimum alignment for memory addresses which can be used in VkGeneratedCommandsInfoNV.
- **minSequencesIndexBufferOffsetAlignment** is the minimum alignment for memory addresses which can be used in VkGeneratedCommandsInfoNV.
- **minIndirectCommandsBufferOffsetAlignment** is the minimum alignment for memory addresses used in VkIndirectCommandsStreamNV, and as preprocess buffer in
If the `VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDeviceDeviceGeneratedCommandsPropertiesNV-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_PROPERTIES_NV`

The `VkPhysicalDevicePortabilitySubsetPropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_portability_subset
typedef struct VkPhysicalDevicePortabilitySubsetPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    uint32_t minVertexInputBindingStrideAlignment;
} VkPhysicalDevicePortabilitySubsetPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `minVertexInputBindingStrideAlignment` indicates the minimum alignment for vertex input strides. `VkVertexInputBindingDescription::stride` must be a multiple of, and at least as large as, this value. The value must be a power of two.

If the `VkPhysicalDevicePortabilitySubsetPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- `VUID-VkPhysicalDevicePortabilitySubsetPropertiesKHR-sType-sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_PROPERTIES_KHR`

The `VkPhysicalDeviceFragmentShadingRatePropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_fragment_shading_rate
typedef struct VkPhysicalDeviceFragmentShadingRatePropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkExtent2D minFragmentShadingRateAttachmentTexelSize;
    VkExtent2D maxFragmentShadingRateAttachmentTexelSize;
    uint32_t maxFragmentShadingRateAttachmentTexelSizeAspectRatio;
} VkPhysicalDeviceFragmentShadingRatePropertiesKHR;
```
• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.

minFragmentShadingRateAttachmentTexelSize indicates minimum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value must be less than or equal to the values in maxFragmentShadingRateAttachmentTexelSize. Each value must be a power-of-two. It must be (0,0) if the attachmentFragmentShadingRate feature is not supported.

maxFragmentShadingRateAttachmentTexelSize indicates maximum supported width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. Each value must be greater than or equal to the values in minFragmentShadingRateAttachmentTexelSize. Each value must be a power-of-two. It must be (0,0) if the attachmentFragmentShadingRate feature is not supported.

maxFragmentShadingRateAttachmentTexelSizeAspectRatio indicates the maximum ratio between the width and height of the portion of the framebuffer corresponding to each texel in a fragment shading rate attachment. maxFragmentShadingRateAttachmentTexelSizeAspectRatio must be a power-of-two value, and must be less than or equal to max(maxFragmentShadingRateAttachmentTexelSize.width / minFragmentShadingRateAttachmentTexelSize.height, maxFragmentShadingRateAttachmentTexelSize.height / minFragmentShadingRateAttachmentTexelSize.width). It must be 0 if the attachmentFragmentShadingRate feature is not supported.

primitiveFragmentShadingRateWithMultipleViewports specifies whether the primitive fragment shading rate can be used when multiple viewports are used. If this value is VK_FALSE, only a single viewport must be used, and applications must not write to the ViewportMaskNV or ViewportIndex built-in when setting PrimitiveShadingRateKHR. It must be VK_FALSE if the shaderOutputViewportIndex feature, the VK_EXT_shader_viewport_index_layer extension, or the geometryShader feature is not supported, or if the primitiveFragmentShadingRate feature is not supported.

layeredShadingRateAttachments specifies whether a shading rate attachment image view can be created with multiple layers. If this value is VK_FALSE, when creating an image view with a usage
that includes VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR, layerCount must be 1. It must be VK_FALSE if the multiview feature, the shaderOutputViewportIndex feature, the VK_EXT_shader_viewport_index_layer extension, or the geometryShader feature is not supported, or if the attachmentFragmentShadingRate feature is not supported.

- fragmentShadingRateNonTrivialCombinerOps specifies whether VkFragmentShadingRateCombinerOpKHR enums other than VK_FRAGMENT_SHADING_RATE_COMBINER_OP_KEEP_KHR or VK_FRAGMENT_SHADING_RATE_COMBINER_OP_REPLACE_KHR can be used. It must be VK_FALSE unless either the primitiveFragmentShadingRate or attachmentFragmentShadingRate feature is supported.

- maxFragmentSize indicates the maximum supported width and height of a fragment. Its width and height members must both be power-of-two values. This limit is purely informational, and is not validated.

- maxFragmentSizeAspectRatio indicates the maximum ratio between the width and height of a fragment. maxFragmentSizeAspectRatio must be a power-of-two value, and must be less than or equal to the maximum of the width and height members of maxFragmentSize. This limit is purely informational, and is not validated.

- maxFragmentShadingRateCoverageSamples specifies the maximum number of coverage samples supported in a single fragment. maxFragmentShadingRateCoverageSamples must be less than or equal to the product of the width and height members of maxFragmentSize, and the sample count reported by maxFragmentShadingRateRasterizationSamples. maxFragmentShadingRateCoverageSamples must be less than or equal to maxSampleMaskWords × 32 if fragmentShadingRateWithShaderSampleMask is supported. This limit is purely informational, and is not validated.

- maxFragmentShadingRateRasterizationSamples is a VkSampleCountFlagBits value specifying the maximum sample rate supported when a fragment covers multiple pixels. This limit is purely informational, and is not validated.

- fragmentShadingRateWithShaderDepthStencilWrites specifies whether the implementation supports writing FragDepth or FragStencilRefEXT from a fragment shader for multi-pixel fragments. If this value is VK_FALSE, writing to those built-ins will clamp the fragment shading rate to (1,1).

- fragmentShadingRateWithSampleMask specifies whether the implementation supports setting valid bits of VkPipelineMultisampleStateCreateInfo::pSampleMask to 0 for multi-pixel fragments. If this value is VK_FALSE, zeroing valid bits in the sample mask will clamp the fragment shading rate to (1,1).

- fragmentShadingRateWithShaderSampleMask specifies whether the implementation supports reading or writing SampleMask for multi-pixel fragments. If this value is VK_FALSE, using that built-in will clamp the fragment shading rate to (1,1).

- fragmentShadingRateWithConservativeRasterization specifies whether conservative rasterization is supported for multi-pixel fragments. It must be VK_FALSE if VK_EXT_conservative_rasterization is not supported. If this value is VK_FALSE, using conservative rasterization will clamp the fragment shading rate to (1,1).

- fragmentShadingRateWithFragmentShaderInterlock specifies whether fragment shader interlock is supported for multi-pixel fragments. It must be VK_FALSE if VK_EXT_fragment_shader_interlock is not supported. If this value is VK_FALSE, using fragment shader interlock will clamp the fragment
shading rate to (1, 1).

- **fragmentShadingRateWithCustomSampleLocations** specifies whether custom sample locations are supported for multi-pixel fragments. It must be **VK_FALSE** if **VK_EXT_sample_locations** is not supported. If this value is **VK_FALSE**, using custom sample locations will clamp the fragment shading rate to (1, 1).

- **fragmentShadingRateStrictMultiplyCombiner** specifies whether **VK_FRAGMENT_SHADING_RATE_COMBINER_OP_MUL_KHR** accurately performs a multiplication or not. Implementations where this value is **VK_FALSE** will instead combine rates with an addition. If **fragmentShadingRateNonTrivialCombinerOps** is **VK_FALSE**, implementations must report this as **VK_FALSE**. If **fragmentShadingRateNonTrivialCombinerOps** is **VK_TRUE**, implementations should report this as **VK_TRUE**.

**Note**

Multiplication of the combiner rates using the fragment width/height in linear space is equivalent to an addition of those values in log2 space. Some implementations inadvertently implemented an addition in linear space due to unclear requirements originating outside of this specification. This resulted in **fragmentShadingRateStrictMultiplyCombiner** being added. Fortunately, this only affects situations where a rate of 1 in either dimension is combined with another rate of 1. All other combinations result in the exact same result as if multiplication was performed in linear space due to the clamping logic, and the fact that both the sum and product of 2 and 2 are equal. In many cases, this limit will not affect the correct operation of applications.

If the **VkPhysicalDeviceFragmentShadingRatePropertiesKHR** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

These properties are related to fragment shading rates.

**Valid Usage (Implicit)**

- **VUID-VkPhysicalDeviceFragmentShadingRatePropertiesKHR-sType-sType**
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_PROPERTIES_KHR**

The **VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV** structure is defined as:

```c
typedef struct VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkSampleCountFlagBits maxFragmentShadingRateInvocationCount;
} VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV;
```

- **sType** is a **VkStructureType** value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `maxFragmentShadingRateInvocationCount` is a `VkSampleCountFlagBits` value indicating the maximum number of fragment shader invocations per fragment supported in pipeline, primitive, and attachment fragment shading rates.

If the `VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

These properties are related to fragment shading rates.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_PROPERTIES_NV`

- VUID-VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV-maxFragmentShadingRateInvocationCount-parameter `maxFragmentShadingRateInvocationCount` must be a valid `VkSampleCountFlagBits` value

The `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_custom_border_color
typedef struct VkPhysicalDeviceCustomBorderColorPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t maxCustomBorderColorSamplers;
} VkPhysicalDeviceCustomBorderColorPropertiesEXT;
```

• `maxCustomBorderColorSamplers` indicates the maximum number of samplers with custom border colors which can simultaneously exist on a device.

If the `VkPhysicalDeviceCustomBorderColorPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceCustomBorderColorPropertiesEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_PROPERTIES_EXT`

The `VkPhysicalDeviceProvokingVertexPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_provoking_vertex
typedef struct VkPhysicalDeviceProvokingVertexPropertiesEXT {
```

• `maxCustomBorderColorSamplers` indicates the maximum number of samplers with custom border colors which can simultaneously exist on a device.
VkStructureType sType;
void* pNext;
VkBool32 provokingVertexModePerPipeline;
VkBool32 transformFeedbackPreservesTriangleFanProvokingVertex;
} VkPhysicalDeviceProvokingVertexPropertiesEXT;

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **provokingVertexModePerPipeline** indicates whether the implementation supports graphics pipelines with different provoking vertex modes within the same render pass instance.

• **transformFeedbackPreservesTriangleFanProvokingVertex** indicates whether the implementation can preserve the provoking vertex order when writing triangle fan vertices to transform feedback.

If the **VkPhysicalDeviceProvokingVertexPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

• **VUID-VkPhysicalDeviceProvokingVertexPropertiesEXT-sType-sType**

  sType must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_PROPERTIES_EXT**

The **VkPhysicalDeviceDescriptorBufferPropertiesEXT** structure is defined as:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 combinedImageSamplerDescriptorSingleArray;
    VkBool32 bufferlessPushDescriptors;
    VkBool32 allowSamplerImageViewPostSubmitCreation;
    VkDeviceSize descriptorBufferOffsetAlignment;
    uint32_t maxDescriptorBufferBindings;
    uint32_t maxResourceDescriptorBufferBindings;
    uint32_t maxSamplerDescriptorBufferBindings;
    uint32_t maxEmbeddedImmutableSamplerBindings;
    size_t bufferCaptureReplayDescriptorDataSize;
    size_t imageCaptureReplayDescriptorDataSize;
    size_t imageViewCaptureReplayDescriptorDataSize;
    size_t samplerCaptureReplayDescriptorDataSize;
    size_t accelerationStructureCaptureReplayDescriptorDataSize;
    size_t samplerDescriptorSize;
    size_t combinedImageSamplerDescriptorSize;
    size_t sampledImageDescriptorSize;
    size_t storageImageDescriptorSize;
} VkPhysicalDeviceDescriptorBufferPropertiesEXT;
```
size_t uniformTexelBufferDescriptorSize;
size_t robustUniformTexelBufferDescriptorSize;
size_t storageTexelBufferDescriptorSize;
size_t robustStorageTexelBufferDescriptorSize;
size_t uniformBufferDescriptorSize;
size_t robustUniformBufferDescriptorSize;
size_t storageBufferDescriptorSize;
size_t robustStorageBufferDescriptorSize;
size_t inputAttachmentDescriptorSize;
size_t accelerationStructureDescriptorSize;
VkDeviceSize maxSamplerDescriptorBufferRange;
VkDeviceSize maxResourceDescriptorBufferRange;
VkDeviceSize samplerDescriptorBufferAddressSpaceSize;
VkDeviceSize resourceDescriptorBufferAddressSpaceSize;
VkDeviceSize descriptorBufferAddressSpaceSize;
} VkPhysicalDeviceDescriptorBufferPropertiesEXT;

• sType is a VkStructureType value identifying this structure.

• pNext is NULL or a pointer to a structure extending this structure.

• combinedImageSamplerDescriptorSingleArray indicates that the implementation does not require an array of VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptors to be written into a descriptor buffer as an array of image descriptors, immediately followed by an array of sampler descriptors.

• bufferlessPushDescriptors indicates that the implementation does not require a buffer created with VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT to be bound when using push descriptors.

• allowSamplerImageViewPostSubmitCreation indicates that the implementation does not restrict when the VkSampler or VkImageView objects used to retrieve descriptor data can be created in relation to command buffer submission. If this value is VK_FALSE, then the application must create any VkSampler or VkImageView objects whose descriptor data is accessed during the execution of a command buffer, before the vkQueueSubmit, or vkQueueSubmit2, call that submits that command buffer.

• descriptorBufferOffsetAlignment indicates the required alignment in bytes when setting offsets into the descriptor buffer.

• maxDescriptorBufferBindings indicates the maximum sum total number of descriptor buffers and embedded immutable sampler sets that can be bound.

• maxResourceDescriptorBufferBindings indicates the maximum number of resource descriptor buffers that can be bound.

• maxSamplerDescriptorBufferBindings indicates the maximum number of sampler descriptor buffers that can be bound.

• maxEmbeddedImmutableSamplerBindings indicates the maximum number of embedded immutable sampler sets that can be bound.

• maxEmbeddedImmutableSamplers indicates the maximum number of unique immutable samplers in descriptor set layouts created with
VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT, and pipeline layouts created from them, which can simultaneously exist on a device.

- bufferCaptureReplayDescriptorDataSize indicates the maximum size in bytes of the opaque data used for capture and replay with buffers.
- imageCaptureReplayDescriptorDataSize indicates the maximum size in bytes of the opaque data used for capture and replay with images.
- imageViewCaptureReplayDescriptorDataSize indicates the maximum size in bytes of the opaque data used for capture and replay with image views.
- samplerCaptureReplayDescriptorDataSize indicates the maximum size in bytes of the opaque data used for capture and replay with samplers.
- accelerationStructureCaptureReplayDescriptorDataSize indicates the maximum size in bytes of the opaque data used for capture and replay with acceleration structures.
- samplerDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_SAMPLER descriptor.
- combinedImageSamplerDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER descriptor.
- sampledImageDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_SAMPLED_IMAGE descriptor.
- storageImageDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_IMAGE descriptor.
- uniformTexelBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER descriptor if the robustBufferAccess feature is not enabled.
- robustUniformTexelBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER descriptor if the robustBufferAccess feature is enabled.
- storageTexelBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor if the robustBufferAccess feature is not enabled.
- robustStorageTexelBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER descriptor if the robustBufferAccess feature is enabled.
- uniformBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER descriptor.
- robustUniformBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_UNIFORM_BUFFER descriptor if the robustBufferAccess feature is enabled.
- storageBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_BUFFER descriptor.
- robustStorageBufferDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_STORAGE_BUFFER descriptor if the robustBufferAccess feature is enabled.
- inputAttachmentDescriptorSize indicates the size in bytes of a VK_DESCRIPTOR_TYPE_INPUT_ATTACHMENT descriptor.
- accelerationStructureDescriptorSize indicates the size in bytes of a
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR or
VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_NV descriptor.

- `maxSamplerDescriptorBufferRange` indicates the maximum range in bytes from the address of a sampler descriptor buffer binding that is accessible to a shader.

- `maxResourceDescriptorBufferRange` indicates the maximum range in bytes from the address of a resource descriptor buffer binding that is accessible to a shader.

- `samplerDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT.

- `resourceDescriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with both VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT and VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT.

- `descriptorBufferAddressSpaceSize` indicates the total size in bytes of the address space available for descriptor buffers created with both VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT and VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT.

A descriptor binding with type VK_DESCRIPTOR_TYPE_MUTABLE_VALVE has a descriptor size which is implied by the descriptor types included in the VkMutableDescriptorTypeCreateInfoVALVE::*pDescriptorTypes list. The descriptor size is equal to the maximum size of any descriptor type included in the pDescriptorTypes list.

As there is no way to request robust and non-robust descriptors separately, or specify robust/non-robust descriptors in the set layout, if `robustBufferAccess` is enabled then robust descriptors are always used.

If the VkPhysicalDeviceDescriptorBufferPropertiesEXT structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorBufferPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_PROPERTIES_EXT

The VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_descriptor_buffer
typedef struct VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT {
    VkStructureType          sType;
    void*                    pNext;
    size_t                   combinedImageSamplerDensityMapDescriptorSize;
} VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT;
```

- `sType` is a VkStructureType value identifying this structure.

- `pNext` is NULL or a pointer to a structure extending this structure.
• `combinedImageSamplerDensityMapDescriptorSize` indicates the size in bytes of a `VK_DESCRIPTOR_TYPE_COMBINED_IMAGE_SAMPLER` descriptor when creating the descriptor with `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT` set.

If the `VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_DENSITY_MAP_PROPERTIES_EXT`

The `VkPhysicalDeviceSubpassShadingPropertiesHUAWEI` structure is defined as:

```c
// Provided by VK_HUAWEI_subpass_shading
typedef struct VkPhysicalDeviceSubpassShadingPropertiesHUAWEI {
    VkStructureType  sType;
    void*             pNext;
    uint32_t          maxSubpassShadingWorkgroupSizeAspectRatio;
} VkPhysicalDeviceSubpassShadingPropertiesHUAWEI;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `maxSubpassShadingWorkgroupSizeAspectRatio` indicates the maximum ratio between the width and height of the portion of the subpass shading shader workgroup size. `maxSubpassShadingWorkgroupSizeAspectRatio` must be a power-of-two value, and must be less than or equal to `max(WorkgroupSize.x/WorkgroupSize.y, WorkgroupSize.y/WorkgroupSize.x)`.

If the `VkPhysicalDeviceSubpassShadingPropertiesHUAWEI` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceSubpassShadingPropertiesHUAWEI-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_PROPERTIES_HUAWEI`

The `VkPhysicalDeviceMultiDrawPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_multi_draw
typedef struct VkPhysicalDeviceMultiDrawPropertiesEXT {
    VkStructureType  sType;
    void*             pNext;
} VkPhysicalDeviceMultiDrawPropertiesEXT;
```
The members of the `VkPhysicalDeviceMultiDrawPropertiesEXT` structure describe the following features:

- `maxMultiDrawCount` indicates the maximum number of draw calls which can be batched into a single multidraw.

If the `VkPhysicalDeviceMultiDrawPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceMultiDrawPropertiesEXT-sType-sType

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTI_DRAW_PROPERTIES_EXT`

The `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_graphics_pipeline_library
typedef struct VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 graphicsPipelineLibraryFastLinking;
    VkBool32 graphicsPipelineLibraryIndependentInterpolationDecoration;
} VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT;
```

- `graphicsPipelineLibraryFastLinking` indicates whether fast linking of graphics pipelines is supported. If it is `VK_TRUE`, creating a graphics pipeline entirely from pipeline libraries without `VK_PIPELINE_CREATE_LINK_TIME_OPTIMIZATION_BIT_EXT` is comparable in cost to recording a command in a command buffer.

- `graphicsPipelineLibraryIndependentInterpolationDecoration` indicates whether `NoPerspective` and `Flat` interpolation decorations in the last vertex processing stage and the fragment shader are required to match when using graphics pipeline libraries. If it is `VK_TRUE`, the interpolation decorations do not need to match. If it is `VK_FALSE`, these decorations must either be present in both stages or neither stage in order for a given interface variable to match.

If the `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT-sType-sType

  `sType` must be
The `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR` structure is defined as:

```c
// Provided by VK_KHR_fragment_shader_barycentric
typedef struct VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR {
    VkStructureType sType;
    void* pNext;
    VkBool32 triStripVertexOrderIndependentOfProvokingVertex;
} VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR;
```

- `triStripVertexOrderIndependentOfProvokingVertex` indicates that the implementation does not change its vertex numbering for triangle strip primitives when the `provoking vertex mode` is `VK_PROVOKING_VERTEX_MODE_LAST_VERTEX_EXT`, as shown in the last vertex table.

If the `VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR`

The `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_shader_module_identifier
typedef struct VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint8_t shaderModuleIdentifierAlgorithmUUID[VK_UUID_SIZE];
} VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT;
```

The members of the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure describe the following:

- `shaderModuleIdentifierAlgorithmUUID` is an array of `VK_UUID_SIZE` `uint8_t` values which uniquely represents the algorithm used to compute an identifier in `vkGetShaderModuleIdentifierEXT` and `vkGetShaderModuleCreateInfoIdentifierEXT`. Implementations should not change this value in different driver versions if the algorithm used to compute an identifier is the same.

**Note**

The algorithm UUID may be the same in different ICDs if the algorithms are guaranteed to produce the same results. This may happen in driver stacks which
support different kinds of hardware with shared code.

Khronos’ conformance testing can not guarantee that `shaderModuleIdentifierAlgorithmUUID` values are actually unique, so implementors should make their own best efforts to ensure that their UUID is unlikely to conflict with other implementations which may use a different algorithm. In particular, hard-coded values which easily conflict, such as all-0, should never be used. Hard-coded values are acceptable if best effort is ensured that the value will not accidentally conflict.

If the `VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

```
Valid Usage (Implicit)

• VUID-VkPhysicalDeviceShaderModuleIdentifierPropertiesEXT-sType-sType
  sType must be
  VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_MODULE_IDENTIFIER_PROPERTIES_EXT
```

The `VkPhysicalDevicePipelineRobustnessPropertiesEXT` structure is defined as:

```
// Provided by VK_EXT_pipeline_robustness
typedef struct VkPhysicalDevicePipelineRobustnessPropertiesEXT {
  VkStructureType sType;
  void* pNext;
  VkPipelineRobustnessBufferBehaviorEXT defaultRobustnessStorageBuffers;
  VkPipelineRobustnessBufferBehaviorEXT defaultRobustnessUniformBuffers;
  VkPipelineRobustnessBufferBehaviorEXT defaultRobustnessVertexInputs;
  VkPipelineRobustnessImageBehaviorEXT defaultRobustnessImages;
} VkPhysicalDevicePipelineRobustnessPropertiesEXT;
```

• `sType` is a `VkStructureType` value identifying this structure.

• `pNext` is `NULL` or a pointer to a structure extending this structure.

• `defaultRobustnessStorageBuffers` describes the behaviour of out of bounds accesses made to storage buffers when no robustness features are enabled

• `defaultRobustnessUniformBuffers` describes the behaviour of out of bounds accesses made to uniform buffers when no robustness features are enabled

• `defaultRobustnessVertexInputs` describes the behaviour of out of bounds accesses made to vertex input attributes when no robustness features are enabled

• `defaultRobustnessImages` describes the behaviour of out of bounds accesses made to images when no robustness features are enabled

Some implementations of Vulkan may be able to guarantee that certain types of accesses are always performed with robustness even when the Vulkan API’s robustness features are not explicitly
enabled.

Even when an implementation reports that accesses to a given resource type are robust by default, it remains invalid to make an out of bounds access without requesting the appropriate robustness feature.

If the `VkPhysicalDevicePipelineRobustnessPropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDevicePipelineRobustnessPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_ROBUSTNESS_PROPERTIES_EXT`

The `VkPhysicalDeviceExtendedDynamicState3PropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_extended_dynamic_state3
typedef struct VkPhysicalDeviceExtendedDynamicState3PropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 dynamicPrimitiveTopologyUnrestricted;
} VkPhysicalDeviceExtendedDynamicState3PropertiesEXT;
```

- `dynamicPrimitiveTopologyUnrestricted` indicates that the implementation allows `vkCmdSetPrimitiveTopology` to use a different primitive topology class to the one specified in the active graphics pipeline.

If the `VkPhysicalDeviceExtendedDynamicState3PropertiesEXT` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- `VUID-VkPhysicalDeviceExtendedDynamicState3PropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_3_PROPERTIES_EXT`

The `VkPhysicalDeviceOpticalFlowPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_optical_flow
typedef struct VkPhysicalDeviceOpticalFlowPropertiesNV {
    VkStructureType sType;
    void* pNext;
    VkOpticalFlowGridSizeFlagsNV supportedOutputGridSizes;
    VkOpticalFlowGridSizeFlagsNV supportedHintGridSizes;
} VkPhysicalDeviceOpticalFlowPropertiesNV;
```
VkPhysicalDeviceOpticalFlowPropertiesNV

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **supportedOutputGridSizes** are the supported VkOpticalFlowGridSizeFlagsNV which can be specified in VkOpticalFlowSessionCreateInfoNV::outputGridSize.
- **supportedHintGridSizes** are the supported VkOpticalFlowGridSizeFlagsNV which can be specified in VkOpticalFlowSessionCreateInfoNV::hintGridSize.
- **hintSupported** is a boolean describing whether using hint flow vector map is supported in an optical flow session.
- **costSupported** is a boolean describing whether cost map generation is supported in an optical flow session.
- **bidirectionalFlowSupported** is a boolean describing whether bi-directional flow generation is supported in an optical flow session.
- **globalFlowSupported** is a boolean describing whether global flow vector map generation is supported in an optical flow session.
- **minWidth** is the minimum width in pixels for images used in an optical flow session.
- **minHeight** is the minimum height in pixels for images used in an optical flow session.
- **maxWidth** is the maximum width in pixels for images used in an optical flow session.
- **maxHeight** is the maximum height in pixels for images used in an optical flow session.
- **maxNumRegionsOfInterest** is the maximum number of regions of interest which can be used in an optical flow session. If this maxNumRegionsOfInterest is 0, regions of interest are not supported in an optical flow session.

If the VkPhysicalDeviceOpticalFlowPropertiesNV structure is included in the pNext chain of the VkPhysicalDeviceProperties2 structure passed to vkGetPhysicalDeviceProperties2, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceOpticalFlowPropertiesNV-sType-sType

  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_PROPERTIES_NV

The VkPhysicalDeviceOpacityMicromapPropertiesEXT structure is defined as:
// Provided by VK_EXT_opacity_micromap
typedef struct VkPhysicalDeviceOpacityMicromapPropertiesEXT {
    VkStructureType     sType;
    void*               pNext;
    uint32_t            maxOpacity2StateSubdivisionLevel;
    uint32_t            maxOpacity4StateSubdivisionLevel;
} VkPhysicalDeviceOpacityMicromapPropertiesEXT;

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure.
• **maxOpacity2StateSubdivisionLevel** is the maximum allowed **subdivisionLevel** when **format** is **VK_OPACITY_MICROMAP_FORMAT_2_STATE_EXT**
• **maxOpacity4StateSubdivisionLevel** is the maximum allowed **subdivisionLevel** when **format** is **VK_OPACITY_MICROMAP_FORMAT_4_STATE_EXT**

If the **VkPhysicalDeviceOpacityMicromapPropertiesEXT** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.

**Valid Usage (Implicit)**

• VUID-VkPhysicalDeviceOpacityMicromapPropertiesEXT-sType-sType
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPACITY_MICROMAP_PROPERTIES_EXT**

The **VkPhysicalDeviceDisplacementMicromapPropertiesNV** structure is defined as:

// Provided by VK_NV_displacement_micromap
typedef struct VkPhysicalDeviceDisplacementMicromapPropertiesNV {
    VkStructureType     sType;
    void*               pNext;
    uint32_t            maxDisplacementMicromapSubdivisionLevel;
} VkPhysicalDeviceDisplacementMicromapPropertiesNV;

• **sType** is a **VkStructureType** value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure.
• **maxDisplacementMicromapSubdivisionLevel** is the maximum allowed **subdivisionLevel** for displacement micromaps.

If the **VkPhysicalDeviceDisplacementMicromapPropertiesNV** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to **vkGetPhysicalDeviceProperties2**, it is filled in with each corresponding implementation-dependent property.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDisplacementMicromapPropertiesNV-sType-sType
  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DISPLACEMENT_MICROMAP_PROPERTIES_NV

The `VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM` structure is defined as:

```c
// Provided by VK_ARM_shader_core_builtins
typedef struct VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM {
    VkStructureType sType;
    void* pNext;
    uint64_t shaderCoreMask;
    uint32_t shaderCoreCount;
    uint32_t shaderWarpsPerCore;
} VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `shaderCoreMask` is a bitfield where each bit set represents the presence of a shader core whose ID is the bit position. The highest ID for any shader core on the device is the position of the most significant bit set.
- `shaderCoreCount` is the number of shader cores on the device.
- `shaderWarpsPerCore` is the maximum number of simultaneously executing warps on a shader core.

If the `VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM-sType-sType
  
sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_PROPERTIES_ARM

Values which may be returned in the `rayTracingInvocationReorderReorderingHint` field of `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` are:

```c
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef enum VkRayTracingInvocationReorderModeNV {
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_NV = 0,
    VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_NV = 1,
} VkRayTracingInvocationReorderModeNV;
```
• **VK_RAY_TRACING_INVOCATION_REORDER_MODE_NONE_NV** indicates that the implementation is likely to not reorder at reorder calls.

• **VK_RAY_TRACING_INVOCATION_REORDER_MODE_REORDER_NV** indicates that the implementation is likely to reorder at reorder calls.

The `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_ray_tracing_invocation_reorder
typedef struct VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV {
    VkStructureType sType;   
    void* pNext;             
    VkRayTracingInvocationReorderModeNV rayTracingInvocationReorderReorderingHint;
} VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV;
```

• `rayTracingInvocationReorderReorderingHint` is a hint indicating if the implementation will actually reorder at the reorder calls.

**Note**
Because the extension changes how hits are managed there is a compatibility reason to expose the extension even when an implementation does not have sorting active.

If the `VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV` structure is included in the `pNext` chain of the `VkPhysicalDeviceProperties2` structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceRayTracingInvocationReorderPropertiesNV-sType-sType**

  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_INVOCATION_REORDER_PROPERTIES_NV`

The `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI` structure is defined as:

```c
// Provided by VK_HUAWEI_cluster_culling_shader
typedef struct VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI {
    VkStructureType sType;   
    void* pNext;             
    uint32_t maxWorkGroupCount[3];   
    uint32_t maxWorkGroupSize[3];   
    uint32_t maxOutputClusterCount;   
    VkDeviceSize indirectBufferOffsetAlignment;
} VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI;
```

• `sType` is a `VkStructureType` value identifying this structure.
• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **maxWorkGroupCount[3]** is the maximum number of local workgroups that can be launched by a single command. These three values represent the maximum local workgroup count in the X, Y and Z dimensions, respectively. In the current implementation, the values of Y and Z are both implicitly set as one. groupCountX of DrawCluster command must be less than or equal to maxWorkGroupCount[0].

• **maxWorkGroupSize[3]** is the maximum size of a local workgroup. These three values represent the maximum local workgroup size in the X, Y and Z dimensions, respectively. The x, y and z sizes, as specified by the `LocalSize` or `LocalSizeId` execution mode or by the object decorated by the WorkgroupSize decoration in shader modules, must be less than or equal to the corresponding limit. In the current implementation, the maximum workgroup size of the X dimension is 32, the others are 1.

• **maxOutputClusterCount** is the maximum number of output cluster a single cluster culling shader workgroup can emit.

• **indirectBufferOffsetAlignment** indicates the alignment for cluster drawing command buffer stride. `vkCmdDrawClusterIndirectHUAWEI::offset` must be a multiple of this value.

If the **VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI** structure is included in the **pNext** chain of the **VkPhysicalDeviceProperties2** structure passed to `vkGetPhysicalDeviceProperties2`, it is filled in with each corresponding implementation-dependent property.

---

### Valid Usage (Implicit)

• VUID-VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI-sType-sType must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_PROPERTIES_HUAWEI`

---

The **VkPhysicalDeviceShaderCorePropertiesARM** structure is defined as:

```c
// Provided by VK_ARM_shader_core_properties
typedef struct VkPhysicalDeviceShaderCorePropertiesARM {
    VkStructureType sType;
    void* pNext;
    uint32_t pixelRate;
    uint32_t texelRate;
    uint32_t fmaRate;
} VkPhysicalDeviceShaderCorePropertiesARM;
```

• **sType** is a **VkStructureType** value identifying this structure.

• **pNext** is **NULL** or a pointer to a structure extending this structure.

• **pixelRate** is an unsigned integer value indicating the maximum number of pixels output per clock per shader core.

• **texelRate** is an unsigned integer value indicating the maximum number of texels per clock per shader core.
• \texttt{fmaRate} is an unsigned integer value indicating the maximum number of single-precision fused multiply-add operations per clock per shader core.

If a throughput rate cannot be determined on the physical device, the value 0 will be returned for that rate.

If the \texttt{VkPhysicalDeviceShaderCorePropertiesARM} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- \texttt{VUID-VkPhysicalDeviceShaderCorePropertiesARM-sType-sType} \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_PROPERTIES_ARM}

The \texttt{VkPhysicalDeviceShaderObjectPropertiesEXT} structure is defined as:

```c
// Provided by VK_EXT_shader_object
typedef struct VkPhysicalDeviceShaderObjectPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    uint8_t shaderBinaryUUID[VK_UUID_SIZE];
    uint32_t shaderBinaryVersion;
} VkPhysicalDeviceShaderObjectPropertiesEXT;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \texttt{shaderBinaryUUID} is an array of \texttt{VK_UUID_SIZE} \texttt{uint8_t} values representing a universally unique identifier for one or more implementations whose shader binaries are guaranteed to be compatible with each other.
- \texttt{shaderBinaryVersion} is an unsigned integer incremented to represent backwards compatible differences between implementations with the same \texttt{shaderBinaryUUID}.

The purpose and usage of the values of this structure are described in greater detail in \textit{Binary Shader Compatibility}.

If the \texttt{VkPhysicalDeviceShaderObjectPropertiesEXT} structure is included in the \texttt{pNext} chain of the \texttt{VkPhysicalDeviceProperties2} structure passed to \texttt{vkGetPhysicalDeviceProperties2}, it is filled in with each corresponding implementation-dependent property.

### Valid Usage (Implicit)

- \texttt{VUID-VkPhysicalDeviceShaderObjectPropertiesEXT-sType-sType} \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_OBJECT_PROPERTIES_EXT}
46.1. Limit Requirements

The following table specifies the **required** minimum/maximum for all Vulkan graphics implementations. Where a limit corresponds to a fine-grained device feature which is **optional**, the feature name is listed with two **required** limits, one when the feature is supported and one when it is not supported. If an implementation supports a feature, the limits reported are the same whether or not the feature is enabled.

*Table 56. Required Limit Types*

The **Limit Type** column specifies the limit is either the minimum limit all implementations **must** support, the maximum limit all implementations **must** support, or the exact value all

---

1
implementations must support. For bitmasks a minimum limit is the least bits all implementations must set, but they may have additional bits set beyond this minimum.

2

The \texttt{maxPerStageResources} must be at least the smallest of the following:

\begin{itemize}
  \item the sum of the \texttt{maxPerStageDescriptorUniformBuffers}, \texttt{maxPerStageDescriptorStorageBuffers}, \texttt{maxPerStageDescriptorSampledImages}, \texttt{maxPerStageDescriptorStorageImages}, \texttt{maxPerStageDescriptorInputAttachments}, \texttt{maxColorAttachments} limits, or
  \item 128.
\end{itemize}

It may not be possible to reach this limit in every stage.

3

See \texttt{maxViewportDimensions} for the \textbf{required} relationship to other limits.

4

See \texttt{viewportBoundsRange} for the \textbf{required} relationship to other limits.

5

The values \texttt{minInterpolationOffset} and \texttt{maxInterpolationOffset} describe the closed interval of supported interpolation offsets: \([\texttt{minInterpolationOffset}, \texttt{maxInterpolationOffset}]\). The ULP is determined by \texttt{subPixelInterpolationOffsetBits}. If \texttt{subPixelInterpolationOffsetBits} is 4, this provides increments of \((1/2^4) = 0.0625\), and thus the range of supported interpolation offsets would be \([-0.5, 0.4375]\).

6

The point size ULP is determined by \texttt{PointSizeGranularity}. If the \texttt{PointSizeGranularity} is 0.125, the range of supported point sizes must be at least \([1.0, 63.875]\).

7

The line width ULP is determined by \texttt{LineWidthGranularity}. If the \texttt{LineWidthGranularity} is 0.0625, the range of supported line widths must be at least \([1.0, 7.9375]\).

8

The minimum \texttt{maxDescriptorSet*} limit is \(n\) times the corresponding \textit{specification} minimum \texttt{maxPerStageDescriptor*} limit, where \(n\) is the number of shader stages supported by the \texttt{VkPhysicalDevice}. If all shader stages are supported, \(n = 6\) (vertex, tessellation control, tessellation evaluation, geometry, fragment, compute).

9

The \texttt{UpdateAfterBind} descriptor limits must each be greater than or equal to the corresponding \texttt{non-UpdateAfterBind} limit.

10

If the \texttt{VK_KHR_portability_subset} extension is enabled, the required minimum value of \texttt{maxVertexInputBindings} is 8.
maxResourceDescriptorSize is defined as the maximum value of storageImageDescriptorSize, sampledImageDescriptorSize, robustUniformTexelBufferDescriptorSize, robustStorageTexelBufferDescriptorSize, robustUniformBufferDescriptorSize, robustStorageBufferDescriptorSize, inputAttachmentDescriptorSize, and accelerationStructureDescriptorSize.

46.2. Additional Multisampling Capabilities

To query additional multisampling capabilities which may be supported for a specific sample count, beyond the minimum capabilities described for Limits above, call:

```c
// Provided by VK_EXT_sample_locations
void vkGetPhysicalDeviceMultisamplePropertiesEXT(
    VkPhysicalDevice physicalDevice,
    VkSampleCountFlagBits samples,
    VkMultisamplePropertiesEXT* pMultisampleProperties);
```

- `physicalDevice` is the physical device from which to query the additional multisampling capabilities.
- `samples` is a `VkSampleCountFlagBits` value specifying the sample count to query capabilities for.
- `pMultisampleProperties` is a pointer to a `VkMultisamplePropertiesEXT` structure in which information about additional multisampling capabilities specific to the sample count is returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-samples-parameter `samples` must be a valid `VkSampleCountFlagBits` value
- VUID-vkGetPhysicalDeviceMultisamplePropertiesEXT-pMultisampleProperties-parameter `pMultisampleProperties` must be a valid pointer to a `VkMultisamplePropertiesEXT` structure

The `VkMultisamplePropertiesEXT` structure is defined as

```c
// Provided by VK_EXT_sample_locations
typedef struct VkMultisamplePropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkExtent2D maxSampleLocationGridSize;
} VkMultisamplePropertiesEXT;
```
• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `maxSampleLocationGridSize` is the maximum size of the pixel grid in which sample locations can vary.

### Valid Usage (Implicit)

- VUID-VkMultisamplePropertiesEXT-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_MULTISAMPLE_PROPERTIES_EXT`

- VUID-VkMultisamplePropertiesEXT-pNext-pNext
  
  `pNext` must be `NULL`

If the sample count for which additional multisampling capabilities are requested using `vkGetPhysicalDeviceMultisamplePropertiesEXT` is set in `sampleLocationSampleCounts` the `width` and `height` members of `VkMultisamplePropertiesEXT::maxSampleLocationGridSize` must be greater than or equal to the corresponding members of `maxSampleLocationGridSize`, respectively, otherwise both members must be `0`.

## 46.3. Profile Limits

### 46.3.1. Roadmap 2022

Implementations that claim support for the Roadmap 2022 profile must satisfy the following additional limit requirements:

<table>
<thead>
<tr>

</tbody>
</table>
Chapter 47. Formats

Supported buffer and image formats may vary across implementations. A minimum set of format features are guaranteed, but others must be explicitly queried before use to ensure they are supported by the implementation.

The features for the set of formats (VkFormat) supported by the implementation are queried individually using the vkGetPhysicalDeviceFormatProperties command.

47.1. Format Definition

The following image formats can be passed to, and may be returned from Vulkan commands. The memory required to store each format is discussed with that format, and also summarized in the Representation and Texel Block Size section and the Compatible formats table.

```c
// Provided by VK_VERSION_1_0
typedef enum VkFormat {
    VK_FORMAT_UNDEFINED = 0,
    VK_FORMAT_R4G4_UNORM_PACK8 = 1,
    VK_FORMAT_R4G4B4A4_UNORM_PACK16 = 2,
    VK_FORMAT_B4G4R4A4_UNORM_PACK16 = 3,
    VK_FORMAT_R5G6B5_UNORM_PACK16 = 4,
    VK_FORMAT_B5G6R5_UNORM_PACK16 = 5,
    VK_FORMAT_R5G5B5A1_UNORM_PACK16 = 6,
    VK_FORMAT_B5G5R5A1_UNORM_PACK16 = 7,
    VK_FORMAT_A1R5G5B5_UNORM_PACK16 = 8,
    VK_FORMAT_R8_UNORM = 9,
    VK_FORMAT_R8_SNORM = 10,
    VK_FORMAT_R8_USCALED = 11,
    VK_FORMAT_R8_SSCALED = 12,
    VK_FORMAT_R8_UINT = 13,

// Provided by VK_KHR_sampler_ycccb_conversion
VK_FORMAT_UNDEFINED specifies that the format is not specified.

VK_FORMAT_R4G4_UNORM_PACK8 specifies a two-component, 8-bit packed unsigned normalized format that has a 4-bit R component in bits 4..7, and a 4-bit G component in bits 0..3.

VK_FORMAT_R4G4B4A4_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit R component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit B component in bits 4..7, and a 4-bit A component in bits 0..3.

VK_FORMAT_B4G4R4A4_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit B component in bits 12..15, a 4-bit G component in bits 8..11, a 4-bit R component in bits 4..7, and a 4-bit A component in bits 0..3.

VK_FORMAT_A4R4G4B4_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit R component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit B component in bits 0..3.

VK_FORMAT_A4B4G4R4_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 4-bit A component in bits 12..15, a 4-bit B component in bits 8..11, a 4-bit G component in bits 4..7, and a 4-bit R component in bits 0..3.

VK_FORMAT_R5G6B5_UNORM_PACK16 specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit B component in bits 0..4.

VK_FORMAT_B5G6R5_UNORM_PACK16 specifies a three-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 6-bit G component in bits 5..10, and a 5-bit R component in bits 0..4.

VK_FORMAT_R5G5B5A1_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit R component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit B component in bits 1..5, and a 1-bit A component in bit 0.

VK_FORMAT_B5G5R5A1_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 5-bit B component in bits 11..15, a 5-bit G component in bits 6..10, a 5-bit R component in bits 1..5, and a 1-bit A component in bit 0.

VK_FORMAT_A1R5G5B5_UNORM_PACK16 specifies a four-component, 16-bit packed unsigned normalized format that has a 1-bit A component in bit 15, a 5-bit R component in bits 10..14, a 5-bit G component in bits 5..9, and a 5-bit B component in bits 0..4.

VK_FORMAT_R8_UNORM specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit R component.

VK_FORMAT_R8_SNORM specifies a one-component, 8-bit signed normalized format that has a single 8-bit R component.

VK_FORMAT_R8_USCALED specifies a one-component, 8-bit unsigned scaled integer format that has a single 8-bit R component.

VK_FORMAT_R8_SSCALED specifies a one-component, 8-bit signed scaled integer format that has a single 8-bit R component.

VK_FORMAT_R8_UINT specifies a one-component, 8-bit unsigned integer format that has a single 8-bit R component.
bit R component.

- **VK_FORMAT_R8_SINT** specifies a one-component, 8-bit signed integer format that has a single 8-bit R component.
- **VK_FORMAT_R8_SRGB** specifies a one-component, 8-bit unsigned normalized format that has a single 8-bit R component stored with sRGB nonlinear encoding.
- **VK_FORMAT_R8G8_UNORM** specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SNORM** specifies a two-component, 16-bit signed normalized format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_USCALED** specifies a two-component, 16-bit unsigned scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SSCALED** specifies a two-component, 16-bit signed scaled integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_UINT** specifies a two-component, 16-bit unsigned integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SINT** specifies a two-component, 16-bit signed integer format that has an 8-bit R component in byte 0, and an 8-bit G component in byte 1.
- **VK_FORMAT_R8G8_SRGB** specifies a two-component, 16-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, and an 8-bit G component stored with sRGB nonlinear encoding in byte 1.
- **VK_FORMAT_R8G8B8_UNORM** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SNORM** specifies a three-component, 24-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_USCALED** specifies a three-component, 24-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SSCALED** specifies a three-component, 24-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_UINT** specifies a three-component, 24-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SINT** specifies a three-component, 24-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, and an 8-bit B component in byte 2.
- **VK_FORMAT_R8G8B8_SRGB** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit B component stored with sRGB nonlinear encoding in byte 2.
- **VK_FORMAT_B8G8R8_UNORM** specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.
VK_FORMAT_B8G8R8_SNORM specifies a three-component, 24-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

VK_FORMAT_B8G8R8_USCALED specifies a three-component, 24-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

VK_FORMAT_B8G8R8_SSCALED specifies a three-component, 24-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

VK_FORMAT_B8G8R8_UINT specifies a three-component, 24-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

VK_FORMAT_B8G8R8_SINT specifies a three-component, 24-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, and an 8-bit R component in byte 2.

VK_FORMAT_B8G8R8_SRGB specifies a three-component, 24-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, and an 8-bit R component stored with sRGB nonlinear encoding in byte 2.

VK_FORMAT_R8G8B8A8_UNORM specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_R8G8B8A8_SNORM specifies a four-component, 32-bit signed normalized format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_R8G8B8A8_USCALED specifies a four-component, 32-bit unsigned scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_R8G8B8A8_SSCALED specifies a four-component, 32-bit signed scaled format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_R8G8B8A8_UINT specifies a four-component, 32-bit unsigned integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_R8G8B8A8_SINT specifies a four-component, 32-bit signed integer format that has an 8-bit R component in byte 0, an 8-bit G component in byte 1, an 8-bit B component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_R8G8B8A8_SRGB specifies a four-component, 32-bit unsigned normalized format that has an 8-bit R component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit B component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_B8G8R8A8_UNORM specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

VK_FORMAT_B8G8R8A8_SNORM specifies a four-component, 32-bit signed normalized format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2,
and an 8-bit A component in byte 3.

- **VK_FORMAT_B8G8R8A8_USCALED** specifies a four-component, 32-bit unsigned scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_B8G8R8A8_SSCALED** specifies a four-component, 32-bit signed scaled format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_B8G8R8A8_UINT** specifies a four-component, 32-bit unsigned integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_B8G8R8A8_SINT** specifies a four-component, 32-bit signed integer format that has an 8-bit B component in byte 0, an 8-bit G component in byte 1, an 8-bit R component in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_B8G8R8A8_SRGB** specifies a four-component, 32-bit unsigned normalized format that has an 8-bit B component stored with sRGB nonlinear encoding in byte 0, an 8-bit G component stored with sRGB nonlinear encoding in byte 1, an 8-bit R component stored with sRGB nonlinear encoding in byte 2, and an 8-bit A component in byte 3.

- **VK_FORMAT_A8B8G8R8_UNORM_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_SNORM_PACK32** specifies a four-component, 32-bit packed signed normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_USCALED_PACK32** specifies a four-component, 32-bit packed unsigned scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_SSCALED_PACK32** specifies a four-component, 32-bit packed signed scaled integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_UINT_PACK32** specifies a four-component, 32-bit packed unsigned integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_SINT_PACK32** specifies a four-component, 32-bit packed signed integer format that has an 8-bit A component in bits 24..31, an 8-bit B component in bits 16..23, an 8-bit G component in bits 8..15, and an 8-bit R component in bits 0..7.

- **VK_FORMAT_A8B8G8R8_SRGB_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has an 8-bit A component in bits 24..31, an 8-bit B component stored with sRGB nonlinear encoding in bits 16..23, an 8-bit G component stored with sRGB nonlinear encoding in bits 8..15, and an 8-bit R component stored with sRGB nonlinear encoding in bits 0..7.

- **VK_FORMAT_A2R10G10B10_UNORM_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.
• **VK_FORMAT_A2R10G10B10_SNORM_PACK32** specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

• **VK_FORMAT_A2R10G10B10_USCALED_PACK32** specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

• **VK_FORMAT_A2R10G10B10_SSCALED_PACK32** specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

• **VK_FORMAT_A2R10G10B10_UINT_PACK32** specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

• **VK_FORMAT_A2R10G10B10_SINT_PACK32** specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit R component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit B component in bits 0..9.

• **VK_FORMAT_A2B10G10R10_UNORM_PACK32** specifies a four-component, 32-bit packed unsigned normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

• **VK_FORMAT_A2B10G10R10_SNORM_PACK32** specifies a four-component, 32-bit packed signed normalized format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

• **VK_FORMAT_A2B10G10R10_USCALED_PACK32** specifies a four-component, 32-bit packed unsigned scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

• **VK_FORMAT_A2B10G10R10_SSCALED_PACK32** specifies a four-component, 32-bit packed signed scaled integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

• **VK_FORMAT_A2B10G10R10_UINT_PACK32** specifies a four-component, 32-bit packed unsigned integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

• **VK_FORMAT_A2B10G10R10_SINT_PACK32** specifies a four-component, 32-bit packed signed integer format that has a 2-bit A component in bits 30..31, a 10-bit B component in bits 20..29, a 10-bit G component in bits 10..19, and a 10-bit R component in bits 0..9.

• **VK_FORMAT_R16_UNORM** specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit R component.

• **VK_FORMAT_R16_SNORM** specifies a one-component, 16-bit signed normalized format that has a single 16-bit R component.

• **VK_FORMAT_R16_USCALED** specifies a one-component, 16-bit unsigned scaled integer format that has a single 16-bit R component.

• **VK_FORMAT_R16_SSCALED** specifies a one-component, 16-bit signed scaled integer format that has a single 16-bit R component.

• **VK_FORMAT_R16_UINT** specifies a one-component, 16-bit unsigned integer format that has a single
16-bit R component.

- **VK_FORMAT_R16_SINT** specifies a one-component, 16-bit signed integer format that has a single 16-bit R component.

- **VK_FORMAT_R16_SFLOAT** specifies a one-component, 16-bit signed floating-point format that has a single 16-bit R component.

- **VK_FORMAT_R16G16_UNORM** specifies a two-component, 32-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16_SNORM** specifies a two-component, 32-bit signed normalized format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16_USCALED** specifies a two-component, 32-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16_SSCALED** specifies a two-component, 32-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16_UINT** specifies a two-component, 32-bit unsigned integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16_SINT** specifies a two-component, 32-bit signed integer format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16_SFLOAT** specifies a two-component, 32-bit signed floating-point format that has a 16-bit R component in bytes 0..1, and a 16-bit G component in bytes 2..3.

- **VK_FORMAT_R16G16B16_UNORM** specifies a three-component, 48-bit unsigned normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_SNORM** specifies a three-component, 48-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_USCALED** specifies a three-component, 48-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_SSCALED** specifies a three-component, 48-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_UINT** specifies a three-component, 48-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_SINT** specifies a three-component, 48-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16_SFLOAT** specifies a three-component, 48-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, and a 16-bit B component in bytes 4..5.

- **VK_FORMAT_R16G16B16A16_UNORM** specifies a four-component, 64-bit unsigned normalized format
that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SNORM** specifies a four-component, 64-bit signed normalized format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_USCALED** specifies a four-component, 64-bit unsigned scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SSCALED** specifies a four-component, 64-bit signed scaled integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_UINT** specifies a four-component, 64-bit unsigned integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SINT** specifies a four-component, 64-bit signed integer format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R16G16B16A16_SFLOAT** specifies a four-component, 64-bit signed floating-point format that has a 16-bit R component in bytes 0..1, a 16-bit G component in bytes 2..3, a 16-bit B component in bytes 4..5, and a 16-bit A component in bytes 6..7.

- **VK_FORMAT_R32_UINT** specifies a one-component, 32-bit unsigned integer format that has a single 32-bit R component.

- **VK_FORMAT_R32_SINT** specifies a one-component, 32-bit signed integer format that has a single 32-bit R component.

- **VK_FORMAT_R32_SFLOAT** specifies a one-component, 32-bit signed floating-point format that has a single 32-bit R component.

- **VK_FORMAT_R32G32_UINT** specifies a two-component, 64-bit unsigned integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- **VK_FORMAT_R32G32_SINT** specifies a two-component, 64-bit signed integer format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- **VK_FORMAT_R32G32_SFLOAT** specifies a two-component, 64-bit signed floating-point format that has a 32-bit R component in bytes 0..3, and a 32-bit G component in bytes 4..7.

- **VK_FORMAT_R32G32B32_UINT** specifies a three-component, 96-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.

- **VK_FORMAT_R32G32B32_SINT** specifies a three-component, 96-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.

- **VK_FORMAT_R32G32B32_SFLOAT** specifies a three-component, 96-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, and a 32-bit B component in bytes 8..11.
• **VK_FORMAT_R32G32B32A32_UINT** specifies a four-component, 128-bit unsigned integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.

• **VK_FORMAT_R32G32B32A32_SINT** specifies a four-component, 128-bit signed integer format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.

• **VK_FORMAT_R32G32B32A32_SFLOAT** specifies a four-component, 128-bit signed floating-point format that has a 32-bit R component in bytes 0..3, a 32-bit G component in bytes 4..7, a 32-bit B component in bytes 8..11, and a 32-bit A component in bytes 12..15.

• **VK_FORMAT_R64_UINT** specifies a one-component, 64-bit unsigned integer format that has a single 64-bit R component.

• **VK_FORMAT_R64_SINT** specifies a one-component, 64-bit signed integer format that has a single 64-bit R component.

• **VK_FORMAT_R64_SFLOAT** specifies a one-component, 64-bit signed floating-point format that has a single 64-bit R component.

• **VK_FORMAT_R64G64_UINT** specifies a two-component, 128-bit unsigned integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.

• **VK_FORMAT_R64G64_SINT** specifies a two-component, 128-bit signed integer format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.

• **VK_FORMAT_R64G64_SFLOAT** specifies a two-component, 128-bit signed floating-point format that has a 64-bit R component in bytes 0..7, and a 64-bit G component in bytes 8..15.

• **VK_FORMAT_R64G64B64_UINT** specifies a three-component, 192-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

• **VK_FORMAT_R64G64B64_SINT** specifies a three-component, 192-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

• **VK_FORMAT_R64G64B64_SFLOAT** specifies a three-component, 192-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, and a 64-bit B component in bytes 16..23.

• **VK_FORMAT_R64G64B64A64_UINT** specifies a four-component, 256-bit unsigned integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.

• **VK_FORMAT_R64G64B64A64_SINT** specifies a four-component, 256-bit signed integer format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.

• **VK_FORMAT_R64G64B64A64_SFLOAT** specifies a four-component, 256-bit signed floating-point format that has a 64-bit R component in bytes 0..7, a 64-bit G component in bytes 8..15, a 64-bit B component in bytes 16..23, and a 64-bit A component in bytes 24..31.

• **VK_FORMAT_B10G11R11_UFLOAT_PACK32** specifies a three-component, 32-bit packed unsigned floating-point format that has a 10-bit B component in bits 22..31, an 11-bit G component in bits 11..21, an 11-bit R component in bits 0..10. See [Unsigned 10-Bit Floating-Point Numbers](#)
Unsigned 11-Bit Floating-Point Numbers.

- **VK_FORMAT_E5B9G9R9_UFLOAT_PACK32** specifies a three-component, 32-bit packed unsigned floating-point format that has a 5-bit shared exponent in bits 27..31, a 9-bit B component mantissa in bits 18..26, a 9-bit G component mantissa in bits 9..17, and a 9-bit R component mantissa in bits 0..8.

- **VK_FORMAT_D16_UNORM** specifies a one-component, 16-bit unsigned normalized format that has a single 16-bit depth component.

- **VK_FORMAT_X8_D24_UNORM_PACK32** specifies a two-component, 32-bit format that has 24 unsigned normalized bits in the depth component and, optionally, 8 bits that are unused.

- **VK_FORMAT_D32_SFLOAT** specifies a one-component, 32-bit signed floating-point format that has 32 bits in the depth component.

- **VK_FORMAT_S8_UINT** specifies a one-component, 8-bit unsigned integer format that has 8 bits in the stencil component.

- **VK_FORMAT_D16_UNORM_S8_UINT** specifies a two-component, 24-bit format that has 16 unsigned normalized bits in the depth component and 8 unsigned integer bits in the stencil component.

- **VK_FORMAT_D24_UNORM_S8_UINT** specifies a two-component, 32-bit packed format that has 8 unsigned integer bits in the stencil component, and 24 unsigned normalized bits in the depth component.

- **VK_FORMAT_D32_SFLOAT_S8_UINT** specifies a two-component format that has 32 signed float bits in the depth component and 8 unsigned integer bits in the stencil component. There are optionally 24 bits that are unused.

- **VK_FORMAT_BC1_RGB_UNORM_BLOCK** specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.

- **VK_FORMAT_BC1_RGB_SRGB_BLOCK** specifies a three-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.

- **VK_FORMAT_BC1_RGBA_UNORM_BLOCK** specifies a four-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.

- **VK_FORMAT_BC1_RGBA_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.

- **VK_FORMAT_BC2_UNORM_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.

- **VK_FORMAT_BC2_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.

- **VK_FORMAT_BC3_UNORM_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.
• **VK_FORMAT_BC3_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding.

• **VK_FORMAT_BC4_UNORM_BLOCK** specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.

• **VK_FORMAT_BC4_SNORM_BLOCK** specifies a one-component, block-compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.

• **VK_FORMAT_BC5_UNORM_BLOCK** specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.

• **VK_FORMAT_BC5_SNORM_BLOCK** specifies a two-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.

• **VK_FORMAT_BC6H_UFLOAT_BLOCK** specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned floating-point RGB texel data.

• **VK_FORMAT_BC6H_SFLOAT_BLOCK** specifies a three-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point RGB texel data.

• **VK_FORMAT_BC7_UNORM_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.

• **VK_FORMAT_BC7_SRGB_BLOCK** specifies a four-component, block-compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

• **VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK** specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data. This format has no alpha and is considered opaque.

• **VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK** specifies a three-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding. This format has no alpha and is considered opaque.

• **VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK** specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data, and provides 1 bit of alpha.

• **VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK** specifies a four-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGB texel data with sRGB nonlinear encoding, and provides 1 bit of alpha.

• **VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK** specifies a four-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values.

• **VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK** specifies a four-component, ETC2 compressed format
where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with the first 64 bits encoding alpha values followed by 64 bits encoding RGB values with sRGB nonlinear encoding applied.

- **VK_FORMAT_EAC_R11_UNORM_BLOCK** specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized red texel data.
- **VK_FORMAT_EAC_R11_SNORM_BLOCK** specifies a one-component, ETC2 compressed format where each 64-bit compressed texel block encodes a 4×4 rectangle of signed normalized red texel data.
- **VK_FORMAT_EAC_R11G11_UNORM_BLOCK** specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- **VK_FORMAT_EAC_R11G11_SNORM_BLOCK** specifies a two-component, ETC2 compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed normalized RG texel data with the first 64 bits encoding red values followed by 64 bits encoding green values.
- **VK_FORMAT_ASTC_4x4_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data.
- **VK_FORMAT_ASTC_4x4_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- **VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 4×4 rectangle of signed floating-point RGBA texel data.
- **VK_FORMAT_ASTC_5x4_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of unsigned normalized RGBA texel data.
- **VK_FORMAT_ASTC_5x4_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- **VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×4 rectangle of signed floating-point RGBA texel data.
- **VK_FORMAT_ASTC_5x5_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of unsigned normalized RGBA texel data.
- **VK_FORMAT_ASTC_5x5_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.
- **VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 5×5 rectangle of signed floating-point RGBA texel data.
- **VK_FORMAT_ASTC_6x5_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of unsigned normalized RGBA texel data.
data.

- **VK_FORMAT_ASTC_6x5_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×5 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_6x6_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_6x6_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 6×6 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_8x5_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×5 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_8x5_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_8x5_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×5 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_8x6_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×6 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_8x6_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_8x6_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×6 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_8x8_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_8x8_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes an 8×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_8x8_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 8×8 rectangle of signed floating-point RGBA texel data.
• **VK_FORMAT_ASTC_10x5_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data.

• **VK_FORMAT_ASTC_10x5_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

• **VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×5 rectangle of signed floating-point RGBA texel data.

• **VK_FORMAT_ASTC_10x6_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data.

• **VK_FORMAT_ASTC_10x6_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

• **VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×6 rectangle of signed floating-point RGBA texel data.

• **VK_FORMAT_ASTC_10x8_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data.

• **VK_FORMAT_ASTC_10x8_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

• **VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×8 rectangle of signed floating-point RGBA texel data.

• **VK_FORMAT_ASTC_10x10_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data.

• **VK_FORMAT_ASTC_10x10_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

• **VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 10×10 rectangle of signed floating-point RGBA texel data.

• **VK_FORMAT_ASTC_12x10_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data.

• **VK_FORMAT_ASTC_12x10_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of unsigned normalized RGBA texel data.
texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×10 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_ASTC_12x12_UNORM_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data.

- **VK_FORMAT_ASTC_12x12_SRGB_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of unsigned normalized RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK** specifies a four-component, ASTC compressed format where each 128-bit compressed texel block encodes a 12×12 rectangle of signed floating-point RGBA texel data.

- **VK_FORMAT_G8B8G8R8_422_UNORM** specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit G component for the even i coordinate in byte 0, an 8-bit B component in byte 1, an 8-bit G component for the odd i coordinate in byte 2, and an 8-bit R component in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_B8G8R8G8_422_UNORM** specifies a four-component, 32-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has an 8-bit B component in byte 0, an 8-bit G component for the even i coordinate in byte 1, an 8-bit R component in byte 2, and an 8-bit G component for the odd i coordinate in byte 3. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G8_B8_R8_3PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component in plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which \( [i_G \times 0.5] = i_B = i_R \) and \( [j_G \times 0.5] = j_B = j_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G8_B8R8_2PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which \( [i_G \times 0.5] = i_B = i_R \) and \( [j_G \times 0.5] = j_B = j_R \). The
location of each plane when this image is in linear layout can be determined via
\texttt{vkGetImageSubresourceLayout}, using \texttt{VK\_IMAGE\_ASPECT\_PLANE\_0\_BIT} for the G plane, and
\texttt{VK\_IMAGE\_ASPECT\_PLANE\_1\_BIT} for the BR plane. This format only supports images with a width
and height that is a multiple of two.

- **\texttt{VK\_FORMAT\_G8\_B8\_R8\_3PLANE\_422\_UNORM}** specifies an unsigned normalized \textit{multi-planar format} that
  has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component
  in plane 2. The horizontal dimension of the R and B plane is halved relative to the image
dimensions, and each R and B value is shared with the G components for which
\( i_G \times 0.5 = i_B = i_R \). The location of each plane when this image is in linear layout can be
determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK\_IMAGE\_ASPECT\_PLANE\_0\_BIT} for the G
plane, \texttt{VK\_IMAGE\_ASPECT\_PLANE\_1\_BIT} for the B plane, and \texttt{VK\_IMAGE\_ASPECT\_PLANE\_2\_BIT} for the R
plane. This format only supports images with a width that is a multiple of two.

- **\texttt{VK\_FORMAT\_G8\_B8\_R8\_2PLANE\_422\_UNORM}** specifies an unsigned normalized \textit{multi-planar format} that
  has an 8-bit G component in plane 0, and a two-component, 16-bit BR plane 1 consisting of an 8-
bit B component in byte 0 and an 8-bit R component in byte 1. The horizontal dimension of the
BR plane is halved relative to the image dimensions, and each R and B value is shared with the
G components for which \( i_G \times 0.5 = i_B = i_R \). The location of each plane when this image is in
linear layout can be determined via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK\_IMAGE\_ASPECT\_PLANE\_0\_BIT} for the G
plane, and \texttt{VK\_IMAGE\_ASPECT\_PLANE\_1\_BIT} for the BR plane. This format only supports images with a width that is a multiple of two.

- **\texttt{VK\_FORMAT\_G8\_B8\_R8\_3PLANE\_444\_UNORM}** specifies an unsigned normalized \textit{multi-planar format} that
  has an 8-bit G component in plane 0, an 8-bit B component in plane 1, and an 8-bit R component
  in plane 2. Each plane has the same dimensions and each R, G and B component contributes to a
single texel. The location of each plane when this image is in linear layout can be determined
via \texttt{vkGetImageSubresourceLayout}, using \texttt{VK\_IMAGE\_ASPECT\_PLANE\_0\_BIT} for the G plane,
\texttt{VK\_IMAGE\_ASPECT\_PLANE\_1\_BIT} for the B plane, and \texttt{VK\_IMAGE\_ASPECT\_PLANE\_2\_BIT} for the R
plane.

- **\texttt{VK\_FORMAT\_R10\_X6\_UNORM\_PACK16}** specifies a one-component, 16-bit unsigned normalized format
  that has a single 10-bit R component in the top 10 bits of a 16-bit word, with the bottom 6 bits
unused.

- **\texttt{VK\_FORMAT\_R10\_X6\_G10\_X6\_UNORM\_2PACK16}** specifies a two-component, 32-bit unsigned normalized
  format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, and a 10-bit G
component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word
unused.

- **\texttt{VK\_FORMAT\_R10\_X6\_G10\_X6\_B10\_X6\_A10\_X6\_UNORM\_4PACK16}** specifies a four-component, 64-bit unsigned
  normalized format that has a 10-bit R component in the top 10 bits of the word in bytes 0..1, a
10-bit G component in the top 10 bits of the word in bytes 2..3, a 10-bit B component in the top
10 bits of the word in bytes 4..5, and a 10-bit A component in the top 10 bits of the word in bytes
6..7, with the bottom 6 bits of each word unused.

- **\texttt{VK\_FORMAT\_G10\_X6\_B10\_X6\_G10\_X6\_R10\_X6\_422\_UNORM\_4PACK16}** specifies a four-component, 64-bit format
containing a pair of G components, an R component, and a B component, collectively encoding a
2x1 rectangle of unsigned normalized RGB texel data. One G value is present at each \( i \) coordinate, with the B and R values shared across both G values and thus recorded at half the
horizontal resolution of the image. This format has a 10-bit G component for the even \( i \) coordinate
in the top 10 bits of the word in bytes 0..1, a 10-bit B component in the top 10 bits of the word in bytes
2..3, a 10-bit G component for the odd \( i \) coordinate in the top 10 bits of the
word in bytes 4..5, and a 10-bit R component in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_B10X6G10X6R10X6_422_UNORM_4PACK16** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2\times1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 10-bit B component in the top 10 bits of the word in bytes 0..1, a 10-bit G component for the even i coordinate in the top 10 bits of the word in bytes 2..3, a 10-bit R component in the top 10 bits of the word in bytes 4..5, and a 10-bit G component for the odd i coordinate in the top 10 bits of the word in bytes 6..7, with the bottom 6 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which \( |i_G \times 0.5| = i_B = i_R \) and \( |j_G \times 0.5| = j_B = j_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G10X6_B10X6_R10X6_2PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which \( |i_G \times 0.5| = i_B = i_R \) and \( |j_G \times 0.5| = j_B = j_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G10X6_B10X6_G10X6_422_UNORM_4PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit B component in the top 10 bits of each 16-bit word of plane 0, a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( |i_G \times 0.5| = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width that is a multiple of two.
• **VK_FORMAT_G10X6_B10X6R10X6_2PLANE_422_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, with the bottom 6 bits of each word unused. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \(i_G \times 0.5 = i_B = i_R\). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width that is a multiple of two.

• **VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a 10-bit B component in the top 10 bits of each 16-bit word of plane 1, and a 10-bit R component in the top 10 bits of each 16-bit word of plane 2, with the bottom 6 bits of each word unused. Each plane has the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane.

• **VK_FORMAT_R12X4_UNORM_PACK16** specifies a one-component, 16-bit unsigned normalized format that has a single 12-bit R component in the top 12 bits of a 16-bit word, with the bottom 4 bits unused.

• **VK_FORMAT_R12X4G12X4_UNORM_2PACK16** specifies a two-component, 32-bit unsigned normalized format that has a 12-bit R component in the top 12 bits of the word in bytes 0..1, and a 12-bit G component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused.

• **VK_FORMAT_R12X4G12X4B12X4G12X4R12X4_422_UNORM_4PACK16** specifies a four-component, 64-bit unsigned normalized format that has a 12-bit R component in the top 12 bits of the word in bytes 0..1, a 12-bit G component in the top 12 bits of the word in bytes 2..3, a 12-bit B component in the top 12 bits of the word in bytes 4..5, and a 12-bit A component in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused.

• **VK_FORMAT_G12X4B12X4G12X4R12X4_422_UNORM_4PACK16** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each \(i\) coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 12-bit G component for the even \(i\) coordinate in the top 12 bits of the word in bytes 0..1, a 12-bit B component in the top 12 bits of the word in bytes 2..3, a 12-bit G component for the odd \(i\) coordinate in the top 12 bits of the word in bytes 4..5, and a 12-bit R component in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

• **VK_FORMAT_B12X4G12X4R12X4G12X4_422_UNORM_4PACK16** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each \(i\) coordinate, with the B and R values shared across both G values and thus recorded at half the
horizontal resolution of the image. This format has a 12-bit B component in the top 12 bits of the word in bytes 0..1, a 12-bit G component for the even \( i \) coordinate in the top 12 bits of the word in bytes 2..3, a 12-bit R component in the top 12 bits of the word in bytes 4..5, and a 12-bit G component for the odd \( i \) coordinate in the top 12 bits of the word in bytes 6..7, with the bottom 4 bits of each word unused. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which \( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \) and \( \lfloor j_G \times 0.5 \rfloor = j_B = j_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4R12X4_2PLANE_420_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which \( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_422_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4R12X4_2PLANE_422_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, with the bottom 4 bits of each word unused. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( \lfloor i_G \times 0.5 \rfloor = i_B = i_R \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width that is a multiple of two.
plane, and VK_IMAGE_ASPECT_PLANE_1_BIT for the BR plane. This format only supports images with a width that is a multiple of two.

- **VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, a 12-bit B component in the top 12 bits of each 16-bit word of plane 1, and a 12-bit R component in the top 12 bits of each 16-bit word of plane 2, with the bottom 4 bits of each word unused. Each plane has the same dimensions and each R, G, and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, VK_IMAGE_ASPECT_PLANE_1_BIT for the B plane, and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane.

- **VK_FORMAT_G16B16G16R16_422_UNORM** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 16-bit G component for the even i coordinate in the word in bytes 0..1, a 16-bit B component in the word in bytes 2..3, a 16-bit G component for the odd i coordinate in the word in bytes 4..5, and a 16-bit R component in the word in bytes 6..7. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_B16G16R16G16_422_UNORM** specifies a four-component, 64-bit format containing a pair of G components, an R component, and a B component, collectively encoding a 2×1 rectangle of unsigned normalized RGB texel data. One G value is present at each i coordinate, with the B and R values shared across both G values and thus recorded at half the horizontal resolution of the image. This format has a 16-bit B component in the word in bytes 0..1, a 16-bit G component for the even i coordinate in the word in bytes 2..3, a 16-bit R component in the word in bytes 4..5, and a 16-bit G component for the odd i coordinate in the word in bytes 6..7. This format only supports images with a width that is a multiple of two. For the purposes of the constraints on copy extents, this format is treated as a compressed format with a 2×1 compressed texel block.

- **VK_FORMAT_G16_B16_R16_3PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. The horizontal and vertical dimensions of the R and B planes are halved relative to the image dimensions, and each R and B component is shared with the G components for which |iG × 0.5| = iB = iR and |jG × 0.5| = jB = jR. The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, VK_IMAGE_ASPECT_PLANE_1_BIT for the B plane, and VK_IMAGE_ASPECT_PLANE_2_BIT for the R plane. This format only supports images with a width and height that is a multiple of two.

- **VK_FORMAT_G16_B16R16_2PLANE_420_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. The horizontal and vertical dimensions of the BR plane are halved relative to the image dimensions, and each R and B value is shared with the G components for which |iG × 0.5| = iB = iR and |jG × 0.5| = jB = jR. The location of each plane when this image is in linear layout can be determined via vkGetImageSubresourceLayout, using VK_IMAGE_ASPECT_PLANE_0_BIT for the G plane, and VK_IMAGE_ASPECT_PLANE_1_BIT for the BR plane. This format only supports images with a width and height that is a multiple of two.
• **VK_FORMAT_G16_B16_R16_3PLANE_422_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. The horizontal dimension of the R and B plane is halved relative to the image dimensions, and each R and B value is shared with the G component for which \( i_G \times 0.5 \) = \( i_B \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane. This format only supports images with a width that is a multiple of two.

• **VK_FORMAT_G16_B16R16_2PLANE_422_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in the word in bytes 2..3. The horizontal dimension of the BR plane is halved relative to the image dimensions, and each R and B value is shared with the G components for which \( i_G \times 0.5 \) = \( i_B \). The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane. This format only supports images with a width that is a multiple of two.

• **VK_FORMAT_G16_B16_R16_3PLANE_444_UNORM** specifies an unsigned normalized multi-planar format that has a 16-bit G component in each 16-bit word of plane 0, a 16-bit B component in each 16-bit word of plane 1, and a 16-bit R component in each 16-bit word of plane 2. Each plane has the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, `VK_IMAGE_ASPECT_PLANE_1_BIT` for the B plane, and `VK_IMAGE_ASPECT_PLANE_2_BIT` for the R plane.

• **VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 10-bit G component in the top 10 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 10-bit B component in the top 10 bits of the word in bytes 0..1, and a 10-bit R component in the top 10 bits of the word in bytes 2..3, the bottom 6 bits of each word unused. Both planes have the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

• **VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16** specifies an unsigned normalized multi-planar format that has a 12-bit G component in the top 12 bits of each 16-bit word of plane 0, and a two-component, 32-bit BR plane 1 consisting of a 12-bit B component in the top 12 bits of the word in bytes 0..1, and a 12-bit R component in the top 12 bits of the word in bytes 2..3, the bottom 4 bits of each word unused. Both planes have the same dimensions and each R, G and B component contributes to a single texel. The location of each plane when this image is in linear layout can be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.
layout can be determined via `vkGetImageSubresourceLayout`, using
`VK_IMAGE_ASPECT_PLANE_0_BIT` for the G plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

- **VK_FORMAT_G16_B16R16_2PLANE_444_UNORM** specifies an unsigned normalized multi-planar format
  that has a 16-bit G component in each 16-bit word of plane 0, and a two-component, 32-bit BR plane
  1 consisting of a 16-bit B component in the word in bytes 0..1, and a 16-bit R component in
  the word in bytes 2..3. Both planes have the same dimensions and each R, G and B component
  contributes to a single texel. The location of each plane when this image is in linear layout can
  be determined via `vkGetImageSubresourceLayout`, using `VK_IMAGE_ASPECT_PLANE_0_BIT` for the G
  plane, and `VK_IMAGE_ASPECT_PLANE_1_BIT` for the BR plane.

- **VK_FORMAT_PVRTC1_2BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized
  RGBA texel data.

- **VK_FORMAT_PVRTC1_4BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized
  RGBA texel data.

- **VK_FORMAT_PVRTC2_2BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized
  RGBA texel data.

- **VK_FORMAT_PVRTC2_4BPP_UNORM_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized
  RGBA texel data.

- **VK_FORMAT_PVRTC1_2BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized
  RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_PVRTC1_4BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized
  RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_PVRTC2_2BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes an 8×4 rectangle of unsigned normalized
  RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_PVRTC2_4BPP_SRGB_BLOCK_IMG** specifies a four-component, PVRTC compressed format
  where each 64-bit compressed texel block encodes a 4×4 rectangle of unsigned normalized
  RGBA texel data with sRGB nonlinear encoding applied to the RGB components.

- **VK_FORMAT_R16G16_S10_5_NV** specifies a two-component, fixed-point format where most
  significant bit specifies the sign bit, next 10 bits specify the integer value and last 5 bits
  represent the fractional value.

### 47.1.1. Compatible formats of planes of multi-planar formats

Individual planes of multi-planar formats are size-compatible with single-plane color formats if
they occupy the same number of bits per texel block, and are compatible with those formats if they
have the same block extent.

In the following table, individual planes of a multi-planar format are compatible with the format
listed against the relevant plane index for that multi-planar format, and any format compatible with the listed single-plane format according to Format Compatibility Classes. These planes are also size-compatible with any format that is size-compatible with the listed single-plane format.

Table 58. Plane Format Compatibility Table

### 47.1.2. Multi-planar format image aspect

When using `VkImageAspectFlagBits` to select a plane of a multi-planar format, the following are the valid options:

- **Two planes**
  - `VK_IMAGE_ASPECT_PLANE_0_BIT`
  - `VK_IMAGE_ASPECT_PLANE_1_BIT`
- **Three planes**
  - `VK_IMAGE_ASPECT_PLANE_0_BIT`
47.1.3. Packed Formats

For the purposes of address alignment when accessing buffer memory containing vertex attribute or texel data, the following formats are considered packed - components of the texels or attributes are stored in bitfields packed into one or more 8-, 16-, or 32-bit fundamental data type.

- **Packed into 8-bit data types:**
  - VK_FORMAT_R4G4_UNORM_PACK8

- **Packed into 16-bit data types:**
  - VK_FORMAT_R4G4B4A4_UNORM_PACK16
  - VK_FORMAT_B4G4R4A4_UNORM_PACK16
  - VK_FORMAT_R5G6B5_UNORM_PACK16
  - VK_FORMAT_B5G6R5_UNORM_PACK16
  - VK_FORMAT_R5G5B5A1_UNORM_PACK16
  - VK_FORMAT_B5G5R5A1_UNORM_PACK16
  - VK_FORMAT_A1R5G5B5_UNORM_PACK16
  - VK_FORMAT_R10X6_UNORM_PACK16
  - VK_FORMAT_R10X6G10X6_UNORM_2PACK16
  - VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16
  - VK_FORMAT_G10X6B10X6G10X6R10X6_422_UNORM_4PACK16
  - VK_FORMAT_B10X6G10X6R10X6G10X6_422_UNORM_4PACK16
  - VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_420_UNORM_3PACK16
  - VK_FORMAT_G10X6_B10X6R10X6_2PLANE_420_UNORM_3PACK16
  - VK_FORMAT_G10X6_B10X6_R10X6_3PLANE_422_UNORM_3PACK16
  - VK_FORMAT_R12X4_UNORM_PACK16
  - VK_FORMAT_R12X4G12X4_UNORM_2PACK16
  - VK_FORMAT_R12X4G12X4B12X4A12X4_UNORM_4PACK16
  - VK_FORMAT_G12X4B12X4G12X4R12X4_422_UNORM_4PACK16
  - VK_FORMAT_B12X4G12X4R12X4G12X4_422_UNORM_4PACK16
  - VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_420_UNORM_3PACK16
  - VK_FORMAT_G12X4_B12X4R12X4_2PLANE_420_UNORM_3PACK16
  - VK_FORMAT_G12X4_B12X4_R12X4_3PLANE_444_UNORM_3PACK16
47.1.4. Identification of Formats

A "format" is represented by a single enum value. The name of a format is usually built up by using the following pattern:

```
VK_FORMAT_{component-format|compression-scheme}_{numeric-format}
```
The component-format indicates either the size of the R, G, B, and A components (if they are present) in the case of a color format, or the size of the depth (D) and stencil (S) components (if they are present) in the case of a depth/stencil format (see below). An X indicates a component that is unused, but may be present for padding.
### Table 59. Interpretation of Numeric Format

<table>
<thead>
<tr>
<th>Numeric format</th>
<th>Type-Declaration instructions</th>
<th>Numeric type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>UNORM</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are unsigned normalized values in the range [0,1]</td>
</tr>
<tr>
<td><strong>SNORM</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are signed normalized values in the range [-1,1]</td>
</tr>
<tr>
<td><strong>USCALED</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are unsigned integer values that get converted to floating-point in the range [0,2^n-1]</td>
</tr>
<tr>
<td><strong>SSCALED</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are signed integer values that get converted to floating-point in the range [-2^n-1,2^n-1-1]</td>
</tr>
<tr>
<td><strong>UINT</strong></td>
<td>OpTypeInt</td>
<td>unsigned integer</td>
<td>The components are unsigned integer values in the range [0,2^n-1]</td>
</tr>
<tr>
<td><strong>SINT</strong></td>
<td>OpTypeInt</td>
<td>signed integer</td>
<td>The components are signed integer values in the range [-2^n-1,2^n-1-1]</td>
</tr>
<tr>
<td><strong>UFLOAT</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are unsigned floating-point numbers (used by packed, shared exponent, and some compressed formats)</td>
</tr>
<tr>
<td><strong>SFLOAT</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The components are signed floating-point numbers</td>
</tr>
<tr>
<td><strong>SRGB</strong></td>
<td>OpTypeFloat</td>
<td>floating-point</td>
<td>The R, G, and B components are unsigned normalized values that represent values using sRGB nonlinear encoding, while the A component (if one exists) is a regular unsigned normalized value</td>
</tr>
</tbody>
</table>

n is the number of bits in the component.

The suffix \_PACKnn indicates that the format is packed into an underlying type with \(nn\) bits. The suffix \_mPACKnn is a short-hand that indicates that the format has \(m\) groups of components (which may or may not be stored in separate planes) that are each packed into an underlying type with \(nn\) bits.

The suffix \_BLOCK indicates that the format is a block-compressed format, with the representation of multiple pixels encoded interdependently within a region.

### Table 60. Interpretation of Compression Scheme

<table>
<thead>
<tr>
<th>Compression scheme</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>BC</td>
<td>Block Compression. See <a href="#">Block-Compressed Image Formats</a>.</td>

<tr>
<td>Compression scheme</td>
<td>Description</td>
</tr>
<tr>
<td>--------------------</td>
<td>-------------</td>
</tr>
<tr>
<td>ASTC</td>
<td>Adaptive Scalable Texture Compression (LDR Profile). See ASTC Compressed Image Formats.</td>
</tr>
</tbody>
</table>

For multi-planar images, the components in separate planes are separated by underscores, and the number of planes is indicated by the addition of a \_2PLANE or \_3PLANE suffix. Similarly, the separate aspects of depth-stencil formats are separated by underscores, although these are not considered separate planes. Formats are suffixed by \_422 to indicate that planes other than the first are reduced in size by a factor of two horizontally or that the R and B values appear at half the horizontal frequency of the G values, \_420 to indicate that planes other than the first are reduced in size by a factor of two both horizontally and vertically, and \_444 for consistency to indicate that all three planes of a three-planar image are the same size.

### Note
No common format has a single plane containing both R and B components but does not store these components at reduced horizontal resolution.

#### 47.1.5. Representation and Texel Block Size

Color formats must be represented in memory in exactly the form indicated by the format's name. This means that promoting one format to another with more bits per component and/or additional components must not occur for color formats. Depth/stencil formats have more relaxed requirements as discussed below.

Each format has a texel block size, the number of bytes used to store one texel block (a single addressable element of an uncompressed image, or a single compressed block of a compressed image). The texel block size for each format is shown in the Compatible formats table.

The representation of non-packed formats is that the first component specified in the name of the format is in the lowest memory addresses and the last component specified is in the highest memory addresses. See Byte mappings for non-packed/compressed color formats. The in-memory ordering of bytes within a component is determined by the host endianness.

<table>
<thead>
<tr>
<th>0 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15</th>
<th>← Byte</th>
</tr>
</thead>
<tbody>
<tr>
<td>R</td>
<td>VK_FORMAT_R8_ *</td>
</tr>
<tr>
<td>R G</td>
<td>VK_FORMAT_R8G8_ *</td>
</tr>
<tr>
<td>R G B</td>
<td>VK_FORMAT_R8G8B8_ *</td>
</tr>
<tr>
<td>B G R</td>
<td>VK_FORMAT_B8G8R8_ *</td>
</tr>
<tr>
<td>R G B A</td>
<td>VK_FORMAT_R8G8B8A8_ *</td>
</tr>
<tr>
<td>B G R A</td>
<td>VK_FORMAT_B8G8R8A8_ *</td>
</tr>
<tr>
<td>G₀ B G₁ R</td>
<td>VK_FORMAT_G8B8G8R8_422_UNORM</td>
</tr>
<tr>
<td>B G₀ R G₁</td>
<td>VK_FORMAT_B8G8R8G8_422_UNORM</td>
</tr>
</tbody>
</table>
Packed formats store multiple components within one underlying type. The bit representation is that the first component specified in the name of the format is in the most-significant bits and the last component specified is in the least-significant bits of the underlying type. The in-memory ordering of bytes comprising the underlying type is determined by the host endianness.

47.1.6. Depth/Stencil Formats

Depth/stencil formats are considered opaque and need not be stored in the exact number of bits per texel or component ordering indicated by the format enum. However, implementations must not substitute a different depth or stencil precision than is described in the format (e.g. D16 must not be implemented as D24 or D32).

47.1.7. Format Compatibility Classes

Uncompressed color formats are compatible with each other if they occupy the same number of bits per texel block. Compressed color formats are compatible with each other if the only difference between them is the numeric format of the uncompressed pixels. Each depth/stencil format is only compatible with itself. In the following table, all the formats in the same row are compatible. Each format has a defined texel block extent specifying how many texels each texel block represents in each dimension.

Table 65. Compatible Formats

**Size Compatibility**

Color formats with the same texel block size are considered *size-compatible*. If two size-compatible formats have different block extents (i.e. for compressed formats), then an image with size \(A \times B \times C\) in one format with a block extent of \(a \times b \times c\) can be represented as an image with size \(X \times Y \times Z\) in the other format with block extent \(x \times y \times z\) at the ratio between the block extents for each format, where

\[
\frac{A}{a} = \left\lceil \frac{X}{x} \right\rceil \\
\frac{B}{b} = \left\lceil \frac{Y}{y} \right\rceil \\
\frac{C}{c} = \left\lceil \frac{Z}{z} \right\rceil
\]

**Note**

For example, a 7x3 image in the `VK_FORMAT_ASTC_8x5_UNORM_BLOCK` format can be represented as a 1x1 `VK_FORMAT_R64G64_UINT` image.

Images created with the `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT` flag can have size-compatible views created from them to enable access via different size-compatible formats. Image views created in this way will be sized to match the expectations of the block extents noted above.

Copy operations are able to copy between size-compatible formats in different resources to enable manipulation of data in different formats. The extent used in these copy operations always matches the source image, and is resized to the expectations of the block extents noted above for the destination image.

**47.2. Format Properties**

To query supported format features which are properties of the physical device, call:
void vkGetPhysicalDeviceFormatProperties(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkFormatProperties* pFormatProperties);

- `physicalDevice` is the physical device from which to query the format properties.
- `format` is the format whose properties are queried.
- `pFormatProperties` is a pointer to a `VkFormatProperties` structure in which physical device properties for `format` are returned.

**Valid Usage (Implicit)**

- VUID-vkGetPhysicalDeviceFormatProperties-physicalDevice-parameter
  `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceFormatProperties-format-parameter
  `format` must be a valid `VkFormat` value
- VUID-vkGetPhysicalDeviceFormatProperties-pFormatProperties-parameter
  `pFormatProperties` must be a valid pointer to a `VkFormatProperties` structure

The `VkFormatProperties` structure is defined as:

```c
typedef struct VkFormatProperties {
    VkFormatFeatureFlags linearTilingFeatures;
    VkFormatFeatureFlags optimalTilingFeatures;
    VkFormatFeatureFlags bufferFeatures;
} VkFormatProperties;
```

- `linearTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_LINEAR`.
- `optimalTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_OPTIMAL`.
- `bufferFeatures` is a bitmask of `VkFormatFeatureFlagBits` specifying features supported by buffers.

**Note**

If no format feature flags are supported, the format itself is not supported, and images of that format cannot be created.

If `format` is a block-compressed format, then `bufferFeatures` must not support any features for the format.
If `format` is not a multi-plane format then `linearTilingFeatures` and `optimalTilingFeatures` must not contain `VK_FORMAT_FEATURE_DISJOINT_BIT`.

Bits which can be set in the `VkFormatProperties` features `linearTilingFeatures`, `optimalTilingFeatures`, `VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures`, and `bufferFeatures` are:

```c
// Provided by VK_VERSION_1_0
typedef enum VkFormatfeatureFlagBits {
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT = 0x00000001,
    VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT = 0x00000002,
    VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT = 0x00000004,
    VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT = 0x00000008,
    VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT = 0x00000010,
    VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT = 0x00000020,
    VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT = 0x00000080,
    VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT = 0x00000100,
    VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT = 0x00000200,
    VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT = 0x00000400,
    VK_FORMAT_FEATURE_BLEND_SRC_BIT = 0x00000800,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT = 0x00001000,
    VK_FORMAT_FEATURE_TRANSFER_SRC_BIT = 0x00004000,
    VK_FORMAT_FEATURE_TRANSFER_DST_BIT = 0x00008000,
    VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT = 0x00020000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT = 0x00040000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT = 0x00080000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT = 0x00100000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT = 0x00200000,
    VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT = 0x00800000,
    VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT = 0x00010000,
    VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR = 0x02000000,
};
```

3558
// Provided by VK_KHR_video_decode_queue
VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR = 0x04000000,
// Provided by VK_KHR_acceleration_structure
VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR = 0x20000000,
// Provided by VK_EXT_filter_cubic
VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT = 0x00002000,

VK_FORMAT_FEATURE_TRANSFER_DST_BIT_KHR = VK_FORMAT_FEATURE_TRANSFER_DST_BIT,
// Provided by VK_EXT_sampler_filter_minmax
VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT_EXT =
VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT_KHR =
VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT_KHR =
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT_KHR =
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT_KHR =
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT,
// Provided by VK_KHR_sampler_ycbcr_conversion
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT_KHR =
VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT,
These values all have the same meaning as the equivalently named values for `VkFormatFeatureFlags2` and may be set in `linearTilingFeatures`, `optimalTilingFeatures`, and `VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures`, specifying that the features are supported by images or image views or sampler Y’CbCr conversion objects created with the queried `vkGetPhysicalDeviceFormatProperties::format`:

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT** specifies that an image view can be sampled from.
- **VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT** specifies that an image view can be used as a storage image.
- **VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT** specifies that an image view can be used as storage image that supports atomic operations.
- **VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT** specifies that an image view can be used as a framebuffer color attachment and as an input attachment.
- **VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BLEND_BIT** specifies that an image view can be used as a framebuffer color attachment that supports blending.
- **VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT** specifies that an image view can be used as a framebuffer depth/stencil attachment and as an input attachment.
- **VK_FORMAT_FEATURE_BLIT_SRC_BIT** specifies that an image can be used as srcImage for the `vkCmdBlitImage2` and `vkCmdBlitImage` commands.
- **VK_FORMAT_FEATURE_BLIT_DST_BIT** specifies that an image can be used as dstImage for the `vkCmdBlitImage2` and `vkCmdBlitImage` commands.
- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT** specifies that if `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` is also set, an image view can be used with a sampler that has either of `magFilter` or `minFilter` set to `VK_FILTER_LINEAR`, or `mipmapMode` set to `VK_SAMPLER_MIPMAP_MODE_LINEAR`. If `VK_FORMAT_FEATURE_BLIT_SRC_BIT` is also set, an image can be used as the srcImage to `vkCmdBlitImage2` and `vkCmdBlitImage` with a filter of `VK_FILTER_LINEAR`. This bit must only be exposed for formats that also support the `VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT` or `VK_FORMAT_FEATURE_BLIT_SRC_BIT`.

If the format being queried is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports linear filtering, and that linear filtering of the depth aspect is supported whether depth compare is enabled in the sampler or not. Where depth comparison is supported it may be linear filtered whether this bit is present or not, but where this bit is not present the filtered value may be computed in an implementation-dependent manner which differs from the normal rules of linear filtering. The resulting value must be in the range \([0,1]\) and should be proportional to, or a weighted average of, the number of comparison passes or failures.

- **VK_FORMAT_FEATURE_TRANSFER_SRC_BIT** specifies that an image can be used as a source image for
copy commands. If the application apiVersion is Vulkan 1.0 and VK_KHR_maintenance1 is not supported, VK_FORMAT_FEATURE_TRANSFER_SRC_BIT is implied to be set when the format feature flag is not 0.

- **VK_FORMAT_FEATURE_TRANSFER_DST_BIT** specifies that an image can be used as a destination image for copy commands and clear commands. If the application apiVersion is Vulkan 1.0 and VK_KHR_maintenance1 is not supported, VK_FORMAT_FEATURE_TRANSFER_DST_BIT is implied to be set when the format feature flag is not 0.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT** specifies VkImage can be used as a sampled image with a min or max VkSamplerReductionMode. This bit must only be exposed for formats that also support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT** specifies that VkImage can be used with a sampler that has either of magFilter or minFilter set to VK_FILTER_CUBIC_EXT, or be the source image for a blit with filter set to VK_FILTER_CUBIC_EXT. This bit must only be exposed for formats that also support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT. If the format being queried is a depth/stencil format, this only specifies that the depth aspect is cubic filterable.

- **VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT** specifies that an application can define a sampler Y′C_bC_r conversion using this format as a source, and that an image of this format can be used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of VK_CHROMA_LOCATION_MIDPOINT. Otherwise both xChromaOffset and yChromaOffset must be VK_CHROMA_LOCATION_COSITED_EVEN. If a format does not incorporate chroma downsampling (it is not a “422” or “420” format) but the implementation supports sampler Y′C_bC_r conversion for this format, the implementation must set VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT.

- **VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT** specifies that an application can define a sampler Y′C_bC_r conversion using this format as a source, and that an image of this format can be used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of VK_CHROMA_LOCATION_MIDPOINT. If neither VK_FORMAT_FEATURE_COSITED_CHROMA_SAMPLES_BIT nor VK_FORMAT_FEATURE_MIDPOINT_CHROMA_SAMPLES_BIT is set, the application must not define a sampler Y′C_bC_r conversion using this format as a source.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT** specifies that an application can define a sampler Y′C_bC_r conversion using this format as a source with chromaFilter set to VK_FILTER_LINEAR.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT** specifies that the format can have different chroma, min, and mag filters.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT** specifies that reconstruction is explicit, as described in Chroma Reconstruction. If this bit is not present, reconstruction is implicit by default.

- **VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT** specifies that reconstruction can be forcibly made explicit by setting VkSamplerYcbcrConversionCreateInfo::forceExplicitReconstruction to VK_TRUE. If the format being queried supports VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT it must also support VK_FORMAT_FEATURE_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT.
IT.

- **VK_FORMAT_FEATURE_DISJOINT_BIT** specifies that a multi-planar image can have the **VK_IMAGE_CREATE_DISJOINT_BIT** set during image creation. An implementation must not set **VK_FORMAT_FEATURE_DISJOINT_BIT** for single-plane formats.

- **VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT** specifies that an image view can be used as a fragment density map attachment.

- **VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR** specifies that an image view can be used as a fragment shading rate attachment. An implementation must not set this feature for formats with a numeric format other than UINT, or set it as a buffer feature.

- **VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR** specifies that an image view with this format can be used as a decode output picture in video decode operations.

- **VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video decode operations.

- **VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR** specifies that an image view with this format can be used as an encode input picture in video encode operations.

- **VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video encode operations.

**Note**
Specific video profiles may have additional restrictions on the format and other image creation parameters corresponding to image views used by video coding operations that can be enumerated using the `vkGetPhysicalDeviceVideoFormatPropertiesKHR` command.

The following bits may be set in `bufferFeatures`, specifying that the features are supported by buffers or buffer views created with the queried `vkGetPhysicalDeviceFormatProperties::format`:

- **VK_FORMAT_FEATURE_UNIFORM_TEXEL_BUFFER_BIT** specifies that the format can be used to create a buffer view that can be bound to a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.

- **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_BIT** specifies that the format can be used to create a buffer view that can be bound to a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.

- **VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT** specifies that atomic operations are supported on `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` with this format.

- **VK_FORMAT_FEATURE_VERTEX_BUFFER_BIT** specifies that the format can be used as a vertex attribute format (VkVertexInputAttributeDescription::format).

- **VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR** specifies that the format can be used as the vertex format when creating an acceleration structure (VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat). This format can also be used as the vertex format in host memory when doing host acceleration structure builds.

**Note**
VK_FORMAT_FEATURE_STORAGE_IMAGE_ATOMIC_BIT and VK_FORMAT_FEATURE_STORAGE_TEXEL_BUFFER_ATOMIC_BIT are only intended to be advertised for single-component formats, since SPIR-V atomic operations require a scalar type.

// Provided by VK_VERSION_1_0
typedef VkFlags VkFormatFeatureFlags;

VkFormatFeatureFlags is a bitmask type for setting a mask of zero or more VkFormatFeatureFlagBits.

To query supported format features which are properties of the physical device, call:

// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceFormatProperties2(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkFormatProperties2* pFormatProperties);

or the equivalent command

// Provided by VK_KHR_get_physical_device_properties2
void vkGetPhysicalDeviceFormatProperties2KHR(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkFormatProperties2* pFormatProperties);

- physicalDevice is the physical device from which to query the format properties.
- format is the format whose properties are queried.
- pFormatProperties is a pointer to a VkFormatProperties2 structure in which physical device properties for format are returned.

vkGetPhysicalDeviceFormatProperties2 behaves similarly to vkGetPhysicalDeviceFormatProperties, with the ability to return extended information in a pNext chain of output structures.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceFormatProperties2-physicalDevice-parameter physicalDevice must be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceFormatProperties2-format-parameter format must be a valid VkFormat value
- VUID-vkGetPhysicalDeviceFormatProperties2-pFormatProperties-parameter pFormatProperties must be a valid pointer to a VkFormatProperties2 structure
The `VkFormatProperties2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkFormatProperties2 {
    VkStructureType sType;
    void* pNext;
    VkFormatProperties formatProperties;
} VkFormatProperties2;
```

or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkFormatProperties2 VkFormatProperties2KHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `formatProperties` is a `VkFormatProperties` structure describing features supported by the requested format.

### Valid Usage (Implicit)

- **VUID-VkFormatProperties2-sType-sType**
  
  `sType` must be `VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_2`

- **VUID-VkFormatProperties2-pNext-pNext**
  
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkDrmFormatModifierPropertiesList2EXT`, `VkDrmFormatModifierPropertiesListEXT`, `VkFormatProperties3`, or `VkSubpassResolvePerformanceQueryEXT`.

- **VUID-VkFormatProperties2-sType-unique**
  
  The `sType` value of each struct in the `pNext` chain must be unique.

To obtain the list of Linux DRM format modifiers compatible with a `VkFormat`, add a `VkDrmFormatModifierPropertiesListEXT` structure to the `pNext` chain of `VkFormatProperties2`.

The `VkDrmFormatModifierPropertiesListEXT` structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesListEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t drmFormatModifierCount;
    VkDrmFormatModifierPropertiesEXT* pDrmFormatModifierProperties;
} VkDrmFormatModifierPropertiesListEXT;
```
- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifierCount` is an inout parameter related to the number of modifiers compatible with the format, as described below.
- `pDrmFormatModifierProperties` is either `NULL` or a pointer to an array of `VkDrmFormatModifierPropertiesEXT` structures.

If `pDrmFormatModifierProperties` is `NULL`, then the function returns in `drmFormatModifierCount` the number of modifiers compatible with the queried format. Otherwise, the application must set `drmFormatModifierCount` to the length of the array `pDrmFormatModifierProperties`; the function will write at most `drmFormatModifierCount` elements to the array, and will return in `drmFormatModifierCount` the number of elements written.

Among the elements in array `pDrmFormatModifierProperties`, each returned `drmFormatModifier` must be unique.

### Valid Usage (Implicit)

- `VUID-VkDrmFormatModifierPropertiesListEXT-sType-sType`
  - `sType` must be `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_EXT`

The `VkDrmFormatModifierPropertiesEXT` structure describes properties of a `VkFormat` when that format is combined with a Linux DRM format modifier. These properties, like those of `VkFormatProperties2`, are independent of any particular image.

The `VkDrmFormatModifierPropertiesEXT` structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierPropertiesEXT {
    uint64_t drmFormatModifier;
    uint32_t drmFormatModifierPlaneCount;
    VkFormatFeatureFlags drmFormatModifierTilingFeatures;
} VkDrmFormatModifierPropertiesEXT;
```

- `drmFormatModifier` is a Linux DRM format modifier.
- `drmFormatModifierPlaneCount` is the number of memory planes in any image created with format and `drmFormatModifier`. An image's memory planecount is distinct from its format planecount, as explained below.
- `drmFormatModifierTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits` that are supported by any image created with format and `drmFormatModifier`.

The returned `drmFormatModifierTilingFeatures` must contain at least one bit.

The implementation must not return `DRM_FORMAT_MOD_INVALID` in `drmFormatModifier`.

An image's memory planecount (as returned by `drmFormatModifierPlaneCount`) is distinct from its
format planecount (in the sense of multi-planar Y’C_bC_r formats). In VkImageAspectFlags, each
VK_IMAGE_ASPECT_MEMORY_PLANE_i_BIT_EXT represents a memory plane and each
VK_IMAGE_ASPECT_PLANE_i_BIT a format plane.

An image’s set of format planes is an ordered partition of the image’s content into separable groups
of format components. The ordered partition is encoded in the name of each VkFormat. For
example, VK_FORMAT_G8_B8R8_2PLANE_420_UNORM contains two format planes; the first plane contains
the green component and the second plane contains the blue component and red component. If the
format name does not contain PLANE, then the format contains a single plane; for example,
VK_FORMAT_R8G8B8A8_UNORM. Some commands, such as vkCmdCopyBufferToImage, do not operate on
all format components in the image, but instead operate only on the format planes explicitly chosen
by the application and operate on each format plane independently.

An image’s set of memory planes is an ordered partition of the image’s memory rather than the
image’s content. Each memory plane is a contiguous range of memory. The union of an image’s
memory planes is not necessarily contiguous.

If an image is linear, then the partition is the same for memory planes and for format planes.
Therefore, if the returned drmFormatModifier is DRM_FORMAT_MOD_LINEAR, then
drmFormatModifierPlaneCount must equal the format planecount, and
drmFormatModifierTilingFeatures must be identical to the VkFormatProperties2
::linearTilingFeatures returned in the same pNext chain.

If an image is non-linear, then the partition of the image’s memory into memory planes is
implementation-specific and may be unrelated to the partition of the image’s content into format planes.
For example, consider an image whose format is VK_FORMAT_G8_B8_B8_2PLANE_420_UNORM,
tiling is VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, whose
drmFormatModifier is not DRM_FORMAT_MOD_LINEAR, and flags lacks VK_IMAGE_CREATE_DISJOINT_BIT. The image has 3 format planes, and commands such vkCmdCopyBufferToImage act on each format plane independently as if the data of each format plane were separable from the data of the other planes. In a straightforward implementation, the implementation may store the image’s content in 3 adjacent memory planes where each memory plane corresponds exactly to a format plane. However, the implementation may also store the image’s content in a single memory plane where all format components are combined using an implementation-private block-compressed format; or the implementation may store the image’s content in a collection of 7 adjacent memory planes using an implementation-private sharding technique. Because the image is non-linear and non-disjoint, the implementation has much freedom when choosing the image’s placement in memory.

The memory planecount applies to function parameters and structures only when the API specifies
an explicit requirement on drmFormatModifierPlaneCount. In all other cases, the memory planecount
is ignored.

The list of Linux DRM format modifiers compatible with a VkFormat can be obtained by adding a
VkDrmFormatModifierPropertiesList2EXT structure to the pNext chain of VkFormatProperties2.

The VkDrmFormatModifierPropertiesList2EXT structure is defined as:

```c
typedef struct VkDrmFormatModifierPropertiesList2EXT {
```
VkStructureType
void*
uint32_t
VkDrmFormatModifierProperties2EXT*
} VkDrmFormatModifierPropertiesList2EXT;

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• drmFormatModifierCount is an inout parameter related to the number of modifiers compatible with the format, as described below.
• pDrmFormatModifierProperties is either NULL or a pointer to an array of VkDrmFormatModifierProperties2EXT structures.

If pDrmFormatModifierProperties is NULL, the number of modifiers compatible with the queried format is returned in drmFormatModifierCount. Otherwise, the application must set drmFormatModifierCount to the length of the array pDrmFormatModifierProperties; the function will write at most drmFormatModifierCount elements to the array, and will return in drmFormatModifierCount the number of elements written.

Among the elements in array pDrmFormatModifierProperties, each returned drmFormatModifier must be unique.

Among the elements in array pDrmFormatModifierProperties, the bits reported in drmFormatModifierTilingFeatures must include the bits reported in the corresponding element of VkDrmFormatModifierPropertiesListEXT::pDrmFormatModifierProperties.

Valid Usage (Implicit)

• VUID-VkDrmFormatModifierPropertiesList2EXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_2_EXT

The VkDrmFormatModifierProperties2EXT structure describes properties of a VkFormat when that format is combined with a Linux DRM format modifier. These properties, like those of VkFormatProperties2, are independent of any particular image.

The VkDrmFormatModifierPropertiesEXT structure is defined as:

```c
// Provided by VK_KHR_format_feature_flags2 with VK_EXT_image_drm_format_modifier
typedef struct VkDrmFormatModifierProperties2EXT {
    uint64_t       drmFormatModifier;
    uint32_t       drmFormatModifierPlaneCount;
    VkFormatFeatureFlags2 drmFormatModifierTilingFeatures;
} VkDrmFormatModifierProperties2EXT;
```

• drmFormatModifier is a Linux DRM format modifier.
• drmFormatModifierPlaneCount is the number of memory planes in any image created with format
and `drmFormatModifier`. An image's `memory planecount` is distinct from its `format planecount`, as explained below.

- `drmFormatModifierTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits2` that are supported by any image created with `format` and `drmFormatModifier`.

To query supported format extended features which are properties of the physical device, add `VkFormatProperties3` structure to the `pNext` chain of `VkFormatProperties2`.

The `VkFormatProperties3` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkFormatProperties3 {
    VkStructureType sType;
    void* pNext;
    VkFormatFeatureFlags2 linearTilingFeatures;
    VkFormatFeatureFlags2 optimalTilingFeatures;
    VkFormatFeatureFlags2 bufferFeatures;
} VkFormatProperties3;
```

or the equivalent

```c
// Provided by VK_KHR_format_feature_flags2
typedef VkFormatProperties3 VkFormatProperties3KHR;
```

- `linearTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits2` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_LINEAR`.
- `optimalTilingFeatures` is a bitmask of `VkFormatFeatureFlagBits2` specifying features supported by images created with a `tiling` parameter of `VK_IMAGE_TILING_OPTIMAL`.
- `bufferFeatures` is a bitmask of `VkFormatFeatureFlagBits2` specifying features supported by buffers.

The bits reported in `linearTilingFeatures`, `optimalTilingFeatures` and `bufferFeatures` must include the bits reported in the corresponding fields of `VkFormatProperties2::formatProperties`.

### Valid Usage (Implicit)

- VUID-VkFormatProperties3-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_3`

Bits which can be set in the `VkFormatProperties3` features `linearTilingFeatures`, `optimalTilingFeatures`, and `bufferFeatures` are:

```c
// Provided by VK_VERSION_1_3
// Flag bits for VkFormatFeatureFlagBits2
typedef VkFlags64 VkFormatFeatureFlagBits2;
```
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT = 0x00000001ULL;
static const VkFormatFeatureFlagBits2 VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT_KHR = 0x00000001ULL;

VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM = 0x1000000000ULL;
// Provided by VK_KHR_format_feature_flags2 with VK_QCOM_image_processing
The following bits may be set in linearTilingFeatures and optimalTilingFeatures, specifying that the features are supported by images or image views or sampler Y’CbCr conversion objects created with the queried vkGetPhysicalDeviceFormatProperties2::format:

- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT** specifies that an image view can be sampled from.
- **VK_FORMAT_FEATURE_2_STORAGE_IMAGE_BIT** specifies that an image view can be used as a storage image.
- **VK_FORMAT_FEATURE_2_STORAGE_IMAGE_ATOMIC_BIT** specifies that an image view can be used as storage image that supports atomic operations.
- **VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BIT** specifies that an image view can be used as a framebuffer color attachment and as an input attachment.
- **VK_FORMAT_FEATURE_2_COLOR_ATTACHMENT_BLEND_BIT** specifies that an image view can be used as a framebuffer color attachment that supports blending.
- **VK_FORMAT_FEATURE_2_DEPTH_STENCIL_ATTACHMENT_BIT** specifies that an image view can be used as a framebuffer depth/stencil attachment and as an input attachment.
- **VK_FORMAT_FEATURE_2_BLIT_SRC_BIT** specifies that an image can be used as the srcImage for vkCmdBlitImage2 and vkCmdBlitImage.
- **VK_FORMAT_FEATURE_2_BLIT_DST_BIT** specifies that an image can be used as the dstImage for vkCmdBlitImage2 and vkCmdBlitImage.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_LINEAR_BIT** specifies that if VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT is also set, an image view can be used with a sampler that has either of magFilter or minFilter set to VK_FILTER_LINEAR, or mipmapMode set to VK_SAMPLER_MIPMAP_MODE_LINEAR. If VK_FORMAT_FEATURE_2_BLIT_SRC_BIT is also set, an image can be used as the srcImage for vkCmdBlitImage2 and vkCmdBlitImage with a filter of VK_FILTER_LINEAR. This bit must only be exposed for formats that also support the VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT or VK_FORMAT_FEATURE_2_BLIT_SRC_BIT.
If the format being queried is a depth/stencil format, this bit only specifies that the depth aspect (not the stencil aspect) of an image of this format supports linear filtering. Where depth comparison is supported it may be linear filtered whether this bit is present or not, but where this bit is not present the filtered value may be computed in an implementation-dependent manner which differs from the normal rules of linear filtering. The resulting value must be in the range \([0,1]\) and should be proportional to, or a weighted average of, the number of comparison passes or failures.

- **VK_FORMAT_FEATURE_2_TRANSFER_SRC_BIT** specifies that an image can be used as a source image for copy commands.
- **VK_FORMAT_FEATURE_2_TRANSFER_DST_BIT** specifies that an image can be used as a destination image for copy commands and clear commands.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_MINMAX_BIT** specifies VkImage can be used as a sampled image with a min or max VkSamplerReductionMode. This bit must only be exposed for formats that also support the **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT**.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_FILTER_CUBIC_BIT** specifies that VkImage can be used with a sampler that has either of magFilter or minFilter set to VK_FILTER_CUBIC_EXT, or be the source image for a blit with filter set to VK_FILTER_CUBIC_EXT. This bit must only be exposed for formats that also support the **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_BIT**. If the format being queried is a depth/stencil format, this only specifies that the depth aspect is cubic filterable.
- **VK_FORMAT_FEATURE_2_MIDPOINT_CHROMA_SAMPLES_BIT** specifies that an application can define a sampler Y‘C\text{b}C\text{r} conversion using this format as a source, and that an image of this format can be used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of VK_CHROMA_LOCATION_MIDPOINT. Otherwise both xChromaOffset and yChromaOffset must be VK_CHROMA_LOCATION_COSITED_EVEN. If a format does not incorporate chroma downsampling (it is not a “422” or “420” format) but the implementation supports sampler Y‘C\text{b}C\text{r} conversion for this format, the implementation must set **VK_FORMAT_FEATURE_2_MIDPOINT_CHROMA_SAMPLES_BIT**.
- **VK_FORMAT_FEATURE_2_COSITED_CHROMA_SAMPLES_BIT** specifies that an application can define a sampler Y‘C\text{b}C\text{r} conversion using this format as a source, and that an image of this format can be used with a VkSamplerYcbcrConversionCreateInfo xChromaOffset and/or yChromaOffset of VK_CHROMA_LOCATION_COSITED_EVEN. Otherwise both xChromaOffset and yChromaOffset must be VK_CHROMA_LOCATION_MIDPOINT. If neither **VK_FORMAT_FEATURE_2_COSITED_CHROMA_SAMPLES_BIT** nor **VK_FORMAT_FEATURE_2_MIDPOINT_CHROMA_SAMPLES_BIT** is set, the application must not define a sampler Y‘C\text{b}C\text{r} conversion using this format as a source.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_LINEAR_FILTER_BIT** specifies that an application can define a sampler Y‘C\text{b}C\text{r} conversion using this format as a source, and that an image of this format with chromaFilter set to VK_FILTER_LINEAR.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_SEPARATE_RECONSTRUCTION_FILTER_BIT** specifies that the format can have different chroma, min, and mag filters.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT** specifies that reconstruction is explicit, as described in Chroma Reconstruction. If this bit is not present, reconstruction is implicit by default.
- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT** specifies that reconstruction can be forcibly made explicit by setting
VkSamplerYcbcrConversionCreateInfo::forceExplicitReconstruction to VK_TRUE. If the format being queried supports VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_BIT it must also support VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_YCBCR_CONVERSION_CHROMA_RECONSTRUCTION_EXPLICIT_FORCEABLE_BIT.

- **VK_FORMAT_FEATURE_2_DISJOINT_BIT** specifies that a multi-planar image can have the VK_IMAGE_CREATE_DISJOINT_BIT set during image creation. An implementation must not set VK_FORMAT_FEATURE_2_DISJOINT_BIT for single-plane formats.

- **VK_FORMAT_FEATURE_2_FRAGMENT_DENSITY_MAP_BIT_EXT** specifies that an image view can be used as a fragment density map attachment.

- **VK_FORMAT_FEATURE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR** specifies that an image view can be used as a fragment shading rate attachment. An implementation must not set this feature for formats with a numeric format other than UINT, or set it as a buffer feature.

- **VK_FORMAT_FEATURE_2_VIDEO_DECODE_OUTPUT_BIT_KHR** specifies that an image view with this format can be used as a decode output picture in video decode operations.

- **VK_FORMAT_FEATURE_2_VIDEO_DECODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video decode operations.

- **VK_FORMAT_FEATURE_2_VIDEO_ENCODE_INPUT_BIT_KHR** specifies that an image view with this format can be used as an encode input picture in video encode operations.

- **VK_FORMAT_FEATURE_2_VIDEO_ENCODE_DPB_BIT_KHR** specifies that an image view with this format can be used as an output reconstructed picture or an input reference picture in video encode operations.

- **VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT** specifies that image views or buffer views created with this format can be used as storage images or storage texel buffers respectively for read operations without specifying a format.

- **VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT** specifies that image views or buffer views created with this format can be used as storage images or storage texel buffers respectively for write operations without specifying a format.

- **VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT** specifies that image views created with this format can be used for depth comparison performed by OpImage*Dref* instructions.

- **VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV** specifies that the format is supported as a renderable Linear Color Attachment. This bit will be set for renderable color formats in the linearTilingFeatures. This must not be set in the optimalTilingFeatures or bufferFeatures members.

Note

Specific video profiles may have additional restrictions on the format and other image creation parameters corresponding to image views used by video coding operations that can be enumerated using the vkGetPhysicalDeviceVideoFormatPropertiesKHR command.
• **VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM** specifies that image views created with this format can be used as the weight image input to weight image sampling operations.

• **VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM** specifies that image views created with this format can be sampled in weight image sampling operations.

• **VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM** specifies that image views created with this format can be used in block matching operations.

• **VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM** specifies that image views created with this format can be sampled in box filter sampling operations.

The following bits may be set in `bufferFeatures`, specifying that the features are supported by buffers or buffer views created with the queried `vkGetPhysicalDeviceFormatProperties2::format`:

• **VK_FORMAT_FEATURE_2_UNIFORM_TEXEL_BUFFER_BIT** specifies that the format can be used to create a buffer view that can be bound to a `VK_DESCRIPTOR_TYPE_UNIFORM_TEXEL_BUFFER` descriptor.

• **VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_BIT** specifies that the format can be used to create a buffer view that can be bound to a `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` descriptor.

• **VK_FORMAT_FEATURE_2_STORAGE_TEXEL_BUFFER_ATOMIC_BIT** specifies that atomic operations are supported on `VK_DESCRIPTOR_TYPE_STORAGE_TEXEL_BUFFER` with this format.

• **VK_FORMAT_FEATURE_2_VERTEX_BUFFER_BIT** specifies that the format can be used as a vertex attribute format (`VkVertexInputAttributeDescription::format`).

• **VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR** specifies that the format can be used as the vertex format when creating an acceleration structure (`VkAccelerationStructureGeometryTrianglesDataKHR::vertexFormat`). This format can also be used as the vertex format in host memory when doing host acceleration structure builds.

• **VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT** specifies that buffer views created with this format can be used as storage texel buffers for read operations without specifying a format.

• **VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT** specifies that buffer views created with this format can be used as storage texel buffers for write operations without specifying a format.

• **VK_FORMAT_FEATURE_2_OPTICAL_FLOW_IMAGE_BIT_NV** specifies that an image view with this format can be used as an input or reference to optical flow operations.

• **VK_FORMAT_FEATURE_2_OPTICAL_FLOW_VECTOR_BIT_NV** specifies that an image view with this format can be used as a flow vector map (either as hint, output or global flow) for optical flow operations.

• **VK_FORMAT_FEATURE_2_OPTICAL_FLOW_COST_BIT_NV** specifies that an image view with this format can be used as an output cost map for optical flow operations.

// Provided by VK_VERSION_1_3
define VkFlags64 VkFormatFeatureFlags2;

or the equivalent
VkFormatFeatureFlags2 is a bitmask type for setting a mask of zero or more VkFormatFeatureFlagBits2.

To query the performance characteristics of a subpass resolve operation for an attachment with a VkFormat, add a VkSubpassResolvePerformanceQueryEXT structure to the pNext chain of VkFormatProperties2.

The VkSubpassResolvePerformanceQueryEXT structure is defined as:

```c
// Provided by VK_EXT_multisampled_render_to_single_sampled
typedef struct VkSubpassResolvePerformanceQueryEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 optimal;
} VkSubpassResolvePerformanceQueryEXT;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **optimal** specifies that a subpass resolve operation is optimally performed.

If optimal is VK_FALSE for a VkFormat, using a subpass resolve operation on a multisampled attachment with this format can incur additional costs, including additional memory bandwidth usage and a higher memory footprint. If an attachment with such a format is used in a multisampled-render-to-single-sampled subpass, the additional memory and memory bandwidth usage can nullify the benefits of using the VK_EXT_multisampled_render_to_single_sampled extension.

**Valid Usage (Implicit)**

- VUID-VkSubpassResolvePerformanceQueryEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_SUBPASS_RESOLVE_PERFORMANCE_QUERY_EXT

### 47.2.1. Potential Format Features

Some valid usage conditions depend on the format features supported by a VkImage whose VkImageTiling is unknown. In such cases the exact VkFormatFeatureFlagBits supported by the VkImage cannot be determined, so the valid usage conditions are expressed in terms of the potential format features of the VkImage format.

The potential format features of a VkFormat are defined as follows:

- The union of VkFormatFeatureFlagBits and VkFormatFeatureFlagBits2, supported when the VkImageTiling is VK_IMAGE_TILING_OPTIMAL, VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT, or VK_IMAGE_TILING_LINEAR if VkFormat is not VK_FORMAT_UNDEFINED
• VkAndroidHardwareBufferFormatPropertiesANDROID::formatFeatures and VkAndroidHardwareBufferFormatProperties2ANDROID::formatFeatures of a valid external format if VkFormat is VK_FORMAT_UNDEFINED

• VkScreenBufferFormatPropertiesQNX::formatFeatures of a valid external format if VkFormat is VK_FORMAT_UNDEFINED

47.3. Required Format Support

Implementations must support at least the following set of features on the listed formats. For images, these features must be supported for every VkImageType (including arrayed and cube variants) unless otherwise noted. These features are supported on existing formats without needing to advertise an extension or needing to explicitly enable them. Support for additional functionality beyond the requirements listed here is queried using the vkGetPhysicalDeviceFormatProperties command.

Note

Unless otherwise excluded below, the required formats are supported for all VkImageCreateFlags values as long as those flag values are otherwise allowed.

The following tables show which feature bits must be supported for each format. Formats that are required to support VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT must also support VK_FORMAT_FEATURE_TRANSFER_SRC_BIT and VK_FORMAT_FEATURE_TRANSFER_DST_BIT.

The VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT, VK_FORMAT_FEATURE_BLIT_SRC_BIT and VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_LINEAR_BIT features must be supported in optimalTilingFeatures for all the formats in at least one of: this table, Mandatory format support: BC compressed formats with VkImageType VK_IMAGE_TYPE_2D and VK_IMAGE_TYPE_3D, or Mandatory format support: ETC2 and EAC compressed formats with VkImageType VK_IMAGE_TYPE_2D.

If cubic filtering is supported, VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT must be supported for the following image view types:

- VK_IMAGE_VIEW_TYPE_2D
- VK_IMAGE_VIEW_TYPE_2D_ARRAY

for the following formats:

- VK_FORMAT_R4G4_UNORM_PACK8
- VK_FORMAT_R4G4B4A4_UNORM_PACK16
- VK_FORMAT_B4G4R4A4_UNORM_PACK16
- VK_FORMAT_R5G6B5_UNORM_PACK16
- VK_FORMAT_B5G6R5_UNORM_PACK16
- VK_FORMAT_R5G5B5A1_UNORM_PACK16
- VK_FORMAT_B5G5R5A1_UNORM_PACK16
- VK_FORMAT_A1R5G5B5_UNORM_PACK16
- VK_FORMAT_RB_UNORM
- VK_FORMAT_RB_SNORM
- VK_FORMAT_RB_SRGB
- VK_FORMAT_RB8G8_UNORM
- VK_FORMAT_RB8G8_SNORM
- VK_FORMAT_RB8G8_SRGB
- VK_FORMAT_RB8B8_UNORM
- VK_FORMAT_RB8B8_SNORM
- VK_FORMAT_RB8B8_SRGB
- VK_FORMAT_B8G8R8_UNORM
If ETC compressed formats are supported, `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT` must be supported for the following image view types:

- `VK_IMAGE_VIEW_TYPE_2D`
- `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

for the following additional formats:

- `VK_FORMAT_ETC2_R8G8B8_UNORM_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8_SRGB_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A1_UNORM_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A1_SRGB_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A8_UNORM_BLOCK`
- `VK_FORMAT_ETC2_R8G8B8A8_SRGB_BLOCK`

If cubic filtering is supported for any other formats, the following image view types must be supported for those formats:

- `VK_IMAGE_VIEW_TYPE_2D`
- `VK_IMAGE_VIEW_TYPE_2D_ARRAY`

To be used with `VkImageView` with `subresourceRange.aspectMask` equal to `VK_IMAGE_ASPECT_COLOR_BIT`, sampler Y’C₆C₈ conversion must be enabled for the following formats:
Table 80. Formats requiring sampler Y’CnCn conversion for `VK_IMAGE_ASPECT_COLOR_BIT` image views

</table>

Format features marked † **must** be supported for `optimalTilingFeatures` with `VkImageType VK_IMAGE_TYPE_2D` if the `VkPhysicalDevice` supports the `VkPhysicalDeviceSamplerYcbcrConversionFeatures` feature.

Formats marked ‡ do not require a sampler Y’C_B_C_R conversion for `VK_IMAGE_ASPECT_COLOR_BIT` image views if the `VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT::formatRgba10x6WithoutYCbCrSampler` feature is enabled.

Implementations are not required to support the `VK_IMAGE_CREATE_SPARSE_BINDING_BIT`, `VK_IMAGE_CREATE_SPARSE_RESIDENCY_BIT`, or `VK_IMAGE_CREATE_SPARSE_ALIASED_BIT` `VkImageCreateFlags` for the above formats that require sampler Y’C_B_C_R conversion. To determine whether the implementation supports sparse image creation flags with these formats use `vkGetPhysicalDeviceImageFormatProperties` or `vkGetPhysicalDeviceImageFormatProperties2`.

`VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT` **must** be supported for the following formats if the `fragmentDensityMap` feature is enabled:

- `VK_FORMAT_R8G8_UNORM`

`VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR` **must** be supported in `bufferFeatures` for the following formats if the `accelerationStructure` feature is supported:

- `VK_FORMAT_R32G32_SFLOAT`
- `VK_FORMAT_R32G32B32_SFLOAT`
- `VK_FORMAT_R16G16_SFLOAT`
- `VK_FORMAT_R16G16B16A16_SFLOAT`
- `VK_FORMAT_R16G16_SNORM`
- `VK_FORMAT_R16G16B16A16_SNORM`

`VK_FORMAT_FEATURE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR` **must** be supported for the following formats if the `attachmentFragmentShadingRate` feature is supported:

- `VK_FORMAT_R8_UINT`
47.3.1. Formats without shader storage format

The device-level features for using a storage image or a storage texel buffer with an image format of Unknown, shaderStorageImageReadWithoutFormat and shaderStorageImageWriteWithoutFormat, only apply to the following formats:

- VK_FORMAT_R8G8B8A8_UNORM
- VK_FORMAT_R8G8B8A8_SNORM
- VK_FORMAT_R8G8B8A8_UINT
- VK_FORMAT_R8G8B8A8_SINT

• VK_FORMAT_R8_UINT

**Note**

This list of formats is the union of required storage formats from Required Format Support section and formats listed in shaderStorageImageExtendedFormats.

An implementation that supports VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT for any format from the given list of formats and supports shaderStorageImageReadWithoutFormat must support VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT for that same format if Vulkan 1.3 or the VK_KHR_format_feature_flags2 extension is supported.

An implementation that supports VK_FORMAT_FEATURE_STORAGE_IMAGE_BIT for any format from the given list of formats and supports shaderStorageImageWriteWithoutFormat must support VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT for that same format if Vulkan 1.3 or the VK_KHR_format_feature_flags2 extension is supported.

### 47.3.2. Depth comparison format support

If Vulkan 1.3 or the VK_KHR_format_feature_flags2 extension is supported, a depth/stencil format with a depth component supporting VK_FORMAT_FEATURE_SAMPLED_IMAGE_BIT must support VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT.

### 47.3.3. Format feature dependent usage flags

Certain resource usage flags depend on support for the corresponding format feature flag for the format in question. The following tables list the VkBufferUsageFlagBits and VkImageUsageFlagBits that have such dependencies, and the format feature flags they depend on. Additional restrictions, including, but not limited to, further required format feature flags specific to the particular use of the resource may apply, as described in the respective sections of this specification.

**Table 81. Format feature dependent buffer usage flags**

Chapter 48. Additional Capabilities

This chapter describes additional capabilities beyond the minimum capabilities described in the Limits and Formats chapters, including:

- Additional Image Capabilities
- Additional Buffer Capabilities
- Optional Semaphore Capabilities
- Optional Fence Capabilities
- Timestamp Calibration Capabilities

48.1. Additional Image Capabilities

Additional image capabilities, such as larger dimensions or additional sample counts for certain image types, or additional capabilities for linear tiling format images, are described in this section.

To query additional capabilities specific to image types, call:

```cpp
// Provided by VK_VERSION_1_0
VkResult vkGetPhysicalDeviceImageFormatProperties(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkImageType type,
    VkImageTiling tiling,
    VkImageUsageFlags usage,
    VkImageCreateFlags flags,
    VkImageFormatProperties* pImageFormatProperties);
```

- `physicalDevice` is the physical device from which to query the image capabilities.
- `format` is a VkFormat value specifying the image format, corresponding to VkImageCreateInfo::format.
- `type` is a VkImageType value specifying the image type, corresponding to VkImageCreateInfo::imageType.
- `tiling` is a VkImageTiling value specifying the image tiling, corresponding to VkImageCreateInfo::tiling.
- `usage` is a bitmask of VkImageUsageFlagBits specifying the intended usage of the image, corresponding to VkImageCreateInfo::usage.
- `flags` is a bitmask of VkImageCreateFlagBits specifying additional parameters of the image, corresponding to VkImageCreateInfo::flags.
- `pImageFormatProperties` is a pointer to a VkImageFormatProperties structure in which capabilities are returned.

The `format`, `type`, `tiling`, `usage`, and `flags` parameters correspond to parameters that would be
consumed by `vkCreateImage` (as members of `VkImageCreateInfo`).

If `format` is not a supported image format, or if the combination of `format`, `type`, `tiling`, `usage`, and `flags` is not supported for images, then `vkGetPhysicalDeviceImageFormatProperties` returns `VK_ERROR_FORMAT_NOT_SUPPORTED`.

The limitations on an image format that are reported by `vkGetPhysicalDeviceImageFormatProperties` have the following property: if `usage1` and `usage2` of type `VkImageUsageFlags` are such that the bits set in `usage1` are a subset of the bits set in `usage2`, and `flags1` and `flags2` of type `VkImageCreateFlags` are such that the bits set in `flags1` are a subset of the bits set in `flags2`, then the limitations for `usage1` and `flags1` must be no more strict than the limitations for `usage2` and `flags2`, for all values of `format`, `type`, and `tiling`.

### Valid Usage

- VUID-vkGetPhysicalDeviceImageFormatProperties-tiling-02248
  
  tiling must not be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`. (Use `vkGetPhysicalDeviceImageFormatProperties2` instead)

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceImageFormatProperties-physicalDevice-parameter
  
  physicalDevice must be a valid `VkPhysicalDevice` handle

- VUID-vkGetPhysicalDeviceImageFormatProperties-format-parameter
  
  format must be a valid `VkFormat` value

- VUID-vkGetPhysicalDeviceImageFormatProperties-type-parameter
  
  type must be a valid `VkImageType` value

- VUID-vkGetPhysicalDeviceImageFormatProperties-tiling-parameter
  
  tiling must be a valid `VkImageTiling` value

- VUID-vkGetPhysicalDeviceImageFormatProperties-usage-parameter
  
  usage must be a valid combination of `VkImageUsageFlagBits` values

- VUID-vkGetPhysicalDeviceImageFormatProperties-usage-requiredbitmap
  
  usage must not be 0

- VUID-vkGetPhysicalDeviceImageFormatProperties-flags-parameter
  
  flags must be a valid combination of `VkImageCreateFlagBits` values

  
  `pImageFormatProperties` must be a valid pointer to a `VkImageFormatProperties` structure

### Return Codes

**Success**

- `VK_SUCCESS`
Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_FORMAT_NOT_SUPPORTED

The `VkImageFormatProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_0
typedef struct VkImageFormatProperties {
    VkExtent3D maxExtent;
    uint32_t maxMipLevels;
    uint32_t maxArrayLayers;
    VkSampleCountFlags sampleCounts;
    VkDeviceSize maxResourceSize;
} VkImageFormatProperties;
```

- `maxExtent` are the maximum image dimensions. See the Allowed Extent Values section below for how these values are constrained by `type`.

- `maxMipLevels` is the maximum number of mipmap levels. `maxMipLevels` must be equal to the number of levels in the complete mipmap chain based on the `maxExtent.width`, `maxExtent.height`, and `maxExtent.depth`, except when one of the following conditions is true, in which case it may instead be 1:
  - `vkGetPhysicalDeviceImageFormatProperties::tiling` was `VK_IMAGE_TILING_LINEAR`
  - `VkPhysicalDeviceImageFormatInfo2::tiling` was `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`
  - the `VkPhysicalDeviceImageFormatInfo2::pNext` chain included a `VkPhysicalDeviceExternalImageFormatInfo` structure with a handle type included in the `handleTypes` member for which mipmap image support is not required
  - `image format` is one of the formats that require a sampler Y’CbCr conversion
  - `flags` contains `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`

- `maxArrayLayers` is the maximum number of array layers. `maxArrayLayers` must be no less than `VkPhysicalDeviceLimits::maxImageArrayLayers`, except when one of the following conditions is true, in which case it may instead be 1:
  - `tiling` is `VK_IMAGE_TILING_LINEAR`
  - `tiling` is `VK_IMAGE_TILING_OPTIMAL` and `type` is `VK_IMAGE_TYPE_3D`
  - `format` is one of the formats that require a sampler Y’CbCr conversion

- If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`, then `maxArrayLayers` must not be 0.

- `sampleCounts` is a bitmask of `VkSampleCountFlagBits` specifying all the supported sample counts for this image as described below.

- `maxResourceSize` is an upper bound on the total image size in bytes, inclusive of all image subresources. Implementations may have an address space limit on total size of a resource, which is advertised by this property. `maxResourceSize` must be at least $2^{31}$. 
Note
There is no mechanism to query the size of an image before creating it, to compare that size against `maxResourceSize`. If an application attempts to create an image that exceeds this limit, the creation will fail and `vkCreateImage` will return `VK_ERROR_OUT_OF_DEVICE_MEMORY`. While the advertised limit must be at least $2^{31}$, it may not be possible to create an image that approaches that size, particularly for `VK_IMAGE_TYPE_1D`.

If the combination of parameters to `vkGetPhysicalDeviceImageFormatProperties` is not supported by the implementation for use in `vkCreateImage`, then all members of `VkImageFormatProperties` will be filled with zero.

Note
Filling `VkImageFormatProperties` with zero for unsupported formats is an exception to the usual rule that output structures have undefined contents on error. This exception was unintentional, but is preserved for backwards compatibility.

To determine the image capabilities compatible with an external memory handle type, call:

```c
// Provided by VK_NV_external_memory_capabilities
VkResult vkGetPhysicalDeviceExternalImageFormatPropertiesNV(
    VkPhysicalDevice physicalDevice,
    VkFormat format,
    VkImageType type,
    VkImageTiling tiling,
    VkImageUsageFlags usage,
    VkImageCreateFlags flags,
    VkExternalMemoryHandleTypeFlagsNV externalHandleType,
    VkExternalImageFormatPropertiesNV*pExternalImageFormatProperties);```

- `physicalDevice` is the physical device from which to query the image capabilities
- `format` is the image format, corresponding to `VkImageCreateInfo::format`.
- `type` is the image type, corresponding to `VkImageCreateInfo::imageType`.
- `tiling` is the image tiling, corresponding to `VkImageCreateInfo::tiling`.
- `usage` is the intended usage of the image, corresponding to `VkImageCreateInfo::usage`.
- `flags` is a bitmask describing additional parameters of the image, corresponding to `VkImageCreateInfo::flags`.
- `externalHandleType` is either one of the bits from `VkExternalMemoryHandleTypeFlagBitsNV`, or 0.
- `pExternalImageFormatProperties` is a pointer to a `VkExternalImageFormatPropertiesNV` structure in which capabilities are returned.

If `externalHandleType` is 0, `pExternalImageFormatProperties->imageFormatProperties` will return the same values as a call to `vkGetPhysicalDeviceImageFormatProperties`, and the other members of
pExternalImageFormatProperties will all be 0. Otherwise, they are filled in as described for VkExternalImageFormatPropertiesNV.

### Valid Usage

- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-externalHandleType-07721
  - externalHandleType must not have more than one bit set

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-physicalDevice-parameter
  - physicalDevice must be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-format-parameter
  - format must be a valid VkFormat value
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-type-parameter
  - type must be a valid VkImageType value
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-tiling-parameter
  - tiling must be a valid VkImageTiling value
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-usage-parameter
  - usage must be a valid combination of VkImageUsageFlagBits values
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-usage-requiredbitmask
  - usage must not be 0
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-flags-parameter
  - flags must be a valid combination of VkImageCreateFlagBits values
- VUID-vkGetPhysicalDeviceExternalImageFormatPropertiesNV-externalHandleType-parameter
  - externalHandleType must be a valid combination of VkExternalMemoryHandleTypeFlagBitsNV values
  - pExternalImageFormatProperties must be a valid pointer to a VkExternalImageFormatPropertiesNV structure

### Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY
- VK_ERROR_FORMAT_NOT_SUPPORTED
The `VkExternalImageFormatPropertiesNV` structure is defined as:

```c
// Provided by VK_NV_external_memory_capabilities
typedef struct VkExternalImageFormatPropertiesNV {
    VkImageFormatProperties imageFormatProperties;
    VkExternalMemoryFeatureFlagsNV externalMemoryFeatures;
    VkExternalMemoryHandleTypeFlagsNV exportFromImportedHandleTypes;
    VkExternalMemoryHandleTypeFlagsNV compatibleHandleTypes;
} VkExternalImageFormatPropertiesNV;
```

- `imageFormatProperties` will be filled in as when calling `vkGetPhysicalDeviceImageFormatProperties`, but the values returned may vary depending on the external handle type requested.

- `externalMemoryFeatures` is a bitmask of `VkExternalMemoryFeatureFlagBitsNV`, indicating properties of the external memory handle type (`vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType`) being queried, or 0 if the external memory handle type is 0.

- `exportFromImportedHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` containing a bit set for every external handle type that may be used to create memory from which the handles of the type specified in `vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType` can be exported, or 0 if the external memory handle type is 0.

- `compatibleHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBitsNV` containing a bit set for every external handle type that may be specified simultaneously with the handle type specified by `vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType` when calling `vkAllocateMemory`, or 0 if the external memory handle type is 0. `compatibleHandleTypes` will always contain `vkGetPhysicalDeviceExternalImageFormatPropertiesNV::externalHandleType` Bits which can be set in `VkExternalImageFormatPropertiesNV::externalMemoryFeatures`, indicating properties of the external memory handle type, are:

```c
// Provided by VK_NV_external_memory_capabilities
typedef enum VkExternalMemoryFeatureFlagBitsNV {
    VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_NV = 0x00000001,
    VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_NV = 0x00000002,
    VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_NV = 0x00000004,
} VkExternalMemoryFeatureFlagBitsNV;
```

- `VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_NV` specifies that external memory of the specified type must be created as a dedicated allocation when used in the manner specified.

- `VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_NV` specifies that the implementation supports exporting handles of the specified type.

- `VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_NV` specifies that the implementation supports importing handles of the specified type.
typedef VkFlags VkExternalMemoryFeatureFlagsNV;

VkExternalMemoryFeatureFlagsNV is a bitmask type for setting a mask of zero or more VkExternalMemoryFeatureFlagBitsNV.

To query additional capabilities specific to image types, call:

// Provided by VK_VERSION_1_1
VkResult vkGetPhysicalDeviceImageFormatProperties2(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceImageFormatInfo2* pImageFormatInfo,
    VkImageFormatProperties2* pImageFormatProperties);

or the equivalent command

// Provided by VK_KHR_get_physical_device_properties2
VkResult vkGetPhysicalDeviceImageFormatProperties2KHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceImageFormatInfo2* pImageFormatInfo,
    VkImageFormatProperties2* pImageFormatProperties);

- physicalDevice is the physical device from which to query the image capabilities.
- pImageFormatInfo is a pointer to a VkPhysicalDeviceImageFormatInfo2 structure describing the parameters that would be consumed by vkCreateImage.
- pImageFormatProperties is a pointer to a VkImageFormatProperties2 structure in which capabilities are returned.

vkGetPhysicalDeviceImageFormatProperties2 behaves similarly to vkGetPhysicalDeviceImageFormatProperties, with the ability to return extended information in a pNext chain of output structures.

If the pNext chain of pImageFormatInfo includes a VkVideoProfileListInfoKHR structure with a profileCount member greater than 0, then this command returns format capabilities specific to image types used in conjunction with the specified video profiles. In this case, this command will return one of the video-profile-specific error codes if any of the profiles specified via VkVideoProfileListInfoKHR::pProfiles are not supported. Furthermore, if VkPhysicalDeviceImageFormatInfo2::usage includes any image usage flag not supported by the specified video profiles, then this command returns VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR.

Valid Usage

- VUID-vkGetPhysicalDeviceImageFormatProperties2-pNext-01868
  If the pNext chain of pImageFormatProperties includes a VkAndroidHardwareBufferUsageANDROID structure, the pNext chain of pImageFormatInfo
must include a `VkPhysicalDeviceExternalImageFormatInfo` structure with `handleType` set to `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`.

**Valid Usage (Implicit)**

- VUID-vkGetPhysicalDeviceImageFormatProperties2-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle.

**Return Codes**

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
- `VK_ERROR_OUT_OF_DEVICE_MEMORY`
- `VK_ERROR_FORMAT_NOT_SUPPORTED`
- `VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR`
- `VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR`

The `VkPhysicalDeviceImageFormatInfo2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceImageFormatInfo2 {
    VkStructureType sType;
    const void* pNext;
    VkFormat format;
    VkImageType type;
    VkImageTiling tiling;
    VkImageUsageFlags usage;
    VkImageCreateFlags flags;
} VkPhysicalDeviceImageFormatInfo2;
```
or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkPhysicalDeviceImageFormatInfo2 VkPhysicalDeviceImageFormatInfo2KHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure. The `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` is used to provide additional image parameters to `vkGetPhysicalDeviceImageFormatProperties2`.
- **format** is a `VkFormat` value indicating the image format, corresponding to `VkImageCreateInfo::format`.
- **type** is a `VkImageType` value indicating the image type, corresponding to `VkImageCreateInfo::imageType`.
- **tiling** is a `VkImageTiling` value indicating the image tiling, corresponding to `VkImageCreateInfo::tiling`.
- **usage** is a bitmask of `VkImageUsageFlagBits` indicating the intended usage of the image, corresponding to `VkImageCreateInfo::usage`.
- **flags** is a bitmask of `VkImageCreateFlagBits` indicating additional parameters of the image, corresponding to `VkImageCreateInfo::flags`.

The members of `VkPhysicalDeviceImageFormatInfo2` correspond to the arguments to `vkGetPhysicalDeviceImageFormatProperties`, with `sType` and `pNext` added for extensibility.

### Valid Usage

- VUID-VkPhysicalDeviceImageFormatInfo2-tiling-02249
  tiling must be `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` if and only if the `pNext` chain includes `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`.

- VUID-VkPhysicalDeviceImageFormatInfo2-tiling-02313
  If `tiling` is `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and `flags` contains `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT`, then the `pNext` chain must include a `VkImageFormatListCreateInfo` structure with non-zero `viewFormatCount`.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageFormatInfo2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_INFO_2`.

- VUID-VkPhysicalDeviceImageFormatInfo2-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkImageCompressionControlEXT`, `VkImageFormatListCreateInfo`, `VkImageStencilUsageCreateInfo`, `VkOpticalFlowImageFormatInfoNV`, `VkPhysicalDeviceExternalImageFormatInfo`, `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`,...
The `VkImageFormatProperties2` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkImageFormatProperties2 {
    VkStructureType sType;
    void* pNext;
    VkImageFormatProperties imageFormatProperties;
} VkImageFormatProperties2;
```

or the equivalent

```c
// Provided by VK_KHR_get_physical_device_properties2
typedef VkImageFormatProperties2 VkImageFormatProperties2KHR;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure. The `pNext` chain of `VkImageFormatProperties2` is used to allow the specification of additional capabilities to be returned from `vkGetPhysicalDeviceImageFormatProperties2`.
- **imageFormatProperties** is a `VkImageFormatProperties` structure in which capabilities are returned.

If the combination of parameters to `vkGetPhysicalDeviceImageFormatProperties2` is not supported by the implementation for use in `vkCreateImage`, then all members of `imageFormatProperties` will be filled with zero.

---

**Note**
Filling `imageFormatProperties` with zero for unsupported formats is an exception to the usual rule that output structures have undefined contents on error. This exception was unintentional, but is preserved for backwards compatibility. This exception only applies to `imageFormatProperties`, not `sType`, `pNext`, or any structures chained from `pNext`.

Valid Usage (Implicit)

- VUID-VkImageFormatProperties2-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_IMAGE_FORMAT_PROPERTIES_2`

- VUID-VkImageFormatProperties2-pNext-pNext
  Each `pNext` member of any structure (including this one) in the `pNext` chain must be either `NULL` or a pointer to a valid instance of `VkAndroidHardwareBufferUsageANDROID`, `VkExternalImageFormatProperties`, `VkFilterCubicImageViewImageFormatPropertiesEXT`, `VkImageCompressionPropertiesEXT`, `VkSamplerYcbcrConversionImageFormatProperties`, or `VkTextureLODGatherFormatPropertiesAMD`

- VUID-VkImageFormatProperties2-sType-unique
  The `sType` value of each struct in the `pNext` chain must be unique

To determine if texture gather functions that take explicit LOD and/or bias argument values can be used with a given image format, add a `VkTextureLODGatherFormatPropertiesAMD` structure to the `pNext` chain of the `VkImageFormatProperties2` structure in a call to `vkGetPhysicalDeviceImageFormatProperties2`.

The `VkTextureLODGatherFormatPropertiesAMD` structure is defined as:

```c
// Provided by VK_AMD_texture_gather_bias_lod
typedef struct VkTextureLODGatherFormatPropertiesAMD {
    VkStructureType sType;
    void* pNext;
    VkBool32 supportsTextureGatherLODBiasAMD;
} VkTextureLODGatherFormatPropertiesAMD;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `supportsTextureGatherLODBiasAMD` tells if the image format can be used with texture gather bias/LOD functions, as introduced by the `VK_AMD_texture_gather_bias_lod` extension. This field is set by the implementation. User-specified value is ignored.

Valid Usage (Implicit)

- VUID-VkTextureLODGatherFormatPropertiesAMD-sType-sType
  `sType` must be `VK_STRUCTURE_TYPE_TEXTURE_LOD_GATHER_FORMAT_PROPERTIES_AMD`
To determine the image capabilities compatible with an external memory handle type, add a
VkPhysicalDeviceExternalImageFormatInfo structure to the pNext chain of the
VkPhysicalDeviceImageFormatInfo2 structure and a VkExternalImageFormatProperties structure to
the pNext chain of the VkImageFormatProperties2 structure.

The VkPhysicalDeviceExternalImageFormatInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalImageFormatInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalImageFormatInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkPhysicalDeviceExternalImageFormatInfo
        VkPhysicalDeviceExternalImageFormatInfoKHR;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **handleType** is a VkExternalMemoryHandleTypeFlagBits value specifying the memory handle
type that will be used with the memory associated with the image.

If **handleType** is 0, vkGetPhysicalDeviceImageFormatProperties2 will behave as if
VkPhysicalDeviceExternalImageFormatInfo was not present, and
VkExternalImageFormatProperties will be ignored.

If **handleType** is not compatible with the **format**, **type**, **tiling**, **usage**, and **flags** specified in
VkPhysicalDeviceImageFormatInfo2, then vkGetPhysicalDeviceImageFormatProperties2 returns
VK_ERROR_FORMAT_NOT_SUPPORTED.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceExternalImageFormatInfo-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_IMAGE_FORMAT_INFO

- VUID-VkPhysicalDeviceExternalImageFormatInfo-handleType-parameter
  If **handleType** is not 0, **handleType** must be a valid VkExternalMemoryHandleTypeFlagBits
  value

Possible values of VkPhysicalDeviceExternalImageFormatInfo::**handleType**, specifying an external
memory handle type, are:

```c
// Provided by VK_VERSION_1_1
```
typedef enum VkExternalMemoryHandleTypeFlagBits {
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT = 0x00000008,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT = 0x00000010,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT = 0x00000020,
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT = 0x00000040,
    // Provided by VK_EXT_external_memory_dma_buf
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT = 0x00000200,
    // Provided by VK_ANDROID_external_memory_android_hardware_buffer
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID = 0x00000400,
    // Provided by VK_EXT_external_memory_host
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT = 0x00000080,
    // Provided by VK_EXT_external_memory_host
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT = 0x00000100,
    // Provided by VK_FUCHSIA_external_memory
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA = 0x00000800,
    // Provided by VK_NV_external_memory_rdma
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV = 0x00001000,
    // Provided by VK_QNX_external_memory_screen_buffer
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX = 0x00004000,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT,
    // Provided by VK_KHR_external_memory_capabilities
    VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT_KHR = VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT,
} VkExternalMemoryHandleTypeFlagBits;

or the equivalent

// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryHandleTypeFlagBits VkExternalMemoryHandleTypeFlagBitsKHR;
• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_FD_BIT** specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it **must** be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT** specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT** specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying memory resource represented by its Vulkan memory object, and will therefore become invalid when all Vulkan memory objects associated with it are destroyed.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT** specifies an NT handle returned by `IDXGIResource1::CreateSharedHandle` referring to a Direct3D 10 or 11 texture resource. It owns a reference to the memory used by the Direct3D resource.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT** specifies a global share handle returned by `IDXGIResource::GetSharedHandle` referring to a Direct3D 10 or 11 texture resource. It does not own a reference to the underlying Direct3D resource, and will therefore become invalid when all Vulkan memory objects and Direct3D resources associated with it are destroyed.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_HEAP_BIT** specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 heap resource. It owns a reference to the resources used by the Direct3D heap.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT** specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 committed resource. It owns a reference to the memory used by the Direct3D resource.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT** specifies a host pointer returned by a host memory allocation command. It does not own a reference to the underlying memory resource, and will therefore become invalid if the host memory is freed.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT** specifies a host pointer to host mapped foreign memory. It does not own a reference to the underlying memory resource, and will therefore become invalid if the foreign memory is unmapped or otherwise becomes no longer available.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT** is a file descriptor for a Linux dma_buf. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID** specifies an AHardwareBuffer object defined by the Android NDK. See Android Hardware Buffers for more details of this handle type.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_ZIRCON_VMO_BIT_FUCHSIA** is a Zircon handle to a virtual memory object.

• **VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV** is a handle to an allocation accessible by
remote devices. It owns a reference to the underlying memory resource represented by its Vulkan memory object.

- **VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX** specifies a `screen_buffer` object defined by the QNX SDP. See QNX Screen Buffer for more details of this handle type.
Some external memory handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

### Table 83. External memory handle types compatibility

</table>

**Note**

The above table does not restrict the drivers and devices with which VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT and VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT may be shared, as these handle types inherently mean memory that does not come from the same device, as they import memory from the host or a foreign device, respectively.

**Note**

Even though the above table does not restrict the drivers and devices with which
VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT may be shared, query mechanisms exist in the Vulkan API that prevent the import of incompatible dma-bufs (such as `vkGetMemoryFdPropertiesKHR`) and that prevent incompatible usage of dma-bufs (such as `VkPhysicalDeviceExternalBufferInfo` and `VkPhysicalDeviceExternalImageFormatInfo`).

```
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalMemoryHandleTypeFlags;
```

or the equivalent

```
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalMemoryHandleTypeFlags VkExternalMemoryHandleTypeFlagsKHR;
```

`VkExternalMemoryHandleTypeFlags` is a bitmask type for setting a mask of zero or more `VkExternalMemoryHandleTypeFlagBits`.

The `VkExternalImageFormatProperties` structure is defined as:

```
// Provided by VK_VERSION_1_1
typedef struct VkExternalImageFormatProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalMemoryProperties externalMemoryProperties;
} VkExternalImageFormatProperties;
```

or the equivalent

```
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalImageFormatProperties VkExternalImageFormatPropertiesKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `externalMemoryProperties` is a `VkExternalMemoryProperties` structure specifying various capabilities of the external handle type when used with the specified image creation parameters.

**Valid Usage (Implicit)**

- VUID-VkExternalImageFormatProperties-sType-sType
  
  `sType must be VK_STRUCTURE_TYPE_EXTERNAL_IMAGE_FORMAT_PROPERTIES`

The `VkExternalMemoryProperties` structure is defined as:
typedef struct VkExternalMemoryProperties {
    VkExternalMemoryFeatureFlags externalMemoryFeatures;
    VkExternalMemoryHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalMemoryHandleTypeFlags compatibleHandleTypes;
} VkExternalMemoryProperties;

or the equivalent

typedef VkExternalMemoryProperties VkExternalMemoryPropertiesKHR;

- `externalMemoryFeatures` is a bitmask of `VkExternalMemoryFeatureFlagBits` specifying the features of `handleType`.
- `exportFromImportedHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying which types of imported handle `handleType` can be exported from.
- `compatibleHandleTypes` is a bitmask of `VkExternalMemoryHandleTypeFlagBits` specifying handle types which can be specified at the same time as `handleType` when creating an image compatible with external memory.

`compatibleHandleTypes` must include at least `handleType`. Inclusion of a handle type in `compatibleHandleTypes` does not imply the values returned in `VkImageFormatProperties2` will be the same when `VkPhysicalDeviceExternalImageFormatInfo::handleType` is set to that type. The application is responsible for querying the capabilities of all handle types intended for concurrent use in a single image and intersecting them to obtain the compatible set of capabilities.

Bits which may be set in `VkExternalMemoryProperties::externalMemoryFeatures`, specifying features of an external memory handle type, are:

```c
typedef enum VK_VERSION_1_1
    VkExternalMemoryFeatureFlagBits {
        VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT = 0x00000001,
        VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT = 0x00000002,
        VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT = 0x00000004,
        // Provided by VK_KHR_external_memory_capabilities
        VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT_KHR =
            VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT,
        // Provided by VK_KHR_external_memory_capabilities
        VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT_KHR =
            VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT,
        // Provided by VK_KHR_external_memory_capabilities
        VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT_KHR =
            VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT,
    } VkExternalMemoryFeatureFlagBits;
```

or the equivalent
VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT specifies that images or buffers created with the specified parameters and handle type must use the mechanisms defined by VkMemoryDedicatedRequirements and VkMemoryDedicatedAllocateInfo to create (or import) a dedicated allocation for the image or buffer.

VK_EXTERNAL_MEMORY_FEATURE_EXPORTABLE_BIT specifies that handles of this type can be exported from Vulkan memory objects.

VK_EXTERNAL_MEMORY_FEATURE_IMPORTABLE_BIT specifies that handles of this type can be imported as Vulkan memory objects.

Because their semantics in external APIs roughly align with that of an image or buffer with a dedicated allocation in Vulkan, implementations are required to report VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT for the following external handle types:

- VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_BIT
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_TEXTURE_KMT_BIT
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D12_RESOURCE_BIT
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID for images only
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX for images only

Implementations must not report VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT for buffers with external handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID. Implementations must not report VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT for buffers with external handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX. Implementations must not report VK_EXTERNAL_MEMORY_FEATURE_DEDICATED_ONLY_BIT for images or buffers with external handle type VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT, or VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT.

VkExternalMemoryFeatureFlags is a bitmask type for setting a mask of zero or more VkExternalMemoryFeatureFlagBits.

To query the image capabilities that are compatible with a Linux DRM format modifier, set VkPhysicalDeviceImageFormatInfo2::tiling to VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT and add a VkPhysicalDeviceImageDrmFormatModifierInfoEXT structure to the pNext chain of
The `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_image_drm_format_modifier
typedef struct VkPhysicalDeviceImageDrmFormatModifierInfoEXT {
    VkStructureType      sType;
    const void*          pNext;
    uint64_t              drmFormatModifier;
    VkSharingMode        sharingMode;
    uint32_t              queueFamilyIndexCount;
    const uint32_t*       pQueueFamilyIndices;
} VkPhysicalDeviceImageDrmFormatModifierInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `drmFormatModifier` is the image's Linux DRM format modifier, corresponding to `VkImageDrmFormatModifierExplicitCreateInfoEXT::modifier` or to `VkImageDrmFormatModifierListCreateInfoEXT::pModifiers`.
- `sharingMode` specifies how the image will be accessed by multiple queue families.
- `queueFamilyIndexCount` is the number of entries in the `pQueueFamilyIndices` array.
- `pQueueFamilyIndices` is a pointer to an array of `queueFamilyIndexCount` `uint32_t` values.

If the `drmFormatModifier` is incompatible with the parameters specified in `VkPhysicalDeviceImageFormatInfo2` and its `pNext` chain, then `vkGetPhysicalDeviceImageFormatProperties2` returns `VK_ERROR_FORMAT_NOT_SUPPORTED`. The implementation must support the query of any `drmFormatModifier`, including unknown and invalid modifier values.

### Valid Usage

- **VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02314**
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `pQueueFamilyIndices` must be a valid pointer to an array of `queueFamilyIndexCount` `uint32_t` values.

- **VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02315**
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, then `queueFamilyIndexCount` must be greater than 1.

- **VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-02316**
  If `sharingMode` is `VK_SHARING_MODE_CONCURRENT`, each element of `pQueueFamilyIndices` must be unique and must be less than the `pQueueFamilyPropertyCount` returned by `vkGetPhysicalDeviceQueueFamilyProperties2` for the `physicalDevice` that was used to create device.
Valid Usage (Implicit)

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_DRM_FORMAT_MODIFIER_INFO_EXT**

- VUID-VkPhysicalDeviceImageDrmFormatModifierInfoEXT-sharingMode-parameter
  
  **sharingMode** must be a valid **VkSharingMode** value

To determine the number of combined image samplers required to support a multi-planar format, add **VkSamplerYcbcrConversionImageFormatProperties** to the **pNext** chain of the **VkImageFormatProperties2** structure in a call to **vkGetPhysicalDeviceImageFormatProperties2**.

The **VkSamplerYcbcrConversionImageFormatProperties** structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkSamplerYcbcrConversionImageFormatProperties {
    VkStructureType sType;
    void* pNext;
    uint32_t combinedImageSamplerDescriptorCount;
} VkSamplerYcbcrConversionImageFormatProperties;
```

or the equivalent

```c
// Provided by VK_KHR_sampler_ycbcr_conversion
typedef VkSamplerYcbcrConversionImageFormatProperties
VkSamplerYcbcrConversionImageFormatPropertiesKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **combinedImageSamplerDescriptorCount** is the number of combined image sampler descriptors that the implementation uses to access the format.

Valid Usage (Implicit)

- VUID-VkSamplerYcbcrConversionImageFormatProperties-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_SAMPLER_YCBCR_CONVERSION_IMAGE_FORMAT_PROPERTIES**

**combinedImageSamplerDescriptorCount** is a number between 1 and the number of planes in the format. A descriptor set layout binding with immutable Y’C₆C₇R conversion samplers will have a maximum **combinedImageSamplerDescriptorCount** which is the maximum across all formats supported by its samplers of the **combinedImageSamplerDescriptorCount** for each format. Descriptor sets with that layout will internally use that maximum **combinedImageSamplerDescriptorCount** descriptors for each descriptor in the binding. This expanded number of descriptors will be consumed from the descriptor pool when a descriptor set is allocated, and counts towards the
maxDescriptorSetSamplers, maxDescriptorSetSampledImages, maxPerStageDescriptorSamplers, and maxPerStageDescriptorSampledImages limits.

### Note

All descriptors in a binding use the same maximum combinedImageSamplerDescriptorCount descriptors to allow implementations to use a uniform stride for dynamic indexing of the descriptors in the binding.

For example, consider a descriptor set layout binding with two descriptors and immutable samplers for multi-planar formats that have VkSamplerYcbcrConversionImageFormatProperties::combinedImageSamplerDescriptorCount values of 2 and 3 respectively. There are two descriptors in the binding and the maximum combinedImageSamplerDescriptorCount is 3, so descriptor sets with this layout consume 6 descriptors from the descriptor pool. To create a descriptor pool that allows allocating four descriptor sets with this layout, descriptorCount must be at least 24.

To obtain optimal Android hardware buffer usage flags for specific image creation parameters, add a VkAndroidHardwareBufferUsageANDROID structure to the pNext chain of a VkImageFormatProperties2 structure passed to vkGetPhysicalDeviceImageFormatProperties2. This structure is defined as:

```c
// Provided by VK_ANDROID_external_memory_android_hardware_buffer
typedef struct VkAndroidHardwareBufferUsageANDROID {
    VkStructureType sType;
    void* pNext;
    uint64_t androidHardwareBufferUsage;
} VkAndroidHardwareBufferUsageANDROID;
```

- **sType** is a VkStructureType value identifying this structure.
- **pNext** is NULL or a pointer to a structure extending this structure.
- **androidHardwareBufferUsage** returns the Android hardware buffer usage flags.

The androidHardwareBufferUsage field must include Android hardware buffer usage flags listed in the AHardwareBuffer Usage Equivalence table when the corresponding Vulkan image usage or image creation flags are included in the usage or flags fields of VkPhysicalDeviceImageFormatInfo2. It must include at least one GPU usage flag (AHARDWAREBUFFER_USAGE_GPU_*), even if none of the corresponding Vulkan usages or flags are requested.

### Note

Requiring at least one GPU usage flag ensures that Android hardware buffer memory will be allocated in a memory pool accessible to the Vulkan implementation, and that specializing the memory layout based on usage flags does not prevent it from being compatible with Vulkan. Implementations may avoid unnecessary restrictions caused by this requirement by using vendor usage flags to indicate that only the Vulkan uses indicated in VkImageFormatProperties2...
Valid Usage (Implicit)

• VUID-VkAndroidHardwareBufferUsageANDROID-sType-sType
  sType must be VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_USAGE_ANDROID

To determine if cubic filtering can be used with a given image format and a given image view type add a VkPhysicalDeviceImageViewImageFormatInfoEXT structure to the pNext chain of the VkPhysicalDeviceImageFormatInfo2 structure, and a VkFilterCubicImageViewImageFormatPropertiesEXT structure to the pNext chain of the VkImageFormatProperties2 structure.

The VkPhysicalDeviceImageViewImageFormatInfoEXT structure is defined as:

```c
// Provided by VK_EXT_filter_cubic
typedef struct VkPhysicalDeviceImageViewImageFormatInfoEXT {
    VkStructureType sType;
    void* pNext;
    VkImageViewType imageViewType;
} VkPhysicalDeviceImageViewImageFormatInfoEXT;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• imageViewType is a VkImageViewType value specifying the type of the image view.

Valid Usage (Implicit)

• VUID-VkPhysicalDeviceImageViewImageFormatInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_IMAGE_FORMAT_INFO_EXT

• VUID-VkPhysicalDeviceImageViewImageFormatInfoEXT-imageViewType-parameter
  imageViewType must be a valid VkImageViewType value

The VkFilterCubicImageViewImageFormatPropertiesEXT structure is defined as:

```c
// Provided by VK_EXT_filter_cubic
typedef struct VkFilterCubicImageViewImageFormatPropertiesEXT {
    VkStructureType sType;
    void* pNext;
    VkBool32 filterCubic;
    VkBool32 filterCubicMinmax;
} VkFilterCubicImageViewImageFormatPropertiesEXT;
```

• sType is a VkStructureType value identifying this structure.
• `pNext` is NULL or a pointer to a structure extending this structure.

• `filterCubic` tells if image format, image type and image view type can be used with cubic filtering. This field is set by the implementation. User-specified value is ignored.

• `filterCubicMinMax` tells if image format, image type and image view type can be used with cubic filtering and minmax filtering. This field is set by the implementation. User-specified value is ignored.

---

Valid Usage (Implicit)

- VUID-VkFilterCubicImageViewImageFormatPropertiesEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_FILTER_CUBIC_IMAGE_VIEW_IMAGE_FORMAT_PROPERTIES_EXT

---

Valid Usage

- VUID-VkFilterCubicImageViewImageFormatPropertiesEXT-pNext-02627
  If the `pNext` chain of the `VkImageFormatProperties2` structure includes a `VkFilterCubicImageViewImageFormatPropertiesEXT` structure, the `pNext` chain of the `VkPhysicalDeviceImageFormatInfo2` structure must include a `VkPhysicalDeviceImageViewImageFormatInfoEXT` structure with an `imageViewType` that is compatible with `imageType`

---

48.1.1. Supported Sample Counts

`vkGetPhysicalDeviceImageFormatProperties` returns a bitmask of `VkSampleCountFlagBits` in `sampleCounts` specifying the supported sample counts for the image parameters.

`sampleCounts` will be set to VK_SAMPLE_COUNT_1_BIT if at least one of the following conditions is true:

- tiling is VK_IMAGE_TILING_LINEAR
- type is not VK_IMAGE_TYPE_2D
- flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT
- Neither the VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT flag nor the VK_FORMAT_FEATURE_DEPTH_STENCIL_ATTACHMENT_BIT flag in `VkFormatProperties::optimalTilingFeatures` returned by `vkGetPhysicalDeviceFormatProperties` is set
- `VkPhysicalDeviceExternalImageFormatInfo::handleType` is an external handle type for which multisampled image support is not required.
- format is one of the formats that require a sampler Y'CbCr conversion
- usage contains VK_IMAGE_USAGE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- usage contains VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT

Otherwise, the bits set in `sampleCounts` will be the sample counts supported for the specified values of `usage` and `format`. For each bit set in `usage`, the supported sample counts relate to the limits in `VkPhysicalDeviceLimits` as follows:

---

3622
If usage includes VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT and format is a floating- or fixed-point color format, a superset of VkPhysicalDeviceLimits::framebufferColorSampleCounts

If usage includes VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT and format is an integer format, a superset of VkPhysicalDeviceVulkan12Properties::framebufferIntegerColorSampleCounts

If usage includes VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and format includes a depth component, a superset of VkPhysicalDeviceLimits::framebufferDepthSampleCounts

If usage includes VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and format includes a stencil component, a superset of VkPhysicalDeviceLimits::framebufferStencilSampleCounts

If usage includes VK_IMAGE_USAGE_DEPTH_STENCIL_ATTACHMENT_BIT, and format is an integer format, a superset of VkPhysicalDeviceLimits::framebufferIntegerColorSampleCounts

If usage includes VK_IMAGE_USAGE_SAMPLED_BIT, and format includes a color component, a superset of VkPhysicalDeviceLimits::sampledImageColorSampleCounts

If usage includes VK_IMAGE_USAGE_SAMPLED_BIT, and format includes a depth component, a superset of VkPhysicalDeviceLimits::sampledImageDepthSampleCounts

If usage includes VK_IMAGE_USAGE_SAMPLED_BIT, and format is an integer format, a superset of VkPhysicalDeviceLimits::sampledImageIntegerSampleCounts

If usage includes VK_IMAGE_USAGE_STORAGE_BIT, a superset of VkPhysicalDeviceLimits::storageImageSampleCounts

If multiple bits are set in usage, sampleCounts will be the intersection of the per-usage values described above.

If none of the bits described above are set in usage, then there is no corresponding limit in VkPhysicalDeviceLimits. In this case, sampleCounts must include at least VK_SAMPLE_COUNT_1_BIT.

### 48.1.2. Allowed Extent Values Based On Image Type

Implementations may support extent values larger than the required minimum/maximum values for certain types of images. VkImageFormatProperties::maxExtent for each type is subject to the constraints below.

**Note**
Implementations must support images with dimensions up to the required minimum/maximum values for all types of images. It follows that the query for additional capabilities must return extent values that are at least as large as the required values.

For VK_IMAGE_TYPE_1D:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimension1D
- maxExtent.height = 1
- maxExtent.depth = 1

For VK_IMAGE_TYPE_2D when flags does not contain VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimension2D
- maxExtent.height ≥ VkPhysicalDeviceLimits::maxImageDimension2D
maxExtent.depth = 1

For VK_IMAGE_TYPE_2D when flags contains VK_IMAGE_CREATE_CUBE_COMPATIBLE_BIT:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimensionCube
- maxExtent.height ≥ VkPhysicalDeviceLimits::maxImageDimensionCube
- maxExtent.depth = 1

For VK_IMAGE_TYPE_3D:

- maxExtent.width ≥ VkPhysicalDeviceLimits::maxImageDimension3D
- maxExtent.height ≥ VkPhysicalDeviceLimits::maxImageDimension3D
- maxExtent.depth ≥ VkPhysicalDeviceLimits::maxImageDimension3D

48.2. Additional Buffer Capabilities

To query the external handle types supported by buffers, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalBufferProperties(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
    VkExternalBufferProperties* pExternalBufferProperties);
```

or the equivalent command

```c
// Provided by VK_KHR_external_memory_capabilities
void vkGetPhysicalDeviceExternalBufferPropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalBufferInfo* pExternalBufferInfo,
    VkExternalBufferProperties* pExternalBufferProperties);
```

- physicalDevice is the physical device from which to query the buffer capabilities.
- pExternalBufferInfo is a pointer to a VkPhysicalDeviceExternalBufferInfo structure describing the parameters that would be consumed by vkCreateBuffer.
- pExternalBufferProperties is a pointer to a VkExternalBufferProperties structure in which capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalBufferProperties-physicalDevice-parameter
  physicalDevice must be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceExternalBufferProperties-pExternalBufferInfo-parameter
  pExternalBufferInfo must be a valid pointer to a valid
**VkPhysicalDeviceExternalBufferInfo** structure

- VUID-vkGetPhysicalDeviceExternalBufferProperties-pExternalBufferProperties-parameter
  
  **pExternalBufferProperties** must be a valid pointer to a **VkExternalBufferProperties** structure

The **VkPhysicalDeviceExternalBufferInfo** structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalBufferInfo {
    VkStructureType sType;
    const void* pNext;
    VkBufferCreateFlags flags;
    VkBufferUsageFlags usage;
    VkExternalMemoryHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalBufferInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkPhysicalDeviceExternalBufferInfo VkPhysicalDeviceExternalBufferInfoKHR;
```

- **sType** is a **VkStructureType** value identifying this structure.
- **pNext** is **NULL** or a pointer to a structure extending this structure.
- **flags** is a bitmask of **VkBufferCreateFlagBits** describing additional parameters of the buffer, corresponding to **VkBufferCreateInfo::flags**.
- **usage** is a bitmask of **VkBufferUsageFlagBits** describing the intended usage of the buffer, corresponding to **VkBufferCreateInfo::usage**.
- **handleType** is a **VkExternalMemoryHandleTypeFlagBits** value specifying the memory handle type that will be used with the memory associated with the buffer.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceExternalBufferInfo-sType-sType
  
  **sType** must be **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_BUFFER_INFO**

- VUID-VkPhysicalDeviceExternalBufferInfo-pNext-pNext
  
  **pNext** must be **NULL**

- VUID-VkPhysicalDeviceExternalBufferInfo-flags-parameter
  
  **flags** must be a valid combination of **VkBufferCreateFlagBits** values

- VUID-VkPhysicalDeviceExternalBufferInfo-usage-parameter
  
  **usage** must be a valid combination of **VkBufferUsageFlagBits** values

- VUID-VkPhysicalDeviceExternalBufferInfo-usage-requiredbitmask
usage must not be 0

- VUID-VkPhysicalDeviceExternalBufferInfo-handleType-parameter
  handleType must be a valid VkExternalMemoryHandleTypeFlagBits value

The VkExternalBufferProperties structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkExternalBufferProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalMemoryProperties externalMemoryProperties;
} VkExternalBufferProperties;
```

or the equivalent

```c
// Provided by VK_KHR_external_memory_capabilities
typedef VkExternalBufferProperties VkExternalBufferPropertiesKHR;
```

- sType is a VkStructureType value identifying this structure.
- pNext is NULL or a pointer to a structure extending this structure.
- externalMemoryProperties is a VkExternalMemoryProperties structure specifying various capabilities of the external handle type when used with the specified buffer creation parameters.

Valid Usage (Implicit)

- VUID-VkExternalBufferProperties-sType-sType
  sType must be VK_STRUCTURE_TYPE_EXTERNAL_BUFFER_PROPERTIES

- VUID-VkExternalBufferProperties-pNext-pNext
  pNext must be NULL

### 48.3. Optional Semaphore Capabilities

Semaphores may support import and export of their payload to external handles. To query the external handle types supported by semaphores, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalSemaphoreProperties(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalSemaphoreInfo* pExternalSemaphoreInfo,
    VkExternalSemaphoreProperties* pExternalSemaphoreProperties);
```
or the equivalent command

```c
// Provided by VK_KHR_external_semaphore_capabilities
void vkGetPhysicalDeviceExternalSemaphorePropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalSemaphoreInfo* pExternalSemaphoreInfo,
    VkExternalSemaphoreProperties* pExternalSemaphoreProperties);
```

- `physicalDevice` is the physical device from which to query the semaphore capabilities.
- `pExternalSemaphoreInfo` is a pointer to a `VkPhysicalDeviceExternalSemaphoreInfo` structure describing the parameters that would be consumed by `vkCreateSemaphore`.
- `pExternalSemaphoreProperties` is a pointer to a `VkExternalSemaphoreProperties` structure in which capabilities are returned.

### Valid Usage (Implicit)

- **VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-physicalDevice-parameter**
  - `physicalDevice` must be a valid `VkPhysicalDevice` handle
- **VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-pExternalSemaphoreInfo-parameter**
  - `pExternalSemaphoreInfo` must be a valid pointer to a valid `VkPhysicalDeviceExternalSemaphoreInfo` structure
- **VUID-vkGetPhysicalDeviceExternalSemaphoreProperties-pExternalSemaphoreProperties-parameter**
  - `pExternalSemaphoreProperties` must be a valid pointer to a `VkExternalSemaphoreProperties` structure

The `VkPhysicalDeviceExternalSemaphoreInfo` structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalSemaphoreInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalSemaphoreHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalSemaphoreInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_semaphore_capabilities
typedef VkPhysicalDeviceExternalSemaphoreInfo
VkPhysicalDeviceExternalSemaphoreInfoKHR;
```

- `sType` is a `VkStructureType` value identifying this structure.
• $p\text{Next}$ is NULL or a pointer to a structure extending this structure.

• $\text{handleType}$ is a $\text{VkExternalSemaphoreHandleTypeFlagBits}$ value specifying the external semaphore handle type for which capabilities will be returned.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-sType-sType
  
  $s\text{Type}$ must be $\text{VK\_STRUCTURE\_TYPE\_PHYSICAL\_DEVICE\_EXTERNAL\_SEMAPHORE\_INFO}$

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-pNext-pNext
  
  $p\text{Next}$ must be NULL or a pointer to a valid instance of $\text{VkSemaphoreTypeCreateInfo}$

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-sType-unique
  
  The $s\text{Type}$ value of each struct in the $p\text{Next}$ chain must be unique

- VUID-VkPhysicalDeviceExternalSemaphoreInfo-handleType-parameter
  
  $\text{handleType}$ must be a valid $\text{VkExternalSemaphoreHandleTypeFlagBits}$ value

Bits which may be set in $\text{VkPhysicalDeviceExternalSemaphoreInfo::handleType}$, specifying an external semaphore handle type, are:

```c
// Provided by VK\_VERSION\_1\_1
typedef enum $\text{VkExternalSemaphoreHandleTypeFlagBits}$ {
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_FD\_BIT}$ = 0x00000001,
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_BIT}$ = 0x00000002,
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_KMT\_BIT}$ = 0x00000004,
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_D3D12\_FENCE\_BIT}$ = 0x00000008,
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_SYNC\_FD\_BIT}$ = 0x00000010,
    // Provided by VK\_FUCHSIA\_external\_ semaphore
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_ZIRCON\_EVENT\_BIT\_FUCHSIA}$ = 0x00000080,
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_D3D11\_FENCE\_BIT}$ =
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_D3D12\_FENCE\_BIT}$,
    // Provided by VK\_KHR\_external\_ semaphore\_ capabilities
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_FD\_BIT\_KHR}$ =
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_FD\_BIT}$,
    // Provided by VK\_KHR\_external\_ semaphore\_ capabilities
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_BIT\_KHR}$ =
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_BIT}$,
    // Provided by VK\_KHR\_external\_ semaphore\_ capabilities
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_KMT\_BIT\_KHR}$ =
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_OPAQUE\_WIN32\_KMT\_BIT}$,
    // Provided by VK\_KHR\_external\_ semaphore\_ capabilities
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_D3D12\_FENCE\_BIT\_KHR}$ =
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_D3D12\_FENCE\_BIT}$,
    // Provided by VK\_KHR\_external\_ semaphore\_ capabilities
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_SYNC\_FD\_BIT\_KHR}$ =
    $\text{VK\_EXTERNAL\_SEMAPHORE\_HANDLE\_TYPE\_SYNC\_FD\_BIT}$,
} $\text{VkExternalSemaphoreHandleTypeFlagBits}$;
```
or the equivalent

```c
// Provided by VK_KHR_external_semaphore_capabilities
typedef VkExternalSemaphoreHandleTypeFlagBits
    VkExternalSemaphoreHandleTypeFlagBitsKHR;
```

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_FD_BIT** specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it **must** be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying synchronization primitive represented by its Vulkan semaphore object.

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT** specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It **must** be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying synchronization primitive represented by its Vulkan semaphore object.

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT** specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying synchronization primitive represented by its Vulkan semaphore object, and will therefore become invalid when all Vulkan semaphore objects associated with it are destroyed.

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT** specifies an NT handle returned by `ID3D12Device::CreateSharedHandle` referring to a Direct3D 12 fence, or `ID3D11Device5::CreateFence` referring to a Direct3D 11 fence. It owns a reference to the underlying synchronization primitive associated with the Direct3D fence.

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D11_FENCE_BIT** is an alias of **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_D3D12_FENCE_BIT** with the same meaning. It is provided for convenience and code clarity when interacting with D3D11 fences.

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT** specifies a POSIX file descriptor handle to a Linux Sync File or Android Fence object. It can be used with any native API accepting a valid sync file or fence as input. It owns a reference to the underlying synchronization primitive associated with the file descriptor. Implementations which support importing this handle type **must** accept any type of sync or fence FD supported by the native system they are running on.

- **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_ZIRCON_EVENT_BIT_FUCHSIA** specifies a handle to a Zircon event object. It can be used with any native API that accepts a Zircon event handle. Zircon event handles are created with `ZX_RIGHTS_BASIC` and `ZX_RIGHTS_SIGNAL` rights. Vulkan on Fuchsia uses only the `ZX_EVENT_SIGNALED` bit when signaling or waiting.

**Note**

Handles of type **VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_SYNC_FD_BIT** generated by the implementation may represent either Linux Sync Files or Android Fences at the implementation’s discretion. Applications **should** only use operations defined for both types of file descriptors, unless they know via means external to Vulkan the type of the file descriptor, or are prepared to deal with the system-defined
operation failures resulting from using the wrong type.
Some external semaphore handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

Table 84. External semaphore handle types compatibility

// Provided by VK_VERSION_1_1

typedef VkFlags VkExternalSemaphoreHandleTypeFlags;

or the equivalent

// Provided by VK_KHR_external_semaphore_capabilities

typedef VkExternalSemaphoreHandleTypeFlags VkExternalSemaphoreHandleTypeFlagsKHR;

VkExternalSemaphoreHandleTypeFlags is a bitmask type for setting a mask of zero or more VkExternalSemaphoreHandleTypeFlagBits.

The VkExternalSemaphoreProperties structure is defined as:

// Provided by VK_VERSION_1_1

typedef struct VkExternalSemaphoreProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalSemaphoreHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalSemaphoreHandleTypeFlags compatibleHandleTypes;
    VkExternalSemaphoreFeatureFlags externalSemaphoreFeatures;
} VkExternalSemaphoreProperties;

or the equivalent

// Provided by VK_KHR_external_semaphore_capabilities

typedef VkExternalSemaphoreProperties VkExternalSemaphorePropertiesKHR;
• **sType** is a `VkStructureType` value identifying this structure.

• **pNext** is NULL or a pointer to a structure extending this structure.

• **exportFromImportedHandleTypes** is a bitmask of `VkExternalSemaphoreHandleTypeFlagBits` specifying which types of imported handle `handleType` can be exported from.

• **compatibleHandleTypes** is a bitmask of `VkExternalSemaphoreHandleTypeFlagBits` specifying handle types which can be specified at the same time as `handleType` when creating a semaphore.

• **externalSemaphoreFeatures** is a bitmask of `VkExternalSemaphoreFeatureFlagBits` describing the features of `handleType`.

If `handleType` is not supported by the implementation, then `VkExternalSemaphoreProperties::externalSemaphoreFeatures` will be set to zero.

### Valid Usage (Implicit)

- VUID-VkExternalSemaphoreProperties-sType-sType
  
  `sType` must be `VK_STRUCTURE_TYPE_EXTERNAL_SEMAPHORE_PROPERTIES`

- VUID-VkExternalSemaphoreProperties-pNext-pNext
  
  `pNext` must be NULL

Bits which may be set in `VkExternalSemaphoreProperties::externalSemaphoreFeatures`, specifying the features of an external semaphore handle type, are:

```c
// Provided by VK_VERSION_1_1
typedef enum VkExternalSemaphoreFeatureFlagBits {
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT = 0x00000001,
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT = 0x00000002,

    // Provided by VK_KHR_external_semaphore_capabilities
    VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT_KHR = VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT,
    VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT_KHR = VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT,
} VkExternalSemaphoreFeatureFlagBits;
```

or the equivalent

```c
// Provided by VK_KHR_external_semaphore_capabilities
typedef VkExternalSemaphoreFeatureFlagBits VkExternalSemaphoreFeatureFlagBitsKHR;
```

- **VK_EXTERNAL_SEMAPHORE_FEATURE_EXPORTABLE_BIT** specifies that handles of this type can be exported from Vulkan semaphore objects.

- **VK_EXTERNAL_SEMAPHORE_FEATURE_IMPORTABLE_BIT** specifies that handles of this type can be imported as Vulkan semaphore objects.
typedef VkFlags VkExternalSemaphoreFeatureFlags;

or the equivalent

typedef VkExternalSemaphoreFeatureFlags VkExternalSemaphoreFeatureFlagsKHR;

VkExternalSemaphoreFeatureFlags is a bitmask type for setting a mask of zero or more
VkExternalSemaphoreFeatureFlagBits.

48.4. Optional Fence Capabilities

Fences may support import and export of their payload to external handles. To query the external
handle types supported by fences, call:

```c
// Provided by VK_VERSION_1_1
void vkGetPhysicalDeviceExternalFenceProperties(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalFenceInfo* pExternalFenceInfo,
    VkExternalFenceProperties* pExternalFenceProperties);
```

or the equivalent command

```c
// Provided by VK_KHR_external_fence_capabilities
void vkGetPhysicalDeviceExternalFencePropertiesKHR(
    VkPhysicalDevice physicalDevice,
    const VkPhysicalDeviceExternalFenceInfo* pExternalFenceInfo,
    VkExternalFenceProperties* pExternalFenceProperties);
```

- **physicalDevice** is the physical device from which to query the fence capabilities.
- **pExternalFenceInfo** is a pointer to a VkPhysicalDeviceExternalFenceInfo structure describing the
  parameters that would be consumed by vkCreateFence.
- **pExternalFenceProperties** is a pointer to a VkExternalFenceProperties structure in which
  capabilities are returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceExternalFenceProperties-physicalDevice-parameter
  physicalDevice must be a valid VkPhysicalDevice handle
- VUID-vkGetPhysicalDeviceExternalFenceProperties-pExternalFenceInfo-parameter
  pExternalFenceInfo must be a valid pointer to a valid VkPhysicalDeviceExternalFenceInfo structure
• VUID-vkGetPhysicalDeviceExternalFenceProperties-pExternalFenceProperties-parameter

*pExternalFenceProperties must be a valid pointer to a VkExternalFenceProperties structure.

The VkPhysicalDeviceExternalFenceInfo structure is defined as:

```c
// Provided by VK_VERSION_1_1
typedef struct VkPhysicalDeviceExternalFenceInfo {
    VkStructureType sType;
    const void* pNext;
    VkExternalFenceHandleTypeFlagBits handleType;
} VkPhysicalDeviceExternalFenceInfo;
```

or the equivalent

```c
// Provided by VK_KHR_external_fence_capabilities
typedef VkPhysicalDeviceExternalFenceInfo VkPhysicalDeviceExternalFenceInfoKHR;
```

• **sType** is a VkStructureType value identifying this structure.
• **pNext** is NULL or a pointer to a structure extending this structure.
• **handleType** is a VkExternalFenceHandleTypeFlagBits value specifying an external fence handle type for which capabilities will be returned.

**Note**
Handles of type VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT generated by the implementation may represent either Linux Sync Files or Android Fences at the implementation's discretion. Applications should only use operations defined for both types of file descriptors, unless they know via means external to Vulkan the type of the file descriptor, or are prepared to deal with the system-defined operation failures resulting from using the wrong type.

**Valid Usage (Implicit)**

- VUID-VkPhysicalDeviceExternalFenceInfo-sType-sType
  
  *sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FENCE_INFO*

- VUID-VkPhysicalDeviceExternalFenceInfo-pNext-pNext
  
  *pNext must be NULL*

- VUID-VkPhysicalDeviceExternalFenceInfo-handleType-parameter
  
  *handleType must be a valid VkExternalFenceHandleTypeFlagBits value*

Bits which may be set in

- **VkPhysicalDeviceExternalFenceInfo::handleType**
• **VkExternalFenceProperties::exportFromImportedHandleTypes**

• **VkExternalFenceProperties::compatibleHandleTypes**

indicate external fence handle types, and are:

```c
typedef enum VkExternalFenceHandleTypeFlagBits {
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT = 0x00000001,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT = 0x00000002,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT = 0x00000004,
    VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT = 0x00000008,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT_KHR = VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT,
} VkExternalFenceHandleTypeFlagBits;
```

or the equivalent

```c
// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceHandleTypeFlagBits VkExternalFenceHandleTypeFlagBitsKHR;
```

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT** specifies a POSIX file descriptor handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the POSIX system calls `dup`, `dup2`, `close`, and the non-standard system call `dup3`. Additionally, it must be transportable over a socket using an `SCM_RIGHTS` control message. It owns a reference to the underlying synchronization primitive represented by its Vulkan fence object.

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT** specifies an NT handle that has only limited valid usage outside of Vulkan and other compatible APIs. It must be compatible with the functions `DuplicateHandle`, `CloseHandle`, `CompareObjectHandles`, `GetHandleInformation`, and `SetHandleInformation`. It owns a reference to the underlying synchronization primitive represented by its Vulkan fence object.

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT** specifies a global share handle that has only limited valid usage outside of Vulkan and other compatible APIs. It is not compatible with any native APIs. It does not own a reference to the underlying synchronization primitive represented by its Vulkan fence object, and will therefore become invalid when all Vulkan fence objects associated with it are destroyed.

• **VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT** specifies a POSIX file descriptor handle to a Linux
Sync File or Android Fence. It can be used with any native API accepting a valid sync file or fence as input. It owns a reference to the underlying synchronization primitive associated with the file descriptor. Implementations which support importing this handle type **must** accept any type of sync or fence FD supported by the native system they are running on.
Some external fence handle types can only be shared within the same underlying physical device and/or the same driver version, as defined in the following table:

<table>
<thead>
<tr>
<th>Handle type</th>
<th>VkPhysicalDeviceIDProperties::driverUUID</th>
<th>VkPhysicalDeviceIDProperties::deviceUUID</th>
</tr>
</thead>
<tbody>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT</td>
<td>Must match</td>
<td>Must match</td>
</tr>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT</td>
<td>Must match</td>

</tr>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT</td>
<td>Must match</td>
<td>Must match</td>
</tr>
<tr>
<td>VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT</td>
<td>No restriction</td>
<td>No restriction</td>
</tr>
</tbody>
</table>

// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalFenceHandleTypeFlags;

or the equivalent

// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceHandleTypeFlags VkExternalFenceHandleTypeFlagsKHR;

VkExternalFenceHandleTypeFlags is a bitmask type for setting a mask of zero or more VkExternalFenceHandleTypeFlagBits.

The VkExternalFenceProperties structure is defined as:

// Provided by VK_VERSION_1_1
typedef struct VKExternalFenceProperties {
    VkStructureType sType;
    void* pNext;
    VkExternalFenceHandleTypeFlags exportFromImportedHandleTypes;
    VkExternalFenceHandleTypeFlags compatibleHandleTypes;
    VkExternalFenceFeatureFlags externalFenceFeatures;
} VkExternalFenceProperties;

or the equivalent

// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceProperties VkExternalFencePropertiesKHR;

- exportFromImportedHandleTypes is a bitmask of VkExternalFenceHandleTypeFlagBits indicating which types of imported handle handleType can be exported from.
• **compatibleHandleTypes** is a bitmask of **VkExternalFenceHandleTypeFlagBits** specifying handle types which can be specified at the same time as **handleType** when creating a fence.

• **externalFenceFeatures** is a bitmask of **VkExternalFenceFeatureFlagBits** indicating the features of **handleType**.

If **handleType** is not supported by the implementation, then **VkExternalFenceProperties::externalFenceFeatures** will be set to zero.

---

**Valid Usage (Implicit)**

- VUID-VkExternalFenceProperties-sType-sType
  
  *sType* must be **VK_STRUCTURE_TYPE_EXTERNAL_FENCE_PROPERTIES**

- VUID-VkExternalFenceProperties-pNext-pNext
  
  *pNext* must be **NULL**

---

Bits which may be set in **VkExternalFenceProperties::externalFenceFeatures**, indicating features of a fence external handle type, are:

```cpp
// Provided by VK_VERSION_1_1
typedef enum VkExternalFenceFeatureFlagBits {
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT = 0x00000001,
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT = 0x00000002,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT_KHR =
    VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT,
    // Provided by VK_KHR_external_fence_capabilities
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT_KHR =
    VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT,
} VkExternalFenceFeatureFlagBits;
```

or the equivalent

```cpp
// Provided by VK_KHR_external_fence_capabilities
typedef VkExternalFenceFeatureFlagBits VkExternalFenceFeatureFlagBitsKHR;
```

- **VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT** specifies handles of this type can be exported from Vulkan fence objects.

- **VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT** specifies handles of this type can be imported to Vulkan fence objects.

```cpp
// Provided by VK_VERSION_1_1
typedef VkFlags VkExternalFenceFeatureFlags;
```

or the equivalent

---

3638
VkExternalFenceFeatureFlags is a bitmask type for setting a mask of zero or more VkExternalFenceFeatureFlagBits.

48.5. Timestamp Calibration Capabilities

To query the set of time domains for which a physical device supports timestamp calibration, call:

```c
// Provided by VK_EXT_calibrated_timestamps
VkResult vkGetPhysicalDeviceCalibrateableTimeDomainsEXT(
    VkPhysicalDevice physicalDevice,
    uint32_t* pTimeDomainCount,
    VkTimeDomainEXT* pTimeDomains);
```

- `physicalDevice` is the physical device from which to query the set of calibrateable time domains.
- `pTimeDomainCount` is a pointer to an integer related to the number of calibrateable time domains available or queried, as described below.
- `pTimeDomains` is either `NULL` or a pointer to an array of `VkTimeDomainEXT` values, indicating the supported calibrateable time domains.

If `pTimeDomains` is `NULL`, then the number of calibrateable time domains supported for the given `physicalDevice` is returned in `pTimeDomainCount`. Otherwise, `pTimeDomainCount` must point to a variable set by the user to the number of elements in the `pTimeDomains` array, and on return the variable is overwritten with the number of values actually written to `pTimeDomains`. If the value of `pTimeDomainCount` is less than the number of calibrateable time domains supported, at most `pTimeDomainCount` values will be written to `pTimeDomains`, and `VK_INCOMPLETE` will be returned instead of `VK_SUCCESS`, to indicate that not all the available time domains were returned.

Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsEXT-physicalDevice-parameter
  `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsEXT-pTimeDomainCount-parameter
  `pTimeDomainCount` must be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceCalibrateableTimeDomainsEXT-pTimeDomains-parameter
  If the value referenced by `pTimeDomainCount` is not 0, and `pTimeDomains` is not `NULL`, `pTimeDomains` must be a valid pointer to an array of `pTimeDomainCount` `VkTimeDomainEXT` values
Return Codes

Success
• VK_SUCCESS
• VK_INCOMPLETE

Failure
• VK_ERROR_OUT_OF_HOST_MEMORY
• VK_ERROR_OUT_OF_DEVICE_MEMORY
Chapter 49. Debugging

To aid developers in tracking down errors in the application's use of Vulkan, particularly in combination with an external debugger or profiler, debugging extensions may be available.

The VkObjectType enumeration defines values, each of which corresponds to a specific Vulkan handle type. These values can be used to associate debug information with a particular type of object through one or more extensions.

```c
// Provided by VK_VERSION_1_0
typedef enum VkObjectType {
    VK_OBJECT_TYPE_UNKNOWN = 0,
    VK_OBJECT_TYPE_INSTANCE = 1,
    VK_OBJECT_TYPE_PHYSICAL_DEVICE = 2,
    VK_OBJECT_TYPE_DEVICE = 3,
    VK_OBJECT_TYPE_QUEUE = 4,
    VK_OBJECT_TYPE_SEMAPHORE = 5,
    VK_OBJECT_TYPE_COMMAND_BUFFER = 6,
    VK_OBJECT_TYPE_FENCE = 7,
    VK_OBJECT_TYPE_DEVICE_MEMORY = 8,
    VK_OBJECT_TYPE_BUFFER = 9,
    VK_OBJECT_TYPE_IMAGE = 10,
    VK_OBJECT_TYPE_EVENT = 11,
    VK_OBJECT_TYPE_QUERY_POOL = 12,
    VK_OBJECT_TYPE_BUFFER_VIEW = 13,
    VK_OBJECT_TYPE_IMAGE_VIEW = 14,
    VK_OBJECT_TYPE_SHADER_MODULE = 15,
    VK_OBJECT_TYPE_PIPELINE_CACHE = 16,
    VK_OBJECT_TYPE_PIPELINE_LAYOUT = 17,
    VK_OBJECT_TYPE_RENDER_PASS = 18,
    VK_OBJECT_TYPE_PIPELINE = 19,
    VK_OBJECT_TYPE_DESCRIPTOR_SET_LAYOUT = 20,
    VK_OBJECT_TYPE_SAMPLER = 21,
    VK_OBJECT_TYPE_DESCRIPTOR_POOL = 22,
    VK_OBJECT_TYPE_DESCRIPTOR_SET = 23,
    VK_OBJECT_TYPE_FRAMEBUFFER = 24,
    VK_OBJECT_TYPE_COMMAND_POOL = 25,
    // Provided by VK_VERSION_1_1
    VK_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION = 1000156000,
    // Provided by VK_VERSION_1_1
    VK_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE = 1000085000,
    // Provided by VK_VERSION_1_3
    VK_OBJECT_TYPE_PRIVATE_DATA_SLOT = 1000295000,
    // Provided by VK_KHR_surface
    VK_OBJECT_TYPE_SURFACE_KHR = 1000000000,
    // Provided by VK_KHR_swapchain
    VK_OBJECT_TYPE_SWAPCHAIN_KHR = 1000001000,
    // Provided by VK_KHR_display
    VK_OBJECT_TYPE_DISPLAY_KHR = 1000002000,
    // Provided by VK_KHR_display
};
```

49.1. Debug Utilities

Vulkan provides flexible debugging utilities for debugging an application.

The **Object Debug Annotation** section describes how to associate either a name or binary data with a specific Vulkan object.

The **Queue Labels** section describes how to annotate and group the work submitted to a queue.

The **Command Buffer Labels** section describes how to associate logical elements of the scene with commands in a VkCommandBuffer.

The **Debug Messengers** section describes how to create debug messenger objects associated with an application supplied callback to capture debug messages from a variety of Vulkan components.

49.1.1. Object Debug Annotation

It can be useful for an application to provide its own content relative to a specific Vulkan object.

The following commands allow application developers to associate user-defined information with Vulkan objects. These commands are device-level commands but they **may** reference instance-level objects (such as VkInstance) and physical device-level objects (such as VkPhysicalDevice) with a few restrictions: * The data for the corresponding object **may** still be available after the VkDevice used in the corresponding API call to set it is destroyed, but access to this data is not guaranteed and should be avoided. * Subsequent calls to change the data of the same object across multiple VkDevice objects, **may** result in the data being changed to the most recent version for all VkDevice objects and not just the VkDevice used in the most recent API call.

**Object Naming**

An object can be provided a user-defined name by calling `vkSetDebugUtilsObjectNameEXT` as defined below:

```c
// Provided by VK_EXT_debug_utils
```
VkResult vkSetDebugUtilsObjectNameEXT(
    VkDevice device,
    const VkDebugUtilsObjectNameInfoEXT* pNameInfo);

• device is the device that is associated with the named object passed in via objectHandle.

• pNameInfo is a pointer to a VkDebugUtilsObjectNameInfoEXT structure specifying parameters of the name to set on the object.

Valid Usage

• VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-02587
  pNameInfo->objectType must not be VK_OBJECT_TYPE_UNKNOWN

• VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-02588
  pNameInfo->objectHandle must not be VK_NULL_HANDLE

• VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07872
  If pNameInfo->objectHandle is the valid handle of an instance-level object, the VkDevice identified by device must be a descendent of the same VkInstance as the object identified by pNameInfo->objectHandle

• VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07873
  If pNameInfo->objectHandle is the valid handle of a physical-device-level object, the VkDevice identified by device must be a descendent of the same VkPhysicalDevice as the object identified by pNameInfo->objectHandle

• VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-07874
  If pNameInfo->objectHandle is the valid handle of a device-level object, that object must be a descendent of the VkDevice identified by device

Valid Usage (Implicit)

• VUID-vkSetDebugUtilsObjectNameEXT-device-parameter
  device must be a valid VkDevice handle

• VUID-vkSetDebugUtilsObjectNameEXT-pNameInfo-parameter
  pNameInfo must be a valid pointer to a valid VkDebugUtilsObjectNameInfoEXT structure

Host Synchronization

• Host access to pNameInfo->objectHandle must be externally synchronized

Return Codes

Success

• VK_SUCCESS
Failure

- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The `VkDebugUtilsObjectNameInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsObjectNameInfoEXT {
    VkStructureType     sType;
    const void*         pNext;
    VkObjectType        objectType;
    uint64_t            objectHandle;
    const char*         pObjectName;
} VkDebugUtilsObjectNameInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `objectType` is a `VkObjectType` specifying the type of the object to be named.
- `objectHandle` is the object to be named.
- `pObjectName` is either `NULL` or a null-terminated UTF-8 string specifying the name to apply to `objectHandle`.

Applications may change the name associated with an object simply by calling `vkSetDebugUtilsObjectNameEXT` again with a new string. If `pObjectName` is either `NULL` or an empty string, then any previously set name is removed.

The `graphicsPipelineLibrary` feature allows the specification of pipelines without the creation of `VkShaderModule` objects beforehand. In order to continue to allow naming these shaders independently, `VkDebugUtilsObjectNameInfoEXT` can be included in the `pNext` chain of `VkPipelineShaderStageCreateInfo`, which associates a static name with that particular shader.

Valid Usage

- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-02589
  If `objectType` is `VK_OBJECT_TYPE_UNKNOWN`, `objectHandle` must not be `VK_NULL_HANDLE`

- VUID-VkDebugUtilsObjectNameInfoEXT-objectType-02590
  If `objectType` is not `VK_OBJECT_TYPE_UNKNOWN`, `objectHandle` must be `VK_NULL_HANDLE` or a valid Vulkan handle of the type associated with `objectType` as defined in the `VkObjectType` and Vulkan Handle Relationship table

Valid Usage (Implicit)

- VUID-VkDebugUtilsObjectNameInfoEXT-sType-sType
**Object Data Association**

In addition to setting a name for an object, debugging and validation layers may have uses for additional binary data on a per-object basis that have no other place in the Vulkan API.

For example, a VkShaderModule could have additional debugging data attached to it to aid in offline shader tracing.

Additional data can be attached to an object by calling `vkSetDebugUtilsObjectTagEXT` as defined below.

```c
// Provided by VK_EXT_debug_utils
VkResult vkSetDebugUtilsObjectTagEXT(
    VkDevice device,
    const VkDebugUtilsObjectTagInfoEXT* pTagInfo);
```

- `device` is the device that created the object.
- `pTagInfo` is a pointer to a `VkDebugUtilsObjectTagInfoEXT` structure specifying parameters of the tag to attach to the object.

**Valid Usage**

- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07875
  If `pNameInfo->objectHandle` is the valid handle of an instance-level object, the `VkDevice` identified by `device` must be a descendent of the same `VkInstance` as the object identified by `pNameInfo->objectHandle`

- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07876
  If `pNameInfo->objectHandle` is the valid handle of a physical-device-level object, the `VkDevice` identified by `device` must be a descendent of the same `VkPhysicalDevice` as the object identified by `pNameInfo->objectHandle`

- VUID-vkSetDebugUtilsObjectTagEXT-pNameInfo-07877
  If `pNameInfo->objectHandle` is the valid handle of a device-level object, that object must be a descendent of the `VkDevice` identified by `device`

**Valid Usage (Implicit)**

- VUID-vkSetDebugUtilsObjectTagEXT-device-parameter
  `device` must be a valid `VkDevice` handle
Host Synchronization

- Host access to pTagInfo->objectHandle must be externally synchronized.

Return Codes

Success
- VK_SUCCESS

Failure
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The VkDebugUtilsObjectTagInfoEXT structure is defined as:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsObjectTagInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkObjectType objectType;
    uint64_t objectHandle;
    uint64_t tagName;
    size_t tagSize;
    const void* pTag;
} VkDebugUtilsObjectTagInfoEXT;
```

- `sType` is a VkStructureType value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `objectType` is a VkObjectType specifying the type of the object to be named.
- `objectHandle` is the object to be tagged.
- `tagName` is a numerical identifier of the tag.
- `tagSize` is the number of bytes of data to attach to the object.
- `pTag` is a pointer to an array of `tagSize` bytes containing the data to be associated with the object.

The `tagName` parameter gives a name or identifier to the type of data being tagged. This can be used by debugging layers to easily filter for only data that can be used by that implementation.
### Valid Usage

- **VUID-VkDebugUtilsObjectTagInfoEXT-objectType-01908**
  - `objectType` must not be `VK_OBJECT_TYPE_UNKNOWN`

- **VUID-VkDebugUtilsObjectTagInfoEXT-objectHandle-01910**
  - `objectHandle` must be a valid Vulkan handle of the type associated with `objectType` as defined in the `VkObjectType` and `Vulkan Handle Relationship` table

### Valid Usage (Implicit)

- **VUID-VkDebugUtilsObjectTagInfoEXT-sType-sType**
  - `sType` must be `VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_TAG_INFO_EXT`

- **VUID-VkDebugUtilsObjectTagInfoEXT-pNext-pNext**
  - `pNext` must be `NULL`

- **VUID-VkDebugUtilsObjectTagInfoEXT-objectType-parameter**
  - `objectType` must be a valid `VkObjectType` value

- **VUID-VkDebugUtilsObjectTagInfoEXT-pTag-parameter**
  - `pTag` must be a valid pointer to an array of `tagSize` bytes

- **VUID-VkDebugUtilsObjectTagInfoEXT-tagSize-arraylength**
  - `tagSize` must be greater than 0

### 49.1.2. Queue Labels

All Vulkan work must be submitted using queues. It is possible for an application to use multiple queues, each containing multiple command buffers, when performing work. It can be useful to identify which queue, or even where in a queue, something has occurred.

To begin identifying a region using a debug label inside a queue, you may use the `vkQueueBeginDebugUtilsLabelEXT` command.

Then, when the region of interest has passed, you may end the label region using `vkQueueEndDebugUtilsLabelEXT`.

Additionally, a single debug label may be inserted at any time using `vkQueueInsertDebugUtilsLabelEXT`.

A queue debug label region is opened by calling:

```c
// Provided by VK_EXT_debug_utils
void vkQueueBeginDebugUtilsLabelEXT(
    VkQueue queue,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- `queue` is the queue in which to start a debug label region.
• `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label region to open.

## Valid Usage ( Implicit )

- VUID-vkQueueBeginDebugUtilsLabelEXT-queue-parameter `queue` must be a valid `VkQueue` handle
- VUID-vkQueueBeginDebugUtilsLabelEXT-pLabelInfo-parameter `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure

## Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
</table>

The `VkDebugUtilsLabelEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsLabelEXT {
    VkStructureType sType;
    const void* pNext;
    const char* pLabelName;
    float color[4];
} VkDebugUtilsLabelEXT;
```

• `sType` is a `VkStructureType` value identifying this structure.
• `pNext` is `NULL` or a pointer to a structure extending this structure.
• `pLabelName` is a pointer to a null-terminated UTF-8 string containing the name of the label.
• `color` is an optional RGBA color value that can be associated with the label. A particular implementation may choose to ignore this color value. The values contain RGBA values in order, in the range 0.0 to 1.0. If all elements in `color` are set to 0.0 then it is ignored.

## Valid Usage ( Implicit )

- VUID-VkDebugUtilsLabelEXT-sType-sType `sType` must be `VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT`
- VUID-VkDebugUtilsLabelEXT-pNext-pNext `pNext` must be `NULL`
- VUID-VkDebugUtilsLabelEXT-pLabelName-parameter `pLabelName` must be a null-terminated UTF-8 string

A queue debug label region is closed by calling:
// Provided by VK_EXT_debug_utils

```c
void vkQueueEndDebugUtilsLabelEXT(
    VkQueue queue);
```

- `queue` is the queue in which a debug label region should be closed.

The calls to `vkQueueBeginDebugUtilsLabelEXT` and `vkQueueEndDebugUtilsLabelEXT` must be matched and balanced.

**Valid Usage**

- VUID-vkQueueEndDebugUtilsLabelEXT-None-01911
  There must be an outstanding `vkQueueBeginDebugUtilsLabelEXT` command prior to the `vkQueueEndDebugUtilsLabelEXT` on the queue

**Valid Usage (Implicit)**

- VUID-vkQueueEndDebugUtilsLabelEXT-queue-parameter
  `queue` must be a valid `VkQueue` handle

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
</table>

A single label can be inserted into a queue by calling:

// Provided by VK_EXT_debug_utils

```c
void vkQueueInsertDebugUtilsLabelEXT(
    VkQueue queue,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- `queue` is the queue into which a debug label will be inserted.
- `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label to insert.

**Valid Usage (Implicit)**

- VUID-vkQueueInsertDebugUtilsLabelEXT-queue-parameter
  `queue` must be a valid `VkQueue` handle
- VUID-vkQueueInsertDebugUtilsLabelEXT-pLabelInfo-parameter
  `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure
49.1.3. Command Buffer Labels

Typical Vulkan applications will submit many command buffers in each frame, with each command buffer containing a large number of individual commands. Being able to logically annotate regions of command buffers that belong together as well as hierarchically subdivide the frame is important to a developer's ability to navigate the commands viewed holistically.

To identify the beginning of a debug label region in a command buffer, `vkCmdBeginDebugUtilsLabelEXT` can be used as defined below.

To indicate the end of a debug label region in a command buffer, `vkCmdEndDebugUtilsLabelEXT` can be used.

To insert a single command buffer debug label inside of a command buffer, `vkCmdInsertDebugUtilsLabelEXT` can be used as defined below.

A command buffer debug label region can be opened by calling:

```c
// Provided by VK_EXT_debug_utils
void vkCmdBeginDebugUtilsLabelEXT(
    VkCommandBuffer commandBuffer,
    const VkDebugUtilsLabelEXT* pLabelInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pLabelInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label region to open.

### Valid Usage (Implicit)

- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-parameter
  
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdBeginDebugUtilsLabelEXT-pLabelInfo-parameter
  
  `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure

- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-recording
  
  `commandBuffer` must be in the recording state

- VUID-vkCmdBeginDebugUtilsLabelEXT-commandBuffer-cmdpool
  
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- VUID-vkCmdBeginDebugUtilsLabelEXT-videocoding

3652
This command **must** only be called outside of a video coding scope.

**Host Synchronization**

- Host access to `commandBuffer` **must** be externally synchronized.
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized.

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics Compute</td>
<td>Action State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A command buffer label region can be closed by calling:

```c
// Provided by VK_EXT_debug_utils
void vkCmdEndDebugUtilsLabelEXT(
    VkCommandBuffer commandBuffer);
```

- `commandBuffer` is the command buffer into which the command is recorded.

An application **may** open a debug label region in one command buffer and close it in another, or otherwise split debug label regions across multiple command buffers or multiple queue submissions. When viewed from the linear series of submissions to a single queue, the calls to `vkCmdBeginDebugUtilsLabelEXT` and `vkCmdEndDebugUtilsLabelEXT` **must** be matched and balanced.

There **can** be problems reporting command buffer debug labels during the recording process because command buffers **may** be recorded out of sequence with the resulting execution order. Since the recording order **may** be different, a solitary command buffer **may** have an inconsistent view of the debug label regions by itself. Therefore, if an issue occurs during the recording of a command buffer, and the environment requires returning debug labels, the implementation **may** return only those labels it is aware of. This is true even if the implementation is aware of only the debug labels within the command buffer being actively recorded.

**Valid Usage**

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-01912**
  There **must** be an outstanding `vkCmdBeginDebugUtilsLabelEXT` command prior to the `vkCmdEndDebugUtilsLabelEXT` on the queue that `commandBuffer` is submitted to.
- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-01913**
If `commandBuffer` is a secondary command buffer, there must be an outstanding `vkCmdBeginDebugUtilsLabelEXT` command recorded to `commandBuffer` that has not previously been ended by a call to `vkCmdEndDebugUtilsLabelEXT`.

### Valid Usage (Implicit)

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-parameter**
  
  `commandBuffer` must be a valid `VkCommandBuffer` handle.

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-recording**
  
  `commandBuffer` must be in the recording state.

- **VUID-vkCmdEndDebugUtilsLabelEXT-commandBuffer-cmdpool**
  
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations.

- **VUID-vkCmdEndDebugUtilsLabelEXT-videocoding**
  
  This command must only be called outside of a video coding scope.

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized.

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>Action State</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A single debug label can be inserted into a command buffer by calling:

```c
// Provided by VK_EXT_debug_utils
void vkCmdInsertDebugUtilsLabelEXT(
    VkCommandBuffer commandBuffer,    // provided by VK_EXT_debug_utils
    const VkDebugUtilsLabelEXT* pInfo);    // provided by VK_EXT_debug_utils
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pInfo` is a pointer to a `VkDebugUtilsLabelEXT` structure specifying parameters of the label to insert.
Valid Usage (Implicit)

- VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle

- VUID-vkCmdInsertDebugUtilsLabelEXT-pLabelInfo-parameter
  `pLabelInfo` must be a valid pointer to a valid `VkDebugUtilsLabelEXT` structure

- VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-recording
  `commandBuffer` must be in the recording state

- VUID-vkCmdInsertDebugUtilsLabelEXT-commandBuffer-cmdpool
  The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, or compute operations

- VUID-vkCmdInsertDebugUtilsLabelEXT-videocoding
  This command must only be called outside of a video coding scope

Host Synchronization

- Host access to `commandBuffer` must be externally synchronized

- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized

Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary Secondary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute</td>
<td>Action</td>
</tr>
</tbody>
</table>

49.1.4. Debug Messengers

Vulkan allows an application to register multiple callbacks with any Vulkan component wishing to report debug information. Some callbacks may log the information to a file, others may cause a debug break point or other application defined behavior. A primary producer of callback messages are the validation layers. An application can register callbacks even when no validation layers are enabled, but they will only be called for the Vulkan loader and, if implemented, other layer and driver events.

A `VkDebugUtilsMessengerEXT` is a messenger object which handles passing along debug messages to a provided debug callback.

```cpp
// Provided by VK_EXT_debug_utils
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDebugUtilsMessengerEXT)
```
The debug messenger will provide detailed feedback on the application’s use of Vulkan when events of interest occur. When an event of interest does occur, the debug messenger will submit a debug message to the debug callback that was provided during its creation. Additionally, the debug messenger is responsible for filtering out debug messages that the callback is not interested in and will only provide desired debug messages.

A debug messenger triggers a debug callback with a debug message when an event of interest occurs. To create a debug messenger which will trigger a debug callback, call:

```c
// Provided by VK_EXT_debug_utils
VkResult vkCreateDebugUtilsMessengerEXT(
    VkInstance instance,
    const VkDebugUtilsMessengerCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDebugUtilsMessengerEXT* pMessenger);
```

- `instance` is the instance the messenger will be used with.
- `pCreateInfo` is a pointer to a `VkDebugUtilsMessengerCreateInfoEXT` structure containing the callback pointer, as well as defining conditions under which this messenger will trigger the callback.
- `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.
- `pMessenger` is a pointer to a `VkDebugUtilsMessengerEXT` handle in which the created object is returned.

### Valid Usage (Implicit)

- VUID-vkCreateDebugUtilsMessengerEXT-instance-parameter
  `instance` must be a valid `VkInstance` handle
- VUID-vkCreateDebugUtilsMessengerEXT-pCreateInfo-parameter
  `pCreateInfo` must be a valid pointer to a valid `VkDebugUtilsMessengerCreateInfoEXT` structure
- VUID-vkCreateDebugUtilsMessengerEXT-pAllocator-parameter
  If `pAllocator` is not NULL, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure
- VUID-vkCreateDebugUtilsMessengerEXT-pMessenger-parameter
  `pMessenger` must be a valid pointer to a `VkDebugUtilsMessengerEXT` handle

### Return Codes

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`
The application must ensure that \texttt{vkCreateDebugUtilsMessengerEXT} is not executed in parallel with any Vulkan command that is also called with \texttt{instance} or child of \texttt{instance} as the dispatchable argument.

The definition of \texttt{VkDebugUtilsMessengerCreateInfoEXT} is:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsMessengerCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugUtilsMessengerCreateFlagsEXT flags;
    VkDebugUtilsMessageSeverityFlagsEXT messageSeverity;
    VkDebugUtilsMessageTypeFlagsEXT messageType;
    PFN_vkDebugUtilsMessengerCallbackEXT pfnUserCallback;
    void* pUserData;
} VkDebugUtilsMessengerCreateInfoEXT;
```

- \texttt{sType} is a \texttt{VkStructureType} value identifying this structure.
- \texttt{pNext} is \texttt{NULL} or a pointer to a structure extending this structure.
- \texttt{flags} is \texttt{0} and is reserved for future use.
- \texttt{messageSeverity} is a bitmask of \texttt{VkDebugUtilsMessageSeverityFlagBitsEXT} specifying which severity of event(s) will cause this callback to be called.
- \texttt{messageType} is a bitmask of \texttt{VkDebugUtilsMessageTypeFlagBitsEXT} specifying which type of event(s) will cause this callback to be called.
- \texttt{pfnUserCallback} is the application callback function to call.
- \texttt{pUserData} is user data to be passed to the callback.

For each \texttt{VkDebugUtilsMessengerEXT} that is created the \texttt{VkDebugUtilsMessengerCreateInfoEXT::messageSeverity} and \texttt{VkDebugUtilsMessengerCreateInfoEXT::messageType} determine when that \texttt{VkDebugUtilsMessengerCreateInfoEXT::pfnUserCallback} is called. The process to determine if the user’s \texttt{pfnUserCallback} is triggered when an event occurs is as follows:

1. The implementation will perform a bitwise AND of the event’s \texttt{VkDebugUtilsMessageSeverityFlagBitsEXT} with the \texttt{messageSeverity} provided during creation of the \texttt{VkDebugUtilsMessengerEXT} object.
   a. If the value is 0, the message is skipped.
2. The implementation will perform bitwise AND of the event’s \texttt{VkDebugUtilsMessageTypeFlagBitsEXT} with the \texttt{messageType} provided during the creation of the \texttt{VkDebugUtilsMessengerEXT} object.
   a. If the value is 0, the message is skipped.
3. The callback will trigger a debug message for the current event

The callback will come directly from the component that detected the event, unless some other layer intercepts the calls for its own purposes (filter them in a different way, log to a system error
An application can receive multiple callbacks if multiple \texttt{VkDebugUtilsMessengerEXT} objects are created. A callback will always be executed in the same thread as the originating Vulkan call.

A callback can be called from multiple threads simultaneously (if the application is making Vulkan calls from multiple threads).

### Valid Usage

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-pfnUserCallback-01914**
  
  \texttt{pfnUserCallback} must be a valid \texttt{PFN_vkDebugUtilsMessengerCallbackEXT}

### Valid Usage (Implicit)

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-sType-sType**
  
  \texttt{sType} must be \texttt{VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT}

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-flags-zerobitmask**
  
  \texttt{flags} must be 0

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-messageSeverity-parameter**
  
  \texttt{messageSeverity} must be a valid combination of \texttt{VkDebugUtilsMessageSeverityFlagBitsEXT} values

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-messageSeverity-requiredbitmask**
  
  \texttt{messageSeverity} must not be 0

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-messageType-parameter**
  
  \texttt{messageType} must be a valid combination of \texttt{VkDebugUtilsMessageTypeFlagBitsEXT} values

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-messageType-requiredbitmask**
  
  \texttt{messageType} must not be 0

- **VUID-VkDebugUtilsMessengerCreateInfoEXT-pfnUserCallback-parameter**
  
  \texttt{pfnUserCallback} must be a valid \texttt{PFN_vkDebugUtilsMessengerCallbackEXT} value

```c
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessengerCreateFlagsEXT;

VkDebugUtilsMessengerCreateFlagsEXT is a bitmask type for setting a mask, but is currently reserved for future use.

Bits which can be set in \texttt{VkDebugUtilsMessengerCreateInfoEXT::messageSeverity}, specifying event severities which cause a debug messenger to call the callback, are:

```c
// Provided by VK_EXT_debug_utils
typedef enum VkDebugUtilsMessageSeverityFlagBitsEXT {
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_VERBOSE_BIT_EXT = 0x00000001,
```
VK_DEBUG_UTILS_MESSAGE_SEVERITY_VERBOSE_BIT_EXT specifies the most verbose output indicating all diagnostic messages from the Vulkan loader, layers, and drivers should be captured.

VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT specifies an informational message such as resource details that may be handy when debugging an application.

VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT specifies use of Vulkan that may expose an app bug. Such cases may not be immediately harmful, such as a fragment shader outputting to a location with no attachment. Other cases may point to behavior that is almost certainly bad when unintended such as using an image whose memory has not been filled. In general if you see a warning but you know that the behavior is intended/desired, then simply ignore the warning.

VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT specifies that the application has violated a valid usage condition of the specification.

Note
The values of VkDebugUtilsMessageSeverityFlagBitsEXT are sorted based on severity. The higher the flag value, the more severe the message. This allows for simple boolean operation comparisons when looking at VkDebugUtilsMessageSeverityFlagBitsEXT values.

For example:

```c
if (messageSeverity >= VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT) {
    // Do something for warnings and errors
}
```

In addition, space has been left between the enums to allow for later addition of new severities in between the existing values.

```c
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessageSeverityFlagsEXT;
```

VkDebugUtilsMessageSeverityFlagsEXT is a bitmask type for setting a mask of zero or more VkDebugUtilsMessageSeverityFlagBitsEXT.

Bits which can be set in VkDebugUtilsMessengerCreateInfoEXT::messageType, specifying event types which cause a debug messenger to call the callback, are:

```c
// Provided by VK_EXT_debug_utils
typedef enum VkDebugUtilsMessageTypeFlagBitsEXT {
```
VkDebugUtilsMessageTypeFlagBitsExt = 0x00000001,
VkDebugUtilsMessageTypeValidationBitExt = 0x00000002,
VkDebugUtilsMessageTypePerformanceBitExt = 0x00000004,
// Provided by VK_EXT_device_address_binding_report
VkDebugUtilsMessageTypeDeviceAddressBindingBitExt = 0x00000008,
}
VkDebugUtilsMessageTypeFlagBitsExt;

- **VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT** specifies that some general event has occurred. This is typically a non-specification, non-performance event.

- **VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT** specifies that something has occurred during validation against the Vulkan specification that may indicate invalid behavior.

- **VK_DEBUG_UTILS_MESSAGE_TYPE_PERFORMANCE_BIT_EXT** specifies a potentially non-optimal use of Vulkan, e.g. using `vkCmdClearColorImage` when setting `VkAttachmentDescription::loadOp` to `VK_ATTACHMENT_LOAD_OP_CLEAR` would have worked.

- **VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT** specifies that the implementation has modified the set of GPU-visible virtual addresses associated with a Vulkan object.

// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessageTypeFlagsExt;

VkDebugUtilsMessageTypeFlagsExt is a bitmask type for setting a mask of zero or more `VkDebugUtilsMessageTypeFlagBitsExt`.

The prototype for the `VkDebugUtilsMessengerCreateInfoExt::PFNUserCallback` function implemented by the application is:

// Provided by VK_EXT_debug_utils
typedef VkBool32 (VKAPI_PTR *PFN_vkDebugUtilsMessengerCallbackExt)(
    VkDebugUtilsMessageSeverityFlagBitsExt messageSeverity,
    VkDebugUtilsMessageTypeFlagsExt messageTypes,
    const VkDebugUtilsMessengerCallbackDataExt* pCallbackData,
    void* pUserData);

- `messageSeverity` specifies the `VkDebugUtilsMessageSeverityFlagBitsExt` that triggered this callback.

- `messageTypes` is a bitmask of `VkDebugUtilsMessageTypeFlagBitsExt` specifying which type of event(s) triggered this callback.

- `pCallbackData` contains all the callback related data in the `VkDebugUtilsMessengerCallbackDataExt` structure.

- `pUserData` is the user data provided when the `VkDebugUtilsMessengerExt` was created.

The callback returns a `VkBool32`, which is interpreted in a layer-specified manner. The application should always return `VK_FALSE`. The `VK_TRUE` value is reserved for use in layer development.
Valid Usage

- VUID-PFN_vkDebugUtilsMessengerCallbackEXT-None-04769
  The callback **must** not make calls to any Vulkan commands

The definition of `VkDebugUtilsMessengerCallbackDataEXT` is:

```c
// Provided by VK_EXT_debug_utils
typedef struct VkDebugUtilsMessengerCallbackDataEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugUtilsMessengerCallbackDataFlagsEXT flags;
    const char* pMessageIdName;
    int32_t messageIdNumber;
    const char* pMessage;
    uint32_t queueLabelCount;
    const VkDebugUtilsLabelEXT* pQueueLabels;
    uint32_t cmdBufLabelCount;
    const VkDebugUtilsLabelEXT* pCmdBufLabels;
    uint32_t objectCount;
    const VkDebugUtilsObjectNameInfoEXT* pObjects;
} VkDebugUtilsMessengerCallbackDataEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **flags** is `0` and is reserved for future use.
- **pMessageIdName** is a null-terminated string that identifies the particular message ID that is associated with the provided message. If the message corresponds to a validation layer message, then this string may contain the portion of the Vulkan specification that is believed to have been violated.

- **messageIdNumber** is the ID number of the triggering message. If the message corresponds to a validation layer message, then this number is related to the internal number associated with the message being triggered.
- **pMessage** is a null-terminated string detailing the trigger conditions.
- **queueLabelCount** is a count of items contained in the `pQueueLabels` array.
- **pQueueLabels** is `NULL` or a pointer to an array of `VkDebugUtilsLabelEXT` active in the current `VkQueue` at the time the callback was triggered. Refer to Queue Labels for more information.
- **cmdBufLabelCount** is a count of items contained in the `pCmdBufLabels` array.
- **pCmdBufLabels** is `NULL` or a pointer to an array of `VkDebugUtilsLabelEXT` active in the current `VkCommandBuffer` at the time the callback was triggered. Refer to Command Buffer Labels for more information.
- **objectCount** is a count of items contained in the `pObjects` array.
- `pObjects` is a pointer to an array of `VkDebugUtilsObjectNameInfoEXT` objects related to the detected issue. The array is roughly in order of importance, but the 0th element is always guaranteed to be the most important object for this message.

**Note**

This structure should only be considered valid during the lifetime of the triggered callback.

Since adding queue and command buffer labels behaves like pushing and popping onto a stack, the order of both `pQueueLabels` and `pCmdBufLabels` is based on the order the labels were defined. The result is that the first label in either `pQueueLabels` or `pCmdBufLabels` will be the first defined (and therefore the oldest) while the last label in each list will be the most recent.

**Note**

`pQueueLabels` will only be non-NULL if one of the objects in `pObjects` can be related directly to a defined `VkQueue` which has had one or more labels associated with it.

Likewise, `pCmdBufLabels` will only be non-NULL if one of the objects in `pObjects` can be related directly to a defined `VkCommandBuffer` which has had one or more labels associated with it. Additionally, while command buffer labels allow for beginning and ending across different command buffers, the debug messaging framework **cannot** guarantee that labels in `pCmdBufLabels` will contain those defined outside of the associated command buffer. This is partially due to the fact that the association of one command buffer with another may not have been defined at the time the debug message is triggered.

---

**Valid Usage (Implicit)**

- VUID-VkDebugUtilsMessengerCallbackDataEXT-sType-sType
  
  `sType` **must** be `VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CALLBACK_DATA_EXT`

- VUID-VkDebugUtilsMessengerCallbackDataEXT-pNext-pNext
  
  `pNext` **must** be `NULL` or a pointer to a valid instance of `VkDeviceAddressBindingCallbackDataEXT`

- VUID-VkDebugUtilsMessengerCallbackDataEXT-sType-unique
  
  The `sType` value of each struct in the `pNext` chain **must** be unique

- VUID-VkDebugUtilsMessengerCallbackDataEXT-flags-zerobitmask
  
  `flags` **must** be `0`

- VUID-VkDebugUtilsMessengerCallbackDataEXT-pMessageIdName-parameter
  
  If `pMessageIdName` is not `NULL`, `pMessageIdName` **must** be a null-terminated UTF-8 string

- VUID-VkDebugUtilsMessengerCallbackDataEXT-pMessage-parameter
  
  `pMessage` **must** be a null-terminated UTF-8 string

- VUID-VkDebugUtilsMessengerCallbackDataEXT-pQueueLabels-parameter
  
  If `queueLabelCount` is not `0`, `pQueueLabels` **must** be a valid pointer to an array of `queueLabelCount` valid `VkDebugUtilsLabelEXT` structures
If `cmdBufLabelCount` is not 0, `pCmdBufLabels` must be a valid pointer to an array of `cmdBufLabelCount` valid `VkDebugUtilsLabelEXT` structures.

If `objectCount` is not 0, `pObjects` must be a valid pointer to an array of `objectCount` valid `VkDebugUtilsObjectNameInfoEXT` structures.

```
// Provided by VK_EXT_debug_utils
typedef VkFlags VkDebugUtilsMessengerCallbackDataFlagsEXT;
```

`VkDebugUtilsMessengerCallbackDataFlagsEXT` is a bitmask type for setting a mask, but is currently reserved for future use.

The definition of `VkDeviceAddressBindingCallbackDataEXT` is:

```
// Provided by VK_EXT_device_address_binding_report
typedef struct VkDeviceAddressBindingCallbackDataEXT {
    VkStructureType sType;
    void* pNext;
    VkDeviceAddressBindingFlagsEXT flags;
    VkDeviceAddress baseAddress;
    VkDeviceSize size;
    VkDeviceAddressBindingTypeEXT bindingType;
} VkDeviceAddressBindingCallbackDataEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkDeviceAddressBindingFlagBitsEXT` specifying additional information about the binding event that caused the callback to be called.
- `baseAddress` is a GPU-accessible virtual address identifying the start of a region of the virtual address space associated with a Vulkan object, as identified by the `pObjects` member of `VkDebugUtilsMessengerCallbackDataEXT`.
- `size` is the size in bytes of a region of GPU-accessible virtual address space.
- `bindingType` is a `VkDeviceAddressBindingTypeEXT` specifying the type of binding event that caused the callback to be called.

If the `reportAddressBinding` feature is enabled and the implementation binds or unbinds a region of virtual address space associated with a Vulkan object, the implementation must submit a debug message with the following properties:

- `messageSeverity` equal to `VK_DEBUG_UTILS_MESSAGE_SEVERITY_INFO_BIT_EXT`
- `messageType` equal to `VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT`
- `VkDebugUtilsMessengerCallbackDataEXT::pObjects` must identify the associated Vulkan object.
VkDeviceAddressBindingCallbackDataEXT must be included in the pNext chain of VkDebugUtilsMessengerCallbackDataEXT.

These debug messages must be emitted both for GPU virtual address space regions that are explicitly bound to a Vulkan object via the `vkBind*Memory/vkBind*Memory2` functions, and for those that are implicitly generated via memory allocation or importing external memory.

An implementation may report binding events associated with a Vulkan object via `VkDebugUtilsMessengerEXT` prior to the object becoming visible to an application via other Vulkan commands. For example, object creation functions may report binding events that occur during an objects creation. In such cases, `VkDeviceAddressBindingCallbackDataEXT::flags` must include `VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT`.

Object handles reported in this manner are not valid object handles, and must not be used as an input parameter to any Vulkan command.

Any valid object handle returned by an object creation function must match the handle specified via any previously reported binding events associated with the object's creation.

### Valid Usage (Implicit)

- VUID-VkDeviceAddressBindingCallbackDataEXT-sType-sType
  - `sType` must be `VK_STRUCTURE_TYPE_DEVICE_ADDRESS_BINDING_CALLBACK_DATA_EXT`

- VUID-VkDeviceAddressBindingCallbackDataEXT-flags-parameter
  - `flags` must be a valid combination of `VkDeviceAddressBindingFlagBitsEXT` values

- VUID-VkDeviceAddressBindingCallbackDataEXT-bindingType-parameter
  - `bindingType` must be a valid `VkDeviceAddressBindingTypeEXT` value

Bits which can be set in `VkDeviceAddressBindingCallbackDataEXT::flags` specifying additional information about a binding event are:

```c
// Provided by VK_EXT_device_address_binding_report
typedef enum VkDeviceAddressBindingFlagBitsEXT {
    VK_DEVICE_ADDRESS_BINDING_INTERNAL_OBJECT_BIT_EXT = 0x00000001,
} VkDeviceAddressBindingFlagBitsEXT;
```

- `VKDEVICEADDRESS_BINDING/Internal/Object/Bit/EXT` specifies that `VkDeviceAddressBindingCallbackDataEXT` describes a Vulkan object that has not been made visible to the application via a Vulkan command.

```c
// Provided by VK_EXT_device_address_binding_report
typedef VkFlags VkDeviceAddressBindingFlagsEXT;
```

`VkDeviceAddressBindingFlagsEXT` is a bitmask type for setting a mask of zero or more `VkDeviceAddressBindingFlagBitsEXT`.^

3664
The `VkDeviceAddressBindingTypeEXT` enum is defined as:

```c
// Provided by VK_EXT_device_address_binding_report
typedef enum VkDeviceAddressBindingTypeEXT {
    VK_DEVICE_ADDRESS_BINDING_TYPE_BIND_EXT = 0,
    VK_DEVICE_ADDRESS_BINDING_TYPE_UNBIND_EXT = 1,
} VkDeviceAddressBindingTypeEXT;
```

- `VK_DEVICE_ADDRESS_BINDING_TYPE_BIND_EXT` specifies that a new GPU-accessible virtual address range has been bound.
- `VK_DEVICE_ADDRESS_BINDING_TYPE_UNBIND_EXT` specifies that a GPU-accessible virtual address range has been unbound.

There may be times that a user wishes to intentionally submit a debug message. To do this, call:

```c
// Provided by VK_EXT_debug_utils
void vkSubmitDebugUtilsMessageEXT(
    VkInstance instance,
    VkDebugUtilsMessageSeverityFlagBitsEXT messageSeverity,
    VkDebugUtilsMessageTypeFlagsEXT messageTypes,
    const VkDebugUtilsMessengerCallbackDataEXT* pCallbackData);
```

- `instance` is the debug stream's `VkInstance`.
- `messageSeverity` is a `VkDebugUtilsMessageSeverityFlagBitsEXT` value specifying the severity of this event/message.
- `messageTypes` is a bitmask of `VkDebugUtilsMessageTypeFlagBitsEXT` specifying which type of event(s) to identify with this message.
- `pCallbackData` contains all the callback related data in the `VkDebugUtilsMessengerCallbackDataEXT` structure.

The call will propagate through the layers and generate callback(s) as indicated by the message's flags. The parameters are passed on to the callback in addition to the `pUserData` value that was defined at the time the messenger was registered.

### Valid Usage

- **VUID-vkSubmitDebugUtilsMessageEXT-objectType-02591**
  The `objectType` member of each element of `pCallbackData->pObjects` must not be `VK_OBJECT_TYPE_UNKNOWN`

### Valid Usage (Implicit)

- **VUID-vkSubmitDebugUtilsMessageEXT-instance-parameter**
  `instance` must be a valid `VkInstance` handle
• VUID-vkSubmitDebugUtilsMessageEXT-messageSeverity-parameter
  messageSeverity must be a valid VkDebugUtilsMessageSeverityFlagBitsEXT value

• VUID-vkSubmitDebugUtilsMessageEXT-messageTypes-parameter
  messageTypes must be a valid combination of VkDebugUtilsMessageTypeFlagBitsEXT values

• VUID-vkSubmitDebugUtilsMessageEXT-messageTypes-requiredbitmask
  messageTypes must not be 0

• VUID-vkSubmitDebugUtilsMessageEXT-pCallbackData-parameter
  pCallbackData must be a valid pointer to a valid VkDebugUtilsMessengerCallbackDataEXT structure

To destroy a VkDebugUtilsMessengerEXT object, call:

```c
// Provided by VK_EXT_debug_utils
void vkDestroyDebugUtilsMessengerEXT(
    VkInstance          instance,    // Provided by VK_EXT_debug_utils
    VkDebugUtilsMessengerEXT messenger,    // Provided by VK_EXT_debug_utils
    const VkAllocationCallbacks* pAllocator);
```

• `instance` is the instance where the callback was created.

• `messenger` is the VkDebugUtilsMessengerEXT object to destroy. `messenger` is an externally synchronized object and must not be used on more than one thread at a time. This means that `vkDestroyDebugUtilsMessengerEXT` must not be called when a callback is active.

• `pAllocator` controls host memory allocation as described in the Memory Allocation chapter.

**Valid Usage**

• VUID-vkDestroyDebugUtilsMessengerEXT-messenger-01915
  If VkAllocationCallbacks were provided when messenger was created, a compatible set of callbacks must be provided here

• VUID-vkDestroyDebugUtilsMessengerEXT-messenger-01916
  If no VkAllocationCallbacks were provided when messenger was created, pAllocator must be NULL

**Valid Usage (Implicit)**

• VUID-vkDestroyDebugUtilsMessengerEXT-instance-parameter
  instance must be a valid VkInstance handle

• VUID-vkDestroyDebugUtilsMessengerEXT-messenger-parameter
  If messenger is not VK_NULL_HANDLE, messenger must be a valid VkDebugUtilsMessengerEXT handle

• VUID-vkDestroyDebugUtilsMessengerEXT-pAllocator-parameter
If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure.

- `VUID-vkDestroyDebugUtilsMessengerEXT-messenger-parent`

  If `messenger` is a valid handle, it must have been created, allocated, or retrieved from `instance`.

**Host Synchronization**

- Host access to `messenger` must be externally synchronized.

The application must ensure that `vkDestroyDebugUtilsMessengerEXT` is not executed in parallel with any Vulkan command that is also called with `instance` or child of `instance` as the dispatchable argument.

### 49.2. Debug Markers

Debug markers provide a flexible way for debugging and validation layers to receive annotation and debug information.

The **Object Annotation** section describes how to associate a name or binary data with a Vulkan object.

The **Command Buffer Markers** section describes how to associate logical elements of the scene with commands in the command buffer.

#### 49.2.1. Object Annotation

The commands in this section allow application developers to associate user-defined information with Vulkan objects at will.

An object can be given a user-friendly name by calling:

```c
// Provided by VK_EXT_debug_marker
VkResult vkDebugMarkerSetObjectNameEXT(
    VkDevice device,               
    const VkDebugMarkerObjectNameInfoEXT* pNameInfo);
```

- `device` is the device that created the object.
- `pNameInfo` is a pointer to a `VkDebugMarkerObjectNameInfoEXT` structure specifying the parameters of the name to set on the object.

**Valid Usage (Implicit)**

- `VUID-vkDebugMarkerSetObjectNameEXT-device-parameter`

  `device` must be a valid `VkDevice` handle.
VUID-vkDebugMarkerSetObjectNameEXT-pNameInfo-parameter

- **pNameInfo** must be a valid pointer to a valid `VkDebugMarkerObjectNameInfoEXT` structure.

## Host Synchronization

- Host access to `pNameInfo->object` must be externally synchronized.

## Return Codes

### Success
- **VK_SUCCESS**

### Failure
- **VK_ERROR_OUT_OF_HOST_MEMORY**
- **VK_ERROR_OUT_OF_DEVICE_MEMORY**

The `VkDebugMarkerObjectNameInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_marker
typedef struct VkDebugMarkerObjectNameInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugReportObjectTypeEXT objectType;
    uint64_t object;
    const char* pObjectName;
} VkDebugMarkerObjectNameInfoEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **objectType** is a `VkDebugReportObjectTypeEXT` specifying the type of the object to be named.
- **object** is the object to be named.
- **pObjectName** is a null-terminated UTF-8 string specifying the name to apply to object.

Applications may change the name associated with an object simply by calling `vkDebugMarkerSetObjectNameEXT` again with a new string. To remove a previously set name, **pObjectName** should be set to an empty string.

## Valid Usage

- **VUID-VkDebugMarkerObjectNameInfoEXT-objectType-01490**
  - **objectType** must not be `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT`
In addition to setting a name for an object, debugging and validation layers may have uses for additional binary data on a per-object basis that has no other place in the Vulkan API. For example, a `VkShaderModule` could have additional debugging data attached to it to aid in offline shader tracing. To attach data to an object, call:

```c
// Provided by VK_EXT_debug_marker
VkResult vkDebugMarkerSetObjectTagEXT(
    VkDevice device,
    const VkDebugMarkerObjectTagInfoEXT* pTagInfo);
```

- `device` is the device that created the object.
- `pTagInfo` is a pointer to a `VkDebugMarkerObjectTagInfoEXT` structure specifying the parameters of the tag to attach to the object.

**Valid Usage (Implicit)**

- VUID-vkDebugMarkerSetObjectTagEXT-device-parameter
  `device` must be a valid `VkDevice` handle
- VUID-vkDebugMarkerSetObjectTagEXT-pTagInfo-parameter
  `pTagInfo` must be a valid pointer to a valid `VkDebugMarkerObjectTagInfoEXT` structure

**Host Synchronization**

- Host access to `pTagInfo->object` must be externally synchronized
Return Codes

**Success**
- VK_SUCCESS

**Failure**
- VK_ERROR_OUT_OF_HOST_MEMORY
- VK_ERROR_OUT_OF_DEVICE_MEMORY

The `VkDebugMarkerObjectTagInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_debug_marker
typedef struct VkDebugMarkerObjectTagInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugReportObjectTypeEXT objectType;
    uint64_t object;
    uint64_t tagName;
    size_t tagSize;
    const void* pTag;
} VkDebugMarkerObjectTagInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is NULL or a pointer to a structure extending this structure.
- `objectType` is a `VkDebugReportObjectTypeEXT` specifying the type of the object to be named.
- `object` is the object to be tagged.
- `tagName` is a numerical identifier of the tag.
- `tagSize` is the number of bytes of data to attach to the object.
- `pTag` is a pointer to an array of `tagSize` bytes containing the data to be associated with the object.

The `tagName` parameter gives a name or identifier to the type of data being tagged. This can be used by debugging layers to easily filter for only data that can be used by that implementation.

**Valid Usage**

- VUID-VkDebugMarkerObjectTagInfoEXT-objectType-01493
  `objectType` must not be `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT`

- VUID-VkDebugMarkerObjectTagInfoEXT-object-01494
  `object` must not be `VK_NULL_HANDLE`

- VUID-VkDebugMarkerObjectTagInfoEXT-object-01495
  `object` must be a Vulkan object of the type associated with `objectType` as defined in `VkDebugReportObjectTypeEXT` and Vulkan Handle Relationship
49.2.2. Command Buffer Markers

Typical Vulkan applications will submit many command buffers in each frame, with each command buffer containing a large number of individual commands. Being able to logically annotate regions of command buffers that belong together as well as hierarchically subdivide the frame is important to a developer’s ability to navigate the commands viewed holistically.

The marker commands `vkCmdDebugMarkerBeginEXT` and `vkCmdDebugMarkerEndEXT` define regions of a series of commands that are grouped together, and they can be nested to create a hierarchy. The `vkCmdDebugMarkerInsertEXT` command allows insertion of a single label within a command buffer.

A marker region can be opened by calling:

```c
// Provided by VK_EXT_debug_marker
void vkCmdDebugMarkerBeginEXT(
    VkCommandBuffer commandBuffer,
    const VkDebugMarkerMarkerInfoEXT* pMarkerInfo);
```

- `commandBuffer` is the command buffer into which the command is recorded.
- `pMarkerInfo` is a pointer to a `VkDebugMarkerMarkerInfoEXT` structure specifying the parameters of the marker region to open.

Valid Usage (Implicit)

- VUID-vkCmdDebugMarkerBeginEXT-commandBuffer-parameter
  `commandBuffer` must be a valid `VkCommandBuffer` handle
- VUID-vkCmdDebugMarkerBeginEXT-pMarkerInfo-parameter
  `pMarkerInfo` must be a valid pointer to a valid `VkDebugMarkerMarkerInfoEXT` structure
- VUID-vkCmdDebugMarkerBeginEXT-commandBuffer-recording
  `commandBuffer` must be in the recording state
The *VkCommandPool* that *commandBuffer* was allocated from must support graphics, or compute operations.

This command must only be called outside of a video coding scope.

**Host Synchronization**

- Host access to *commandBuffer* must be externally synchronized.
- Host access to the *VkCommandPool* that *commandBuffer* was allocated from must be externally synchronized.

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

The *VkDebugMarkerMarkerInfoEXT* structure is defined as:

```c
// Provided by VK_EXT_debug_marker
typedef struct VkDebugMarkerMarkerInfoEXT {
   VkStructureType sType;
   const void* pNext;
   const char* pMarkerName;
   float color[4];
} VkDebugMarkerMarkerInfoEXT;
```

- *sType* is a *VkStructureType* value identifying this structure.
- *pNext* is NULL or a pointer to a structure extending this structure.
- *pMarkerName* is a pointer to a null-terminated UTF-8 string containing the name of the marker.
- *color* is an optional RGBA color value that can be associated with the marker. A particular implementation may choose to ignore this color value. The values contain RGBA values in order, in the range 0.0 to 1.0. If all elements in *color* are set to 0.0 then it is ignored.

**Valid Usage (Implicit)**

- VUID-VkDebugMarkerMarkerInfoEXT-sType-sType
  - *sType* must be VK_STRUCTURE_TYPE_DEBUG_MARKER_MARKER_INFO_EXT
- VUID-VkDebugMarkerMarkerInfoEXT-pNext-pNext
pNext must be NULL

- VUID-VkDebugMarkerMarkerInfoEXT-pMarkerName-parameter
  pMarkerName must be a null-terminated UTF-8 string

A marker region can be closed by calling:

```c
// Provided by VK_EXT_debug_marker
void vkCmdDebugMarkerEndEXT(
    VkCommandBuffer commandBuffer);
```

- commandBuffer is the command buffer into which the command is recorded.

An application may open a marker region in one command buffer and close it in another, or otherwise split marker regions across multiple command buffers or multiple queue submissions. When viewed from the linear series of submissions to a single queue, the calls to `vkCmdDebugMarkerBeginEXT` and `vkCmdDebugMarkerEndEXT` must be matched and balanced.

## Valid Usage

- VUID-vkCmdDebugMarkerEndEXT-commandBuffer-01239
  There must be an outstanding `vkCmdDebugMarkerBeginEXT` command prior to the `vkCmdDebugMarkerEndEXT` on the queue that commandBuffer is submitted to

- VUID-vkCmdDebugMarkerEndEXT-commandBuffer-01240
  If commandBuffer is a secondary command buffer, there must be an outstanding `vkCmdDebugMarkerBeginEXT` command recorded to commandBuffer that has not previously been ended by a call to `vkCmdDebugMarkerEndEXT`

## Valid Usage (Implicit)

- VUID-vkCmdDebugMarkerEndEXT-commandBuffer-parameter
  commandBuffer must be a valid VkCommandBuffer handle

- VUID-vkCmdDebugMarkerEndEXT-commandBuffer-recording
  commandBuffer must be in the recording state

- VUID-vkCmdDebugMarkerEndEXT-commandBuffer-cmdpool
  The VkCommandPool that commandBuffer was allocated from must support graphics, or compute operations

- VUID-vkCmdDebugMarkerEndEXT-videocoding
  This command must only be called outside of a video coding scope

## Host Synchronization

- Host access to commandBuffer must be externally synchronized
• Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized

---

**Command Properties**

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td>Compute</td>
<td></td>
</tr>
</tbody>
</table>

A single marker label can be inserted into a command buffer by calling:

```c
// Provided by VK_EXT_debug_marker
void vkCmdDebugMarkerInsertEXT(
    VkCommandBuffer commandBuffer,
    const VkDebugMarkerMarkerInfoEXT* pMarkerInfo);
```

• `commandBuffer` is the command buffer into which the command is recorded.
• `pMarkerInfo` is a pointer to a `VkDebugMarkerMarkerInfoEXT` structure specifying the parameters of the marker to insert.

---

**Valid Usage (Implicit)**

• VUID-vkCmdDebugMarkerInsertEXT-commandBuffer-parameter `commandBuffer` **must** be a valid `VkCommandBuffer` handle

• VUID-vkCmdDebugMarkerInsertEXT-pMarkerInfo-parameter `pMarkerInfo` **must** be a valid pointer to a valid `VkDebugMarkerMarkerInfoEXT` structure

• VUID-vkCmdDebugMarkerInsertEXT-commandBuffer-recording `commandBuffer` **must** be in the recording state

• VUID-vkCmdDebugMarkerInsertEXT-commandBuffer-cmdpool The `VkCommandPool` that `commandBuffer` was allocated from **must** support graphics, or compute operations

• VUID-vkCmdDebugMarkerInsertEXT-videocoding This command **must** only be called outside of a video coding scope

---

**Host Synchronization**

• Host access to `commandBuffer` **must** be externally synchronized

• Host access to the `VkCommandPool` that `commandBuffer` was allocated from **must** be externally synchronized
49.3. Debug Report Callbacks

Debug report callbacks are represented by \texttt{VkDebugReportCallbackEXT} handles:

```c
// Provided by VK_EXT_debug_report
VK_DEFINE_NON_DISPATCHABLE_HANDLE(VkDebugReportCallbackEXT)
```

Debug report callbacks give more detailed feedback on the application’s use of Vulkan when events of interest occur.

To register a debug report callback, an application uses \texttt{vkCreateDebugReportCallbackEXT}.

```c
// Provided by VK_EXT_debug_report
VkResult vkCreateDebugReportCallbackEXT(
    VkInstance instance,
    const VkDebugReportCallbackCreateInfoEXT* pCreateInfo,
    const VkAllocationCallbacks* pAllocator,
    VkDebugReportCallbackEXT* pCallback);
```

- \texttt{instance} is the instance the callback will be logged on.
- \texttt{pCreateInfo} is a pointer to a \texttt{VkDebugReportCallbackCreateInfoEXT} structure defining the conditions under which this callback will be called.
- \texttt{pAllocator} controls host memory allocation as described in the Memory Allocation chapter.
- \texttt{pCallback} is a pointer to a \texttt{VkDebugReportCallbackEXT} handle in which the created object is returned.

### Valid Usage (Implicit)

- \texttt{VUID-vkCreateDebugReportCallbackEXT-instance-parameter} \texttt{instance} must be a valid \texttt{VkInstance} handle
- \texttt{VUID-vkCreateDebugReportCallbackEXT-pCreateInfo-parameter} \texttt{pCreateInfo} must be a valid pointer to a valid \texttt{VkDebugReportCallbackCreateInfoEXT} structure
- \texttt{VUID-vkCreateDebugReportCallbackEXT-pAllocator-parameter} If \texttt{pAllocator} is not NULL, \texttt{pAllocator} must be a valid pointer to a valid
**VkAllocationCallbacks** structure

- VUID-vkCreateDebugReportCallbackEXT-pCallback-parameter
  - `pCallback` must be a valid pointer to a `VkDebugReportCallbackEXT` handle

---

**Return Codes**

**Success**
- `VK_SUCCESS`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`

---

The definition of `VkDebugReportCallbackCreateInfoEXT` is:

```c
// Provided by VK_EXT_debug_report
typedef struct VkDebugReportCallbackCreateInfoEXT {
    VkStructureType sType;
    const void* pNext;
    VkDebugReportFlagsEXT flags;
    PFN_vkDebugReportCallbackEXT pfnCallback;
    void* pUserData;
} VkDebugReportCallbackCreateInfoEXT;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
- `flags` is a bitmask of `VkDebugReportFlagBitsEXT` specifying which event(s) will cause this callback to be called.
- `pfnCallback` is the application callback function to call.
- `pUserData` is user data to be passed to the callback.

For each `VkDebugReportCallbackEXT` that is created the `VkDebugReportCallbackCreateInfoEXT::flags` determine when that `VkDebugReportCallbackCreateInfoEXT::pfnCallback` is called. When an event happens, the implementation will do a bitwise AND of the event's `VkDebugReportFlagBitsEXT` flags to each `VkDebugReportCallbackEXT` object's flags. For each non-zero result the corresponding callback will be called. The callback will come directly from the component that detected the event, unless some other layer intercepts the calls for its own purposes (filter them in a different way, log to a system error log, etc.).

An application may receive multiple callbacks if multiple `VkDebugReportCallbackEXT` objects were created. A callback will always be executed in the same thread as the originating Vulkan call.

A callback may be called from multiple threads simultaneously (if the application is making Vulkan calls from multiple threads).
Valid Usage (Implicit)

- VUID-VkDebugReportCallbackCreateInfoEXT-sType-sType
  sType **must** be **VK_STRUCTURE_TYPE_DEBUG_REPORT_CALLBACK_CREATE_INFO_EXT**

- VUID-VkDebugReportCallbackCreateInfoEXT-flags-parameter
  flags **must** be a valid combination of **VkDebugReportFlagBitsEXT** values

- VUID-VkDebugReportCallbackCreateInfoEXT-pfnCallback-parameter
  pfnCallback **must** be a valid **PFN_vkDebugReportCallbackEXT** value

Bits which **can** be set in **VkDebugReportCallbackCreateInfoEXT::flags**, specifying events which cause a debug report, are:

```c
// Provided by VK_EXT_debug_report
typedef enum VkDebugReportFlagBitsEXT {
    VK_DEBUG_REPORT_INFORMATION_BIT_EXT = 0x00000001,
    VK_DEBUG_REPORT_WARNING_BIT_EXT = 0x00000002,
    VK_DEBUG_REPORT_PERFORMANCE_WARNING_BIT_EXT = 0x00000004,
    VK_DEBUG_REPORT_ERROR_BIT_EXT = 0x00000008,
    VK_DEBUG_REPORT_DEBUG_BIT_EXT = 0x00000010,
} VkDebugReportFlagBitsEXT;
```

- **VK_DEBUG_REPORT_ERROR_BIT_EXT** specifies that the application has violated a valid usage condition of the specification.

- **VK_DEBUG_REPORT_WARNING_BIT_EXT** specifies use of Vulkan that **may** expose an app bug. Such cases may not be immediately harmful, such as a fragment shader outputting to a location with no attachment. Other cases **may** point to behavior that is almost certainly bad when unintended such as using an image whose memory has not been filled. In general if you see a warning but you know that the behavior is intended/desired, then simply ignore the warning.

- **VK_DEBUG_REPORT_PERFORMANCE_WARNING_BIT_EXT** specifies a potentially non-optimal use of Vulkan, e.g. using **vkCmdClearColorImage** when setting **VkAttachmentDescription::loadOp** to **VK_ATTACHMENT_LOAD_OP_CLEAR** would have worked.

- **VK_DEBUG_REPORT_INFORMATION_BIT_EXT** specifies an informational message such as resource details that may be handy when debugging an application.

- **VK_DEBUG_REPORT_DEBUG_BIT_EXT** specifies diagnostic information from the implementation and layers.

```c
// Provided by VK_EXT_debug_report
typedef VkFlags VkDebugReportFlagsEXT;
```

**VkDebugReportFlagsEXT** is a bitmask type for setting a mask of zero or more **VkDebugReportFlagBitsEXT**.

The prototype for the **VkDebugReportCallbackCreateInfoEXT::pfnCallback** function implemented by
The application is:

```c
// Provided by VK_EXT_debug_report
typedef VkBool32 (VKAPI_PTR *PFN_vkDebugReportCallbackEXT)(
    VkDebugReportFlagsEXT flags,
    VkDebugReportObjectTypeEXT objectType,
    uint64_t object,
    size_t location,
    int32_t messageCode,
    const char *pLayerPrefix,
    const char *pMessage,
    void *pUserData);
```

- `flags` specifies the `VkDebugReportFlagBitsEXT` that triggered this callback.
- `objectType` is a `VkDebugReportObjectTypeEXT` value specifying the type of object being used or created at the time the event was triggered.
- `object` is the object where the issue was detected. If `objectType` is `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT`, `object` is undefined.
- `location` is a component (layer, driver, loader) defined value specifying the location of the trigger. This is an optional value.
- `messageCode` is a layer-defined value indicating what test triggered this callback.
- `pLayerPrefix` is a null-terminated string that is an abbreviation of the name of the component making the callback. `pLayerPrefix` is only valid for the duration of the callback.
- `pMessage` is a null-terminated string detailing the trigger conditions. `pMessage` is only valid for the duration of the callback.
- `pUserData` is the user data given when the `VkDebugReportCallbackEXT` was created.

The callback must not call `vkDestroyDebugReportCallbackEXT`.

The callback returns a `VkBool32`, which is interpreted in a layer-specified manner. The application should always return `VK_FALSE`. The `VK_TRUE` value is reserved for use in layer development.

`object` must be a Vulkan object or `VK_NULL_HANDLE`. If `objectType` is not `VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT` and `object` is not `VK_NULL_HANDLE`, `object` must be a Vulkan object of the corresponding type associated with `objectType` as defined in `VkDebugReportObjectTypeEXT` and Vulkan Handle Relationship.

Possible values passed to the `objectType` parameter of the callback function specified by `VkDebugReportCallbackCreateInfoEXT::pfnCallback`, specifying the type of object handle being reported, are:

```c
// Provided by VK_EXT_debug_marker, VK_EXT_debug_report
typedef enum VkDebugReportObjectTypeEXT {
    VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT = 0,
    VK_DEBUG_REPORT_OBJECT_TYPE_INSTANCE_EXT = 1,
    VK_DEBUG_REPORT_OBJECT_TYPE_PHYSICAL_DEVICE_EXT = 2
}
```
VK_DEBUG_REPORT_OBJECT_TYPE_DEVICE_EXT = 3,
VK_DEBUG_REPORT_OBJECT_TYPE_QUEUE_EXT = 4,
VK_DEBUG_REPORT_OBJECT_TYPE_SEMAPHORE_EXT = 5,

</tbody>
</table>

**Note**

The primary expected use of `VK_ERROR_VALIDATION_FAILED_EXT` is for validation layer testing. It is not expected that an application would see this error code during normal use of the validation layers.

To inject its own messages into the debug stream, call:

```c
// Provided by VK_EXT_debug_report
void vkDebugReportMessageEXT(
    VkInstance instance,
    VkDebugReportFlagsEXT flags,
    VkDebugReportObjectTypeEXT objectType,
    uint64_t object,
    size_t location,
    int32_t messageCode,
    const char* pLayerPrefix,
    const char* pMessage);
```

- **instance** is the debug stream's `VkInstance`.
- **flags** specifies the `VkDebugReportFlagBitsEXT` classification of this event/message.
- **objectType** is a `VkDebugReportObjectTypeEXT` specifying the type of object being used or created at the time the event was triggered.
- **object** is the object where the issue was detected. **object can be VK_NULL_HANDLE** if there is no object associated with the event.
- **location** is an application defined value.
- **messageCode** is an application defined value.
- **pLayerPrefix** is the abbreviation of the component making this event/message.
- **pMessage** is a null-terminated string detailing the trigger conditions.
The call will propagate through the layers and generate callback(s) as indicated by the message’s flags. The parameters are passed on to the callback in addition to the pUserData value that was defined at the time the callback was registered.

### Valid Usage

- **VUID-vkDebugReportMessageEXT-object-01241**
  
  object **must** be a Vulkan object or VK_NULL_HANDLE

- **VUID-vkDebugReportMessageEXT-objectType-01498**
  
  If objectType is not VK_DEBUG_REPORT_OBJECT_TYPE_UNKNOWN_EXT and object is not VK_NULL_HANDLE, object **must** be a Vulkan object of the corresponding type associated with objectType as defined in VkDebugReportObjectTypeEXT and Vulkan Handle Relationship

### Valid Usage (Implicit)

- **VUID-vkDebugReportMessageEXT-instance-parameter**
  
  instance **must** be a valid VkInstance handle

- **VUID-vkDebugReportMessageEXT-flags-parameter**
  
  flags **must** be a valid combination of VkDebugReportFlagBitsEXT values

- **VUID-vkDebugReportMessageEXT-flags-requiredbitmap**
  
  flags **must** not be 0

- **VUID-vkDebugReportMessageEXT-objectType-parameter**
  
  objectType **must** be a valid VkDebugReportObjectTypeEXT value

- **VUID-vkDebugReportMessageEXT-pLayerPrefix-parameter**
  
  pLayerPrefix **must** be a null-terminated UTF-8 string

- **VUID-vkDebugReportMessageEXT-pMessage-parameter**
  
  pMessage **must** be a null-terminated UTF-8 string

To destroy a VkDebugReportCallbackEXT object, call:

```c
// Provided by VK_EXT_debug_report
void vkDestroyDebugReportCallbackEXT(
    VkInstance instance,
    VkDebugReportCallbackEXT callback,
    const VkAllocationCallbacks* pAllocator);
```

- instance is the instance where the callback was created.

- callback is the VkDebugReportCallbackEXT object to destroy. callback is an externally synchronized object and must not be used on more than one thread at a time. This means that vkDestroyDebugReportCallbackEXT must not be called when a callback is active.

- pAllocator controls host memory allocation as described in the Memory Allocation chapter.
Valid Usage

• VUID-vkDestroyDebugReportCallbackEXT-instance-01242
  If `VkAllocationCallbacks` were provided when `callback` was created, a compatible set of callbacks must be provided here

• VUID-vkDestroyDebugReportCallbackEXT-instance-01243
  If no `VkAllocationCallbacks` were provided when `callback` was created, `pAllocator` must be `NULL`

Valid Usage (Implicit)

• VUID-vkDestroyDebugReportCallbackEXT-instance-parameter
  `instance` must be a valid `VkInstance` handle

• VUID-vkDestroyDebugReportCallbackEXT-callback-parameter
  If `callback` is not `VK_NULL_HANDLE`, `callback` must be a valid `VkDebugReportCallbackEXT` handle

• VUID-vkDestroyDebugReportCallbackEXT-pAllocator-parameter
  If `pAllocator` is not `NULL`, `pAllocator` must be a valid pointer to a valid `VkAllocationCallbacks` structure

• VUID-vkDestroyDebugReportCallbackEXT-callback-parent
  If `callback` is a valid handle, it must have been created, allocated, or retrieved from `instance`

Host Synchronization

• Host access to `callback` must be externally synchronized

49.4. Device Loss Debugging

49.4.1. Device Diagnostic Checkpoints

Device execution progress can be tracked for the purposes of debugging a device loss by annotating the command stream with application-defined diagnostic checkpoints.

Device diagnostic checkpoints are inserted into the command stream by calling `vkCmdSetCheckpointNV`.

```c
// Provided by VK_NV_device_diagnostic_checkpoints
void vkCmdSetCheckpointNV(  
  VkCommandBuffer commandBuffer,  
  const void* pCheckpointMarker);
```
- `commandBuffer` is the command buffer that will receive the marker.
- `pCheckpointMarker` is an opaque application-provided value that will be associated with the checkpoint.

### Valid Usage (Implicit)

- **VUID-vkCmdSetCheckpointNV-commandBuffer-parameter**
  - `commandBuffer` must be a valid `VkCommandBuffer` handle.
- **VUID-vkCmdSetCheckpointNV-commandBuffer-recording**
  - `commandBuffer` must be in the recording state.
- **VUID-vkCmdSetCheckpointNV-commandBuffer-cmdpool**
  - The `VkCommandPool` that `commandBuffer` was allocated from must support graphics, compute, or transfer operations.
- **VUID-vkCmdSetCheckpointNV-videocoding**
  - This command must only be called outside of a video coding scope.

### Host Synchronization

- Host access to `commandBuffer` must be externally synchronized.
- Host access to the `VkCommandPool` that `commandBuffer` was allocated from must be externally synchronized.

### Command Properties

<table>
<thead>
<tr>
<th>Command Buffer Levels</th>
<th>Render Pass Scope</th>
<th>Video Coding Scope</th>
<th>Supported Queue Types</th>
<th>Command Type</th>
</tr>
</thead>
<tbody>
<tr>
<td>Primary</td>
<td>Both</td>
<td>Outside</td>
<td>Graphics, Compute, Transfer</td>
<td>Action</td>
</tr>
<tr>
<td>Secondary</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note that `pCheckpointMarker` is treated as an opaque value. It does not need to be a valid pointer and will not be dereferenced by the implementation.

If the device encounters an error during execution, the implementation will return a `VK_ERROR_DEVICE_LOST` error to the application at some point during host execution. When this happens, the application can call `vkGetQueueCheckpointData2NV` to retrieve information on the most recent diagnostic checkpoints that were executed by the device.

```c
// Provided by VK_KHR_synchronization2 with VK_NV_device_diagnostic_checkpoints
void vkGetQueueCheckpointData2NV(
    VkQueue queue,
    uint32_t* pCheckpointDataCount,
)
```
VkCheckpointData2NV* pCheckpointData);

- `queue` is the `VkQueue` object the caller would like to retrieve checkpoint data for.
- `pCheckpointDataCount` is a pointer to an integer related to the number of checkpoint markers available or queried, as described below.
- `pCheckpointData` is either `NULL` or a pointer to an array of `VkCheckpointData2NV` structures.

If `pCheckpointData` is `NULL`, then the number of checkpoint markers available is returned in `pCheckpointDataCount`. Otherwise, `pCheckpointDataCount` must point to a variable set by the user to the number of elements in the `pCheckpointData` array, and on return the variable is overwritten with the number of structures actually written to `pCheckpointData`.

If `pCheckpointDataCount` is less than the number of checkpoint markers available, at most `pCheckpointDataCount` structures will be written.

### Valid Usage

- **VUID-vkGetQueueCheckpointData2NV-queue-03892**: The device that `queue` belongs to must be in the lost state

### Valid Usage (Implicit)

- **VUID-vkGetQueueCheckpointData2NV-queue-parameter**: `queue` must be a valid `VkQueue` handle
- **VUID-vkGetQueueCheckpointData2NV-pCheckpointDataCount-parameter**: `pCheckpointDataCount` must be a valid pointer to a `uint32_t` value
- **VUID-vkGetQueueCheckpointData2NV-pCheckpointData-parameter**: If the value referenced by `pCheckpointDataCount` is not 0, and `pCheckpointData` is not `NULL`, `pCheckpointData` must be a valid pointer to an array of `pCheckpointDataCount` `VkCheckpointData2NV` structures

The `VkCheckpointData2NV` structure is defined as:

```c
// Provided by VK_KHR_synchronization2 with VK_NV_device_diagnostic_checkpoints
typedef struct VkCheckpointData2NV {
    VkStructureType sType;
    void* pNext;
    VkPipelineStageFlags2 stage;
    void* pCheckpointMarker;
} VkCheckpointData2NV;
```

- `sType` is a `VkStructureType` value identifying this structure.
- `pNext` is `NULL` or a pointer to a structure extending this structure.
• **stage** indicates a single pipeline stage which the checkpoint marker data refers to.

• **pCheckpointMarker** contains the value of the last checkpoint marker executed in the stage that **stage** refers to.

---

### Valid Usage (Implicit)

- VUID-VkCheckpointData2NV-sType-sType
  
  *sType* **must** be **VK_STRUCTURE_TYPE_CHECKPOINT_DATA_2_NV**

- VUID-VkCheckpointData2NV-pNext-pNext
  
  *pNext* **must** be **NULL**

---

The stages at which a checkpoint marker **can** be executed are implementation-defined and **can** be queried by calling `vkGetPhysicalDeviceQueueFamilyProperties2`.

If the device encounters an error during execution, the implementation will return a **VK_ERROR_DEVICE_LOST** error to the application at a certain point during host execution. When this happens, the application **can** call `vkGetQueueCheckpointDataNV` to retrieve information on the most recent diagnostic checkpoints that were executed by the device.

```c
// Provided by VK_NV_device_diagnostic_checkpoints
void vkGetQueueCheckpointDataNV(
    VkQueue queue,
    uint32_t* pCheckpointDataCount,
    VkCheckpointDataNV* pCheckpointData);
```

- **queue** is the **VkQueue** object the caller would like to retrieve checkpoint data for.

- **pCheckpointDataCount** is a pointer to an integer related to the number of checkpoint markers available or queried, as described below.

- **pCheckpointData** is either **NULL** or a pointer to an array of **VkCheckpointDataNV** structures.

If **pCheckpointData** is **NULL**, then the number of checkpoint markers available is returned in **pCheckpointDataCount**.

Otherwise, **pCheckpointDataCount** **must** point to a variable set by the user to the number of elements in the **pCheckpointData** array, and on return the variable is overwritten with the number of structures actually written to **pCheckpointData**.

If **pCheckpointDataCount** is less than the number of checkpoint markers available, at most **pCheckpointDataCount** structures will be written.

---

### Valid Usage

- VUID-vkGetQueueCheckpointDataNV-queue-02025

  The device that **queue** belongs to **must** be in the lost state.
Valid Usage (Implicit)

• VUID-vkGetQueueCheckpointDataNV-queue-parameter
  queue must be a valid VkQueue handle

• VUID-vkGetQueueCheckpointDataNV-pCheckpointDataCount-parameter
  pCheckpointDataCount must be a valid pointer to a uint32_t value

• VUID-vkGetQueueCheckpointDataNV-pCheckpointData-parameter
  If the value referenced by pCheckpointDataCount is not 0, and pCheckpointData is not NULL, pCheckpointData must be a valid pointer to an array of pCheckpointDataCount VkCheckpointDataNV structures

The VkCheckpointDataNV structure is defined as:

```
// Provided by VK_NV_device_diagnostic_checkpoints
typedef struct VkCheckpointDataNV {
    VkStructureType sType;
    void* pNext;
    VkPipelineStageFlagBits stage;
    void* pCheckpointMarker;
} VkCheckpointDataNV;
```

• sType is a VkStructureType value identifying this structure.
• pNext is NULL or a pointer to a structure extending this structure.
• stage is a VkPipelineStageFlagBits value specifying which pipeline stage the checkpoint marker data refers to.
• pCheckpointMarker contains the value of the last checkpoint marker executed in the stage that stage refers to.

The stages at which a checkpoint marker can be executed are implementation-defined and can be queried by calling vkGetPhysicalDeviceQueueFamilyProperties2.

Valid Usage (Implicit)

• VUID-VkCheckpointDataNV-sType-sType
  sType must be VK_STRUCTURE_TYPE_CHECKPOINT_DATA_NV

• VUID-VkCheckpointDataNV-pNext-pNext
  pNext must be NULL

49.4.2. Device Fault Diagnosis

To retrieve diagnostic information about faults that may have caused device loss, call:

```
// Provided by VK_EXT_device_fault
```
vkGetDeviceFaultInfoEXT(
    VkDevice device,
    VkDeviceFaultCountsEXT* pFaultCounts,
    VkDeviceFaultInfoEXT* pFaultInfo);

- **device** is the logical device from which to query the diagnostic fault information.
- **pFaultCounts** is a pointer to a *VkDeviceFaultCountsEXT* structure in which counts for structures describing additional fault information are returned.
- **pFaultInfo** is **NULL** or a pointer to a *VkDeviceFaultInfoEXT* structure in which fault information is returned.

If **pFaultInfo** is **NULL**, then the counts of corresponding additional fault information structures available are returned in the addressInfoCount and vendorInfoCount members of **pFaultCounts**. Additionally, the size of any vendor-specific binary crash dump is returned in the vendorBinarySize member of **pFaultCounts**.

If **pFaultInfo** is not **NULL**, **pFaultCounts** must point to a *VkDeviceFaultCountsEXT* structure with each structure count or size member (addressInfoCount, vendorInfoCount, vendorBinarySize) set by the user to the number of elements in the corresponding output array member of **pFaultInfo** (pAddressInfos and pVendorInfos), or to the size of the output buffer in bytes (pVendorBinaryData). On return, each structure count member is overwritten with the number of structures actually written to the corresponding output array member of **pFaultInfo**. Similarly, vendorBinarySize is overwritten with the number of bytes actually written to the pVendorBinaryData member of **pFaultInfo**.

If the **vendor-specific crash dumps** feature is not enabled, then implementations must set **pFaultCounts**->vendorBinarySize to zero and must not modify **pFaultInfo**->pVendorBinaryData.

If any **pFaultCounts** structure count member is less than the number of corresponding fault properties available, at most structure count (addressInfoCount, vendorInfoCount) elements will be written to the associated **pFaultInfo** output array. Similarly, if vendorBinarySize is less than the size in bytes of the available crash dump data, at most vendorBinarySize elements will be written to pVendorBinaryData.

If **pFaultInfo** is **NULL**, then subsequent calls to **vkGetDeviceFaultInfoEXT** for the same **device** must return identical values in the addressInfoCount, vendorInfoCount and vendorBinarySize members of **pFaultCounts**.

If **pFaultInfo** is not **NULL**, then subsequent calls to **vkGetDeviceFaultInfoEXT** for the same **device** must return identical values in the output members of **pFaultInfo** (pAddressInfos, pVendorInfos, pVendorBinaryData), up to the limits described by the structure count and buffer size members of **pFaultCounts** (addressInfoCount, vendorInfoCount, vendorBinarySize). If the sizes of the output members of **pFaultInfo** increase for a subsequent call to **vkGetDeviceFaultInfoEXT**, then supplementary information may be returned in the additional available space.

If any **pFaultCounts** structure count member is smaller than the number of corresponding fault properties available, or if **pFaultCounts**->vendorBinarySize is smaller than the size in bytes of the generated binary crash dump data, **VK_INCOMPLETE** will be returned instead of **VK_SUCCESS**, to indicate that not all the available properties were returned.
If `pFaultCounts->vendorBinarySize` is less than what is necessary to store the binary crash dump header, nothing will be written to `pFaultInfo->pVendorBinaryData` and zero will be written to `pFaultCounts->vendorBinarySize`.

---

**Valid Usage**

- VUID-vkGetDeviceFaultInfoEXT-device-07336
  
  **device** must be in the **lost** state

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07337
  
  If the value referenced by `pFaultCounts->addressInfoCount` is not 0, and `pFaultInfo->pAddressInfos` is not NULL, `pFaultInfo->pAddressInfos` must be a valid pointer to an array of `pFaultCounts->addressInfoCount` `VkDeviceFaultAddressInfoEXT` structures

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07338
  
  If the value referenced by `pFaultCounts->vendorInfoCount` is not 0, and `pFaultInfo->pVendorInfos` is not NULL, `pFaultInfo->pVendorInfos` must be a valid pointer to an array of `pFaultCounts->vendorInfoCount` `VkDeviceFaultVendorInfoEXT` structures

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-07339
  
  If the value referenced by `pFaultCounts->vendorBinarySize` is not 0, and `pFaultInfo->pVendorBinaryData` is not NULL, `pFaultInfo->pVendorBinaryData` must be a valid pointer to an array of `pFaultCounts->vendorBinarySize` bytes

---

**Valid Usage (Implicit)**

- VUID-vkGetDeviceFaultInfoEXT-device-parameter
  
  **device** must be a valid `VkDevice` handle

- VUID-vkGetDeviceFaultInfoEXT-pFaultCounts-parameter
  
  `pFaultCounts` must be a valid pointer to a `VkDeviceFaultCountsEXT` structure

- VUID-vkGetDeviceFaultInfoEXT-pFaultInfo-parameter
  
  If `pFaultInfo` is not NULL, `pFaultInfo` must be a valid pointer to a `VkDeviceFaultInfoEXT` structure

---

**Return Codes**

**Success**

- VK_SUCCESS
- VK_INCOMPLETE

**Failure**

- VK_ERROR_OUT_OF_HOST_MEMORY

---

The `VkDeviceFaultCountsEXT` structure is defined as:
// Provided by VK_EXT_device_fault

typedef struct VkDeviceFaultCountsEXT {
    VkStructureType sType;
    void* pNext;
    uint32_t addressInfoCount;
    uint32_t vendorInfoCount;
    VkDeviceSize vendorBinarySize;
} VkDeviceFaultCountsEXT;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **addressInfoCount** is the number of `VkDeviceFaultAddressInfoEXT` structures describing either memory accesses which **may** have caused a page fault, or the addresses of active instructions at the time of the fault.
- **vendorInfoCount** is the number of `VkDeviceFaultVendorInfoEXT` structures describing vendor-specific fault information.
- **vendorBinarySize** is the size in bytes of a vendor-specific binary crash dump, which may provide additional information when imported into external tools.

### Valid Usage (Implicit)

- VUID-VkDeviceFaultCountsEXT-sType-sType
  - **sType** must be `VK_STRUCTURE_TYPEDEVICE_FAULT_COUNTS_EXT`
- VUID-VkDeviceFaultCountsEXT-pNext-pNext
  - **pNext** must be `NULL`

The `VkDeviceFaultInfoEXT` structure is defined as:

// Provided by VK_EXT_device_fault

typedef struct VkDeviceFaultInfoEXT {
    VkStructureType sType;
    void* pNext;
    char description[VK_MAX_DESCRIPTION_SIZE];
    VkDeviceFaultAddressInfoEXT* pAddressInfos;
    VkDeviceFaultVendorInfoEXT* pVendorInfos;
    void* pVendorBinaryData;
} VkDeviceFaultInfoEXT;

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **description** is an array of `VK_MAX_DESCRIPTION_SIZE` `char` containing a null-terminated UTF-8 string which is a human readable description of the fault.
- **pAddressInfos** is `NULL` or a pointer to an array of `VkDeviceFaultAddressInfoEXT` structures
describing either memory accesses which may have caused a page fault, or describing active instruction pointers at the time of the fault. If not NULL, each element of pAddressInfos describes the a bounded region of GPU virtual address space containing either the GPU virtual address accessed, or the value of an active instruction pointer.

- **pVendorInfos** is NULL or a pointer to an array of VkDeviceFaultVendorInfoEXT structures describing vendor-specific fault information.
- **pVendorBinaryData** is NULL or a pointer to vendorBinarySize number of bytes of data, which will be populated with a vendor-specific binary crash dump, as described in Vendor Binary Crash Dumps.

An implementation should populate as many members of VkDeviceFaultInfoEXT as possible, given the information available at the time of the fault and the constraints of the implementation itself.

Due to hardware limitations, pAddressInfos describes ranges of GPU virtual address space, rather than precise addresses. The precise memory address accessed or the precise value of the instruction pointer must lie within the region described.

Note
Each element of pAddressInfos describes either:

- A memory access which may have triggered a page fault and may have contributed to device loss
- The value of an active instruction pointer at the time a fault occurred. This value may be indicative of the active pipeline or shader at the time of device loss

Comparison of the GPU virtual addresses described by pAddressInfos to GPU virtual address ranges reported by the VK_EXT_device_address_binding_report extension may allow applications to correlate between these addresses and Vulkan objects. Applications should be aware that these addresses may also correspond to resources internal to an implementation, which will not be reported via the VK_EXT_device_address_binding_report extension.

Valid Usage (Implicit)

- VUID-VkDeviceFaultInfoEXT-sType-sType
  sType must be VK_STRUCTURE_TYPE_DEVICE_FAULT_INFO_EXT
- VUID-VkDeviceFaultInfoEXT-pNext-pNext
  pNext must be NULL
- VUID-VkDeviceFaultInfoEXT-pAddressInfos-parameter
  If pAddressInfos is not NULL, pAddressInfos must be a valid pointer to a VkDeviceFaultAddressInfoEXT structure
- VUID-VkDeviceFaultInfoEXT-pVendorInfos-parameter
  If pVendorInfos is not NULL, pVendorInfos must be a valid pointer to a VkDeviceFaultVendorInfoEXT structure
The `VkDeviceFaultAddressInfoEXT` structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultAddressInfoEXT {
    VkDeviceFaultAddressTypeEXT addressType;
    VkDeviceAddress reportedAddress;
    VkDeviceSize addressPrecision;
} VkDeviceFaultAddressInfoEXT;
```

- `addressType` is either the type of memory operation that triggered a page fault, or the type of association between an instruction pointer and a fault.
- `reportedAddress` is the GPU virtual address recorded by the device.
- `addressPrecision` is a power of two value that specifies how precisely the device can report the address.

The combination of `reportedAddress` and `addressPrecision` allow the possible range of addresses to be calculated, such that:

```c
lower_address = (pInfo->reportedAddress & ~(pInfo->addressPrecision-1))
upper_address = (pInfo->reportedAddress | (pInfo->addressPrecision-1))
```

**Note**

It is valid for the `reportedAddress` to contain a more precise address than indicated by `addressPrecision`. In this case, the value of `reportedAddress` should be treated as an additional hint as to the value of the address that triggered the page fault, or to the value of an instruction pointer.

**Valid Usage (Implicit)**

- `VUID-VkDeviceFaultAddressInfoEXT-addressType-parameter`  
  `addressType` must be a valid `VkDeviceFaultAddressTypeEXT` value

Possible values of `VkDeviceFaultAddressInfoEXT::addressType` are:

```c
// Provided by VK_EXT_device_fault
typedef enum VkDeviceFaultAddressTypeEXT {
    VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_EXT = 0,
    VK_DEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_EXT = 1,
    VK_DEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_EXT = 2,
    VK_DEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_EXT = 3,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_EXT = 4,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_EXT = 5,
    VK_DEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_EXT = 6,
} VkDeviceFaultAddressTypeEXT;
```
• **VK_DEVICE_FAULT_ADDRESS_TYPE_NONE_EXT** specifies that **VkDeviceFaultAddressInfoEXT** does not describe a page fault, or an instruction address.

• **VKDEVICE_FAULT_ADDRESS_TYPE_READ_INVALID_EXT** specifies that **VkDeviceFaultAddressInfoEXT** describes a page fault triggered by an invalid read operation.

• **VKDEVICE_FAULT_ADDRESS_TYPE_WRITE_INVALID_EXT** specifies that **VkDeviceFaultAddressInfoEXT** describes a page fault triggered by an invalid write operation.

• **VKDEVICE_FAULT_ADDRESS_TYPE_EXECUTE_INVALID_EXT** describes a page fault triggered by an attempt to execute non-executable memory.

• **VKDEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_UNKNOWN_EXT** specifies an instruction pointer value at the time the fault occurred. This may or may not be related to a fault.

• **VKDEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_INVALID_EXT** specifies an instruction pointer value associated with an invalid instruction fault.

• **VKDEVICE_FAULT_ADDRESS_TYPE_INSTRUCTION_POINTER_FAULT_EXT** specifies an instruction pointer value associated with a fault.

**Note**

The instruction pointer values recorded may not identify the specific instruction(s) that triggered the fault. The relationship between the instruction pointer reported and triggering instruction will be vendor-specific.

The **VkDeviceFaultVendorInfoEXT** structure is defined as:

```c
// Provided by VK_EXT_device_fault
typedef struct VkDeviceFaultVendorInfoEXT {
    char description[VK_MAX_DESCRIPTION_SIZE];
    uint64_t vendorFaultCode;
    uint64_t vendorFaultData;
} VkDeviceFaultVendorInfoEXT;
```

• **description** is an array of **VK_MAX_DESCRIPTION_SIZE** char containing a null-terminated UTF-8 string which is a human readable description of the fault.

• **vendorFaultCode** is the vendor-specific fault code for this fault.

• **vendorFaultData** is the vendor-specific fault data associated with this fault.

**Vendor Binary Crash Dumps**

Applications **can** store the vendor-specific binary crash dump data retrieved by calling **vkGetDeviceFaultInfoEXT** for later analysis using external tools.

However, the format of this data **may** depend on the vendor ID, device ID, driver version, and other details of the device. To enable external applications to identify the original device from which a crash dump was generated, the initial bytes written to **VkDeviceFaultInfoEXT::pVendorBinaryData** **must** begin with a valid crash dump header.

Version one of the crash dump header is defined as:
// Provided by VK_EXT_device_fault

typedef struct VkDeviceFaultVendorBinaryHeaderVersionOneEXT {
    uint32_t headerSize;
    VkDeviceFaultVendorBinaryHeaderVersionEXT headerVersion;
    uint32_t vendorID;
    uint32_t deviceID;
    uint32_t driverVersion;
    uint8_t pipelineCacheUUID[VK_UUID_SIZE];
    uint32_t applicationNameOffset;
    uint32_t applicationVersion;
    uint32_t engineNameOffset;
    uint32_t engineVersion;
    uint32_t apiVersion;
} VkDeviceFaultVendorBinaryHeaderVersionOneEXT;

• headerSize is the length in bytes of the crash dump header.

• headerVersion is a VkDeviceFaultVendorBinaryHeaderVersionEXT enum value specifying the version of the header. A consumer of the crash dump should use the header version to interpret the remainder of the header.

• vendorID is the VkPhysicalDeviceProperties::vendorID of the implementation.

• deviceID is the VkPhysicalDeviceProperties::deviceID of the implementation.

• driverVersion is the VkPhysicalDeviceProperties::driverVersion of the implementation.

• pipelineCacheUUID is an array of VK_UUID_SIZE uint8_t values matching the VkPhysicalDeviceProperties::pipelineCacheUUID property of the implementation.

• applicationNameOffset is zero, or an offset from the base address of the crash dump header to a null-terminated UTF-8 string containing the name of the application. If applicationNameOffset is non-zero, this string must match the application name specified via VkApplicationInfo::pApplicationName during instance creation.

• applicationVersion must be zero or the value specified by VkApplicationInfo::applicationVersion during instance creation.

• engineNameOffset is zero, or an offset from the base address of the crash dump header to a null-terminated UTF-8 string containing the name of the engine (if any) used to create the application. If engineNameOffset is non-zero, this string must match the engine name specified via VkApplicationInfo::pEngineName during instance creation.

• engineVersion must be zero or the value specified by VkApplicationInfo::engineVersion during instance creation.

• apiVersion must be zero or the value specified by VkApplicationInfo::apiVersion during instance creation.

Unlike most structures declared by the Vulkan API, all fields of this structure are written with the least significant byte first, regardless of host byte-order.

The C language specification does not define the packing of structure members. This layout assumes tight structure member packing, with members laid out in the order listed in the structure,
and the intended size of the structure is 56 bytes. If a compiler produces code that diverges from that pattern, applications must employ another method to set values at the correct offsets.

### Valid Usage

- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerSize-07340
  - headerSize must be 56
- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerVersion-07341
  - headerVersion must be VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT

### Valid Usage (Implicit)

- VUID-VkDeviceFaultVendorBinaryHeaderVersionOneEXT-headerVersion-parameter
  - headerVersion must be a valid VkDeviceFaultVendorBinaryHeaderVersionEXT value

Possible values of the headerVersion value of the crash dump header are:

```c
// Provided by VK_EXT_device_fault
typedef enum VkDeviceFaultVendorBinaryHeaderVersionEXT {
    VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT = 1,
} VkDeviceFaultVendorBinaryHeaderVersionEXT;
```

- VK_DEVICE_FAULT_VENDOR_BINARY_HEADER_VERSION_ONE_EXT specifies version one of the binary crash dump header.

### 49.5. Active Tooling Information

Information about tools providing debugging, profiling, or similar services, active for a given physical device, can be obtained by calling:

```c
// Provided by VK_VERSION_1_3
VkResult vkGetPhysicalDeviceToolProperties(
    VkPhysicalDevice physicalDevice,
    uint32_t* pToolCount,
    VkPhysicalDeviceToolProperties* pToolProperties);
```

or the equivalent command

```c
// Provided by VK_EXT_tooling_info
VkResult vkGetPhysicalDeviceToolPropertiesEXT(
    VkPhysicalDevice physicalDevice,
    uint32_t* pToolCount,
    VkPhysicalDeviceToolPropertiesEXT* pToolProperties);
```
• `physicalDevice` is the handle to the physical device to query for active tools.
• `pToolCount` is a pointer to an integer describing the number of tools active on `physicalDevice`.
• `pToolProperties` is either `NULL` or a pointer to an array of `VkPhysicalDeviceToolProperties` structures.

If `pToolProperties` is `NULL`, then the number of tools currently active on `physicalDevice` is returned in `pToolCount`. Otherwise, `pToolCount` must point to a variable set by the user to the number of elements in the `pToolProperties` array, and on return the variable is overwritten with the number of structures actually written to `pToolProperties`. If `pToolCount` is less than the number of currently active tools, at most `pToolCount` structures will be written.

The count and properties of active tools may change in response to events outside the scope of the specification. An application should assume these properties might change at any given time.

### Valid Usage (Implicit)

- VUID-vkGetPhysicalDeviceToolProperties-physicalDevice-parameter `physicalDevice` must be a valid `VkPhysicalDevice` handle
- VUID-vkGetPhysicalDeviceToolProperties-pToolCount-parameter `pToolCount` must be a valid pointer to a `uint32_t` value
- VUID-vkGetPhysicalDeviceToolProperties-pToolProperties-parameter If the value referenced by `pToolCount` is not 0, and `pToolProperties` is not `NULL`, `pToolProperties` must be a valid pointer to an array of `VkPhysicalDeviceToolProperties` structures

### Return Codes

**Success**
- `VK_SUCCESS`
- `VK_INCOMPLETE`

**Failure**
- `VK_ERROR_OUT_OF_HOST_MEMORY`

The `VkPhysicalDeviceToolProperties` structure is defined as:

```c
// Provided by VK_VERSION_1_3
typedef struct VkPhysicalDeviceToolProperties {
    VkStructureType sType;
    void* pNext;
    char name[VK_MAX_EXTENSION_NAME_SIZE];
    char version[VK_MAX_EXTENSION_NAME_SIZE];
    VkToolPurposeFlags purposes;
    char description[VK_MAX_DESCRIPTION_SIZE];
    char layer[VK_MAX_EXTENSION_NAME_SIZE];
} VkPhysicalDeviceToolProperties;
```
```cpp
} VkPhysicalDeviceToolProperties;

or the equivalent

```cpp
// Provided by VK_EXT_tooling_info
typedef VkPhysicalDeviceToolProperties VkPhysicalDeviceToolPropertiesEXT;
```

- **sType** is a `VkStructureType` value identifying this structure.
- **pNext** is `NULL` or a pointer to a structure extending this structure.
- **name** is a null-terminated UTF-8 string containing the name of the tool.
- **version** is a null-terminated UTF-8 string containing the version of the tool.
- **purposes** is a bitmask of `VkToolPurposeFlagBits` which is populated with purposes supported by the tool.
- **description** is a null-terminated UTF-8 string containing a description of the tool.
- **layer** is a null-terminated UTF-8 string containing the name of the layer implementing the tool, if the tool is implemented in a layer - otherwise it may be an empty string.

### Valid Usage (Implicit)

- VUID-VkPhysicalDeviceToolProperties-sType-sType
  - **sType** must be `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TOOL_PROPERTIES`
- VUID-VkPhysicalDeviceToolProperties-pNext-pNext
  - **pNext** must be `NULL`

Bits which can be set in `VkPhysicalDeviceToolProperties::purposes`, specifying the purposes of an active tool, are:

```cpp
// Provided by VK_VERSION_1_3
typedef enum VkToolPurposeFlagBits {
    VK_TOOL_PURPOSE_VALIDATION_BIT = 0x00000001,
    VK_TOOL_PURPOSE_PROFILING_BIT = 0x00000002,
    VK_TOOL_PURPOSE_TRACING_BIT = 0x00000004,
    VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT = 0x00000008,
    VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT = 0x00000010,
    // Provided by VK_EXT_debug_report with VK_EXT_tooling_info, VK_EXT_debug_utils with
    // VK_EXT_tooling_info
    VK_TOOL_PURPOSE_DEBUG_REPORTING_BIT_EXT = 0x00000020,
    // Provided by VK_EXT_debug_marker with VK_EXT_tooling_info, VK_EXT_debug_utils with
    // VK_EXT_tooling_info
    VK_TOOL_PURPOSE_DEBUG_MARKERS_BIT_EXT = 0x00000040,
    VK_TOOL_PURPOSE_VALIDATION_BIT_EXT = VK_TOOL_PURPOSE_VALIDATION_BIT,
    VK_TOOL_PURPOSE_PROFILING_BIT_EXT = VK_TOOL_PURPOSE_PROFILING_BIT,
    VK_TOOL_PURPOSE_TRACING_BIT_EXT = VK_TOOL_PURPOSE_TRACING_BIT,
    VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT_EXT =
```
VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT,
    VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT_EXT =
VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT,
} VkToolPurposeFlagBits;

or the equivalent

// Provided by VK_EXT_tooling_info
typedef VkToolPurposeFlagBits VkToolPurposeFlagBitsEXT;

• VK_TOOL_PURPOSE_VALIDATION_BIT specifies that the tool provides validation of API usage.
• VK_TOOL_PURPOSE_PROFILING_BIT specifies that the tool provides profiling of API usage.
• VK_TOOL_PURPOSE_TRACING_BIT specifies that the tool is capturing data about the application’s API usage, including anything from simple logging to capturing data for later replay.
• VK_TOOL_PURPOSE_ADDITIONAL_FEATURES_BIT specifies that the tool provides additional API features/extensions on top of the underlying implementation.
• VK_TOOL_PURPOSE_MODIFYING_FEATURES_BIT specifies that the tool modifies the API features/limits/extensions presented to the application.
• VK_TOOL_PURPOSE_DEBUG_REPORTING_BIT_EXT specifies that the tool reports additional information to the application via callbacks specified by vkCreateDebugReportCallbackEXT or vkCreateDebugUtilsMessengerEXT
• VK_TOOL_PURPOSE_DEBUG_MARKERS_BIT_EXT specifies that the tool consumes debug markers or object debug annotation, queue labels, or command buffer labels

// Provided by VK_VERSION_1_3
typedef VkFlags VkToolPurposeFlags;

or the equivalent

// Provided by VK_EXT_tooling_info
typedef VkToolPurposeFlags VkToolPurposeFlagsEXT;

VkToolPurposeFlags is a bitmask type for setting a mask of zero or more VkToolPurposeFlagBits.
Appendix A: Vulkan Environment for SPIR-V

Shaders for Vulkan are defined by the Khronos SPIR-V Specification as well as the Khronos SPIR-V Extended Instructions for GLSL Specification. This appendix defines additional SPIR-V requirements applying to Vulkan shaders.

Versions and Formats

A Vulkan 1.3 implementation must support the 1.0, 1.1, 1.2, 1.3, 1.4, 1.5, and 1.6 versions of SPIR-V and the 1.0 version of the SPIR-V Extended Instructions for GLSL.

A SPIR-V module passed into vkCreateShaderModule is interpreted as a series of 32-bit words in host endianness, with literal strings packed as described in section 2.2 of the SPIR-V Specification. The first few words of the SPIR-V module must be a magic number and a SPIR-V version number, as described in section 2.3 of the SPIR-V Specification.

Capabilities

The table below lists the set of SPIR-V capabilities that may be supported in Vulkan implementations. The application must not use any of these capabilities in SPIR-V passed to vkCreateShaderModule unless one of the following conditions is met for the VkDevice specified in the device parameter of vkCreateShaderModule:

- The corresponding field in the table is blank.
- Any corresponding Vulkan feature is enabled.
- Any corresponding Vulkan extension is enabled.
- Any corresponding Vulkan property is supported.
- The corresponding core version is supported (as returned by VkPhysicalDeviceProperties::apiVersion).

The application **must** not pass a SPIR-V module containing any of the following to `vkCreateShaderModule`:

- any `OpCapability` not listed above,
- an unsupported capability, or
- a capability which corresponds to a Vulkan feature or extension which has not been enabled.
SPIR-V Extensions

The following table lists SPIR-V extensions that implementations may support. The application must not pass a SPIR-V module to `vkCreateShaderModule` that uses the following SPIR-V extensions unless one of the following conditions is met for the `VkDevice` specified in the `device` parameter of `vkCreateShaderModule`:

- Any corresponding Vulkan extension is enabled.
- The corresponding core version is supported (as returned by `VkPhysicalDeviceProperties::apiVersion`).

**Validation Rules within a Module**

A SPIR-V module passed to `vkCreateShaderModule` **must** conform to the following rules:

### Standalone SPIR-V Validation

The following rules **can** be validated with only the SPIR-V module itself. They do not depend on knowledge of the implementation and its capabilities or knowledge of runtime information, such as enabled features.

#### Valid Usage

- **VUID-StandaloneSpirv-None-04633**
  Every entry point **must** have no return value and accept no arguments

- **VUID-StandaloneSpirv-None-04634**
  The static function-call graph for an entry point **must** not contain cycles; that is, static recursion is not allowed

- **VUID-StandaloneSpirv-None-04635**
  The Logical or PhysicalStorageBuffer64 addressing model **must** be selected

- **VUID-StandaloneSpirv-None-04636**
  Scope for execution **must** be limited to Workgroup or Subgroup

- **VUID-StandaloneSpirv-None-04637**
  If the Scope for execution is Workgroup, then it **must** only be used in the task, mesh, tessellation control, or compute Execution Model

- **VUID-StandaloneSpirv-None-04638**
Scope for memory must be limited to Device, QueueFamily, Workgroup, ShaderCallKHR, Subgroup, or Invocation

- **VUID-StandaloneSpirv-ExecutionModel-07320**
  If the ExecutionModel is TessellationControl, and the MemoryModel is GLSL450, the Scope for memory must not be Workgroup

- **VUID-StandaloneSpirv-None-07321**
  If the Scope for memory is Workgroup, then it must only be used in the task, mesh, tessellation control, or compute Execution Model

- **VUID-StandaloneSpirv-None-04640**
  If the Scope for memory is ShaderCallKHR, then it must only be used in ray generation, intersection, closest hit, any-hit, miss, and callable Execution Model

- **VUID-StandaloneSpirv-None-04641**
  If the Scope for memory is Invocation, then memory semantics must be None

- **VUID-StandaloneSpirv-None-04642**
  Scope for group operations must be limited to Subgroup

- **VUID-StandaloneSpirv-SubgroupVoteKHR-07951**
  If none of the SubgroupVoteKHR, GroupNonUniform, or SubgroupBallotKHR capabilities are declared, Scope for memory must not be Subgroup

- **VUID-StandaloneSpirv-None-04643**
  Storage Class must be limited to UniformConstant, Input, Uniform, Output, Workgroup, Private, Function, PushConstant, Image, StorageBuffer, RayPayloadKHR, IncomingRayPayloadKHR, HitAttributeKHR, CallableDataKHR, IncomingCallableDataKHR, ShaderRecordBufferKHR, PhysicalStorageBuffer, or TileImageEXT

- **VUID-StandaloneSpirv-None-04644**
  If the Storage Class is Output, then it must not be used in the GlCompute, RayGenerationKHR, IntersectionKHR, AnyHitKHR, ClosestHitKHR, MissKHR, or CallableKHR Execution Model

- **VUID-StandaloneSpirv-None-04645**
  If the Storage Class is Workgroup, then it must only be used in the task, mesh, or compute Execution Model

- **VUID-StandaloneSpirv-None-08720**
  If the Storage Class is TileImageEXT, then it must only be used in the fragment execution model

- **VUID-StandaloneSpirv-OpAtomicStore-04730**
  OpAtomicStore must not use Acquire, AcquireRelease, or SequentiallyConsistent memory semantics

- **VUID-StandaloneSpirv-OpAtomicLoad-04731**
  OpAtomicLoad must not use Release, AcquireRelease, or SequentiallyConsistent memory semantics

- **VUID-StandaloneSpirv-OpMemoryBarrier-04732**
  OpMemoryBarrier must use one of Acquire, Release, AcquireRelease, or SequentiallyConsistent memory semantics

- **VUID-StandaloneSpirv-OpMemoryBarrier-04733**
OpMemoryBarrier must include at least one Storage Class

- VUID-StandaloneSpirv-OpControlBarrier-04650
  If the semantics for OpControlBarrier includes one of Acquire, Release, AcquireRelease, or SequentiallyConsistent memory semantics, then it must include at least one Storage Class operand

- VUID-StandaloneSpirv-OpVariable-04651
  Any OpVariable with an Initializer operand must have Output, Private, Function, or Workgroup as its Storage Class operand

- VUID-StandaloneSpirv-OpVariable-04734
  Any OpVariable with an Initializer operand and Workgroup as its Storage Class operand must use OpConstantNull as the initializer

- VUID-StandaloneSpirv-OpReadClockKHR-04652
  Scope for OpReadClockKHR must be limited to Subgroup or Device

- VUID-StandaloneSpirv-OriginLowerLeft-04653
  The OriginLowerLeft Execution Mode must not be used; fragment entry points must declare OriginUpperLeft

- VUID-StandaloneSpirv-PixelCenterInteger-04654
  The PixelCenterInteger Execution Mode must not be used (pixels are always centered at half-integer coordinates)

- VUID-StandaloneSpirv-UniformConstant-04655
  Any variable in the UniformConstant Storage Class must be typed as either OpTypeImage, OpTypeSampler, OpTypeSampledImage, OpTypeAccelerationStructureKHR, or an array of one of these types

- VUID-StandaloneSpirv-Uniform-06807
  Any variable in the Uniform or StorageBuffer Storage Class must be typed as OpTypeStruct or an array of this type

- VUID-StandaloneSpirv-PushConstant-06808
  Any variable in the PushConstant Storage Class must be typed as OpTypeStruct

- VUID-StandaloneSpirv-OpTypeImage-04656
  OpTypeImage must declare a scalar 32-bit float, 64-bit integer, or 32-bit integer type for the “Sampled Type” (RelaxedPrecision can be applied to a sampling instruction and to the variable holding the result of a sampling instruction)

- VUID-StandaloneSpirv-OpTypeImage-04657
  OpTypeImage must have a “Sampled” operand of 1 (sampled image) or 2 (storage image)

- VUID-StandaloneSpirv-OpTypeSampledImage-06671
  OpTypeSampledImage must have a OpTypeImage with a “Sampled” operand of 1 (sampled image)

- VUID-StandaloneSpirv-Image-04965
  The SPIR-V Type of the Image Format operand of an OpTypeImage must match the Sampled Type, as defined in Image Format and Type Matching

- VUID-StandaloneSpirv-OpImageTexelPointer-04658
  If an OpImageTexelPointer is used in an atomic operation, the image type of the image parameter to OpImageTexelPointer must have an image format of R64i, R64ui, R32f, R32i, or
• VUID-StandaloneSpirv-OpImageQuerySizeLod-04659  
  `OpImageQuerySizeLod`, `OpImageQueryLod`, and `OpImageQueryLevels` **must** only consume an 
  “Image” operand whose type has its “Sampled” operand set to 1

• VUID-StandaloneSpirv-OpTypeImage-06214  
  An `OpTypeImage` with a “Dim” operand of `SubpassData` **must** have an “Arrayed” operand of 0 
  (non-arrayed) and a “Sampled” operand of 2 (storage image)

• VUID-StandaloneSpirv-SubpassData-04660  
  The \((u,v)\) coordinates used for a `SubpassData` **must** be the \(<id>\) of a constant vector \((0,0)\), or 
  if a layer coordinate is used, **must** be a vector that was formed with constant 0 for the \(u\) 
  and \(v\) components

• VUID-StandaloneSpirv-OpTypeImage-06924  
  Objects of types `OpTypeImage`, `OpTypeSampler`, `OpTypeSampledImage`, 
  `OpTypeAccelerationStructureKHR`, and arrays of these types **must** not be stored to or 
  modified

• VUID-StandaloneSpirv-Uniform-06925  
  Any variable in the `Uniform Storage Class` decorated as `Block` **must** not be stored to or 
  modified

• VUID-StandaloneSpirv-Offset-04663  
  Image operand `Offset` **must** only be used with `OpImageGather` instructions

• VUID-StandaloneSpirv-Offset-04865  
  Any image instruction which uses an `Offset`, `ConstOffset`, or `ConstOffsets` image operand, 
  **must** only consume a “Sampled Image” operand whose type has its “Sampled” operand set 
  to 1

• VUID-StandaloneSpirv-OpImageGather-04664  
  The “Component” operand of `OpImageGather`, and `OpImageSparseGather` **must** be the \(<id>\) of 
  a constant instruction

• VUID-StandaloneSpirv-OpImage-04777  
  `OpImage*Dref*` instructions **must** not consume an image whose `Dim` is 3D

• VUID-StandaloneSpirv-None-04667  
  Structure types **must** not contain opaque types

• VUID-StandaloneSpirv-BuiltIn-04668  
  Any `BuiltIn` decoration not listed in `Built-In Variables` **must** not be used

• VUID-StandaloneSpirv-Location-06672  
  The `Location` or `Component` decorations **must** only be used with the `Input`, `Output`, 
  `RayPayloadKHR`, `IncomingRayPayloadKHR`, `HitAttributeKHR`, `HitObjectAttributeNV`, 
  `CallableDataKHR`, `IncomingCallableDataKHR`, or `ShaderRecordBufferKHR` storage classes

• VUID-StandaloneSpirv-Location-04915  
  The `Location` or `Component` decorations **must** not be used with `BuiltIn`

• VUID-StandaloneSpirv-Location-04916  
  The `Location` decorations **must** be used on user-defined variables

• VUID-StandaloneSpirv-Location-04917  
  (u,v) coordinates used for a `SubpassData` **must** be the \(<id>\) of a constant vector \((0,0)\), or 
  if a layer coordinate is used, **must** be a vector that was formed with constant 0 for the \(u\) 
  and \(v\) components

• VUID-StandaloneSpirv-OpTypeImage-06924  
  Objects of types `OpTypeImage`, `OpTypeSampler`, `OpTypeSampledImage`, 
  `OpTypeAccelerationStructureKHR`, and arrays of these types **must** not be stored to or 
  modified

• VUID-StandaloneSpirv-Uniform-06925  
  Any variable in the `Uniform Storage Class` decorated as `Block` **must** not be stored to or 
  modified

• VUID-StandaloneSpirv-Offset-04663  
  Image operand `Offset` **must** only be used with `OpImageGather` instructions

• VUID-StandaloneSpirv-Offset-04865  
  Any image instruction which uses an `Offset`, `ConstOffset`, or `ConstOffsets` image operand, 
  **must** only consume a “Sampled Image” operand whose type has its “Sampled” operand set 
  to 1

• VUID-StandaloneSpirv-OpImageGather-04664  
  The “Component” operand of `OpImageGather`, and `OpImageSparseGather` **must** be the \(<id>\) of 
  a constant instruction

• VUID-StandaloneSpirv-OpImage-04777  
  `OpImage*Dref*` instructions **must** not consume an image whose `Dim` is 3D

• VUID-StandaloneSpirv-None-04667  
  Structure types **must** not contain opaque types

• VUID-StandaloneSpirv-BuiltIn-04668  
  Any `BuiltIn` decoration not listed in `Built-In Variables` **must** not be used

• VUID-StandaloneSpirv-Location-06672  
  The `Location` or `Component` decorations **must** only be used with the `Input`, `Output`, 
  `RayPayloadKHR`, `IncomingRayPayloadKHR`, `HitAttributeKHR`, `HitObjectAttributeNV`, 
  `CallableDataKHR`, `IncomingCallableDataKHR`, or `ShaderRecordBufferKHR` storage classes

• VUID-StandaloneSpirv-Location-04915  
  The `Location` or `Component` decorations **must** not be used with `BuiltIn`

• VUID-StandaloneSpirv-Location-04916  
  The `Location` decorations **must** be used on user-defined variables

• VUID-StandaloneSpirv-Location-04917
If a user-defined variable is a pointer to a Block decorated OpTypeStruct, then the OpVariable must have a Location decoration

- VUID-StandaloneSpirv-Location-04918
  If a user-defined variable has a Location decoration, and the variable is a pointer to a OpTypeStruct, then the members of that structure must not have Location decorations

- VUID-StandaloneSpirv-Location-04919
  If a user-defined variable does not have a Location decoration, and the variable is a pointer to a Block decorated OpTypeStruct, then each member of the struct must have a Location decoration

- VUID-StandaloneSpirv-Component-04920
  The Component decoration value must not be greater than 3

- VUID-StandaloneSpirv-Component-04921
  If the Component decoration is used on an OpVariable that has a OpTypeVector type with a Component Type with a Width that is less than or equal to 32, the sum of its Component Count and the Component decoration value must be less than or equal to 4

- VUID-StandaloneSpirv-Component-04922
  If the Component decoration is used on an OpVariable that has a OpTypeVector type with a Component Type with a Width that is equal to 64, the sum of two times its Component Count and the Component decoration value must be less than or equal to 4

- VUID-StandaloneSpirv-Component-04923
  The Component decorations value must not be 1 or 3 for scalar or two-component 64-bit data types

- VUID-StandaloneSpirv-Component-04924
  The Component decorations must not be used with any type that is not a scalar or vector, or an array of such a type

- VUID-StandaloneSpirv-Component-07703
  The Component decorations must not be used for a 64-bit vector type with more than two components

- VUID-StandaloneSpirv-GLSLShared-04669
  The GLSLShared and GLSLPacked decorations must not be used

- VUID-StandaloneSpirv-Flat-04670
  The Flat, NoPerspective, Sample, and Centroid decorations must only be used on variables with the Output or Input Storage Class

- VUID-StandaloneSpirv-Flat-06201
  The Flat, NoPerspective, Sample, and Centroid decorations must not be used on variables with the Output storage class in a fragment shader

- VUID-StandaloneSpirv-Flat-06202
  The Flat, NoPerspective, Sample, and Centroid decorations must not be used on variables with the Input storage class in a vertex shader

- VUID-StandaloneSpirv-PerVertexKHR-06777
  The PerVertexKHR decoration must only be used on variables with the Input Storage Class in a fragment shader
Any variable with integer or double-precision floating-point type and with Input Storage Class in a fragment shader, must be decorated Flat.

The ViewportRelativeNV decoration must only be used on a variable decorated with Layer in the vertex, tessellation evaluation, or geometry shader stages.

The ViewportRelativeNV decoration must not be used unless a variable decorated with one of ViewportIndex or ViewportMaskNV is also statically used by the same OpEntryPoint.

The ViewportMaskNV and ViewportIndex decorations must not both be statically used by one or more OpEntryPoint's that form the pre-rasterization shader stages of a graphics pipeline.

Rounding modes other than round-to-nearest-even and round-towards-zero must not be used for the FPRoundingMode decoration.

Variables decorated with Invariant and variables with structure types that have any members decorated with Invariant must be in the Output or Input Storage Class, Invariant used on an Input Storage Class variable or structure member has no effect.

If the VulkanMemoryModel capability is not declared, the Volatile decoration must be used on any variable declaration that includes one of the SMIDNV, WarpIDNV, SubgroupSize, SubgroupLocalInvocationId, SubgroupEqMask, SubgroupGtMask, SubgroupLtMask, or SubgroupLtMask BuiltIn decorations when used in the ray generation, closest hit, miss, intersection, or callable shaders, or with the RayTmaxKHR Builtin decoration when used in an intersection shader.

If the VulkanMemoryModel capability is declared, the OpLoad instruction must use the Volatile memory semantics when it accesses into any variable that includes one of the SMIDNV, WarpIDNV, SubgroupSize, SubgroupLocalInvocationId, SubgroupEqMask, SubgroupGtMask, SubgroupLeMask, or SubgroupLtMask BuiltIn decorations when used in the ray generation, closest hit, miss, intersection, or callable shaders, or with the RayTmaxKHR Builtin decoration when used in an intersection shader.

OpTypeRuntimeArray must only be used for the last member of a Block-decorated OpTypeStruct in StorageBuffer or PhysicalStorageBuffer Storage Class; BufferBlock-decorated OpTypeStruct in Uniform Storage Class; the outermost dimension of an arrayed variable in the StorageBuffer, Uniform, or UniformConstant Storage Class.

A type $T$ that is an array sized with a specialization constant must neither be, nor be contained in, the type $T_2$ of a variable $V$, unless either: a) $T$ is equal to $T_2$, b) $V$ is declared in the Function, or Private Storage Class, c) $V$ is a non-Block variable in the Workgroup Storage Class, or d) $V$ is an interface variable with an additional level of arrayness, as described in interface matching, and $T$ is the member type of the array type $T_2$. 
If `OpControlBarrier` is used in ray generation, intersection, any-hit, closest hit, miss, fragment, vertex, tessellation evaluation, or geometry shaders, the execution Scope must be `Subgroup`.

For each compute shader entry point, either a `LocalSize` or `LocalSizeId` Execution Mode, or an object decorated with the `WorkgroupSize` decoration must be specified.

For compute shaders using the `DerivativeGroupQuadsNV` execution mode, the first two dimensions of the local workgroup size must be a multiple of two.

For compute shaders using the `DerivativeGroupLinearNV` execution mode, the product of the dimensions of the local workgroup size must be a multiple of four.

If `OpGroupNonUniformBallotBitCount` is used, the group operation must be limited to `Reduce`, `InclusiveScan`, or `ExclusiveScan`.

The `Pointer` operand of all atomic instructions must have a Storage Class limited to `Uniform`, `Workgroup`, `Image`, `StorageBuffer`, `PhysicalStorageBuffer`, or `TaskPayloadWorkgroupEXT`.

Output variables or block members decorated with `Offset` that have a 64-bit type, or a composite type containing a 64-bit type, must specify an `Offset` value aligned to a 8 byte boundary.

The size of any output block containing any member decorated with `Offset` that is a 64-bit type must be a multiple of 8.

The first member of an output block specifying a `Offset` decoration must specify a `Offset` value that is aligned to an 8 byte boundary if that block contains any member decorated with `Offset` and is a 64-bit type.

Output variables or block members decorated with `Offset` that have a 32-bit type, or a composite type contains a 32-bit type, must specify an `Offset` value aligned to a 4 byte boundary.

Output variables, blocks or block members decorated with `Offset` must only contain base types that have components that are either 32-bit or 64-bit in size.

Only variables or block members in the output interface decorated with `Offset` can be captured for transform feedback, and those variables or block members must also be decorated with `XfbBuffer` and `XfbStride`, or inherit `XfbBuffer` and `XfbStride` decorations from a block containing them.
All variables or block members in the output interface of the entry point being compiled decorated with a specific `XfbBuffer` value must all be decorated with identical `XfbStride` values.

- **VUID-StandaloneSpirv-Stream-04694**
  If any variables or block members in the output interface of the entry point being compiled are decorated with `Stream`, then all variables belonging to the same `XfbBuffer` must specify the same `Stream` value.

- **VUID-StandaloneSpirv-XfbBuffer-04696**
  For any two variables or block members in the output interface of the entry point being compiled with the same `XfbBuffer` value, the ranges determined by the `Offset` decoration and the size of the type must not overlap.

- **VUID-StandaloneSpirv-XfbBuffer-04697**
  All block members in the output interface of the entry point being compiled that are in the same block and have a declared or inherited `XfbBuffer` decoration must specify the same `XfbBuffer` value.

- **VUID-StandaloneSpirv-RayPayloadKHR-04698**
  `RayPayloadKHR Storage Class` must only be used in ray generation, closest hit or miss shaders.

- **VUID-StandaloneSpirv-IncomingRayPayloadKHR-04699**
  `IncomingRayPayloadKHR Storage Class` must only be used in closest hit, any-hit, or miss shaders.

- **VUID-StandaloneSpirv-IncomingRayPayloadKHR-04700**
  There must be at most one variable with the `IncomingRayPayloadKHR Storage Class` in the input interface of an entry point.

- **VUID-StandaloneSpirv-HitAttributeKHR-04701**
  `HitAttributeKHR Storage Class` must only be used in intersection, any-hit, or closest hit shaders.

- **VUID-StandaloneSpirv-HitAttributeKHR-04702**
  There must be at most one variable with the `HitAttributeKHR Storage Class` in the input interface of an entry point.

- **VUID-StandaloneSpirv-HitAttributeKHR-04703**
  A variable with `HitAttributeKHR Storage Class` must only be written to in an intersection shader.

- **VUID-StandaloneSpirv-CallableDataKHR-04704**
  `CallableDataKHR Storage Class` must only be used in ray generation, closest hit, miss, and callable shaders.

- **VUID-StandaloneSpirv-IncomingCallableDataKHR-04705**
  `IncomingCallableDataKHR Storage Class` must only be used in callable shaders.

- **VUID-StandaloneSpirv-IncomingCallableDataKHR-04706**
  There must be at most one variable with the `IncomingCallableDataKHR Storage Class` in the input interface of an entry point.

- **VUID-StandaloneSpirv-ShaderRecordBufferKHR-07119**
  `ShaderRecordBufferKHR Storage Class` must only be used in ray generation, intersection,
any-hit, closest hit, callable, or miss shaders

- **VUID-StandaloneSpirv-Base-07650**
  The *Base* operand of *OpPtrAccessChain* must have a storage class of *Workgroup, StorageBuffer,* or *PhysicalStorageBuffer*

- **VUID-StandaloneSpirv-Base-07651**
  If the *Base* operand of *OpPtrAccessChain* has a *Workgroup Storage Class*, then the *VariablePointers* capability must be declared

- **VUID-StandaloneSpirv-Base-07652**
  If the *Base* operand of *OpPtrAccessChain* has a *StorageBuffer Storage Class*, then the *VariablePointers* or *VariablePointersStorageBuffer* capability must be declared

- **VUID-StandaloneSpirv-PhysicalStorageBuffer64-04708**
  If the *PhysicalStorageBuffer64* addressing model is enabled, all instructions that support memory access operands and that use a physical pointer must include the *Aligned* operand

- **VUID-StandaloneSpirv-PhysicalStorageBuffer64-04709**
  If the *PhysicalStorageBuffer64* addressing model is enabled, any access chain instruction that accesses into a *RowMajor* matrix must only be used as the *Pointer* operand to *OpLoad* or *OpStore*

- **VUID-StandaloneSpirv-PhysicalStorageBuffer64-04710**
  If the *PhysicalStorageBuffer64* addressing model is enabled, *OpConvertUToPtr* and *OpConvertPtrToU* must use an integer type whose *Width* is 64

- **VUID-StandaloneSpirv-OpTypeForwardPointer-04711**
  *OpTypeForwardPointer* must have a *Storage Class* of *PhysicalStorageBuffer*

- **VUID-StandaloneSpirv-None-04745**
  All block members in a variable with a *Storage Class* of *PushConstant* declared as an array must only be accessed by dynamically uniform indices

- **VUID-StandaloneSpirv-OpVariable-06673**
  There must not be more than one *OpVariable* in the *PushConstant Storage Class* listed in the Interface for each *OpEntryPoint*

- **VUID-StandaloneSpirv-OpEntryPoint-06674**
  Each *OpEntryPoint* must not statically use more than one *OpVariable* in the *PushConstant Storage Class*

- **VUID-StandaloneSpirv-OpEntryPoint-08721**
  Each *OpEntryPoint* must not have more than one *Input* variable assigned the same *Component* word inside a *Location* slot, either explicitly or implicitly

- **VUID-StandaloneSpirv-OpEntryPoint-08722**
  Each *OpEntryPoint* must not have more than one *Output* variable assigned the same *Component* word inside a *Location* slot, either explicitly or implicitly

- **VUID-StandaloneSpirv-Result-04780**
  The *Result Type* operand of any *OpImageRead* or *OpImageSparseRead* instruction must be a vector of four components

- **VUID-StandaloneSpirv-Base-04781**
The Base operand of any OpBitCount, OpBitReverse, OpBitFieldInsert, OpBitFieldSExtract, or OpBitFieldUExtract instruction must be a 32-bit integer scalar or a vector of 32-bit integers.

- **VUID-StandaloneSpirv-PushConstant-06675**: Any variable in the PushConstant or StorageBuffer storage class must be decorated as Block.

- **VUID-StandaloneSpirv-Uniform-06676**: Any variable in the UniformStorage Class must be decorated as Block or BufferBlock.

- **VUID-StandaloneSpirv-UniformConstant-06677**: Any variable in the UniformConstant, StorageBuffer, or Uniform Storage Class must be decorated with DescriptorSet and Binding.

- **VUID-StandaloneSpirv-InputAttachmentIndex-06678**: Variables decorated with InputAttachmentIndex must be in the UniformConstant Storage Class.

- **VUID-StandaloneSpirv-DescriptorSet-06491**: If a variable is decorated by DescriptorSet or Binding, the Storage Class must correspond to an entry in Shader Resource and Storage Class Correspondence.

- **VUID-StandaloneSpirv-Input-06778**: Variables with a Storage Class of Input in a fragment shader stage that are decorated with PerVertexKHR must be declared as arrays.

- **VUID-StandaloneSpirv-MeshEXT-07102**: The module must not contain both an entry point that uses the TaskEXT or MeshEXT Execution Model and an entry point that uses the TaskNV or MeshNV Execution Model.

- **VUID-StandaloneSpirv-MeshEXT-07106**: In mesh shaders using the MeshEXT Execution Model OpSetMeshOutputsEXT must be called before any outputs are written.

- **VUID-StandaloneSpirv-MeshEXT-07107**: In mesh shaders using the MeshEXT Execution Model all variables declared as output must not be read from.

- **VUID-StandaloneSpirv-MeshEXT-07108**: In mesh shaders using the MeshEXT Execution Model for OpSetMeshOutputsEXT instructions, the “Vertex Count” and “Primitive Count” operands must not depend on ViewIndex.

- **VUID-StandaloneSpirv-MeshEXT-07109**: In mesh shaders using the MeshEXT Execution Model variables decorated with PrimitivePointIndicesEXT, PrimitiveLineIndicesEXT, or PrimitiveTriangleIndicesEXT declared as an array must not be accessed by indices that depend on ViewIndex.

- **VUID-StandaloneSpirv-MeshEXT-07110**: In mesh shaders using the MeshEXT Execution Model any values stored in variables decorated with PrimitivePointIndicesEXT, PrimitiveLineIndicesEXT, or PrimitiveTriangleIndicesEXT must not depend on ViewIndex.

- **VUID-StandaloneSpirv-MeshEXT-07111**: In mesh shaders using the MeshEXT Execution Model variables in workgroup or private Storage Class declared as or containing a composite type must not be accessed by indices that depend on ViewIndex.
In mesh shaders using the MeshEXT Execution Model the OutputVertices Execution Mode must be greater than 0.

In mesh shaders using the MeshEXT Execution Model the OutputPrimitivesEXT Execution Mode must be greater than 0.

In mesh shaders using the MeshEXT or MeshNV Execution Model and the OutputPoints Execution Mode, if the number of output points is greater than 0, a PointSize decorated variable must be written to for each output point.

Variables with a Storage Class of Input or Output and a type of OpTypeBool must be decorated with the BuiltIn decoration.

The tile image variable declarations must obey the constraints on the TileImageEXT Storage Class and the Location decoration described in Fragment Tile Image Interface.

The TileImageEXT Storage Class must only be used for declaring tile image variables.

The Storage Class of the Pointer operand to OpCooperativeMatrixLoadKHR or OpCooperativeMatrixStoreKHR must be limited to Workgroup, StorageBuffer, or PhysicalStorageBuffer.

Runtime SPIR-V Validation

The following rules must be validated at runtime. These rules depend on knowledge of the implementation and its capabilities and knowledge of runtime information, such as enabled features.

Valid Usage

If vulkanMemoryModel is enabled and vulkanMemoryModelDeviceScope is not enabled, Device memory scope must not be used.

If vulkanMemoryModel is not enabled, QueueFamily memory scope must not be used.

If shaderSubgroupClock is not enabled, the Subgroup scope must not be used for OpReadClockKHR.

If shaderDeviceClock is not enabled, the Device scope must not be used for OpReadClockKHR.

If VkPhysicalDeviceProperties::apiVersion is less than Vulkan 1.3, the...
VK_KHR_format_feature_flags2 extension is not supported, and shaderStorageImageWriteWithoutFormat is not enabled, any variable created with a “Type” of OpTypeImage that has a “Sampled” operand of 2 and an “Image Format” operand of Unknown must be decorated with NonWritable

- VUID-RuntimeSpirv-apiVersion-07955
  If VkPhysicalDeviceProperties::apiVersion is less than Vulkan 1.3, the VK_KHR_format_feature_flags2 extension is not supported, and shaderStorageImageReadWithoutFormat is not enabled, any variable created with a “Type” of OpTypeImage that has a “Sampled” operand of 2 and an “Image Format” operand of Unknown must be decorated with NonReadable

- VUID-RuntimeSpirv-OpImageWrite-07112
  OpImageWrite to any Image whose Image Format is not Unknown must have the Texel operand contain at least as many components as the corresponding VkFormat as given in the SPIR-V Image Format compatibility table

- VUID-RuntimeSpirv-Location-06272
  The sum of Location and the number of locations the variable it decorates consumes must be less than or equal to the value for the matching Execution Model defined in Shader Input and Output Locations

- VUID-RuntimeSpirv-Fragment-06427
  When blending is enabled and one of the dual source blend modes is in use, the maximum number of output attachments written to in the Fragment Execution Model must be less than or equal to maxFragmentDualSrcAttachments

- VUID-RuntimeSpirv-Location-06428
  The maximum number of storage buffers, storage images, and output Location decorated color attachments written to in the Fragment Execution Model must be less than or equal to maxFragmentCombinedOutputResources

- VUID-RuntimeSpirv-NonUniform-06274
  If an instruction loads from or stores to a resource (including atomics and image instructions) and the resource descriptor being accessed is not dynamically uniform, then the operand corresponding to that resource (e.g. the pointer or sampled image operand) must be decorated with NonUniform

- VUID-RuntimeSpirv-None-06275
  shaderBufferInt64Atomics must be enabled for group operations to use 8-bit integer, 16-bit integer, 64-bit integer, 16-bit floating-point, and vectors of these types

- VUID-RuntimeSpirv-subgroupBroadcastDynamicId-06276
  If subgroupBroadcastDynamicId is VK_TRUE, and the shader module version is 1.5 or higher, the “Index” for OpGroupNonUniformQuadBroadcast must be dynamically uniform within the derivative group. Otherwise, “Index” must be a constant

- VUID-RuntimeSpirv-subgroupBroadcastDynamicId-06277
  If subgroupBroadcastDynamicId is VK_TRUE, and the shader module version is 1.5 or higher, the “Id” for OpGroupNonUniformBroadcast must be dynamically uniform within the subgroup. Otherwise, “Id” must be a constant

- VUID-RuntimeSpirv-None-06278
  shaderBufferInt64Atomics must be enabled for 64-bit integer atomic operations to be
supported on a Pointer with a Storage Class of StorageBuffer or Uniform

- VUID-RuntimeSpirv-None-06279
  
  shaderSharedInt64Atomics must be enabled for 64-bit integer atomic operations to be supported on a Pointer with a Storage Class of Workgroup

- VUID-RuntimeSpirv-None-06284
  
  shaderBufferFloat32Atomics, or shaderBufferFloat32AtomicAdd, or shaderBufferFloat64Atomics, or shaderBufferFloat64AtomicAdd, or shaderBufferFloat16Atomics, or shaderBufferFloat16AtomicAdd, or shaderBufferFloat16AtomicMinMax, or shaderBufferFloat32AtomicMinMax, or shaderBufferFloat64AtomicMinMax must be enabled for floating-point atomic operations to be supported on a Pointer with a Storage Class of StorageBuffer

- VUID-RuntimeSpirv-None-06285
  
  shaderSharedFloat32Atomics, or shaderSharedFloat32AtomicAdd, or shaderSharedFloat64Atomics, or shaderSharedFloat64AtomicAdd, or shaderSharedFloat16Atomics, or shaderSharedFloat16AtomicAdd, or shaderSharedFloat16AtomicMinMax, or shaderSharedFloat32AtomicMinMax, or shaderSharedFloat64AtomicMinMax must be enabled for floating-point atomic operations to be supported on a Pointer with a Storage Class of Workgroup

- VUID-RuntimeSpirv-None-06286
  
  shaderImageFloat32Atomics, or shaderImageFloat32AtomicAdd, or shaderImageFloat32AtomicMinMax must be enabled for 32-bit floating-point atomic operations to be supported on a Pointer with a Storage Class of Image

- VUID-RuntimeSpirv-None-06287
  
  sparseImageFloat32Atomics, or sparseImageFloat32AtomicAdd, or sparseImageFloat32AtomicMinMax must be enabled for 32-bit floating-point atomic operations to be supported on sparse images

- VUID-RuntimeSpirv-None-06288
  
  shaderImageInt64Atomics must be enabled for 64-bit integer atomic operations to be supported on a Pointer with a Storage Class of Image

- VUID-RuntimeSpirv-denormBehaviorIndependence-06289
  
  If denormBehaviorIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY, then the entry point must use the same denormals Execution Mode for both 16-bit and 64-bit floating-point types

- VUID-RuntimeSpirv-denormBehaviorIndependence-06290
  
  If denormBehaviorIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE, then the entry point must use the same denormals Execution Mode for all floating-point types

- VUID-RuntimeSpirv-roundingModeIndependence-06291
  
  If roundingModeIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY, then the entry point must use the same rounding Execution Mode for both 16-bit and 64-bit floating-point types

- VUID-RuntimeSpirv-roundingModeIndependence-06292
  
  If roundingModeIndependence is VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE, then the entry point must use the same rounding Execution Mode for all floating-point types
• **VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat16-06293**
  If `shaderSignedZeroInfNanPreserveFloat16` is `VK_FALSE`, then `SignedZeroInfNanPreserve` for 16-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat32-06294**
  If `shaderSignedZeroInfNanPreserveFloat32` is `VK_FALSE`, then `SignedZeroInfNanPreserve` for 32-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderSignedZeroInfNanPreserveFloat64-06295**
  If `shaderSignedZeroInfNanPreserveFloat64` is `VK_FALSE`, then `SignedZeroInfNanPreserve` for 64-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderDenormPreserveFloat16-06296**
  If `shaderDenormPreserveFloat16` is `VK_FALSE`, then `DenormPreserve` for 16-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderDenormPreserveFloat32-06297**
  If `shaderDenormPreserveFloat32` is `VK_FALSE`, then `DenormPreserve` for 32-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderDenormPreserveFloat64-06298**
  If `shaderDenormPreserveFloat64` is `VK_FALSE`, then `DenormPreserve` for 64-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat16-06299**
  If `shaderDenormFlushToZeroFloat16` is `VK_FALSE`, then `DenormFlushToZero` for 16-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat32-06300**
  If `shaderDenormFlushToZeroFloat32` is `VK_FALSE`, then `DenormFlushToZero` for 32-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderDenormFlushToZeroFloat64-06301**
  If `shaderDenormFlushToZeroFloat64` is `VK_FALSE`, then `DenormFlushToZero` for 64-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderRoundingModeRTEFloat16-06302**
  If `shaderRoundingModeRTEFloat16` is `VK_FALSE`, then `RoundingModeRTE` for 16-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderRoundingModeRTEFloat32-06303**
  If `shaderRoundingModeRTEFloat32` is `VK_FALSE`, then `RoundingModeRTE` for 32-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderRoundingModeRTEFloat64-06304**
  If `shaderRoundingModeRTEFloat64` is `VK_FALSE`, then `RoundingModeRTE` for 64-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderRoundingModeRTZFloat16-06305**
  If `shaderRoundingModeRTZFloat16` is `VK_FALSE`, then `RoundingModeRTZ` for 16-bit floating-point type **must** not be used.

• **VUID-RuntimeSpirv-shaderRoundingModeRTZFloat32-06306**
  If `shaderRoundingModeRTZFloat32` is `VK_FALSE`, then `RoundingModeRTZ` for 32-bit floating-point type **must** not be used.
• VUID-RuntimeSpirv-shaderRoundingModeRTZFloat64-06307
  If shaderRoundingModeRTZFloat64 is VK_FALSE, then RoundingModeRTZ for 64-bit floating-point type must not be used

• VUID-RuntimeSpirv-Offset-06308
  The Offset plus size of the type of each variable, in the output interface of the entry point being compiled, decorated with XfbBuffer must not be greater than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataSize

• VUID-RuntimeSpirv-XfbBuffer-06309
  For any given XfbBuffer value, define the buffer data size to be smallest number of bytes such that, for all outputs decorated with the same XfbBuffer value, the size of the output interface variable plus the Offset is less than or equal to the buffer data size. For a given Stream, the sum of all the buffer data sizes for all buffers writing to that stream the must not exceed VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreamDataSize

• VUID-RuntimeSpirv-OpEmitStreamVertex-06310
  The Stream value to OpEmitStreamVertex and OpEndStreamPrimitive must be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams

• VUID-RuntimeSpirv-transformFeedbackStreamsLinesTriangles-06311
  If the geometry shader emits to more than one vertex stream and VkPhysicalDeviceTransformFeedbackPropertiesEXT::transformFeedbackStreamsLinesTriangles is VK_FALSE, then Execution Mode must be OutputPoints

• VUID-RuntimeSpirv-Stream-06312
  The stream number value to Stream must be less than VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackStreams

• VUID-RuntimeSpirv-XfbStride-06313
  The XFB Stride value to XfbStride must be less than or equal to VkPhysicalDeviceTransformFeedbackPropertiesEXT::maxTransformFeedbackBufferDataStride

• VUID-RuntimeSpirv-PhysicalStorageBuffer64-06314
  If the PhysicalStorageBuffer64 addressing model is enabled any load or store through a physical pointer type must be aligned to a multiple of the size of the largest scalar type in the pointed-to type

• VUID-RuntimeSpirv-PhysicalStorageBuffer64-06315
  If the PhysicalStorageBuffer64 addressing model is enabled the pointer value of a memory access instruction must be at least as aligned as specified by the Aligned memory access operand

• VUID-RuntimeSpirv-OpTypeCooperativeMatrixNV-06316
  For OpTypeCooperativeMatrixNV, the component type, scope, number of rows, and number of columns must match one of the matrices in any of the supported VkCooperativeMatrixPropertiesNV

• VUID-RuntimeSpirv-OpCooperativeMatrixMulAddNV-06317
  For OpCooperativeMatrixMulAddNV, the type of A must have VkCooperativeMatrixPropertiesNV::MSize rows and VkCooperativeMatrixPropertiesNV::KSize columns and have a component type that matches
VkCooperativeMatrixPropertiesNV::AType

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddNV-06318
  For OpCooperativeMatrixMulAddNV, the type of B must have
  VkCooperativeMatrixPropertiesNV::KSize rows and VkCooperativeMatrixPropertiesNV::NSize columns and have a component type that matches
  VkCooperativeMatrixPropertiesNV::BType

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddNV-06319
  For OpCooperativeMatrixMulAddNV, the type of C must have
  VkCooperativeMatrixPropertiesNV::MSize rows and VkCooperativeMatrixPropertiesNV::NSize columns and have a component type that matches
  VkCooperativeMatrixPropertiesNV::CType

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddNV-06320
  For OpCooperativeMatrixMulAddNV, the type of Result must have
  VkCooperativeMatrixPropertiesNV::MSize rows and VkCooperativeMatrixPropertiesNV::NSize columns and have a component type that matches
  VkCooperativeMatrixPropertiesNV::DType

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddNV-06321
  For OpCooperativeMatrixMulAddNV, the type of A, B, C, and Result must all have a scope of
  scope

- VUID-RuntimeSpirv-OpTypeCooperativeMatrixNV-06322
  OpTypeCooperativeMatrixNV and OpCooperativeMatrix* instructions must not be used in
  shader stages not included in VkPhysicalDeviceCooperativeMatrixPropertiesNV::cooperativeMatrixSupportedStages

- VUID-RuntimeSpirv-OpTypeCooperativeMatrixKHR-08974
  For OpTypeCooperativeMatrixKHR, the component type, scope, number of rows, and number
  of columns must match one of the matrices in any of the supported
  VkCooperativeMatrixPropertiesKHR.

- VUID-RuntimeSpirv-MSize-08975
  For OpCooperativeMatrixMulAddKHR, the type of A must have
  VkCooperativeMatrixPropertiesKHR::MSize rows and
  VkCooperativeMatrixPropertiesKHR::KSize columns and have a component type that matches
  VkCooperativeMatrixPropertiesKHR::AType.

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-08976
  For OpCooperativeMatrixMulAddKHR, when the component type of A is a signed integer type,
  the MatrixASignedComponents cooperative matrix operand must be present.

- VUID-RuntimeSpirv-KSize-08977
  For OpCooperativeMatrixMulAddKHR, the type of B must have
  VkCooperativeMatrixPropertiesKHR::KSize rows and
  VkCooperativeMatrixPropertiesKHR::NSize columns and have a component type that matches
  VkCooperativeMatrixPropertiesKHR::BType.

- VUID-RuntimeSpirv-OpCooperativeMatrixMulAddKHR-08978
  For OpCooperativeMatrixMulAddKHR, when the component type of B is a signed integer type,
  the MatrixBSignedComponents cooperative matrix operand must be present.
For OpCooperativeMatrixMulAddKHR, the type of \( C \) must have \( VkCooperativeMatrixPropertiesKHR::MSize \) rows and \( VkCooperativeMatrixPropertiesKHR::NSize \) columns and have a component type that matches \( VkCooperativeMatrixPropertiesKHR::CType \).

For OpCooperativeMatrixMulAddKHR, when the component type of \( C \) is a signed integer type, the \( MatrixCSignedComponents \) cooperative matrix operand must be present.

For OpCooperativeMatrixMulAddKHR, the type of \( Result \) must have \( VkCooperativeMatrixPropertiesKHR::MSize \) rows and \( VkCooperativeMatrixPropertiesKHR::NSize \) columns and have a component type that matches \( VkCooperativeMatrixPropertiesKHR::ResultType \).

For OpCooperativeMatrixMulAddKHR, when the component type of \( Result \) is a signed integer type, the \( MatrixResultSignedComponents \) cooperative matrix operand must be present.

For OpCooperativeMatrixMulAddKHR, the \( SaturatingAccumulation \) cooperative matrix operand must be present if and only if \( VkCooperativeMatrixPropertiesKHR::saturatingAccumulation \) is \( VK_TRUE \).

For OpCooperativeMatrixMulAddKHR, the \( A, B, C, \) and \( Result \) all have a scope.

OpTypeCooperativeMatrixKHR and OpCooperativeMatrix* instructions must not be used in shader stages not included in \( VkPhysicalDeviceCooperativeMatrixPropertiesKHR::cooperativeMatrixSupportedStages \).

DescriptorSet and Binding decorations must obey the constraints on Storage Class, type, and descriptor type described in DescriptorSet and Binding Assignment

For OpCooperativeMatrixLoadNV and OpCooperativeMatrixStoreNV instructions, the \( Pointer \) and \( Stride \) operands must be aligned to at least the lesser of 16 bytes or the natural alignment of a row or column (depending on ColumnMajor) of the matrix (where the natural alignment is the number of columns/rows multiplied by the component size)

For mesh shaders using the MeshNV Execution Model the OutputVertices OpExecutionMode must be less than or equal to \( VkPhysicalDeviceMeshShaderPropertiesNV::maxMeshOutputVertices \).

For mesh shaders using the MeshNV Execution Model the OutputPrimitivesNV OpExecutionMode must be less than or equal to \( VkPhysicalDeviceMeshShaderPropertiesNV::maxMeshOutputPrimitives \).
For mesh shaders using the MeshEXT Execution Model the OutputVertices OpExecutionMode must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxMeshOutputVertices.

For mesh shaders using the MeshEXT Execution Model the “Vertex Count” operand of OpSetMeshOutputsEXT must be less than or equal to OutputVertices OpExecutionMode.

For mesh shaders using the MeshEXT Execution Model the OutputPrimitivesEXT OpExecutionMode must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxMeshOutputPrimitives.

For mesh shaders using the MeshEXT Execution Model the “Primitive Count” operand of OpSetMeshOutputsEXT must be less than or equal to OutputPrimitivesEXT OpExecutionMode.

In task shaders using the TaskEXT Execution Model OpEmitMeshTasksEXT must be called exactly once under dynamically uniform conditions.

In mesh shaders using the MeshEXT Execution Model OpSetMeshOutputsEXT must be called at most once under dynamically uniform conditions.

In task shaders using the TaskEXT Execution Model the x size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxTaskWorkGroupSize[0].

In task shaders using the TaskEXT Execution Model the y size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxTaskWorkGroupSize[1].

In task shaders using the TaskEXT Execution Model the z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxTaskWorkGroupSize[2].

In task shaders using the TaskEXT Execution Model the product of x size, y size, and z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxTaskWorkGroupInvocations.

For mesh shaders using the MeshEXT Execution Model the x size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxMeshWorkGroupSize[0].

For mesh shaders using the MeshEXT Execution Model the y size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT:maxMeshWorkGroupSize[1].
For mesh shaders using the MeshEXT Execution Model the z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupSize.

For mesh shaders using the MeshEXT Execution Model the product of x size, y size, and z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupInvocations.

In task shaders using the TaskEXT Execution Model the value of the “Group Count X” operand of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount[0].

In task shaders using the TaskEXT Execution Model the value of the “Group Count Y” operand of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount[1].

In task shaders using the TaskEXT Execution Model the value of the “Group Count Z” operand of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupCount[2].

In task shaders using the TaskEXT Execution Model the product of the “Group Count” operands of OpEmitMeshTasksEXT must be less than or equal to VkPhysicalDeviceMeshShaderPropertiesEXT::maxMeshWorkGroupTotalCount.

The sum of size in bytes for variables and padding in the Workgroup Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshSharedMemorySize.

The sum of size in bytes for variables and padding in the TaskPayloadWorkgroupEXT or Workgroup Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshPayloadAndSharedMemorySize.

The sum of size in bytes for variables in the Output Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshOutputMemorySize according to the formula in Mesh Shader Output.

The sum of size in bytes for variables and in the TaskPayloadWorkgroupEXT Storage Class in the MeshEXT Execution Model must be less than or equal to maxMeshPayloadAndOutputMemorySize.

The sum of size in bytes for variables and in the TaskPayloadWorkgroupEXT Storage Class in the TaskEXT Execution Model must be less than or equal to maxTaskPayloadSize.
The sum of size in bytes for variables and padding in the Workgroup Storage Class in the TaskEXT Execution Model must be less than or equal to maxTaskSharedMemorySize.

The sum of size in bytes for variables and padding in the TaskPayloadWorkgroupEXT or Workgroup Storage Class in the TaskEXT Execution Model must be less than or equal to maxTaskPayloadAndSharedMemorySize.

For OpCooperativeMatrixLoadKHR and OpCooperativeMatrixStoreKHR instructions, the Pointer and Stride operands must be aligned to at least the lesser of 16 bytes or the natural alignment of a row or column (depending on ColumnMajor) of the matrix (where the natural alignment is the number of columns/rows multiplied by the component size).

If the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::shaderSampleRateInterpolationFunctions is VK_FALSE, then GLSL.std.450 fragment interpolation functions are not supported by the implementation and OpCapability must not be set to InterpolationFunction.

If tessellationShader is enabled, and the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationIsolines is VK_FALSE, then OpExecutionMode must not be set to Isolines.

If tessellationShader is enabled, and the VK_KHR_portability_subset extension is enabled, and VkPhysicalDevicePortabilitySubsetFeaturesKHR::tessellationPointMode is VK_FALSE, then OpExecutionMode must not be set to PointMode.

If storageBuffer8BitAccess is VK_FALSE, then objects containing an 8-bit integer element must not have Storage Class of StorageBuffer, ShaderRecordBufferKHR, or PhysicalStorageBuffer.

If uniformAndStorageBuffer8BitAccess is VK_FALSE, then objects in the Uniform Storage Class with the Block decoration must not have an 8-bit integer member.

If storagePushConstant8 is VK_FALSE, then objects containing an 8-bit integer element must not have Storage Class of PushConstant.

If storageBuffer16BitAccess is VK_FALSE, then objects containing 16-bit integer or 16-bit floating-point elements must not have Storage Class of StorageBuffer, ShaderRecordBufferKHR, or PhysicalStorageBuffer.

If uniformAndStorageBuffer16BitAccess is VK_FALSE, then objects in the Uniform Storage Class with the Block decoration must not have 16-bit integer or 16-bit floating-point members.

If storagePushConstant16 is VK_FALSE, then objects containing 16-bit integer or 16-bit floating-point elements must not have Storage Class of PushConstant.
If `storagePushConstant16` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements **must** not have Storage Class of PushConstant

- **VUID-RuntimeSpirv-storageInputOutput16-06334**
  If `storageInputOutput16` is `VK_FALSE`, then objects containing 16-bit integer or 16-bit floating-point elements **must** not have Storage Class of Input or Output

- **VUID-RuntimeSpirv-Non-06337**
  shaderBufferFloat16Atomics, or shaderBufferFloat16AtomicAdd, or shaderBufferFloat16AtomicMinMax, or shaderSharedFloat16Atomics, or shaderSharedFloat16AtomicAdd, or shaderSharedFloat16AtomicMinMax **must** be enabled for 16-bit floating point atomic operations

- **VUID-RuntimeSpirv-Non-06338**
  shaderBufferFloat32Atomics, or shaderBufferFloat32AtomicAdd, or shaderBufferFloat32AtomicMinMax, or shaderSharedFloat32Atomics, or shaderSharedFloat32AtomicAdd, or shaderSharedFloat32AtomicMinMax, or shaderImageFloat32Atomics, or shaderImageFloat32AtomicAdd, or shaderImageFloat32AtomicMinMax **must** be enabled for 32-bit floating point atomic operations

- **VUID-RuntimeSpirv-Non-06339**
  shaderBufferFloat64Atomics, or shaderBufferFloat64AtomicAdd, or shaderBufferFloat64AtomicMinMax, or shaderSharedFloat64Atomics, or shaderSharedFloat64AtomicAdd, or shaderSharedFloat64AtomicMinMax, or shaderImageFloat64Atomics, or shaderImageFloat64AtomicAdd, or shaderImageFloat64AtomicMinMax **must** be enabled for 64-bit floating point atomic operations

- **VUID-RuntimeSpirv-NonWritable-06340**
  If `fragmentStoresAndAtomics` is not enabled, then all storage image, storage texel buffer, and storage buffer variables in the fragment stage **must** be decorated with the NonWritable decoration

- **VUID-RuntimeSpirv-NonWritable-06341**
  If `vertexPipelineStoresAndAtomics` is not enabled, then all storage image, storage texel buffer, and storage buffer variables in the vertex, tessellation, and geometry stages **must** be decorated with the NonWritable decoration

- **VUID-RuntimeSpirv-Non-06342**
  If `subgroupQuadOperationsInAllStages` is `VK_FALSE`, then quad subgroup operations **must** not be used except for in fragment and compute stages

- **VUID-RuntimeSpirv-Non-06343**
  Group operations with subgroup scope **must** not be used if the shader stage is not in subgroupSupportedStages

- **VUID-RuntimeSpirv-Offset-06344**
  The first element of the Offset operand of InterpolateAtOffset **must** be greater than or equal to:
  \[
  \text{frag}_\text{width} \times \text{minInterpolationOffset}
  \]
  where \(\text{frag}_\text{width}\) is the width of the current fragment in pixels

- **VUID-RuntimeSpirv-Offset-06345**
  The first element of the Offset operand of InterpolateAtOffset **must** be less than or equal to
frag\_width \times (\text{maxInterpolationOffset} + \text{ULP}) - \text{ULP}

where \text{frag\_width} is the width of the current fragment in pixels and ULP = \frac{1}{2^\text{subPixelInterpolationOffsetBits}}.

- \textit{VUID-RuntimeSpirv-Offset-06346}
  The second element of the \textit{Offset} operand of \texttt{InterpolateAtOffset} \textbf{must} be greater than or equal to
  \text{frag\_height} \times \text{minInterpolationOffset}
  where \text{frag\_height} is the height of the current fragment in pixels.

- \textit{VUID-RuntimeSpirv-Offset-06347}
  The second element of the \textit{Offset} operand of \texttt{InterpolateAtOffset} \textbf{must} be less than or equal to
  \text{frag\_height} \times (\text{maxInterpolationOffset} + \text{ULP}) - \text{ULP}
  where \text{frag\_height} is the height of the current fragment in pixels and ULP = \frac{1}{2^\text{subPixelInterpolationOffsetBits}}.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06348}
  For \texttt{OpRayQueryInitializeKHR} instructions, all components of the \texttt{RayOrigin} and \texttt{RayDirection} operands \textbf{must} be finite floating-point values.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06349}
  For \texttt{OpRayQueryInitializeKHR} instructions, the \texttt{RayTmin} and \texttt{RayTmax} operands \textbf{must} be non-negative floating-point values.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06350}
  For \texttt{OpRayQueryInitializeKHR} instructions, the \texttt{RayTmin} operand \textbf{must} be less than or equal to the \texttt{RayTmax} operand.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06351}
  For \texttt{OpRayQueryInitializeKHR} instructions, \texttt{RayOrigin}, \texttt{RayDirection}, \texttt{RayTmin}, and \texttt{RayTmax} operands \textbf{must} not contain NaNs.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06352}
  For \texttt{OpRayQueryInitializeKHR} instructions, \texttt{Acceleration Structure} \textbf{must} be an acceleration structure built as a \texttt{top-level acceleration structure}.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06889}
  For \texttt{OpRayQueryInitializeKHR} instructions, the \texttt{Rayflags} operand \textbf{must} not contain both \texttt{SkipTrianglesKHR} and \texttt{SkipAABBsKHR}.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06890}
  For \texttt{OpRayQueryInitializeKHR} instructions, the \texttt{Rayflags} operand \textbf{must} not contain more than one of \texttt{SkipTrianglesKHR}, \texttt{CullBackFacingTrianglesKHR}, and \texttt{CullFrontFacingTrianglesKHR}.

- \textit{VUID-RuntimeSpirv-OpRayQueryInitializeKHR-06891}
  For \texttt{OpRayQueryInitializeKHR} instructions, the \texttt{Rayflags} operand \textbf{must} not contain more than one of \texttt{OpaqueKHR}, \texttt{NoOpaqueKHR}, \texttt{CullOpaqueKHR}, and \texttt{CullNoOpaqueKHR}.

- \textit{VUID-RuntimeSpirv-OpRayQueryGenerateIntersectionKHR-06353}
  For \texttt{OpRayQueryGenerateIntersectionKHR} instructions, \texttt{Hit T} \textbf{must} satisfy the condition
  \texttt{RayTmin} \leq \texttt{Hit T} \leq \texttt{RayTmax}, where \texttt{RayTmin} is equal to the value returned by \texttt{OpRayQueryGetRayTMinKHR} with the same ray query object, and \texttt{RayTmax} is equal to the value.
of `OpRayQueryGetIntersectionTKHR` for the current committed intersection with the same ray query object

- **VUID-RuntimeSpirv-OpRayQueryGenerateIntersectionKHR-06354**

  The value of the “Hit Kind” operand of `OpReportIntersectionKHR` must be in the range
For `OpTraceRayKHR` instructions, if `Acceleration Structure` was built with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags, the pipeline must have been created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` set.

For `OpTraceRayMotionNV` instructions, all components of the `RayOrigin` and `RayDirection` operands must be finite floating-point values.

For `OpTraceRayMotionNV` instructions, the `RayTmin` and `RayTmax` operands must be non-negative floating-point values.

For `OpTraceRayMotionNV` instructions, the `RayTmin` operand must be less than or equal to the `RayTmax` operand.

For `OpTraceRayMotionNV` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands must not contain NaNs.

For `OpTraceRayMotionNV` instructions, `Acceleration Structure` must be an acceleration structure built as a top-level acceleration structure with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags.

For `OpTraceRayMotionNV` instructions, the `time` operand must be between 0.0 and 1.0.

For `OpTraceRayMotionNV` instructions, the pipeline must have been created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` set.

For `OpHitObjectTraceRayMotionNV` instructions, if `Acceleration Structure` was built with `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV` in flags, the pipeline must have been created with `VK_PIPELINE_CREATE_RAY_TRACING_ALLOW_MOTION_BIT_NV` set.

For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, all components of the `RayOrigin` and `RayDirection` operands must be finite floating-point values.

For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `RayTmin` and `RayTmax` operands must be non-negative floating-point values.

For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, the `RayTmin` operand must be less than or equal to the `RayTmax` operand.

For `OpHitObjectTraceRayNV` and `OpHitObjectTraceRayMotionNV` instructions, `RayOrigin`, `RayDirection`, `RayTmin`, and `RayTmax` operands must not contain NaNs.
• VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07709
  For OpHitObjectTraceRayMotionNV instructions, Acceleration Structure must be an acceleration structure built as a top-level acceleration structure with VK_BUILD_ACCELERATION_STRUCTURE MOTION_BIT_NV in flags.

• VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07710
  For OpHitObjectTraceRayNV and OpHitObjectTraceRayMotionNV instructions the time operand must be between 0.0 and 1.0.

• VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07711
  For OpHitObjectTraceRayMotionNV instructions the pipeline must have been created with VK_PIPELINE_CREATE Ray Tracing ALLOW MOTION_BIT_NV set.

• VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07712
  For OpHitObjectTraceRayNV and OpHitObjectTraceRayMotionNV instructions, the Rayflags operand must not contain both SkipTrianglesKHR and SkipAABBsKHR.

• VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07713
  For OpHitObjectTraceRayNV and OpHitObjectTraceRayMotionNV instructions, the Rayflags operand must not contain more than one of SkipTrianglesKHR, CullBackFacingTrianglesKHR, and CullFrontFacingTrianglesKHR.

• VUID-RuntimeSpirv-OpHitObjectTraceRayNV-07714
  For OpHitObjectTraceRayNV and OpHitObjectTraceRayMotionNV instructions, the Rayflags operand must not contain more than one of OpaqueKHR, NoOpaqueKHR, CullOpaqueKHR, and CullNoOpaqueKHR.

• VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07715
  For OpHitObjectTraceRayNV and OpHitObjectTraceRayMotionNV instructions, if the Rayflags operand contains SkipTrianglesKHR, the pipeline must not have been created with VK_PIPELINE_CREATE Ray Tracing SKIP AABBs_BIT_KHR set.

• VUID-RuntimeSpirv-OpHitObjectTraceRayMotionNV-07716
  For OpHitObjectTraceRayNV and OpHitObjectTraceRayMotionNV instructions, if the Rayflags operand contains SkipAABBsKHR, the pipeline must not have been created with VK_PIPELINE_CREATE Ray Tracing SKIP_TRIANGLES_BIT_KHR set.

• VUID-RuntimeSpirv-x-06429
  The x size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[0].

• VUID-RuntimeSpirv-y-06430
  The y size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[1].

• VUID-RuntimeSpirv-z-06431
  The z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupSize[2].

• VUID-RuntimeSpirv-x-06432
  The product of x size, y size, and z size in LocalSize or LocalSizeId must be less than or equal to VkPhysicalDeviceLimits::maxComputeWorkGroupInvocations.

• VUID-RuntimeSpirv-LocalSizeId-06434
  If Execution Mode LocalSizeId is used, maintenance4 must be enabled.
If `maintenance4` is not enabled, any `OpTypeVector` output interface variables must not have a higher `Component Count` than a matching `OpTypeVector` input interface variable.

Any user-defined variables shared between the `OpEntryPoint` of two shader stages, and declared with `Input` as its `Storage Class` for the subsequent shader stage, must have all `Location` slots and `Component` words declared in the preceding shader stage's `OpEntryPoint` with `Output` as the `Storage Class`.

Any user-defined variables between the `OpEntryPoint` of two shader stages must have the same type and width for each `Component`.

Any `OpVariable`, Block-decorated `OpTypeStruct`, or Block-decorated `OpTypeStruct` members shared between the `OpEntryPoint` of two shader stages must have matching decorations as defined in interface matching.

The sum of size in bytes for variables and padding in the `Workgroup` Storage Class in the `GLCompute Execution Model` must be less than or equal to `maxComputeSharedMemorySize`.

If `shaderZeroInitializeWorkgroupMemory` is not enabled, any `OpVariable` with `Workgroup` as its `Storage Class` must not have an `Initializer` operand.

If an `OpImage*Gather` operation has an image operand of `Offset`, `ConstOffset`, or `ConstOffsets` the offset value must be greater than or equal to `minTexelGatherOffset`.

If an `OpImageSample*` or `OpImageFetch*` operation has an image operand of `ConstOffset` then the offset value must be greater than or equal to `minTexelOffset`.

If an `OpImageSample*` or `OpImageFetch*` operation has an image operand of `ConstOffset` then the offset value must be less than or equal to `maxTexelOffset`.

If an `OpTypeImage` has an `MS` operand 0, its bound image must have been created with `VkImageCreateInfo::samples` as `VK_SAMPLE_COUNT_1_BIT`.

If an `OpTypeImage` has an `MS` operand 1, its bound image must not have been created with `VkImageCreateInfo::samples` as `VK_SAMPLE_COUNT_1_BIT`.

If the subpass description contains `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_QCOM`, then the SPIR-V fragment shader Capability `SampleRateShading` must not be enabled.

If the subpass description contains `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_QCOM`, then the SPIR-V fragment shader Capability `SampleRateShading` must not be enabled.
The Execution Mode SubgroupUniformControlFlowKHR must not be applied to an entry point unless shaderSubgroupUniformControlFlow is enabled and the corresponding shader stage bit is set in subgroup supportedStages and the entry point does not execute any invocation repack instructions

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06767
  If shaderEarlyAndLateFragmentTests is not enabled, the EarlyAndLateFragmentTestsEXT Execution Mode must not be used

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06768
  If shaderEarlyAndLateFragmentTests feature is not enabled, the StencilRefUnchangedFrontEXT Execution Mode must not be used

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06769
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefUnchangedBackEXT Execution Mode must not be used

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06770
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefGreaterFrontEXT Execution Mode must not be used

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06771
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefGreaterBackEXT Execution Mode must not be used

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06772
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefLessFrontEXT Execution Mode must not be used

- VUID-RuntimeSpirv-shaderEarlyAndLateFragmentTests-06773
  If shaderEarlyAndLateFragmentTests is not enabled, the StencilRefLessBackEXT Execution Mode must not be used

- VUID-RuntimeSpirv-OpImageWeightedSampleQCOM-06979
  If an OpImageWeightedSampleQCOM operation is used, then the Texture Sampled Image and Weight Image parameters must both be dynamically uniform for the quad

- VUID-RuntimeSpirv-OpImageWeightedSampleQCOM-06980
  If an OpImageWeightedSampleQCOM operation is used, then the Weight Image parameter must be of Storage Class UniformConstant and type OpTypeImage with Depth=0, Dim=2D, Arrayed=1, MS=0, and Sampled=1

- VUID-RuntimeSpirv-OpImageWeightedSampleQCOM-06981
  If an OpImageWeightedSampleQCOM operation is used, then the Weight Image parameter must be decorated with WeightTextureQCOM

- VUID-RuntimeSpirv-OpImageBlockMatchSADQCOM-06982
  If an OpImageBlockMatchSADQCOM or OpImageBlockMatchSSDQCOM operation is used, then the target sampled image, reference sampled image, and Block Size parameters must both be dynamically uniform for the quad

- VUID-RuntimeSpirv-OpImageBlockMatchSSDQCOM-06983
  If an OpImageBlockMatchSSDQCOM or OpImageBlockMatchSADQCOM operation is used, then target sampled image and reference sampled image parameters must be of storage class UniformConstant and type OpTypeImage with Depth=0, Dim=2D, Arrayed=0, MS=0, and Sampled=1
If an OpImageBlockMatchSSDQCOM or OpImageBlockMatchSADQCOM operation is used, then the target sampled image and reference sampled image parameters must be decorated with BlockMatchTextureQCOM.

If an OpImageBlockMatchSSDQCOM or OpImageBlockMatchSADQCOM operation is used, then target sampled image and reference sampled image parameters must have been created using an identical sampler object.

If an OpImageBlockMatchSSDQCOM or OpImageBlockMatchSADQCOM operation is used, then target sampled image and reference sampled image parameters must have been created with sampler object with unnormalizeCordinates equal to VK_TRUE.

If an OpImageBlockMatchSSDQCOM or OpImageBlockMatchSADQCOM operation is used, then Block Size less than or equal to maxBlockMatchRegion.

If an OpImageBoxFilterQCOM operation is used, then Box Size.y must be equal to or greater than 1.0 and less than or equal to maxBoxFilterBlockSize.height.

If an OpImageBoxFilterQCOM operation is used, then Sampled Texture Image and Box Size parameters must be dynamically uniform.

Each OpEntryPoint must not have more than one variable decorated with InputAttachmentIndex per image aspect of the attachment image bound to it, either explicitly or implicitly as described by input attachment interface.

If shaderTileImageColorReadAccess is not enabled, OpColorAttachmentReadEXT operation must not be used.

If shaderTileImageDepthReadAccess is not enabled, OpDepthAttachmentReadEXT operation must not be used.

If shaderTileImageStencilReadAccess is not enabled, OpStencilAttachmentReadEXT operation must not be used.

If sample shading is enabled and minSampleShading is 1.0, the sample operand of any OpColorAttachmentReadEXT, OpDepthAttachmentReadEXT, or OpStencilAttachmentReadEXT operation must evaluate to the value of the coverage index for any given fragment invocation.
If sample shading is enabled and any of the OpColorAttachmentReadEXT, OpDepthAttachmentReadEXT, or OpStencilAttachmentReadEXT operations are used, then minSampleShading must be 1.0.

Precision and Operation of SPIR-V Instructions

The following rules apply to half, single, and double-precision floating point instructions:

- Positive and negative infinities and positive and negative zeros are generated as dictated by IEEE 754, but subject to the precisions allowed in the following table.
- Dividing a non-zero by a zero results in the appropriately signed IEEE 754 infinity.
- Signaling NaNs are not required to be generated and exceptions are never raised. Signaling NaN may be converted to quiet NaN values by any floating point instruction.
- By default, the implementation may perform optimizations on half, single, or double-precision floating-point instructions that ignore sign of a zero, or assume that arguments and results are not NaNs or infinities. If the entry point is declared with the SignedZeroInfNanPreserve Execution Mode, then NaNs, infinities, and the sign of zero must not be ignored.
- Denormalized values are supported.
  - By default, any half, single, or double-precision denormalized value input into a shader or potentially generated by any instruction (except those listed above) or any extended instructions for GLSL in a shader may be flushed to zero.
  - If the entry point is declared with the DenormFlushToZero Execution Mode then for the affected instructions the denormalized result must be flushed to zero and the denormalized operands may be flushed to zero. Denormalized values obtained via unpacking an integer into a vector of values with smaller bit width and interpreting those values as floating-point numbers must be flushed to zero.
instructions for GLSL: Round, RoundEven, Trunc, FAbs, Floor, Ceil, Fract, Radians, Degrees, Sin, Cos, Tan, Asin, Acos, Atan, Sinh, Cosh, Tanh, Asinh, Acosh, Atanh, Atan2, Pow, Exp, Log, Exp2, Log2, Sqrt, InverseSqrt, Determinant, MatrixInverse, Modf, ModfStruct, FMin, FMax, FClamp, FMix, Step, SmoothStep, Fma, UnpackHalf2x16, UnpackDouble2x32, Length, Distance, Cross, Normalize, FaceForward, Reflect, Refract, NMin, NMax, NClamp. Other SPIR-V instructions (except those excluded above) may also flush denormalized values.

The precision of double-precision instructions is at least that of single precision.

The precision of individual operations is defined in Precision of Individual Operations. Subject to the constraints below, however, implementations may reorder or combine operations, resulting in expressions exhibiting different precisions than might be expected from the constituent operations.

**Evaluation of Expressions**

Implementations may rearrange floating-point operations using any of the mathematical properties governing the expressions in precise arithmetic, even where the floating-point operations do not share these properties. This includes, but is not limited to, associativity and distributivity, and may involve a different number of rounding steps than would occur if the operations were not rearranged. In shaders that use the SignedZeroInfNanPreserve Execution Mode the values must be preserved if they are generated after any rearrangement but the Execution Mode does not change which rearrangements are valid. This rearrangement can be prevented for particular operations by using the NoContraction decoration.

**Note**

For example, in the absence of the NoContraction decoration implementations are allowed to implement \( a + b - a \) and \( \frac{a \times b}{a} \) as \( b \). The SignedZeroInfNanPreserve does not prevent these transformations, even though they may overflow to infinity or NaN when evaluated in floating-point.

If the NoContraction decoration is applied then operations may not be rearranged, so, for example, \( a + a - a \) must account for possible overflow to infinity. If infinities are not preserved then the expression may be replaced with \( a \), since the replacement is exact when overflow does not occur and infinities may be replaced with undefined values. If both NoContraction and SignedZeroInfNanPreserve are used then the result must be infinity for sufficiently large \( a \).
Precision of Individual Operations

The precision of individual operations is defined either in terms of rounding (correctly rounded), as an error bound in ULP, or as inherited from a formula as follows:

Correctly Rounded

Operations described as “correctly rounded” will return the infinitely precise result, \( x \), rounded so as to be representable in floating-point. The rounding mode is not specified, unless the entry point is declared with the `RoundingModeRTE` or the `RoundingModeRTZ` Execution Mode. These execution modes affect only correctly rounded SPIR-V instructions. These execution modes do not affect `OpQuantizeToF16`. If the rounding mode is not specified then this rounding is implementation specific, subject to the following rules. If \( x \) is exactly representable then \( x \) will be returned. Otherwise, either the floating-point value closest to and no less than \( x \) or the value closest to and no greater than \( x \) will be returned.

ULP

Where an error bound of \( n \) ULP (units in the last place) is given, for an operation with infinitely precise result \( x \) the value returned must be in the range \([x - n \times ulp(x), x + n \times ulp(x)]\). The function \( ulp(x) \) is defined as follows:

If there exist non-equal, finite floating-point numbers \( a \) and \( b \) such that \( a \leq x \leq b \) then \( ulp(x) \) is the minimum possible distance between such numbers, \( ulp(x) = \min_{a < b} |b - a| \). If such numbers do not exist then \( ulp(x) \) is defined to be the difference between the two non-equal, finite floating-point numbers nearest to \( x \).

Where the range of allowed return values includes any value of magnitude larger than that of the largest representable finite floating-point number, operations may, additionally, return either an infinity of the appropriate sign or the finite number with the largest magnitude of the appropriate sign. If the infinitely precise result of the operation is not mathematically defined then the value returned is undefined.

Inherited From ...

Where an operation’s precision is described as being inherited from a formula, the result returned must be at least as accurate as the result of computing an approximation to \( x \) using a formula equivalent to the given formula applied to the supplied inputs. Specifically, the formula given may be transformed using the mathematical associativity, commutativity and distributivity of the operators involved to yield an equivalent formula. The SPIR-V precision rules, when applied to each such formula and the given input values, define a range of permitted values. If NaN is one of the permitted values then the operation may return any result, otherwise let the largest permitted value in any of the ranges be \( F_{\text{max}} \) and the smallest be \( F_{\text{min}} \). The operation must return a value in the range \([x - E, x + E]\) where \( E = \max(|x - F_{\text{min}}|, |x - F_{\text{max}}|) \). If the entry point is declared with the `DenormFlushToZero` execution mode, then any intermediate denormal value(s) while evaluating the formula may be flushed to zero. Denormal final results must be flushed to zero. If the entry point is declared with the `DenormPreserve Execution Mode`, then denormals must be preserved throughout the formula.

For half- (16 bit) and single- (32 bit) precision instructions, precisions are required to be at least as
follows:

### Table 90. Precision of core SPIR-V Instructions

<table>
<thead>
<tr>
<th>Instruction</th>
<th>Single precision, unless decorated with RelaxedPrecision</th>
<th>Half precision</th>
</tr>
</thead>
<tbody>
<tr>
<td>OpFAdd</td>
<td>Correctly rounded.</td>
<td></td>
</tr>
<tr>
<td>OpFSum</td>
<td>Correctly rounded.</td>
<td></td>
</tr>
<tr>
<td>OpDot(x, y)</td>
<td>Inherited from $\sum_{i=0}^{n-1} x_i \times y_i$</td>
<td></td>
</tr>
<tr>
<td>OpFOrdEqual, OpFUnordEqual</td>
<td>Correct result</td>
<td></td>
</tr>
<tr>
<td>OpFOrdLessThan, OpFUnordLessThan</td>
<td>Correct result</td>
<td></td>
</tr>
<tr>
<td>OpFOrdGreaterThan, OpFUnordGreaterThan</td>
<td>Correct result</td>
<td></td>
</tr>
<tr>
<td>OpFOrdLessThanEqual, OpFUnordLessThanEqual</td>
<td>Correct result</td>
<td></td>
</tr>
<tr>
<td>OpFOrdGreaterThanEqual, OpFUnordGreaterThanEqual</td>
<td>Correct result</td>
<td></td>
</tr>
<tr>
<td>OpFDiv(x,y)</td>
<td>2.5 ULP for $</td>
<td>y</td>
</tr>
<tr>
<td>OpFRem(x,y)</td>
<td>Inherited from $x - y \times \text{trunc}(x/y)$.</td>
<td></td>
</tr>
<tr>
<td>OpFMod(x,y)</td>
<td>Inherited from $x - y \times \text{floor}(x/y)$.</td>
<td></td>
</tr>
<tr>
<td>conversions between types</td>
<td>Correctly rounded.</td>
<td></td>
</tr>
</tbody>
</table>

**Note**

The OpFRem and OpFMod instructions use cheap approximations of remainder, and the error can be large due to the discontinuity in trunc() and floor(). This can produce mathematically unexpected results in some cases, such as FMod(x,x) computing x rather than 0, and can also cause the result to have a different sign than the infinitely precise result.

GLSL.std.450 extended instructions specifically defined in terms of the above instructions inherit the above errors. GLSL.std.450 extended instructions not listed above and not defined in terms of the above have undefined precision.

For the `OpSRem` and `OpSMod` instructions, if either operand is negative the result is undefined.

![Note](image)

While the `OpSRem` and `OpSMod` instructions are supported by the Vulkan environment, they require non-negative values and thus do not enable additional functionality beyond what `OpUMod` provides.

`OpCooperativeMatrixMulAddNV` performs its operations in an implementation-dependent order and internal precision.

`OpCooperativeMatrixMulAddKHR` performs its operations in an implementation-dependent order and internal precision.
Signedness of SPIR-V Image Accesses

SPIR-V associates a signedness with all integer image accesses. This is required in certain parts of the SPIR-V and the Vulkan image access pipeline to ensure defined results. The signedness is determined from a combination of the access instruction’s Image Operands and the underlying image’s Sampled Type as follows:

1. If the instruction’s Image Operands contains the SignExtend operand then the access is signed.
2. If the instruction’s Image Operands contains the ZeroExtend operand then the access is unsigned.
3. Otherwise, the image accesses signedness matches that of the Sampled Type of the OpTypeImage being accessed.

Image Format and Type Matching

When specifying the Image Format of an OpTypeImage, the converted bit width and type, as shown in the table below, must match the Sampled Type. The signedness must match the signedness of any access to the image.

Note
Formatted accesses are always converted from a shader readable type to the resource’s format or vice versa via Format Conversion for reads and Texel Output Format Conversion for writes. As such, the bit width and format below do not necessarily match 1:1 with what might be expected for some formats.

For a given Image Format, the Sampled Type must be the type described in the Type column of the below table, with its Literal Width set to that in the Bit Width column. Every access that is made to the image must have a signedness equal to that in the Signedness column (where applicable).

**Ray Query Precision and Operation**

The values returned by `OpRayQueryGetIntersectionTriangleVertexPositionsKHR` are transformed by
the geometry transform, which is performed at standard floating point precision, but without a specifically defined order of floating point operations to perform the matrix multiplication.
Appendix B: Memory Model

Note
This memory model describes synchronizations provided by all implementations; however, some of the synchronizations defined require extra features to be supported by the implementation. See VkPhysicalDeviceVulkanMemoryModelFeatures.

Agent

Operation is a general term for any task that is executed on the system.

Note
An operation is by definition something that is executed. Thus if an instruction is skipped due to control flow, it does not constitute an operation.

Each operation is executed by a particular agent. Possible agents include each shader invocation, each host thread, and each fixed-function stage of the pipeline.

Memory Location

A memory location identifies unique storage for 8 bits of data. Memory operations access a set of memory locations consisting of one or more memory locations at a time, e.g. an operation accessing a 32-bit integer in memory would read/write a set of four memory locations. Memory operations that access whole aggregates may access any padding bytes between elements or members, but no padding bytes at the end of the aggregate. Two sets of memory locations overlap if the intersection of their sets of memory locations is non-empty. A memory operation must not affect memory at a memory location not within its set of memory locations.

Memory locations for buffers and images are explicitly allocated in VkDeviceMemory objects, and are implicitly allocated for SPIR-V variables in each shader invocation.

Variables with Workgroup storage class that point to a block-decorated type share a set of memory locations.

Allocation

The values stored in newly allocated memory locations are determined by a SPIR-V variable’s initializer, if present, or else are undefined. At the time an allocation is created there have been no memory operations to any of its memory locations. The initialization is not considered to be a memory operation.

Note
For tessellation control shader output variables, a consequence of initialization not being considered a memory operation is that some implementations may need to
insert a barrier between the initialization of the output variables and any reads of those variables.

Memory Operation

For an operation A and memory location M:

- A reads M if and only if the data stored in M is an input to A.
- A writes M if and only if the data output from A is stored to M.
- A accesses M if and only if it either reads or writes (or both) M.

Note

A write whose value is the same as what was already in those memory locations is still considered to be a write and has all the same effects.

Reference

A reference is an object that a particular agent can use to access a set of memory locations. On the host, a reference is a host virtual address. On the device, a reference is:

- The descriptor that a variable is bound to, for variables in Image, Uniform, or StorageBuffer storage classes. If the variable is an array (or array of arrays, etc.) then each element of the array may be a unique reference.
- The address range for a buffer in PhysicalStorageBuffer storage class, where the base of the address range is queried with vkGetBufferDeviceAddress and the length of the range is the size of the buffer.
- A single common reference for all variables with Workgroup storage class that point to a block-decorated type.
- The variable itself for non-block-decorated type variables in Workgroup storage class.
- The variable itself for variables in other storage classes.

Two memory accesses through distinct references may require availability and visibility operations as defined below.

Program-Order

A dynamic instance of an instruction is defined in SPIR-V (https://registry.khronos.org/spir-v/specs/unified1/SPIRV.html#DynamicInstance) as a way of referring to a particular execution of a static instruction. Program-order is an ordering on dynamic instances of instructions executed by a single shader invocation:

- (Basic block): If instructions A and B are in the same basic block, and A is listed in the module before B, then the n'th dynamic instance of A is program-ordered before the n'th dynamic instance of B.
• (Branch): The dynamic instance of a branch or switch instruction is program-ordered before the dynamic instance of the OpLabel instruction to which it transfers control.

• (Call entry): The dynamic instance of an OpFunctionCall instruction is program-ordered before the dynamic instances of the OpFunctionParameter instructions and the body of the called function.

• (Call exit): The dynamic instance of the instruction following an OpFunctionCall instruction is program-ordered after the dynamic instance of the return instruction executed by the called function.

• (Transitive Closure): If dynamic instance A of any instruction is program-ordered before dynamic instance B of any instruction and B is program-ordered before dynamic instance C of any instruction then A is program-ordered before C.

• (Complete definition): No other dynamic instances are program-ordered.

For instructions executed on the host, the source language defines the program-order relation (e.g. as “sequenced-before”).

Shader Call Related

Shader-call-related is an equivalence relation on invocations defined as the symmetric and transitive closure of:

• A is shader-call-related to B if A is created by an invocation repack instruction executed by B.

Shader Call Order

Shader-call-order is a partial order on dynamic instances of instructions executed by invocations that are shader-call-related:

• (Program order): If dynamic instance A is program-ordered before B, then A is shader-call-ordered before B.

• (Shader call entry): If A is a dynamic instance of an invocation repack instruction and B is a dynamic instance executed by an invocation that is created by A, then A is shader-call-ordered before B.

• (Shader call exit): If A is a dynamic instance of an invocation repack instruction, B is the next dynamic instance executed by the same invocation, and C is a dynamic instance executed by an invocation that is created by A, then C is shader-call-ordered before B.

• (Transitive closure): If A is shader-call-ordered-before B and B is shader-call-ordered-before C, then A is shader-call-ordered-before C.

• (Complete definition): No other dynamic instances are shader-call-ordered.

Scope

Atomic and barrier instructions include scopes which identify sets of shader invocations that must obey the requested ordering and atomicity rules of the operation, as defined below.
The various scopes are described in detail in the Shaders chapter.

**Atomic Operation**

An *atomic operation* on the device is any SPIR-V operation whose name begins with `OpAtomic`. An atomic operation on the host is any operation performed with an std::atomic typed object.

Each atomic operation has a memory *scope* and a *semantics*. Informally, the scope determines which other agents it is atomic with respect to, and the semantics constrains its ordering against other memory accesses. Device atomic operations have explicit scopes and semantics. Each host atomic operation implicitly uses the *CrossDevice* scope, and uses a memory semantics equivalent to a C++ std::memory_order value of relaxed, acquire, release, acq_rel, or seq_cst.

Two atomic operations A and B are *potentially-mutually-ordered* if and only if all of the following are true:

- They access the same set of memory locations.
- They use the same reference.
- A is in the instance of B's memory scope.
- B is in the instance of A's memory scope.
- A and B are not the same operation (irreflexive).

Two atomic operations A and B are *mutually-ordered* if and only if they are potentially-mutually-ordered and any of the following are true:

- A and B are both device operations.
- A and B are both host operations.
- A is a device operation, B is a host operation, and the implementation supports concurrent host- and device-atomics.

**Note**

If two atomic operations are not mutually-ordered, and if their sets of memory locations overlap, then each must be synchronized against the other as if they were non-atomic operations.

**Scoped Modification Order**

For a given atomic write A, all atomic writes that are mutually-ordered with A occur in an order known as A's *scoped modification order*. A's scoped modification order relates no other operations.

**Note**

Invocations outside the instance of A's memory scope may observe the values at A's set of memory locations becoming visible to it in an order that disagrees with the scoped modification order.
It is valid to have non-atomic operations or atomics in a different scope instance to
the same set of memory locations, as long as they are synchronized against each
other as if they were non-atomic (if they are not, it is treated as a data race). That
means this definition of A’s scoped modification order could include atomic
operations that occur much later, after intervening non-atomics. That is a bit non-
intuitive, but it helps to keep this definition simple and non-circular.

Memory Semantics

Non-atomic memory operations, by default, may be observed by one agent in a different order than
they were written by another agent.

Atomics and some synchronization operations include memory semantics, which are flags that
constrain the order in which other memory accesses (including non-atomic memory accesses and
availability and visibility operations) performed by the same agent can be observed by other
agents, or can observe accesses by other agents.

Device instructions that include semantics are OpAtomic*, OpControlBarrier, OpMemoryBarrier, and
OpMemoryNamedBarrier. Host instructions that include semantics are some std::atomic methods and
memory fences.

SPIR-V supports the following memory semantics:

- Relaxed: No constraints on order of other memory accesses.
- Acquire: A memory read with this semantic performs an acquire operation. A memory barrier
  with this semantic is an acquire barrier.
- Release: A memory write with this semantic performs a release operation. A memory barrier
  with this semantic is a release barrier.
- AcquireRelease: A memory read-modify-write operation with this semantic performs both an
  acquire operation and a release operation, and inherits the limitations on ordering from both of
  those operations. A memory barrier with this semantic is both a release and acquire barrier.

SPIR-V does not support “consume” semantics on the device.

The memory semantics operand also includes storage class semantics which indicate which storage
classes are constrained by the synchronization. SPIR-V storage class semantics include:

- UniformMemory
- WorkgroupMemory
- ImageMemory
- OutputMemory

Each SPIR-V memory operation accesses a single storage class. Semantics in synchronization
operations can include a combination of storage classes.

The UniformMemory storage class semantic applies to accesses to memory in the PhysicalStorageBuffer, ShaderRecordBufferKHR, Uniform and StorageBuffer storage classes. The WorkgroupMemory storage class semantic applies to accesses to memory in the Workgroup storage class. The ImageMemory storage class semantic applies to accesses to memory in the Image storage class. The OutputMemory storage class semantic applies to accesses to memory in the Output storage class.

**Note**
Informally, these constraints limit how memory operations can be reordered, and these limits apply not only to the order of accesses as performed in the agent that executes the instruction, but also to the order the effects of writes become visible to all other agents within the same instance of the instruction’s memory scope.

**Note**
Release and acquire operations in different threads can act as synchronization operations, to guarantee that writes that happened before the release are visible after the acquire. (This is not a formal definition, just an Informative forward reference.)

**Note**
The OutputMemory storage class semantic is only useful in tessellation control shaders, which is the only execution model where output variables are shared between invocations.

The memory semantics operand can also include availability and visibility flags, which apply availability and visibility operations as described in availability and visibility. The availability/visibility flags are:

- **MakeAvailable**: Semantics must be Release or AcquireRelease. Performs an availability operation before the release operation or barrier.
- **MakeVisible**: Semantics must be Acquire or AcquireRelease. Performs a visibility operation after the acquire operation or barrier.

The specifics of these operations are defined in Availability and Visibility Semantics.

Host atomic operations may support a different list of memory semantics and synchronization operations, depending on the host architecture and source language.

**Release Sequence**

After an atomic operation A performs a release operation on a set of memory locations M, the release sequence headed by A is the longest continuous subsequence of A's scoped modification order that consists of:

- the atomic operation A as its first element
• atomic read-modify-write operations on M by any agent

**Note**
The atomics in the last bullet **must** be mutually-ordered with A by virtue of being in A's scoped modification order.

**Note**
This intentionally omits “atomic writes to M performed by the same agent that performed A”, which is present in the corresponding C++ definition.

## Synchronizes-With

*Synchronizes-with* is a relation between operations, where each operation is either an atomic operation or a memory barrier (aka fence on the host).

If A and B are atomic operations, then A synchronizes-with B if and only if all of the following are true:

- A performs a release operation
- B performs an acquire operation
- A and B are mutually-ordered
- B reads a value written by A or by an operation in the release sequence headed by A

**OpControlBarrier, OpMemoryBarrier, and OpMemoryNamedBarrier** are *memory barrier* instructions in SPIR-V.

If A is a release barrier and B is an atomic operation that performs an acquire operation, then A synchronizes-with B if and only if all of the following are true:

- there exists an atomic write X (with any memory semantics)
- A is program-ordered before X
- X and B are mutually-ordered
- B reads a value written by X or by an operation in the release sequence headed by X
  - If X is relaxed, it is still considered to head a hypothetical release sequence for this rule
- A and B are in the instance of each other's memory scopes
- X's storage class is in A's semantics.

If A is an atomic operation that performs a release operation and B is an acquire barrier, then A synchronizes-with B if and only if all of the following are true:

- there exists an atomic read X (with any memory semantics)
- X is program-ordered before B
- X and A are mutually-ordered
• X reads a value written by A or by an operation in the release sequence headed by A
• A and B are in the instance of each other's memory scopes
• X's storage class is in B's semantics.

If A is a release barrier and B is an acquire barrier, then A synchronizes-with B if all of the following are true:

• there exists an atomic write X (with any memory semantics)
• A is program-ordered before X
• there exists an atomic read Y (with any memory semantics)
• Y is program-ordered before B
• X and Y are mutually-ordered
• Y reads the value written by X or by an operation in the release sequence headed by X
  ◦ If X is relaxed, it is still considered to head a hypothetical release sequence for this rule
• A and B are in the instance of each other's memory scopes
• X's and Y's storage class is in A's and B's semantics.
  ◦ NOTE: X and Y must have the same storage class, because they are mutually ordered.

If A is a release barrier, B is an acquire barrier, and C is a control barrier (where A can equal C, and B can equal C), then A synchronizes-with B if all of the following are true:

• A is program-ordered before (or equals) C
• C is program-ordered before (or equals) B
• A and B are in the instance of each other's memory scopes
• A and B are in the instance of C's execution scope

Note
This is similar to the barrier-barrier synchronization above, but with a control barrier filling the role of the relaxed atomics.

Let F be an ordering of fragment shader invocations, such that invocation F₁ is ordered before invocation F₂ if and only if F₁ and F₂ overlap as described in Fragment Shader Interlock and F₁ executes the interlocked code before F₂.

If A is an OpEndInvocationInterlockEXT instruction and B is an OpBeginInvocationInterlockEXT instruction, then A synchronizes-with B if the agent that executes A is ordered before the agent that executes B in F. A and B are both considered to have FragmentInterlock memory scope and semantics of UniformMemory and ImageMemory, and A is considered to have Release semantics and B is considered to have Acquire semantics.

Note
OpBeginInvocationInterlockEXT and OpBeginInvocationInterlockEXT do not perform implicit availability or visibility operations. Usually, shaders using fragment
shader interlock will declare the relevant resources as coherent to get implicit per-instruction availability and visibility operations.

If A is a release barrier and B is an acquire barrier, then A synchronizes-with B if all of the following are true:

- A is shader-call-ordered-before B
- A and B are in the instance of each other's memory scopes

No other release and acquire barriers synchronize-with each other.

**System-Synchronizes-With**

System-synchronizes-with is a relation between arbitrary operations on the device or host. Certain operations system-synchronize-with each other, which informally means the first operation occurs before the second and that the synchronization is performed without using application-visible memory accesses.

If there is an execution dependency between two operations A and B, then the operation in the first synchronization scope system-synchronizes-with the operation in the second synchronization scope.

**Note**

This covers all Vulkan synchronization primitives, including device operations executing before a synchronization primitive is signaled, wait operations happening before subsequent device operations, signal operations happening before host operations that wait on them, and host operations happening before vkQueueSubmit. The list is spread throughout the synchronization chapter, and is not repeated here.

System-synchronizes-with implicitly includes all storage class semantics and has CrossDevice scope.

If A system-synchronizes-with B, we also say A is system-synchronized-before B and B is system-synchronized-after A.

**Private vs. Non-Private**

By default, non-atomic memory operations are treated as private, meaning such a memory operation is not intended to be used for communication with other agents. Memory operations with the NonPrivatePointer/NonPrivateTexel bit set are treated as non-private, and are intended to be used for communication with other agents.

More precisely, for private memory operations to be Location-Ordered between distinct agents requires using system-synchronizes-with rather than shader-based synchronization. Non-private memory operations still obey program-order.

Atomic operations are always considered non-private.
Inter-Thread-Happens-Before

Let SC be a non-empty set of storage class semantics. Then (using template syntax) operation A \textit{inter-thread-happens-before\textless SC\textgreater} operation B if and only if any of the following is true:

- A system-synchronizes-with B
- A synchronizes-with B, and both A and B have all of SC in their semantics
- A is an operation on memory in a storage class in SC or that has all of SC in its semantics, B is a release barrier or release atomic with all of SC in its semantics, and A is program-ordered before B
- A is an acquire barrier or acquire atomic with all of SC in its semantics, B is an operation on memory in a storage class in SC or that has all of SC in its semantics, and A is program-ordered before B
- A and B are both host operations and A inter-thread-happens-before B as defined in the host language specification
- A inter-thread-happens-before\textless SC\textgreater some X and X inter-thread-happens-before\textless SC\textgreater B

Happens-Before

Operation A \textit{happens-before} operation B if and only if any of the following is true:

- A is program-ordered before B
- A inter-thread-happens-before\textless SC\textgreater B for some set of storage classes SC

\textit{Happens-after} is defined similarly.

\textbf{Note}

Unlike C++, happens-before is not always sufficient for a write to be visible to a read. Additional availability and visibility operations may be required for writes to be visible-to other memory accesses.

\textbf{Note}

Happens-before is not transitive, but each of program-order and inter-thread-happens-before\textless SC\textgreater are transitive. These can be thought of as covering the “single-threaded” case and the “multi-threaded” case, and it is not necessary (and not valid) to form chains between the two.

Availability and Visibility

\textit{Availability} and \textit{visibility} are states of a write operation, which (informally) track how far the write has permeated the system, i.e. which agents and references are able to observe the write. Availability state is per \textit{memory domain}. Visibility state is per (agent,reference) pair. Availability and visibility states are per-memory location for each write.
Memory domains are named according to the agents whose memory accesses use the domain. Domains used by shader invocations are organized hierarchically into multiple smaller memory domains which correspond to the different scopes. Each memory domain is considered the dual of a scope, and vice versa. The memory domains defined in Vulkan include:

- **host** - accessible by host agents
- **device** - accessible by all device agents for a particular device
- **shader** - accessible by shader agents for a particular device, corresponding to the Device scope
- **queue family instance** - accessible by shader agents in a single queue family, corresponding to the QueueFamily scope.
- **fragment interlock instance** - accessible by fragment shader agents that overlap, corresponding to the FragmentInterlock scope.
- **shader call instance** - accessible by shader agents that are shader-call-related, corresponding to the ShaderCallKHR scope.
- **workgroup instance** - accessible by shader agents in the same workgroup, corresponding to the Workgroup scope.
- **subgroup instance** - accessible by shader agents in the same subgroup, corresponding to the Subgroup scope.

The memory domains are nested in the order listed above, except for shader call instance domain, with memory domains later in the list nested in the domains earlier in the list. The shader call instance domain is at an implementation-dependent location in the list, and is nested according to that location. The shader call instance domain is not broader than the queue family instance domain.

**Note**

Memory domains do not correspond to storage classes or device-local and host-local VkDeviceMemory allocations, rather they indicate whether a write can be made visible only to agents in the same subgroup, same workgroup, overlapping fragment shader invocation, shader-call-related ray tracing invocation, in any shader invocation, or anywhere on the device, or host. The shader, queue family instance, fragment interlock instance, shader call instance, workgroup instance, and subgroup instance domains are only used for shader-based availability/visibility operations, in other cases writes can be made available from/visible to the shader via the device domain.

**Availability operations**, **visibility operations**, and **memory domain operations** alter the state of the write operations that happen-before them, and which are included in their source scope to be available or visible to their destination scope.

- For an availability operation, the source scope is a set of (agent,reference,memory location) tuples, and the destination scope is a set of memory domains.
- For a memory domain operation, the source scope is a memory domain and the destination scope is a memory domain.
- For a visibility operation, the source scope is a set of memory domains and the destination
How the scopes are determined depends on the specific operation. Availability and memory domain operations expand the set of memory domains to which the write is available. Visibility operations expand the set of (agent,reference,memory location) tuples to which the write is visible.

Recall that availability and visibility states are per-memory location, and let W be a write operation to one or more locations performed by agent A via reference R. Let L be one of the locations written. (W,L) (the write W to L), is initially not available to any memory domain and only visible to (A,R,L). An availability operation AV that happens-after W and that includes (A,R,L) in its source scope makes (W,L) available to the memory domains in its destination scope.

A memory domain operation DOM that happens-after AV and for which (W,L) is available in the source scope makes (W,L) available in the destination memory domain.

A visibility operation VIS that happens-after AV (or DOM) and for which (W,L) is available in any domain in the source scope makes (W,L) visible to all (agent,reference,L) tuples included in its destination scope.

If write W₂ happens-after W, and their sets of memory locations overlap, then W will not be available/visible to all agents/references for those memory locations that overlap (and future AV/DOM/VIS ops cannot revive W’s write to those locations).

Availability, memory domain, and visibility operations are treated like other non-atomic memory accesses for the purpose of memory semantics, meaning they can be ordered by release-acquire sequences or memory barriers.

An availability chain is a sequence of availability operations to increasingly broad memory domains, where element N+1 of the chain is performed in the dual scope instance of the destination memory domain of element N and element N happens-before element N+1. An example is an availability operation with destination scope of the workgroup instance domain that happens-before an availability operation to the shader domain performed by an invocation in the same workgroup. An availability chain AVC that happens-after W and that includes (A,R,L) in the source scope makes (W,L) available to the memory domains in its final destination scope. An availability chain with a single element is just the availability operation.

Similarly, a visibility chain is a sequence of visibility operations from increasingly narrow memory domains, where element N of the chain is performed in the dual scope instance of the source memory domain of element N+1 and element N happens-before element N+1. An example is a visibility operation with source scope of the shader domain that happens-before a visibility operation with source scope of the workgroup instance domain performed by an invocation in the same workgroup. A visibility chain VISC that happens-after AVC (or DOM) and for which (W,L) is available in any domain in the source scope makes (W,L) visible to all (agent,reference,L) tuples included in its final destination scope. A visibility chain with a single element is just the visibility operation.

**Availability, Visibility, and Domain Operations**

The following operations generate availability, visibility, and domain operations. When multiple
availability/visibility/domain operations are described, they are system-synchronized-with each other in the order listed.

An operation that performs a memory dependency generates:

- If the source access mask includes `VK_ACCESS_HOST_WRITE_BIT`, then the dependency includes a memory domain operation from host domain to device domain.
- An availability operation with source scope of all writes in the first access scope of the dependency and a destination scope of the device domain.
- A visibility operation with source scope of the device domain and destination scope of the second access scope of the dependency.
- If the destination access mask includes `VK_ACCESS_HOST_READ_BIT` or `VK_ACCESS_HOST_WRITE_BIT`, then the dependency includes a memory domain operation from device domain to host domain.

`vkFlushMappedMemoryRanges` performs an availability operation, with a source scope of (agents,references) = (all host threads, all mapped memory ranges passed to the command), and destination scope of the host domain.

`vkInvalidateMappedMemoryRanges` performs a visibility operation, with a source scope of the host domain and a destination scope of (agents,references) = (all host threads, all mapped memory ranges passed to the command).

`vkQueueSubmit` performs a memory domain operation from host to device, and a visibility operation with source scope of the device domain and destination scope of all agents and references on the device.

**Availability and Visibility Semantics**

A memory barrier or atomic operation via agent A that includes MakeAvailable in its semantics performs an availability operation whose source scope includes agent A and all references in the storage classes in that instruction’s storage class semantics, and all memory locations, and whose destination scope is a set of memory domains selected as specified below. The implicit availability operation is program-ordered between the barrier or atomic and all other operations program-ordered before the barrier or atomic.

A memory barrier or atomic operation via agent A that includes MakeVisible in its semantics performs a visibility operation whose source scope is a set of memory domains selected as specified below, and whose destination scope includes agent A and all references in the storage classes in that instruction’s storage class semantics, and all memory locations. The implicit visibility operation is program-ordered between the barrier or atomic and all other operations program-ordered after the barrier or atomic.

The memory domains are selected based on the memory scope of the instruction as follows:

- **Device** scope uses the shader domain
- **QueueFamily** scope uses the queue family instance domain
- **FragmentInterlock** scope uses the fragment interlock instance domain
• **ShaderCallKHR** scope uses the shader call instance domain
• **Workgroup** scope uses the workgroup instance domain
• **Subgroup** uses the subgroup instance domain
• **Invocation** perform no availability/visibility operations.

When an availability operation performed by an agent A includes a memory domain D in its destination scope, where D corresponds to scope instance S, it also includes the memory domains that correspond to each smaller scope instance S’ that is a subset of S and that includes A. Similarly for visibility operations.

**Per-Instruction Availability and Visibility Semantics**

A memory write instruction that includes MakePointerAvailable, or an image write instruction that includes MakeTexelAvailable, performs an availability operation whose source scope includes the agent and reference used to perform the write and the memory locations written by the instruction, and whose destination scope is a set of memory domains selected by the Scope operand specified in Availability and Visibility Semantics. The implicit availability operation is program-ordered between the write and all other operations program-ordered after the write.

A memory read instruction that includes MakePointerVisible, or an image read instruction that includes MakeTexelVisible, performs a visibility operation whose source scope is a set of memory domains selected by the Scope operand as specified in Availability and Visibility Semantics, and whose destination scope includes the agent and reference used to perform the read and the memory locations read by the instruction. The implicit visibility operation is program-ordered between read and all other operations program-ordered before the read.

**Note**

Although reads with per-instruction visibility only perform visibility ops from the shader or fragment interlock instance or shader call instance or workgroup instance or subgroup instance domain, they will also see writes that were made visible via the device domain, i.e. those writes previously performed by non-shader agents and made visible via API commands.

**Note**

It is expected that all invocations in a subgroup execute on the same processor with the same path to memory, and thus availability and visibility operations with subgroup scope can be expected to be “free”.

**Location-Ordered**

Let X and Y be memory accesses to overlapping sets of memory locations M, where X ≠ Y. Let \((A_X,R_X)\) be the agent and reference used for X, and \((A_Y,R_Y)\) be the agent and reference used for Y. For now, let “→” denote happens-before and “→ _rcpo_” denote the reflexive closure of program-ordered before.

If \(D_1\) and \(D_2\) are different memory domains, then let \(\text{DOM}(D_1,D_2)\) be a memory domain operation from \(D_1\) to \(D_2\). Otherwise, let \(\text{DOM}(D,D)\) be a placeholder such that \(X \rightarrow \text{DOM}(D,D) \rightarrow Y\) if and only if
X → Y.

X is location-ordered before Y for a location L in M if and only if any of the following is true:

- \( A_X = A_Y \) and \( R_X = R_Y \) and \( X \rightarrow Y \)
  - NOTE: this case means no availability/visibility ops are required when it is the same (agent,reference).
- X is a read, both X and Y are non-private, and \( X \rightarrow Y \)
- X is a read, and X (transitively) system-synchronizes with Y
- If \( R_X = R_Y \) and \( A_X \) and \( A_Y \) access a common memory domain D (e.g. are in the same workgroup instance if D is the workgroup instance domain), and both X and Y are non-private:
  - X is a write, Y is a write, AVC(\( A_X, R_X, D, L \)) is an availability chain making (X,L) available to domain D, and \( X \rightarrow rpo AVC(\( A_X, R_X, D, L \)) \rightarrow Y \)
  - X is a write, Y is a read, AVC(\( A_X, R_X, D, L \)) is an availability chain making (X,L) available to domain D, VISC(\( A_Y, R_Y, D, L \)) is a visibility chain making writes to L available in domain D visible to Y, and \( X \rightarrow rpo AVC(\( A_X, R_X, D, L \)) \rightarrow VISC(\( A_Y, R_Y, D, L \)) \rightarrow rpo Y \)
  - If \( VkPhysicalDeviceVulkanMemoryModelFeatures::vulkanMemoryModelAvailabilityVisibilityChains \) is VK_FALSE, then AVC and VISC must each only have a single element in the chain, in each sub-bullet above.
- Let \( D_X \) and \( D_Y \) each be either the device domain or the host domain, depending on whether \( A_X \) and \( A_Y \) execute on the device or host:
  - X is a write and Y is a write, and \( X \rightarrow AV(\( A_X, R_X, D_X, L \)) \rightarrow DOM(\( D_X, D_Y \)) \rightarrow Y \)
  - X is a write and Y is a read, and \( X \rightarrow AV(\( A_X, R_X, D_X, L \)) \rightarrow DOM(\( D_X, D_Y \)) \rightarrow VIS(\( A_Y, R_Y, D_Y, L \)) \rightarrow Y \)

Note
The final bullet (synchronization through device/host domain) requires API-level synchronization operations, since the device/host domains are not accessible via shader instructions. And “device domain” is not to be confused with “device scope”, which synchronizes through the “shader domain”.

Data Race

Let X and Y be operations that access overlapping sets of memory locations M, where X \( \neq \) Y, and at least one of X and Y is a write, and X and Y are not mutually-ordered atomic operations. If there does not exist a location-ordered relation between X and Y for each location in M, then there is a data race.

Applications must ensure that no data races occur during the execution of their application.

Note
Data races can only occur due to instructions that are actually executed. For example, an instruction skipped due to control flow must not contribute to a data race.
Visible-To

Let X be a write and Y be a read whose sets of memory locations overlap, and let M be the set of memory locations that overlap. Let \( M_2 \) be a non-empty subset of M. Then X is visible-to Y for memory locations \( M_2 \) if and only if all of the following are true:

- X is location-ordered before Y for each location L in \( M_2 \).
- There does not exist another write Z to any location L in \( M_2 \) such that X is location-ordered before Z for location L and Z is location-ordered before Y for location L.

If X is visible-to Y, then Y reads the value written by X for locations \( M_2 \).

Note

It is possible for there to be a write between X and Y that overwrites a subset of the memory locations, but the remaining memory locations (\( M_2 \)) will still be visible-to Y.

Acyclicity

Reads-from is a relation between operations, where the first operation is a write, the second operation is a read, and the second operation reads the value written by the first operation. From-reads is a relation between operations, where the first operation is a read, the second operation is a write, and the first operation reads a value written earlier than the second operation in the second operation’s scoped modification order (or the first operation reads from the initial value, and the second operation is any write to the same locations).

Then the implementation must guarantee that no cycles exist in the union of the following relations:

- location-ordered
- scoped modification order (over all atomic writes)
- reads-from
- from-reads

Note

This is a “consistency” axiom, which informally guarantees that sequences of operations cannot violate causality.

Scoped Modification Order Coherence

Let A and B be mutually-ordered atomic operations, where A is location-ordered before B. Then the following rules are a consequence of acyclicity:

- If A and B are both reads and A does not read the initial value, then the write that A takes its value from must be earlier in its own scoped modification order than (or the same as) the write that B takes its value from (no cycles between location-order, reads-from, and from-reads).
• If A is a read and B is a write and A does not read the initial value, then A must take its value from a write earlier than B in B's scoped modification order (no cycles between location-order, scope modification order, and reads-from).

• If A is a write and B is a read, then B must take its value from A or a write later than A in A's scoped modification order (no cycles between location-order, scoped modification order, and from-reads).

• If A and B are both writes, then A must be earlier than B in A's scoped modification order (no cycles between location-order and scoped modification order).

• If A is a write and B is a read-modify-write and B reads the value written by A, then B comes immediately after A in A's scoped modification order (no cycles between scoped modification order and from-reads).

Shader I/O

If a shader invocation A in a shader stage other than Vertex performs a memory read operation X from an object in storage class CallableDataKHR, IncomingCallableDataKHR, RayPayloadKHR, HitAttributeKHR, IncomingRayPayloadKHR, or Input, then X is system-synchronized-after all writes to the corresponding CallableDataKHR, IncomingCallableDataKHR, RayPayloadKHR, HitAttributeKHR, IncomingRayPayloadKHR, or Output storage variable(s) in the shader invocation(s) that contribute to generating invocation A, and those writes are all visible-to X.

Note

It is not necessary for the upstream shader invocations to have completed execution, they only need to have generated the output that is being read.

Deallocation

A call to vkFreeMemory must happen-after all memory operations on all memory locations in that VkDeviceMemory object.

Note

Normally, device memory operations in a given queue are synchronized with vkFreeMemory by having a host thread wait on a fence signaled by that queue, and the wait happens-before the call to vkFreeMemory on the host.

The deallocation of SPIR-V variables is managed by the system and happens-after all operations on those variables.

Descriptions (Informative)

This subsection offers more easily understandable consequences of the memory model for app/compiler developers.

Let SC be the storage class(es) specified by a release or acquire operation or barrier.
An atomic write with release semantics must not be reordered against any read or write to SC that is program-ordered before it (regardless of the storage class the atomic is in).

An atomic read with acquire semantics must not be reordered against any read or write to SC that is program-ordered after it (regardless of the storage class the atomic is in).

Any write to SC program-ordered after a release barrier must not be reordered against any read or write to SC program-ordered before that barrier.

Any read from SC program-ordered before an acquire barrier must not be reordered against any read or write to SC program-ordered after the barrier.

A control barrier (even if it has no memory semantics) must not be reordered against any memory barriers.

This memory model allows memory accesses with and without availability and visibility operations, as well as atomic operations, all to be performed on the same memory location. This is critical to allow it to reason about memory that is reused in multiple ways, e.g. across the lifetime of different shader invocations or draw calls. While GLSL (and legacy SPIR-V) applies the “coherent” decoration to variables (for historical reasons), this model treats each memory access instruction as having optional implicit availability/visibility operations. GLSL to SPIR-V compilers should map all (non-atomic) operations on a coherent variable to Make{Pointer,Texel}{Available}{Visible} flags in this model.

Atomic operations implicitly have availability/visibility operations, and the scope of those operations is taken from the atomic operation’s scope.

**Tessellation Output Ordering**

For SPIR-V that uses the Vulkan Memory Model, the OutputMemory storage class is used to synchronize accesses to tessellation control output variables. For legacy SPIR-V that does not enable the Vulkan Memory Model via OpMemoryModel, tessellation outputs can be ordered using a control barrier with no particular memory scope or semantics, as defined below.

Let X and Y be memory operations performed by shader invocations A\(_X\) and A\(_Y\). Operation X is **tessellation-output-ordered** before operation Y if and only if all of the following are true:

- There is a dynamic instance of an OpControlBarrier instruction C such that X is program-ordered before C in A\(_X\) and C is program-ordered before Y in A\(_Y\).
- A\(_X\) and A\(_Y\) are in the same instance of C’s execution scope.

If shader invocations A\(_X\) and A\(_Y\) in the TessellationControl execution model execute memory operations X and Y, respectively, on the Output storage class, and X is tessellation-output-ordered before Y with a scope of Workgroup, then X is location-ordered before Y, and if X is a write and Y is a read then X is visible-to Y.

**Cooperative Matrix Memory Access**

For each dynamic instance of a cooperative matrix load or store instruction (OpCooperativeMatrixLoadNV or OpCooperativeMatrixStoreNV), a single implementation-dependent
invocation within the instance of the matrix's scope performs a non-atomic load or store (respectively) to each memory location that is defined to be accessed by the instruction.
Appendix C: Compressed Image Formats

The compressed texture formats used by Vulkan are described in the specifically identified sections of the Khronos Data Format Specification, version 1.3.

Unless otherwise described, the quantities encoded in these compressed formats are treated as normalized, unsigned values.

Those formats listed as sRGB-encoded have in-memory representations of R, G and B components which are nonlinearly-encoded as $R'$, $G'$, and $B'$; any alpha component is unchanged. As part of filtering, the nonlinear $R'$, $G'$, and $B'$ values are converted to linear R, G, and B components; any alpha component is unchanged. The conversion between linear and nonlinear encoding is performed as described in the “KHR_DF_TRANSFER_SRGB” section of the Khronos Data Format Specification.
Block-Compressed Image Formats

BC1, BC2 and BC3 formats are described in “S3TC Compressed Texture Image Formats” chapter of the Khronos Data Format Specification. BC4 and BC5 are described in the “RGTC Compressed Texture Image Formats” chapter. BC6H and BC7 are described in the “BPTC Compressed Texture Image Formats” chapter.

<td>12 × 12</td>
<td>HDR</td>
</tr>
</tbody>
</table>

ASTC textures containing HDR block encodings **should** be passed to the API using an ASTC SFLOAT texture format.

**Note**

An HDR block in a texture passed using a LDR UNORM format will return the appropriate ASTC error color if the implementation supports only the ASTC LDR profile, but may result in either the error color or a decompressed HDR color if the implementation supports HDR decoding.

### ASTC decode mode

If the `VK_EXT_astc_decode_mode` extension is enabled, the decode mode is determined as follows:

*Table 96. Mapping of Vulkan ASTC decoding format to ASTC decoding modes*

<table>
<thead>
<tr>
<th>VkFormat</th>
<th>Decoding mode</th>
</tr>
</thead>
<tbody>
<tr>
<td>VK_FORMAT_R16G16B16A16_SFLOAT</td>
<td>decode_float16</td>
</tr>
<tr>
<td>VK_FORMAT_R8G8B8A8_UNORM</td>
<td>decode_unorm8</td>
</tr>
<tr>
<td>VK_FORMAT_E5B9G9R9_UFLOAT_PACK32</td>
<td>decode_rgb9e5</td>
</tr>
</tbody>
</table>

Otherwise, the ASTC decode mode is decode_float16.
Note that an implementation may use HDR mode when linear LDR mode is requested unless the decode mode is decode_unorm8.
PVRTC Compressed Image Formats

PVRTC formats are described in the “PVRTC Compressed Texture Image Formats” chapter of the Khronos Data Format Specification.

Appendix D: Core Revisions (Informative)

New minor versions of the Vulkan API are defined periodically by the Khronos Vulkan Working Group. These consist of some amount of additional functionality added to the core API, potentially including both new functionality and functionality promoted from extensions.

It is possible to build the specification for earlier versions, but to aid readability of the latest versions, this appendix gives an overview of the changes as compared to earlier versions.

Version 1.3

Vulkan Version 1.3 promoted a number of key extensions into the core API:

- VK_KHR_copy_commands2
- VK_KHR_dynamic_rendering
- VK_KHR_format_feature_flags2
- VK_KHR_maintenance4
- VK_KHR_shader_integer_dot_product
- VK_KHR_shader_non_semantic_info
- VK_KHR_shader_terminate_invocation
- VK_KHR_synchronization2
- VK_KHR_zero_initialize_workgroup_memory
- VK_EXT_4444_formats
- VK_EXT_extended_dynamic_state
- VK_EXT_extended_dynamic_state2
- VK_EXT_image_robustness
- VK_EXT_inline_uniform_block
- VK_EXT_pipeline_creation_cache_control
- VK_EXT_pipeline_creation_feedback
- VK_EXT_private_data
- VK_EXT_shader_demote_to_helper_invocation
- VK_EXT_subgroup_size_control
- VK_EXT_texel_buffer_alignment
- VK_EXT_texture_compression_astc_hdr
- VK_EXT_tooling_info
- VK_EXT_ycbcr_2plane_444_formats
All differences in behavior between these extensions and the corresponding Vulkan 1.3 functionality are summarized below.

**Differences relative to VK_EXT_4444_formats**

If the VK_EXT_4444_formats extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDevice4444FormatsFeaturesEXT structure.

**Differences relative to VK_EXT_extended_dynamic_state**

All dynamic state enumerants and entry points defined by VK_EXT_extended_dynamic_state are required in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceExtendedDynamicStateFeaturesEXT structure.

**Differences relative to VK_EXT_extended_dynamic_state2**

The optional dynamic state enumerants and entry points defined by VK_EXT_extended_dynamic_state2 for patch control points and logic op are not promoted in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceExtendedDynamicState2FeaturesEXT structure.

**Differences relative to VK_EXT_texel_buffer_alignment**

The more specific alignment requirements defined by VkPhysicalDeviceTexelBufferAlignmentProperties are required in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT structure. The texelBufferAlignment feature is enabled if using a Vulkan 1.3 instance.

**Differences relative to VK_EXT_texture_compression_astc_hdr**

If the VK_EXT_texture_compression_astc_hdr extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. The textureCompressionASTC_HDR member of VkPhysicalDeviceVulkan13Features indicates whether a Vulkan 1.3 implementation supports these formats.

**Differences relative to VK_EXT_ycbcr_2plane_444_formats**

If the VK_EXT_ycbcr_2plane_444_formats extension is not supported, support for all formats defined by it are optional in Vulkan 1.3. There are no members in the VkPhysicalDeviceVulkan13Features structure corresponding to the VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT structure.

**Additional Vulkan 1.3 Feature Support**

In addition to the promoted extensions described above, Vulkan 1.3 added required support for:

- SPIR-V version 1.6
SPIR-V 1.6 deprecates (but does not remove) the WorkgroupSize decoration.

- The bufferDeviceAddress feature which indicates support for accessing memory in shaders as storage buffers via vkGetBufferDeviceAddress.
- The vulkanMemoryModel and vulkanMemoryModelDeviceScope features, which indicate support for the corresponding Vulkan Memory Model capabilities.
- The maxInlineUniformTotalSize limit is added to provide the total size of all inline uniform block bindings in a pipeline layout.

New Macros

- VK_API_VERSION_1_3

3786
Version 1.2

Vulkan Version 1.2 promoted a number of key extensions into the core API:

- VK_KHR_8bit_storage
- VK_KHR_buffer_device_address
- VK_KHR_create_renderpass2
- VK_KHR_depth_stencil_resolve
- VK_KHR_draw_indirect_count
- VK_KHR_driver_properties
- VK_KHR_image_format_list
- VK_KHR_imageless_framebuffer
- VK_KHR_sampler_mirror_clamp_to_edge
- VK_KHR_separate_depth_stencil_layouts
- VK_KHR_shader_atomic_int64
- VK_KHR_shader_float16_int8
- VK_KHR_shader_float_controls
- VK_KHR_shader_subgroup_extended_types
- VK_KHR_spirv_1_4
- VK_KHR_timeline_semaphore
• VK_KHR_uniform_buffer_standard_layout
• VK_KHR_vulkan_memory_model
• VK_EXT_descriptor_indexing
• VK_EXT_host_query_reset
• VK_EXT_sampler_filter_minmax
• VK_EXT_scalar_block_layout
• VK_EXT_separate_stencil_usage
• VK_EXT_shader_viewport_index_layer

All differences in behavior between these extensions and the corresponding Vulkan 1.2 functionality are summarized below.

**Differences relative to VK_KHR_8bit_storage**

If the VK_KHR_8bit_storage extension is not supported, support for the SPIR-V storageBuffer8BitAccess capability in shader modules is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::storageBuffer8BitAccess when queried via vkGetPhysicalDeviceFeatures2.

**Differences relative to VK_KHR_draw_indirect_count**

If the VK_KHR_draw_indirect_count extension is not supported, support for the entry points vkCmdDrawIndirectCount and vkCmdDrawIndexedIndirectCount is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::drawIndirectCount when queried via vkGetPhysicalDeviceFeatures2.

**Differences relative to VK_KHR_sampler_mirror_clamp_to_edge**

If the VK_KHR_sampler_mirror_clamp_to_edge extension is not supported, support for the VkSamplerAddressMode VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::samplerMirrorClampToEdge when queried via vkGetPhysicalDeviceFeatures2.

**Differences relative to VK_EXT_descriptor_indexing**

If the VK_EXT_descriptor_indexing extension is not supported, support for the descriptorIndexing feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::descriptorIndexing when queried via vkGetPhysicalDeviceFeatures2.

**Differences relative to VK_EXT_scalar_block_layout**

If the VK_EXT_scalar_block_layout extension is not supported, support for the scalarBlockLayout feature is optional. Support for this feature is defined by VkPhysicalDeviceVulkan12Features::scalarBlockLayout when queried via vkGetPhysicalDeviceFeatures2.
Differences relative to **VK_EXT_shader_viewport_index_layer**

The `ShaderViewportIndexLayerEXT` SPIR-V capability was replaced with the `ShaderViewportIndex` and `ShaderLayer` capabilities. Declaring both is equivalent to declaring `ShaderViewportIndexLayerEXT`. If the `VK_EXT_shader_viewport_index_layer` extension is not supported, support for the `ShaderViewportIndexLayerEXT` SPIR-V capability is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::shaderOutputViewportIndex` and ` VkPhysicalDeviceVulkan12Features::shaderOutputLayer` when queried via `vkGetPhysicalDeviceFeatures2`.

Differences relative to **VK_KHR_buffer_device_address**

If the `VK_KHR_buffer_device_address` extension is not supported, support for the `bufferDeviceAddress` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::bufferDeviceAddress` when queried via `vkGetPhysicalDeviceFeatures2`.

Differences relative to **VK_KHR_shader_atomic_int64**

If the `VK_KHR_shader_atomic_int64` extension is not supported, support for the `shaderBufferInt64Atomics` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::shaderBufferInt64Atomics` when queried via `vkGetPhysicalDeviceFeatures2`.

Differences relative to **VK_KHR_shader_float16_int8**

If the `VK_KHR_shader_float16_int8` extension is not supported, support for the `shaderFloat16` and `shaderInt8` features is optional. Support for these features are defined by `VkPhysicalDeviceVulkan12Features::shaderFloat16` and ` VkPhysicalDeviceVulkan12Features::shaderInt8` when queried via `vkGetPhysicalDeviceFeatures2`.

Differences relative to **VK_KHR_vulkan_memory_model**

If the `VK_KHR_vulkan_memory_model` extension is not supported, support for the `vulkanMemoryModel` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVulkan12Features::vulkanMemoryModel` when queried via `vkGetPhysicalDeviceFeatures2`.

**Additional Vulkan 1.2 Feature Support**

In addition to the promoted extensions described above, Vulkan 1.2 added support for:

- SPIR-V version 1.4.
- SPIR-V version 1.5.
- The `samplerMirrorClampToEdge` feature which indicates whether the implementation supports the `VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE` sampler address mode.
- The `ShaderNonUniform` capability in SPIR-V version 1.5.
- The `shaderOutputViewportIndex` feature which indicates that the `ShaderViewportIndex` capability can be used.
• The shaderOutputLayer feature which indicates that the ShaderLayer capability can be used.

• The subgroupBroadcastDynamicId feature which allows the “Id” operand of OpGroupNonUniformBroadcast to be dynamically uniform within a subgroup, and the “Index” operand of OpGroupNonUniformQuadBroadcast to be dynamically uniform within a derivative group, in shader modules of version 1.5 or higher.

• The drawIndirectCount feature which indicates whether the vkCmdDrawIndirectCount and vkCmdDrawIndexedIndirectCount functions can be used.

• The descriptorIndexing feature which indicates the implementation supports the minimum number of descriptor indexing features as defined in the Feature Requirements section.

• The samplerFilterMinmax feature which indicates whether the implementation supports the minimum number of image formats that support the VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_MINMAX_BIT feature bit as defined by the filterMinmaxSingleComponentFormats property minimum requirements.

• The framebufferIntegerColorSampleCounts limit which indicates the color sample counts that are supported for all framebuffer color attachments with integer formats.

**Version 1.1**

Vulkan Version 1.1 promoted a number of key extensions into the core API:

- VK_KHR_16bit_storage
- VK_KHR_bind_memory2
- VK_KHR_dedicated_allocation
- VK_KHR_descriptor_update_template
- VK_KHR_device_group
- VK_KHR_device_group_creation
- VK_KHR_external_fence
- VK_KHR_external_fence_capabilities
- VK_KHR_external_memory
- VK_KHR_external_memory_capabilities
All differences in behavior between these extensions and the corresponding Vulkan 1.1 functionality are summarized below.

**Differences relative to VK_KHR_16bit_storage**

If the VK_KHR_16bit_storage extension is not supported, support for the storageBuffer16BitAccess feature is optional. Support for this feature is defined by VkPhysicalDevice16BitStorageFeatures::storageBuffer16BitAccess or VkPhysicalDeviceVulkan11Features::storageBuffer16BitAccess when queried via vkGetPhysicalDeviceFeatures2.

**Differences relative to VK_KHR_sampler_ycbcr_conversion**

If the VK_KHR_sampler_ycbcr_conversion extension is not supported, support for the samplerYcbcrConversion feature is optional. Support for this feature is defined by VkPhysicalDeviceSamplerYcbcrConversionFeatures::samplerYcbcrConversion or VkPhysicalDeviceVulkan11Features::samplerYcbcrConversion when queried via vkGetPhysicalDeviceFeatures2.

**Differences relative to VK_KHR_shader_draw_parameters**

If the VK_KHR_shader_draw_parameters extension is not supported, support for the SPV_KHR_shader_draw_parameters SPIR-V extension is optional. Support for this feature is defined by VkPhysicalDeviceShaderDrawParametersFeatures::shaderDrawParameters or VkPhysicalDeviceVulkan11Features::shaderDrawParameters when queried via vkGetPhysicalDeviceFeatures2.
Differences relative to `VK_KHR_variable_pointers`

If the `VK_KHR_variable_pointers` extension is not supported, support for the `variablePointersStorageBuffer` feature is optional. Support for this feature is defined by `VkPhysicalDeviceVariablePointersFeatures::variablePointersStorageBuffer` or `VkPhysicalDeviceVulkan11Features::variablePointersStorageBuffer` when queried via `vkGetPhysicalDeviceFeatures2`.

Additional Vulkan 1.1 Feature Support

In addition to the promoted extensions described above, Vulkan 1.1 added support for:

- The group operations and subgroup scope.
- The protected memory feature.
- A new command to enumerate the instance version: `vkEnumerateInstanceVersion`.
- The `VkPhysicalDeviceShaderDrawParametersFeatures` feature query struct (where the `VK_KHR_shader_draw_parameters` extension did not have one).

New Macros

- `VK_API_VERSION_1_1`

New Object Types

- `VkDescriptorUpdateTemplate`
- `VkSamplerYcbcrConversion`

New Commands

- `vkBindBufferMemory2`
- `vkBindImageMemory2`
- `vkCmdDispatchBase`
- `vkCmdSetDeviceMask`
- `vkCreateDescriptorUpdateTemplate`
- `vkCreateSamplerYcbcrConversion`
- `vkDestroyDescriptorUpdateTemplate`
- `vkDestroySamplerYcbcrConversion`
- `vkEnumerateInstanceVersion`
- `vkEnumeratePhysicalDeviceGroups`
- `vkGetBufferMemoryRequirements2`
- `vkGetDescriptorSetLayoutSupport`
- `vkGetDeviceGroupPeerMemoryFeatures`
• vkGetDeviceQueue2
• vkGetImageMemoryRequirements2
• vkGetImageSparseMemoryRequirements2
• vkGetPhysicalDeviceExternalBufferProperties
• vkGetPhysicalDeviceExternalFenceProperties
• vkGetPhysicalDeviceExternalSemaphoreProperties
• vkGetPhysicalDeviceFeatures2
• vkGetPhysicalDeviceFormatProperties2
• vkGetPhysicalDeviceImageFormatProperties2
• vkGetPhysicalDeviceMemoryProperties2
• vkGetPhysicalDeviceProperties2
• vkGetPhysicalDeviceQueueFamilyProperties2
• vkGetPhysicalDeviceSparseImageFormatProperties2
• vkTrimCommandPool
• vkUpdateDescriptorSetWithTemplate

**New Structures**

• VkBindBufferMemoryInfo
• VkBindImageMemoryInfo
• VkBufferMemoryRequirementsInfo2
• VkDescriptorSetLayoutSupport
• VkDescriptorUpdateTemplateCreateInfo
• VkDescriptorUpdateTemplateEntry
• VkDeviceQueueInfo2
• VkExternalBufferProperties
• VkExternalFenceProperties
• VkExternalMemoryProperties
• VkExternalSemaphoreProperties
• VkFormatProperties2

  • `VkPhysicalDeviceIDProperties`
  • `VkPhysicalDeviceMaintenance3Properties`
  • `VkPhysicalDeviceMultiviewProperties`
  • `VkPhysicalDevicePointClippingProperties`
  • `VkPhysicalDeviceProtectedMemoryProperties`
  • `VkPhysicalDeviceSubgroupProperties`

• **Extending `VkPipelineTessellationStateCreateInfo`:**
  • `VkPipelineTessellationDomainOriginStateCreateInfo`

• **Extending `VkRenderPassBeginInfo`, `VkRenderingInfo`:**
  • `VkDeviceGroupRenderPassBeginInfo`

• **Extending `VkRenderPassCreateInfo`:**
  • `VkRenderPassInputAttachmentAspectCreateInfo`
  • `VkRenderPassMultiviewCreateInfo`

• **Extending `VkSamplerCreateInfo`, `VkImageViewCreateInfo`:**
  • `VkSamplerYcbcrConversionInfo`

• **Extending `VkSemaphoreCreateInfo`:**

• **Extending `VkSemaphoreCreateInfo`:**

• **Extending `VkSemaphoreCreateInfo`:**

3800
- VkExportSemaphoreCreateInfo

Extending VkSubmitInfo:
- VkDeviceGroupSubmitInfo
- VkProtectedSubmitInfo

New Enums

- VkChromaLocation
- VkDescriptorUpdateTemplateType
- VkDeviceQueueCreateFlagBits
- VkExternalFenceFeatureFlagBits
- VkExternalFenceHandleTypeFlagBits
- VkExternalMemoryFeatureFlagBits
- VkExternalMemoryHandleTypeFlagBits
- VkExternalSemaphoreFeatureFlagBits
- VkExternalSemaphoreHandleTypeFlagBits

Appendix E: Layers & Extensions (Informative)

Extensions to the Vulkan API can be defined by authors, groups of authors, and the Khronos Vulkan Working Group. In order not to compromise the readability of the Vulkan Specification, the core Specification does not incorporate most extensions. The online Registry of extensions is available at URL

https://registry.khronos.org/vulkan/

and allows generating versions of the Specification incorporating different extensions.

Authors creating extensions and layers must follow the mandatory procedures described in the Vulkan Documentation and Extensions document when creating extensions and layers.

The remainder of this appendix documents a set of extensions chosen when this document was built. Versions of the Specification published in the Registry include:

- Core API + mandatory extensions required of all Vulkan implementations.
- Core API + all registered and published Khronos (KHR) extensions.
- Core API + all registered and published extensions.

Extensions are grouped as Khronos KHR, multivendor EXT, and then alphabetically by author ID. Within each group, extensions are listed in alphabetical order by their name.

Extension Dependencies

Extensions which have dependencies on specific core versions or on other extensions will list such dependencies.

For core versions, the specified version must be supported at runtime. All extensions implicitly require support for Vulkan 1.0.

For a device extension, use of any device-level functionality defined by that extension requires that any extensions that extension depends on be enabled.

For any extension, use of any instance-level functionality defined by that extension requires only that any extensions that extension depends on be supported at runtime.

List of Current Extensions

Description

In order to be efficient, rendering techniques such as ray tracing need a quick way to identify which primitives may be intersected by a ray traversing the geometries. Acceleration structures are the most common way to represent the geometry spatially sorted, in order to quickly identify such potential intersections.

This extension adds new functionalities:

- Acceleration structure objects and build commands
- Structures to describe geometry inputs to acceleration structure builds
- Acceleration structure copy commands

New Object Types

- VkAccelerationStructureKHR

New Commands

- vkBuildAccelerationStructuresKHR
- vkCmdBuildAccelerationStructuresIndirectKHR
- vkCmdBuildAccelerationStructuresKHR
- vkCmdCopyAccelerationStructureKHR
- vkCmdCopyAccelerationStructureToMemoryKHR
- vkCmdCopyMemoryToAccelerationStructureKHR
- vkCmdWriteAccelerationStructuresPropertiesKHR
- vkCopyAccelerationStructureKHR
- vkCopyAccelerationStructureToMemoryKHR
- vkCopyMemoryToAccelerationStructureKHR
- vkCreateAccelerationStructureKHR
- vkDestroyAccelerationStructureKHR
- vkGetAccelerationStructureBuildSizesKHR
- vkGetAccelerationStructureDeviceAddressKHR
- vkGetDeviceAccelerationStructureCompatibilityKHR
- vkWriteAccelerationStructuresPropertiesKHR

New Structures

- VkAabbPositionsKHR
- VkAccelerationStructureBuildGeometryInfoKHR
- VkAccelerationStructureBuildRangeInfoKHR
- VkAccelerationStructureBuildSizesInfoKHR
- VkAccelerationStructureCreateInfoKHR
- VkAccelerationStructureDeviceAddressInfoKHR
- VkAccelerationStructureGeometryAabbsDataKHR
- VkAccelerationStructureGeometryInstancesDataKHR
- VkAccelerationStructureGeometryKHR
- VkAccelerationStructureGeometryTrianglesDataKHR
- VkAccelerationStructureInstanceKHR
- VkAccelerationStructureVersionInfoKHR
- VkCopyAccelerationStructureInfoKHR
- VkCopyAccelerationStructureToMemoryInfoKHR
- VkCopyMemoryToAccelerationStructureInfoKHR
- VkTransformMatrixKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceAccelerationStructureFeaturesKHR
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceAccelerationStructurePropertiesKHR
- Extending VkWriteDescriptorSet:
  - VkWriteDescriptorSetAccelerationStructureKHR

New Unions
- VkAccelerationStructureGeometryDataKHR
- VkDeviceOrHostAddressConstKHR
- VkDeviceOrHostAddressKHR

New Enums
- VkAccelerationStructureBuildTypeKHR
- VkAccelerationStructureCompatibilityKHR
- VkAccelerationStructureCreateFlagBitsKHR
- VkAccelerationStructureTypeKHR
- VkBuildAccelerationStructureFlagBitsKHR
- VkBuildAccelerationStructureModeKHR
- VkCopyAccelerationStructureModeKHR
- VkGeometryFlagBitsKHR
- VkGeometryInstanceFlagBitsKHR
New Bitmasks

- VkAccelerationStructureCreateFlagsKHR
- VkBuildAccelerationStructureFlagsKHR
- VkGeometryFlagsKHR
- VkGeometryInstanceFlagsKHR

New Enum Constants

- VK_KHR_ACCELERATION_STRUCTURE_EXTENSION_NAME
- VK_KHR_ACCELERATION_STRUCTURE_SPEC_VERSION

Extending VkAccessFlagBits:
  - VK_ACCESS_ACCELERATION_STRUCTURE_READ_BIT_KHR
  - VK_ACCESS_ACCELERATION_STRUCTURE_WRITE_BIT_KHR

Extending VkBufferUsageFlagBits:
  - VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR
  - VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR

Extending VkDebugReportObjectTypeEXT:
  - VK_DEBUG_REPORT_OBJECT_TYPE_ACCELERATION_STRUCTURE_KHR_EXT

Extending VkDescriptorType:
  - VK_DESCRIPTOR_TYPE_ACCELERATION_STRUCTURE_KHR

Extending VkFormatFeatureFlagBits:
  - VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR

Extending VkIndexType:
  - VK_INDEX_TYPE_NONE_KHR

Extending VkObjectType:
  - VK_OBJECT_TYPE_ACCELERATION_STRUCTURE_KHR

Extending VkPipelineStageFlagBits:
  - VK_PIPELINE_STAGE_ACCELERATION_STRUCTURE_BUILD_BIT_KHR

Extending VkQueryType:
  - VK_QUERY_TYPE_ACCELERATION_STRUCTURE_COMPACTED_SIZE_KHR
  - VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_SIZE_KHR

Extending VkStructureType:
  - VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_GEOMETRY_INFO_KHR
  - VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR
If `VK_KHR_format_feature_flags2` is supported:

- Extending `VkFormatFeatureFlagBits2`:
  - `VK_FORMAT_FEATURE_2_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR`

**Issues**

(1) How does this extension differ from `VK_NV_ray_tracing`?

**DISCUSSION:**

The following is a summary of the main functional differences between `VK_KHR_acceleration_structure` and `VK_NV_ray_tracing`:

- added acceleration structure serialization / deserialization
  (`VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR`,
   `VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR`,
   `vkCmdCopyAccelerationStructureToMemoryKHR`,
   `vkCmdCopyMemoryToAccelerationStructureKHR`)

- document inactive primitives and instances

- added `VkPhysicalDeviceAccelerationStructureFeaturesKHR` structure

- added indirect and batched acceleration structure builds
  (`vkCmdBuildAccelerationStructuresIndirectKHR`)

- added host acceleration structure commands

- reworked geometry structures so they could be better shared between device, host, and indirect builds

- explicitly made `VkAccelerationStructureKHR` use device addresses
• added acceleration structure compatibility check function
  (`vkGetDeviceAccelerationStructureCompatibilityKHR`)
• add parameter for requesting memory requirements for host and/or device build
• added format feature for acceleration structure build vertex formats
  (`VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR`)

(2) Can you give a more detailed comparison of differences and similarities between
`VK_NV_ray_tracing` and `VK_KHR_acceleration_structure`?

DISCUSSION:

The following is a more detailed comparison of which commands, structures, and enums are
aliased, changed, or removed.

• Aliased functionality — enums, structures, and commands that are considered equivalent:
  ◦ `VkGeometryTypeNV` ↔ `VkGeometryTypeKHR`
  ◦ `VkAccelerationStructureTypeNV` ↔ `VkAccelerationStructureTypeKHR`
  ◦ `VkCopyAccelerationStructureModeNV` ↔ `VkCopyAccelerationStructureModeKHR`
  ◦ `VkGeometryFlagsNV` ↔ `VkGeometryFlagsKHR`
  ◦ `VkGeometryFlagBitsNV` ↔ `VkGeometryFlagBitsKHR`
  ◦ `VkGeometryInstanceFlagsNV` ↔ `VkGeometryInstanceFlagsKHR`
  ◦ `VkGeometryInstanceFlagBitsNV` ↔ `VkGeometryInstanceFlagBitsKHR`
  ◦ `VkBuildAccelerationStructureFlagsNV` ↔ `VkBuildAccelerationStructureFlagsKHR`
  ◦ `VkBuildAccelerationStructureFlagBitsNV` ↔ `VkBuildAccelerationStructureFlagBitsKHR`
  ◦ `VkTransformMatrixNV` ↔ `VkTransformMatrixKHR` (added to `VK_NV_ray_tracing` for
descriptive purposes)
  ◦ `VkAabbPositionsNV` ↔ `VkAabbPositionsKHR` (added to `VK_NV_ray_tracing` for descriptive
purposes)
  ◦ `VkAccelerationStructureInstanceNV` ↔ `VkAccelerationStructureInstanceKHR` (added to
`VK_NV_ray_tracing` for descriptive purposes)

• Changed enums, structures, and commands:
  ◦ renamed `VK_GEOMETRY_INSTANCE_TRIANGLE_CULL_DISABLE_BIT_NV` →
    `VK_GEOMETRY_INSTANCE_TRIANGLE_FACING_CULL_DISABLE_BIT_KHR`
    in `VkGeometryInstanceFlagBitsKHR`
  ◦ `VkGeometryTrianglesNV` → `VkAccelerationStructureGeometryTrianglesDataKHR` (device or
    host address instead of buffer+offset)
  ◦ `VkGeometryAABBNV` → `VkAccelerationStructureGeometryAabbsDataKHR` (device or host
    address instead of buffer+offset)
  ◦ `VkGeometryDataNV` → `VkAccelerationStructureGeometryDataKHR` (union of
triangle/aabbs/instances)
  ◦ `VkGeometryNV` → `VkAccelerationStructureGeometryKHR` (changed type of geometry)
- **VkAccelerationStructureCreateInfoNV** → **VkAccelerationStructureCreateInfoKHR** (reshuffle geometry layout/information)

- **VkPhysicalDeviceRayTracingPropertiesNV** → **VkPhysicalDeviceAccelerationStructurePropertiesKHR** (for acceleration structure properties, renamed `maxTriangleCount` to `maxPrimitiveCount`, added per stage and update after bind limits) and **VkPhysicalDeviceRayTracingPipelinePropertiesKHR** (for ray tracing pipeline properties)

- **VkAccelerationStructureMemoryRequirementsInfoNV** (deleted - replaced by allocating on top of **VkBuffer**)

- **VkWriteDescriptorSetAccelerationStructureNV** → **VkWriteDescriptorSetAccelerationStructureKHR** (different acceleration structure type)

- **vkCreateAccelerationStructureNV** → **vkCreateAccelerationStructureKHR** (device address, different geometry layout/information)

- **vkGetAccelerationStructureMemoryRequirementsNV** (deleted - replaced by allocating on top of **VkBuffer**)

- **vkCmdBuildAccelerationStructureNV** → **vkCmdBuildAccelerationStructuresKHR** (params moved to structs, layout differences)

- **vkCmdCopyAccelerationStructureNV** → **vkCmdCopyAccelerationStructureKHR** (params to struct, extendable)

- **vkGetAccelerationStructureHandleNV** → **vkGetAccelerationStructureDeviceAddressKHR** (device address instead of handle)

- **VkAccelerationStructureMemoryRequirementsTypeNV** → size queries for scratch space moved to **vkGetAccelerationStructureBuildSizesKHR**

- **vkDestroyAccelerationStructureNV** → **vkDestroyAccelerationStructureKHR** (different acceleration structure types)

- **vkCmdWriteAccelerationStructuresPropertiesNV** → **vkCmdWriteAccelerationStructuresPropertiesKHR** (different acceleration structure types)

- **Added enums, structures and commands:**
  - **VK_GEOMETRY_TYPE_INSTANCES_KHR** to **VkGeometryTypeKHR** enum
  - **VK_COPY_ACCELERATION_STRUCTURE_MODE_SERIALIZE_KHR**, **VK_COPY_ACCELERATION_STRUCTURE_MODE_DESERIALIZE_KHR** to **VkCopyAccelerationStructureModeKHR** enum
  - **VkPhysicalDeviceAccelerationStructureFeaturesKHR** structure
  - **VkAccelerationStructureBuildTypeKHR** enum
  - **VkBuildAccelerationStructureModeKHR** enum
  - **VkDeviceOrHostAddressKHR** and **VkDeviceOrHostAddressConstKHR** unions
  - **VkAccelerationStructureBuildRangeInfoKHR** struct
  - **VkAccelerationStructureGeometryInstancesDataKHR** struct
  - **VkAccelerationStructureDeviceAddressInfoKHR** struct
• VkAccelerationStructureVersionInfoKHR struct
• VkStridedDeviceAddressRegionKHR struct
• VkCopyAccelerationStructureToMemoryInfoKHR struct
• VkCopyMemoryToAccelerationStructureInfoKHR struct
• VkCopyAccelerationStructureInfoKHR struct
• vkBuildAccelerationStructuresKHR command (host build)
• vkCopyAccelerationStructureKHR command (host copy)
• vkCopyAccelerationStructureToMemoryKHR (host serialize)
• vkCopyMemoryToAccelerationStructureKHR (host deserialize)
• vkWriteAccelerationStructuresPropertiesKHR (host properties)
• vkCmdCopyAccelerationStructureToMemoryKHR (device serialize)
• vkCmdCopyMemoryToAccelerationStructureKHR (device deserialize)
• vkGetDeviceAccelerationStructureCompatibilityKHR (serialization)

(3) What are the changes between the public provisional (VK_KHR_ray_tracing v8) release and the internal provisional (VK_KHR_ray_tracing v9) release?

• added geometryFlags to VkAccelerationStructureCreateGeometryTypeInfoKHR (later reworked to obsolete this)
• added minAccelerationStructureScratchOffsetAlignment property to VkPhysicalDeviceRayTracingPropertiesKHR
• fix naming and return enum from vkGetDeviceAccelerationStructureCompatibilityKHR
  ◦ renamed VkAccelerationStructureVersionKHR to VkAccelerationStructureVersionInfoKHR
  ◦ renamed Vk_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_KHR to VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_VERSION_INFO_KHR
  ◦ removed VK_ERROR_INCOMPATIBLE_VERSION_KHR
  ◦ added VkAccelerationStructureCompatibilityKHR enum
  ◦ remove return value from vkGetDeviceAccelerationStructureCompatibilityKHR and added return enum parameter
• Require Vulkan 1.1
• added creation time capture and replay flags
  ◦ added VkAccelerationStructureCreateFlagBitsKHR and VkAccelerationStructureCreateFlagsKHR
  ◦ renamed the flags member of VkAccelerationStructureCreateInfoKHR to buildFlags (later removed) and added the createFlags member
• change vkCmdBuildAccelerationStructuresIndirectKHR to use buffer device address for indirect parameter
• make VK_KHR_deferred_host_operations an interaction instead of a required extension (later went back on this)
• renamed `VkAccelerationStructureBuildOffsetInfoKHR` to `VkAccelerationStructureBuildRangeInfoKHR`
  ◦ renamed the `ppOffsetInfos` parameter of `vkCmdBuildAccelerationStructuresKHR` to `ppBuildRangeInfos`

• Re-unify geometry description between build and create
  ◦ remove `VkAccelerationStructureCreateGeometryTypeInfoKHR` and `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_GEOMETRY_TYPE_INFO_KHR`
  ◦ added `VkAccelerationStructureCreateSizeInfoKHR` structure (later removed)
  ◦ change type of the `pGeometryInfos` member of `VkAccelerationStructureCreateInfoKHR` from `VkAccelerationStructureCreateGeometryTypeInfoKHR` to `VkAccelerationStructureGeometryKHR` (later removed)
  ◦ added `pCreateSizeInfos` member to `VkAccelerationStructureCreateInfoKHR` (later removed)

• Fix `ppGeometries` ambiguity, add `pGeometries`
  ◦ remove `geometryArrayOfPointers` member of `VkAccelerationStructureBuildGeometryInfoKHR`
  ◦ disambiguate two meanings of `ppGeometries` by explicitly adding `pGeometries` to the `VkAccelerationStructureBuildGeometryInfoKHR` structure and require one of them be `NULL`

• added `nullDescriptor` support for acceleration structures

• changed the `update` member of `VkAccelerationStructureBuildGeometryInfoKHR` from a bool to the `mode` `VkBuildAccelerationStructureModeKHR` enum which allows future extensibility in update types

• Clarify deferred host ops for pipeline creation
  ◦ `VkDeferredOperationKHR` is now a top-level parameter for `vkBuildAccelerationStructuresKHR`, `vkCreateRayTracingPipelinesKHR`, `vkCopyAccelerationStructureToMemoryKHR`, `vkCopyAccelerationStructureKHR`, and `vkCopyMemoryToAccelerationStructureKHR`
  ◦ removed `VkDeferredOperationInfoKHR` structure
  ◦ change deferred host creation/return parameter behavior such that the implementation can modify such parameters until the deferred host operation completes
  ◦ `VK_KHR_deferred_host_operations` is required again again

• Change acceleration structure build to always be sized
  ◦ de-alias `VkAccelerationStructureMemoryRequirementsTypeNV` and `VkAccelerationStructureMemoryRequirementsTypeKHR` and remove `VkAccelerationStructureMemoryRequirementsTypeKHR`
  ◦ add `vkGetAccelerationStructureBuildSizesKHR` command and `VkAccelerationStructureBuildSizesInfoKHR` structure and `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_BUILD_SIZES_INFO_KHR` enum to query sizes for acceleration structures and scratch storage
  ◦ move size queries for scratch space to `vkGetAccelerationStructureBuildSizesKHR`
  ◦ remove `compactedSize`, `buildFlags`, `maxGeometryCount`, `pGeometryInfos`, `pCreateSizeInfos`
members of `VkAccelerationStructureCreateInfoKHR` and add the `size` member

- add `maxVertex` member to `VkAccelerationStructureGeometryTrianglesDataKHR` structure
- remove `VkAccelerationStructureCreateInfoKHR` structure

(4) What are the changes between the internal provisional (VK_KHR_ray_tracing v9) release and the final (VK_KHR_acceleration_structure v11) release?

- refactor VK_KHR_ray_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - `VK_KHR_acceleration_structure` (for acceleration structure operations)
  - `VK_KHR_ray_tracing_pipeline` (for ray tracing pipeline and shader stages)
  - `VK_KHR_ray_query` (for ray queries in existing shader stages)
- clarify buffer usage flags for ray tracing
  - `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` is left alone in `VK_NV_ray_tracing` (required on `scratch` and `instanceData`)
  - `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` is added as an alias of `VK_BUFFER_USAGE_RAY_TRACING_BIT_NV` in `VK_KHR_ray_tracing_pipeline` and is required on shader binding table buffers
  - `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_BUILD_INPUT_READ_ONLY_BIT_KHR` is added in `VK_KHR_acceleration_structure` for all vertex, index, transform, aabb, and instance buffer data referenced by device build commands
  - `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` is used for `scratchData`
- add `max primitive counts` (`ppMaxPrimitiveCounts`) to `vkCmdBuildAccelerationStructuresIndirectKHR`
- Allocate acceleration structures from `VkBuffers` and add a mode to constrain the device address
  - de-alias `VkBindAccelerationStructureMemoryInfoNV` and `vkBindAccelerationStructureMemoryNV`, and remove `VkBindAccelerationStructureMemoryInfoKHR`, `VkAccelerationStructureMemoryRequirementsInfoKHR`, and `vkGetAccelerationStructureMemoryRequirementsKHR`
  - acceleration structures now take a `VkBuffer` and offset at creation time for memory placement
  - add a new `VK_BUFFER_USAGE_ACCELERATION_STRUCTURE_STORAGE_BIT_KHR` buffer usage for such buffers
  - add a new `VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR` acceleration structure type for layering
- move `VK_GEOMETRY_TYPE_INSTANCES_KHR` to main enum instead of being added via extension
- make build commands more consistent - all now build multiple acceleration structures and are named pluraly (`vkCmdBuildAccelerationStructuresIndirectKHR`, `vkCmdBuildAccelerationStructuresKHR`, `vkbuiltAccelerationStructuresKHR`)
- add interactions with `VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT` for acceleration structures, including a new feature
(descriptorBindingAccelerationStructureUpdateAfterBind) and 3 new properties
(maxPerStageDescriptorAccelerationStructures,
maxPerStageDescriptorUpdateAfterBindAccelerationStructures,
maxDescriptorSetUpdateAfterBindAccelerationStructures)

- extension is no longer provisional
- define synchronization requirements for builds, traces, and copies
- define synchronization requirements for AS build inputs and indirect build buffer

(5) What is VK_ACCELERATION_STRUCTURE_TYPE_GENERIC_KHR for?

**RESOLVED:** It is primarily intended for API layering. In DXR, the acceleration structure is basically just a buffer in a special layout, and you do not know at creation time whether it will be used as a top or bottom level acceleration structure. We thus added a generic acceleration structure type whose type is unknown at creation time, but is specified at build time instead. Applications which are written directly for Vulkan should not use it.

**Version History**

- Revision 1, 2019-12-05 (Members of the Vulkan Ray Tracing TSG)
  - Internal revisions (forked from VK_NV_ray_tracing)
- Revision 2, 2019-12-20 (Daniel Koch, Eric Werness)
  - Add const version of DeviceOrHostAddress (!3515)
  - Add VU to clarify that only handles in the current pipeline are valid (!3518)
  - Restore some missing VUs and add in-place update language (#1902, !3522)
  - rename VkAccelerationStructureInstanceKHR member from accelerationStructure to accelerationStructureReference to better match its type (!3523)
  - Allow VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS for pipeline creation if shader group handles cannot be reused (!3523)
  - update documentation for the VK_ERROR_INVALID_OPAQUE_CAPTURE_ADDRESS error code and add missing documentation for new return codes from VK_KHR_deferred_host_operations (!3523)
  - list new query types for VK_KHR_ray_tracing (!3523)
  - Fix VU statements for VkAccelerationStructureGeometryKHR referring to correct union members and update to use more current wording (!3523)
- Revision 3, 2020-01-10 (Daniel Koch, Jon Leech, Christoph Kubisch)
  - Fix 'instance of' and 'that/which contains/defines' markup issues (!3528)
  - factor out VK_KHR_pipeline_library as stand-alone extension (!3540)
  - Resolve Vulkan-hpp issues (!3543)
    - add missing require for VkGeometryInstanceFlagsKHR
    - de-alias VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CREATE_INFO_NV since the KHR structure is no longer equivalent
• add len to pDataSize attribute for vkWriteAccelerationStructuresPropertiesKHR

• Revision 4, 2020-01-23 (Daniel Koch, Eric Werness)
  ◦ Improve vkWriteAccelerationStructuresPropertiesKHR, add return value and VUs (#1947)
  ◦ Clarify language to allow multiple raygen shaders (#1959)
  ◦ Various editorial feedback (!3556)
  ◦ Add language to help deal with looped self-intersecting fans (#1901)
  ◦ Change vkCmdTraceRays{,Indirect}KHR args to pointers (!3559)
  ◦ Add scratch address validation language (#1941, !3551)
  ◦ Fix definition and add hierarchy information for shader call scope (#1977, !3571)

• Revision 5, 2020-02-04 (Eric Werness, Jeff Bolz, Daniel Koch)
  ◦ remove vestigial accelerationStructureUUID (!3582)
  ◦ update definition of repack instructions and improve memory model interactions (#1910, #1913, !3584)
  ◦ Fix wrong sType for VkPhysicalDeviceRayTracingFeaturesKHR (#1988)
  ◦ Use provisional SPIR-V capabilities (#1987)
  ◦ require rayTraversalPrimitiveCulling if rayQuery is supported (#1927)
  ◦ Miss shaders do not have object parameters (!3592)
  ◦ Fix missing required types in XML (!3592)
  ◦ clarify matching conditions for update (!3592)
  ◦ add goal that host and device builds be similar (!3592)
  ◦ clarify that maxPrimitiveCount limit should apply to triangles and AABBs (!3592)
  ◦ Require alignment for instance arrayOfPointers (!3592)
  ◦ Zero is a valid value for instance flags (!3592)
  ◦ Add some alignment VUs that got lost in refactoring (!3592)
  ◦ Recommend TMin epsilon rather than culling (!3592)
  ◦ Get angle from dot product not cross product (!3592)
  ◦ Clarify that AH can access the payload and attributes (!3592)
  ◦ Match DXR behavior for inactive primitive definition (!3592)
  ◦ Use a more generic term than degenerate for inactive to avoid confusion (!3592)

• Revision 6, 2020-02-20 (Daniel Koch)
  ◦ fix some dangling NV references (#1996)
  ◦ rename VkCmdTraceRaysIndirectCommandKHR to VkTraceRaysIndirectCommandKHR (!3607)
  ◦ update contributor list (!3611)
  ◦ use uint64_t instead of VkAccelerationStructureReferenceKHR in
VkAccelerationStructureInstanceKHR (#2004)

- Revision 7, 2020-02-28 (Tobias Hector)
  - remove HitTKHR SPIR-V builtin (spirv/spirv-extensions#7)

- Revision 8, 2020-03-06 (Tobias Hector, Dae Kim, Daniel Koch, Jeff Bolz, Eric Werness)
  - explicitly state that Tmax is updated when new closest intersection is accepted (#2020,#3536)
  - Made references to min and max t values consistent (#3644)
  - finish enumerating differences relative to VK_NV_ray_tracing in issues (1) and (2) (#1974,#3642)
  - fix formatting in some math equations (#3642)
  - Restrict the Hit Kind operand of OpReportIntersectionKHR to 7-bits (spirv/spirv-extensions#8,#3646)
  - Say ray tracing 'should' be watertight (#2008,#3631)
  - Clarify memory requirements for ray tracing buffers (#2005,#3649)
  - Add callable size limits (#1997,#3652)

- Revision 9, 2020-04-15 (Eric Werness, Daniel Koch, Tobias Hector, Joshua Barczak)
  - Add geometry flags to acceleration structure creation (#3672)
  - add build scratch memory alignment (minAccelerationStructureScratchOffsetAlignment) (#2065,#3725)
  - fix naming and return enum from vkGetDeviceAccelerationStructureCompatibilityKHR (#2051,#3726)
  - require SPIR-V 1.4 (#2096,#3777)
  - added creation time capture/replay flags (#2104,#3774)
  - require Vulkan 1.1 (#2133,#3806)
  - use device addresses instead of VkBuffers for ray tracing commands (#2074,#3815)
  - add interactions with Vulkan 1.2 and VK_KHR_vulkan_memory_model (#2133,#3830)
  - make VK_KHR_pipeline_library an interaction instead of required (#2045,#2108,#3830)
  - make VK_KHR_deferred_host_operations an interaction instead of required (#2045,#3830)
  - removed maxCallableSize and added explicit stack size management for ray pipelines (#1997,#3817,#3772,#3844)
  - improved documentation for VkAccelerationStructureVersionInfoKHR (#2135,3835)
  - rename VkAccelerationStructureBuildOffsetInfoKHR to VkAccelerationStructureBuildRangeInfoKHR (#2058,#3754)
  - Re-unify geometry description between build and create (#3754)
  - Fix ppGeometries ambiguity, add pGeometries (#2032,#3811)
  - add interactions with VK_EXT_robustness2 and allow nullDescriptor support for acceleration structures (#1920,#3848)
  - added future extensibility for AS updates (#2114,#3849)
- Fix VU for dispatchrays and add a limit on the size of the full grid (#2160)!3851
- Add shaderGroupHandleAlignment property (#2180)!3875
- Clarify deferred host ops for pipeline creation (#2067)!3813
- Change acceleration structure build to always be sized (#2131,#2197,#2198,#3854,#3883,#3880)

Revision 10, 2020-07-03 (Mathieu Robart, Daniel Koch, Eric Werness, Tobias Hector)

- Decomposition of the specification, from VK_KHR_ray_tracing to VK_KHR_acceleration_structure (#1918,#3912)
- clarify buffer usage flags for ray tracing (#2181,#3939)
- add max primitive counts to build indirect command (#2233,#3944)
- Allocate acceleration structures from VkBuffers and add a mode to constrain the device address (#2131,#3936)
- Move VK_GEOMETRY_TYPE_INSTANCES_KHR to main enum (#2243,#3952)
- make build commands more consistent (#2247,#3958)
- add interactions with UPDATE_AFTER_BIND (#2128,#3986)
- correct and expand build command VUs (#4020)
- fix copy command VUs (#4018)
- added various alignment requirements (#2229,#3943)
- fix valid usage for arrays of geometryCount items (#2198,#4010)
- define what is allowed to change on RTAS updates and relevant VUs (#2177,#3961)

Revision 11, 2020-11-12 (Eric Werness, Josh Barczak, Daniel Koch, Tobias Hector)

- de-alias NV and KHR acceleration structure types and associated commands (#2271,#4035)
- specify alignment for host copy commands (#2273,#4037)
- document VK_FORMAT_FEATURE_ACCELERATION_STRUCTURE_VERTEX_BUFFER_BIT_KHR
- specify that acceleration structures are non-linear (#2289,#4068)
- add several missing VUs for strides, vertexFormat, and indexType (#2315,#4069)
- restore VUs for VkAccelerationStructureBuildGeometryInfoKHR (#2337,#4098)
- ban multi-instance memory for host operations (#2324,#4102)
- allow dstAccelerationStructure to be null for vkGetAccelerationStructureBuildSizesKHR (#2330,#4111)
- more build VU cleanup (#2138,#4130)
- specify host endianness for AS serialization (#2261,#4136)
- add invertible transform matrix VU (#1710,#4140)
- require geometryCount to be 1 for TLAS builds (#4145)
- improved validity conditions for build addresses (#4142)
- add single statement SPIR-V VUs, build limit VUs (#4158)
document limits for vertex and aabb strides (#2390, #4184)

specify that `VK_PIPELINE_STAGE ACCELERATION_STRUCTURE_BUILD_BIT_KHR` applies to AS copies (#2382, #4173)

define sync for AS build inputs and indirect buffer (#2407, #4208)

- Revision 12, 2021-08-06 (Samuel Bourasseau)
  
  - rename `VK_GEOMETRY_INSTANCE_TRIANGLE_FRONT_COUNTERCLOCKWISE_BIT_KHR` to `VK_GEOMETRY_INSTANCE_TRIANGLE_FLIP_FACING_BIT_KHR` (keep previous as alias).
  
  - Clarify description and add note.

- Revision 13, 2021-09-30 (Jon Leech)
  
  - Add interaction with `VK_KHR_format_feature_flags2` to `vk.xml`

Description

The `VK_KHR_android_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an `ANativeWindow`, Android's native surface type. The `ANativeWindow` represents the producer endpoint of any buffer queue, regardless of consumer endpoint. Common consumer endpoints for `ANativeWindows` are the system window compositor, video encoders, and application-specific compositors importing the images through a `SurfaceTexture`.

New Base Types

- `ANativeWindow`

New Commands

- `vkCreateAndroidSurfaceKHR`

New Structures

- `VkAndroidSurfaceCreateInfoKHR`

New Bitmasks

- `VkAndroidSurfaceCreateFlagsKHR`

New Enum Constants

- `VK_KHR_ANDROID_SURFACE_EXTENSION_NAME`
• VK_KHR_ANDROID_SURFACE_SPEC_VERSION

• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_ANDROID_SURFACE_CREATE_INFO_KHR

Issues

1) Does Android need a way to query for compatibility between a particular physical device (and queue family?) and a specific Android display?

RESOLVED: No. Currently on Android, any physical device is expected to be able to present to the system compositor, and all queue families must support the necessary image layout transitions and synchronization operations.

Version History

• Revision 1, 2015-09-23 (Jesse Hall)
  ◦ Initial draft.

• Revision 2, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_android_surface to VK_KHR_android_surface.

• Revision 3, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to surface creation function.

• Revision 4, 2015-11-10 (Jesse Hall)
  ◦ Removed VK_ERROR_INVALID_ANDROID_WINDOW_KHR.

• Revision 5, 2015-11-28 (Daniel Rakos)
  ◦ Updated the surface create function to take a pCreateInfo structure.

• Revision 6, 2016-01-14 (James Jones)
  ◦ Moved VK_ERROR_NATIVE_WINDOW_IN_USE_KHR from the VK_KHR_android_surface to the VK_KHR_surface extension.

Interactions and External Dependencies
• This extension requires SPV_KHR_cooperative_matrix
• This extension provides API support for GL_KHR_cooperative_matrix

Contributors
• Jeff Bolz, NVIDIA
• Markus Tavenrath, NVIDIA
• Daniel Koch, NVIDIA
• Kevin Petit, Arm Ltd.
• Boris Zanin, AMD

Description
This extension adds support for using cooperative matrix types in SPIR-V. Cooperative matrix types are medium-sized matrices that are primarily supported in compute shaders, where the storage for the matrix is spread across all invocations in some scope (usually a subgroup) and those invocations cooperate to efficiently perform matrix multiplies.

Cooperative matrix types are defined by the SPV_KHR_cooperative_matrix SPIR-V extension and can be used with the GL_KHR_cooperative_matrix GLSL extension.

This extension includes support for enumerating the matrix types and dimensions that are supported by the implementation.

New Commands

Description
The **VK_KHR_deferred_host_operations** extension defines the infrastructure and usage patterns for deferrable commands, but does not specify any commands as deferrable. This is left to additional dependent extensions. Commands **must** not be deferred unless the deferral is specifically allowed by another extension which depends on **VK_KHR_deferred_host_operations**.

New Object Types
• *VkDeferredOperationKHR*

New Commands
• *vkCreateDeferredOperationKHR*
• *vkDeferredOperationJoinKHR*
• *vkDestroyDeferredOperationKHR*
• vkGetDeferredOperationMaxConcurrencyKHR
• vkGetDeferredOperationResultKHR

New Enum Constants

• VK_KHR_DEFERRED_HOST_OPERATIONS_EXTENSION_NAME
• VK_KHR_DEFERRED_HOST_OPERATIONS_SPEC_VERSION

Extending VkObjectType:
• VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR

Extending VkResult:
• VK_OPERATION_DEFERRED_KHR
• VK_OPERATION_NOT_DEFERRED_KHR
• VK_THREAD_DONE_KHR
• VK_THREAD_IDLE_KHR

Code Examples

The following examples will illustrate the concept of deferrable operations using a hypothetical example. The command `vkDoSomethingExpensive` denotes a deferrable command.

The following example illustrates how a vulkan application might request deferral of an expensive operation:

```cpp
// create a deferred operation
VkDeferredOperationKHR hOp;
VkResult result = vkCreateDeferredOperationKHR(device, pCallbacks, &hOp);
assert(result == VK_SUCCESS);

result = vkDoSomethingExpensive(device, hOp, ...);
assert(result == VK_OPERATION_DEFERRED_KHR);

// operation was deferred. Execute it asynchronously
std::async::launch(
    [ hOp ]()
    {
        vkDeferredOperationJoinKHR(device, hOp);

        result = vkGetDeferredOperationResultKHR(device, hOp);

        // deferred operation is now complete. 'result' indicates success or failure

        vkDestroyDeferredOperationKHR(device, hOp, pCallbacks);
    }
);```

3850
The following example illustrates extracting concurrency from a single deferred operation:

```cpp
// create a deferred operation
VkDeferredOperationKHR hOp;
VkResult result = vkCreateDeferredOperationKHR(device, pCallbacks, &hOp);
assert(result == VK_SUCCESS);

result = vkDoSomethingExpensive(device, hOp, ...);
assert(result == VK_OPERATION_DEFERRED_KHR);

// Query the maximum amount of concurrency and clamp to the desired maximum
uint32_t numLaunches = std::min(vkGetDeferredOperationMaxConcurrencyKHR(device, hOp), maxThreads);

std::vector<std::future<void>> joins;
for (uint32_t i = 0; i < numLaunches; i++) {
    joins.emplace_back(std::async::launch(
        [hOp]() {
        vkDeferredOperationJoinKHR(device, hOp);
            // in a job system, a return of VK_THREAD_IDLE_KHR should queue
            another
                // job, but it is not functionally required
        });
    })
}

for (auto &f : joins) {
    f.get();
}

result = vkGetDeferredOperationResultKHR(device, hOp);

// deferred operation is now complete. 'result' indicates success or failure
vkDestroyDeferredOperationKHR(device, hOp, pCallbacks);
```

The following example shows a subroutine which guarantees completion of a deferred operation, in the presence of multiple worker threads, and returns the result of the operation.

```cpp
VkResult FinishDeferredOperation(VkDeferredOperationKHR hOp) {
    // Attempt to join the operation until the implementation indicates that we should stop
    VkResult result = vkDeferredOperationJoinKHR(device, hOp);
    while (result == VK_THREAD_IDLE_KHR) {
        
    }
}
```
std::this_thread::yield();
result = vkDeferredOperationJoinKHR(device, hOp);
}

switch( result )
{
  case VK_SUCCESS:
  {
    // deferred operation has finished. Query its result
    result = vkGetDeferredOperationResultKHR(device, hOp);
  }
  break;

  case VK_THREAD_DONE_KHR:
  {
    // deferred operation is being wrapped up by another thread
    // wait for that thread to finish
    do
    {
      std::this_thread::yield();
      result = vkGetDeferredOperationResultKHR(device, hOp);
    } while( result == VK_NOT_READY );
  }
  break;

  default:
  assert(false); // other conditions are illegal.
  break;
}

return result;
}

Issues

1. Should this extension have a VkPhysicalDevice*FeaturesKHR structure?

RESOLVED: No. This extension does not add any functionality on its own and requires a dependent extension to actually enable functionality and thus there is no value in adding a feature structure. If necessary, any dependent extension could add a feature boolean if it wanted to indicate that it is adding optional deferral support.

Version History

• Revision 1, 2019-12-05 (Josh Barczak, Daniel Koch)
  ◦ Initial draft.
• Revision 2, 2020-03-06 (Daniel Koch, Tobias Hector)
  ◦ Add missing VK_OBJECT_TYPE_DEFERRED_OPERATION_KHR enum
• fix sample code
• Clarified deferred operation parameter lifetimes (#2018,!3647)

• Revision 3, 2020-05-15 (Josh Barczak)
  ◦ Clarify behavior of vkGetDeferredOperationMaxConcurrencyKHR, allowing it to return 0 if
    the operation is complete (#2036,!3850)

• Revision 4, 2020-11-12 (Tobias Hector, Daniel Koch)
  ◦ Remove VkDeferredOperationInfoKHR and change return value semantics when deferred
    host operations are in use (#2067,3813)
  ◦ clarify return value of vkGetDeferredOperationResultKHR (#2339,!4110)

Description
This extension provides the API to enumerate displays and available modes on a given device.

New Object Types
- VkDisplayKHR
- VkDisplayModeKHR

New Commands
- vkCreateDisplayModeKHR
- vkCreateDisplayPlaneSurfaceKHR
- vkGetDisplayModePropertiesKHR
- vkGetDisplayPlaneCapabilitiesKHR
- vkGetDisplayPlaneSupportedDisplaysKHR
- vkGetPhysicalDeviceDisplayPlanePropertiesKHR
- vkGetPhysicalDeviceDisplayPropertiesKHR

New Structures
- VkDisplayModeCreateInfoKHR
- VkDisplayModeParametersKHR
- VkDisplayModePropertiesKHR
- VkDisplayPlaneCapabilitiesKHR
- VkDisplayPlanePropertiesKHR
- VkDisplayPropertiesKHR
- VkDisplaySurfaceCreateInfoKHR

New Enums
- VkDisplayPlaneAlphaFlagBitsKHR

New Bitmasks
- VkDisplayModeCreateFlagsKHR
- VkDisplayPlaneAlphaFlagsKHR
- VkDisplaySurfaceCreateFlagsKHR
- VkSurfaceTransformFlagsKHR
New Enum Constants

- VK_KHR_DISPLAY_EXTENSION_NAME
- VK_KHR_DISPLAY_SPEC_VERSION

Extending VkObjectType:
- VK_OBJECT_TYPE_DISPLAY_KHR
- VK_OBJECT_TYPE_DISPLAY_MODE_KHR

Extending VkStructureType:
- VK_STRUCTURE_TYPE_DISPLAY_MODE_CREATE_INFO_KHR
- VK_STRUCTURE_TYPE_DISPLAY_SURFACE_CREATE_INFO_KHR

Issues

1) Which properties of a mode should be fixed in the mode information vs. settable in some other function when setting the mode? E.g., do we need to double the size of the mode pool to include both stereo and non-stereo modes? YUV and RGB scanout even if they both take RGB input images? BGR vs. RGB input? etc.

PROPOSED RESOLUTION: Many modern displays support at most a handful of resolutions and timings natively. Other “modes” are expected to be supported using scaling hardware on the display engine or GPU. Other properties, such as rotation and mirroring should not require duplicating hardware modes just to express all combinations. Further, these properties may be implemented on a per-display or per-overlay granularity.

To avoid the exponential growth of modes as mutable properties are added, as was the case with EGLConfig/WGL pixel formats/GLXFBConfig, this specification should separate out hardware properties and configurable state into separate objects. Modes and overlay planes will express capabilities of the hardware, while a separate structure will allow applications to configure scaling, rotation, mirroring, color keys, LUT values, alpha masks, etc. for a given swapchain independent of the mode in use. Constraints on these settings will be established by properties of the immutable objects.

Note the resolution of this issue may affect issue 5 as well.

2) What properties of a display itself are useful?

PROPOSED RESOLUTION: This issue is too broad. It was meant to prompt general discussion, but resolving this issue amounts to completing this specification. All interesting properties should be included. The issue will remain as a placeholder since removing it would make it hard to parse existing discussion notes that refer to issues by number.

3) How are multiple overlay planes within a display or mode enumerated?

PROPOSED RESOLUTION: They are referred to by an index. Each display will report the number of overlay planes it contains.

4) Should swapchains be created relative to a mode or a display?
PROPOSED RESOLUTION: When using this extension, swapchains are created relative to a mode and a plane. The mode implies the display object the swapchain will present to. If the specified mode is not the display's current mode, the new mode will be applied when the first image is presented to the swapchain, and the default operating system mode, if any, will be restored when the swapchain is destroyed.

5) Should users query generic ranges from displays and construct their own modes explicitly using those constraints rather than querying a fixed set of modes (Most monitors only have one real “mode” these days, even though many support relatively arbitrary scaling, either on the monitor side or in the GPU display engine, making “modes” something of a relic/compatibility construct).

PROPOSED RESOLUTION: Expose both. Display information structures will expose a set of predefined modes, as well as any attributes necessary to construct a customized mode.

6) Is it fine if we return the display and display mode handles in the structure used to query their properties?

PROPOSED RESOLUTION: Yes.

7) Is there a possibility that not all displays of a device work with all of the present queues of a device? If yes, how do we determine which displays work with which present queues?

PROPOSED RESOLUTION: No known hardware has such limitations, but determining such limitations is supported automatically using the existing VK_KHR_surface and VK_KHR_swapchain query mechanisms.

8) Should all presentation need to be done relative to an overlay plane, or can a display mode + display be used alone to target an output?

PROPOSED RESOLUTION: Require specifying a plane explicitly.

9) Should displays have an associated window system display, such as an HDC or Display*?

PROPOSED RESOLUTION: No. Displays are independent of any windowing system in use on the system. Further, neither HDC nor Display* refer to a physical display object.

10) Are displays queried from a physical GPU or from a device instance?

PROPOSED RESOLUTION: Developers prefer to query modes directly from the physical GPU so they can use display information as an input to their device selection algorithms prior to device creation. This avoids the need to create placeholder device instances to enumerate displays.

This preference must be weighed against the extra initialization that must be done by driver vendors prior to device instance creation to support this usage.

11) Should displays and/or modes be dispatchable objects? If functions are to take displays, overlays, or modes as their first parameter, they must be dispatchable objects as defined in Khronos bug 13529. If they are not added to the list of dispatchable objects, functions operating on them must take some higher-level object as their first parameter. There is no performance case against making them dispatchable objects, but they would be the first extension objects to be dispatchable.
PROPOSED RESOLUTION: Do not make displays or modes dispatchable. They will dispatch based on their associated physical device.

12) Should hardware cursor capabilities be exposed?

PROPOSED RESOLUTION: Defer. This could be a separate extension on top of the base WSI specs.

if they are one physical display device to an end user, but may internally be implemented as two side-by-side displays using the same display engine (and sometimes cabling) resources as two physically separate display devices.

RESOLVED: Tiled displays will appear as a single display object in this API.

14) Should the raw EDID data be included in the display information?

RESOLVED: No. A future extension could be added which reports the EDID if necessary. This may be complicated by the outcome of issue 13.

15) Should min and max scaling factor capabilities of overlays be exposed?

RESOLVED: Yes. This is exposed indirectly by allowing applications to query the min/max position and extent of the source and destination regions from which image contents are fetched by the display engine when using a particular mode and overlay pair.

16) Should devices be able to expose planes that can be moved between displays? If so, how?

RESOLVED: Yes. Applications can determine which displays a given plane supports using `vkGetDisplayPlaneSupportedDisplaysKHR`.

17) Should there be a way to destroy display modes? If so, does it support destroying “built in” modes?

RESOLVED: Not in this extension. A future extension could add this functionality.

18) What should the lifetime of display and built-in display mode objects be?

RESOLVED: The lifetime of the instance. These objects cannot be destroyed. A future extension may be added to expose a way to destroy these objects and/or support display hotplug.

19) Should persistent mode for smart panels be enabled/disabled at swapchain creation time, or on a per-present basis.

RESOLVED: On a per-present basis.

Examples

Note

The example code for the `VK_KHR_display` and `VK_KHR_display_swapchain` extensions was removed from the appendix after revision 1.0.43. The display enumeration example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/...
Version History

- Revision 1, 2015-02-24 (James Jones)
  - Initial draft

- Revision 2, 2015-03-12 (Norbert Nopper)
  - Added overlay enumeration for a display.

- Revision 3, 2015-03-17 (Norbert Nopper)
  - Fixed typos and namings as discussed in Bugzilla.
  - Reordered and grouped functions.
  - Added functions to query count of display, mode and overlay.
  - Added native display handle, which may be needed on some platforms to create a native Window.

- Revision 4, 2015-03-18 (Norbert Nopper)
  - Removed primary and virtualPostion members (see comment of James Jones in Bugzilla).
  - Added native overlay handle to information structure.
  - Replaced , with ; in struct.

- Revision 6, 2015-03-18 (Daniel Rakos)
  - Added WSI extension suffix to all items.
  - Made the whole API more “Vulkanish”.
  - Replaced all functions with a single vkGetDisplayInfoKHR function to better match the rest of the API.
  - Made the display, display mode, and overlay objects be first class objects, not subclasses of VkBaseObject as they do not support the common functions anyways.
  - Renamed *Info structures to *Properties.
  - Removed overlayIndex field from VkOverlayProperties as there is an implicit index already as a result of moving to a “Vulkanish” API.
  - Displays are not get through device, but through physical GPU to match the rest of the Vulkan API. Also this is something ISVs explicitly requested.
  - Added issue (6) and (7).

- Revision 7, 2015-03-25 (James Jones)
  - Added an issues section
  - Added rotation and mirroring flags

- Revision 8, 2015-03-25 (James Jones)
  - Combined the duplicate issues sections introduced in last change.
  - Added proposed resolutions to several issues.
• Revision 9, 2015-04-01 (Daniel Rakos)
  ◦ Rebased extension against Vulkan 0.82.0

• Revision 10, 2015-04-01 (James Jones)
  ◦ Added issues (10) and (11).
  ◦ Added more straw-man issue resolutions, and cleaned up the proposed resolution for issue (4).
  ◦ Updated the rotation and mirroring enums to have proper bitmask semantics.

• Revision 11, 2015-04-15 (James Jones)
  ◦ Added proposed resolution for issues (1) and (2).
  ◦ Added issues (12), (13), (14), and (15)
  ◦ Removed pNativeHandle field from overlay structure.
  ◦ Fixed small compilation errors in example code.

• Revision 12, 2015-07-29 (James Jones)
  ◦ Rewrote the guts of the extension against the latest WSI swapchain specifications and the latest Vulkan API.
  ◦ Address overlay planes by their index rather than an object handle and refer to them as “planes” rather than “overlays” to make it slightly clearer that even a display with no “overlays” still has at least one base “plane” that images can be displayed on.
  ◦ Updated most of the issues.
  ◦ Added an “extension type” section to the specification header.
  ◦ Reused the VK_EXT_KHR_surface surface transform enumerations rather than redefining them here.
  ◦ Updated the example code to use the new semantics.

• Revision 13, 2015-08-21 (Ian Elliott)
  ◦ Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  ◦ Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.

• Revision 14, 2015-09-01 (James Jones)
  ◦ Restore single-field revision number.

• Revision 15, 2015-09-08 (James Jones)
  ◦ Added alpha flags enum.
  ◦ Added premultiplied alpha support.

• Revision 16, 2015-09-08 (James Jones)
  ◦ Added description section to the spec.
  ◦ Added issues 16 - 18.

• Revision 17, 2015-10-02 (James Jones)
Planes are now a property of the entire device rather than individual displays. This allows planes to be moved between multiple displays on devices that support it.

- Added a function to create a VkSurfaceKHR object describing a display plane and mode to align with the new per-platform surface creation conventions.
- Removed detailed mode timing data. It was agreed that the mode extents and refresh rate are sufficient for current use cases. Other information could be added back in as an extension if it is needed in the future.
- Added support for smart/persistent/buffered display devices.

- Revision 18, 2015-10-26 (Ian Elliott)
  - Renamed from VK_EXT_KHR_display to VK_KHR_display.

- Revision 19, 2015-11-02 (James Jones)
  - Updated example code to match revision 17 changes.

- Revision 20, 2015-11-03 (Daniel Rakos)
  - Added allocation callbacks to creation functions.

- Revision 21, 2015-11-10 (Jesse Hall)
  - Added VK_DISPLAY_PLANE_ALPHA_OPAQUE_BIT_KHR, and use VkDisplayPlaneAlphaFlagBitsKHR for VkDisplayPlanePropertiesKHR::alphaMode instead of VkDisplayPlaneAlphaFlagsKHR, since it only represents one mode.
  - Added reserved flags bitmask to VkDisplayPlanePropertiesKHR.
  - Use VkSurfaceTransformFlagBitsKHR instead of obsolete VkSurfaceTransformKHR.
  - Renamed vkGetDisplayPlaneSupportedDisplaysKHR parameters for clarity.

- Revision 22, 2015-12-18 (James Jones)
  - Added missing “planeIndex” parameter to vkGetDisplayPlaneSupportedDisplaysKHR()

- Revision 23, 2017-03-13 (James Jones)
  - Closed all remaining issues. The specification and implementations have been shipping with the proposed resolutions for some time now.
  - Removed the sample code and noted it has been integrated into the official Vulkan SDK cube demo.

Description
This extension provides an API to create a swapchain directly on a device's display without any underlying window system.

New Commands
• vkCreateSharedSwapchainsKHR

New Structures
• Extending VkPresentInfoKHR:
  ◦ VkDisplayPresentInfoKHR

New Enum Constants
• VK_KHR_DISPLAY_SWAPCHAIN_EXTENSION_NAME
• VK_KHR_DISPLAY_SWAPCHAIN_SPEC_VERSION
• Extending VkResult:
• VK_ERROR_INCOMPATIBLE_DISPLAY_KHR

• Extending VkStructureType:
  • VK_STRUCTURE_TYPE_DISPLAY_PRESENT_INFO_KHR

Issues

1) Should swapchains sharing images each hold a reference to the images, or should it be up to the application to destroy the swapchains and images in an order that avoids the need for reference counting?

**RESOLVED:** Take a reference. The lifetime of presentable images is already complex enough.

2) Should the `srcRect` and `dstRect` parameters be specified as part of the presentation command, or at swapchain creation time?

**RESOLVED:** As part of the presentation command. This allows moving and scaling the image on the screen without the need to respotify the mode or create a new swapchain and presentable images.

3) Should `srcRect` and `dstRect` be specified as rects, or separate offset/extent values?

**RESOLVED:** As rects. Specifying them separately might make it easier for hardware to expose support for one but not the other, but in such cases applications must just take care to obey the reported capabilities and not use non-zero offsets or extents that require scaling, as appropriate.

4) How can applications create multiple swapchains that use the same images?

**RESOLVED:** By calling `vkCreateSharedSwapchainsKHR`.

An earlier resolution used `vkCreateSwapchainKHR`, chaining multiple `VkSwapchainCreateInfoKHR` structures through `pNext`. In order to allow each swapchain to also allow other extension structs, a level of indirection was used: `VkSwapchainCreateInfoKHR::pNext` pointed to a different structure, which had both `sType` and `pNext` members for additional extensions, and also had a pointer to the next `VkSwapchainCreateInfoKHR` structure. The number of swapchains to be created could only be found by walking this linked list of alternating structures, and the `pSwapchains` out parameter was reinterpreted to be an array of `VkSwapchainKHR` handles.

Another option considered was a method to specify a “shared” swapchain when creating a new swapchain, such that groups of swapchains using the same images could be built up one at a time. This was deemed unusable because drivers need to know all of the displays an image will be used on when determining which internal formats and layouts to use for that image.

Examples

---

**Note**
The example code for the `VK_KHR_display` and `VK_KHR_display_swapchain` extensions was removed from the appendix after revision 1.0.43. The display swapchain creation example code was ported to the cube demo that is shipped with the official Khrnos SDK, and is being kept up-to-date in that location (see: [https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c](https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c)).
Version History

- Revision 1, 2015-07-29 (James Jones)
  - Initial draft
- Revision 2, 2015-08-21 (Ian Elliott)
  - Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  - Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.
- Revision 3, 2015-09-01 (James Jones)
  - Restore single-field revision number.
- Revision 4, 2015-09-08 (James Jones)
  - Allow creating multiple swapchains that share the same images using a single call to vkCreateSwapchainKHR().
- Revision 5, 2015-09-10 (Alon Or-bach)
  - Removed underscores from SWAP_CHAIN in two enums.
- Revision 6, 2015-10-02 (James Jones)
  - Added support for smart panels/buffered displays.
- Revision 7, 2015-10-26 (Ian Elliott)
  - Renamed from VK_EXT_KHR_display_swapchain to VK_KHR_display_swapchain.
- Revision 8, 2015-11-03 (Daniel Rakos)
  - Updated sample code based on the changes to VK_KHR_swapchain.
- Revision 9, 2015-11-10 (Jesse Hall)
  - Replaced VkDisplaySwapchainCreateInfoKHR with vkCreateSharedSwapchainsKHR, changing resolution of issue #4.
- Revision 10, 2017-03-13 (James Jones)
  - Closed all remaining issues. The specification and implementations have been shipping with the proposed resolutions for some time now.
  - Removed the sample code and noted it has been integrated into the official Vulkan SDK cube demo.

VK_KHR_external_fence_fd

Name String

VK_KHR_external_fence_fd

Extension Type

Device extension
An application using external memory may wish to synchronize access to that memory using fences. This extension enables an application to export fence payload to and import fence payload from POSIX file descriptors.

**New Commands**

- `vkGetFenceFdKHR`
- `vkImportFenceFdKHR`

**New Structures**

- `VkFenceGetFdInfoKHR`
New Enum Constants

- VK_KHR_EXTERNAL_FENCE_FD_EXTENSION_NAME
- VK_KHR_EXTERNAL_FENCE_FD_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_FENCE_GET_FD_INFO_KHR
  - VK_STRUCTURE_TYPE_IMPORT_FENCE_FD_INFO_KHR

Issues

This extension borrows concepts, semantics, and language from VK_KHR_external_semaphore_fd. That extension's issues apply equally to this extension.

Version History

Description

An application using external memory may wish to synchronize access to that memory using fences. This extension enables an application to export fence payload to and import fence payload from Windows handles.

New Commands

- `vkGetFenceWin32HandleKHR`
- `vkImportFenceWin32HandleKHR`

New Structures

- `VkFenceGetWin32HandleInfoKHR`
- `VkImportFenceWin32HandleInfoKHR`

Extending `VkFenceCreateInfo`:
- `VkExportFenceWin32HandleInfoKHR`

New Enum Constants

- `VK_KHR_EXTERNAL_FENCE_WIN32_EXTENSION_NAME`
- `VK_KHR_EXTERNAL_FENCE_WIN32_SPEC_VERSION`

Extending `VkStructureType`:
- `VK_STRUCTURE_TYPE_EXPORT_FENCE_WIN32_HANDLE_INFO_KHR`
- `VK_STRUCTURE_TYPE_FENCE_GET_WIN32_HANDLE_INFO_KHR`
- `VK_STRUCTURE_TYPE_IMPORT_FENCE_WIN32_HANDLE_INFO_KHR`

Issues

This extension borrows concepts, semantics, and language from `VK_KHR_external_semaphore_win32`. 
That extension’s issues apply equally to this extension.

1) Should D3D12 fence handle types be supported, like they are for semaphores?

**Resolved**: No. Doing so would require extending the fence signal and wait operations to provide values to signal / wait for, like VkD3D12FenceSubmitInfoKHR does. A D3D12 fence can be signaled by importing it into a VkSemaphore instead of a VkFence, and applications can check status or wait on the D3D12 fence using non-Vulkan APIs. The convenience of being able to do these operations on VkFence objects does not justify the extra API complexity.

Description

An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export POSIX file descriptor handles from Vulkan memory objects and to import Vulkan memory objects from POSIX file descriptor handles exported from other Vulkan memory objects or from similar resources in other APIs.

New Commands

- vkGetMemoryFdKHR
- vkGetMemoryFdPropertiesKHR

New Structures

- VkMemoryFdPropertiesKHR
- VkMemoryGetFdInfoKHR
- Extending VkMemoryAllocateInfo:
  - VkImportMemoryFdInfoKHR

New Enum Constants

- VK_KHR_EXTERNAL_MEMORY_FD_EXTENSION_NAME
- VK_KHR_EXTERNAL_MEMORY_FD_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_IMPORT_MEMORY_FD_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_FD_PROPERTIES_KHR
  - VK_STRUCTURE_TYPE_MEMORY_GET_FD_INFO_KHR

Issues

1) Does the application need to close the file descriptor returned by vkGetMemoryFdKHR?

**RESOLVED:** Yes, unless it is passed back in to a driver instance to import the memory. A successful get call transfers ownership of the file descriptor to the application, and a successful import transfers it back to the driver. Destroying the original memory object will not close the file descriptor or remove its reference to the underlying memory resource associated with it.

2) Do drivers ever need to expose multiple file descriptors per memory object?

**RESOLVED:** No. This would indicate there are actually multiple memory objects, rather than a
single memory object.

3) How should the valid size and memory type for POSIX file descriptor memory handles created outside of Vulkan be specified?

**RESOLVED:** The valid memory types are queried directly from the external handle. The size will be specified by future extensions that introduce such external memory handle types.

Description

An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export Windows handles from Vulkan memory objects and to import Vulkan memory objects from Windows handles exported from other Vulkan memory objects or from similar resources in other APIs.

New Commands

- vkGetMemoryWin32HandleKHR
- vkGetMemoryWin32HandlePropertiesKHR

New Structures

- VkMemoryGetWin32HandleInfoKHR
- VkMemoryWin32HandlePropertiesKHR
- Extending VkMemoryAllocateInfo:
  - VkExportMemoryWin32HandleInfoKHR
  - VkImportMemoryWin32HandleInfoKHR

New Enum Constants

- VK_KHR_EXTERNAL_MEMORY_WIN32_EXTENSION_NAME
- VK_KHR_EXTERNAL_MEMORY_WIN32_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_KHR
  - VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_GET_WIN32_HANDLE_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_WIN32_HANDLE_PROPERTIES_KHR

Issues

1) Do applications need to call CloseHandle() on the values returned from vkGetMemoryWin32HandleKHR when handleType is VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR?

RESOLVED: Yes, unless it is passed back in to another driver instance to import the object. A successful get call transfers ownership of the handle to the application. Destroying the memory object will not destroy the handle or the handle’s reference to the underlying memory resource.

2) Should the language regarding KMT/Windows 7 handles be moved to a separate extension so that it can be deprecated over time?
RESOLVED: No. Support for them can be deprecated by drivers if they choose, by no longer returning them in the supported handle types of the instance level queries.

3) How should the valid size and memory type for windows memory handles created outside of Vulkan be specified?

RESOLVED: The valid memory types are queried directly from the external handle. The size is determined by the associated image or buffer memory requirements for external handle types that require dedicated allocations, and by the size specified when creating the object from which the handle was exported for other external handle types.

Description

An application using external memory may wish to synchronize access to that memory using semaphores. This extension enables an application to export semaphore payload to and import semaphore payload from Windows handles.

New Commands

• vkGetSemaphoreWin32HandleKHR
• vkImportSemaphoreWin32HandleKHR
New Structures

• VkImportSemaphoreWin32HandleInfoKHR
• VkSemaphoreGetWin32HandleInfoKHR
• Extending VkSemaphoreCreateInfo:
  ◦ VkExportSemaphoreWin32HandleInfoKHR
• Extending VkSubmitInfo:
  ◦ VkD3D12FenceSubmitInfoKHR

New Enum Constants

• VK_KHR_EXTERNAL_SEMAPHORE_WIN32_EXTENSION_NAME
• VK_KHR_EXTERNAL_SEMAPHORE_WIN32_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_D3D12_FENCE_SUBMIT_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_EXPORT_SEMAPHORE_WIN32_HANDLE_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_IMPORT_SEMAPHORE_WIN32_HANDLE_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_SEMAPHORE_GET_WIN32_HANDLE_INFO_KHR

Issues

1) Do applications need to call CloseHandle() on the values returned from vkGetSemaphoreWin32HandleKHR when handleType is VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR?

RESOLVED: Yes, unless it is passed back in to another driver instance to import the object. A successful get call transfers ownership of the handle to the application. Destroying the semaphore object will not destroy the handle or the handle's reference to the underlying semaphore resource.

2) Should the language regarding KMT/Windows 7 handles be moved to a separate extension so that it can be deprecated over time?

RESOLVED: No. Support for them can be deprecated by drivers if they choose, by no longer returning them in the supported handle types of the instance level queries.

3) Should applications be allowed to specify additional object attributes for shared handles?

RESOLVED: Yes. Applications will be allowed to provide similar attributes to those they would to any other handle creation API.

4) How do applications communicate the desired fence values to use with D3D12_FENCE-based Vulkan semaphores?

RESOLVED: There are a couple of options. The values for the signaled and reset states could be communicated up front when creating the object and remain static for the life of the Vulkan semaphore, or they could be specified using auxiliary structures when submitting semaphore
signal and wait operations, similar to what is done with the keyed mutex extensions. The latter is more flexible and consistent with the keyed mutex usage, but the former is a much simpler API.

Since Vulkan tends to favor flexibility and consistency over simplicity, a new structure specifying D3D12 fence acquire and release values is added to the `vkQueueSubmit` function.

- Contributors to the VK_NV_fragment_shader_barycentric specification

Description

This extension is based on the VK_NV_fragment_shader_barycentric extension, and adds support for the following SPIR-V extension in Vulkan:

- SPV_KHR_fragment_shader_barycentric

The extension provides access to three additional fragment shader variable decorations in SPIR-V:

- PerVertexKHR, which indicates that a fragment shader input will not have interpolated values, but instead must be accessed with an extra array index that identifies one of the vertices of the primitive producing the fragment
- BaryCoordKHR, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using perspective interpolation
- BaryCoordNoPerspKHR, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using linear interpolation

When using GLSL source-based shader languages, the following variables from GL_EXT_fragment_shader_barycentric map to these SPIR-V built-in decorations:

- in vec3 gl_BaryCoordEXT; → BaryCoordKHR
- in vec3 gl_BaryCoordNoPerspEXT; → BaryCoordNoPerspKHR

GLSL variables declared using the pervertexEXT GLSL qualifier are expected to be decorated with PerVertexKHR in SPIR-V.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceFragmentShaderBarycentricFeaturesKHR
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceFragmentShaderBarycentricPropertiesKHR
New Enum Constants

- VK_KHR_FRAGMENT_SHADER_BARYCENTRIC_EXTENSION_NAME
- VK_KHR_FRAGMENT_SHADER_BARYCENTRIC_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_PROPERTIES_KHR

New Built-In Variables

- BaryCoordKHR
- BaryCoordNoPerspKHR

New SPIR-V Decorations

- PerVertexKHR

New SPIR-V Capabilities

- FragmentBarycentricKHR

Issues

1) What are the interactions with MSAA and how are BaryCoordKHR and BaryCoordNoPerspKHR interpolated?

**RESOLVED:** The inputs decorated with BaryCoordKHR or BaryCoordNoPerspKHR may also be decorated with the Centroid or Sample qualifiers to specify interpolation, like any other fragment shader input. If shaderSampleRateInterpolationFunctions is enabled, the extended instructions InterpolateAtCentroid, InterpolateAtOffset, and InterpolateAtSample from the GLSL.std.450 may also be used with inputs decorated with BaryCoordKHR or BaryCoordNoPerspKHR.

• Contributors to the VK_NV_shading_rate_image specification
Contributors to the VK_EXT_fragment_density_map specification

Description
This extension adds the ability to change the rate at which fragments are shaded. Rather than the usual single fragment invocation for each pixel covered by a primitive, multiple pixels can be shaded by a single fragment shader invocation.

Up to three methods are available to the application to change the fragment shading rate:

- **Pipeline Fragment Shading Rate**, which allows the specification of a rate per-draw.
- **Primitive Fragment Shading Rate**, which allows the specification of a rate per primitive, specified during shading.
- **Attachment Fragment Shading Rate**, which allows the specification of a rate per-region of the framebuffer, specified in a specialized image attachment.

Additionally, these rates can all be specified and combined in order to adjust the overall detail in the image at each point.

This functionality can be used to focus shading efforts where higher levels of detail are needed in some parts of a scene compared to others. This can be particularly useful in high resolution rendering, or for XR contexts.

This extension also adds support for the SPV_KHR_fragment_shading_rate extension which enables setting the primitive fragment shading rate, and allows querying the final shading rate from a fragment shader.

New Commands

- vkCmdSetFragmentShadingRateKHR
- vkGetPhysicalDeviceFragmentShadingRatesKHR

New Structures

- VkPhysicalDeviceFragmentShadingRateKHR
- Extending VkGraphicsPipelineCreateInfo:
  - VkPipelineFragmentShadingRateStateCreateInfoKHR

Description
This extension provides new queries for device display properties and capabilities that can be easily extended by other extensions, without introducing any further queries. This extension can be considered the VK_KHR_display equivalent of the VK_KHR_get_physical_device_properties2 extension.

New Commands
• vkGetDisplayModeProperties2KHR
• vkGetDisplayPlaneCapabilities2KHR
• vkGetPhysicalDeviceDisplayPlaneProperties2KHR
• vkGetPhysicalDeviceDisplayProperties2KHR
New Structures

- VkDisplayModeProperties2KHR
- VkDisplayPlaneCapabilities2KHR
- VkDisplayPlaneInfo2KHR
- VkDisplayPlaneProperties2KHR
- VkDisplayProperties2KHR

New Enum Constants

- VK_KHR_GET_DISPLAY_PROPERTIES_2_EXTENSION_NAME
- VK_KHR_GET_DISPLAY_PROPERTIES_2_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_DISPLAY_MODE_PROPERTIES_2_KHR
  - VK_STRUCTURE_TYPE_DISPLAY_PLANE_CAPABILITIES_2_KHR
  - VK_STRUCTURE_TYPE_DISPLAY_PLANE_INFO_2_KHR
  - VK_STRUCTURE_TYPE_DISPLAY_PLANE_PROPERTIES_2_KHR
  - VK_STRUCTURE_TYPE_DISPLAY_PROPERTIES_2_KHR

Issues

1) What should this extension be named?

RESOLVED: VK_KHR_get_display_properties2. Other alternatives:

- VK_KHR_display2
- One extension, combined with VK_KHR_surface_capabilites2.

2) Should extensible input structs be added for these new functions:

RESOLVED:

- vkGetPhysicalDeviceDisplayProperties2KHR: No. The only current input is a VkPhysicalDevice. Other inputs would not make sense.
- vkGetPhysicalDeviceDisplayPlaneProperties2KHR: No. The only current input is a VkPhysicalDevice. Other inputs would not make sense.
- vkGetDisplayModeProperties2KHR: No. The only current inputs are a VkPhysicalDevice and a VkDisplayModeKHR. Other inputs would not make sense.

3) Should additional display query functions be extended?

RESOLVED:

- vkGetDisplayPlaneSupportedDisplaysKHR: No. Extensions should instead extend vkGetDisplayPlaneCapabilitiesKHR().
**Version History**

**Description**

This extension provides new queries for device surface capabilities that can be easily extended by other extensions, without introducing any further queries. This extension can be considered the VK_KHR_surface equivalent of the VK_KHR_get_physical_device_properties2 extension.
New Commands

- vkGetPhysicalDeviceSurfaceCapabilities2KHR
- vkGetPhysicalDeviceSurfaceFormats2KHR

New Structures

- VkPhysicalDeviceSurfaceInfo2KHR
- VkSurfaceCapabilities2KHR
- VkSurfaceFormat2KHR

New Enum Constants

- VK_KHR_GET_SURFACE_CAPABILITIES_2_EXTENSION_NAME
- VK_KHR_GET_SURFACE_CAPABILITIES_2_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICALDEVICE_SURFACEINFO2_KHR
  - VK_STRUCTURE_TYPE_SURFACECAPABILITIES2_KHR
  - VK_STRUCTURE_TYPE_SURFACEFORMAT2_KHR

Issues

1) What should this extension be named?

RESOLVED: VK_KHR_get_surface_capabilities2. Other alternatives:

- VK_KHR_surface2
- One extension, combining a separate display-specific query extension.

2) Should additional WSI query functions be extended?

RESOLVED:

- vkGetPhysicalDeviceSurfaceCapabilitiesKHR: Yes. The need for this motivated the extension.
- vkGetPhysicalDeviceSurfaceSupportKHR: No. Currently only has boolean output. Extensions should instead extend vkGetPhysicalDeviceSurfaceCapabilities2KHR.
- vkGetPhysicalDeviceSurfaceFormatsKHR: Yes.
- vkGetPhysicalDeviceSurfacePresentModesKHR: No. Recent discussion concluded this introduced too much variability for applications to deal with. Extensions should instead extend vkGetPhysicalDeviceSurfaceCapabilities2KHR.
- vkGetPhysicalDeviceXlibPresentationSupportKHR: Not in this extension.
- vkGetPhysicalDeviceXcbPresentationSupportKHR: Not in this extension.
- vkGetPhysicalDeviceWaylandPresentationSupportKHR: Not in this extension.
• `vkGetPhysicalDeviceWin32PresentationSupportKHR`: Not in this extension.

2021-10-22

**Contributors**

• Tobias Hector, AMD
  • Contributors to `VK_EXT_global_priority`
  • Contributors to `VK_EXT_global_priority_query`

**Description**

In Vulkan, users can specify device-scope queue priorities. In some cases it may be useful to extend this concept to a system-wide scope. This device extension allows applications to query the global queue priorities supported by a queue family, and then set a priority when creating queues. The default queue priority is `VK_QUEUE_GLOBAL_PRIORITY_MEDIUM_EXT`. 
Implementations can report which global priority levels are treated differently by the implementation. It is intended primarily for use in system integration along with certain platform-specific priority enforcement rules.

The driver implementation will attempt to skew hardware resource allocation in favour of the higher-priority task. Therefore, higher-priority work may retain similar latency and throughput characteristics even if the system is congested with lower priority work.

The global priority level of a queue shall take precedence over the per-process queue priority (VkDeviceQueueCreateInfo::pQueuePriorities).

Abuse of this feature may result in starving the rest of the system from hardware resources. Therefore, the driver implementation may deny requests to acquire a priority above the default priority (VK_QUEUE_GLOBAL_PRIORITY_MEDIUM_EXT) if the caller does not have sufficient privileges. In this scenario VK_ERROR_NOT_PERMITTED_EXT is returned.

The driver implementation may fail the queue allocation request if resources required to complete the operation have been exhausted (either by the same process or a different process). In this scenario VK_ERROR_INITIALIZATION_FAILED is returned.

New Structures

- Extending VkDeviceQueueCreateInfo:
  - VkDeviceQueueGlobalPriorityCreateInfoKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceGlobalPriorityQueryFeaturesKHR
- Extending VkQueueFamilyProperties2:
  - VkQueueFamilyGlobalPriorityPropertiesKHR

New Enums

- VkQueueGlobalPriorityKHR

New Enum Constants

- VK_KHR_GLOBAL_PRIORITY_EXTENSION_NAME
- VK_KHR_GLOBAL_PRIORITY_SPEC_VERSION
- VK_MAX_GLOBAL_PRIORITY_SIZE_KHR
- Extending VkResult:
  - VK_ERROR_NOT_PERMITTED_KHR
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_DEVICE_QUEUE_GLOBAL_PRIORITY_CREATE_INFO_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES_KHR
  - VK_STRUCTURE_TYPE_QUEUE_FAMILY_GLOBAL_PRIORITY_PROPERTIES_KHR
Issues

1) Can we additionally query whether a caller is permitted to acquire a specific global queue priority in this extension?

**RESOLVED:** No. Whether a caller has enough privilege goes with the OS, and the Vulkan driver cannot really guarantee that the privilege will not change in between this query and the actual queue creation call.

2) If more than 1 queue using global priority is requested, is there a good way to know which queue is failing the device creation?

**RESOLVED:** No. There is not a good way at this moment, and it is also not quite actionable for the applications to know that because the information may not be accurate. Queue creation can fail because of runtime constraints like insufficient privilege or lack of resource, and the failure is not necessarily tied to that particular queue configuration requested.

`VK_KHR_swapchain`

**Contact**

- Ian Elliott [ianelliottus](mailto:ianelliottus)

Other Extension Metadata
Description

This device extension extends `vkQueuePresentKHR`, from the `VK_KHR_swapchain` extension, allowing an application to specify a list of rectangular, modified regions of each image to present. This should be used in situations where an application is only changing a small portion of the presentable images within a swapchain, since it enables the presentation engine to avoid wasting time presenting parts of the surface that have not changed.

This extension is leveraged from the `EGL_KHR_swap_buffers_with_damage` extension.

New Structures

- `VkPresentRegionKHR`
- `VkRectLayerKHR`
- Extending `VkPresentInfoKHR`:
  - `VkPresentRegionsKHR`

New Enum Constants

- `VK_KHR_INCREMENTAL_PRESENT_EXTENSION_NAME`
- `VK_KHR_INCREMENTAL_PRESENT_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PRESENT_REGIONS_KHR`
Issues

1) How should we handle stereo-3D swapchains? We need to add a layer for each rectangle. One approach is to create another struct containing the VkRect2D plus layer, and have VkPresentRegionsKHR point to an array of that struct. Another approach is to have two parallel arrays, pRectangles and pLayers, where pRectangles[i] and pLayers[i] must be used together. Which approach should we use, and if the array of a new structure, what should that be called?

RESOLVED: Create a new structure, which is a VkRect2D plus a layer, and will be called VkRectLayerKHR.

2) Where is the origin of the VkRectLayerKHR?

RESOLVED: The upper left corner of the presentable image(s) of the swapchain, per the definition of framebuffer coordinates.

3) Does the rectangular region, VkRectLayerKHR, specify pixels of the swapchain's image(s), or of the surface?

RESOLVED: Of the image(s). Some presentation engines may scale the pixels of a swapchain's image(s) to the size of the surface. The size of the swapchain's image(s) will be consistent, where the size of the surface may vary over time.

4) What if all of the rectangles for a given swapchain contain a width and/or height of zero?

RESOLVED: The application is indicating that no pixels changed since the last present. The presentation engine may use such a hint and not update any pixels for the swapchain. However, all other semantics of vkQueuePresentKHR must still be honored, including waiting for semaphores to signal.

5) When the swapchain is created with VkSwapchainCreateInfoKHR::preTransform set to a value other than VK_SURFACE_TRANSFORM_IDENTITY_BIT_KHR, should the rectangular region, VkRectLayerKHR, be transformed to align with the preTransform?

RESOLVED: No. The rectangular region in VkRectLayerKHR should not be transformed. As such, it may not align with the extents of the swapchain's image(s). It is the responsibility of the presentation engine to transform the rectangular region. This matches the behavior of the Android presentation engine, which set the precedent.

Extension and Version Dependencies

- VK_KHR_get_physical_device_properties2
  - or
- Version 1.1
Description

The `VK_KHR_performance_query` extension adds a mechanism to allow querying of performance counters for use in applications and by profiling tools.

Each queue family may expose counters that can be enabled on a queue of that family. We extend `VkQueryType` to add a new query type for performance queries, and chain a structure on `VkQueryPoolCreateInfo` to specify the performance queries to enable.

New Commands

- `vkAcquireProfilingLockKHR`
- `vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR`
New Structures

- VkAcquireProfilingLockInfoKHR
- VkPerformanceCounterDescriptionKHR
- VkPerformanceCounterKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDevicePerformanceQueryFeaturesKHR
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDevicePerformanceQueryPropertiesKHR
- Extending VkQueryPoolCreateInfo:
  - VkQueryPoolPerformanceCreateInfoKHR
- Extending VkSubmitInfo, VkSubmitInfo2:
  - VkPerformanceQuerySubmitInfoKHR

New Unions

- VkPerformanceCounterResultKHR

New Enums

- VkAcquireProfilingLockFlagBitsKHR
- VkPerformanceCounterDescriptionFlagBitsKHR
- VkPerformanceCounterScopeKHR
- VkPerformanceCounterStorageKHR
- VkPerformanceCounterUnitKHR

New Bitmasks

- VkAcquireProfilingLockFlagsKHR
- VkPerformanceCounterDescriptionFlagsKHR

New Enum Constants

- VK_KHR_PERFORMANCE_QUERY_EXTENSION_NAME
- VK_KHR_PERFORMANCE_QUERY_SPEC_VERSION
- Extending VkQueryType:
  - VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR
- Extending VkStructureType:
Issues

1) Should this extension include a mechanism to begin a query in command buffer A and end the query in command buffer B?

RESOLVED No - queries are tied to command buffer creation and thus have to be encapsulated within a single command buffer.

2) Should this extension include a mechanism to begin and end queries globally on the queue, not using the existing command buffer commands?

RESOLVED No - for the same reasoning as the resolution of 1).

3) Should this extension expose counters that require multiple passes?

RESOLVED Yes - users should re-submit a command buffer with the same commands in it multiple times, specifying the pass to count as the query parameter in VkPerformanceQuerySubmitInfoKHR.

4) How to handle counters across parallel workloads?

RESOLVED In the spirit of Vulkan, a counter description flag
VK_PERFORMANCE_COUNTER_DESCRIPTION_CONCURRENTLY_IMPACTED_BIT_KHR denotes that the accuracy of a counter result is affected by parallel workloads.

5) How to handle secondary command buffers?

RESOLVED Secondary command buffers inherit any counter pass index specified in the parent primary command buffer. Note: this is no longer an issue after change from issue 10 resolution.

6) What commands does the profiling lock have to be held for?

RESOLVED For any command buffer that is being queried with a performance query pool, the profiling lock must be held while that command buffer is in the recording, executable, or pending state.

7) Should we support vkCmdCopyQueryPoolResults?

RESOLVED Yes.

8) Should we allow performance queries to interact with multiview?
RESOLVED Yes, but the performance queries must be performed once for each pass per view.

9) Should a $queryCount > 1$ be usable for performance queries?

RESOLVED Yes. Some vendors will have costly performance counter query pool creation, and would rather if a certain set of counters were to be used multiple times that a $queryCount > 1$ can be used to amortize the instantiation cost.

10) Should we introduce an indirect mechanism to set the counter pass index?

RESOLVED Specify the counter pass index at submit time instead, to avoid requiring re-recording of command buffers when multiple counter passes are needed.

Examples

The following example shows how to find what performance counters a queue family supports, setup a query pool to record these performance counters, how to add the query pool to the command buffer to record information, and how to get the results from the query pool.

```c
// A previously created physical device
VkPhysicalDevice physicalDevice;

// One of the queue families our device supports
uint32_t queueFamilyIndex;

uint32_t counterCount;

// Get the count of counters supported
vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR(
    physicalDevice,
    queueFamilyIndex,
    &counterCount,
    NULL,
    NULL);

VkPerformanceCounterKHR* counters =
    malloc(sizeof(VkPerformanceCounterKHR) * counterCount);
VkPerformanceCounterDescriptionKHR* counterDescriptions =
    malloc(sizeof(VkPerformanceCounterDescriptionKHR) * counterCount);

// Get the counters supported
vkEnumeratePhysicalDeviceQueueFamilyPerformanceQueryCountersKHR(
    physicalDevice,
    queueFamilyIndex,
    &counterCount,
    counters,
    counterDescriptions);

// Try to enable the first 8 counters
uint32_t enabledCounters[8];
```
const uint32_t enabledCounterCount = min(counterCount, 8));

for (uint32_t i = 0; i < enabledCounterCount; i++) {
    enabledCounters[i] = i;
}

// A previously created device that had the performanceCounterQueryPools feature
// set to VK_TRUE
VkDevice device;

VkQueryPoolPerformanceCreateInfoKHR performanceQueryCreateInfo = {
    VK_STRUCTURE_TYPE_QUERY_POOL_PERFORMANCE_CREATE_INFO_KHR,
    NULL,

    // Specify the queue family that this performance query is performed on
    queueFamilyIndex,

    // The number of counters to enable
    enabledCounterCount,

    // The array of indices of counters to enable
    enabledCounters
};

// Get the number of passes our counters will require.
uint32_t numPasses;

vkGetPhysicalDeviceQueueFamilyPerformanceQueryPassesKHR(
    physicalDevice,
    &performanceQueryCreateInfo,
    &numPasses);

VkQueryPoolCreateInfo queryPoolCreateInfo = {
    VK_STRUCTURE_TYPE_QUERY_POOL_CREATE_INFO,
    &performanceQueryCreateInfo,
    0,

    // Using our new query type here
    VK_QUERY_TYPE_PERFORMANCE_QUERY_KHR,
    1,
    0
};

VkQueryPool queryPool;

VkResult result = vkCreateQueryPool(
    device,
&queryPoolCreateInfo,
    NULL,
    &queryPool);

assert(VK_SUCCESS == result);

// A queue from queueFamilyIndex
VkQueue queue;

// A command buffer we want to record counters on
VkCommandBuffer commandBuffer;

VkCommandBufferBeginInfo commandBufferBeginInfo = {
    VK_STRUCTURE_TYPE_COMMAND_BUFFER_BEGIN_INFO,
    NULL,
    0,
    NULL
};

VkAcquireProfilingLockInfoKHR lockInfo = {
    VK_STRUCTURE_TYPE_ACQUIRE_PROFILING_LOCK_INFO_KHR,
    NULL,
    0,
    UINT64_MAX // Wait forever for the lock
};

// Acquire the profiling lock before we record command buffers
// that will use performance queries
result = vkAcquireProfilingLockKHR(device, &lockInfo);

assert(VK_SUCCESS == result);

result = vkBeginCommandBuffer(commandBuffer, &commandBufferBeginInfo);

assert(VK_SUCCESS == result);

vkCmdResetQueryPool(
    commandBuffer,
    queryPool,
    0,
    1);

vkCmdBeginQuery(
    commandBuffer,
    queryPool,
    0,
    0);

// Perform the commands you want to get performance information on
// ...
// Perform a barrier to ensure all previous commands were complete before
// ending the query
vkCmdPipelineBarrier(commandBuffer,
    VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT,
    VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT,
    0,
    0,
    NULL,
    0,
    NULL,
    0,
    NULL);

vkCmdEndQuery(
    commandBuffer,
    queryPool,
    0);

result = vkEndCommandBuffer(commandBuffer);
assert(VK_SUCCESS == result);

Description

When a pipeline is created, its state and shaders are compiled into zero or more device-specific executables, which are used when executing commands against that pipeline. This extension adds a mechanism to query properties and statistics about the different executables produced by the pipeline compilation process. This is intended to be used by debugging and performance tools to allow them to provide more detailed information to the user. Certain compile time shader statistics provided through this extension may be useful to developers for debugging or performance analysis.
New Commands

- vkGetPipelineExecutableInternalRepresentationsKHR
- vkGetPipelineExecutablePropertiesKHR
- vkGetPipelineExecutableStatisticsKHR

New Structures

- VkPipelineExecutableInfoKHR
- VkPipelineExecutableInternalRepresentationKHR
- VkPipelineExecutablePropertiesKHR
- VkPipelineExecutableStatisticKHR
- VkPipelineInfoKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDevicePipelineExecutablePropertiesFeaturesKHR

New Unions

- VkPipelineExecutableStatisticValueKHR

New Enums

- VkPipelineExecutableStatisticFormatKHR

New Enum Constants

- VK_KHR_PIPELINE_EXECUTABLE_PROPERTIES_EXTENSION_NAME
- VK_KHR_PIPELINE_EXECUTABLE_PROPERTIES_SPEC_VERSION
- Extending VkPipelineCreateFlagBits:
  - VK_PIPELINE_CREATE_CAPTURE_INTERNAL_REPRESENTATIONS_BIT_KHR
  - VK_PIPELINE_CREATE_CAPTURE_STATISTICS_BIT_KHR
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_EXECUTABLE_PROPERTIES_FEATURES_KHR
  - VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INFO_KHR
  - VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_INTERNAL_REPRESENTATION_KHR
  - VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_PROPERTIES_KHR
  - VK_STRUCTURE_TYPE_PIPELINE_EXECUTABLE_STATISTIC_KHR
  - VK_STRUCTURE_TYPE_PIPELINE_INFO_KHR
Issues

1) What should we call the pieces of the pipeline which are produced by the compilation process and about which you can query properties and statistics?

**RESOLVED**: Call them “executables”. The name “binary” was used in early drafts of the extension but it was determined that “pipeline binary” could have a fairly broad meaning (such as a binary serialized form of an entire pipeline) and was too big of a namespace for the very specific needs of this extension.

Description

A pipeline library is a special pipeline that cannot be bound, instead it defines a set of shaders and shader groups which can be linked into other pipelines. This extension defines the infrastructure for pipeline libraries, but does not specify the creation or usage of pipeline libraries. This is left to additional dependent extensions.

New Structures

VK_KHR_portabilityEnumeration

Name String

VK_KHR_portabilityEnumeration

Extension Type

Instance extension

Registered Extension Number

395

Revision

1

Ratification Status

Ratified
Description

This extension allows applications to control whether devices that expose the `VK_KHR_portability_subset` extension are included in the results of physical device enumeration. Since devices which support the `VK_KHR_portability_subset` extension are not fully conformant Vulkan implementations, the Vulkan loader does not report those devices unless the application explicitly asks for them. This prevents applications which may not be aware of non-conformant devices from accidentally using them, as any device which supports the `VK_KHR_portability_subset` extension mandates that the extension must be enabled if that device is used.

This extension is implemented in the loader.

New Enum Constants

- `VK_KHR_PORTABILITY_ENUMERATION_EXTENSION_NAME`
- `VK_KHR_PORTABILITY_ENUMERATION_SPEC_VERSION`
- Extending `VkInstanceCreateFlagBits`:
  - `VK_INSTANCE_CREATE_ENUMERATE_PORTABILITY_BIT_KHR`

IP Status
No known IP claims.

Contributors
• Keith Packard, Valve
• Ian Elliott, Google
• Tobias Hector, AMD
• Daniel Stone, Collabora

Description
This device extension allows an application that uses the VK_KHR_swapchain extension to wait for present operations to complete. An application can use this to monitor and control the pacing of the application by managing the number of outstanding images yet to be presented.

New Commands
• vkWaitForPresentKHR

New Structures
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDevicePresentWaitFeaturesKHR

New Enum Constants
• VK_KHR_PRESENT_WAIT_EXTENSION_NAME
• VK_KHR_PRESENT_WAIT_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICALDEVICE_PRESENT_WAIT_FEATURES_KHR

Issues
1) When does the wait finish?

RESOLVED. The wait will finish when the present is visible to the user. There is no requirement for any precise timing relationship between the presentation of the image to the user, but implementations should signal the wait as close as possible to the presentation of the first pixel in the new image to the user.

2) Should this use fences or other existing synchronization mechanism.
RESOLVED. Because display and rendering are often implemented in separate drivers, this extension will provide a separate synchronization API.

3) Should this extension share present identification with other extensions?

RESOLVED. Yes. A new extension, VK_KHR_present_id, should be created to provide a shared structure for presentation identifiers.

4) What happens when presentations complete out of order wrt calls to vkQueuePresent? This could happen if the semaphores for the presentations were ready out of order.

OPTION A: Require that when a PresentId is set that the driver ensure that images are always presented in the order of calls to vkQueuePresent.

OPTION B: Finish both waits when the earliest present completes. This will complete the later present wait earlier than the actual presentation. This should be the easiest to implement as the driver need only track the largest present ID completed. This is also the ‘natural’ consequence of interpreting the existing vkWaitForPresentKHR specification.

OPTION C: Finish both waits when both have completed. This will complete the earlier presentation later than the actual presentation time. This is allowed by the current specification as there is no precise timing requirement for when the presentId value is updated. This requires slightly more complexity in the driver as it will need to track all outstanding presentId values.

Description

This extension allows descriptors to be written into the command buffer, while the implementation is responsible for managing their memory. Push descriptors may enable easier porting from older APIs and in some cases can be more efficient than writing descriptors into descriptor sets.

New Commands

• `vkCmdPushDescriptorSetKHR`

If `VK_KHR_descriptor_update_template` is supported:

• `vkCmdPushDescriptorSetWithTemplateKHR`

If Version 1.1 is supported:

• `vkCmdPushDescriptorSetWithTemplateKHR`

New Structures

• Extending `VkPhysicalDeviceProperties2`:
  ◦ `VkPhysicalDevicePushDescriptorPropertiesKHR`

New Enum Constants

• `VK_KHR_PUSH_DESCRIPTOR_EXTENSION_NAME`
• `VK_KHR_PUSH_DESCRIPTOR_SPEC_VERSION`
• Extending `VkDescriptorSetLayoutCreateFlagBits`:
  ◦ `VK_DESCRIPTOR_SET_LAYOUT_CREATE_PUSH_DESCRIPTOR_BIT_KHR`
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL DEVICE_PUSH_DESCRIPTOR_PROPERTIES_KHR

If VK_KHR_descriptor_update_template is supported:

• Extending VkDescriptorUpdateTemplateType:
  ◦ VK_DESCRIPTOR UPDATE TEMPLATE_TYPE_PUSH_DESCRIPTORSTYPES_KHR

If Version 1.1 is supported:

• Extending VkDescriptorUpdateTemplateType:
  ◦ VK_DESCRIPTOR_UPDATE_TEMPLATE_TYPE_PUSH_DESCRIPTORSTYPES_KHR

Version History

• Revision 1, 2016-10-15 (Jeff Bolz)

Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

Ray queries are available to all shader types, including graphics, compute and ray tracing pipelines. Ray queries are not able to launch additional shaders, instead returning traversal results to the calling shader.

This extension adds support for the following SPIR-V extension in Vulkan:

- `SPV_KHR_ray_query`

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRayQueryFeaturesKHR`

New Enum Constants

- `VK_KHR_RAY_QUERY_EXTENSION_NAME`
- `VK_KHR_RAY_QUERY_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_QUERY_FEATURES_KHR`
New SPIR-V Capabilities

- RayQueryKHR
- RayTraversalPrimitiveCullingKHR

Sample Code

Example of ray query in a GLSL shader, illustrating how to use ray queries to determine whether a given position (at ray origin) is in shadow or not, by tracing a ray towards the light, and checking for any intersections with geometry occluding the light.

```glsl
rayQueryEXT rq;
rayQueryInitializeEXT(rq, accStruct, gl_RayFlagsTerminateOnFirstHitEXT, cullMask, origin, tMin, direction, tMax);

// Traverse the acceleration structure and store information about the first intersection (if any)
rayQueryProceedEXT(rq);

if (rayQueryGetIntersectionTypeEXT(rq, true) == gl_RayQueryCommittedIntersectionNoneEXT) {
    // Not in shadow
}
```

Issues

(1) What are the changes between the public provisional (VK_KHR_ray_tracing v8) release and the final (VK_KHR_acceleration_structure v11 / VK_KHR_ray_query v1) release?

- refactor VK_KHR_ray_tracing into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - VK_KHR_acceleration_structure (for acceleration structure operations)
  - VK_KHR_ray_tracing_pipeline (for ray tracing pipeline and shader stages)
  - VK_KHR_ray_query (for ray queries in existing shader stages)
- Update SPIRV capabilities to use RayQueryKHR
- extension is no longer provisional

Version History

- Revision 1, 2020-11-12 (Mathieu Robart, Daniel Koch, Andrew Garrard)
  - Decomposition of the specification, from VK_KHR_ray_tracing to VK_KHR_ray_query (#1918,!3912)
  - update to use RayQueryKHR SPIR-V capability
  - add numerical limits for ray parameters (#2235,!3960)
- relax formula for ray intersection candidate determination (#2322,!4080)
- restrict traces to TLAS (#2239,!4141)
- require HitT to be in ray interval for OpRayQueryGenerateIntersectionKHR (#2359,!4146)
- add ray query shader stages for AS read bit (#2407,!4203)

**Interactions and External Dependencies**

- This extension requires SPV_KHR_ray_cull_mask
- This extension provides API support for GLSL_EXT_ray_cull_mask
- Interacts with VK_KHR_ray_tracing_pipeline
- Interacts with VK_KHR_synchronization2

**Contributors**

- Stu Smith, AMD
- Tobias Hector, AMD
- Marius Bjorge, Arm
- Tom Olson, Arm
Description

VK_KHR_ray_tracing_maintenance1 adds a collection of minor ray tracing features, none of which would warrant an entire extension of their own.

The new features are as follows:

- Adds support for the SPV_KHR_ray_cull_mask SPIR-V extension in Vulkan. This extension provides access to built-in CullMaskKHR shader variable which contains the value of the OpTrace* Cull Mask parameter. This new shader variable is accessible in the intersection, any-hit, closest-hit and miss shader stages.

- Adds support for a new pipeline stage and access mask built on top of VK_KHR_synchronization2:
  - VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR to specify execution of acceleration structure copy commands
  - VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR to specify read access to a shader binding table in any shader pipeline stage

- Adds two new acceleration structure query parameters:
  - VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR to query the acceleration structure size on the device timeline
  - VK_QUERY_TYPE_ACCELERATION_STRUCTURE.Serialization.Bottom_Level_Pointers_KHR to query the number of bottom level acceleration structure pointers for serialization

- Adds an optional new indirect ray tracing dispatch command, vkCmdTraceRaysIndirect2KHR, which sources the shader binding table parameters as well as the dispatch dimensions from the device. The rayTracingPipelineTraceRaysIndirect2 feature indicates whether this functionality is supported.

New Commands

If VK_KHR_ray_tracing_pipeline is supported:

- vkCmdTraceRaysIndirect2KHR
New Structures

• Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceRayTracingMaintenance1FeaturesKHR`

If `VK_KHR_ray_tracing_pipeline` is supported:

• `VkTraceRaysIndirectCommand2KHR`

New Enum Constants

• `VK_KHR_RAY TRACING_MAINTENANCE_1_EXTENSION_NAME`
• `VK_KHR_RAY TRACING_MAINTENANCE_1_SPEC_VERSION`

• Extending `VkQueryType`:
  ◦ `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SERIALIZATION_BOTTOM_LEVEL_POINTERS_KHR`
  ◦ `VK_QUERY_TYPE_ACCELERATION_STRUCTURE_SIZE_KHR`

• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_MAINTENANCE_1_FEATURES_KHR`

If `VK_KHR_synchronization2` is supported:

• Extending `VkPipelineStageFlagBits2`:
  ◦ `VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_COPY_BIT_KHR`

If `VK_KHR_synchronization2` and `VK_KHR_ray_tracing_pipeline` is supported:

• Extending `VkAccessFlagBits2`:
  ◦ `VK_ACCESS_2_SHADER_BINDING_TABLE_READ_BIT_KHR`

New Built-In Variables

• `CullMaskKHR`

New SPIR-V Capabilities

• `RayCullMaskKHR`

Issues

Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

To enable ray tracing, this extension adds a few different categories of new functionality:

- A new ray tracing pipeline type with new shader domains: ray generation, intersection, any-hit, closest hit, miss, and callable
- A shader binding indirection table to link shader groups with acceleration structure items
- Ray tracing commands which initiate the ray pipeline traversal and invocation of the various new shader domains depending on which traversal conditions are met

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_KHR_ray_tracing

New Commands

- vkCmdSetRayTracingPipelineStackSizeKHR
- vkCmdTraceRaysIndirectKHR
- vkCmdTraceRaysKHR
- vkCreateRayTracingPipelinesKHR
- vkGetRayTracingCaptureReplayShaderGroupHandlesKHR
- vkGetRayTracingShaderGroupHandlesKHR
- vkGetRayTracingShaderGroupStackSizeKHR

New Structures

- VkRayTracingPipelineCreateInfoKHR
- VkRayTracingPipelineInterfaceCreateInfoKHR
- VkRayTracingShaderGroupCreateInfoKHR
- VkStridedDeviceAddressRegionKHR
- VkTraceRaysIndirectCommandKHR

- (modified)PrimitiveId

New SPIR-V Capabilities

- RayTracingKHR
- RayTraversalPrimitiveCullingKHR

Issues

(1) How does this extension differ from VK_NV_ray_tracing?

DISCUSSION:

The following is a summary of the main functional differences between VK_KHR_ray_tracing_pipeline and VK_NV_ray_tracing:

- added support for indirect ray tracing (vkCmdTraceRaysIndirectKHR)
- uses SPV_KHR_ray_tracing instead of SPV_NV_ray_tracing
  - refer to KHR SPIR-V enums instead of NV SPIR-V enums (which are functionally equivalent and aliased to the same values).
• added RayGeometryIndexKHR built-in

• removed vkCompileDeferredNV compilation functionality and replaced with deferred host operations interactions for ray tracing

• added VkPhysicalDeviceRayTracingPipelineFeaturesKHR structure

• extended VkPhysicalDeviceRayTracingPipelinePropertiesKHR structure
  ◦ renamed maxRecursionDepth to maxRayRecursionDepth and it has a minimum of 1 instead of 31
  ◦ require shaderGroupHandleSize to be 32 bytes
  ◦ added maxRayDispatchInvocationCount, shaderGroupHandleAlignment and maxRayHitAttributeSize

• reworked geometry structures so they could be better shared between device, host, and indirect builds

• changed SBT parameters to a structure and added size (VkStridedDeviceAddressRegionKHR)

• add parameter for requesting memory requirements for host and/or device build

• added pipeline library support for ray tracing

• added watertightness guarantees

• added no-null-shader pipeline flags (VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_*,_SHADERS_BIT_KHR)

• added memory model interactions with ray tracing and define how subgroups work and can be repacked

(2) Can you give a more detailed comparison of differences and similarities between VK_NV_ray_tracing and VK_KHR_ray_tracing_pipeline?

DISCUSSION:

The following is a more detailed comparison of which commands, structures, and enums are aliased, changed, or removed.

• Aliased functionality — enums, structures, and commands that are considered equivalent:
  ◦ VkRayTracingShaderGroupTypeNV ↔ VkRayTracingShaderGroupTypeKHR
  ◦ vkGetRayTracingShaderGroupHandlesNV ↔ vkGetRayTracingShaderGroupHandlesKHR

• Changed enums, structures, and commands:
  ◦ VkRayTracingShaderGroupCreateInfoNV → VkRayTracingShaderGroupCreateInfoKHR (added pShaderGroupCaptureReplayHandle)
  ◦ VkRayTracingPipelineCreateInfoNV → VkRayTracingPipelineCreateInfoKHR (changed type of pgroups, added libraries, pLibraryInterface, and pDynamicState)
  ◦ VkPhysicalDeviceRayTracingPropertiesNV → VkPhysicalDeviceRayTracingPropertiesKHR (renamed maxTriangleCount to maxPrimitiveCount, added shaderGroupHandleCaptureReplaySize)
  ◦ vkCmdTraceRaysNV → vkCmdTraceRaysKHR (params to struct)
  ◦ vkCreateRayTracingPipelinesNV → vkCreateRayTracingPipelinesKHR (different struct, changed functionality)
• Added enums, structures and commands:
  ◦ VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_ANY_HIT_SHADERS_BIT_KHR
  ◦ VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_CLOSEST_HIT_SHADERS_BIT_KHR,
  ◦ VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_MISS_SHADERS_BIT_KHR,
  ◦ VK_PIPELINE_CREATE_RAY_TRACING_NO_NULL_INTERSECTION_SHADERS_BIT_KHR,
  ◦ VK_PIPELINE_CREATE_RAY_TRACING_SKIP_TRIANGLES_BIT_KHR,
  ◦ VK_PIPELINE_CREATE_RAY_TRACING_SKIP_AABBS_BIT_KHR to VkPipelineCreateFlagBits
  ◦ VkPhysicalDeviceRayTracingPipelineFeaturesKHR structure
  ◦ VkDeviceOrHostAddressKHR and VkDeviceOrHostAddressConstKHR unions
  ◦ VkPipelineLibraryCreateInfoKHR struct
  ◦ VkRayTracingPipelineInterfaceCreateInfoKHR struct
  ◦ VkStridedDeviceAddressRegionKHR struct
  ◦ vkCmdTraceRaysIndirectKHR command and VkTraceRaysIndirectCommandKHR struct
  ◦ vkGetRayTracingCaptureReplayShaderGroupHandlesKHR (shader group capture/replay)
  ◦ vkCmdSetRayTracingPipelineStackSizeKHR and vkGetRayTracingShaderGroupStackSizeKHR commands for stack size control
• Functionality removed:
  ◦ VK_PIPELINE_CREATE_DEFER_COMPILE_BIT_NV
  ◦ vkCompileDeferredNV command (replaced with VK_KHR_deferred_host_operations)

(3) What are the changes between the public provisional (VK_KHR_ray_tracing v8) release and the internal provisional (VK_KHR_ray_tracing v9) release?

• Require Vulkan 1.1 and SPIR-V 1.4
• Added interactions with Vulkan 1.2 and VK_KHR_vulkan_memory_model
• added creation time capture and replay flags
  ◦ added VK_PIPELINE_CREATE_RAY_TRACING_SHADER_GROUP_HANDLE_CAPTURE_REPLAY_BIT_KHR to VkPipelineCreateFlagBits
• replace VkStridedBufferRegionKHR with VkStridedDeviceAddressRegionKHR and change vkCmdTraceRaysKHR, vkCmdTraceRaysIndirectKHR, to take these for the shader binding table and use device addresses instead of buffers.
• require the shader binding table buffers to have the VK_BUFFER_USAGE_RAY_TRACING_BIT_KHR set
• make VK_KHR_pipeline_library an interaction instead of required extension
• rename the libraries member of VkRayTracingPipelineCreateInfoKHR to pLibraryInfo and make it a pointer
• make VK_KHR_deferred_host_operations an interaction instead of a required extension (later went back on this)
• added explicit stack size management for ray tracing pipelines
  ◦ removed the maxCallableSize member of VkRayTracingPipelineInterfaceCreateInfoKHR
- added the `pDynamicState` member to `VkRayTracingPipelineCreateInfoKHR`
- added `VK_DYNAMIC_STATERAY_TRACING_PIPELINE_STACK_SIZE_KHR` dynamic state for ray tracing pipelines
- added `vkGetRayTracingShaderGroupStackSizeKHR` and `vkCmdSetRayTracingPipelineStackSizeKHR` commands
- added `VkShaderGroupShaderKHR` enum
- Added `maxRayDispatchInvocationCount` limit to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Added `shaderGroupHandleAlignment` property to ` VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Added `maxRayHitAttributeSize` property to `VkPhysicalDeviceRayTracingPipelinePropertiesKHR`
- Clarify deferred host ops for pipeline creation
  - `VkDeferredOperationKHR` is now a top-level parameter for `vkCreateRayTracingPipelinesKHR`
  - removed `VkDeferredOperationInfoKHR` structure
  - change deferred host creation/return parameter behavior such that the implementation can modify such parameters until the deferred host operation completes
  - `VK_KHR_deferred_host_operations` is required again

(4) What are the changes between the internal provisional (VK_KHR_ray_tracing v9) release and the final (VK_KHR_acceleration_structure v11 / VK_KHR_ray_tracing_pipeline v1) release?

- refactor `VK_KHR_ray_tracing` into 3 extensions, enabling implementation flexibility and decoupling ray query support from ray pipelines:
  - `VK_KHR_acceleration_structure` (for acceleration structure operations)
  - `VK_KHR_ray_tracing_pipeline` (for ray tracing pipeline and shader stages)
  - `VK_KHR_ray_query` (for ray queries in existing shader stages)
- Require `Volatile` for the following builtins in the ray generation, closest hit, miss, intersection, and callable shader stages:
  - `SubgroupSize, SubgroupLocalInvocationId, SubgroupEqMask, SubgroupGeMask, SubgroupGtMask, SubgroupLeMask, SubgroupLtMask`
  - `SMIDNV, WarpIDNV`
- clarify buffer usage flags for ray tracing
  - `VK_BUFFER_USAGE_SHADER_BINDING_TABLE_BIT_KHR` is added as an alias of `VK_BUFFER_USAGERAY_TRACING_BIT_NV` and is required on shader binding table buffers
  - `VK_BUFFER_USAGE_STORAGE_BUFFER_BIT` is used in `VK_KHR_acceleration_structure` for `scratchData`
- rename `maxRecursionDepth` to `maxRayPipelineRecursionDepth` (pipeline creation) and `maxRecursionDepth` (limit) to reduce confusion
- Add queryable `maxRayHitAttributeSize` limit and rename members of `VkRayTracingPipelineInterfaceCreateInfoKHR` to `maxPipelineRayPayloadSize` and
maxPipelineRayHitAttributeSize for clarity

- Update SPIRV capabilities to use RayTracingKHR
- extension is no longer provisional
- define synchronization requirements for indirect trace rays and indirect buffer

(5) This extension adds gl_InstanceID for the intersection, any-hit, and closest hit shaders, but in KHR_vulkan_gsl, gl_InstanceID is replaced with gl_InstanceIndex. Which should be used for Vulkan in this extension?

**RESOLVED:** This extension uses gl_InstanceID and maps it to InstanceId in SPIR-V. It is acknowledged that this is different than other shader stages in Vulkan. There are two main reasons for the difference here:

- symmetry with gl_PrimitiveID which is also available in these shaders
- there is no “baseInstance” relevant for these shaders, and so ID makes it more obvious that this is zero-based.

(6) Why is VK_KHR_pipeline_library an interaction instead of a required dependency, particularly when the “Feature Requirements” section says it is required to be supported anyhow?

**RESOLVED:** If VK_KHR_pipeline_library were a required extension dependency, then every application would need to enable the extension whether or not they actually want to use the pipeline library functionality. Developers found this to be annoying and unfriendly behavior. We do wish to require all implementations to support it though, and thus it is listed in the feature requirements section.

**Sample Code**

Example ray generation GLSL shader

```glsl
#version 450 core
#extension GL_EXT_ray_tracing : require
layout(set = 0, binding = 0, rgba8) uniform image2D image;
layout(set = 0, binding = 1) uniform accelerationStructureEXT as;
layout(location = 0) rayPayloadEXT float payload;

void main()
{
    vec4 col = vec4(0, 0, 0, 1);

    vec3 origin = vec3(float(gl_LaunchIDEXT.x)/float(gl_LaunchSizeEXT.x), float(gl_LaunchIDEXT.y)/float(gl_LaunchSizeEXT.y), 1.0);
    vec3 dir = vec3(0.0, 0.0, -1.0);

    traceRayEXT(as, 0, 0xff, 0, 1, 0, origin, 0.0, dir, 1000.0, 0);

    col.y = payload;
}
```
imageStore(image, ivec2(gl_LaunchIDEXT.xy), col);

**Version History**

- Revision 1, 2020-11-12 (Mathieu Robart, Daniel Koch, Eric Werness, Tobias Hector)
  - Decomposition of the specification, from VK_KHR_ray_tracing to VK_KHR_ray_tracing_pipeline (#1918,!3912)
  - require certain subgroup and sm_shader_builtin shader builtins to be decorated as volatile in the ray generation, closest hit, miss, intersection, and callable stages (#1924,!3903,!3954)
  - clarify buffer usage flags for ray tracing (#2181,!3939)
  - rename maxRecursionDepth to maxRayPipelineRecursionDepth and maxRayRecursionDepth (#2203,!3937)
  - add queryable maxRayHitAttributeSize and rename members of VkRayTracingPipelineInterfaceCreateInfoKHR (#2102,!3966)
  - update to use RayTracingKHR SPIR-V capability
  - add VUs for matching hit group type against geometry type (#2245,!3994)
  - require RayTMaxKHR be volatile in intersection shaders (#2268,!4030)
  - add numerical limits for ray parameters (#2235,!3960)
  - fix SBT indexing rules for device addresses (#2308,!4079)
  - relax formula for ray intersection candidate determination (#2322,!4080)
  - add more details on ShaderRecordBufferKHR variables (#2230,!4083)
  - clarify valid bits for InstanceCustomIndexKHR (GLSL/GLSL#19,!4128)
  - allow at most one IncomingRayPayloadKHR, IncomingCallableDataKHR, and HitAttributeKHR (!4129)
  - add minimum for maxShaderGroupStride (#2353,!4131)
  - require VK_KHR_pipeline_library extension to be supported (#2348,!4135)
  - clarify meaning of 'geometry index' (#2272,!4137)
  - restrict traces to TLAS (#2239,!4141)
  - add note about maxPipelineRayPayloadSize (#2383,!4172)
  - do not require raygen shader in pipeline libraries (!4185)
  - define sync for indirect trace rays and indirect buffer (#2407,!4208)

• Daniel Koch, NVIDIA
Description

VK_KHR_ray_tracing_position_fetch adds the ability to fetch the vertex positions in the shader from a hit triangle as stored in the acceleration structure.

An application adds VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR to the acceleration structure at build time. Then, if the hit is a triangle geometry, the shader (any-hit or closest hit for ray pipelines or using ray query) can fetch the three, three-component vertex positions in object space, of the triangle which was hit.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceRayTracingPositionFetchFeaturesKHR

New Enum Constants

- VK_KHR_RAY_TRACING_POSITION_FETCH_EXTENSION_NAME
- VK_KHR_RAY_TRACING_POSITION_FETCH_SPEC_VERSION
- Extending VkBuildAccelerationStructureFlagBitsKHR:
  - VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DATA_ACCESS_KHR
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RAY_TRACING_POSITION_FETCH_FEATURES_KHR

New Built-In Variables

- HitTriangleVertexPositionsKHR

New SPIR-V Capabilities

- RayTracingPositionFetchKHR

Interactions and External Dependencies
• This extension requires SPV_KHR_shader_clock.
• This extension provides API support for ARB_shader_clock and EXT_shader_realtime_clock

Contributors
• Aaron Hagan, AMD
• Daniel Koch, NVIDIA

Description

This extension advertises the SPIR-V ShaderClockKHR capability for Vulkan, which allows a shader to query a real-time or monotonically incrementing counter at the subgroup level or across the device level. The two valid SPIR-V scopes for OpReadClockKHR are Subgroup and Device.

When using GLSL source-based shading languages, the clockRealtime*EXT() timing functions map to the OpReadClockKHR instruction with a scope of Device, and the clock*ARB() timing functions map to the OpReadClockKHR instruction with a scope of Subgroup.
New Structures

Interactions and External Dependencies
- Requires SPIR-V 1.3.
- This extension requires SPV_KHR_subgroup_uniform_control_flow
- This extension provides API support for GL_EXT_subgroupuniform_qualifier

Contributors
- Alan Baker, Google
- Jeff Bolz, NVIDIA

Description
This extension allows the use of the SPV_KHR_subgroup_uniform_control_flow SPIR-V extension in shader modules. SPV_KHR_subgroup_uniform_control_flow provides stronger guarantees that diverged subgroups will reconverge.

Developers should utilize this extension if they use subgroup operations to reduce the work performed by a uniform subgroup. This extension will guarantee that uniform subgroup will reconverge in the same manner as invocation groups (see “Uniform Control Flow” in the Khronos SPIR-V Specification).

New Structures

Description

This extension extends `VK_KHR_swapchain` to enable creation of a shared presentable image. This allows the application to use the image while the presentation engine is accessing it, in order to reduce the latency between rendering and presentation.

New Commands

- `vkGetSwapchainStatusKHR`

New Structures

- Extending `VkSurfaceCapabilities2KHR`:
  - `VkSharedPresentSurfaceCapabilitiesKHR`

New Enum Constants

- `VK_KHR_SHARED_PRESENTABLE_IMAGE_EXTENSION_NAME`
- `VK_KHR_SHARED_PRESENTABLE_IMAGE_SPEC_VERSION`
- Extending `VkImageLayout`:
  - `VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR`
- Extending `VkPresentModeKHR`:
  - `VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR`
  - `VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_SHARED_PRESENT_SURFACE_CAPABILITIES_KHR`

Issues

1) Should we allow a Vulkan WSI swapchain to toggle between normal usage and shared presentation usage?

**RESOLVED:** No. WSI swapchains are typically recreated with new properties instead of having their properties changed. This can also save resources, assuming that fewer images are needed for shared presentation, and assuming that most VR applications do not need to switch between normal and shared usage.
2) Should we have a query for determining how the presentation engine refresh is triggered?

**RESOLVED:** Yes. This is done via which presentation modes a surface supports.

3) Should the object representing a shared presentable image be an extension of a VkSwapchainKHR or a separate object?

**RESOLVED:** Extension of a swapchain due to overlap in creation properties and to allow common functionality between shared and normal presentable images and swapchains.

4) What should we call the extension and the new structures it creates?

**RESOLVED:** Shared presentable image / shared present.

5) Should the minImageCount and presentMode values of the VkSwapchainCreateInfoKHR be ignored, or required to be compatible values?

**RESOLVED:** minImageCount must be set to 1, and presentMode should be set to either VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR.

6) What should the layout of the shared presentable image be?

**RESOLVED:** After acquiring the shared presentable image, the application must transition it to the VK_IMAGE_LAYOUT_SHARED_PRESENT_KHR layout prior to it being used. After this initial transition, any image usage that was requested during swapchain creation can be performed on the image without layout transitions being performed.

7) Do we need a new API for the trigger to refresh new content?

**RESOLVED:** vkQueuePresentKHR to act as API to trigger a refresh, as will allow combination with other compatible extensions to vkQueuePresentKHR.

8) How should an application detect a VK_ERROR_OUT_OF_DATE_KHR error on a swapchain using the VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR present mode?

**RESOLVED:** Introduce vkGetSwapchainStatusKHR to allow applications to query the status of a swapchain using a shared presentation mode.

9) What should subsequent calls to vkQueuePresentKHR for VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR swapchains be defined to do?

**RESOLVED:** State that implementations may use it as a hint for updated content.

10) Can the ownership of a shared presentable image be transferred to a different queue?

**RESOLVED:** No. It is not possible to transfer ownership of a shared presentable image obtained from a swapchain created using VK_SHARING_MODE_EXCLUSIVE after it has been presented.

11) How should vkQueueSubmit behave if a command buffer uses an image from a VK_ERROR_OUT_OF_DATE_KHR swapchain?

**RESOLVED:** vkQueueSubmit is expected to return the VK_ERROR_DEVICE_LOST error.
12) Can Vulkan provide any guarantee on the order of rendering, to enable beam chasing?

**RESOLVED:** This could be achieved via use of render passes to ensure strip rendering.

Description

The `VK_KHR_surface` extension is an instance extension. It introduces `VkSurfaceKHR` objects, which abstract native platform surface or window objects for use with Vulkan. It also provides a way to determine whether a queue family in a physical device supports presenting to particular surface.

Separate extensions for each platform provide the mechanisms for creating `VkSurfaceKHR` objects, but once created they may be used in this and other platform-independent extensions, in particular the `VK_KHR_swapchain` extension.

New Object Types

- `VkSurfaceKHR`

New Commands

- `vkDestroySurfaceKHR`
- `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`
- `vkGetPhysicalDeviceSurfaceFormatsKHR`
- `vkGetPhysicalDeviceSurfacePresentModesKHR`
- `vkGetPhysicalDeviceSurfaceSupportKHR`

New Structures

- `VkSurfaceCapabilitiesKHR`
- `VkSurfaceFormatKHR`

New Enums

- `VkColorSpaceKHR`
- `VkCompositeAlphaFlagBitsKHR`
- `VkPresentModeKHR`
- `VkSurfaceTransformFlagBitsKHR`
New Bitmasks

- VkCompositeAlphaFlagsKHR

New Enum Constants

- VK_KHR_SURFACE_EXTENSION_NAME
- VK_KHR_SURFACE_SPEC_VERSION

Extending VkObjectType:
- VK_OBJECT_TYPE_SURFACE_KHR

Extending VkResult:
- VK_ERROR_NATIVE_WINDOW_IN_USE_KHR
- VK_ERROR_SURFACE_LOST_KHR

Examples

Note

The example code for the VK_KHR_surface and VK_KHR_swapchain extensions was removed from the appendix after revision 1.0.29. This WSI example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c).

Issues

1) Should this extension include a method to query whether a physical device supports presenting to a specific window or native surface on a given platform?

**RESOLVED:** Yes. Without this, applications would need to create a device instance to determine whether a particular window can be presented to. Knowing that a device supports presentation to a platform in general is not sufficient, as a single machine might support multiple seats, or instances of the platform that each use different underlying physical devices. Additionally, on some platforms, such as the X Window System, different drivers and devices might be used for different windows depending on which section of the desktop they exist on.

2) Should the vkGetPhysicalDeviceSurfaceCapabilitiesKHR, vkGetPhysicalDeviceSurfaceFormatsKHR, and vkGetPhysicalDeviceSurfacePresentModesKHR functions be in this extension and operate on physical devices, rather than being in VK_KHR_swapchain (i.e. device extension) and being dependent on VkDevice?

**RESOLVED:** Yes. While it might be useful to depend on VkDevice (and therefore on enabled extensions and features) for the queries, Vulkan was released only with the VkPhysicalDevice versions. Many cases can be resolved by a Valid Usage statement, and/or by a separate pNext chain version of the query struct specific to a given extension or parameters, via extensible versions of the queries: vkGetPhysicalDeviceSurfacePresentModes2EXT, vkGetPhysicalDeviceSurfaceCapabilities2KHR, and vkGetPhysicalDeviceSurfaceFormats2KHR.
3) Should Vulkan support Xlib or XCB as the API for accessing the X Window System platform?

**RESOLVED:** Both. XCB is a more modern and efficient API, but Xlib usage is deeply ingrained in many applications and likely will remain in use for the foreseeable future. Not all drivers necessarily need to support both, but including both as options in the core specification will probably encourage support, which should in turn ease adoption of the Vulkan API in older codebases. Additionally, the performance improvements possible with XCB likely will not have a measurable impact on the performance of Vulkan presentation and other minimal window system interactions defined here.

4) Should the GBM platform be included in the list of platform enums?

**RESOLVED:** Deferred, and will be addressed with a platform-specific extension to be written in the future.

**Version History**

- **Revision 1, 2015-05-20 (James Jones)**
  - Initial draft, based on LunarG KHR spec, other KHR specs, patches attached to bugs.

- **Revision 2, 2015-05-22 (Ian Elliott)**
  - Created initial Description section.
  - Removed query for whether a platform requires the use of a queue for presentation, since it was decided that presentation will always be modeled as being part of the queue.
  - Fixed typos and other minor mistakes.

- **Revision 3, 2015-05-26 (Ian Elliott)**
  - Improved the Description section.

- **Revision 4, 2015-05-27 (James Jones)**
  - Fixed compilation errors in example code.

- **Revision 5, 2015-06-01 (James Jones)**
  - Added issues 1 and 2 and made related spec updates.

- **Revision 6, 2015-06-01 (James Jones)**
  - Merged the platform type mappings table previously removed from VK_KHR_swapchain with the platform description table in this spec.
  - Added issues 3 and 4 documenting choices made when building the initial list of native platforms supported.

- **Revision 7, 2015-06-11 (Ian Elliott)**
  - Updated table 1 per input from the KHR TSG.
  - Updated issue 4 (GBM) per discussion with Daniel Stone. He will create a platform-specific extension sometime in the future.

- **Revision 8, 2015-06-17 (James Jones)**
  - Updated enum-extending values using new convention.
• Fixed the value of VK_SURFACE_PLATFORM_INFO_TYPE_SUPPORTED_KHR.

• Revision 9, 2015-06-17 (James Jones)
  • Rebased on Vulkan API version 126.

• Revision 10, 2015-06-18 (James Jones)
  • Marked issues 2 and 3 resolved.

• Revision 11, 2015-06-23 (Ian Elliott)
  • Examples now show use of function pointers for extension functions.
  • Eliminated extraneous whitespace.

• Revision 12, 2015-07-07 (Daniel Rakos)
  • Added error section describing when each error is expected to be reported.
  • Replaced the term “queue node index” with “queue family index” in the spec as that is the agreed term to be used in the latest version of the core header and spec.
  • Replaced bool32_t with VkBool32.

• Revision 13, 2015-08-06 (Daniel Rakos)
  • Updated spec against latest core API header version.

• Revision 14, 2015-08-20 (Ian Elliott)
  • Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
  • Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.
  • Did miscellaneous cleanup, etc.

• Revision 15, 2015-08-20 (Ian Elliott—porting a 2015-07-29 change from James Jones)
  • Moved the surface transform enums here from VK_WSI_swapchain so they could be reused by VK_WSI_display.

• Revision 16, 2015-09-01 (James Jones)
  • Restore single-field revision number.

• Revision 17, 2015-09-01 (James Jones)
  • Fix example code compilation errors.

• Revision 18, 2015-09-26 (Jesse Hall)
  • Replaced VkSurfaceDescriptionKHR with the VkSurfaceKHR object, which is created via layered extensions. Added VkDestroySurfaceKHR.

• Revision 19, 2015-09-28 (Jesse Hall)
  • Renamed from VK_EXT_KHR_swapchain to VK_EXT_KHR_surface.

• Revision 20, 2015-09-30 (Jeff Vigil)
  • Add error result VK_ERROR_SURFACE_LOST_KHR.

• Revision 21, 2015-10-15 (Daniel Rakos)
• Updated the resolution of issue #2 and include the surface capability queries in this extension.
• Renamed SurfaceProperties to SurfaceCapabilities as it better reflects that the values returned are the capabilities of the surface on a particular device.
• Other minor cleanup and consistency changes.

• Revision 22, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_surface to VK_KHR_surface.

• Revision 23, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to vkDestroySurfaceKHR.

• Revision 24, 2015-11-10 (Jesse Hall)
  ◦ Removed VkSurfaceTransformKHR. Use VkSurfaceTransformFlagBitsKHR instead.
  ◦ Rename VkSurfaceCapabilitiesKHR member maxImageArraySize to maxImageArrayLayers.

• Revision 25, 2016-01-14 (James Jones)
  ◦ Moved VK_ERROR_NATIVE_WINDOW_IN_USE_KHR from the VK_KHR_android_surface to the VK_KHR_surface extension.

• 2016-08-23 (Ian Elliott)
  ◦ Update the example code, to not have so many characters per line, and to split out a new example to show how to obtain function pointers.

• 2016-08-25 (Ian Elliott)
  ◦ A note was added at the beginning of the example code, stating that it will be removed from future versions of the appendix.

Description
This extension extends VkSurfaceCapabilities2KHR, providing applications a way to query whether swapchains can be created with the VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR flag set.

Vulkan 1.1 added (optional) support for protect memory and protected resources including buffers (VK_BUFFER_CREATE_PROTECTED_BIT), images (VK_IMAGE_CREATE_PROTECTED_BIT), and swapchains (VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR). However, on implementations which support multiple windowing systems, not all window systems may be able to provide a protected display path.

This extension provides a way to query if a protected swapchain created for a surface (and thus a specific windowing system) can be displayed on screen. It extends the existing VkSurfaceCapabilities2KHR structure with a new VkSurfaceProtectedCapabilitiesKHR structure from which the application can obtain information about support for protected swapchain creation through vkGetPhysicalDeviceSurfaceCapabilities2KHR.

New Structures
• Extending VkSurfaceCapabilities2KHR:
  ◦ VkSurfaceProtectedCapabilitiesKHR

New Enum Constants
• VK_KHR_SURFACE_PROTECTED_CAPABILITIES_EXTENSION_NAME
• VK_KHR_SURFACE_PROTECTED_CAPABILITIES_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_SURFACE_PROTECTED_CAPABILITIES_KHR

Description

The VK_KHR_swapchain extension is the device-level companion to the VK_KHR_surface extension. It introduces VkSwapchainKHR objects, which provide the ability to present rendering results to a surface.

New Object Types

- VkSwapchainKHR

New Commands

- vkAcquireNextImageKHR
- vkCreateSwapchainKHR
- vkDestroySwapchainKHR
- vkGetSwapchainImagesKHR
- vkQueuePresentKHR

If Version 1.1 is supported:

- vkAcquireNextImage2KHR
- vkGetDeviceGroupPresentCapabilitiesKHR
- vkGetDeviceGroupSurfacePresentModesKHR
- vkGetPhysicalDevicePresentRectanglesKHR

New Structures

- VkPresentInfoKHR
- VkSwapchainCreateInfoKHR

If Version 1.1 is supported:
- VkAcquireNextImageInfoKHR
- VkDeviceGroupPresentCapabilitiesKHR
- Extending VkBindImageMemoryInfo:
  - VkBindImageMemorySwapchainInfoKHR
- Extending VkImageCreateInfo:
  - VkImageSwapchainCreateInfoKHR
- Extending VkPresentInfoKHR:
  - VkDeviceGroupPresentInfoKHR
- Extending VkSwapchainCreateInfoKHR:
  - VkDeviceGroupSwapchainCreateInfoKHR

**New Enums**
- VkSwapchainCreateFlagBitsKHR

If Version 1.1 is supported:
- VkDeviceGroupPresentModeFlagBitsKHR

**New Bitmasks**
- VkSwapchainCreateFlagsKHR

If Version 1.1 is supported:
- VkDeviceGroupPresentModeFlagsKHR

**New Enum Constants**
- VK_KHR_SWAPCHAIN_EXTENSION_NAME
- VK_KHR_SWAPCHAIN_SPEC_VERSION
- Extending VkImageLayout:
  - VK_IMAGE_LAYOUT_PRESENT_SRC_KHR
- Extending VkObjectType:
  - VK_OBJECT_TYPE_SWAPCHAIN_KHR
- Extending VkResult:
  - VK_ERROR_OUT_OF_DATE_KHR
  - VK_SUBOPTIMAL_KHR
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PRESENT_INFO_KHR
  - VK_STRUCTURE_TYPE_SWAPCHAIN_CREATE_INFO_KHR
If Version 1.1 is supported:

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR
  - VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR
  - VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR
  - VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR
  - VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR
  - VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR

- Extending VkSwapchainCreateFlagBitsKHR:
  - VK_SWAPCHAIN_CREATE_PROTECTED_BIT_KHR
  - VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR

**Issues**

1) Does this extension allow the application to specify the memory backing of the presentable images?

**RESOLVED:** No. Unlike standard images, the implementation will allocate the memory backing of the presentable image.

2) What operations are allowed on presentable images?

**RESOLVED:** This is determined by the image usage flags specified when creating the presentable image’s swapchain.

3) Does this extension support MSAA presentable images?

**RESOLVED:** No. Presentable images are always single-sampled. Multi-sampled rendering must use regular images. To present the rendering results the application must manually resolve the multi-sampled image to a single-sampled presentable image prior to presentation.

4) Does this extension support stereo/multi-view presentable images?

**RESOLVED:** Yes. The number of views associated with a presentable image is determined by the `imageArrayLayers` specified when creating a swapchain. All presentable images in a given swapchain use the same array size.

5) Are the layers of stereo presentable images half-sized?

**RESOLVED:** No. The image extents always match those requested by the application.

6) Do the “present” and “acquire next image” commands operate on a queue? If not, do they need to include explicit semaphore objects to interlock them with queue operations?

**RESOLVED:** The present command operates on a queue. The image ownership operation it represents happens in order with other operations on the queue, so no explicit semaphore object is
Applications may want to acquire the next image in separate threads from those in which they manage their queue, or in multiple threads. To make such usage easier, the acquire next image command takes a semaphore to signal as a method of explicit synchronization. The application must later queue a wait for this semaphore before queuing execution of any commands using the image.

7) Does \texttt{vkAcquireNextImageKHR} block if no images are available?

\textbf{RESOLVED}: The command takes a timeout parameter. Special values for the timeout are 0, which makes the call a non-blocking operation, and \texttt{UINT64_MAX}, which blocks indefinitely. Values in between will block for up to the specified time. The call will return when an image becomes available or an error occurs. It may, but is not required to, return before the specified timeout expires if the swapchain becomes out of date.

8) Can multiple presents be queued using one \texttt{vkQueuePresentKHR} call?

\textbf{RESOLVED}: Yes. \texttt{VkPresentInfoKHR} contains a list of swapchains and corresponding image indices that will be presented. When supported, all presentations queued with a single \texttt{vkQueuePresentKHR} call will be applied atomically as one operation. The same swapchain must not appear in the list more than once. Later extensions may provide applications stronger guarantees of atomicity for such present operations, and/or allow them to query whether atomic presentation of a particular group of swapchains is possible.

9) How do the presentation and acquire next image functions notify the application the targeted surface has changed?

\textbf{RESOLVED}: Two new result codes are introduced for this purpose:

- \texttt{VK_SUBOPTIMAL_KHR} - Presentation will still succeed, subject to the window resize behavior, but the swapchain is no longer configured optimally for the surface it targets. Applications should query updated surface information and recreate their swapchain at the next convenient opportunity.
- \texttt{VK_ERROR_OUT_OF_DATE_KHR} - Failure. The swapchain is no longer compatible with the surface it targets. The application must query updated surface information and recreate the swapchain before presentation will succeed.

These can be returned by both \texttt{vkAcquireNextImageKHR} and \texttt{vkQueuePresentKHR}.

10) Does the \texttt{vkAcquireNextImageKHR} command return a semaphore to the application via an output parameter, or accept a semaphore to signal from the application as an object handle parameter?

\textbf{RESOLVED}: Accept a semaphore to signal as an object handle. This avoids the need to specify whether the application must destroy the semaphore or whether it is owned by the swapchain, and if the latter, what its lifetime is and whether it can be reused for other operations once it is received from \texttt{vkAcquireNextImageKHR}.

11) What types of swapchain queuing behavior should be exposed? Options include swap interval
specification, mailbox/most recent vs. FIFO queue management, targeting specific vertical blank
intervals or absolute times for a given present operation, and probably others. For some of these,
whether they are specified at swapchain creation time or as per-present parameters needs to be
decided as well.

**RESOLVED:** The base swapchain extension will expose 3 possible behaviors (of which, FIFO will
always be supported):

- **Immediate present:** Does not wait for vertical blanking period to update the current image,
  likely resulting in visible tearing. No internal queue is used. Present requests are applied
  immediately.

- **Mailbox queue:** Waits for the next vertical blanking period to update the current image. No
  tearing should be observed. An internal single-entry queue is used to hold pending presentation
  requests. If the queue is full when a new presentation request is received, the new request
  replaces the existing entry, and any images associated with the prior entry become available for
  reuse by the application.

- **FIFO queue:** Waits for the next vertical blanking period to update the current image. No
  tearing should be observed. An internal queue containing `numSwapchainImages - 1` entries is used to hold
  pending presentation requests. New requests are appended to the end of the queue, and one
  request is removed from the beginning of the queue and processed during each vertical
  blanking period in which the queue is non-empty.

Not all surfaces will support all of these modes, so the modes supported will be returned using a
surface information query. All surfaces must support the FIFO queue mode. Applications must
choose one of these modes up front when creating a swapchain. Switching modes can be
accomplished by recreating the swapchain.

12) Can `VK_PRESENT_MODE_MAILBOX_KHR` provide non-blocking guarantees for
`vkAcquireNextImageKHR`? If so, what is the proper criteria?

**RESOLVED:** Yes. The difficulty is not immediately obvious here. Naively, if at least 3 images are
requested, mailbox mode should always have an image available for the application if the
application does not own any images when the call to `vkAcquireNextImageKHR` was made.
However, some presentation engines may have more than one “current” image, and would still
need to block in some cases. The right requirement appears to be that if the application allocates
the surface’s minimum number of images + 1 then it is guaranteed non-blocking behavior when it
does not currently own any images.

13) Is there a way to create and initialize a new swapchain for a surface that has generated a
`VK_SUBOPTIMAL_KHR` return code while still using the old swapchain?

**RESOLVED:** Not as part of this specification. This could be useful to allow the application to create
an “optimal” replacement swapchain and rebuild all its command buffers using it in a background
thread at a low priority while continuing to use the “suboptimal” swapchain in the main thread. It
could probably use the same “atomic replace” semantics proposed for recreating direct-to-device
swapchains without incurring a mode switch. However, after discussion, it was determined some
platforms probably could not support concurrent swapchains for the same surface though, so this
will be left out of the base KHR extensions. A future extension could add this for platforms where it
is supported.

14) Should there be a special value for `VkSurfaceCapabilitiesKHR::maxImageCount` to indicate there are no practical limits on the number of images in a swapchain?

**RESOLVED:** Yes. There will often be cases where there is no practical limit to the number of images in a swapchain other than the amount of available resources (i.e., memory) in the system. Trying to derive a hard limit from things like memory size is prone to failure. It is better in such cases to leave it to applications to figure such soft limits out via trial/failure iterations.

15) Should there be a special value for `VkSurfaceCapabilitiesKHR::currentExtent` to indicate the size of the platform surface is undefined?

**RESOLVED:** Yes. On some platforms (Wayland, for example), the surface size is defined by the images presented to it rather than the other way around.

16) Should there be a special value for `VkSurfaceCapabilitiesKHR::maxImageExtent` to indicate there is no practical limit on the surface size?

**RESOLVED:** No. It seems unlikely such a system would exist. 0 could be used to indicate the platform places no limits on the extents beyond those imposed by Vulkan for normal images, but this query could just as easily return those same limits, so a special “unlimited” value does not seem useful for this field.

17) How should surface rotation and mirroring be exposed to applications? How do they specify rotation and mirroring transforms applied prior to presentation?

**RESOLVED:** Applications can query both the supported and current transforms of a surface. Both are specified relative to the device’s “natural” display rotation and direction. The supported transforms indicate which orientations the presentation engine accepts images in. For example, a presentation engine that does not support transforming surfaces as part of presentation, and which is presenting to a surface that is displayed with a 90-degree rotation, would return only one supported transform bit: `VK_SURFACE_TRANSFORM_ROTATE_90_BIT_KHR`. Applications must transform their rendering by the transform they specify when creating the swapchain in `preTransform` field.

18) Can surfaces ever not support `VK_MIRROR_NONE`? Can they support vertical and horizontal mirroring simultaneously? Relatedly, should `VK_MIRROR_NONE[_BIT]` be zero, or bit one, and should applications be allowed to specify multiple pre and current mirror transform bits, or exactly one?

**RESOLVED:** Since some platforms may not support presenting with a transform other than the native window’s current transform, and prerotation/mirroring are specified relative to the device’s natural rotation and direction, rather than relative to the surface’s current rotation and direction, it is necessary to express lack of support for no mirroring. To allow this, the `MIRROR_NONE` enum must occupy a bit in the flags. Since `MIRROR_NONE` must be a bit in the bitmask rather than a bitmask with no values set, allowing more than one bit to be set in the bitmask would make it possible to describe undefined transforms such as `VK_MIRROR_NONE_BIT | VK_MIRROR_HORIZONTAL_BIT`, or a transform that includes both “no mirroring” and “horizontal mirroring” simultaneously. Therefore, it is desirable to allow specifying all supported mirroring transforms using only one bit. The question then becomes, should there be a `VK_MIRROR_HORIZONTAL_AND_VERTICAL_BIT` to represent a simultaneous horizontal and vertical mirror transform? However, such a transform is equivalent to
a 180 degree rotation, so presentation engines and applications that wish to support or use such a transform can express it through rotation instead. Therefore, 3 exclusive bits are sufficient to express all needed mirroring transforms.

19) Should support for sRGB be required?

RESOLVED: In the advent of UHD and HDR display devices, proper color space information is vital to the display pipeline represented by the swapchain. The app can discover the supported format/color-space pairs and select a pair most suited to its rendering needs. Currently only the sRGB color space is supported, future extensions may provide support for more color spaces. See issues 23 and 24.

20) Is there a mechanism to modify or replace an existing swapchain with one targeting the same surface?

RESOLVED: Yes. This is described above in the text.

21) Should there be a way to set prerotation and mirroring using native APIs when presenting using a Vulkan swapchain?

RESOLVED: Yes. The transforms that can be expressed in this extension are a subset of those possible on native platforms. If a platform exposes a method to specify the transform of presented images for a given surface using native methods and exposes more transforms or other properties for surfaces than Vulkan supports, it might be impossible, difficult, or inconvenient to set some of those properties using Vulkan KHR extensions and some using the native interfaces. To avoid overwriting properties set using native commands when presenting using a Vulkan swapchain, the application can set the pretransform to “inherit”, in which case the current native properties will be used, or if none are available, a platform-specific default will be used. Platforms that do not specify a reasonable default or do not provide native mechanisms to specify such transforms should not include the inherit bits in the supportedTransforms bitmask they return in VkSurfaceCapabilitiesKHR.

22) Should the content of presentable images be clipped by objects obscuring their target surface?

RESOLVED: Applications can choose which behavior they prefer. Allowing the content to be clipped could enable more efficient presentation methods on some platforms, but some applications might rely on the content of presentable images to perform techniques such as partial updates or motion blurs.

23) What is the purpose of specifying a VkColorSpaceKHR along with VkFormat when creating a swapchain?

RESOLVED: While Vulkan itself is color space agnostic (e.g. even the meaning of R, G, B and A can be freely defined by the rendering application), the swapchain eventually will have to present the images on a display device with specific color reproduction characteristics. If any color space transformations are necessary before an image can be displayed, the color space of the presented image must be known to the swapchain. A swapchain will only support a restricted set of color format and -space pairs. This set can be discovered via vkGetPhysicalDeviceSurfaceFormatsKHR. As it can be expected that most display devices support the sRGB color space, at least one format/color-space pair has to be exposed, where the color space is VK_COLOR_SPACE_SRGB_NONLINEAR_KHR.
24) How are sRGB formats and the sRGB color space related?

**RESOLVED:** While Vulkan exposes a number of SRGB texture formats, using such formats does not guarantee working in a specific color space. It merely means that the hardware can directly support applying the non-linear transfer functions defined by the sRGB standard color space when reading from or writing to images of those formats. Still, it is unlikely that a swapchain will expose a *_SRGB format along with any color space other than VK_COLOR_SPACE_SRGB_NONLINEAR_KHR.

On the other hand, non-*_SRGB formats will be very likely exposed in pair with a SRGB color space. This means, the hardware will not apply any transfer function when reading from or writing to such images, yet they will still be presented on a device with sRGB display characteristics. In this case the application is responsible for applying the transfer function, for instance by using shader math.

25) How are the lifetimes of surfaces and swapchains targeting them related?

**RESOLVED:** A surface must outlive any swapchains targeting it. A VkSurfaceKHR owns the binding of the native window to the Vulkan driver.

26) How can the client control the way the alpha component of swapchain images is treated by the presentation engine during compositing?

**RESOLVED:** We should add new enum values to allow the client to negotiate with the presentation engine on how to treat image alpha values during the compositing process. Since not all platforms can practically control this through the Vulkan driver, a value of VK_COMPOSITE_ALPHA_INHERIT_BIT_KHR is provided like for surface transforms.

27) Is vkCreateSwapchainKHR the right function to return VK_ERROR_NATIVE_WINDOW_IN_USE_KHR, or should the various platform-specific VkSurfaceKHR factory functions catch this error earlier?

**RESOLVED:** For most platforms, the VkSurfaceKHR structure is a simple container holding the data that identifies a native window or other object representing a surface on a particular platform. For the surface factory functions to return this error, they would likely need to register a reference on the native objects with the native display server somehow, and ensure no other such references exist. Surfaces were not intended to be that heavyweight.

Swapchains are intended to be the objects that directly manipulate native windows and communicate with the native presentation mechanisms. Swapchains will already need to communicate with the native display server to negotiate allocation and/or presentation of presentable images for a native surface. Therefore, it makes more sense for swapchain creation to be the point at which native object exclusivity is enforced. Platforms may choose to enforce further restrictions on the number of VkSurfaceKHR objects that may be created for the same native window if such a requirement makes sense on a particular platform, but a global requirement is only sensible at the swapchain level.

**Examples**

<table>
<thead>
<tr>

<tr>
<td>The example code for the VK_KHR_surface and VK_KHR_swapchain extensions was</td>
</tr>
</tbody>
</table>
removed from the appendix after revision 1.0.29. This WSI example code was ported to the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c).

Version History

- Revision 1, 2015-05-20 (James Jones)
  ◦ Initial draft, based on LunarG KHR spec, other KHR specs, patches attached to bugs.

- Revision 2, 2015-05-22 (Ian Elliott)
  ◦ Made many agreed-upon changes from 2015-05-21 KHR TSG meeting. This includes using only a queue for presentation, and having an explicit function to acquire the next image.
  ◦ Fixed typos and other minor mistakes.

- Revision 3, 2015-05-26 (Ian Elliott)
  ◦ Improved the Description section.
  ◦ Added or resolved issues that were found in improving the Description. For example, pSurfaceDescription is used consistently, instead of sometimes using pSurface.

- Revision 4, 2015-05-27 (James Jones)
  ◦ Fixed some grammatical errors and typos
  ◦ Filled in the description of imageUseFlags when creating a swapchain.
  ◦ Added a description of swapInterval.
  ◦ Replaced the paragraph describing the order of operations on a queue for image ownership and presentation.

- Revision 5, 2015-05-27 (James Jones)
  ◦ Imported relevant issues from the (abandoned) vk_wsi_persistent_swapchain_images extension.
  ◦ Added issues 6 and 7, regarding behavior of the acquire next image and present commands with respect to queues.
  ◦ Updated spec language and examples to align with proposed resolutions to issues 6 and 7.

- Revision 6, 2015-05-27 (James Jones)
  ◦ Added issue 8, regarding atomic presentation of multiple swapchains
  ◦ Updated spec language and examples to align with proposed resolution to issue 8.

- Revision 7, 2015-05-27 (James Jones)
  ◦ Fixed compilation errors in example code, and made related spec fixes.

- Revision 8, 2015-05-27 (James Jones)
  ◦ Added issue 9, and the related VK_SUBOPTIMAL_KHR result code.
  ◦ Renamed VK_OUT_OF_DATE_KHR to VK_ERROR_OUT_OF_DATE_KHR.

- Revision 9, 2015-05-27 (James Jones)
- Added inline proposed resolutions (marked with [JRJ]) to some XXX questions/issues. These should be moved to the issues section in a subsequent update if the proposals are adopted.

- Revision 10, 2015-05-28 (James Jones)
  - Converted vkAcquireNextImageKHR back to a non-queue operation that uses a VkSemaphore object for explicit synchronization.
  - Added issue 10 to determine whether vkAcquireNextImageKHR generates or returns semaphores, or whether it operates on a semaphore provided by the application.

- Revision 11, 2015-05-28 (James Jones)
  - Marked issues 6, 7, and 8 resolved.
  - Renamed VkSurfaceCapabilityPropertiesKHR to VkSurfacePropertiesKHR to better convey the mutable nature of the information it contains.

- Revision 12, 2015-05-28 (James Jones)
  - Added issue 11 with a proposed resolution, and the related issue 12.
  - Updated various sections of the spec to match the proposed resolution to issue 11.

- Revision 13, 2015-06-01 (James Jones)
  - Moved some structures to VK_EXT_KHR_swap_chain to resolve the specification’s issues 1 and 2.

- Revision 14, 2015-06-01 (James Jones)
  - Added code for example 4 demonstrating how an application might make use of the two different present and acquire next image KHR result codes.
  - Added issue 13.

- Revision 15, 2015-06-01 (James Jones)
  - Added issues 14 - 16 and related spec language.
  - Fixed some spelling errors.
  - Added language describing the meaningful return values for vkAcquireNextImageKHR and vkQueuePresentKHR.

- Revision 16, 2015-06-02 (James Jones)
  - Added issues 17 and 18, as well as related spec language.
  - Removed some erroneous text added by mistake in the last update.

- Revision 17, 2015-06-15 (Ian Elliott)
  - Changed special value from “-1” to “0” so that the data types can be unsigned.

- Revision 18, 2015-06-15 (Ian Elliott)
  - Clarified the values of VkSurfacePropertiesKHR::minImageCount and the timeout parameter of the vkAcquireNextImageKHR function.

- Revision 19, 2015-06-17 (James Jones)
  - Misc. cleanup. Removed resolved inline issues and fixed typos.
  - Fixed clarification of VkSurfacePropertiesKHR::minImageCount made in version 18.
- Added a brief “Image Ownership” definition to the list of terms used in the spec.

- Revision 20, 2015-06-17 (James Jones)
  - Updated enum-extending values using new convention.

- Revision 21, 2015-06-17 (James Jones)
  - Added language describing how to use VK_IMAGE_LAYOUT_PRESENT_SOURCE_KHR.
  - Cleaned up an XXX comment regarding the description of which queues vkQueuePresentKHR can be used on.

- Revision 22, 2015-06-17 (James Jones)
  - Rebased on Vulkan API version 126.

- Revision 23, 2015-06-18 (James Jones)
  - Updated language for issue 12 to read as a proposed resolution.
  - Marked issues 11, 12, 13, 16, and 17 resolved.
  - Temporarily added links to the relevant bugs under the remaining unresolved issues.
  - Added issues 19 and 20 as well as proposed resolutions.

- Revision 24, 2015-06-19 (Ian Elliott)
  - Changed special value for VkSurfacePropertiesKHR::currentExtent back to “-1” from “0”. This value will never need to be unsigned, and “0” is actually a legal value.

- Revision 25, 2015-06-23 (Ian Elliott)
  - Examples now show use of function pointers for extension functions.
  - Eliminated extraneous whitespace.

- Revision 26, 2015-06-25 (Ian Elliott)
  - Resolved Issues 9 & 10 per KHR TSG meeting.

- Revision 27, 2015-06-25 (James Jones)
  - Added oldSwapchain member to VkSwapchainCreateInfoKHR.

- Revision 28, 2015-06-25 (James Jones)
  - Added the “inherit” bits to the rotation and mirroring flags and the associated issue 21.

- Revision 29, 2015-06-25 (James Jones)
  - Added the “clipped” flag to VkSwapchainCreateInfoKHR, and the associated issue 22.
  - Specified that presenting an image does not modify it.

- Revision 30, 2015-06-25 (James Jones)
  - Added language to the spec that clarifies the behavior of vkCreateSwapchainKHR() when the oldSwapchain field of VkSwapchainCreateInfoKHR is not NULL.

- Revision 31, 2015-06-26 (Ian Elliott)
  - Example of new VkSwapchainCreateInfoKHR members, “oldSwapchain” and “clipped”.
  - Example of using VkSurfacePropertiesKHR::{min|max}ImageCount to set VkSwapchainCreateInfoKHR::minImageCount.
• Rename vkGetSurfaceInfoKHR()'s 4th parameter to “pDataSize”, for consistency with other functions.

• Add macro with C-string name of extension (just to header file).

• Revision 32, 2015-06-26 (James Jones)
  ◦ Minor adjustments to the language describing the behavior of “oldSwapchain”
  ◦ Fixed the version date on my previous two updates.

• Revision 33, 2015-06-26 (Jesse Hall)
  ◦ Add usage flags to VkSwapchainCreateInfoKHR

• Revision 34, 2015-06-26 (Ian Elliott)
  ◦ Rename vkQueuePresentKHR()'s 2nd parameter to “pPresentInfo”, for consistency with other functions.

• Revision 35, 2015-06-26 (Faith Ekstrand)
  ◦ Merged the VkRotationFlagBitsKHR and VkMirrorFlagBitsKHR enums into a single VkSurfaceTransformFlagBitsKHR enum.

• Revision 36, 2015-06-26 (Faith Ekstrand)
  ◦ Added a VkSurfaceTransformKHR enum that is not a bitmask. Each value in VkSurfaceTransformKHR corresponds directly to one of the bits in VkSurfaceTransformFlagBitsKHR so transforming from one to the other is easy. Having a separate enum means that currentTransform and preTransform are now unambiguous by definition.

• Revision 37, 2015-06-29 (Ian Elliott)
  ◦ Corrected one of the signatures of vkAcquireNextImageKHR, which had the last two parameters switched from what it is elsewhere in the specification and header files.

• Revision 38, 2015-06-30 (Ian Elliott)
  ◦ Corrected a typo in description of the vkGetSwapchainInfoKHR() function.
  ◦ Corrected a typo in header file comment for VkPresentInfoKHR::sType.

• Revision 39, 2015-07-07 (Daniel Rakos)
  ◦ Added error section describing when each error is expected to be reported.
  ◦ Replaced bool32_t with VkBool32.

• Revision 40, 2015-07-10 (Ian Elliott)
  ◦ Updated to work with version 138 of the vulkan.h header. This includes declaring the VkSwapchainKHR type using the new VK_DEFINE_NONDISP_HANDLE macro, and no longer extending VkObjectType (which was eliminated).

• Revision 41 2015-07-09 (Mathias Heyer)
  ◦ Added color space language.

• Revision 42, 2015-07-10 (Daniel Rakos)
  ◦ Updated query mechanism to reflect the convention changes done in the core spec.
Removed “queue” from the name of VK_STRUCTURE_TYPE_QUEUE_PRESENT_INFO_KHR to be consistent with the established naming convention.

Removed reference to the no longer existing VkObjectType enum.

**Revision 43, 2015-07-17 (Daniel Rakos)**
- Added support for concurrent sharing of swapchain images across queue families.
- Updated sample code based on recent changes

**Revision 44, 2015-07-27 (Ian Elliott)**
- Noted that support for VK_PRESENT_MODE_FIFO_KHR is required. That is ICDs may optionally support IMMEDIATE and MAILBOX, but must support FIFO.

**Revision 45, 2015-08-07 (Ian Elliott)**
- Corrected a typo in spec file (type and variable name had wrong case for the imageColorSpace member of the VkSwapchainCreateInfoKHR struct).
- Corrected a typo in header file (last parameter in PFN_vkGetSurfacePropertiesKHR was missing “KHR” at the end of type: VkSurfacePropertiesKHR).

**Revision 46, 2015-08-20 (Ian Elliott)**
- Renamed this extension and all of its enumerations, types, functions, etc. This makes it compliant with the proposed standard for Vulkan extensions.
- Switched from “revision” to “version”, including use of the VK_MAKE_VERSION macro in the header file.
- Made improvements to several descriptions.
- Changed the status of several issues from PROPOSED to RESOLVED, leaving no unresolved issues.
- Resolved several TODOs, did miscellaneous cleanup, etc.

**Revision 47, 2015-08-20 (Ian Elliott—porting a 2015-07-29 change from James Jones)**
- Moved the surface transform enums to VK_WSI_swapchain so they could be reused by VK_WSI_display.

**Revision 48, 2015-09-01 (James Jones)**
- Various minor cleanups.

**Revision 49, 2015-09-01 (James Jones)**
- Restore single-field revision number.

**Revision 50, 2015-09-01 (James Jones)**
- Update Example #4 to include code that illustrates how to use the oldSwapchain field.

**Revision 51, 2015-09-01 (James Jones)**
- Fix example code compilation errors.

**Revision 52, 2015-09-08 (Matthaeus G. Chajdas)**
- Corrected a typo.

**Revision 53, 2015-09-10 (Alon Or-bach)**
• Removed underscore from SWAP_CHAIN left in VK_STRUCTURE_TYPE_SWAPCHAIN_CREATE_INFO_KHR.

• Revision 54, 2015-09-11 (Jesse Hall)
  ◦ Described the execution and memory coherence requirements for image transitions to and from VK_IMAGE_LAYOUT_PRESENT_SOURCE_KHR.

• Revision 55, 2015-09-11 (Ray Smith)
  ◦ Added errors for destroying and binding memory to presentable images

• Revision 56, 2015-09-18 (James Jones)
  ◦ Added fence argument to vkAcquireNextImageKHR
  ◦ Added example of how to meter a host thread based on presentation rate.

• Revision 57, 2015-09-26 (Jesse Hall)
  ◦ Replace VkSurfaceDescriptionKHR with VkSurfaceKHR.
  ◦ Added issue 25 with agreed resolution.

• Revision 58, 2015-09-28 (Jesse Hall)
  ◦ Renamed from VK_EXT_KHR_device_swapchain to VK_EXT_KHR_swapchain.

• Revision 59, 2015-09-29 (Ian Elliott)
  ◦ Changed vkDestroySwapchainKHR() to return void.

• Revision 60, 2015-10-01 (Jeff Vigil)
  ◦ Added error result VK_ERROR_SURFACE_LOST_KHR.

• Revision 61, 2015-10-05 (Faith Ekstrand)
  ◦ Added the VkCompositeAlpha enum and corresponding structure fields.

• Revision 62, 2015-10-12 (Daniel Rakos)
  ◦ Added VK_PRESENT_MODE_FIFO_RELAXED_KHR.

• Revision 63, 2015-10-15 (Daniel Rakos)
  ◦ Moved surface capability queries to VK_EXT_KHR_surface.

• Revision 64, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_swapchain to VK_KHR_swapchain.

• Revision 65, 2015-10-28 (Ian Elliott)
  ◦ Added optional pResult member to VkPresentInfoKHR, so that per-swapchain results can be obtained from vkQueuePresentKHR().

• Revision 66, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to create and destroy functions.
  ◦ Updated resource transition language.
  ◦ Updated sample code.

• Revision 67, 2015-11-10 (Jesse Hall)
Add reserved flags bitmask to VkSwapchainCreateInfoKHR.
Modify naming and member ordering to match API style conventions, and so the VkSwapchainCreateInfoKHR image property members mirror corresponding VkImageCreateInfo members but with an ‘image’ prefix.
Make VkPresentInfoKHR::pResults non-const; it is an output array parameter.
Make pPresentInfo parameter to vkQueuePresentKHR const.

Revision 68, 2016-04-05 (Ian Elliott)

Moved the “validity” include for vkAcquireNextImage to be in its proper place, after the prototype and list of parameters.
Clarified language about presentable images, including how they are acquired, when applications can and cannot use them, etc. As part of this, removed language about “ownership” of presentable images, and replaced it with more-consistent language about presentable images being “acquired” by the application.

2016-08-23 (Ian Elliott)

Update the example code, to use the final API command names, to not have so many characters per line, and to split out a new example to show how to obtain function pointers. This code is more similar to the LunarG “cube” demo program.

2016-08-25 (Ian Elliott)

A note was added at the beginning of the example code, stating that it will be removed from future versions of the appendix.

Revision 69, 2017-09-07 (Tobias Hector)

Added interactions with Vulkan 1.1

Revision 70, 2017-10-06 (Ian Elliott)

Corrected interactions with Vulkan 1.1

Description

This extension allows processing of swapchain images as different formats to that used by the window system, which is particularly useful for switching between sRGB and linear RGB formats.

It adds a new swapchain creation flag that enables creating image views from presentable images with a different format than the one used to create the swapchain.

New Enum Constants

• VK_KHR_SWAPCHAIN_MUTABLE_FORMAT_EXTENSION_NAME
• VK_KHR_SWAPCHAIN_MUTABLE_FORMAT_SPEC_VERSION
• Extending VkSwapchainCreateFlagBitsKHR:
  • VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BITS_KHR
Issues

1) Are there any new capabilities needed?

**RESOLVED**: No. It is expected that all implementations exposing this extension support swapchain image format mutability.

2) Do we need a separate `VK_SWAPCHAIN_CREATE_EXTENDED_USAGE_BIT_KHR`?

**RESOLVED**: No. This extension requires `VK_KHR_maintenance2` and presentable images of swapchains created with `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR` are created internally in a way equivalent to specifying both `VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT` and `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR`.

3) Do we need a separate structure to allow specifying an image format list for swapchains?

**RESOLVED**: No. We simply use the same `VkImageFormatListCreateInfoKHR` structure introduced by `VK_KHR_image_format_list`. The structure is required to be included in the `pNext` chain of `VkSwapchainCreateInfoKHR` for swapchains created with `VK_SWAPCHAIN_CREATE_MUTABLE_FORMAT_BIT_KHR`.

• Tony Zlatinski, NVIDIA
• Daniel Rakos, RasterGrid

Description

This extension builds upon the VK_KHR_video_decode_queue extension by adding support for decoding elementary video stream sequences compliant with the H.264/AVC video compression standard.

Note
This extension was promoted to KHR from the provisional extension VK_EXT_video_decode_h264.

New Structures

• Extending VkVideoCapabilitiesKHR:
  ◦ VkVideoDecodeH264CapabilitiesKHR
• Extending VkVideoDecodeInfoKHR:
  ◦ VkVideoDecodeH264PictureInfoKHR
• Extending VkVideoProfileInfoKHR, VkQueryPoolCreateInfo:
  ◦ VkVideoDecodeH264ProfileInfoKHR
• Extending VkVideoReferenceSlotInfoKHR:
  ◦ VkVideoDecodeH264DpbSlotInfoKHR
• Extending VkVideoSessionParametersCreateInfoKHR:
  ◦ VkVideoDecodeH264SessionParametersCreateInfoKHR

• Extending VkVideoSessionParametersUpdateInfoKHR:
  ◦ VkVideoDecodeH264SessionParametersAddInfoKHR

New Enums

• VkVideoDecodeH264PictureLayoutFlagBitsKHR

New Bitmasks

• VkVideoDecodeH264PictureLayoutFlagsKHR

New Enum Constants

• VK_KHR_VIDEO_Decode_H264_EXTENSION_NAME
• VK_KHR_VIDEO_Decode_H264_SPEC_VERSION

• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_VIDEO_Decode_H264_CAPABILITIES_KHR
  ◦ VK_STRUCTURE_TYPE_VIDEO_Decode_H264_DPB_SLOT_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_VIDEO_Decode_H264_PICTURE_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_VIDEO_Decode_H264_PROFILE_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_VIDEO_Decode_H264_SESSION_PARAMETERS_ADD_INFO_KHR
  ◦ VK_STRUCTURE_TYPE_VIDEO_Decode_H264_SESSION_PARAMETERS_CREATE_INFO_KHR

• Extending VkVideoCodecOperationFlagBitsKHR:
  ◦ VK_VIDEO_CODEC_OPERATION_DECODE_H264_BIT_KHR

Version History

• Revision 1, 2018-6-11 (Peter Fang)
  ◦ Initial draft

• Revision 2, March 29 2021 (Tony Zlatinski)
  ◦ Spec and API Updates

• Revision 3, August 1 2021 (Srinath Kumarapuram)
  ◦ Rename VkVideoDecodeH264FieldLayoutFlagsEXT to VkVideoDecodeH264PictureLayoutFlagsEXT, VkVideoDecodeH264FieldLayoutFlagBitsEXT to VkVideoDecodeH264PictureLayoutFlagBitsEXT (along with the names of enumerants it defines), and VkVideoDecodeH264ProfileEXT.fieldLayout to VkVideoDecodeH264ProfileEXT.pictureLayout, following Vulkan naming conventions.

• Revision 4, 2022-03-16 (Ahmed Abdelkhalek)
• Relocate Std header version reporting/requesting from this extension to VK_KHR_video_queue extension.

• Remove the now empty VkVideoDecodeH264SessionCreateInfoEXT.

• Revision 5, 2022-03-31 (Ahmed Abdelkhalek)
  • Use type StdVideoH264Level for VkVideoDecodeH264Capabilities.maxLevel

• Revision 6, 2022-08-09 (Daniel Rakos)
  • Rename VkVideoDecodeH264ProfileEXT to VkVideoDecodeH264ProfileInfoEXT
  • Rename VkVideoDecodeH264MvcEXT to VkVideoDecodeH264MvcInfoEXT

• Revision 7, 2022-09-18 (Daniel Rakos)
  • Change type of VkVideoDecodeH264ProfileInfoEXT::pictureLayout to VkVideoDecodeH264PictureLayoutFlagBitsEXT
  • Remove MVC support and related VkVideoDecodeH264MvcInfoEXT structure
  • Rename spsStdCount, pSpsStd, ppsStdCount, and pPpsStd to stdSPSCount, pStdSPSs, stdPPSPCount, and pStdPPSSs, respectively, in VkVideoDecodeH264SessionParametersAddInfoEXT
  • Rename maxSpsStdCount and maxPpsStdCount to maxStdSPSCount and maxStdPPSCount, respectively, in VkVideoDecodeH264SessionParametersCreateInfoEXT
  • Rename slicesCount and pSlicesDataOffsets to sliceCount and pSliceOffsets, respectively, in VkVideoDecodeH264PictureInfoEXT

• Revision 8, 2022-09-29 (Daniel Rakos)
  • Change extension from EXT to KHR
  • Extension is no longer provisional

Description

This extension builds upon the `VK_KHR_video_queue` extension by adding common APIs specific to video decoding and thus enabling implementations to expose queue families supporting video decode operations.

More specifically, it adds video decode specific capabilities and a new command buffer command that allows recording video decode operations against a video session.

This extension is to be used in conjunction with other codec specific video decode extensions that enable decoding video sequences of specific video compression standards.

New Commands

- `vkCmdDecodeVideoKHR`

New Structures

- `VkVideoDecodeInfoKHR`
- Extending `VkVideoCapabilitiesKHR`:
  - `VkVideoDecodeCapabilitiesKHR`
- Extending `VkVideoProfileInfoKHR, VkQueryPoolCreateInfo`:
  - `VkVideoDecodeUsageInfoKHR`

New Enums

- `VkVideoDecodeCapabilityFlagBitsKHR`
- `VkVideoDecodeUsageFlagBitsKHR`

New Bitmasks

- `VkVideoDecodeCapabilityFlagsKHR`
- `VkVideoDecodeFlagsKHR`
New Enum Constants

- **VK_KHR_VIDEO_DECODE_QUEUE_EXTENSION_NAME**
- **VK_KHR_VIDEO_DECODE_QUEUE_SPEC_VERSION**

Extending **VkAccessFlagBits2**:
- **VK_ACCESS_2_VIDEO_DECODE_READ_BIT_KHR**
- **VK_ACCESS_2_VIDEO_DECODE_WRITE_BIT_KHR**

Extending **VkBufferUsageFlagBits**:
- **VK_BUFFER_USAGE_VIDEO_DECODE_DST_BIT_KHR**
- **VK_BUFFER_USAGE_VIDEO_DECODE_SRC_BIT_KHR**

Extending **VkFormatFeatureFlagBits**:
- **VK_FORMAT_FEATURE_VIDEO_DECODE_DPB_BIT_KHR**
- **VK_FORMAT_FEATURE_VIDEO_DECODE_OUTPUT_BIT_KHR**

Extending **VkImageLayout**:
- **VK_IMAGE_LAYOUT_VIDEO_DECODE_DPB_KHR**
- **VK_IMAGE_LAYOUT_VIDEO_DECODE_DST_KHR**
- **VK_IMAGE_LAYOUT_VIDEO_DECODE_SRC_KHR**

Extending **VkImageUsageFlagBits**:
- **VK_IMAGE_USAGE_VIDEO_DECODE_DPB_BIT_KHR**
- **VK_IMAGE_USAGE_VIDEO_DECODE_DST_BIT_KHR**
- **VK_IMAGE_USAGE_VIDEO_DECODE_SRC_BIT_KHR**

Extending **VkPipelineStageFlagBits2**:
- **VK_PIPELINE_STAGE_2_VIDEO_DECODE_BIT_KHR**

Extending **VkQueueFlagBits**:
- **VK_QUEUE_VIDEO_DECODE_BIT_KHR**

Extending **VkStructureType**:
- **VK_STRUCTURE_TYPE_VIDEO_DECODE_CAPABILITIES_KHR**
- **VK_STRUCTURE_TYPE_VIDEO_DECODE_INFO_KHR**
- **VK_STRUCTURE_TYPE_VIDEO_DECODE_USAGE_INFO_KHR**

If **VK_KHR_format_feature_flags2** is supported:

Extending **VkFormatFeatureFlagBits2**:
- **VK_FORMAT_FEATURE_2_VIDEO_DECODE_DPB_BIT_KHR**
- **VK_FORMAT_FEATURE_2_VIDEO_DECODE_OUTPUT_BIT_KHR**
Version History

• Revision 1, 2018-6-11 (Peter Fang)
  ◦ Initial draft
• Revision 1.5, Nov 09 2018 (Tony Zlatinski)
  ◦ API Updates
• Revision 1.6, Jan 08 2020 (Tony Zlatinski)
  ◦ API unify with the video_encode_queue spec
• Revision 1.7, March 29 2021 (Tony Zlatinski)
  ◦ Spec and API updates.
• Revision 2, September 30 2021 (Jon Leech)
  ◦ Add interaction with `VK_KHR_format_feature_flags2` to `vk.xml`
• Revision 3, 2022-02-25 (Ahmed Abdelkhalek)
  ◦ Add `VkVideoDecodeCapabilitiesKHR` with new flags to report support for decode DPB and output coinciding in the same image, or in distinct images.
• Revision 4, 2022-03-31 (Ahmed Abdelkhalek)
  ◦ Remove redundant `VkVideoDecodeInfoKHR.coded{Offset|Extent}`
• Revision 5, 2022-07-18 (Daniel Rakos)
  ◦ Remove `VkVideoDecodeFlagBitsKHR` as it contains no defined flags for now
• Revision 6, 2022-08-12 (Daniel Rakos)
  ◦ Add `VkVideoDecodeUsageInfoKHR` structure and related flags
• Revision 7, 2022-09-29 (Daniel Rakos)
  ◦ Extension is no longer provisional

• Daniel Rakos, RasterGrid

Description

This extension provides common APIs to enable exposing queue families with support for video codec operations by introducing the following new object types and related functionalities:

• Video session objects that represent and maintain the state needed to perform video codec operations.
• Video session parameters objects that act as a container for codec specific parameters.

In addition, it also introduces query commands that allow applications to determine video coding related capabilities, and command buffer commands that enable recording video coding operations against a video session.

This extension is to be used in conjunction with other extensions that enable specific video coding operations.
New Object Types

- VkVideoSessionKHR
- VkVideoSessionParametersKHR

New Commands

- vkBindVideoSessionMemoryKHR
- vkCmdBeginVideoCodingKHR
- vkCmdControlVideoCodingKHR
- vkCmdEndVideoCodingKHR
- vkCreateVideoSessionKHR
- vkCreateVideoSessionParametersKHR
- vkDestroyVideoSessionKHR
- vkDestroyVideoSessionParametersKHR
- vkGetPhysicalDeviceVideoCapabilitiesKHR
- vkGetPhysicalDeviceVideoFormatPropertiesKHR
- vkGetVideoSessionMemoryRequirementsKHR
- vkUpdateVideoSessionParametersKHR

New Structures

- VkBindVideoSessionMemoryInfoKHR
- VkPhysicalDeviceVideoFormatInfoKHR
- VkVideoBeginCodingInfoKHR
- VkVideoCapabilitiesKHR
- VkVideoCodingControlInfoKHR
- VkVideoEndCodingInfoKHR
- VkVideoFormatPropertiesKHR
- VkVideoPictureResourceInfoKHR
- VkVideoReferenceSlotInfoKHR
- VkVideoSessionCreateInfoKHR
- VkVideoSessionMemoryRequirementsKHR
- VkVideoSessionParametersCreateInfoKHR
- VkVideoSessionParametersUpdateInfoKHR
- Extending VkPhysicalDeviceImageFormatInfo2, VkPhysicalDeviceVideoFormatInfoKHR, VkImageCreateInfo, VkBufferCreateInfo:
  - VkVideoProfileListInfoKHR
• Extending `VkQueryPoolCreateInfo`:
  ◦ `VkVideoProfileInfoKHR`
• Extending `VkQueueFamilyProperties2`:
  ◦ `VkQueueFamilyQueryResultStatusPropertiesKHR`
  ◦ `VkQueueFamilyVideoPropertiesKHR`

**New Enums**

• `VkQueryResultStatusKHR`
• `VkVideoCapabilityFlagBitsKHR`
• `VkVideoChromaSubsamplingFlagBitsKHR`
• `VkVideoCodecOperationFlagBitsKHR`
• `VkVideoCodingControlFlagBitsKHR`
• `VkVideoComponentBitDepthFlagBitsKHR`
• `VkVideoSessionCreateFlagBitsKHR`

**New Bitmasks**

• `VkVideoBeginCodingFlagsKHR`
• `VkVideoCapabilityFlagsKHR`
• `VkVideoChromaSubsamplingFlagsKHR`
• `VkVideoCodecOperationFlagsKHR`
• `VkVideoCodingControlFlagsKHR`
• `VkVideoComponentBitDepthFlagsKHR`
• `VkVideoEndCodingFlagsKHR`
• `VkVideoSessionCreateFlagsKHR`
• `VkVideoSessionParametersCreateFlagsKHR`

**New Enum Constants**

• `VK_KHR_VIDEO_QUEUE_EXTENSION_NAME`
• `VK_KHR_VIDEO_QUEUE_SPEC_VERSION`

Extending `VkObjectType`:
  ◦ `VK_OBJECT_TYPE_VIDEO_SESSION_KHR`
  ◦ `VK_OBJECT_TYPE_VIDEO_SESSION_PARAMETERS_KHR`

Extending `VkQueryResultFlagBits`:
  ◦ `VK_QUERY_RESULT_WITH_STATUS_BIT_KHR`

Extending `VkQueryType`:
• Extending *VkResult*:
  - VK_ERROR_IMAGE_USAGE_NOT_SUPPORTED_KHR
  - VK_ERROR_VIDEO_PICTURE_LAYOUT_NOT_SUPPORTED_KHR
  - VK_ERROR_VIDEO_PROFILE_CODEC_NOT_SUPPORTED_KHR
  - VK_ERROR_VIDEO_PROFILE_FORMAT_NOT_SUPPORTED_KHR
  - VK_ERROR_VIDEO_PROFILE_OPERATION_NOT_SUPPORTED_KHR
  - VK_ERROR_VIDEO_STD_VERSION_NOT_SUPPORTED_KHR

• Extending *VkStructureType*:
  - VK_STRUCTURE_TYPE_BIND_VIDEO_SESSION_MEMORY_INFO_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_FORMAT_INFO_KHR
  - VK_STRUCTURE_TYPE_QUEUE_FAMILY_QUERY_RESULT_STATUS_PROPERTIES_KHR
  - VK_STRUCTURE_TYPE_QUEUE_FAMILY_VIDEO_PROPERTIES_KHR
  - VK_STRUCTURE_TYPE_VIDEO_BEGIN_CODING_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_CAPABILITIES_KHR
  - VK_STRUCTURE_TYPE_VIDEO_CODING_CONTROL_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_END_CODING_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_FORMAT_PROPERTIES_KHR
  - VK_STRUCTURE_TYPE_VIDEO_PICTURE_RESOURCE_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_PROFILE_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_PROFILE_LIST_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_REFERENCE_SLOT_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_SESSION_CREATE_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_SESSION_MEMORY_REQUIREMENTS_KHR
  - VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_CREATE_INFO_KHR
  - VK_STRUCTURE_TYPE_VIDEO_SESSION_PARAMETERS_UPDATE_INFO_KHR

**Version History**

• Revision 0.1, 2019-11-21 (Tony Zlatinski)
  - Initial draft

• Revision 0.2, 2019-11-27 (Tony Zlatinski)
  - Make vulkan video core common between decode and encode

• Revision 1, March 29 2021 (Tony Zlatinski)
  - Spec and API updates.

• Revision 2, August 1 2021 (Srinath Kumarapuram)
- Rename `VkVideoCapabilitiesFlagBitsKHR` to `VkVideoCapabilityFlagBitsKHR` (along with the names of enumerants it defines) and `VkVideoCapabilitiesFlagsKHR` to `VkVideoCapabilityFlagsKHR`, following Vulkan naming conventions.

- Revision 3, 2022-03-16 (Ahmed Abdelkhalek)
  - Relocate Std header version reporting/requesting from codec-operation specific extensions to this extension.
  - Make Std header versions codec-operation specific instead of only codec-specific.

- Revision 4, 2022-05-30 (Daniel Rakos)
  - Refactor the video format query APIs and related language
  - Extend `VkResult` with video-specific error codes

- Revision 5, 2022-08-11 (Daniel Rakos)
  - Add `VkVideoSessionParametersCreateFlagsKHR`
  - Remove `VkVideoCodingQualityPresetFlagsKHR`
  - Rename `VkQueueFamilyQueryResultStatusProperties2KHR` to `VkQueueFamilyQueryResultStatusPropertiesKHR`
  - Rename `VkVideoQueueFamilyProperties2KHR` to `VkQueueFamilyVideoPropertiesKHR`
  - Rename `VkVideoProfileKHR` to `VkVideoProfileInfoKHR`
  - Rename `VkVideoProfilesKHR` to `VkVideoProfileListInfoKHR`
  - Rename `VkVideoGetMemoryPropertiesKHR` to `VkVideoSessionMemoryRequirementsKHR`
  - Rename `VkVideoBindMemoryKHR` to `VkBindVideoSessionMemoryInfoKHR`
  - Fix `pNext` constness of `VkPhysicalDeviceVideoFormatInfoKHR` and `VkVideoSessionMemoryRequirementsKHR`
  - Fix incorrectly named value enums in bit enum types `VkVideoCodecOperationFlagBitsKHR` and `VkVideoChromaSubsamplingFlagBitsKHR`
  - Remove unnecessary default values from `VkVideoSessionCreateFlagBitsKHR` and `VkVideoCodingControlFlagBitsKHR`
  - Eliminate nested pointer in `VkVideoSessionMemoryRequirementsKHR`
  - Rename `VkVideoPictureResourceKHR` to `VkVideoPictureResourceInfoKHR`
  - Rename `VkVideoReferenceSlotKHR` to `VkVideoReferenceSlotInfoKHR`

- Revision 6, 2022-09-18 (Daniel Rakos)
  - Rename the `maxReferencePicturesSlotsCount` and `maxReferencePicturesActiveCount` fields of `VkVideoCapabilitiesKHR` and `VkVideoSessionCreateInfoKHR` to `maxDpbSlots` and `maxActiveReferencePictures`, respectively, to clarify their meaning
  - Rename `capabilityFlags` to `flags` in `VkVideoCapabilitiesKHR`
  - Rename `videoPictureExtentGranularity` to `pictureAccessGranularity` in `VkVideoCapabilitiesKHR`
  - Rename `minExtent` and `maxExtent` to `minCodedExtent` and `maxCodedExtent`, respectively, in `VkVideoCapabilitiesKHR`
• Rename `referencePicturesFormat` to `referencePictureFormat` in `VkVideoSessionCreateInfoKHR`.

• Revision 7, 2022-09-26 (Daniel Rakos)
  ◦ Change type of `VkVideoReferenceSlotInfoKHR::slotIndex` from `int8_t` to `int32_t`.

• Revision 8, 2022-09-29 (Daniel Rakos)
  ◦ Extension is no longer provisional.

Description

The VK_KHR_wayland_surface extension is an instance extension. It provides a mechanism to create a VkSurfaceKHR object (defined by the VK_KHR_surface extension) that refers to a Wayland wl_surface, as well as a query to determine support for rendering to a Wayland compositor.

New Commands

- vkCreateWaylandSurfaceKHR
- vkGetPhysicalDeviceWaylandPresentationSupportKHR

New Structures

- VkWaylandSurfaceCreateInfoKHR

New Bitmasks

- VkWaylandSurfaceCreateFlagsKHR

New Enum Constants

- VK_KHR_WAYLAND_SURFACE_EXTENSION_NAME
- VK_KHR_WAYLAND_SURFACE_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_WAYLAND_SURFACE_CREATE_INFO_KHR

Issues

1) Does Wayland need a way to query for compatibility between a particular physical device and a specific Wayland display? This would be a more general query than vkGetPhysicalDeviceSurfaceSupportKHR: if the Wayland-specific query returned VK_TRUE for a
(VkPhysicalDevice, struct wl_display*) pair, then the physical device could be assumed to support presentation to any VkSurfaceKHR for surfaces on the display.

**RESOLVED**: Yes. vkGetPhysicalDeviceWaylandPresentationSupportKHR was added to address this issue.

2) Should we require surfaces created with vkCreateWaylandSurfaceKHR to support the VK_PRESENT_MODE_MAILBOX_KHR present mode?

**RESOLVED**: Yes. Wayland is an inherently mailbox window system and mailbox support is required for some Wayland compositor interactions to work as expected. While handling these interactions may be possible with VK_PRESENT_MODE_FIFO_KHR, it is much more difficult to do without deadlock and requiring all Wayland applications to be able to support implementations which only support VK_PRESENT_MODE_FIFO_KHR would be an onerous restriction on application developers.

**Version History**

- **Revision 1, 2015-09-23 (Jesse Hall)**
  - Initial draft, based on the previous contents of VK_EXT_KHR_swapchain (later renamed VK_EXT_KHR_surface).
- **Revision 2, 2015-10-02 (James Jones)**
  - Added vkGetPhysicalDeviceWaylandPresentationSupportKHR() to resolve issue #1.
  - Adjusted wording of issue #1 to match the agreed-upon solution.
  - Renamed “window” parameters to “surface” to match Wayland conventions.
- **Revision 3, 2015-10-26 (Ian Elliott)**
  - Renamed from VK_EXT_KHR_wayland_surface to VK_KHR_wayland_surface.
- **Revision 4, 2015-11-03 (Daniel Rakos)**
  - Added allocation callbacks to vkCreateWaylandSurfaceKHR.
- **Revision 5, 2015-11-28 (Daniel Rakos)**
  - Updated the surface create function to take a pCreateInfo structure.
- **Revision 6, 2017-02-08 (Faith Ekstrand)**
  - Added the requirement that implementations support VK_PRESENT_MODE_MAILBOX_KHR.
  - Added wording about interactions between vkQueuePresentKHR and the Wayland requests sent to the compositor.

Description

Applications that wish to import Direct3D 11 memory objects into the Vulkan API may wish to use the native keyed mutex mechanism to synchronize access to the memory between Vulkan and Direct3D. This extension provides a way for an application to access the keyed mutex associated with an imported Vulkan memory object when submitting command buffers to a queue.

New Structures

• Extending VkSubmitInfo, VkSubmitInfo2:
  ◦ VkWin32KeyedMutexAcquireReleaseInfoKHR

New Enum Constants

• VK_KHR_WIN32_KEYED_MUTEX_EXTENSION_NAME
• VK_KHR_WIN32_KEYED_MUTEX_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_WIN32_KEYED_MUTEX_ACQUIRE_RELEASE_INFO_KHR

Description

The `VK_KHR_win32_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to a Win32 `HWND`, as well as a query to determine support for rendering to the windows desktop.

New Commands

- `vkCreateWin32SurfaceKHR`
- `vkGetPhysicalDeviceWin32PresentationSupportKHR`

New Structures

- `VkWin32SurfaceCreateInfoKHR`

New Bitmasks

- `VkWin32SurfaceCreateFlagsKHR`

New Enum Constants

- `VK_KHR_WIN32_SURFACE_EXTENSION_NAME`
- `VK_KHR_WIN32_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_WIN32_SURFACE_CREATE_INFO_KHR`

Issues

1) Does Win32 need a way to query for compatibility between a particular physical device and a specific screen? Compatibility between a physical device and a window generally only depends on what screen the window is on. However, there is not an obvious way to identify a screen without already having a window on the screen.

**RESOLVED**: No. While it may be useful, there is not a clear way to do this on Win32. However, a
method was added to query support for presenting to the windows desktop as a whole.

2) If a native window object (HWND) is used by one graphics API, and then is later used by a different graphics API (one of which is Vulkan), can these uses interfere with each other?

**RESOLVED**: Yes.

Uses of a window object by multiple graphics APIs results in undefined behavior. Such behavior may succeed when using one Vulkan implementation but fail when using a different Vulkan implementation. Potential failures include:

- Creating then destroying a flip presentation model DXGI swapchain on a window object can prevent `vkCreateSwapchainKHR` from succeeding on the same window object.
- Creating then destroying a `VkSwapchainKHR` on a window object can prevent creation of a bitblt model DXGI swapchain on the same window object.
- Creating then destroying a `VkSwapchainKHR` on a window object can effectively `SetPixelFormat` to a different format than the format chosen by an OpenGL application.
- Creating then destroying a `VkSwapchainKHR` on a window object on one `VkPhysicalDevice` can prevent `vkCreateSwapchainKHR` from succeeding on the same window object, but on a different `VkPhysicalDevice` that is associated with a different Vulkan ICD.

In all cases the problem can be worked around by creating a new window object.

Technical details include:

- Creating a DXGI swapchain over a window object can alter the object for the remainder of its lifetime. The alteration persists even after the DXGI swapchain has been destroyed. This alteration can make it impossible for a conformant Vulkan implementation to create a `VkSwapchainKHR` over the same window object. Mention of this alteration can be found in the remarks section of the MSDN documentation for `DXGI_SWAP_EFFECT`.
- Calling GDI’s `SetPixelFormat` (needed by OpenGL’s WGL layer) on a window object alters the object for the remainder of its lifetime. The MSDN documentation for `SetPixelFormat` explains that a window object's pixel format can be set only one time.
- Creating a `VkSwapchainKHR` over a window object can alter the object for its remaining lifetime. Either of the above alterations may occur as a side effect of `vkCreateSwapchainKHR`.

**Version History**

- Revision 1, 2015-09-23 (Jesse Hall)
  ◦ Initial draft, based on the previous contents of VK_EXT_KHR_swapchain (later renamed VK_EXT_KHR_surface).
- Revision 2, 2015-10-02 (James Jones)
  ◦ Added presentation support query for win32 desktops.
- Revision 3, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_win32_surface to VK_KHR_win32_surface.
• Revision 4, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to vkCreateWin32SurfaceKHR.

• Revision 5, 2015-11-28 (Daniel Rakos)
  ◦ Updated the surface create function to take a pCreateInfo structure.

• Revision 6, 2017-04-24 (Jeff Juliano)
  ◦ Add issue 2 addressing reuse of a native window object in a different Graphics API, or by a different Vulkan ICD.

**Interactions and External Dependencies**

• This extension requires SPV_KHR_workgroup_memory_explicit_layout

• This extension provides API support for GL_EXT_shared_memory_block

**Contributors**

• Caio Marcelo de Oliveira Filho, Intel

• Jeff Bolz, NVIDIA
Description

This extension adds Vulkan support for the `SPV_KHR_workgroup_memory_explicit_layout` SPIR-V extension, which allows shaders to explicitly define the layout of `Workgroup` storage class memory and create aliases between variables from that storage class in a compute shader.

The aliasing feature allows different “views” on the same data, so the shader can bulk copy data from another storage class using one type (e.g. an array of large vectors), and then use the data with a more specific type. It also enables reducing the amount of workgroup memory consumed by allowing the shader to alias data whose lifetimes do not overlap.

The explicit layout support and some form of aliasing is also required for layering OpenCL on top of Vulkan.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceWorkgroupMemoryExplicitLayoutFeaturesKHR`

New Enum Constants

- `VK_KHR_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_EXTENSION_NAME`
- `VK_KHR_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_SPEC_VERSION`

Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_WORKGROUP_MEMORY_EXPLICIT_LAYOUT_FEATURES_KHR`

New SPIR-V Capabilities

- `WorkgroupMemoryExplicitLayoutKHR`
- `WorkgroupMemoryExplicitLayout8BitAccessKHR`
- `WorkgroupMemoryExplicitLayout16BitAccessKHR`

Version History

- Revision 1, 2020-06-01 (Caio Marcelo de Oliveira Filho)
  - Initial version

Description

The `VK_KHR_xcb_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an X11 Window, using the XCB client-side library, as well as a query to determine support for rendering via XCB.

New Commands

- `vkCreateXcbSurfaceKHR`
- `vkGetPhysicalDeviceXcbPresentationSupportKHR`

New Structures

- `VkXcbSurfaceCreateInfoKHR`

New Bitmasks

- `VkXcbSurfaceCreateFlagsKHR`

New Enum Constants

- `VK_KHR_XCB_SURFACE_EXTENSION_NAME`
- `VK_KHR_XCB_SURFACE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_XCB_SURFACE_CREATE_INFO_KHR`

Issues

1) Does XCB need a way to query for compatibility between a particular physical device and a specific screen? This would be a more general query than `vkGetPhysicalDeviceSurfaceSupportKHR`: If it returned `VK_TRUE`, then the physical device could be assumed to support presentation to any window on that screen.

**RESOLVED**: Yes, this is needed for toolkits that want to create a `VkDevice` before creating a window. To ensure the query is reliable, it must be made against a particular X visual rather than the screen in general.

Version History

- Revision 1, 2015-09-23 (Jesse Hall)
  - Initial draft, based on the previous contents of `VK_EXT_KHR_swapchain` (later renamed `VK_EXT_KHR_surface`).
- Revision 2, 2015-10-02 (James Jones)
• Added presentation support query for an (xcb_connection_t*, xcb_visualid_t) pair.
• Removed “root” parameter from CreateXcbSurfaceKHR(), as it is redundant when a window on the same screen is specified as well.
• Adjusted wording of issue #1 and added agreed upon resolution.

• Revision 3, 2015-10-14 (Ian Elliott)
  • Removed “root” parameter from CreateXcbSurfaceKHR() in one more place.
• Revision 4, 2015-10-26 (Ian Elliott)
  • Renamed from VK_EXT_KHR xcb_surface to VK_KHR xcb_surface.
• Revision 5, 2015-10-23 (Daniel Rakos)
  • Added allocation callbacks to vkCreateXcbSurfaceKHR.
• Revision 6, 2015-11-28 (Daniel Rakos)
  • Updated the surface create function to take a pCreateInfo structure.

Description

The `VK_KHR_xlib_surface` extension is an instance extension. It provides a mechanism to create a `VkSurfaceKHR` object (defined by the `VK_KHR_surface` extension) that refers to an X11 Window, using the Xlib client-side library, as well as a query to determine support for rendering via Xlib.

New Commands

- `vkCreateXlibSurfaceKHR`
- `vkGetPhysicalDeviceXlibPresentationSupportKHR`

New Structures

- `VkXlibSurfaceCreateInfoKHR`

New Bitmasks

- `VkXlibSurfaceCreateFlagsKHR`

New Enum Constants

- `VK_KHR_XLIB_SURFACE_EXTENSION_NAME`
- `VK_KHR_XLIB_SURFACE_SPEC_VERSION`
• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_XLIB_SURFACE_CREATE_INFO_KHR`

**Issues**

1) Does X11 need a way to query for compatibility between a particular physical device and a specific screen? This would be a more general query than `vkGetPhysicalDeviceSurfaceSupportKHR`; if it returned `VK_TRUE`, then the physical device could be assumed to support presentation to any window on that screen.

**RESOLVED**: Yes, this is needed for toolkits that want to create a `VkDevice` before creating a window. To ensure the query is reliable, it must be made against a particular X visual rather than the screen in general.

**Version History**

• Revision 1, 2015-09-23 (Jesse Hall)
  ◦ Initial draft, based on the previous contents of VK_EXT_KHR_swapchain (later renamed VK_EXT_KHR_surface).

• Revision 2, 2015-10-02 (James Jones)
  ◦ Added presentation support query for (Display*, VisualID) pair.
  ◦ Removed “root” parameter from CreateXlibSurfaceKHR(), as it is redundant when a window on the same screen is specified as well.
  ◦ Added appropriate X errors.
  ◦ Adjusted wording of issue #1 and added agreed upon resolution.

• Revision 3, 2015-10-14 (Ian Elliott)
  ◦ Renamed this extension from VK_EXT_KHR_x11_surface to VK_EXT_KHR_xlib_surface.

• Revision 4, 2015-10-26 (Ian Elliott)
  ◦ Renamed from VK_EXT_KHR_xlib_surface to VK_KHR_xlib_surface.

• Revision 5, 2015-11-03 (Daniel Rakos)
  ◦ Added allocation callbacks to vkCreateXlibSurfaceKHR.

• Revision 6, 2015-11-28 (Daniel Rakos)
  ◦ Updated the surface create function to take a pCreateInfo structure.

- Daniel Vetter, Intel
Description

This extension allows an application to take exclusive control on a display currently associated with an X11 screen. When control is acquired, the display will be deassociated from the X11 screen until control is released or the specified display connection is closed. Essentially, the X11 screen will behave as if the monitor has been unplugged until control is released.

New Commands

- vkAcquireXlibDisplayEXT
- vkGetRandROutputDisplayEXT

New Enum Constants

- VK_EXT_ACQUIRE_XLIB_DISPLAY_EXTENSION_NAME
- VK_EXT_ACQUIRE_XLIB_DISPLAY_SPEC_VERSION

Issues

1) Should vkAcquireXlibDisplayEXT take an RandR display ID, or a Vulkan display handle as input?

**RESOLVED:** A Vulkan display handle. Otherwise there would be no way to specify handles to displays that had been prevented from being included in the X11 display list by some native platform or vendor-specific mechanism.

2) How does an application figure out which RandR display corresponds to a Vulkan display?

**RESOLVED:** A new function, vkGetRandROutputDisplayEXT, is introduced for this purpose.

3) Should vkGetRandROutputDisplayEXT be part of this extension, or a general Vulkan / RandR or Vulkan / Xlib extension?

**RESOLVED:** To avoid yet another extension, include it in this extension.

Version History

- Revision 1, 2016-12-13 (James Jones)
  - Initial draft

VK_EXT_astc_decode_mode

Name String

VK_EXT_astc_decode_mode

Extension Type

Device extension
Description

The existing specification requires that low dynamic range (LDR) ASTC textures are decompressed to FP16 values per component. In many cases, decompressing LDR textures to a lower precision intermediate result gives acceptable image quality. Source material for LDR textures is typically authored as 8-bit UNORM values, so decoding to FP16 values adds little value. On the other hand, reducing precision of the decoded result reduces the size of the decompressed data, potentially improving texture cache performance and saving power.

The goal of this extension is to enable this efficiency gain on existing ASTC texture data. This is achieved by giving the application the ability to select the intermediate decoding precision.

Three decoding options are provided:

- **Decode to** `VK_FORMAT_R16G16B16A16_SFLOAT` precision: This is the default, and matches the required behavior in the core API.
- **Decode to** `VK_FORMAT_R8G8B8A8_UNORM` precision: This is provided as an option in LDR mode.
- **Decode to** `VK_FORMAT_E5B9G9R9_UFLOAT_PACK32` precision: This is provided as an option in both LDR and HDR mode. In this mode, negative values cannot be represented and are clamped to zero. The alpha component is ignored, and the results are as if alpha was 1.0. This decode mode is optional and support can be queried via the physical device properties.
New Structures

- Extending `VkImageViewCreateInfo`:
  - `VkImageViewASTCDecodeModeEXT`
- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceASTCDecodeFeaturesEXT`

New Enum Constants

- `VK_EXT_ASTC_DECODE_MODE_EXTENSION_NAME`
- `VK_EXT_ASTC_DECODE_MODE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ASTC_DECODE_FEATURES_EXT`

Issues

1) Are implementations allowed to decode at a higher precision than what is requested?

RESOLUTION: No.
If we allow this, then this extension could be exposed on all implementations that support ASTC.
But developers would have no way of knowing what precision was actually used, and thus whether the image quality is sufficient at reduced precision.

2) Should the decode mode be image view state and/or sampler state?

RESOLUTION: Image view state only.
Some implementations treat the different decode modes as different texture formats.

Example

Create an image view that decodes to `VK_FORMAT_R8G8B8A8_UNORM` precision:

```c
VkImageViewASTCDecodeModeEXT decodeMode =
{
   VK_STRUCTURE_TYPE_IMAGE_VIEW_ASTC_DECODE_MODE_EXT, // sType
   NULL, // pNext
   VK_FORMAT_R8G8B8A8_UNORM // decode mode
};

VkImageViewCreateInfo createInfo =
```
VK_STRUCTURE_TYPE_IMAGE_VIEW_CREATE_INFO, // sType
&decodeMode, // pNext
// flags, image, viewType set to application-desired values
VK_FORMAT_ASTC_8x8_UNORM_BLOCK, // format
// components, subresourceRange set to application-desired values

};

VkImageView imageView;
VkResult result = vkCreateImageView(
    device,
    &createInfo,
    NULL,
    &imageView);

Device extension

Registered Extension Number

149
Description

This extension adds a number of “advanced” blending operations that can be used to perform new color blending operations, many of which are more complex than the standard blend modes provided by unextended Vulkan. This extension requires different styles of usage, depending on the level of hardware support and the enabled features:

• If VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT::advancedBlendCoherentOperations is VK_FALSE, the new blending operations are supported, but a memory dependency must separate each advanced blend operation on a given sample. VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT is used to synchronize reads using advanced blend operations.

• If VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT::advancedBlendCoherentOperations is VK_TRUE, advanced blend operations obey primitive order just like basic blend operations.

In unextended Vulkan, the set of blending operations is limited, and can be expressed very simply. The VK_BLEND_OP_MIN and VK_BLEND_OP_MAX blend operations simply compute component-wise minimums or maximums of source and destination color components. The VK_BLEND_OP_ADD, VK_BLEND_OP_SUBTRACT, and VK_BLEND_OP_REVERSE_SUBTRACT modes multiply the source and destination colors by source and destination factors and either add the two products together or subtract one from the other. This limited set of operations supports many common blending operations but precludes the use of more sophisticated transparency and blending operations commonly available in many dedicated imaging APIs.

This extension provides a number of new “advanced” blending operations. Unlike traditional blending operations using VK_BLEND_OP_ADD, these blending equations do not use source and
destination factors specified by \texttt{VkBlendFactor}. Instead, each blend operation specifies a complete equation based on the source and destination colors. These new blend operations are used for both RGB and alpha components; they \textbf{must} not be used to perform separate RGB and alpha blending (via different values of color and alpha \texttt{VkBlendOp}).

These blending operations are performed using premultiplied colors, where RGB colors \textbf{can} be considered premultiplied or non-premultiplied by alpha, according to the \texttt{srcPremultiplied} and \texttt{dstPremultiplied} members of \texttt{VkPipelineColorBlendAdvancedStateCreateInfoEXT}. If a color is considered non-premultiplied, the (R,G,B) color components are multiplied by the alpha component prior to blending. For non-premultiplied color components in the range \([0,1]\), the corresponding premultiplied color component would have values in the range \([0 \times A, 1 \times A]\).

Many of these advanced blending equations are formulated where the result of blending source and destination colors with partial coverage have three separate contributions: from the portions covered by both the source and the destination, from the portion covered only by the source, and from the portion covered only by the destination. The blend parameter \texttt{VkPipelineColorBlendAdvancedStateCreateInfoEXT::blendOverlap} \textbf{can} be used to specify a correlation between source and destination pixel coverage. If set to \texttt{VK_BLEND_OVERLAP_CONJOINT_EXT}, the source and destination are considered to have maximal overlap, as would be the case if drawing two objects on top of each other. If set to \texttt{VK_BLEND_OVERLAP_DISJOINT_EXT}, the source and destination are considered to have minimal overlap, as would be the case when rendering a complex polygon tessellated into individual non-intersecting triangles. If set to \texttt{VK_BLEND_OVERLAP_UNCORRELATED_EXT}, the source and destination coverage are assumed to have no spatial correlation within the pixel.

In addition to the coherency issues on implementations not supporting \texttt{advancedBlendCoherentOperations}, this extension has several limitations worth noting. First, the new blend operations have a limit on the number of color attachments they \textbf{can} be used with, as indicated by \texttt{VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT::advancedBlendMaxColorAttachments}. Additionally, blending precision \textbf{may} be limited to 16-bit floating-point, which \textbf{may} result in a loss of precision and dynamic range for framebuffer formats with 32-bit floating-point components, and in a loss of precision for formats with 12- and 16-bit signed or unsigned normalized integer components.

\textbf{New Structures}

- Extending \texttt{VkPhysicalDeviceFeatures2, VkDeviceCreateInfo}:
  - \texttt{VkPhysicalDeviceBlendOperationAdvancedFeaturesEXT}

- Extending \texttt{VkPhysicalDeviceProperties2}:
  - \texttt{VkPhysicalDeviceBlendOperationAdvancedPropertiesEXT}

- Extending \texttt{VkPipelineColorBlendStateCreateInfo}:
  - \texttt{VkPipelineColorBlendAdvancedStateCreateInfoEXT}

\textbf{New Enums}

- \texttt{VkBlendOverlapEXT}
New Enum Constants

- VK_EXT_BLEND_OPERATION_ADVANCED_EXTENSION_NAME
- VK_EXT_BLEND_OPERATION_ADVANCED_SPEC_VERSION

Extending VkAccessFlagBits:
- VK_ACCESS_COLOR_ATTACHMENT_READ_NONCOHERENT_BIT_EXT

Description

After the publication of VK_EXT_custom_border_color, it was discovered that some implementations had undefined behavior when combining a sampler that uses a custom border color with image views whose component mapping is not the identity mapping.

Since VK_EXT_custom_border_color has already shipped, this new extension VK_EXT_border_color_swizzle was created to define the interaction between custom border colors and non-identity image view swizzles, and provide a work-around for implementations that must pre-swizzle the sampler border color to match the image view component mapping it is combined
This extension also defines the behavior between samplers with an opaque black border color and image views with a non-identity component swizzle, which was previously left undefined.

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceBorderColorSwizzleFeaturesEXT`
- Extending `VkSamplerCreateInfo`:
  - `VkSamplerBorderColorComponentMappingCreateInfoEXT`

**New Enum Constants**

- `VK_EXT_BORDER_COLOR_SWIZZLE_EXTENSION_NAME`
- `VK_EXT_BORDER_COLOR_SWIZZLE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_BORDER_COLOR_SWIZZLE_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_SAMPLER_BORDER_COLOR_COMPONENT_MAPPING_CREATE_INFO_EXT`

**Issues**

None.

Description

This extension allows for selectively enabling and disabling writes to output color attachments via a pipeline dynamic state.

The intended use cases for this new state are mostly identical to those of colorWriteMask, such as selectively disabling writes to avoid feedback loops between subpasses or bandwidth savings for unused outputs. By making the state dynamic, one additional benefit is the ability to reduce pipeline counts and pipeline switching via shaders that write a superset of the desired data of which subsets are selected dynamically. The reason for a new state, colorWriteEnable, rather than making colorWriteMask dynamic is that, on many implementations, the more flexible per-component semantics of the colorWriteMask state cannot be made dynamic in a performant manner.

New Commands

- vkCmdSetColorWriteEnableEXT

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceColorWriteEnableFeaturesEXT
- Extending VkPipelineColorBlendStateCreateInfo:
  - VkPipelineColorWriteCreateInfoEXT

New Enum Constants

- VK_EXT_COLOR_WRITE_ENABLE_EXTENSION_NAME
- VK_EXT_COLOR_WRITE_ENABLE_SPEC_VERSION
- Extending VkDynamicState:
  - VK_DYNAMIC_STATE_COLOR_WRITE_ENABLE_EXT
- Extending VkStructureType:

Description

This extension allows the execution of one or more rendering commands to be conditional on a value in buffer memory. This may help an application reduce the latency by conditionally discarding rendering commands without application intervention. The conditional rendering commands are limited to draws, compute dispatches and clearing attachments within a conditional rendering block.
New Commands

- vkCmdBeginConditionalRenderingEXT
- vkCmdEndConditionalRenderingEXT

New Structures

- VkConditionalRenderingBeginInfoEXT
- Extending VkCommandBufferInheritanceInfo:
  - VkCommandBufferInheritanceConditionalRenderingInfoEXT
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceConditionalRenderingFeaturesEXT

New Enums

- VkConditionalRenderingFlagBitsEXT

New Bitmasks

- VkConditionalRenderingFlagsEXT

New Enum Constants

- VK_EXT_CONDITIONAL_RENDERING_EXTENSION_NAME
- VK_EXT_CONDITIONAL_RENDERING_SPEC_VERSION
- Extending VkAccessFlagBits:
  - VK_ACCESS_CONDITIONAL_RENDERING_READ_BIT_EXT
- Extending VkBufferUsageFlagBits:
  - VK_BUFFER_USAGE_CONDITIONAL_RENDERING_BIT_EXT
- Extending VkPipelineStageFlagBits:
  - VK_PIPELINE_STAGE_CONDITIONAL_RENDERING_BIT_EXT
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_COMMAND_BUFFER_INHERITANCE_CONDITIONAL_RENDERING_INFO_EXT
  - VK_STRUCTURE_TYPE_CONDITIONAL_RENDERING_BEGIN_INFO_EXT
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONDITIONAL_RENDERING_FEATURES_EXT

Issues

1) Should conditional rendering affect copy and blit commands?

Resolved: Conditional rendering should not affect copies and blits.

2) Should secondary command buffers be allowed to execute while conditional rendering is active
in the primary command buffer?

**RESOLVED**: The rendering commands in secondary command buffer will be affected by an active conditional rendering in primary command buffer if the `conditionalRenderingEnable` is set to `VK_TRUE`. Conditional rendering must not be active in the primary command buffer if `conditionalRenderingEnable` is `VK_FALSE`.

**Examples**

None.

**Version History**

- Revision 1, 2018-04-19 (Vikram Kushwaha)
  - First Version
- Revision 2, 2018-05-21 (Vikram Kushwaha)
  - Add new pipeline stage, access flags and limit conditional rendering to a subpass or entire render pass.

Description

This extension adds a new rasterization mode called conservative rasterization. There are two modes of conservative rasterization; overestimation and underestimation.

When overestimation is enabled, if any part of the primitive, including its edges, covers any part of the rectangular pixel area, including its sides, then a fragment is generated with all coverage samples turned on. This extension allows for some variation in implementations by accounting for differences in overestimation, where the generating primitive size is increased at each of its edges by some sub-pixel amount to further increase conservative pixel coverage. Implementations can allow the application to specify an extra overestimation beyond the base overestimation the implementation already does. It also allows implementations to either cull degenerate primitives or rasterize them.

When underestimation is enabled, fragments are only generated if the rectangular pixel area is fully covered by the generating primitive. If supported by the implementation, when a pixel rectangle is fully covered the fragment shader input variable builtin called `FullyCoveredEXT` is set to true. The shader variable works in either overestimation or underestimation mode.

Implementations can process degenerate triangles and lines by either discarding them or generating conservative fragments for them. Degenerate triangles are those that end up with zero area after the rasterizer quantizes them to the fixed-point pixel grid. Degenerate lines are those with zero length after quantization.
New Structures

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceConservativeRasterizationPropertiesEXT`

- Extending `VkPipelineRasterizationStateCreateInfo`:
  - `VkPipelineRasterizationConservativeStateCreateInfoEXT`

New Enums

- `VkConservativeRasterizationModeEXT`

New Bitmasks

- `VkPipelineRasterizationConservativeStateCreateFlagsEXT`

New Enum Constants

- `VK_EXT_CONSERVATIVE_RASTERIZATION_EXTENSION_NAME`
- `VK_EXT_CONSERVATIVE_RASTERIZATION_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CONSERVATIVE_RASTERIZATION_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_CONSERVATIVE_STATE_CREATE_INFO_EXT`

New Built-In Variables

- `FullyCoveredEXT`

New SPIR-V Capabilities

- `FragmentFullyCoveredEXT`

Version History

- Revision 1.1, 2020-09-06 (Piers Daniell)
  - Add missing SPIR-V and GLSL dependencies.

- Revision 1, 2017-08-28 (Piers Daniell)
  - Internal revisions

Description

This extension provides cross-vendor functionality to specify a custom border color for use when the sampler address mode `VK_SAMPLER_ADDRESS_MODE_CLAMP_TO_BORDER` is used.

To create a sampler which uses a custom border color set `VkSamplerCreateInfo::borderColor` to one of:

- `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
- `VK_BORDER_COLOR_INT_CUSTOM_EXT`

When `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` or `VK_BORDER_COLOR_INT_CUSTOM_EXT` is used, applications must provide a `VkSamplerCustomBorderColorCreateInfoEXT` in the `pNext` chain for `VkSamplerCreateInfo`.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceCustomBorderColorFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceCustomBorderColorPropertiesEXT`
- Extending `VkSamplerCreateInfo`:
  - `VkSamplerCustomBorderColorCreateInfoEXT`

New Enum Constants

- `VK_EXT_CUSTOM_BORDER_COLOR_EXTENSION_NAME`
- `VK_EXT_CUSTOM_BORDER_COLOR_SPEC_VERSION`

Extending `VkBorderColor`:

- `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT`
- `VK_BORDER_COLOR_INT_CUSTOM_EXT`

Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_FEATURES_EXT`
- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CUSTOM_BORDER_COLOR_PROPERTIES_EXT`
- `VK_STRUCTURE_TYPE_SAMPLER_CUSTOM_BORDER_COLOR_CREATE_INFO_EXT`

Issues

1) Should `VkClearColorValue` be used for the border color value, or should we have our own
struct/union? Do we need to specify the type of the input values for the components? This is more of a concern if VkClearColorValue is used here because it provides a union of float, int, uint types.

**RESOLVED:** Will reuse existing VkClearColorValue structure in order to easily take advantage of float, int, uint borderColor types.

2) For hardware which supports a limited number of border colors what happens if that number is exceeded? Should this be handled by the driver unbeknownst to the application? In Revision 1 we had solved this issue using a new Object type, however that may have lead to additional system resource consumption which would otherwise not be required.

**RESOLVED:** Added VkPhysicalDeviceCustomBorderColorPropertiesEXT::maxCustomBorderColorSamplers for tracking implementation-specific limit, and Valid Usage statement handling overflow.

3) Should this be supported for immutable samplers at all, or by a feature bit? Some implementations may not be able to support custom border colors on immutable samplers — is it worthwhile enabling this to work on them for implementations that can support it, or forbidding it entirely.

**RESOLVED:** Samplers created with a custom border color are forbidden from being immutable. This resolves concerns for implementations where the custom border color is an index to a LUT instead of being directly embedded into sampler state.

4) Should UINT and SINT (unsigned integer and signed integer) border color types be separated or should they be combined into one generic INT (integer) type?

**RESOLVED:** Separating these does not make much sense as the existing fixed border color types do not have this distinction, and there is no reason in hardware to do so. This separation would also create unnecessary work and considerations for the application.

**Version History**

- Revision 1, 2019-10-10 (Joshua Ashton)
  - Internal revisions.
- Revision 2, 2019-10-11 (Liam Middlebrook)
  - Remove VkCustomBorderColor object and associated functions
  - Add issues concerning HW limitations for custom border color count
- Revision 3, 2019-10-12 (Joshua Ashton)
  - Re-expose the limits for the maximum number of unique border colors
  - Add extra details about border color tracking
  - Fix typos
- Revision 4, 2019-10-12 (Joshua Ashton)
  - Changed maxUniqueCustomBorderColors to a uint32_t from a VkDeviceSize
- Revision 5, 2019-10-14 (Liam Middlebrook)
  - Added features bit
• Revision 6, 2019-10-15 (Joshua Ashton)
  ◦ Type-ize VK_BORDER_COLOR_CUSTOM
  ◦ Fix const-ness on `pNext` of VkSamplerCustomBorderColorCreateInfoEXT
• Revision 7, 2019-11-26 (Liam Middlebrook)
  ◦ Renamed maxUniqueCustomBorderColors to maxCustomBorderColors
• Revision 8, 2019-11-29 (Joshua Ashton)
  ◦ Renamed borderColor member of VkSamplerCustomBorderColorCreateInfoEXT to customBorderColor
• Revision 9, 2020-02-19 (Joshua Ashton)
  ◦ Renamed maxCustomBorderColors to maxCustomBorderColorSamplers
• Revision 10, 2020-02-21 (Joshua Ashton)
  ◦ Added format to VkSamplerCustomBorderColorCreateInfoEXT and feature bit
• Revision 11, 2020-04-07 (Joshua Ashton)
  ◦ Dropped UINT/SINT border color differences, consolidated types
• Revision 12, 2020-04-16 (Joshua Ashton)
  ◦ Renamed `VK_BORDER_COLOR_CUSTOM_FLOAT_EXT` to `VK_BORDER_COLOR_FLOAT_CUSTOM_EXT` for consistency

Description
Due to the nature of the Vulkan interface, there is very little error information available to the developer and application. By using the VK_EXT_debug_utils extension, developers can obtain more information. When combined with validation layers, even more detailed feedback on the application's use of Vulkan will be provided.

This extension provides the following capabilities:

- The ability to create a debug messenger which will pass along debug messages to an application supplied callback.
- The ability to identify specific Vulkan objects using a name or tag to improve tracking.
• The ability to identify specific sections within a `VkQueue` or `VkCommandBuffer` using labels to aid organization and offline analysis in external tools.

The main difference between this extension and `VK_EXT_debug_report` and `VK_EXT_debug_marker` is that those extensions use `VkDebugReportObjectTypeEXT` to identify objects. This extension uses the core `VkObjectType` in place of `VkDebugReportObjectTypeEXT`. The primary reason for this move is that no future object type handle enumeration values will be added to `VkDebugReportObjectTypeEXT` since the creation of `VkObjectType`.

In addition, this extension combines the functionality of both `VK_EXT_debug_report` and `VK_EXT_debug_marker` by allowing object name and debug markers (now called labels) to be returned to the application's callback function. This should assist in clarifying the details of a debug message including: what objects are involved and potentially which location within a `VkQueue` or `VkCommandBuffer` the message occurred.

**New Object Types**

• `VkDebugUtilsMessengerEXT`

**New Commands**

• `vkCmdBeginDebugUtilsLabelEXT`
• `vkCmdEndDebugUtilsLabelEXT`
• `vkCmdInsertDebugUtilsLabelEXT`
• `vkCreateDebugUtilsMessengerEXT`
• `vkDestroyDebugUtilsMessengerEXT`
• `vkQueueBeginDebugUtilsLabelEXT`
• `vkQueueEndDebugUtilsLabelEXT`
• `vkQueueInsertDebugUtilsLabelEXT`
• `vkSetDebugUtilsObjectNameEXT`
• `vkSetDebugUtilsObjectTagEXT`
• `vkSubmitDebugUtilsMessageEXT`

**New Structures**

• `VkDebugUtilsLabelEXT`
• `VkDebugUtilsMessengerCallbackDataEXT`
• `VkDebugUtilsObjectNameInfoEXT`

Extending `VkInstanceCreateInfo`:

• `VkDebugUtilsMessengerCreateInfoEXT`

Extending `VkPipelineShaderStageCreateInfo`:

• `VkDebugUtilsObjectNameInfoEXT`
New Function Pointers

• PFN_vkDebugUtilsMessengerCallbackEXT

New Enums

• VkDebugUtilsMessageSeverityFlagBitsEXT
• VkDebugUtilsMessageTypeFlagBitsEXT

New Bitmasks

• VkDebugUtilsMessageSeverityFlagsEXT
• VkDebugUtilsMessageTypeFlagsEXT
• VkDebugUtilsMessengerCallbackDataFlagsEXT
• VkDebugUtilsMessengerCreateFlagsEXT

New Enum Constants

• VK_EXT_DEBUG_UTILS_EXTENSION_NAME
• VK_EXT_DEBUG_UTILS_SPEC_VERSION

Extending VkObjectType:

◦ VK_OBJECT_TYPE_DEBUG_UTILS_MESSENGER_EXT

Extending VkStructureType:

◦ VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT
◦ VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CALLBACK_DATA_EXT
◦ VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT
◦ VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_NAME_INFO_EXT
◦ VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_TAG_INFO_EXT

Examples

Example 1

VK_EXT_debug_utils allows an application to register multiple callbacks with any Vulkan component wishing to report debug information. Some callbacks may log the information to a file, others may cause a debug break point or other application defined behavior. An application can register callbacks even when no validation layers are enabled, but they will only be called for loader and, if implemented, driver events.

To capture events that occur while creating or destroying an instance an application can link a VkDebugUtilsMessengerCreateInfoEXT structure to the pNext element of the VkInstanceCreateInfo structure given to vkCreateInstance.

Example uses: Create three callback objects. One will log errors and warnings to the debug console.
using Windows `OutputDebugString`. The second will cause the debugger to break at that callback when an error happens and the third will log warnings to stdout.

```c
extern VkInstance instance;
VkResult res;
VkDebugUtilsMessengerEXT cb1, cb2, cb3;

// Must call extension functions through a function pointer:
PFN_vkCreateDebugUtilsMessengerEXT pfnCreateDebugUtilsMessengerEXT = (PFN_vkCreateDebugUtilsMessengerEXT)vkGetInstanceProcAddr(instance, "vkCreateDebugUtilsMessengerEXT");
PFN_vkDestroyDebugUtilsMessengerEXT pfnDestroyDebugUtilsMessengerEXT = (PFN_vkDestroyDebugUtilsMessengerEXT)vkGetInstanceProcAddr(instance, "vkDestroyDebugUtilsMessengerEXT");

VkDebugUtilsMessengerCreateInfoEXT callback1 = {
    VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT, // sType
    NULL, // pNext
    0, // flags
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT | // messageSeverity
    VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT | // messageType
    VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT,
    myOutputDebugString, // pfnUserCallback
    NULL // pUserData
};
res = pfnCreateDebugUtilsMessengerEXT(instance, &callback1, NULL, &cb1);
if (res != VK_SUCCESS) {
    // Do error handling for VK_ERROR_OUT_OF_MEMORY
}

callback1.messageSeverity = VK_DEBUG_UTILS_MESSAGE_SEVERITY_ERROR_BIT_EXT;
callback1.pfnUserCallback = myDebugBreak;
callback1.pUserData = NULL;
res = pfnCreateDebugUtilsMessengerEXT(instance, &callback1, NULL, &cb2);
if (res != VK_SUCCESS) {
    // Do error handling for VK_ERROR_OUT_OF_MEMORY
}

VkDebugUtilsMessengerCreateInfoEXT callback3 = {
    VK_STRUCTURE_TYPE_DEBUG_UTILS_MESSENGER_CREATE_INFO_EXT, // sType
    NULL, // pNext
    0, // flags
    VK_DEBUG_UTILS_MESSAGE_SEVERITY_WARNING_BIT_EXT, // messageSeverity
    VK_DEBUG_UTILS_MESSAGE_TYPE_GENERAL_BIT_EXT | // messageType
    VK_DEBUG_UTILS_MESSAGE_TYPE_VALIDATION_BIT_EXT,
    mystdOutLogger, // pfnUserCallback
    NULL // pUserData
};
```
pfnUserCallback
    NULL  // pUserData
};
res = pfnCreateDebugUtilsMessengerEXT(instance, &callback3, NULL, &cb3);
if (res != VK_SUCCESS) {
    // Do error handling for VK_ERROR_OUT_OF_MEMORY
}
...

// Remove callbacks when cleaning up
pfnDestroyDebugUtilsMessengerEXT(instance, cb1, NULL);
pfnDestroyDebugUtilsMessengerEXT(instance, cb2, NULL);
pfnDestroyDebugUtilsMessengerEXT(instance, cb3, NULL);

Example 2

Associate a name with an image, for easier debugging in external tools or with validation layers that can print a friendly name when referring to objects in error messages.

    extern VkInstance instance;
    extern VkDevice device;
    extern VkImage image;

    // Must call extension functions through a function pointer:
    PFN_vkSetDebugUtilsObjectNameEXT pfnSetDebugUtilsObjectNameEXT =
        (PFN_vkSetDebugUtilsObjectNameEXT)vkGetInstanceProcAddr(instance, "vkSetDebugUtilsObjectNameEXT");

    // Set a name on the image
    const VkDebugUtilsObjectNameInfoEXT imageNameInfo = {
        VK_STRUCTURE_TYPE_DEBUG_UTILS_OBJECT_NAME_INFO_EXT, // sType
        NULL, // pNext
        VK_OBJECT_TYPE_IMAGE, // objectType
        (uint64_t)image, // objectHandle
        "Brick Diffuse Texture", // pObjectName
    };
    pfnSetDebugUtilsObjectNameEXT(device, &imageNameInfo);

    // A subsequent error might print:
    // Image 'Brick Diffuse Texture' (0xc0dec0dedeadbeef) is used in a
    // command buffer with no memory bound to it.

Example 3

Annotating regions of a workload with naming information so that offline analysis tools can display a more usable visualization of the commands submitted.
extern VkInstance instance;
extern VkCommandBuffer commandBuffer;

// Must call extension functions through a function pointer:
PFN_vkQueueBeginDebugUtilsLabelEXT pfnQueueBeginDebugUtilsLabelEXT = (PFN_vkQueueBeginDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance, "vkQueueBeginDebugUtilsLabelEXT");
PFN_vkQueueEndDebugUtilsLabelEXT pfnQueueEndDebugUtilsLabelEXT = (PFN_vkQueueEndDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance, "vkQueueEndDebugUtilsLabelEXT");
PFN_vkCmdBeginDebugUtilsLabelEXT pfnCmdBeginDebugUtilsLabelEXT = (PFN_vkCmdBeginDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance, "vkCmdBeginDebugUtilsLabelEXT");
PFN_vkCmdEndDebugUtilsLabelEXT pfnCmdEndDebugUtilsLabelEXT = (PFN_vkCmdEndDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance, "vkCmdEndDebugUtilsLabelEXT");
PFN_vkCmdInsertDebugUtilsLabelEXT pfnCmdInsertDebugUtilsLabelEXT = (PFN_vkCmdInsertDebugUtilsLabelEXT)vkGetInstanceProcAddr(instance, "vkCmdInsertDebugUtilsLabelEXT");

// Describe the area being rendered
const VkDebugUtilsLabelEXT houseLabel = {
    VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT, // sType
    NULL, // pNext
    "Brick House", // pLabelName
    { 1.0f, 0.0f, 0.0f, 1.0f }, // color
};

// Start an annotated group of calls under the 'Brick House' name
pfnCmdBeginDebugUtilsLabelEXT(commandBuffer, &houseLabel);
{
    // A mutable structure for each part being rendered
    VkDebugUtilsLabelEXT housePartLabel = {
        VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT, // sType
        NULL, // pNext
        NULL, // pLabelName
        { 0.0f, 0.0f, 0.0f, 0.0f }, // color
    };

    // Set the name and insert the marker
    housePartLabel.pLabelName = "Walls";
    pfnCmdInsertDebugUtilsLabelEXT(commandBuffer, &housePartLabel);

    // Insert the drawcall for the walls
    vkCmdDrawIndexed(commandBuffer, 1000, 1, 0, 0, 0);

    // Insert a recursive region for two sets of windows
    housePartLabel.pLabelName = "Windows";
}
pfnCmdBeginDebugUtilsLabelEXT(commandBuffer, &housePartLabel);
{
    vkCmdDrawIndexed(commandBuffer, 75, 6, 1000, 0, 0);
    vkCmdDrawIndexed(commandBuffer, 100, 2, 1450, 0, 0);
}
pfnCmdEndDebugUtilsLabelEXT(commandBuffer);

housePartLabel.pLabelName = "Front Door";
pfnCmdInsertDebugUtilsLabelEXT(commandBuffer, &housePartLabel);

vkCmdDrawIndexed(commandBuffer, 350, 1, 1650, 0, 0);

housePartLabel.pLabelName = "Roof";
pfnCmdInsertDebugUtilsLabelEXT(commandBuffer, &housePartLabel);

vkCmdDrawIndexed(commandBuffer, 500, 1, 2000, 0, 0);

} // End the house annotation started above
pfnCmdEndDebugUtilsLabelEXT(commandBuffer);

// Do other work

vkEndCommandBuffer(commandBuffer);

// Describe the queue being used
const VkDebugUtilsLabelEXT queueLabel =
{
    VK_STRUCTURE_TYPE_DEBUG_UTILS_LABEL_EXT, // sType
    NULL, // pNext
    "Main Render Work", // pLabelName
    { 0.0f, 1.0f, 0.0f, 1.0f }, // color
};

// Identify the queue label region
pfnQueueBeginDebugUtilsLabelEXT(queue, &queueLabel);

// Submit the work for the main render thread
const VkCommandBuffer cmd_bufs[] = {commandBuffer};
VkSubmitInfo submit_info = {.sType = VK_STRUCTURE_TYPE_SUBMIT_INFO,
    .pNext = NULL,
    .waitSemaphoreCount = 0,
    .pWaitSemaphores = NULL,
    .pWaitDstStageMask = NULL,
    .commandBufferCount = 1,
    .pCommandBuffers = cmd_bufs,
    .signalSemaphoreCount = 0,
    .pSignalSemaphores = NULL};

vkQueueSubmit(queue, 1, &submit_info, fence);

} // End the queue label region
pfnQueueEndDebugUtilsLabelEXT(queue);

Issues

1) Should we just name this extension VK_EXT_debug_report2

**RESOLVED:** No. There is enough additional changes to the structures to break backwards compatibility. So, a new name was decided that would not indicate any interaction with the previous extension.

2) Will validation layers immediately support all the new features.

**RESOLVED:** Not immediately. As one can imagine, there is a lot of work involved with converting the validation layer logging over to the new functionality. Basic logging, as seen in the origin VK_EXT_debug_report extension will be made available immediately. However, adding the labels and object names will take time. Since the priority for Khronos at this time is to continue focusing on Valid Usage statements, it may take a while before the new functionality is fully exposed.

3) If the validation layers will not expose the new functionality immediately, then what is the point of this extension?

**RESOLVED:** We needed a replacement for VK_EXT_debug_report because the VkDebugReportObjectTypeEXT enumeration will no longer be updated and any new objects will need to be debugged using the new functionality provided by this extension.

4) Should this extension be split into two separate parts (1 extension that is an instance extension providing the callback functionality, and another device extension providing the general debug marker and annotation functionality)?

**RESOLVED:** No, the functionality for this extension is too closely related. If we did split up the extension, where would the structures and enums live, and how would you define that the device behavior in the instance extension is really only valid if the device extension is enabled, and the functionality is passed in. It is cleaner to just define this all as an instance extension, plus it allows the application to enable all debug functionality provided with one enable string during vkCreateInstance.

Version History

- Revision 1, 2017-09-14 (Mark Young and all listed Contributors)
  - Initial draft, based on VK_EXT_debug_report and VK_EXT_debug_marker in addition to previous feedback supplied from various companies including Valve, Epic, and Oxide games.
- Revision 2, 2020-04-03 (Mark Young and Piers Daniell)
  - Updated to allow either NULL or an empty string to be passed in for pObjectName in VkDebugUtilsObjectNameInfoEXT, because the loader and various drivers support NULL already.

Description
This extension adds a new structure, `VkDepthBiasRepresentationInfoEXT`, that can be added to a `pNext` chain of `VkPipelineRasterizationStateCreateInfo` and allows setting the scaling and representation of depth bias for a pipeline.

This state can also be set dynamically by using the new structure mentioned above in combination with the new `vkCmdSetDepthBias2EXT` command.

New Commands
- `vkCmdSetDepthBias2EXT`

New Structures
- `VkDepthBiasInfoEXT`
- Extending `VkDepthBiasInfoEXT`, `VkPipelineRasterizationStateCreateInfo`:
  - `VkDepthBiasRepresentationInfoEXT`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceDepthBiasControlFeaturesEXT`

New Enums
- `VkDepthBiasRepresentationEXT`

New Enum Constants
- `VK_EXT_DEPTH_BIAS_CONTROL_EXTENSION_NAME`
- `VK_EXT_DEPTH_BIAS_CONTROL_SPEC_VERSION`
- Extending `VkStructureType`:

Description

This extension allows the application to use the OpenGL depth range in NDC, i.e. with depth in range [-1, 1], as opposed to Vulkan's default of [0, 1]. The purpose of this extension is to allow
efficient layering of OpenGL over Vulkan, by avoiding emulation in the pre-rasterization shader stages. This emulation, which effectively duplicates gl_Position but with a different depth value, costs ALU and consumes shader output components that the implementation may not have to spare to meet OpenGL minimum requirements.

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceDepthClipControlFeaturesEXT`

- Extending `VkPipelineViewportStateCreateInfo`:
  - `VkPipelineViewportDepthClipControlCreateInfoEXT`

**New Enum Constants**

- `VK_EXT_DEPTH_CLIP_CONTROL_EXTENSION_NAME`
- `VK_EXT_DEPTH_CLIP_CONTROL_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL DEVICE_DEPTH_CLIP CONTROL_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_VIEWPORTDEPTH_CLIP_CONTROL_CREATE_INFO_EXT`

**Issues**

1) Should this extension include an origin control option to match GL_LOWER_LEFT found in ARB_clip_control?

**RESOLVED**: No. The fix for porting over the origin is a simple y-axis flip. The depth clip control is a much harder problem to solve than what this extension is aimed to solve. Adding an equivalent to GL_LOWER_LEFT would require more testing.

2) Should this pipeline state be dynamic?

**RESOLVED**: Yes. The purpose of this extension is to emulate the OpenGL depth range, which is expected to be globally fixed (in case of OpenGL ES) or very infrequently changed (with `glClipControl` in OpenGL).

3) Should the control provided in this extension be an enum that could be extended in the future?

**RESOLVED**: No. It is highly unlikely that the depth range is changed to anything other than [0, 1] in the future. Should that happen a new extension will be required to extend such an enum, and that extension might as well add a new struct to chain to `VkPipelineViewportStateCreateInfo::pNext` instead.

Description

This extension allows the depth clipping operation, that is normally implicitly controlled by
**VkPipelineRasterizationStateCreateInfo::depthClampEnable**, to instead be controlled explicitly by **VkPipelineRasterizationDepthClipStateCreateInfoEXT::depthClipEnable**.

This is useful for translating DX content which assumes depth clamping is always enabled, but depth clip can be controlled by the `DepthClipEnable` rasterization state (D3D12_RASTERIZER_DESC).

**New Structures**

- **VK_EXT_depth_range_unrestricted**

**Extension Type**

- Device extension

**Registered Extension Number**

- 14

**Revision**

- 1
This extension removes the VkViewport minDepth and maxDepth restrictions that the values must be between 0.0 and 1.0, inclusive. It also removes the same restriction on VkPipelineDepthStencilStateCreateInfo minDepthBounds and maxDepthBounds. Finally it removes the restriction on the depth value in VkClearDepthStencilValue.

New Enum Constants

- VK_EXT_DEPTH_RANGE_UNRESTRICTED_EXTENSION_NAME
- VK_EXT_DEPTH_RANGE_UNRESTRICTED_SPEC_VERSION

Issues

1) How do VkViewport minDepth and maxDepth values outside of the 0.0 to 1.0 range interact with Primitive Clipping?

RESOLVED: The behavior described in Primitive Clipping still applies. If depth clamping is disabled the depth values are still clipped to \(0 \leq z_c \leq w_c\) before the viewport transform. If depth clamping is enabled the above equation is ignored and the depth values are instead clamped to the VkViewport minDepth and maxDepth values, which in the case of this extension can be outside of the 0.0 to 1.0 range.

2) What happens if a resulting depth fragment is outside of the 0.0 to 1.0 range and the depth buffer is fixed-point rather than floating-point?

RESOLVED: This situation can also arise without this extension (when fragment shaders replace depth values, for example), and this extension does not change the behaviour, which is defined in the Depth Test section of the Fragment Operations chapter.

Description

This extension introduces new commands to put shader-accessible descriptors directly in memory, making the management of descriptor data more explicit.

New Commands

- `vkCmdBindDescriptorBufferEmbeddedSamplersEXT`
- `vkCmdBindDescriptorBuffersEXT`
- `vkCmdSetDescriptorBufferOffsetsEXT`
- `vkGetBufferOpaqueCaptureDescriptorDataEXT`
- `vkGetDescriptorEXT`
- `vkGetDescriptorSetLayoutBindingOffsetEXT`
- `vkGetDescriptorSetLayoutSizeEXT`
- `vkGetImageOpaqueCaptureDescriptorDataEXT`
- `vkGetImageViewOpaqueCaptureDescriptorDataEXT`
- `vkGetSamplerOpaqueCaptureDescriptorDataEXT`

If `VK_KHR_acceleration_structure` or `VK_NV_ray_tracing` is supported:

- `vkGetAccelerationStructureOpaqueCaptureDescriptorDataEXT`

New Structures

- `VkBufferCaptureDescriptorDataInfoEXT`
• VkDescriptorAddressInfoEXT
• VkDescriptorBufferBindingInfoEXT
• VkDescriptorGetInfoEXT
• VkImageCaptureDescriptorDataInfoEXT
• VkImageViewCaptureDescriptorDataInfoEXT
• VkSamplerCaptureDescriptorDataInfoEXT

• Extending VkBufferCreateInfo, VkImageCreateInfo, VkImageViewCreateInfo, VkSamplerCreateInfo, VkAccelerationStructureCreateInfoKHR, VkAccelerationStructureCreateInfoNV:
  ◦ VkOpaqueCaptureDescriptorDataCreateInfoEXT

• Extending VkDescriptorBufferBindingInfoEXT:
  ◦ VkDescriptorBufferBindingPushDescriptorBufferHandleEXT

• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceDescriptorBufferFeaturesEXT

• Extending VkPhysicalDeviceProperties2:
  ◦ VkPhysicalDeviceDescriptorBufferDensityMapPropertiesEXT
  ◦ VkPhysicalDeviceDescriptorBufferPropertiesEXT

If VK_KHR_acceleration_structure or VK_NV_ray_tracing is supported:

• VkAccelerationStructureCaptureDescriptorDataInfoEXT

New Unions

• VkDescriptorDataEXT

New Enum Constants

• VK_EXT_DESCRIPTOR_BUFFER_EXTENSION_NAME
• VK_EXT_DESCRIPTOR_BUFFER_SPEC_VERSION

• Extending VkAccelerationStructureCreateFlagBitsKHR:
  ◦ VK_ACCELERATION_STRUCTURE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

• Extending VkAccessFlagBits2:
  ◦ VK_ACCESS_2_DESCRIPTOR_BUFFER_READ_BIT_EXT

• Extending VkBufferCreateFlagBits:
  ◦ VK_BUFFER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT

• Extending VkBufferUsageFlagBits:
  ◦ VK_BUFFER_USAGE_PUSH_DESCRIPTORS_DESCRIPTOR_BUFFER_BIT_EXT
  ◦ VK_BUFFER_USAGE_RESOURCE_DESCRIPTOR_BUFFER_BIT_EXT
• **VK_BUFFER_USAGE_SAMPLER_DESCRIPTOR_BUFFER_BIT_EXT**

  • **Extending** `VkDescriptorSetLayoutCreateFlagBits`:
    • `VK_DESCRIPTOR_SET_LAYOUT_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`
    • `VK_DESCRIPTOR_SET_LAYOUT_CREATE_EMBEDDED_IMMUTABLE_SAMPLERS_BIT_EXT`

  • **Extending** `VkImageCreateFlagBits`:
    • `VK_IMAGE_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

  • **Extending** `VkImageViewCreateFlagBits`:
    • `VK_IMAGE_VIEW_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

  • **Extending** `VkPipelineCreateFlagBits`:
    • `VK_PIPELINE_CREATE_DESCRIPTOR_BUFFER_BIT_EXT`

  • **Extending** `VkSamplerCreateFlagBits`:
    • `VK_SAMPLER_CREATE_DESCRIPTOR_BUFFER_CAPTURE_REPLAY_BIT_EXT`

  • **Extending** `VkStructureType`:
    • `VK_STRUCTURE_TYPE_BUFFER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
    • `VK_STRUCTURE_TYPE_DESCRIPTOR_ADDRESS_INFO_EXT`
    • `VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_INFO_EXT`
    • `VK_STRUCTURE_TYPE_DESCRIPTOR_BUFFER_BINDING_PUSH_DESCRIPTOR_BUFFER_HANDLE_EXT`
    • `VK_STRUCTURE_TYPE_DESCRIPTOR_GET_INFO_EXT`
    • `VK_STRUCTURE_TYPE_IMAGE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
    • `VK_STRUCTURE_TYPE_IMAGE_VIEW_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`
    • `VK_STRUCTURE_TYPE_OPAQUE_CAPTURE_DESCRIPTOR_DATA_CREATE_INFO_EXT`
    • `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_DENSITY_MAP_PROPERTIES_EXT`
    • `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_FEATURES_EXT`
    • `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_BUFFER_PROPERTIES_EXT`
    • `VK_STRUCTURE_TYPE_SAMPLER_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`

If **VK_KHR_acceleration_structure** or **VK_NV_ray_tracing** is supported:

  • **Extending** `VkStructureType`:
    • `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_CAPTURE_DESCRIPTOR_DATA_INFO_EXT`

- Alex Walters, IMG
- Jeff Bolz, NVIDIA
Description

This extension enables applications to track the binding of regions of the GPU virtual address space, and to associate those regions with Vulkan objects. This extension is primarily intended to aid in crash postmortem, where applications may wish to map a faulting GPU address to a Vulkan object.

For example, a page fault triggered by accessing an address located within a region of the GPU virtual address space that was previously reported as bound and then unbound may indicate a use-after-free error. Similarly, faults generated by accessing virtual addresses outside the limits of a bound region of GPU virtual address space may indicate indexing beyond the bounds of a resource.

New Structures

- Extending `VkDebugUtilsMessengerCallbackDataEXT`:
  - `VkDeviceAddressBindingCallbackDataEXT`
- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceAddressBindingReportFeaturesEXT`

New Enums

- `VkDeviceAddressBindingFlagBitsEXT`
- `VkDeviceAddressBindingTypeEXT`

New Bitmasks

- `VkDeviceAddressBindingFlagsEXT`

New Enum Constants

- `VK_EXT_DEVICE_ADDRESS_BINDING_REPORT_EXTENSION_NAME`
- `VK_EXT_DEVICE_ADDRESS_BINDING_REPORT_SPEC_VERSION`
- Extending `VkDebugUtilsMessageTypeFlagBitsEXT`:
  - `VK_DEBUG_UTILS_MESSAGE_TYPE_DEVICE_ADDRESS_BINDING_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DEVICE_ADDRESS_BINDING_CALLBACK_DATA_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ADDRESS_BINDING_REPORT_FEATURES_EXT`

Issues

1.) Should this extend VK_EXT_debug_utils or VK_EXT_device_memory_report?

**RESOLVED**: Extend VK_EXT_debug_utils. VK_EXT_device_memory_report focuses on memory allocations and would not normally trigger callbacks in all of the situations where VK_EXT_device_address_binding_report is expected to.
2.) Should this extension cover all Vulkan object types, or only resources such as buffers and images?

**RESOLVED:** The extension covers all Vulkan objects, and is not restricted to objects backed by VkDeviceMemory objects.

3.) Should reallocation be identified explicitly, or as a unbind/bind pair?

**RESOLVED:** Reallocation should be represented as a unbind/bind pair.

4.) Can multiple Vulkan objects share an overlapping virtual address range?

**RESOLVED:** Yes. This can be expected to occur due to resources aliasing.

5.) Can a single Vulkan object be associated with multiple virtual address ranges concurrently?

**RESOLVED:** Yes. These should be reported via multiple calls to the reporting callback.

6.) Should the virtual address ranges associated with internal allocations such as memory pools be reported?

**RESOLVED:** Virtual address ranges associated with internal allocations should only be reported when they become associated with a specific Vulkan object. In the case of internal pool allocations, a bind event should be reported when resources from the pool are assigned to a Vulkan object, and an unbind event should be reported when those resources are returned to the pool. Implementations should not report the binding or unbinding of virtual address ranges for which there are no related API objects visible to the application developer.

7.) Can an implementation report binding a virtual address range at VkImage or VkImageView creation, rather than in response to vkBindImageMemory?

**RESOLVED:** Yes. Virtual address range binding should be reported at the appropriate point at which it occurs within the implementation. This extension does not mandate when that should occur, and applications should anticipate receiving callback events at any point after registering callbacks.

8.) Can reporting of binding/unbinding be deferred until a resource is referenced by an executing command buffer?

**RESOLVED:** Changes to the virtual address ranges associated with a Vulkan object should be reported as close as possible to where they occur within the implementation. If virtual address binding is deferred, then the callback should also be deferred to match.

9.) Do bind/unbind callbacks have to form matched pairs? Can a large region be bound, and then subregions unbound, resulting in fragmentation?

**RESOLVED:** Splitting of virtual address regions, and unmatched bind/unbind callbacks may occur. Developers should anticipate that sparse memory may exhibit this behaviour.

10.) The specification mandates that a callback **must** be triggered whenever a GPU virtual address range associated with any Vulkan object is bound or unbound. Do we need queries or properties...
indicating which Vulkan objects will report binding modifications?

**RESOLVED**: No. This extension is not intended to mandate how and when implementations bind virtual ranges to objects. Adding queries or properties would constrain implementations, which might otherwise vary how virtual address bindings occur based on usage.

11.) Should vkAllocateMemory and vkFreeMemory trigger reporting callbacks?

**RESOLVED**: If an implementation binds a GPU virtual address range when vkAllocateMemory is called, then the callbacks must be triggered associating the virtual address range with the VkDeviceMemory object. If the device memory is subsequently bound to a buffer or image via vkBind*Memory, the callbacks should be triggered a second time, reporting the association between virtual address range and the buffer/image.

Description
Device loss can be triggered by a variety of issues, including invalid API usage, implementation errors, or hardware failures.

This extension introduces a new command: `vkGetDeviceFaultInfoEXT`, which may be called subsequent to a `VK_ERROR_DEVICE_LOST` error code having been returned by the implementation. This command allows developers to query for additional information on GPU faults which may have caused device loss, and to generate binary crash dumps, which may be loaded into external tools for further diagnosis.

New Commands
• `vkGetDeviceFaultInfoEXT`

New Structures
• `VkDeviceFaultAddressInfoEXT`
• `VkDeviceFaultCountsEXT`
• `VkDeviceFaultInfoEXT`
• `VkDeviceFaultVendorBinaryHeaderVersionOneEXT`
• `VkDeviceFaultVendorInfoEXT`
• Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceFaultFeaturesEXT`

New Enums
• `VkDeviceFaultAddressTypeEXT`
• `VkDeviceFaultVendorBinaryHeaderVersionEXT`
New Enum Constants

- VK_EXT_DEVICE_FAULT_EXTENSION_NAME
- VK_EXT_DEVICE_FAULT_SPEC_VERSION

Extending VkStructureType:
- VK_STRUCTURE_TYPE_DEVICE_FAULT_COUNTS_EXT
- VK_STRUCTURE_TYPE_DEVICE_FAULT_INFO_EXT
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FAULT_FEATURES_EXT

Description
This device extension allows registration of device memory event callbacks upon device creation, so that applications or middleware can obtain detailed information about memory usage and how memory is associated with Vulkan objects. This extension exposes the actual underlying device memory usage, including allocations that are not normally visible to the application, such as memory consumed by `vkCreateGraphicsPipelines`. It is intended primarily for use by debug tooling rather than for production applications.

New Structures

• `VkDeviceMemoryReportCallbackDataEXT`
• Extending `VkDeviceCreateInfo`:
  ◦ `VkDeviceDeviceMemoryReportCreateInfoEXT`
• Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceDeviceMemoryReportFeaturesEXT`

New Function Pointers

• `PFN_vkDeviceMemoryReportCallbackEXT`

New Enums

• `VkDeviceMemoryReportEventTypeEXT`

New Bitmasks

• `VkDeviceMemoryReportFlagsEXT`

New Enum Constants

• `VK_EXT_DEVICE_MEMORY_REPORT_EXTENSION_NAME`
• `VK_EXT_DEVICE_MEMORY_REPORT_SPEC_VERSION`
• Extending `VkStructureType`:
Issues

1) Should this be better expressed as an extension to VK_EXT_debug_utils and its general-purpose messenger construct?

**RESOLVED:** No. The intended lifecycle is quite different. We want to make this extension tied to the device's lifecycle. Each ICD just handles its own implementation of this extension, and this extension will only be directly exposed from the ICD. So we can avoid the extra implementation complexity used to accommodate the flexibility of VK_EXT_debug_utils extension.

2) Can we extend and use the existing internal allocation callbacks instead of adding the new callback structure in this extension?

**RESOLVED:** No. Our memory reporting layer that combines this information with other memory information it collects directly (e.g. bindings of resources to VkDeviceMemory) would have to intercept all entry points that take a VkAllocationCallbacks parameter and inject its own pfnInternalAllocation and pfnInternalFree. That may be doable for the extensions we know about, but not for ones we do not. The proposal would work fine in the face of most unknown extensions. But even for ones we know about, since apps can provide a different set of callbacks and userdata and those can be retained by the driver and used later (esp. for pool object, but not just those), we would have to dynamically allocate the interception trampoline every time. That is getting to be an unreasonably large amount of complexity and (possibly) overhead.

We are interested in both alloc/free and import/unimport. The latter is fairly important for tracking (and avoiding double-counting) of swapchain images (still true with “native swapchains” based on external memory) and media/camera interop. Though we might be able to handle this with additional VkInternalAllocationType values, for import/export we do want to be able to tie this to the external resource, which is one thing that the memoryObjectId is for.

The internal alloc/free callbacks are not extensible except via new VkInternalAllocationType values. The VkDeviceMemoryReportCallbackDataEXT in this extension is extensible. That was deliberate: there is a real possibility we will want to get extra information in the future. As one example, currently this reports only physical allocations, but we believe there are interesting cases for tracking how populated that VA region is.

The callbacks are clearly specified as only callable within the context of a call from the app into Vulkan. We believe there are some cases where drivers can allocate device memory asynchronously. This was one of the sticky issues that derailed the internal device memory allocation reporting design (which is essentially what this extension is trying to do) leading up to 1.0.

**VkAllocationCallbacks** is described in a section called “Host memory” and the intro to it is very explicitly about host memory. The other callbacks are all inherently about host memory. But this extension is very focused on device memory.
3) Should the callback be reporting which heap is used?

**RESOLVED**: Yes. It is important for non-UMA systems to have all the device memory allocations attributed to the corresponding device memory heaps. For internally-allocated device memory, `heapIndex` will always correspond to an advertised heap, rather than having a magic value indicating a non-advertised heap. Drivers can advertise heaps that do not have any corresponding memory types if they need to.

4) Should we use an array of callback for the layers to intercept instead of chaining multiple of the `VkDeviceDeviceMemoryReportCreateInfoEXT` structures in the `pNext` of `VkDeviceCreateInfo`?

**RESOLVED** No. The pointer to the `VkDeviceDeviceMemoryReportCreateInfoEXT` structure itself is const and you cannot just cast it away. Thus we cannot update the callback array inside the structure. In addition, we cannot drop this `pNext` chain either, so making a copy of this whole structure does not work either.

5) Should we track bulk allocations shared among multiple objects?

**RESOLVED** No. Take the shader heap as an example. Some implementations will let multiple `VkPipeline` objects share the same shader heap. We are not asking the implementation to report `VK_OBJECT_TYPE_PIPELINE` along with a `VK_NULL_HANDLE` for this bulk allocation. Instead, this bulk allocation is considered as a layer below what this extension is interested in. Later, when the actual `VkPipeline` objects are created by suballocating from the bulk allocation, we ask the implementation to report the valid handles of the `VkPipeline` objects along with the actual suballocated sizes and different `memoryObjectId`.

6) Can we require the callbacks to be always called in the same thread with the Vulkan commands?

**RESOLVED** No. Some implementations might choose to multiplex work from multiple application threads into a single backend thread and perform JIT allocations as a part of that flow. Since this behavior is theoretically legit, we cannot require the callbacks to be always called in the same thread with the Vulkan commands, and the note is to remind the applications to handle this case properly.

7) Should we add an additional “allocation failed” event type with things like size and heap index reported?

**RESOLVED** Yes. This fits in well with the callback infrastructure added in this extension, and implementation touches the same code and has the same overheads as the rest of the extension. It could help debugging things like getting an `VK_ERROR_OUT_OF_HOST_MEMORY` error when ending a command buffer. Right now the allocation failure could have happened anywhere during recording, and a callback would be really useful to understand where and why.

Description

This extension, along with related platform extensions, allows applications to take exclusive control of displays associated with a native windowing system. This is especially useful for virtual reality applications that wish to hide HMDs (head mounted displays) from the native platform’s display management system, desktop, and/or other applications.
New Commands

- \texttt{vkReleaseDisplayEXT}

New Enum Constants

- \texttt{VK_EXT_DIRECT_MODE_DISPLAY_EXTENSION_NAME}
- \texttt{VK_EXT_DIRECT_MODE_DISPLAY_SPEC_VERSION}

Issues

1) Should this extension and its related platform-specific extensions leverage \texttt{VK_KHR_display}, or provide separate equivalent interfaces.

\textbf{RESOLVED:} Use \texttt{VK_KHR_display} concepts and objects. \texttt{VK_KHR_display} can be used to enumerate all displays on the system, including those attached to/in use by a window system or native platform, but \texttt{VK_KHR_display_swapchain} will fail to create a swapchain on in-use displays. This extension and its platform-specific children will allow applications to grab in-use displays away from window systems and/or native platforms, allowing them to be used with \texttt{VK_KHR_display_swapchain}.

2) Are separate calls needed to acquire displays and enable direct mode?

\textbf{RESOLVED:} No, these operations happen in one combined command. Acquiring a display puts it into direct mode.

Description
This extension provides additional orthogonally aligned “discard rectangles” specified in framebuffer-space coordinates that restrict rasterization of all points, lines and triangles.

From zero to an implementation-dependent limit (specified by maxDiscardRectangles) number of discard rectangles can be operational at once. When one or more discard rectangles are active, rasterized fragments can either survive if the fragment is within any of the operational discard
rectangles (**VK_DISCARD_RECTANGLE_MODE_INCLUSIVE_EXT** mode) or be rejected if the fragment is within any of the operational discard rectangles (**VK_DISCARD_RECTANGLE_MODE_EXCLUSIVE_EXT** mode).

These discard rectangles operate orthogonally to the existing scissor test functionality. The discard rectangles can be different for each physical device in a device group by specifying the device mask and setting discard rectangle dynamic state.

Version 2 of this extension introduces new dynamic states **VK_DYNAMIC_STATE_DISCARD_RECTANGLE_ENABLE_EXT** and **VK_DYNAMIC_STATE_DISCARD_RECTANGLE_MODE_EXT**, and the corresponding functions **vkCmdSetDiscardRectangleEnableEXT** and **vkCmdSetDiscardRectangleModeEXT**. Applications that use these dynamic states must ensure the implementation advertises at least **specVersion** 2 of this extension.

Description

This extension defines a set of utility functions for use with the `VK_KHR_display` and `VK_KHR_display_swapchain` extensions.

New Commands

- `vkDisplayPowerControlEXT`
- `vkGetSwapchainCounterEXT`
- `vkRegisterDeviceEventEXT`
- `vkRegisterDisplayEventEXT`

New Structures

- `VkDeviceEventInfoEXT`
- `VkDisplayEventInfoEXT`
- `VkDisplayPowerInfoEXT`
- Extending `VkSwapchainCreateInfoKHR`:
  - `VkSwapchainCounterCreateInfoEXT`

New Enums

- `VkDeviceEventTypeEXT`
- `VkDisplayEventTypeEXT`
- `VkDisplayPowerStateEXT`

New Enum Constants

- `VK_EXT_DISPLAY_CONTROL_EXTENSION_NAME`
- `VK_EXT_DISPLAY_CONTROL_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DEVICE_EVENT_INFO_EXT`
  - `VK_STRUCTURE_TYPE_DISPLAY_EVENT_INFO_EXT`
  - `VK_STRUCTURE_TYPE_DISPLAY_POWER_INFO_EXT`
  - `VK_STRUCTURE_TYPE_SWAPCHAIN_COUNTER_CREATE_INFO_EXT`

Issues

1) Should this extension add an explicit “WaitForVsync” API or a fence signaled at vsync that the
application can wait on?

**RESOLVED:** A fence. A separate API could later be provided that allows exporting the fence to a native object that could be inserted into standard run loops on POSIX and Windows systems.

2) Should callbacks be added for a vsync event, or in general to monitor events in Vulkan?

**RESOLVED:** No, fences should be used. Some events are generated by interrupts which are managed in the kernel. In order to use a callback provided by the application, drivers would need to have the userspace driver spawn threads that would wait on the kernel event, and hence the callbacks could be difficult for the application to synchronize with its other work given they would arrive on a foreign thread.

3) Should vblank or scanline events be exposed?

**RESOLVED:** Vblank events. Scanline events could be added by a separate extension, but the latency of processing an interrupt and waking up a userspace event is high enough that the accuracy of a scanline event would be rather low. Further, per-scanline interrupts are not supported by all hardware.

Description
This extension adds almost all of the remaining pipeline state as dynamic state to help applications further reduce the number of monolithic pipelines they need to create and bind.

New Commands
• vkCmdSetAlphaToCoverageEnableEXT
• vkCmdSetAlphaToOneEnableEXT
New Structures

- VkColorBlendAdvancedEXT
- VkColorBlendEquationEXT

Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceExtendedDynamicState3FeaturesEXT
Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceExtendedDynamicState3PropertiesEXT`

**New Enum Constants**

- `VK_EXT_EXTENDED_DYNAMIC_STATE_3_EXTENSION_NAME`
- `VK_EXT_EXTENDED_DYNAMIC_STATE_3_SPEC_VERSION`

Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_ALPHA_TO_COVERAGE_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_ALPHA_TO_ONE_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_COLOR_BLEND_ADVANCED_EXT`
  - `VK_DYNAMIC_STATE_COLOR_BLEND_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_COLOR_BLEND_EQUATION_EXT`
  - `VK_DYNAMIC_STATE_COLOR_WRITE_MASK_EXT`
  - `VK_DYNAMIC_STATE_CONSERVATIVE_RASTERIZATION_MODE_EXT`
  - `VK_DYNAMIC_STATE_COVERAGE_MODULATION_MODE_NV`
  - `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_ENABLE_NV`
  - `VK_DYNAMIC_STATE_COVERAGE_MODULATION_TABLE_NV`
  - `VK_DYNAMIC_STATE_COVERAGE_REDUCTION_MODE_NV`
  - `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_ENABLE_NV`
  - `VK_DYNAMIC_STATE_COVERAGE_TO_COLOR_LOCATION_NV`
  - `VK_DYNAMIC_STATE_DEPTH_CLAMP_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_DEPTH_CLIP_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_DEPTH_CLIP_NEGATIVE_ONE_TO_ONE_EXT`
  - `VK_DYNAMIC_STATE_EXTRA_PRIMITIVE_OVERESTIMATION_SIZE_EXT`
  - `VK_DYNAMIC_STATE_LINE_RASTERIZATION_MODE_EXT`
  - `VK_DYNAMIC_STATE_LINE_STIPPLE_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_LOGIC_OP_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_POLYGON_MODE_EXT`
  - `VK_DYNAMIC_STATE_PROVOKING_VERTEX_MODE_EXT`
  - `VK_DYNAMIC_STATE_RASTERIZATION_SAMPLES_EXT`
  - `VK_DYNAMIC_STATE_RASTERIZATION_STREAM_EXT`
  - `VK_DYNAMIC_STATE_REPRESENTATIVE_FRAGMENT_TEST_ENABLE_NV`
  - `VK_DYNAMIC_STATE_SAMPLE_LOCATIONS_ENABLE_EXT`
  - `VK_DYNAMIC_STATE_SAMPLE_MASK_EXT`
  - `VK_DYNAMIC_STATE_SHADING_RATE_IMAGE_ENABLE_NV`
Issues

1) What about the `VkPipelineMultisampleStateCreateInfo` state `sampleShadingEnable` and `minSampleShading`?

UNRESOLVED

- `sampleShadingEnable` and `minSampleShading` are required when compiling the fragment shader, and it is not meaningful to set them dynamically since they always need to match the fragment shader state, so this hardware state may as well just come from the pipeline with the fragment shader.

Version History

Description

A dma_buf is a type of file descriptor, defined by the Linux kernel, that allows sharing memory across kernel device drivers and across processes. This extension enables applications to import a dma_buf as VkDeviceMemory, to export VkDeviceMemory as a dma_buf, and to create VkBuffer objects that can be bound to that memory.

New Enum Constants

• VK_EXT_EXTERNAL_MEMORY_DMA_BUF_EXTENSION_NAME
• VK_EXT_EXTERNAL_MEMORY_DMA_BUF_SPEC_VERSION
• Extending VkExternalMemoryHandleTypeFlagBits:
  ◦ VK_EXTERNAL_MEMORY_HANDLE_TYPE_DMA_BUF_BIT_EXT

**Issues**

1) How does the application, when creating a VkImage that it intends to bind to dma_buf VkDeviceMemory containing an externally produced image, specify the memory layout (such as row pitch and DRM format modifier) of the VkImage? In other words, how does the application achieve behavior comparable to that provided by EGL_EXT_image_dma_buf_import and EGL_EXT_image_dma_buf_import_modifiers?

**RESOLVED:** Features comparable to those in EGL_EXT_image_dma_buf_import and EGL_EXT_image_dma_buf_import_modifiers will be provided by an extension layered atop this one.

2) Without the ability to specify the memory layout of external dma_buf images, how is this extension useful?

**RESOLVED:** This extension provides exactly one new feature: the ability to import/export between dma_buf and VkDeviceMemory. This feature, together with features provided by VK_KHR_external_memory_fd, is sufficient to bind a VkBuffer to dma_buf.

- Faith Ekstrand, Intel
- James Jones, NVIDIA

**Description**
This extension enables an application to import host allocations and host mapped foreign device memory to Vulkan memory objects.

**New Commands**
- `vkGetMemoryHostPointerPropertiesEXT`

**New Structures**
- `VkMemoryHostPointerPropertiesEXT`
- Extending `VkMemoryAllocateInfo`:
  - `VkImportMemoryHostPointerInfoEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceExternalMemoryHostPropertiesEXT`

**New Enum Constants**
- `VK_EXT_EXTERNAL_MEMORY_HOST_EXTENSION_NAME`
- `VK_EXT_EXTERNAL_MEMORY_HOST_SPEC_VERSION`
- Extending `VkExternalMemoryHandleTypeFlagBits`:
  - `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_ALLOCATION_BIT_EXT`
  - `VK_EXTERNAL_MEMORY_HANDLE_TYPE_HOST_MAPPED_FOREIGN_MEMORY_BIT_EXT`
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_IMPORT_MEMORY_HOST_POINTER_INFO_EXT
  ◦ VK_STRUCTURE_TYPE_MEMORY_HOST_POINTER_PROPERTIES_EXT
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_HOST_PROPERTIES_EXT

Issues

1) What memory type has to be used to import host pointers?

**RESOLVED:** Depends on the implementation. Applications have to use the new `vkGetMemoryHostPointerPropertiesEXT` command to query the supported memory types for a particular host pointer. The reported memory types may include memory types that come from a memory heap that is otherwise not usable for regular memory object allocation and thus such a heap's size may be zero.

2) Can the application still access the contents of the host allocation after importing?

**RESOLVED:** Yes. However, usual synchronization requirements apply.

3) Can the application free the host allocation?

**RESOLVED:** No, it violates valid usage conditions. Using the memory object imported from a host allocation that is already freed thus results in undefined behavior.

4) Is `vkMapMemory` expected to return the same host address which was specified when importing it to the memory object?

**RESOLVED:** No. Implementations are allowed to return the same address but it is not required. Some implementations might return a different virtual mapping of the allocation, although the same physical pages will be used.

5) Is there any limitation on the alignment of the host pointer and/or size?

**RESOLVED:** Yes. Both the address and the size have to be an integer multiple of `minImportedHostPointerAlignment`. In addition, some platforms and foreign devices may have additional restrictions.

6) Can the same host allocation be imported multiple times into a given physical device?

**RESOLVED:** No, at least not guaranteed by this extension. Some platforms do not allow locking the same physical pages for device access multiple times, so attempting to do it may result in undefined behavior.

7) Does this extension support exporting the new handle type?

**RESOLVED:** No.

8) Should we include the possibility to import host mapped foreign device memory using this API?

**RESOLVED:** Yes, through a separate handle type. Implementations are still allowed to support only
one of the handle types introduced by this extension by not returning import support for a particular handle type as returned in `VkExternalMemoryPropertiesKHR`.

Description

*VK_EXT_filter_cubic* extends *VK_IMG_filter_cubic*.

It documents cubic filtering of other image view types. It adds new structures that can be added to the `pNext` chain of `VkPhysicalDeviceImageFormatInfo2` and `VkImageFormatProperties2` that can be used to determine which image types and which image view types support cubic filtering.

New Structures

- Extending `VkImageFormatProperties2`:
  - `VkFilterCubicImageViewImageFormatPropertiesEXT`
- Extending `VkPhysicalDeviceImageFormatInfo2`:
  - `VkPhysicalDeviceImageViewImageFormatInfoEXT`

New Enum Constants

- `VK_EXT_FILTER_CUBIC_EXTENSION_NAME`
- `VK_EXT_FILTER_CUBIC_SPEC_VERSION`
- Extending `VkFilter`:
  - `VK_FILTER_CUBIC_EXT`
- Extending `VkFormatFeatureFlagBits`:
  - `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_FILTER_CUBIC_IMAGE_VIEW_IMAGE_FORMAT_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_VIEW_IMAGE_FORMAT_INFO_EXT`

Version History

- Revision 3, 2019-12-13 (wwlk)
  - Delete requirement to cubic filter the formats USCALED_PACKED32, SScaled_PACKED32, UINT_PACK32, and SINT_PACK32 (cut/paste error)

Description

This extension allows an application to specify areas of the render target where the fragment shader may be invoked fewer times. These fragments are broadcasted out to multiple pixels to cover the render target.

The primary use of this extension is to reduce workloads in areas where lower quality may not be perceived such as the distorted edges of a lens or the periphery of a user's gaze.

New Structures

- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFragmentDensityMapFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFragmentDensityMapPropertiesEXT`
- Extending `VkRenderPassCreateInfo, VkRenderPassCreateInfo2`:
  - `VkRenderPassFragmentDensityMapCreateInfoEXT`

New Enum Constants

- `VK_EXT_FRAGMENT_DENSITY_MAP_EXTENSION_NAME`
- `VK_EXT_FRAGMENT_DENSITY_MAP_SPEC_VERSION`
- Extending `VkAccessFlagBits`:
  - `VK_ACCESS_FRAGMENT_DENSITY_MAP_READ_BIT_EXT`
- Extending `VkFormatFeatureFlagBits`:
  - `VK_FORMAT_FEATURE_FRAGMENT_DENSITY_MAP_BIT_EXT`
- Extending `VkImageCreateFlagBits`:
  - `VK_IMAGE_CREATE_SUBSAMPLED_BIT_EXT`
- Extending `VkImageLayout`:
  - `VK_IMAGE_LAYOUT_FRAGMENT_DENSITY_MAP_OPTIMAL_EXT`
- Extending `VkImageUsageFlagBits`:
  - `VK_IMAGE_USAGE_FRAGMENT_DENSITY_MAP_BIT_EXT`
- Extending `VkImageViewCreateFlagBits`:
  - `VK_IMAGE_VIEW_CREATE_FRAGMENT_DENSITY_MAP_DYNAMIC_BIT_EXT`
- Extending `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_FRAGMENT_DENSITY_PROCESS_BIT_EXT`
- Extending `VkSamplerCreateFlagBits`:
  - `VK_SAMPLER_CREATE_SUBSAMPLED_BIT_EXT`
  - `VK_SAMPLER_CREATE_SUBSAMPLED_COARSE_RECONSTRUCTION_BIT_EXT`
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_FEATURES_EXT

Description

This extension adds support for the FragmentShaderPixelInterlockEXT, FragmentShaderSampleInterlockEXT, and FragmentShaderShadingRateInterlockEXT capabilities from the SPV_EXT_fragment_shader_interlock extension to Vulkan.

Enabling these capabilities provides a critical section for fragment shaders to avoid overlapping pixels being processed at the same time, and certain guarantees about the ordering of fragment shader invocations of fragments of overlapping pixels.

This extension can be useful for algorithms that need to access per-pixel data structures via shader loads and stores. Algorithms using this extension can access per-pixel data structures in critical sections without other invocations accessing the same per-pixel data. Additionally, the ordering guarantees are useful for cases where the API ordering of fragments is meaningful. For example, applications may be able to execute programmable blending operations in the fragment shader, where the destination buffer is read via image loads and the final value is written via image stores.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceFragmentShaderInterlockFeaturesEXT

New Enum Constants

- VK_EXT_FRAGMENT_SHADER_INTERLOCK_EXTENSION_NAME
- VK_EXT_FRAGMENT_SHADER_INTERLOCK_SPEC_VERSION

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_INTERLOCK_FEATURES_EXT

New SPIR-V Capabilities

- FragmentShaderInterlockEXT
- FragmentShaderPixelInterlockEXT
- FragmentShaderShadingRateInterlockEXT

- Joshua Schnarr, NVIDIA
Description

This extension allows applications to set the policy for swapchain creation and presentation mechanisms relating to full-screen access. Implementations may be able to acquire exclusive access to a particular display for an application window that covers the whole screen. This can increase performance on some systems by bypassing composition, however it can also result in disruptive or expensive transitions in the underlying windowing system when a change occurs.

Applications can choose between explicitly disallowing or allowing this behavior, letting the implementation decide, or managing this mode of operation directly using the new `vkAcquireFullScreenExclusiveModeEXT` and `vkReleaseFullScreenExclusiveModeEXT` commands.

New Commands

- `vkAcquireFullScreenExclusiveModeEXT`
- `vkGetPhysicalDeviceSurfacePresentModes2EXT`
- `vkReleaseFullScreenExclusiveModeEXT`

If `VK_KHR_device_group` is supported:

- `vkGetDeviceGroupSurfacePresentModes2EXT`

If `Version 1.1` is supported:

- `vkGetDeviceGroupSurfacePresentModes2EXT`

New Structures

- Extending `VkPhysicalDeviceSurfaceInfo2KHR, VkSwapchainCreateInfoKHR`:
  - `VkSurfaceFullScreenExclusiveInfoEXT`
- Extending `VkSurfaceCapabilities2KHR`:
  - `VkSurfaceCapabilitiesFullScreenExclusiveEXT`

If `VK_KHR_win32_surface` is supported:

- Extending `VkPhysicalDeviceSurfaceInfo2KHR, VkSwapchainCreateInfoKHR`:
  - `VkSurfaceFullScreenExclusiveWin32InfoEXT`

New Enums

- `VkFullScreenExclusiveEXT`

New Enum Constants

- `VK_EXT_FULL_SCREEN_EXCLUSIVE_EXTENSION_NAME`
• `VK_EXT_FULL_SCREEN_EXCLUSIVE_SPEC_VERSION`

Extending `VkResult`:
  ◦ `VK_ERROR_FULL_SCREEN_EXCLUSIVE_MODE_LOST_EXT`

Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_FULL_SCREEN_EXCLUSIVE_EXT`
  ◦ `VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_INFO_EXT`

If `VK_KHR_win32_surface` is supported:

  • Extending `VkStructureType`:
    ◦ `VK_STRUCTURE_TYPE_SURFACE_FULL_SCREEN_EXCLUSIVE_WIN32_INFO_EXT`

**Issues**

1) What should the extension & flag be called?

**RESOLVED:** `VK_EXT_full_screen-exclusive`.

Other options considered (prior to the app-controlled mode) were:

- `VK_EXT_smooth_fullscreen_transition`
- `VK_EXT_fullscreen_behavior`
- `VK_EXT_fullscreen_preference`
- `VK_EXT_fullscreen_hint`
- `VK_EXT_fast_fullscreen_transition`
- `VK_EXT_avoid_fullscreen_exclusive`

2) Do we need more than a boolean toggle?

**RESOLVED:** Yes.

Using an enum with default/allowed/disallowed/app-controlled enables applications to accept driver default behavior, specifically override it in either direction without implying the driver is ever required to use full-screen exclusive mechanisms, or manage this mode explicitly.

3) Should this be a KHR or EXT extension?

**RESOLVED:** EXT, in order to allow it to be shipped faster.

4) Can the fullscreen hint affect the surface capabilities, and if so, should the hint also be specified as input when querying the surface capabilities?

**RESOLVED:** Yes on both accounts.

While the hint does not guarantee a particular fullscreen mode will be used when the swapchain is created, it can sometimes imply particular modes will NOT be used. If the driver determines that it will opt-out of using a particular mode based on the policy, and knows it can only support certain
capabilities if that mode is used, it would be confusing at best to the application to report those capabilities in such cases. Not allowing implementations to report this state to applications could result in situations where applications are unable to determine why swapchain creation fails when they specify certain hint values, which could result in never-terminating surface creation loops.

5) Should full-screen be one word or two?

**RESOLVED:** Two words.

"Fullscreen" is not in my dictionary, and web searches did not turn up definitive proof that it is a colloquially accepted compound word. Documentation for the corresponding Windows API mechanisms dithers. The text consistently uses a hyphen, but none-the-less, there is a SetFullscreenState method in the DXGI swapchain object. Given this inconclusive external guidance, it is best to adhere to the Vulkan style guidelines and avoid inventing new compound words.

**Version History**

- Revision 4, 2019-03-12 (Tobias Hector)
  - Added application-controlled mode, and related functions
  - Tidied up appendix
- Revision 3, 2019-01-03 (James Jones)
  - Renamed to VK_EXT_full_screen_exclusive
  - Made related adjustments to the tri-state enumerant names.
- Revision 2, 2018-11-27 (James Jones)
  - Renamed to VK_KHR_fullscreen_behavior
  - Switched from boolean flag to tri-state enum
- Revision 1, 2018-11-06 (James Jones)
  - Internal revision

Description
This extension allows the separate compilation of four distinct parts of graphics pipelines, with the intent of allowing faster pipeline loading for applications reusing the same shaders or state in multiple pipelines. Each part can be independently compiled into a graphics pipeline library, with a final link step required to create an executable pipeline that can be bound to a command buffer.
New Structures

- Extending `VkGraphicsPipelineCreateInfo`:
  - `VkGraphicsPipelineLibraryCreateInfoEXT`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceGraphicsPipelineLibraryFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceGraphicsPipelineLibraryPropertiesEXT`

New Enums

- `VkGraphicsPipelineLibraryFlagBitsEXT`
- `VkPipelineLayoutCreateFlagBits`

New Bitmasks

- `VkGraphicsPipelineLibraryFlagsEXT`

New Enum Constants

Description
This extension defines two new structures and a function to assign SMPTE (the Society of Motion Picture and Television Engineers) 2086 metadata and CTA (Consumer Technology Association) 861.3 metadata to a swapchain. The metadata includes the color primaries, white point, and luminance range of the reference monitor, which all together define the color volume containing all the possible colors the reference monitor can produce. The reference monitor is the display where creative work is done and creative intent is established. To preserve such creative intent as much as possible and achieve consistent color reproduction on different viewing displays, it is useful for the display pipeline to know the color volume of the original reference monitor where content was created or tuned. This avoids performing unnecessary mapping of colors that are not displayable on the original reference monitor. The metadata also includes the maxContentLightLevel and maxFrameAverageLightLevel as defined by CTA 861.3.

While the intended purpose of the metadata is to assist in the transformation between different color volumes of different displays and help achieve better color reproduction, it is not in the scope of this extension to define how exactly the metadata should be used in such a process. It is up to the implementation to determine how to make use of the metadata.
New Commands

- vkSetHdrMetadataEXT

New Structures

- VkHdrMetadataEXT
- VkXYColorEXT

New Enum Constants

- VK_EXT_HDR_METADATA_EXTENSION_NAME
- VK_EXT_HDR_METADATA_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_HDR_METADATA_EXT

Issues

1) Do we need a query function?

**PROPOSED:** No, Vulkan does not provide queries for state that the application can track on its own.

2) Should we specify default if not specified by the application?

**PROPOSED:** No, that leaves the default up to the display.

Description
The VK_EXT_headless_surface extension is an instance extension. It provides a mechanism to create VkSurfaceKHR objects independently of any window system or display device. The presentation operation for a swapchain created from a headless surface is by default a no-op, resulting in no externally-visible result.

Because there is no real presentation target, future extensions can layer on top of the headless surface to introduce arbitrary or customisable sets of restrictions or features. These could include features like saving to a file or restrictions to emulate a particular presentation target.

This functionality is expected to be useful for application and driver development because it allows any platform to expose an arbitrary or customisable set of restrictions and features of a presentation engine. This makes it a useful portable test target for applications targeting a wide range of presentation engines where the actual target presentation engines might be scarce, unavailable or otherwise undesirable or inconvenient to use for general Vulkan application development.

Description
This extension enables fixed-rate image compression and adds the ability to control when this kind of compression can be applied. Many implementations support some form of framebuffer compression. This is typically transparent to applications as lossless compression schemes are used. With fixed-rate compression, the compression is done at a defined bitrate. Such compression
algorithms generally produce results that are visually lossless, but the results are typically not bit-exact when compared to a non-compressed result. The implementation may not be able to use the requested compression rate in all cases. This extension adds a query that can be used to determine the compression scheme and rate that was applied to an image.

Description

This extension enables fixed-rate image compression and adds the ability to control when this kind of compression can be applied to swapchain images.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceImageCompressionControlSwapchainFeaturesEXT`

New Enum Constants

- `VK_EXT_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_EXTENSION_NAME`
- `VK_EXT_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_COMPRESSION_CONTROL_SWAPCHAIN_FEATURES_EXT`

Version History

- Revision 1, 2022-05-02 (Jan-Harald Fredriksen)
  - Initial draft

**Description**

This extension provides the ability to use *DRM format modifiers* with images, enabling Vulkan to better integrate with the Linux ecosystem of graphics, video, and display APIs.

Its functionality closely overlaps with *EGL_EXT_image_dma_buf_importModifiers*\(^2\) and *EGL_MESA_image_dma_buf_export*\(^3\). Unlike the EGL extensions, this extension does not require the use of a specific handle type (such as a dma_buf) for external memory and provides more explicit control of image creation.

**Introduction to DRM Format Modifiers**

A *DRM format modifier* is a 64-bit, vendor-prefixed, semi-opaque unsigned integer. Most *modifiers* represent a concrete, vendor-specific tiling format for images. Some exceptions are *DRM_FORMAT_MOD_LINEAR* (which is not vendor-specific); *DRM_FORMAT_MOD_NONE* (which is an alias of *DRM_FORMAT_MOD_LINEAR* due to historical accident); and *DRM_FORMAT_MOD_INVALID* (which does not represent a tiling format). The *modifier's* vendor prefix consists of the 8 most significant bits. The canonical list of *modifiers* and vendor prefixes is found in *drm_fourcc.h* in the Linux kernel source.
The other dominant source of modifiers are vendor kernel trees.

One goal of modifiers in the Linux ecosystem is to enumerate for each vendor a reasonably sized set of tiling formats that are appropriate for images shared across processes, APIs, and/or devices, where each participating component may possibly be from different vendors. A non-goal is to enumerate all tiling formats supported by all vendors. Some tiling formats used internally by vendors are inappropriate for sharing; no modifiers should be assigned to such tiling formats.

Modifier values typically do not describe memory layouts. More precisely, a modifier’s lower 56 bits usually have no structure. Instead, modifiers name memory layouts; they name a small set of vendor-preferred layouts for image sharing. As a consequence, in each vendor namespace the modifier values are often sequentially allocated starting at 1.

Each modifier is usually supported by a single vendor and its name matches the pattern {VENDOR}_FORMAT_MOD_* or DRM_FORMAT_MOD_{VENDOR}_*. Examples are I915_FORMAT_MOD_X_TILED and DRM_FORMAT_MOD_BROADCOM_VC4_T_TILED. An exception is DRM_FORMAT_MOD_LINEAR, which is supported by most vendors.

Many APIs in Linux use modifiers to negotiate and specify the memory layout of shared images. For example, a Wayland compositor and Wayland client may, by relaying modifiers over the Wayland protocol zwp_linux_dmabuf_v1, negotiate a vendor-specific tiling format for a shared wl_buffer. The client may allocate the underlying memory for the wl_buffer with GBM, providing the chosen modifier to gbm_bo_create_with_modifiers. The client may then import the wl_buffer into Vulkan for producing image content, providing the resource’s dma_buf to VkImportMemoryFdInfoKHR and its modifier to VkImageDrmFormatModifierExplicitCreateInfoEXT. The compositor may then import the wl_buffer into OpenGL for sampling, providing the resource’s dma_buf and modifier to eglCreateImage. The compositor may also bypass OpenGL and submit the wl_buffer directly to the kernel’s display API, providing the dma_buf and modifier through drm_mode_fb_cmd2.

**Format Translation**

Modifier-capable APIs often pair modifiers with DRM formats, which are defined in drm_fourcc.h. However, VK_EXT_image_drm_format_modifier uses VkFormat instead of DRM formats. The application must convert between VkFormat and DRM format when it sends or receives a DRM format to or from an external API.

The mapping from VkFormat to DRM format is lossy. Therefore, when receiving a DRM format from an external API, often the application must use information from the external API to accurately map the DRM format to a VkFormat. For example, DRM formats do not distinguish between RGB and sRGB (as of 2018-03-28); external information is required to identify the image’s color space.

The mapping between VkFormat and DRM format is also incomplete. For some DRM formats there exist no corresponding Vulkan format, and for some Vulkan formats there exist no corresponding DRM format.

**Usage Patterns**

Three primary usage patterns are intended for this extension:
• **Negotiation.** The application negotiates with *modifier*-aware, external components to determine sets of image creation parameters supported among all components.

In the Linux ecosystem, the negotiation usually assumes the image is a 2D, single-sampled, non-mipmapped, non-array image; this extension permits that assumption but does not require it. The result of the negotiation usually resembles a set of tuples such as \((\text{drmFormat}, \text{drmFormatModifier})\), where each participating component supports all tuples in the set.

Many details of this negotiation - such as the protocol used during negotiation, the set of image creation parameters expressible in the protocol, and how the protocol chooses which process and which API will create the image - are outside the scope of this specification.

In this extension, `vkGetPhysicalDeviceFormatProperties2` with `VkDrmFormatModifierPropertiesListEXT` serves a primary role during the negotiation, and `vkGetPhysicalDeviceImageFormatProperties2` with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT` serves a secondary role.

• **Import.** The application imports an image with a *modifier*.

In this pattern, the application receives from an external source the image's memory and its creation parameters, which are often the result of the negotiation described above. Some image creation parameters are implicitly defined by the external source; for example, `VK_IMAGE_TYPE_2D` is often assumed. Some image creation parameters are usually explicit, such as the image’s *format*, *drmFormatModifier*, and *extent*; and each plane’s *offset* and *rowPitch*.

Before creating the image, the application first verifies that the physical device supports the received creation parameters by querying `vkGetPhysicalDeviceFormatProperties2` with `VkDrmFormatModifierPropertiesListEXT` and `vkGetPhysicalDeviceImageFormatProperties2` with `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`. Then the application creates the image by chaining `VkImageDrmFormatModifierExplicitCreateInfoEXT` and `VkExternalMemoryImageCreateInfo` onto `VkImageCreateInfo`.

• **Export.** The application creates an image and allocates its memory. Then the application exports to *modifier*-aware consumers the image’s memory handles; its creation parameters; its *modifier*; and the *offset*, *size*, and *rowPitch* of each memory plane.

In this pattern, the Vulkan device is the authority for the image; it is the allocator of the image’s memory and the decider of the image’s creation parameters. When choosing the image's creation parameters, the application usually chooses a tuple \((\text{format}, \text{drmFormatModifier})\) from the result of the negotiation described above. The negotiation's result often contains multiple tuples that share the same *format* but differ in their *modifier*. In this case, the application should defer the choice of the image's *modifier* to the Vulkan implementation by providing all such *modifiers* to `VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers`; and the implementation should choose from `pDrmFormatModifiers` the optimal *modifier* in consideration with the other image parameters.

The application creates the image by chaining `VkImageDrmFormatModifierListCreateInfoEXT` and `VkExternalMemoryImageCreateInfo` onto `VkImageCreateInfo`. The protocol and APIs by which the application will share the image with external consumers will likely determine the value of `VkExternalMemoryImageCreateInfo::handleTypes`. The implementation chooses for the
image an optimal modifier from VkImageDrmFormatModifierListCreateInfoEXT::pDrmFormatModifiers. The application then queries the implementation-chosen modifier with vkGetImageDrmFormatModifierPropertiesEXT, and queries the memory layout of each plane with vkGetImageSubresourceLayout.

The application then allocates the image's memory with VkMemoryAllocateInfo, adding chained extending structures for external memory; binds it to the image; and exports the memory, for example, with vkGetMemoryFdKHR.

Finally, the application sends the image's creation parameters, its modifier, its per-plane memory layout, and the exported memory handle to the external consumers. The details of how the application transmits this information to external consumers is outside the scope of this specification.

Prior Art

Extension EGL_EXT_image_dma_buf_import introduced the ability to create an EGLImage by importing for each plane a dma_buf, offset, and row pitch.

Later, extension EGL_EXT_image_dma_buf_import_modifiers introduced the ability to query which combination of formats and modifiers the implementation supports and to specify modifiers during creation of the EGLImage.

Extension EGL_MESA_image_dma_buf_export is the inverse of EGL_EXT_image_dma_buf_import_modifiers.

The Linux kernel modesetting API (KMS), when configuring the display's framebuffer with struct drm_mode_fb_cmd2, allows one to specify the framebuffer's modifier as well as a per-plane memory handle, offset, and row pitch.

GBM, a graphics buffer manager for Linux, allows creation of a gbm_bo (that is, a graphics buffer object) by importing data similar to that in EGL_EXT_image_dma_buf_import_modifiers; and symmetrically allows exporting the same data from the gbm_bo. See the references to modifier and plane in gbm.h.

New Commands

• vkGetImageDrmFormatModifierPropertiesEXT

New Structures

• VkDrmFormatModifierPropertiesEXT
• VkImageDrmFormatModifierPropertiesEXT
• Extending VkFormatProperties2:
  ◦ VkDrmFormatModifierPropertiesListEXT
• Extending VkImageCreateInfo:
  ◦ VkImageDrmFormatModifierExplicitCreateInfoEXT
  ◦ VkImageDrmFormatModifierListCreateInfoEXT
• Extending `VkPhysicalDeviceImageFormatInfo2`:
  ◦ `VkPhysicalDeviceImageDrmFormatModifierInfoEXT`

If `VK_KHR_format_feature_flags2` is supported:

• `VkDrmFormatModifierProperties2EXT`
• Extending `VkFormatProperties2`:
  ◦ `VkDrmFormatModifierPropertiesList2EXT`

**New Enum Constants**

• `VK_EXT_IMAGE_DRM_FORMAT_MODIFIER_EXTENSION_NAME`
• `VK_EXT_IMAGE_DRM_FORMAT_MODIFIER_SPEC_VERSION`

Extending `VkImageAspectFlagBits`:

◦ `VK_IMAGE_ASPECT_MEMORY_PLANE_0_BIT_EXT`
◦ `VK_IMAGE_ASPECT_MEMORY_PLANE_1_BIT_EXT`
◦ `VK_IMAGE_ASPECT_MEMORY_PLANE_2_BIT_EXT`
◦ `VK_IMAGE_ASPECT_MEMORY_PLANE_3_BIT_EXT`

Extending `VkImageTiling`:

◦ `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`

Extending `VkResult`:

◦ `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`

Extending `VkStructureType`:

◦ `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_EXT`
◦ `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_EXPLICIT_CREATE_INFO_EXT`
◦ `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_LIST_CREATE_INFO_EXT`
◦ `VK_STRUCTURE_TYPE_IMAGE_DRM_FORMAT_MODIFIER_PROPERTIES_EXT`
◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_DRM_FORMAT_MODIFIER_INFO_EXT`

If `VK_KHR_format_feature_flags2` is supported:

• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_DRM_FORMAT_MODIFIER_PROPERTIES_LIST_2_EXT`

**Issues**

1) Should this extension define a single DRM format modifier per `VkImage`? Or define one per plane?

+  

**RESOLVED:** There exists a single DRM format modifier per `VkImage`. 
DISCUSSION: Prior art, such as EGL_EXT_image_dma_buf_import_modifiers, struct drm_mode_fb_cmd, and struct gbm_import_fd_modifier_data, allows defining one modifier per plane. However, developers of the GBM and kernel APIs concede it was a mistake. Beginning in Linux 4.10, the kernel requires that the application provide the same DRM format modifier for each plane. (See Linux commit bae781b259269590109e8a4a8227331362b88212). And GBM provides an entry point, gbm_bo_get_modifier, for querying the modifier of the image but does not provide one to query the modifier of individual planes.

2) When creating an image with VkImageDrmFormatModifierExplicitCreateInfoEXT, which is typically used when importing an image, should the application explicitly provide the size of each plane?

RESOLVED: No. The application must not provide the size. To enforce this, the API requires that VkImageDrmFormatModifierExplicitCreateInfoEXT::pPlaneLayouts->size must be 0.

DISCUSSION: Prior art, such as EGL_EXT_image_dma_buf_import_modifiers, struct drm_mode_fb_cmd, and struct gbm_import_fd_modifier_data, omits from the API the size of each plane. Instead, the APIs infer each plane's size from the import parameters, which include the image's pixel format and a dma_buf, offset, and row pitch for each plane.

However, Vulkan differs from EGL and GBM with regards to image creation in the following ways:

**Differences in Image Creation**

• **Undedicated allocation by default.** When importing or exporting a set of dma_bfs as an EGLImage or gbm_bo, common practice mandates that each dma_buf's memory be dedicated (in the sense of VK_KHR_dedicated_allocation) to the image (though not necessarily dedicated to a single plane). In particular, neither the GBM documentation nor the EGL extension specifications explicitly state this requirement, but in light of common practice this is likely due to under-specification rather than intentional omission. In contrast, VK_EXT_image_drm_format_modifier permits, but does not require, the implementation to require dedicated allocations for images created with VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT.

• **Separation of image creation and memory allocation.** When importing a set of dma_bfs as an EGLImage or gbm_bo, EGL and GBM create the image resource and bind it to memory (the dma_bfs) simultaneously. This allows EGL and GBM to query each dma_buf's size during image creation. In Vulkan, image creation and memory allocation are independent unless a dedicated allocation is used (as in VK_KHR_dedicated_allocation). Therefore, without requiring dedicated allocation, Vulkan cannot query the size of each dma_buf (or other external handle) when calculating the image's memory layout. Even if dedication allocation were required, Vulkan cannot calculate the image's memory layout until after the image is bound to its dma_ufs.

The above differences complicate the potential inference of plane size in Vulkan. Consider the following problematic cases:

**Problematic Plane Size Calculations**

• **Padding.** Some plane of the image may require implementation-dependent padding.
• **Metadata.** For some modifiers, the image may have a metadata plane which requires a non-trivial calculation to determine its size.

• **Mipmapped, array, and 3D images.** The implementation may support `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` for images whose `mipLevels`, `arrayLayers`, or `depth` is greater than 1. For such images with certain modifiers, the calculation of each plane's size may be non-trivial.

However, an application-provided plane size solves none of the above problems.

For simplicity, consider an external image with a single memory plane. The implementation is obviously capable calculating the image’s size when its tiling is `VK_IMAGE_TILING_OPTIMAL`. Likewise, any reasonable implementation is capable of calculating the image’s size when its tiling uses a supported modifier.

Suppose that the external image’s size is smaller than the implementation-calculated size. If the application provided the external image’s size to `vkCreateImage`, the implementation would observe the mismatched size and recognize its inability to comprehend the external image’s layout (unless the implementation used the application-provided size to select a refinement of the tiling layout indicated by the modifier, which is strongly discouraged). The implementation would observe the conflict, and reject image creation with `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`. On the other hand, if the application did not provide the external image’s size to `vkCreateImage`, then the application would observe after calling `vkGetImageMemoryRequirements` that the external image’s size is less than the size required by the implementation. The application would observe the conflict and refuse to bind the `VkImage` to the external memory. In both cases, the result is explicit failure.

Suppose that the external image’s size is larger than the implementation-calculated size. If the application provided the external image’s size to `vkCreateImage`, for reasons similar to above the implementation would observe the mismatched size and recognize its inability to comprehend the image data residing in the extra size. The implementation, however, must assume that image data resides in the entire size provided by the application. The implementation would observe the conflict and reject image creation with `VK_ERROR_INVALID_DRM_FORMAT_MODIFIER_PLANE_LAYOUT_EXT`. On the other hand, if the application did not provide the external image’s size to `vkCreateImage`, then the application would observe after calling `vkGetImageMemoryRequirements` that the external image’s size is larger than the implementation-usable size. The application would observe the conflict and refuse to bind the `VkImage` to the external memory. In both cases, the result is explicit failure.

Therefore, an application-provided size provides no benefit, and this extension should not require it. This decision renders `VkSubresourceLayout::size` an unused field during image creation, and thus introduces a risk that implementations may require applications to submit sideband creation parameters in the unused field. To prevent implementations from relying on sideband data, this extension requires the application to set `size` to 0.

Description

This extension allows creating 3D views of 3D images such that the views contain a subset of the slices in the image, using a Z offset and range, for the purpose of using the views as storage image descriptors. This matches functionality in D3D12 and is primarily intended to support D3D12 emulation.

New Structures

Description
This extension allows applications to clamp the minimum LOD value during Image Level(s) Selection, Texel Gathering and Integer Texel Coordinate Operations with a given VkImageView by VkImageViewMinLodCreateInfoEXT::minLod.

This extension may be useful to restrict a VkImageView to only mips which have been uploaded, and the use of fractional minLod can be useful for smoothly introducing new mip levels when using linear mipmap filtering.

Issues

1) In OpenGL, the dither state can change dynamically. Should this extension add a pipeline state for dither?

RESOLVED: No. Changing dither state is rarely, if ever, done during rendering. Every surveyed Android application either entirely disables dither, explicitly enables it, or uses the default state (which is enabled). Additionally, on some hardware dither can only be specified in a render pass granularity, so a change in dither state would necessarily need to cause a render pass break. This extension considers dynamic changes in OpenGL dither state a theoretical situation, and expects the layer to break the render pass in such a situation without any practical downsides.

New Enums

- VkLineRasterizationModeEXT

New Enum Constants

- VK_EXT_LINE_RASTERIZATION_EXTENSION_NAME
- VK_EXT_LINE_RASTERIZATION_SPEC_VERSION

Extending VkDynamicState:

- VK_DYNAMIC_STATE_LINE_STIPPLE_EXT

Extending VkStructureType:

- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_FEATURES_EXT
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINE_RASTERIZATION_PROPERTIES_EXT
- VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_LINE_STATE_CREATE_INFO_EXT

Issues

1) Do we need to support Bresenham-style and smooth lines with more than one rasterization sample? i.e. the equivalent of glEnable(GL_MULTISAMPLE) in OpenGL when the framebuffer has more than one sample?

RESOLVED: Yes. For simplicity, Bresenham line rasterization carries forward a few restrictions from OpenGL, such as not supporting per-sample shading, alpha to coverage, or alpha to one.

Description

This extension incorporates `VK_ATTACHMENT_STORE_OP_NONE_EXT` from `VK_QCOM_render_pass_store_ops`, enabling applications to avoid unnecessary synchronization when an attachment is not written during a render pass.

Additionally, `VK_ATTACHMENT_LOAD_OP_NONE_EXT` is introduced to avoid unnecessary synchronization when an attachment is not used during a render pass at all. In combination with `VK_ATTACHMENT_STORE_OP_NONE_EXT`, this is useful as an alternative to preserve attachments in applications that cannot decide if an attachment will be used in a render pass until after the necessary pipelines have been created.

New Enum Constants

- `VK_EXT_LOAD_STORE_OP_NONE_EXTENSION_NAME`
- `VK_EXT_LOAD_STORE_OP_NONE_SPEC_VERSION`
- Extending `VkAttachmentLoadOp`:

**Description**

While running a Vulkan application, other processes on the machine might also be attempting to use the same device memory, which can pose problems. This extension adds support for querying the amount of memory used and the total memory budget for a memory heap. The values returned by this query are implementation-dependent and can depend on a variety of factors including operating system and system load.

The `VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapBudget` values can be used as a guideline for how much total memory from each heap the current process can use at any given time, before allocations may start failing or causing performance degradation. The values may change based on other activity in the system that is outside the scope and control of the Vulkan implementation.

The `VkPhysicalDeviceMemoryBudgetPropertiesEXT::heapUsage` will display the current process estimated heap usage.
With this information, the idea is for an application at some interval (once per frame, per few seconds, etc) to query `heapBudget` and `heapUsage`. From here the application can notice if it is over budget and decide how it wants to handle the memory situation (free it, move to host memory, changing mipmap levels, etc). This extension is designed to be used in concert with `VK_EXT_memory_priority` to help with this part of memory management.

**New Structures**

- Extending `VkPhysicalDeviceMemoryProperties2`:
  - `VkPhysicalDeviceMemoryBudgetPropertiesEXT`

Description
This extension adds a priority value specified at memory allocation time. On some systems with both device-local and non-device-local memory heaps, the implementation may transparently move memory from one heap to another when a heap becomes full (for example, when the total memory used across all processes exceeds the size of the heap). In such a case, this priority value may be used to determine which allocations are more likely to remain in device-local memory.

New Structures
• Extending VkMemoryAllocateInfo:
  ◦ VkMemoryPriorityAllocateInfoEXT
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceMemoryPriorityFeaturesEXT

Description

This extension provides a new mechanism allowing applications to generate collections of geometric primitives via programmable mesh shading. It is an alternative to the existing programmable primitive shading pipeline, which relied on generating input primitives by a fixed function assembler as well as fixed function vertex fetch.

This extension also adds support for the following SPIR-V extension in Vulkan:

- SPV_EXT_mesh_shader

New Commands

- vkCmdDrawMeshTasksEXT
- vkCmdDrawMeshTasksIndirectCountEXT
- vkCmdDrawMeshTasksIndirectEXT

New Structures

- VkDrawMeshTasksIndirectCommandEXT

Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:

- Extending VkPhysicalDeviceMeshShaderFeaturesEXT

Extending VkPhysicalDeviceProperties2:

- Extending VkPhysicalDeviceMeshShaderPropertiesEXT

New Enum Constants

- VK_EXT_MESH_SHADER_EXTENSION_NAME
- VK_EXT_MESH_SHADER_SPEC_VERSION

Extending VkPipelineStageFlagBits:
• VK_PIPELINE_STAGE_MESH_SHADER_BIT_EXT
• VK_PIPELINE_STAGE_TASK_SHADER_BIT_EXT

**Extending VkQueryPipelineStatisticFlagBits:**
• VK_QUERY_PIPELINE_STATISTIC_MESH_SHADER_INVOCATIONS_BIT_EXT
• VK_QUERY_PIPELINE_STATISTIC_TASK_SHADER_INVOCATIONS_BIT_EXT

**Extending VkQueryType:**
• VK_QUERY_TYPE_MESH_PRIMITIVES_GENERATED_EXT

**Extending VkShaderStageFlagBits:**
• VK_SHADER_STAGE_MESH_BIT_EXT
• VK_SHADER_STAGE_TASK_BIT_EXT

**Extending VkStructureType:**
• VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_EXT
• VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_EXT

If **VK_NV_device_generated_commands** is supported:

**Description**

In a Vulkan implementation that is layered on top of Metal on Apple device platforms, this extension provides the ability to import and export the underlying Metal objects associated with specific Vulkan objects.

As detailed in the [extension proposal document](#), this extension adds one new Vulkan command, `vkExportMetalObjectsEXT`, to export underlying Metal objects from Vulkan objects, and supports importing the appropriate existing Metal objects when creating Vulkan objects of types `VkDeviceMemory`, `VkImage`, `VkSemaphore`, and `VkEvent`.

The intent is that this extension will be advertised and supported only on implementations that are layered on top of Metal on Apple device platforms.

**New Base Types**

- IOSurfaceRef
- MTLBuffer_id
- MTLCommandQueue_id
- MTLDevice_id
- MTLSharedEvent_id
- MTLTexture_id

**New Commands**

- `vkExportMetalObjectsEXT`

**New Structures**

- `VkExportMetalObjectsInfoEXT`
- Extending `VkExportMetalObjectsInfoEXT`:
  - `VkExportMetalBufferInfoEXT`
  - `VkExportMetalCommandQueueInfoEXT`
  - `VkExportMetalDeviceInfoEXT`
  - `VkExportMetalIOSurfaceInfoEXT`
  - `VkExportMetalSharedEventInfoEXT`
- VkExportMetalTextureInfoEXT

Extending VkImageCreateInfo:
- VkImportMetalIOSurfaceInfoEXT
- VkImportMetalTextureInfoEXT

Extending VkInstanceCreateInfo, VkMemoryAllocateInfo, VkImageCreateInfo, VkImageViewCreateInfo, VkBufferViewCreateInfo, VkSemaphoreCreateInfo, VkEventCreateInfo:
- VkExportMetalObjectCreateInfoEXT

Extending VkMemoryAllocateInfo:
- VkImportMetalBufferInfoEXT

Extending VkSemaphoreCreateInfo, VkEventCreateInfo:
- VkImportMetalSharedEventInfoEXT

**New Enums**
- VkExportMetalObjectTypeFlagBitsEXT

**New Bitmasks**
- VkExportMetalObjectTypeFlagsEXT

**New Enum Constants**
- VK_EXT_METAL_OBJECTS_EXTENSION_NAME
- VK_EXT_METAL_OBJECTS_SPEC_VERSION

Extending VkStructureType:
- VK_STRUCTURE_TYPE_EXPORT_METAL_BUFFER_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_COMMAND_QUEUE_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_DEVICE_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_IO_SURFACE_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECTS_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_OBJECT_CREATE_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_SHARED_EVENT_INFO_EXT
- VK_STRUCTURE_TYPE_EXPORT_METAL_TEXTURE_INFO_EXT
- VK_STRUCTURE_TYPE_IMPORT_METAL_BUFFER_INFO_EXT
- VK_STRUCTURE_TYPE_IMPORT_METAL_IO_SURFACE_INFO_EXT
- VK_STRUCTURE_TYPE_IMPORT_METAL_SHARED_EVENT_INFO_EXT
- VK_STRUCTURE_TYPE_IMPORT_METAL_TEXTURE_INFO_EXT
Issues
None.

Version History
• Revision 1, 2022-05-28 (Bill Hollings)
  ◦ Initial draft.
  ◦ Incorporated feedback from review by the Vulkan Working Group. Renamed many structures, moved import/export of MTLBuffer to VkDeviceMemory, added export of MTLSharedEvent, added import of MTLSharedEvent for VkSemaphore and VkEvent, and changed used bit mask fields to individual bit fields to simplify Valid Usage rules.

Description
Processing multiple draw commands in sequence incurs measurable overhead within drivers due to repeated state checks and updates during dispatch. This extension enables passing the entire sequence of draws directly to the driver in order to avoid any such overhead, using an array of VkMultiDrawInfoEXT or VkMultiDrawIndexedInfoEXT structs with vkCmdDrawMultiEXT or vkCmdDrawMultiIndexedEXT, respectively. These functions could be used any time multiple draw commands are being recorded without any state changes between them in order to maximize performance.

New Commands

Description

With careful usage of resolve attachments, multisampled image memory allocated with
VK_MEMORY_PROPERTY_LAZILY_ALLOCATED_BIT, loadOp not equal to VK_ATTACHMENT_LOAD_OP_LOAD and
storeOp not equal to VK_ATTACHMENT_STORE_OP_STORE, a Vulkan application is able to efficiently
perform multisampled rendering without incurring any additional memory penalty on some
implementations.

Under certain circumstances however, the application may not be able to complete its
multisampled rendering within a single render pass; for example if it does partial rasterization
from frame to frame, blending on an image from a previous frame, or in emulation of
GL_EXT_multisampled_render_to_texture. In such cases, the application can use an initial subpass
to effectively load single-sampled data from the next subpass’s resolve attachment and fill in the
multisampled attachment which otherwise uses loadOp equal to VK_ATTACHMENT_LOAD_OP_DONT_CARE.
However, this is not always possible (for example for stencil in the absence of
VK_EXT_shader_stencil_export) and has multiple drawbacks.

Some implementations are able to perform said operation efficiently in hardware, effectively
loading a multisampled attachment from the contents of a single sampled one. Together with the
ability to perform a resolve operation at the end of a subpass, these implementations are able to
perform multisampled rendering on single-sampled attachments with no extra memory or
bandwidth overhead. This extension exposes this capability by allowing a framebuffer and render
pass to include single-sampled attachments while rendering is done with a specified number of
samples.
New Structures

- Extending VkFormatProperties2:
  ◦ VkSubpassResolvePerformanceQueryEXT

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceMultisampledRenderToSingleSampledFeaturesEXT

- Extending VkSubpassDescription2, VkRenderingInfo:
  ◦ VkMultisampledRenderToSingleSampledInfoEXT

New Enum Constants

- VK_EXT_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_EXTENSION_NAME
- VK_EXT_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_SPEC_VERSION

- Extending VkImageCreateFlagBits:
  ◦ VK_IMAGE_CREATE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_BIT_EXT

- Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_INFO_EXT
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTISAMPLED_RENDER_TO_SINGLE_SAMPLED_FEATURES_EXT
  ◦ VK_STRUCTURE_TYPE_SUBPASS_RESOLVE_PERFORMANCE_QUERY_EXT

Issues

1) Could the multisampled attachment be initialized through some form of copy?

RESOLVED: No. Some implementations do not support copying between attachments in general, and find expressing this operation through a copy unnatural.

2) Another way to achieve this is by introducing a new loadOp to load the contents of the multisampled image from a single-sampled one. Why is this extension preferred?

RESOLVED: Using this extension simplifies the application, as it does not need to manage a secondary lazily-allocated image. Additionally, using this extension leaves less room for error; for example a single mistake in loadOp or storeOp would result in the lazily-allocated image to actually take up memory, and remain so until destruction.

3) There is no guarantee that multisampled data between two subpasses with the same number of samples will be retained as the implementation may be forced to split the render pass implicitly for various reasons. Should this extension require that every subpass that uses multisampled-render-to-single-sampled end in an implicit render pass split (which results in a resolve operation)?

RESOLVED: No. Not requiring this allows render passes with multiple multisampled-render-to-single-sampled subpasses to potentially execute more efficiently (though there is no guarantee).

**Description**

This extension allows applications to reduce descriptor memory footprint by allowing a descriptor to be able to mutate to a given list of descriptor types depending on which descriptor types are written into, or copied into a descriptor set.

The main use case this extension intends to address is descriptor indexing with `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` where the descriptor types are completely generic, as this means applications can allocate one large descriptor set, rather than having one large descriptor set per descriptor type, which significantly bloats descriptor memory usage and causes performance issues.

This extension also adds a mechanism to declare that a descriptor pool, and therefore the descriptor sets that are allocated from it, reside only in host memory; as such these descriptors can only be updated/copied, but not bound.

These features together allow much more efficient emulation of the raw D3D12 binding model. This extension is primarily intended to be useful for API layering efforts.

**New Structures**

Description

When adding transparency to a ray traced scene, an application can choose between further
tessellating the geometry or using an any hit shader to allow the ray through specific parts of the
geometry. These options have the downside of either significantly increasing memory consumption
or adding runtime overhead to run shader code in the middle of traversal, respectively.

This extension adds the ability to add an opacity micromap to geometry when building an
acceleration structure. The opacity micromap compactly encodes opacity information which can be
read by the implementation to mark parts of triangles as opaque or transparent. The format is
externally visible to allow the application to compress its internal geometry and surface
representations into the compressed format ahead of time. The compressed format subdivides each
triangle into a set of subtriangles, each of which can be assigned either two or four opacity values.
These opacity values can control if a ray hitting that subtriangle is treated as an opaque hit,
complete miss, or possible hit, depending on the controls described in Ray Opacity Micromap.

This extension provides:

• a VkMicromapEXT structure to store the micromap,
• functions similar to acceleration structure build functions to build the opacity micromap array,
  and
• a structure to extend VkAccelerationStructureGeometryTrianglesDataKHR to attach a micromap
to the geometry of the acceleration structure.

return b0 | (b1 << 1u);
(4) Should there be indirect micromap build?

- Resolved: Not for now. There is more in-depth usage metadata required and it seems less likely that something like a GPU culling system would need to change the counts for a micromap.

(5) Should micromaps have a micromap device address?

- Resolved: There is no need right now (can just use the handle) but that is a bit different from acceleration structures, though the two are not completely parallel in their usage.

(6) Why are the alignment requirements defined as a mix of hardcoded values and caps?

- Resolved: This is most parallel with the definition of `VK_KHR_acceleration_structure` and maintaining commonality makes it easier for applications to share memory.

**Other Extension Metadata**
Vulkan is frequently implemented on multi-user and multi-process operating systems where the device-local memory can be shared by more than one process. On such systems the size of the device-local memory available to the application may not be the full size of the memory heap at all times. In order for these operating systems to support multiple applications the device-local memory is virtualized and paging is used to move memory between device-local and host-local memory heaps, transparent to the application.

The current Vulkan specification does not expose this behavior well and may cause applications to make suboptimal memory choices when allocating memory. For example, in a system with multiple applications running, the application may think that device-local memory is full and revert to making performance-sensitive allocations from host-local memory. In reality the memory heap might not have been full, it just appeared to be at the time memory consumption was queried, and a device-local allocation would have succeeded. A well designed operating system that implements pageable device-local memory will try to have all memory allocations for the foreground application paged into device-local memory, and paged out for other applications as needed when not in use.

When this extension is exposed by the Vulkan implementation it indicates to the application that the operating system implements pageable device-local memory and the application should adjust its memory allocation strategy accordingly. The extension also exposes a new `vkSetDeviceMemoryPriorityEXT` function to allow the application to dynamically adjust the priority of existing memory allocations based on its current needs. This will help the operating system page out lower priority memory allocations before higher priority allocations when needed. It will also help the operating system decide which memory allocations to page back into device-local memory first.

To take best advantage of pageable device-local memory the application must create the Vulkan device with the `VkPhysicalDevicePageableDeviceLocalMemoryFeaturesEXT::pageableDeviceLocalMemory` feature enabled. When enabled the Vulkan implementation will allow device-local memory allocations to be paged in and out by the operating system, and may not return `VK_ERROR_OUT_OF_DEVICE_MEMORY` even if device-local memory appears to be full, but will instead page this, or other allocations, out to make room. The Vulkan implementation will also
ensure that host-local memory allocations will never be promoted to device-local memory by the operating system, or consume device-local memory.

Description

This extension adds a new query to obtain PCI bus information about a physical device.

Not all physical devices have PCI bus information, either due to the device not being connected to the system through a PCI interface or due to platform specific restrictions and policies. Thus this extension is only expected to be supported by physical devices which can provide the information.

As a consequence, applications should always check for the presence of the extension string for each individual physical device for which they intend to issue the new query for and should not have any assumptions about the availability of the extension on any given platform.

Description

This extension provides new facilities to query DRM properties for physical devices, enabling users to match Vulkan physical devices with DRM nodes on Linux.

Its functionality closely overlaps with EGL_EXT_device_drm. Unlike the EGL extension, this extension does not expose a string containing the name of the device file and instead exposes device minor numbers.

DRM defines multiple device node types. Each physical device may have one primary node and one render node associated. Physical devices may have no primary node (e.g. if the device does not have a display subsystem), may have no render node (e.g. if it is a software rendering engine), or may have neither (e.g. if it is a software rendering engine without a display subsystem).

To query DRM properties for a physical device, chain VkPhysicalDeviceDrmPropertiesEXT to

Description

When using pipeline libraries in ray tracing pipelines, a library might get linked into different pipelines in an incremental way. An application can have a strategy where a ray tracing pipeline is comprised of N pipeline libraries and is later augmented by creating a new pipeline with N + 1 libraries. Without this extension, all group handles must be re-queried as the group handle is tied to the pipeline, not the library. This is problematic for applications which aim to decouple construction of record buffers and the linkage of ray tracing pipelines.

To aid in this, this extension enables support for querying group handles directly from pipeline libraries. Group handles obtained from a library must remain bitwise identical in any VkPipeline that links to the library.

With this feature, the extension also improves compatibility with DXR 1.1 AddToStateObject(), which guarantees that group handles returned remain bitwise identical between parent and child pipelines. In addition, querying group handles from COLLECTION objects is also supported with that API.

Description

Vulkan SC requires offline compilation of pipelines. In order to support this, the pipeline state is represented in a JSON schema that is read by an offline tool for compilation.

One method of developing a Vulkan SC application is to author a Vulkan application and use a layer to record and serialize the pipeline state and shaders for offline compilation. Each pipeline is represented by a separate JSON file, and can be identified with a pipelineIdentifier.

Once the pipelines have been compiled by the offline pipeline cache compiler, the Vulkan SC application can then use this pipelineIdentifier for identifying the pipeline via Vulkan SC’s VkPipelineIdentifierInfo structure.

This extension allows the Vulkan application to query the pipelineIdentifier associated with each pipeline so that the application can store this with its pipeline metadata and the Vulkan SC application will then use to map the same state to an entry in the Vulkan SC pipeline cache.

It is expected that this extension will initially be implemented in the json generation layer, although we can envision that there might be future uses for it in native Vulkan drivers as well.

New Commands

• vkGetPipelinePropertiesEXT

New Structures

• VkPipelineInfoEXT
• VkPipelinePropertiesIdentifierEXT
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDevicePipelinePropertiesFeaturesEXT

New Enum Constants

• VK_EXT_PIPELINE_PROPERTIES_EXTENSION_NAME
• VK_EXT_PIPELINE_PROPERTIES_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_PROPERTIES_FEATURES_EXT
  ◦ VK_STRUCTURE_TYPE_PIPELINE_INFO_EXT
  ◦ VK_STRUCTURE_TYPE_PIPELINE_PROPERTIES_IDENTIFIER_EXT

Issues

(1) This extension does not make sense on a strict Vulkan SC implementation. It may however be of potential use in a non-strict Vulkan SC implementation. Should this extension be enabled as part of
Vulkan SC as well?

**RESOLVED:** No. This extension will not be enabled for Vulkan SC.

(2) This is intended to be a general pipeline properties query, but is currently only retrieving the pipeline identifier. Should the pipeline identifier query be mandatory for this extension and for all queries using this entry point?

**RESOLVED:** Use `VkBaseOutStructure` for the return parameter. Currently this is required to actually be a `VkPipelinePropertiesIdentifierEXT` structure, but that could be relaxed in the future to allow other structure types or to allow other structures to be chained in along with this one.

(3) Should there be a feature structure? Should it be required?

**RESOLVED:** Add a feature structure, and a feature for querying pipeline identifier, but allow it to be optional so that this extension can be used as the basis for other pipeline property queries without requiring the pipeline identifier to be supported.

Interactions and External Dependencies

• This extension requires `SPV_KHR_post_depth_coverage`

• This extension provides API support for `GL_ARB_post_depth_coverage` and `GL_EXT_post_depth_coverage`

Contributors

• Jeff Bolz, NVIDIA

Description

This extension adds support for the following SPIR-V extension in Vulkan:

• `SPV_KHR_post_depth_coverage`

which allows the fragment shader to control whether values in the `SampleMask` built-in input variable reflect the coverage after early `depth` and `stencil` tests are applied.

This extension adds a new `PostDepthCoverage` execution mode under the `SampleMaskPostDepthCoverage` capability. When this mode is specified along with `EarlyFragmentTests`, the value of an input variable decorated with the `SampleMask` built-in reflects the coverage after the early fragment tests are applied. Otherwise, it reflects the coverage before the depth and stencil tests.

When using GLSL source-based shading languages, the `post_depth_coverage` layout qualifier from `GL_ARB_post_depth_coverage` or `GL_EXT_post_depth_coverage` maps to the `PostDepthCoverage` execution mode.

Description

This extension adds support for a new query type to match OpenGL's GL_PRIMITIVES_GENERATED to support layering.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDevicePrimitivesGeneratedQueryFeaturesEXT

New Enum Constants

- VK_EXT_PRIMITIVES_GENERATEDQUERY_EXTENSION_NAME
- VK_EXT_PRIMITIVES_GENERATED_QUERY_SPEC_VERSION
- Extending VkQueryType:
  - VK_QUERY_TYPE_PRIMITIVES_GENERATED_EXT
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIMITIVES_GENERATED_QUERY_FEATURES_EXT

Issues

1) Can the query from VK_EXT_transform_feedback be used instead?

RESOLVED: No. While the query from VK_EXT_transform_feedback can produce the same results as in this extension, it is only available while transform feedback is active. The OpenGL GL_PRIMITIVES_GENERATED query is independent from transform feedback. Emulation through artificial transform feedback is unnecessarily inefficient.

2) Can VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT be used instead?

RESOLVED: It could, but we prefer the extension for simplicity. Vulkan requires that only one
query be active at a time. If both the `GL_PRIMITIVES_GENERATED` and the `GL_CLIPPING_INPUT_PRIMITIVES_ARB` queries need to be simultaneously enabled, emulation of both through `VK_QUERY_PIPELINE_STATISTIC_CLIPPING_INVOCATIONS_BIT` is inconvenient.

3) On some hardware, this query cannot be implemented if `VkPipelineRasterizationStateCreateInfo::rasterizerDiscardEnable` is enabled. How will this be handled?

**RESOLVED**: A feature flag is exposed by this extension for this. On said hardware, the GL implementation disables rasterizer-discard and achieves the same effect through other means. It will not be able to do the same in Vulkan due to lack of state information. A feature flag is exposed by this extension so the OpenGL implementation on top of Vulkan would be able to implement a similar workaround.

4) On some hardware, this query cannot be implemented for non-zero query indices. How will this be handled?

**RESOLVED**: A feature flag is exposed by this extension for this. If this feature is not present, the query from `VK_EXT_transform_feedback` can be used to the same effect.

5) How is the interaction of this extension with `transformFeedbackRasterizationStreamSelect` handled?

**RESOLVED**: Disallowed for non-zero streams. In OpenGL, the rasterization stream is always stream zero.

Description

This extension allows changing the provoking vertex convention between Vulkan’s default convention (first vertex) and OpenGL’s convention (last vertex).

This extension is intended for use by API-translation layers that implement APIs like OpenGL on top of Vulkan, and need to match the source API’s provoking vertex convention. Applications using Vulkan directly should use Vulkan’s default convention.
New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceProvokingVertexFeaturesEXT`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceProvokingVertexPropertiesEXT`

- Extending `VkPipelineRasterizationStateCreateInfo`:
  - `VkPipelineRasterizationProvokingVertexStateCreateInfoEXT`

New Enums

- `VkProvokingVertexModeEXT`

New Enum Constants

- `VK_EXT_PROVOKING_VERTEX_EXTENSION_NAME`
- `VK_EXT_PROVOKING_VERTEX_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROVOKING_VERTEX_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_PROVOKING_VERTEX_STATE_CREATE_INFO_EXT`

Issues

1) At what granularity should this state be set?

**RESOLVED:** At pipeline bind, with an optional per-render pass restriction.

The most natural place to put this state is in the graphics pipeline object. Some implementations require it to be known when creating the pipeline, and pipeline state is convenient for implementing OpenGL 3.2’s `glProvokingVertex`, which can change the state between draw calls. However, some implementations can only change it approximately render pass granularity. To accommodate both, provoking vertex will be pipeline state, but implementations can require that only one mode is used within a render pass instance; the render pass’s mode is chosen implicitly when the first pipeline is bound.

2) Does the provoking vertex mode affect the order that vertices are written to transform feedback buffers?

**RESOLVED:** Yes, to enable layered implementations of OpenGL and D3D.

All of OpenGL, OpenGL ES, and Direct3D 11 require that vertices are written to transform feedback buffers such that flat-shaded attributes have the same value when drawing the contents of the transform feedback buffer as they did in the original drawing when the transform feedback buffer was written (assuming the provoking vertex mode has not changed, in APIs that support more than one mode).
Version History

Description

This extension defines a special queue family, `VK_QUEUE_FAMILY_FOREIGN_EXT`, which can be used to transfer ownership of resources backed by external memory to foreign, external queues. This is similar to `VK_QUEUE_FAMILY_EXTERNAL_KHR`, defined in `VK_KHR_external_memory`. The key differences between the two are:

- The queues represented by `VK_QUEUE_FAMILY_EXTERNAL_KHR` must share the same physical device and the same driver version as the current `VkInstance`. `VK_QUEUE_FAMILY_FOREIGN_EXT` has no such restrictions. It can represent devices and drivers from other vendors, and can even represent non-Vulkan-capable devices.
- All resources backed by external memory support `VK_QUEUE_FAMILY_EXTERNAL_KHR`. Support for `VK_QUEUE_FAMILY_FOREIGN_EXT` is more restrictive.
- Applications should expect transitions to/from `VK_QUEUE_FAMILY_FOREIGN_EXT` to be more expensive than transitions to/from `VK_QUEUE_FAMILY_EXTERNAL_KHR`.

New Enum Constants

• Spencer Fricke, Samsung

Description
This extension enables the VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16 format to be used without a sampler Y’C_b conversion enabled.

New Structures
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceRGBA10X6FormatsFeaturesEXT

New Enum Constants
• VK_EXT_RGBA10X6_FORMATS_EXTENSION_NAME
• VK_EXT_RGBA10X6_FORMATS_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RGBA10X6_FORMATS_FEATURES_EXT

Issues
1) Should we reuse the existing format enumeration or introduce a new one?

RESOLVED: We reuse an existing format enumeration, VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16, that was previously exclusively used for YCbCr and therefore had a set of limitations related to that usage. The alternative was to introduce a new
format token with exactly the same bit representation as the existing token, but without the limitations.

2) Should we only introduce `VK_FORMAT_R10X6G10X6B10X6A10X6_UNORM_4PACK16` or also 1-3 component variations?

**RESOLVED:** Only the 4-component format is introduced because the 1- and 2- component variations are already not exclusive to YCbCr, and the 3-component variation is not a good match for hardware capabilities.

Description

This extension adds stricter requirements for how out of bounds reads and writes are handled. Most accesses must be tightly bounds-checked, out of bounds writes must be discarded, out of bound reads must return zero. Rather than allowing multiple possible (0,0,0,x) vectors, the out of bounds values are treated as zero, and then missing components are inserted based on the format as described in Conversion to RGBA and vertex input attribute extraction.

These additional requirements may be expensive on some implementations, and should only be enabled when truly necessary.

This extension also adds support for “null descriptors”, where VK_NULL_HANDLE can be used instead of a valid handle. Accesses to null descriptors have well-defined behavior, and do not rely on robustness.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceRobustness2FeaturesEXT
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceRobustness2PropertiesEXT

New Enum Constants

- VK_EXT_ROBUSTNESS_2_EXTENSION_NAME
- VK_EXT_ROBUSTNESS_2_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_FEATURES_EXT
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ROBUSTNESS_2_PROPERTIES_EXT

Issues

RESOLVED: Some implementations cannot efficiently tightly bounds-check all buffer accesses. Rather, the size of the bound range is padded to some power of two multiple, up to 256 bytes for uniform buffers and up to 4 bytes for storage buffers, and that padded size is bounds-checked. This is sufficient to implement D3D-like behavior, because D3D only allows binding whole uniform buffers or ranges that are a multiple of 256 bytes, and D3D raw and structured buffers only support 32-bit accesses.
Examples
None.

Description

This extension allows an application to modify the locations of samples within a pixel used in rasterization. Additionally, it allows applications to specify different sample locations for each pixel in a group of adjacent pixels, which can increase antialiasing quality (particularly if a custom resolve shader is used that takes advantage of these different locations).

It is common for implementations to optimize the storage of depth values by storing values that can be used to reconstruct depth at each sample location, rather than storing separate depth values for each sample. For example, the depth values from a single triangle may be represented using plane equations. When the depth value for a sample is needed, it is automatically evaluated at the sample location. Modifying the sample locations causes the reconstruction to no longer evaluate the same depth values as when the samples were originally generated, thus the depth aspect of a depth/stencil attachment must be cleared before rendering to it using different sample locations.

Some implementations may need to evaluate depth image values while performing image layout transitions. To accommodate this, instances of the VkSampleLocationsInfoEXT structure can be specified for each situation where an explicit or automatic layout transition has to take place. VkSampleLocationsInfoEXT can be chained from VkImageMemoryBarrier structures to provide sample locations for layout transitions performed by vkCmdWaitEvents and vkCmdPipelineBarrier calls, and VkRenderPassSampleLocationsBeginInfoEXT can be chained from VkRenderPassBeginInfo to provide sample locations for layout transitions performed implicitly by a render pass instance.

Description

This extension allows a shader to perform 16-bit floating-point atomic operations on buffer and workgroup memory as well as floating-point atomic minimum and maximum operations on buffer, workgroup, and image memory. It advertises the SPIR-V AtomicFloat16AddEXT capability which allows atomic add operations on 16-bit floating-point numbers and the SPIR-V
**AtomicFloat16MinMaxEXT**, **AtomicFloat32MinMaxEXT** and **AtomicFloat64MinMaxEXT** capabilities which allow atomic minimum and maximum operations on floating-point numbers. The supported operations include **OpAtomicFAddEXT**, **OpAtomicFMinEXT** and **OpAtomicFMaxEXT**.

- **VK_EXT_SHADER_ATOMIC_FLOAT_2_SPEC_VERSION**
- Extending **VkStructureType**:
  - **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_ATOMIC_FLOAT_2_FEATURES_EXT**

**Issues**

1) Should this extension add support for 16-bit image atomics?

**RESOLVED**: No. While Vulkan supports creating storage images with **VK_FORMAT_R16_SFLOAT** and doing load and store on them, the data in the shader has a 32-bit representation. Vulkan currently has no facility for even basic reading or writing such images using 16-bit float values in the shader. Adding such functionality would be required before 16-bit image atomics would make sense and is outside the scope of this extension.

Description
This extension extends existing 64-bit integer atomic support to enable these operations on images as well.

When working with large 2- or 3-dimensional data sets (e.g. rasterization or screen-space effects), image accesses are generally more efficient than equivalent buffer accesses. This extension allows applications relying on 64-bit integer atomics in this manner to quickly improve performance with only relatively minor code changes.

64-bit integer atomic support is guaranteed for optimally tiled images with the VK_FORMAT_R64_UINT
and \texttt{VK_FORMAT_R64_SINT} formats.

Description

Some applications generate SPIR-V code at runtime. When pipeline caches are primed, either explicitly through e.g. VkPipelineCache mechanisms, or implicitly through driver managed caches, having to re-generate SPIR-V modules is redundant. SPIR-V modules could be cached on disk by an application, but the extra disk size requirement might be prohibitive in some use cases.

This extension adds the ability for an application to query a small identifier associated with a VkShaderModule. On subsequent runs of the application, the same identifier can be provided in lieu of a VkShaderModule object. A pipeline creation call with such a module may succeed if a pipeline could be created without invoking compilation, and information inside the SPIR-V module is not required by the implementation.

VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT must be used if only the identifier is provided, and this use case is intended to work like a non-blocking, speculative compile. Applications can fallback as necessary.

The main motivation for identifying the module itself and not the entire pipeline is that pipeline identifiers change when a driver is updated, but module identifiers are expected to be stable for any particular driver implementation. This approach is helpful for shader pre-compilation systems which can prime pipeline caches ahead of time. When on-disk pipeline caches are updated, the same shader identifiers could lead to a pipeline cache hit.

\section*{Examples}

\subsection*{Example 1}

Create linked pair of vertex and fragment shaders.

```c
// Logical device created with the shaderObject feature enabled
VkDevice device;

// SPIR-V shader code for a vertex shader, along with its size in bytes
void* pVertexSpirv;
size_t vertexSpirvSize;

// SPIR-V shader code for a fragment shader, along with its size in bytes
void* pFragmentSpirv;
size_t fragmentSpirvSize;
```
// Descriptor set layout compatible with the shaders
VkDescriptorSetLayout descriptorSetLayout;

VkShaderCreateInfoEXT shaderCreateInfos[2] =
{
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = VK_SHADER_CREATE_LINK_STAGE_BIT_EXT,
        .stage = VK_SHADER_STAGE_VERTEX_BIT,
        .nextStage = VK_SHADER_STAGE_FRAGMENT_BIT,
        .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
        .codeSize = vertexSpirvSize,
        .pCode = pVertexSpirv,
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout,
        .pushConstantRangeCount = 0,
        .pPushConstantRanges = NULL,
        .pSpecializationInfo = NULL
    },
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = VK_SHADER_CREATE_LINK_STAGE_BIT_EXT,
        .stage = VK_SHADER_STAGE_FRAGMENT_BIT,
        .nextStage = 0,
        .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
        .codeSize = fragmentSpirvSize,
        .pCode = pFragmentSpirv,
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout,
        .pushConstantRangeCount = 0,
        .pPushConstantRanges = NULL,
        .pSpecializationInfo = NULL
    }
};

VkResult result;
VkShaderEXT shaders[2];

result = vkCreateShadersEXT(device, 2, shaderCreateInfos, NULL, shaders);
if (result != VK_SUCCESS)
{
    // Handle error
}

Later, during command buffer recording, bind the linked shaders and draw.
// Command buffer in the recording state
VkCommandBuffer commandBuffer;

// Vertex and fragment shader objects created above
VkShaderEXT shaders[2];

// Assume vertex buffers, descriptor sets, etc. have been bound, and existing
// state setting commands have been called to set all required state

const VkShaderStageFlagBits stages[2] =
{
    VK_SHADER_STAGE_VERTEX_BIT,
    VK_SHADER_STAGE_FRAGMENT_BIT
};

// Bind linked shaders
vkCmdBindShadersEXT(commandBuffer, 2, stages, shaders);

// Equivalent to the previous line. Linked shaders can be bound one at a time,
// in any order:
// vkCmdBindShadersEXT(commandBuffer, 1, &stages[1], &shaders[1]);
// vkCmdBindShadersEXT(commandBuffer, 1, &stages[0], &shaders[0]);

// The above is sufficient to draw if the device was created with the
// tessellationShader and geometryShader features disabled. Otherwise, since
// those stages should not execute, vkCmdBindShadersEXT() must be called at
// least once with each of their stages in pStages before drawing:

const VkShaderStageFlagBits unusedStages[3] =
{
    VK_SHADER_STAGE_TESSELLATION_CONTROL_BIT,
    VK_SHADER_STAGE_TESSELLATION_EVALUATION_BIT,
    VK_SHADER_STAGE_GEOMETRY_BIT
};

// NULL pShaders is equivalent to an array of stageCount VK_NULL_HANDLE values,
// meaning no shaders are bound to those stages, and that any previously bound
// shaders are unbound
vkCmdBindShadersEXT(commandBuffer, 3, unusedStages, NULL);

// Graphics shader objects may only be used to draw inside dynamic render pass
// instances begun with vkCmdBeginRendering(), assume one has already been begun

// Draw a triangle
vkCmdDraw(commandBuffer, 3, 1, 0, 0);

Example 2
Create unlinked vertex, geometry, and fragment shaders.
Logical device created with the shaderObject feature enabled
VkDevice device;

SPIR-V shader code for vertex shaders, along with their sizes in bytes
void* pVertexSpirv[2];
size_t vertexSpirvSize[2];

SPIR-V shader code for a geometry shader, along with its size in bytes
void pGeometrySpirv;
size_t geometrySpirvSize;

SPIR-V shader code for fragment shaders, along with their sizes in bytes
void* pFragmentSpirv[2];
size_t fragmentSpirvSize[2];

Descriptor set layout compatible with the shaders
VkDescriptorSetLayout descriptorSetLayout;

VkShaderCreateInfoEXT shaderCreateInfos[5] =
{
    // Stage order does not matter
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = 0,
        .stage = VK_SHADER_STAGE_GEOMETRY_BIT,
        .nextStage = VK_SHADER_STAGE_FRAGMENT_BIT,
        .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
        .codeSize = pGeometrySpirv,
        .pCode = geometrySpirvSize,
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout,
        .pushConstantRangeCount = 0,
        .pPushConstantRanges = NULL,
        .pSpecializationInfo = NULL
    },
    {
        .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
        .pNext = NULL,
        .flags = 0,
        .stage = VK_SHADER_STAGE_VERTEX_BIT,
        .nextStage = VK_SHADER_STAGE_GEOMETRY_BIT,
        .codeType = VK_SHADER_CODE Type_SPIRV_EXT,
        .codeSize = vertexSpirvSize[0],
        .pCode = pVertexSpirv[0],
        .pName = "main",
        .setLayoutCount = 1,
        .pSetLayouts = &descriptorSetLayout,
        .pushConstantRangeCount = 0,
    }
};
.pPushConstantRanges = NULL,
.pSpecializationInfo = NULL
},
{
    .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
    .pNext = NULL,
    .flags = 0,
    .stage = VK_SHADER_STAGE_FRAGMENT_BIT,
    .nextStage = 0,
    .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
    .codeSize = fragmentSpirvSize[0],
    .pCode = pFragmentSpirv[0],
    .pName = "main",

    .pSpecializationInfo = NULL
},
{
    .sType = VK_STRUCTURE_TYPE_SHADER_CREATE_INFO_EXT,
    .pNext = NULL,
    .flags = 0,
    .stage = VK_SHADER_STAGE_VERTEX_BIT,
    // Suppose we want this vertex shader to be able to be followed by
    // either a geometry shader or fragment shader:
    .nextStage = VK_SHADER_STAGE_GEOMETRY_BIT | VK_SHADER_STAGE_FRAGMENT_BIT,
    .codeType = VK_SHADER_CODE_TYPE_SPIRV_EXT,
    .codeSize = vertexSpirvSize[1],
    .pCode = pVertexSpirv[1],
    .pName = "main",
    .setLayoutCount = 1,
    .pSetLayouts = &descriptorSetLayout;
    .pushConstantRangeCount = 0,
    .pPushConstantRanges = NULL,
Later, during command buffer recording, bind the linked shaders in different combinations and draw.

```cpp
// Command buffer in the recording state
VkCommandBuffer commandBuffer;

// Vertex, geometry, and fragment shader objects created above
VkShaderEXT shaders[5];

// Assume vertex buffers, descriptor sets, etc. have been bound, and existing // state setting commands have been called to set all required state

const VkShaderStageFlagBits stages[3] =
{
    // Any order is allowed
    VK_SHADER_STAGE_FRAGMENT_BIT,
    VK_SHADER_STAGE_VERTEX_BIT,
    VK_SHADER_STAGE_GEOMETRY_BIT,
};

VkShaderEXT bindShaders[3] =
{
    shaders[2], // FS
    shaders[1], // VS
    shaders[0] // GS
};

// Bind unlinked shaders
vkCmdBindShadersEXT(commandBuffer, 3, stages, bindShaders);

// Assume the tessellationShader feature is disabled, so vkCmdBindShadersEXT() // need not have been called with either tessellation stage

// Graphics shader objects may only be used to draw inside dynamic render pass // instances begun with vkCmdBeginRendering(), assume one has already been begun

// Draw a triangle
```
vkCmdDraw(commandBuffer, 3, 1, 0, 0);

// Bind a different unlinked fragment shader
const VkShaderStageFlagBits fragmentStage = VK_SHADER_STAGE_FRAGMENT_BIT;
vkCmdBindShadersEXT(commandBuffer, 1, &fragmentStage, &shaders[3]);

vkCmdDraw(commandBuffer, 3, 1, 0, 0);

// Draw another triangle
vkCmdDraw(commandBuffer, 3, 1, 0, 0);

// Bind a different unlinked vertex shader
const VkShaderStageFlagBits vertexStage = VK_SHADER_STAGE_VERTEX_BIT;
vkCmdBindShadersEXT(commandBuffer, 1, &vertexStage, &shaders[4]);

vkCmdDraw(commandBuffer, 3, 1, 0, 0);

   • Daniel Rakos, AMD
   • Rex Xu, AMD

Description
This extension adds support for the SPIR-V extension SPV_EXT_shader_stencil_export, providing a mechanism whereby a shader may generate the stencil reference value per invocation. When stencil testing is enabled, this allows the test to be performed against the value generated in the shader.

New Enum Constants
   • VK_EXT_SHADER_STENCIL_EXPORT_EXTENSION_NAME
   • VK_EXT_SHADER_STENCIL_EXPORT_SPEC_VERSION

IP Status

No known IP claims.

Interactions and External Dependencies

• This extension requires SPV_EXT_shader_tile_image
• This extension provides API support for GL_EXT_shader_tile_image

Contributors

• Sandeep Kakarlapudi, Arm
• Jan-Harald Fredriksen, Arm
• James Fitzpatrick, Imagination
• Andrew Garrard, Imagination
• Jeff Leger, Qualcomm
• Huilong Wang, Huawei
• Graeme Leese, Broadcom
• Hans-Kristian Arntzen, Valve
• Tobias Hector, AMD
• Jeff Bolz, NVIDIA
• Shahbaz Youssefi, Google

Description

This extension allows fragment shader invocations to read color, depth and stencil values at their pixel location in rasterization order. The functionality is only available when using dynamic render passes introduced by VK_KHR_dynamic_rendering. Example use cases are programmable blending and deferred shading.

See fragment shader tile image reads for more information.
New Structures

- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceShaderTileImageFeaturesEXT`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceShaderTileImagePropertiesEXT`

New Enum Constants

- `VK_EXT_SHADER_TILE_IMAGE_EXTENSION_NAME`
- `VK_EXT_SHADER_TILE_IMAGE_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TILE_IMAGE_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TILE_IMAGE_PROPERTIES_EXT`

Issues

None.

Examples

Color read example.

```cpp
layout( location = 0 /* aliased to color attachment 0 */ ) tileImageEXT highp attachmentEXT color0;
layout( location = 1 /* aliased to color attachment 1 */ ) tileImageEXT highp attachmentEXT color1;

layout( location = 0 ) out vec4 fragColor;

void main()
{
    vec4 value = colorAttachmentReadEXT(color0) + colorAttachmentReadEXT(color1);
    fragColor = value;
}
```

Depth & Stencil read example.

```cpp
void main()
{
    // read sample 0: works for non-MSAA or MSAA targets
    highp float last_depth = depthAttachmentReadEXT();
    lowp uint last_stencil = stencilAttachmentReadEXT();

    //..
}
```

Description
VK_EXT_surface_maintenance1 adds a collection of window system integration features that were intentionally left out or overlooked in the original VK_KHR_surface extension.
The new features are as follows:

- Allow querying number of min/max images from a surface for a particular presentation mode.
- Allow querying a surface's scaled presentation capabilities.
- Allow querying a surface for the set of presentation modes which can be easily switched between without requiring swapchain recreation.

**New Structures**

- Extending `VkPhysicalDeviceSurfaceInfo2KHR`:
  - `VkSurfacePresentModeEXT`
- Extending `VkSurfaceCapabilities2KHR`:
  - `VkSurfacePresentModeCompatibilityEXT`
  - `VkSurfacePresentScalingCapabilitiesEXT`

**New Enums**

- `VkPresentGravityFlagBitsEXT`
- `VkPresentScalingFlagBitsEXT`

**New Bitmasks**

- `VkPresentGravityFlagsEXT`
- `VkPresentScalingFlagsEXT`

**New Enum Constants**

- `VK_EXT_SURFACE_MAINTENANCE_1_EXTENSION_NAME`
- `VK_EXT_SURFACE_MAINTENANCE_1_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_COMPATIBILITY_EXT`
  - `VK_STRUCTURE_TYPE_SURFACE_PRESENT_MODE_EXT`
  - `VK_STRUCTURE_TYPE_SURFACE_PRESENT_SCALING_CAPABILITIES_EXT`

**Version History**

- Revision 0, 2019-02-27 (Lionel Landwerlin)
  - Internal revisions
- Revision 1, 2022-11-09 (Shahbaz Youssefi)
  - Add functionality and complete spec

IP Status
No known IP claims.

Contributors
- Courtney Goeltzenleuchter, Google

Description
This extension expands VkColorSpaceKHR to add support for most standard color spaces beyond VK_COLOR_SPACE_SRGB_NONLINEAR_KHR. This extension also adds support for VK_COLOR_SPACE_PASS_THROUGH_EXT which allows applications to use color spaces not explicitly enumerated in VkColorSpaceKHR.

New Enum Constants
- VK_EXT_SWAPCHAIN_COLOR_SPACE_EXTENSION_NAME
- VK_EXT_SWAPCHAIN_COLOR_SPACE_SPEC_VERSION
- Extending VkColorSpaceKHR:
  - VK_COLOR_SPACE_ADOBERGB_LINEAR_EXT
Issues

1) Does the spec need to specify which kinds of image formats support the color spaces?

**RESOLVED:** Pixel format is independent of color space (though some color spaces really want / need floating point color components to be useful). Therefore, do not plan on documenting what formats support which color spaces. An application can call `vkGetPhysicalDeviceSurfaceFormatsKHR` to query what a particular implementation supports.

2) How does application determine if HW supports appropriate transfer function for a color space?

**RESOLVED:** Extension indicates that implementation must not do the OETF encoding if it is not sRGB. That responsibility falls to the application shaders. Any other native OETF / EOTF functions supported by an implementation can be described by separate extension.

Version History

- **Revision 1, 2016-12-27** (Courtney Goeltzenleuchter)
  - Initial version
- **Revision 2, 2017-01-19** (Courtney Goeltzenleuchter)
  - Add pass through and multiple options for BT2020.
  - Clean up some issues with equations not displaying properly.
- **Revision 3, 2017-06-23** (Courtney Goeltzenleuchter)
  - Add extended sRGB non-linear enum.
- **Revision 4, 2019-04-26** (Graeme Leese)
  - Clarify color space transfer function usage.
- Refer to normative definitions in the Data Format Specification.
- Clarify DCI-P3 and Display P3 usage.

Description

VK_EXT_swapchain_maintenance1 adds a collection of window system integration features that were intentionally left out or overlooked in the original VK_KHR_swapchain extension.

The new features are as follows:

- Specify a fence that will be signaled when the resources associated with a present operation can be safely destroyed.
- Allow changing the present mode a swapchain is using at per-present granularity.
- Allow applications to define the behavior when presenting a swapchain image to a surface with different dimensions than the image. Using this feature may allow implementations to avoid returning VK_ERROR_OUT_OF_DATE_KHR in this situation.
- Allow applications to defer swapchain memory allocation for improved startup time and memory footprint.
- Allow applications to release previously acquired images without presenting them.

New Commands

- vkReleaseSwapchainImagesEXT

New Structures

- VkReleaseSwapchainImagesInfoEXT
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceSwapchainMaintenance1FeaturesEXT

Description

This extension adds transform feedback to the Vulkan API by exposing the SPIR-V TransformFeedback and GeometryStreams capabilities to capture vertex, tessellation or geometry shader outputs to one or more buffers. It adds API functionality to bind transform feedback buffers to capture the primitives emitted by the graphics pipeline from SPIR-V outputs decorated for transform feedback. The transform feedback capture can be paused and resumed by way of storing and retrieving a byte counter. The captured data can be drawn again where the vertex count is derived from the byte counter without CPU intervention. If the implementation is capable, a vertex stream other than zero can be rasterized.
All these features are designed to match the full capabilities of OpenGL core transform feedback functionality and beyond. Many of the features are optional to allow base OpenGL ES GPUs to also implement this extension.

The primary purpose of the functionality exposed by this extension is to support translation layers from other 3D APIs. This functionality is not considered forward looking, and is not expected to be promoted to a KHR extension or to core Vulkan. Unless this is needed for translation, it is recommended that developers use alternative techniques of using the GPU to process and capture vertex data.

**New Commands**

- `vkCmdBeginQueryIndexedEXT`
- `vkCmdBeginTransformFeedbackEXT`
- `vkCmdBindTransformFeedbackBuffersEXT`
- `vkCmdDrawIndirectByteCountEXT`
- `vkCmdEndQueryIndexedEXT`
- `vkCmdEndTransformFeedbackEXT`

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceTransformFeedbackFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceTransformFeedbackPropertiesEXT`
- Extending `VkPipelineRasterizationStateCreateInfo`:
  - `VkPipelineRasterizationStateStreamCreateInfoEXT`

**New Bitmasks**

- `VkPipelineRasterizationStateStreamCreateFlagsEXT`

**New Enum Constants**

- `VK_EXT_TRANSFORM_FEEDBACK_EXTENSION_NAME`
- `VK_EXT_TRANSFORM_FEEDBACK_SPEC_VERSION`
- Extending `VkAccessFlagBits`:
  - `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_READ_BIT_EXT`
  - `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_WRITE_BIT_EXT`
  - `VK_ACCESS_TRANSFORM_FEEDBACK_WRITE_BIT_EXT`
- Extending `VkBufferUsageFlagBits`:
  - `VK_BUFFER_USAGE_TRANSFORM_FEEDBACK_BUFFER_BIT_EXT`
• **Extending** `VkPipelineStageFlagBits`:
  - `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`

• **Extending** `VkQueryType`:
  - `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT`

• **Extending** `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TRANSFORM_FEEDBACK_PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_STATE_STREAM_CREATE_INFO_EXT`

**Issues**

1) Should we include pause/resume functionality?

**RESOLVED**: Yes, this is needed to ease layering other APIs which have this functionality. To pause use `vkCmdEndTransformFeedbackEXT` and provide valid buffer handles in the `pCounterBuffers` array and offsets in the `pCounterBufferOffsets` array for the implementation to save the resume points. Then to resume use `vkCmdBeginTransformFeedbackEXT` with the previous `pCounterBuffers` and `pCounterBufferOffsets` values. Between the pause and resume there needs to be a memory barrier for the counter buffers with a source access of `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_WRITE_BIT_EXT` at pipeline stage `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT` to a destination access of `VK_ACCESS_TRANSFORM_FEEDBACK_COUNTER_READ_BIT_EXT` at pipeline stage `VK_PIPELINE_STAGE_TRANSFORM_FEEDBACK_BIT_EXT`.

2) How does this interact with multiview?

**RESOLVED**: Transform feedback cannot be made active in a render pass with multiview enabled.

3) How should queries be done?

**RESOLVED**: There is a new query type `VK_QUERY_TYPE_TRANSFORM_FEEDBACK_STREAM_EXT`. A query pool created with this type will capture 2 integers - `numPrimitivesWritten` and `numPrimitivesNeeded` - for the specified vertex stream output from the last pre-rasterization shader stage. The vertex stream output queried is zero by default, but can be specified with the new `vkCmdBeginQueryIndexedEXT` and `vkCmdEndQueryIndexedEXT` commands.

Description
This extension provides a mechanism for caching the results of potentially expensive internal validation operations across multiple runs of a Vulkan application. At the core is the VkValidationCacheEXT object type, which is managed similarly to the existing VkPipelineCache.

The new struct VkShaderModuleValidationCacheCreateInfoEXT can be included in the pNext chain at vkCreateShaderModule time. It contains a VkValidationCacheEXT to use when validating the VkShaderModule.

New Object Types
• VkValidationCacheEXT

Description
This extension provides the VkValidationFeaturesEXT struct that can be included in the pNext chain of the VkInstanceCreateInfo structure passed as the pCreateInfo parameter of vkCreateInstance. The structure contains an array of VkValidationFeatureEnableEXT enum values that enable specific validation features that are disabled by default. The structure also contains an array of VkValidationFeatureDisableEXT enum values that disable specific validation layer features that are enabled by default.

Note
The VK_EXT_validation_features extension subsumes all the functionality provided in the VK_EXT_validation_flags extension.

New Structures
• Extending VkInstanceCreateInfo:
  ◦ VkValidationFeaturesEXT

Description

This extension allows instance-rate vertex attributes to be repeated for certain number of instances instead of advancing for every instance when instanced rendering is enabled.

New Structures

• VkVertexInputBindingDivisorDescriptionEXT
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceVertexAttributeDivisorFeaturesEXT
• Extending VkPhysicalDeviceProperties2:
  ◦ VkPhysicalDeviceVertexAttributeDivisorPropertiesEXT
• Extending VkPipelineVertexInputStateCreateInfo:
  ◦ VkPipelineVertexInputDivisorStateCreateInfoEXT

New Enum Constants

• VK_EXT_VERTEX_ATTRIBUTE_DIVISOR_EXTENSION_NAME
• VK_EXT_VERTEX_ATTRIBUTE_DIVISOR_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_FEATURES_EXT
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_ATTRIBUTE_DIVISOR_PROPERTIES_EXT
  ◦ VK_STRUCTURE_TYPE_PIPELINE_VERTEX_INPUT_DIVISOR_STATE_CREATE_INFO_EXT
Issues

1) What is the effect of a non-zero value for `firstInstance`?

**RESOLVED:** The Vulkan API should follow the OpenGL convention and offset attribute fetching by `firstInstance` while computing vertex attribute offsets.

2) Should zero be an allowed divisor?

**RESOLVED:** Yes. A zero divisor means the vertex attribute is repeated for all instances.

Examples

To create a vertex binding such that the first binding uses instanced rendering and the same attribute is used for every 4 draw instances, an application could use the following set of structures:

```c
const VkVertexInputBindingDivisorDescriptionEXT divisorDesc = {
    0,
    4
};

const VkPipelineVertexInputDivisorStateCreateInfoEXT divisorInfo = {
    VK_STRUCTURE_TYPE_PIPELINE_VERTEX_INPUT_DIVISOR_STATE_CREATE_INFO_EXT, // sType
    NULL, // pNext
    1, // vertexBindingDivisorCount
    &divisorDesc // pVertexBindingDivisors
};

Description

One of the states that contributes to the combinatorial explosion of pipeline state objects that need to be created, is the vertex input binding and attribute descriptions. By allowing them to be dynamic applications may reduce the number of pipeline objects they need to create.

This extension adds dynamic state support for what is normally static state in `VkPipelineVertexInputStateCreateInfo`.

New Commands

• `vkCmdSetVertexInputEXT`

New Structures

• `VkVertexInputAttributeDescription2EXT`
• `VkVertexInputBindingDescription2EXT`
• Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceVertexInputDynamicStateFeaturesEXT`

New Enum Constants

• `VK_EXT_VERTEX_INPUT_DYNAMIC_STATE_EXTENSION_NAME`
• `VK_EXT_VERTEX_INPUT_DYNAMIC_STATE_SPEC_VERSION`
• Extending `VkDynamicState`:
  ◦ `VK_DYNAMIC_STATE_VERTEX_INPUT_EXT`
• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VERTEX_INPUT_DYNAMIC_STATE_FEATURES_EXT`
  ◦ `VK_STRUCTURE_TYPE_VERTEX_INPUT_ATTRIBUTE_DESCRIPTION_2_EXT`
  ◦ `VK_STRUCTURE_TYPE_VERTEX_INPUT_BINDING_DESCRIPTION_2_EXT`

Version History

• Revision 2, 2020-11-05 (Piers Daniell)
  ◦ Make `VkVertexInputBindingDescription2EXT` extensible
  ◦ Add new `VkVertexInputAttributeDescription2EXT` struct for the `pVertexAttributeDescriptions` parameter to `vkCmdSetVertexInputEXT` so it is also extensible
• Revision 1, 2020-08-21 (Piers Daniell)

**Description**

This extension adds the device coherent and device uncached memory types. Any device accesses to device coherent memory are automatically made visible to any other device access. Device uncached memory indicates to applications that caches are disabled for a particular memory type, which guarantees device coherence.

Device coherent and uncached memory are expected to have lower performance for general access than non-device coherent memory, but can be useful in certain scenarios; particularly so for debugging.

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceCoherentMemoryFeaturesAMD`

**New Enum Constants**

- `VK_AMD_DEVICE_COHERENT_MEMORY_EXTENSION_NAME`
- `VK_AMD_DEVICE_COHERENT_MEMORY_SPEC_VERSION`
- Extending `VkMemoryPropertyFlagBits`:

Description

This extension enables applications to use multisampled rendering with a depth/stencil sample count that is larger than the color sample count. Having a depth/stencil sample count larger than the color sample count allows maintaining geometry and coverage information at a higher sample rate than color information. All samples are depth/stencil tested, but only the first color sample count number of samples get a corresponding color output.

- Daniel Rakos, AMD
- Graham Sellers, AMD
- Dominik Witczak, AMD

**Description**

This extension introduces the possibility for the application to control the order of primitive rasterization. In unextended Vulkan, the following stages are guaranteed to execute in *API order*:
• depth bounds test
• stencil test, stencil op, and stencil write
• depth test and depth write
• occlusion queries
• blending, logic op, and color write

This extension enables applications to opt into a relaxed, implementation defined primitive rasterization order that may allow better parallel processing of primitives and thus enabling higher primitive throughput. It is applicable in cases where the primitive rasterization order is known to not affect the output of the rendering or any differences caused by a different rasterization order are not a concern from the point of view of the application’s purpose.

A few examples of cases when using the relaxed primitive rasterization order would not have an effect on the final rendering:

• If the primitives rendered are known to not overlap in framebuffer space.
• If depth testing is used with a comparison operator of `VK_COMPARE_OP_LESS`, `VK_COMPARE_OP_LESS_OR_EQUAL`, `VK_COMPARE_OP_GREATER`, or `VK_COMPARE_OP_GREATER_OR_EQUAL`, and the primitives rendered are known to not overlap in clip space.
• If depth testing is not used and blending is enabled for all attachments with a commutative blend operator.

**New Structures**

• Extending `VkPipelineRasterizationStateCreateInfo`:
  ◦ `VkPipelineRasterizationStateRasterizationOrderAMD`

**New Enums**

• `VkRasterizationOrderAMD`

**New Enum Constants**

• `VK_AMD_RASTERIZATION_ORDER_EXTENSION_NAME`
• `VK_AMD_RASTERIZATION_ORDER_SPEC_VERSION`

Extending `VkStructureType`:

  ◦ `VK_STRUCTURE_TYPE_PIPELINE_RASTERIZATION_STATE_RASTERIZATION_ORDER_AMD`

**Issues**

1) How is this extension useful to application developers?

**RESOLVED**: Allows them to increase primitive throughput for cases when strict API order rasterization is not important due to the nature of the content, the configuration used, or the requirements towards the output of the rendering.
2) How does this extension interact with content optimizations aiming to reduce overdraw by appropriately ordering the input primitives?

**RESOLVED:** While the relaxed rasterization order might somewhat limit the effectiveness of such content optimizations, most of the benefits of it are expected to be retained even when the relaxed rasterization order is used, so applications **should** still apply these optimizations even if they intend to use the extension.

3) Are there any guarantees about the primitive rasterization order when using the new relaxed mode?

**RESOLVED:** No. In this case the rasterization order is completely implementation-dependent, but in practice it is expected to partially still follow the order of incoming primitives.

4) Does the new relaxed rasterization order have any adverse effect on repeatability and other invariance rules of the API?

**RESOLVED:** Yes, in the sense that it extends the list of exceptions when the repeatability requirement does not apply.

**Examples**

None

**Issues**

None

Interactions and External Dependencies
  • This extension requires SPV_AMD_shader_fragment_mask
  • This extension provides API support for GL_AMD_shader_fragment_mask

Contributors
  • Aaron Hagan, AMD
  • Daniel Rakos, AMD
  • Timothy Lottes, AMD

Description

This extension provides efficient read access to the fragment mask in compressed multisampled color surfaces. The fragment mask is a lookup table that associates color samples with color fragment values.

From a shader, the fragment mask can be fetched with a call to fragmentMaskFetchAMD, which returns a single uint where each subsequent four bits specify the color fragment index corresponding to the color sample, starting from the least significant bit. For example, when eight color samples are used, the color fragment index for color sample 0 will be in bits 0-3 of the fragment mask, for color sample 7 the index will be in bits 28-31.

The color fragment for a particular color sample may then be fetched with the corresponding fragment mask value using the fragmentFetchAMD shader function.

New Enum Constants

  • VK_AMD_SHADER_FRAGMENT_MASK_EXTENSION_NAME
  • VK_AMD_SHADER_FRAGMENT_MASK_SPEC_VERSION

New SPIR-V Capabilities

  • FragmentMaskAMD
Examples

This example shows a shader that queries the fragment mask from a multisampled compressed surface and uses it to query fragment values.

```cpp
#version 450 core

#extension GL_AMD_shader_fragment_mask: enable

layout(binding = 0) uniform sampler2DMS s2DMS;
layout(binding = 1) uniform isampler2DMSArray is2DMSArray;
layout(binding = 2, input_attachment_index = 0) uniform usubpassInputMS usubpassMS;
layout(location = 0) out vec4 fragColor;

void main()
{
    vec4 fragOne = vec4(0.0);

    uint fragMask = fragmentMaskFetchAMD(s2DMS, ivec2(2, 3));
    uint fragIndex = (fragMask & 0xF0) >> 4;
    fragOne += fragmentFetchAMD(s2DMS, ivec2(2, 3), 1);

    fragMask = fragmentMaskFetchAMD(is2DMSArray, ivec3(2, 3, 1));
    fragIndex = (fragMask & 0xF0) >> 4;
    fragOne += fragmentFetchAMD(is2DMSArray, ivec3(2, 3, 1), fragIndex);

    fragMask = fragmentMaskFetchAMD(usubpassMS);
    fragIndex = (fragMask & 0xF0) >> 4;
    fragOne += fragmentFetchAMD(usubpassMS, fragIndex);

    fragColor = fragOne;
}

Description

This extension adds a way to query certain information about a compiled shader which is part of a pipeline. This information may include shader disassembly, shader binary and various statistics about a shader’s resource usage.

While this extension provides a mechanism for extracting this information, the details regarding the contents or format of this information are not specified by this extension and may be provided by the vendor externally.

Furthermore, all information types are optionally supported, and users should not assume every implementation supports querying every type of information.
New Commands

- vkGetShaderInfoAMD

New Structures

- VkShaderResourceUsageAMD
- VkShaderStatisticsInfoAMD

New Enums

- VkShaderInfoTypeAMD

New Enum Constants

- VK_AMD_SHADER_INFO_EXTENSION_NAME
- VK_AMD_SHADER_INFO_SPEC_VERSION

Examples

This example extracts the register usage of a fragment shader within a particular graphics pipeline:

```c
extern VkDevice device;
extern VkPipeline gfxPipeline;

PFN_vkGetShaderInfoAMD pfnGetShaderInfoAMD = (PFN_vkGetShaderInfoAMD)
vkGetDeviceProcAddr(
    device, "vkGetShaderInfoAMD");

VkShaderStatisticsInfoAMD statistics = {};

size_t dataSize = sizeof(statistics);

if (pfnGetShaderInfoAMD(device,
    gfxPipeline,
    VK_SHADER_STAGE_FRAGMENT_BIT,
    VK_SHADER_INFO_TYPE_STATISTICS_AMD,
    &dataSize,
    &statistics) == VK_SUCCESS)
{
    printf("VGPR usage: %d\n", statistics.resourceUsage.numUsedVgprs);
    printf("SGPR usage: %d\n", statistics.resourceUsage.numUsedSgprs);
}
```

The following example continues the previous example by subsequently attempting to query and print shader disassembly about the fragment shader:

```c
// Query disassembly size (if available)
```
if (PFNGetShaderInfoAMD(device, 
gfxPipeline, 
VK_SHADER_STAGE_FRAGMENT_BIT, 
VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD, 
&dataSize, 
nullptr) == VK_SUCCESS)
{
    printf("Fragment shader disassembly:\n");
    void* disassembly = malloc(dataSize);
    // Query disassembly and print
    if (PFNGetShaderInfoAMD(device, 
gfxPipeline, 
VK_SHADER_STAGE_FRAGMENT_BIT, 
VK_SHADER_INFO_TYPE_DISASSEMBLY_AMD, 
&dataSize, 
    disassembly) == VK_SUCCESS)
    {
        printf((char*)disassembly);
    }
    free(disassembly);
}

VK_AMD_texture_gather_bias_lod

Name String
  VK_AMD_texture_gather_bias_lod

Extension Type
  Device extension
This extension adds two related features.

Firstly, support for the following SPIR-V extension in Vulkan is added:

- **SPV_AMD_texture_gather_bias_lod**

Secondly, the extension allows the application to query which formats can be used together with the new function prototypes introduced by the SPIR-V extension.
New Structures

- Extending VkImageFormatProperties2:
  - VkTextureLODGatherFormatPropertiesAMD

New Enum Constants

- VK_AMD_TEXTURE_GATHER_BIAS_LOD_EXTENSION_NAME
- VK_AMD_TEXTURE_GATHER_BIAS_LOD_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_TEXTURE_LOD_GATHER_FORMAT_PROPERTIES_AMD

New SPIR-V Capabilities

- ImageGatherBiasLodAMD

Examples

```c
struct VkTextureLODGatherFormatPropertiesAMD
{
    VkStructureType sType;
    const void* pNext;
    VkBool32 supportsTextureGatherLODBiasAMD;
};

// How to detect if an image format can be used with the new function prototypes.
VkPhysicalDeviceImageFormatInfo2 formatInfo;
VkImageFormatProperties2 formatProps;
VkTextureLODGatherFormatPropertiesAMD textureLODGatherSupport;

textureLODGatherSupport.sType = VK_STRUCTURE_TYPE_TEXTURE_LOD_GATHER_FORMAT_PROPERTIES_AMD;
textureLODGatherSupport.pNext = nullptr;

formatInfo.sType = VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_INFO_2;
formatInfo.pNext = nullptr;
formatInfo.format = ...;
formatInfo.type = ...;
formatInfo.tiling = ...;
formatInfo.usage = ...;
formatInfo.flags = ...;

formatProps.sType = VK_STRUCTURE_TYPE_IMAGE_FORMAT_PROPERTIES_2;
formatProps.pNext = &textureLODGatherSupport;
```
vkGetPhysicalDeviceImageFormatProperties2(physical_device, &formatInfo, &formatProps);

if (textureLODGatherSupport.supportsTextureGatherLODBiasAMD == VK_TRUE)
{
    // physical device supports SPV_AMD_texture_gather_bias_lod for the specified
    // format configuration.
}
else
{
    // physical device does not support SPV_AMD_texture_gather_bias_lod for the
    // specified format configuration.
}

Description
This extension enables an application to import Android AHardwareBuffer objects created outside of the Vulkan device into Vulkan memory objects, where they can be bound to images and buffers. It also allows exporting an AHardwareBuffer from a Vulkan memory object for symmetry with other operating systems. But since not all AHardwareBuffer usages and formats have Vulkan equivalents, exporting from Vulkan provides strictly less functionality than creating the AHardwareBuffer externally and importing it.

Some AHardwareBuffer images have implementation-defined external formats that may not correspond to Vulkan formats. Sampler Y’CbCr conversion can be used to sample from these images and convert them to a known color space.

New Base Types
- AHardwareBuffer

New Commands
- vkGetAndroidHardwareBufferPropertiesANDROID
- vkGetMemoryAndroidHardwareBufferANDROID

New Structures
- VkAndroidHardwareBufferPropertiesANDROID
- VkMemoryGetAndroidHardwareBufferInfoANDROID
- Extending VkAndroidHardwareBufferPropertiesANDROID:
• Extending `VkImageCreateInfo`, `VkSamplerYcbcrConversionCreateInfo`:
  • Extending `VkExternalFormatANDROID`

• Extending `VkImageFormatProperties2`:
  • `VkAndroidHardwareBufferUsageANDROID`

• Extending `VkMemoryAllocateInfo`:
  • `VkImportAndroidHardwareBufferInfoANDROID`

If `VK_KHR_format_feature_flags2` is supported:

• Extending `VkAndroidHardwareBufferPropertiesANDROID`:
  • `VkAndroidHardwareBufferFormatProperties2ANDROID`

New Enum Constants

• `VK_ANDROID_EXTERNAL_MEMORY_ANDROID_HARDWARE_BUFFER_EXTENSION_NAME`
• `VK_ANDROID_EXTERNAL_MEMORY_ANDROID_HARDWARE_BUFFER_SPEC_VERSION`

Extending `VkExternalMemoryHandleTypeFlagBits`:

• `VK_EXTERNAL_MEMORY_HANDLE_TYPE_ANDROID_HARDWARE_BUFFER_BIT_ANDROID`

Extending `VkStructureType`:

• `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_ANDROID`
• `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_PROPERTIES_ANDROID`
• `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_USAGE_ANDROID`
• `VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_ANDROID`
• `VK_STRUCTURE_TYPE_IMPORT_ANDROID_HARDWARE_BUFFER_INFO_ANDROID`
• `VK_STRUCTURE_TYPE_MEMORY_GET_ANDROID_HARDWARE_BUFFER_INFO_ANDROID`

If `VK_KHR_format_feature_flags2` is supported:

• Extending `VkStructureType`:
  • `VK_STRUCTURE_TYPE_ANDROID_HARDWARE_BUFFER_FORMAT_PROPERTIES_2_ANDROID`

Issues

1) Other external memory objects are represented as weakly-typed handles (e.g. Win32 `HANDLE` or POSIX file descriptor), and require a handle type parameter along with handles. `AHardwareBuffer` is strongly typed, so naming the handle type is redundant. Does symmetry justify adding handle type parameters/fields anyway?

**RESOLVED:** No. The handle type is already provided in places that treat external memory objects generically. In the places we would add it, the application code that would have to provide the handle type value is already dealing with `AHardwareBuffer`-specific commands/structures; the
extra symmetry would not be enough to make that code generic.

2) The internal layout and therefore size of a AHardwareBuffer image may depend on native usage flags that do not have corresponding Vulkan counterparts. Do we provide this information to vkCreateImage somehow, or allow the allocation size reported by vkGetImageMemoryRequirements to be approximate?

**RESOLVED:** Allow the allocation size to be unspecified when allocating the memory. It has to work this way for exported image memory anyway, since AHardwareBuffer allocation happens in vkAllocateMemory, and internally is performed by a separate HAL, not the Vulkan implementation itself. There is a similar issue with vkGetImageSubresourceLayout: the layout is determined by the allocator HAL, so it is not known until the image is bound to memory.

3) Should the result of sampling an external-format image with the suggested Y'CbCr conversion parameters yield the same results as using a samplerExternalOES in OpenGL ES?

**RESOLVED:** This would be desirable, so that apps converting from OpenGL ES to Vulkan could get the same output given the same input. But since sampling and conversion from Y'CbCr images is so loosely defined in OpenGL ES, multiple implementations do it in a way that does not conform to Vulkan's requirements. Modifying the OpenGL ES implementation would be difficult, and would change the output of existing unmodified applications. Changing the output only for applications that are being modified gives developers the chance to notice and mitigate any problems. Implementations are encouraged to minimize differences as much as possible without causing compatibility problems for existing OpenGL ES applications or violating Vulkan requirements.

4) Should an AHardwareBuffer with AHWARDBUFFER_USAGE_CPU_* usage be mappable in Vulkan? Should it be possible to export an AHardwareBuffers with such usage?

**RESOLVED:** Optional, and mapping in Vulkan is not the same as AHardwareBuffer_lock. The semantics of these are different: mapping in memory is persistent, just gives a raw view of the memory contents, and does not involve ownership. AHardwareBuffer_lock gives the host exclusive access to the buffer, is temporary, and allows for reformatting copy-in/copy-out. Implementations are not required to support host-visible memory types for imported Android hardware buffers or resources backed by them. If a host-visible memory type is supported and used, the memory can be mapped in Vulkan, but doing so follows Vulkan semantics: it is just a raw view of the data and does not imply ownership (this means implementations must not internally call AHardwareBuffer_lock to implement vkMapMemory, or assume the application has done so). Implementations are not required to support linear-tiled images backed by Android hardware buffers, even if the AHardwareBuffer has CPU usage. There is no reliable way to allocate memory in Vulkan that can be exported to a AHardwareBuffer with CPU usage.

5) Android may add new AHardwareBuffer formats and usage flags over time. Can reference to them be added to this extension, or do they need a new extension?

**RESOLVED:** This extension can document the interaction between the new AHB formats/usages and existing Vulkan features. No new Vulkan features or implementation requirements can be added. The extension version number will be incremented when this additional documentation is added, but the version number does not indicate that an implementation supports Vulkan memory or resources that map to the new AHardwareBuffer features: support for that must be queried with
vkGetPhysicalDeviceImageFormatProperties2 or is implied by successfully allocating a AHardwareBuffer outside of Vulkan that uses the new feature and has a GPU usage flag.

In essence, these are new features added to a new Android API level, rather than new Vulkan features. The extension will only document how existing Vulkan features map to that new Android feature.

Interactions and External Dependencies

• This extension requires SPV_ARM_core_builtins.
• This extension provides API support for GL_ARM_shader_core_builtins

Contributors

• Kevin Petit, Arm Ltd.
• Jan-Harald Fredriksen, Arm Ltd.

Description

This extension provides the ability to determine device-specific properties on Arm GPUs. It exposes properties for the number of shader cores, the maximum number of warps that can run on a shader core, and shader builtins to enable invocations to identify which core and warp a shader invocation is executing on.

This extension enables support for the SPIR-V CoreBuiltinsARM capability.

These properties and built-ins can be used for debugging or performance optimisation purposes. A typical optimisation example would be to use CoreIDARM to select a per-shader-core instance of a data structure in algorithms that use atomics so as to reduce contention.

New Structures

• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceShaderCoreBuiltinsFeaturesARM
• Extending VkPhysicalDeviceProperties2:
  ◦ VkPhysicalDeviceShaderCoreBuiltinsPropertiesARM

New Enum Constants

• VK_ARM_SHADER_CORE_BUILTINS_EXTENSION_NAME
• VK_ARM_SHADER_CORE_BUILTINS_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_FEATURES_ARM
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_CORE_BUILTINS_PROPERTIES_ARM

New or Modified Built-In Variables

**Description**
A buffer collection is a collection of one or more buffers which were allocated together as a group and which all have the same properties. These properties describe the buffers’ internal representation such as its dimensions and memory layout. This ensures that all of the buffers can be used interchangeably by tasks that require swapping among multiple buffers, such as double-buffered graphics rendering.

By sharing such a collection of buffers between components, communication about buffer lifecycle can be made much simpler and more efficient. For example, when a content producer finishes writing to a buffer, it can message the consumer of the buffer with the buffer index, rather than passing a handle to the shared memory.

On Fuchsia, the Sysmem service uses buffer collections as a core construct in its design. VK_FUCHSIA_buffer_collection is the Vulkan extension that allows Vulkan applications to interoperate with the Sysmem service on Fuchsia.

**New Object Types**
- VkBufferCollectionFUCHSIA
New Commands

- `vkCreateBufferCollectionFUCHSIA`
- `vkDestroyBufferCollectionFUCHSIA`
- `vkGetBufferCollectionPropertiesFUCHSIA`
- `vkSetBufferCollectionBufferConstraintsFUCHSIA`
- `vkSetBufferCollectionImageConstraintsFUCHSIA`

New Structures

- `VK_FUCHSIA_BUFFER_COLLECTION_SPEC_VERSION`
- Extending `VkDebugReportObjectTypeEXT`:
  - `VK_DEBUG_REPORT_OBJECT_TYPE_BUFFER_COLLECTION_FUCHSIA_EXT`
- Extending `VkObjectType`:  

Extending VkStructureType:

- VK_STRUCTURE_TYPE_BUFFER_COLLECTION_BUFFER_CREATE_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CONSTRAINTS_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_BUFFER_COLLECTION_CREATE_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_BUFFER_COLLECTION_IMAGE_CREATE_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_BUFFER_COLLECTION_PROPERTIES_FUCHSIA
- VK_STRUCTURE_TYPE_BUFFER_CONSTRAINTS_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_IMAGE_CONSTRAINTS_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_IMAGE_FORMAT_CONSTRAINTS_INFO_FUCHSIA
- VK_STRUCTURE_TYPE_IMPORT_MEMORY_BUFFER_COLLECTION_FUCHSIA
- VK_STRUCTURE_TYPE_SYSMEM_COLOR_SPACE_FUCHSIA

Issues

1) When configuring a VkImageConstraintsInfoFUCHSIA structure for constraint setting, should a NULL pFormatConstraints parameter be allowed?

**RESOLVED:** No. Specifying a NULL pFormatConstraints results in logical complexity of interpreting the relationship between the VkImageCreateInfo::usage settings of the elements of the pImageCreateInfos array and the implied or desired VkFormatFeatureFlags.

The explicit requirement for pFormatConstraints to be non-NULL simplifies the implied logic of the implementation and expectations for the Vulkan application.

Description
An application using external memory may wish to synchronize access to that memory using semaphores. This extension enables an application to export semaphore payload to and import semaphore payload from Zircon event handles.

New Commands
  • vkGetSemaphoreZirconHandleFUCHSIA
  • vkImportSemaphoreZirconHandleFUCHSIA

New Structures
  • VkImportSemaphoreZirconHandleInfoFUCHSIA
  • VkSemaphoreGetZirconHandleInfoFUCHSIA

New Enum Constants
  • VK_FUCHSIA_EXTERNAL_SEMAPHORE_EXTENSION_NAME
  • VK_FUCHSIA_EXTERNAL_SEMAPHORE_SPEC_VERSION
  • Extending VkExternalSemaphoreHandleTypeFlagBits:
    ◦ VK_EXTERNAL_SEMAPHORE_HANDLE_TYPE_ZIRCON_EVENT_BIT_FUCHSIA
  • Extending VkStructureType:
    ◦ VK_STRUCTURE_TYPE_IMPORT_SEMAPHORE_ZIRCON_HANDLE_INFO_FUCHSIA
    ◦ VK_STRUCTURE_TYPE_SEMAPHORE_GET_ZIRCON_HANDLE_INFO_FUCHSIA
Issues

1) Does the application need to close the Zircon event handle returned by `vkGetSemaphoreZirconHandleFUCHSIA`?

**RESOLVED**: Yes, unless it is passed back in to a driver instance to import the semaphore. A successful get call transfers ownership of the Zircon event handle to the application, and a successful import transfers it back to the driver. Destroying the original semaphore object will not close the Zircon event handle nor remove its reference to the underlying semaphore resource associated with it.

Description

This extension allows an application that uses the VK_KHR_swapchain extension in combination with a Google Games Platform surface provided by the VK_GGP_stream_descriptor_surface extension to associate a Google Games Platform frame token with a present operation.

New Structures

   • Extending VkPresentInfoKHR:
      ◦ VkPresentFrameTokenGGP

New Enum Constants

   • VK_GGP_FRAME_TOKEN_EXTENSION_NAME
   • VK_GGP_FRAME_TOKEN_SPEC_VERSION
   • Extending VkStructureType:
      ◦ VK_STRUCTURE_TYPE_PRESENT_FRAME_TOKEN_GGP
Version History

• Revision 1, 2018-11-26 (Jean-Francois Roy)
  ◦ Initial revision.

Description

This device extension allows an application that uses the VK_KHR_swapchain extension to obtain information about the presentation engine’s display, to obtain timing information about each present, and to schedule a present to happen no earlier than a desired time. An application can use this to minimize various visual anomalies (e.g. stuttering).

Traditional game and real-time animation applications need to correctly position their geometry for when the presentable image will be presented to the user. To accomplish this, applications need various timing information about the presentation engine’s display. They need to know when presentable images were actually presented, and when they could have been presented. Applications also need to tell the presentation engine to display an image no sooner than a given time. This allows the application to avoid stuttering, so the animation looks smooth to the user.
This extension treats variable-refresh-rate (VRR) displays as if they are fixed-refresh-rate (FRR) displays.

**New Commands**

- `vkGetPastPresentationTimingGOOGLE`
- `vkGetRefreshCycleDurationGOOGLE`

**New Structures**

- `VkPastPresentationTimingGOOGLE`
- `VkPresentTimeGOOGLE`
- `VkRefreshCycleDurationGOOGLE`
- Extending `VkPresentInfoKHR`:
  - `VkPresentTimesInfoGOOGLE`

**New Enum Constants**

- `VK_GOOGLE_DISPLAY_TIMING_EXTENSION_NAME`
- `VK_GOOGLE_DISPLAY_TIMING_SPEC_VERSION`
  - Extending `VkStructureType`:
    - `VK_STRUCTURE_TYPE_PRESENT_TIMES_INFO_GOOGLE`

**Examples**

- **Note**
  The example code for the this extension (like the `VK_KHR_surface` and `VK_GOOGLE_display_timing` extensions) is contained in the cube demo that is shipped with the official Khronos SDK, and is being kept up-to-date in that location (see: [https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c](https://github.com/KhronosGroup/Vulkan-Tools/blob/master/cube/cube.c)).

Description

This extension allows the `vkGetPhysicalDeviceSurfaceFormatsKHR` and `vkGetPhysicalDeviceSurfacePresentModesKHR` functions to accept `VK_NULL_HANDLE` as their `surface` parameter, allowing potential surface formats, color spaces and present modes to be queried without providing a surface. Identically, `vkGetPhysicalDeviceSurfaceFormats2KHR`,
vkGetPhysicalDeviceSurfacePresentModes2EXT, and vkGetPhysicalDeviceSurfaceCapabilities2KHR would accept VK_NULL_HANDLE in VkPhysicalDeviceSurfaceInfo2KHR::surface. This can only be supported on platforms where the results of these queries are surface-agnostic and a single presentation engine is the implicit target of all present operations.

**New Enum Constants**

- VK_GOOGLE_SURFACELESS_QUERY_EXTENSION_NAME

Description

Cluster Culling Shaders (CCS) are similar to the existing compute shaders. Their main purpose is to provide an execution environment in order to perform coarse-level geometry culling and LOD selection more efficiently on the GPU.

The traditional 2-pass GPU culling solution using a compute shader sometimes needs a pipeline barrier between compute and graphics pipeline to optimize performance. An additional compaction process may also be required. This extension addresses these shortcomings, allowing compute shaders to directly emit visible clusters to the following graphics pipeline.

A set of new built-in output variables are used to express a visible cluster. In addition, a new built-in function is used to emit these variables from CCS to the IA stage. The IA stage can use these variables to fetches vertices of a visible cluster and drive vertex shaders to shading these vertices.

Note that CCS do not work with geometry or tessellation shaders, but both IA and vertex shaders are preserved. Vertex shaders are still used for vertex position shading, instead of directly outputting transformed vertices from the compute shader. This makes CCS more suitable for mobile GPUs.

New Commands

• vkCmdDrawClusterHUAWEI
• vkCmdDrawClusterIndirectHUAWEI
New Structures

• Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceClusterCullingShaderFeaturesHUAWEI`

• Extending `VkPhysicalDeviceProperties2`:
  ◦ `VkPhysicalDeviceClusterCullingShaderPropertiesHUAWEI`

New Enum Constants

• `VK_HUAWEI_CLUSTER_CULLING_SHADER_EXTENSION_NAME`
• `VK_HUAWEI_CLUSTER_CULLING_SHADER_SPEC_VERSION`

Extending `VkPipelineStageFlagBits2`:
  ◦ `VK_PIPELINE_STAGE_2_CLUSTER_CULLING_SHADER_BIT_HUAWEI`

Extending `VkQueryPipelineStatisticFlagBits`:
  ◦ `VK_QUERY_PIPELINE_STATISTIC_CLUSTER_CULLING_SHADER_INVOCATIONS_BIT_HUAWEI`

Extending `VkShaderStageFlagBits`:
  ◦ `VK_SHADER_STAGE_CLUSTER_CULLING_BIT_HUAWEI`

Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_FEATURES_HUAWEI`
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CLUSTER_CULLING_SHADER_PROPERTIES_HUAWEI`

New Built-In Variables

• `IndexCountHUAWEI`
• `VertexCountHUAWEI`
• `InstanceCountHUAWEI`
• `FirstIndexHUAWEI`
• `FirstVertexHUAWEI`
• `VertexOffsetHUAWEI`
• `FirstInstanceHUAWEI`
• `ClusterIDHUAWEI`

New SPIR-V Capability

• `ClusterCullingShadingHUAWEI`

Sample code

Example of cluster culling in a GLSL shader
#extension GL_HUAWEI_cluster_culling_shader: enable

```cpp
#define GPU_WARP_SIZE 32
#define GPU_GROUP_SIZE GPU_WARP_SIZE
#define GPU_CLUSTER_PER_INVOCATION 1
#define GPU_CLUSTER_PER_WORKGROUP (GPU_GROUP_SIZE * GPU_CLUSTER_PER_INVOCATION)

// Number of threads per workgroup
// - 1D only
// - warpsize = 32
layout(local_size_x=GPU_GROUP_SIZE, local_size_y=1, local_size_z=1) in;

#define GPU_CLUSTER_DESCRIPTOR_BINDING 0
#define GPU_DRAW_BUFFER_BINDING 1
#define GPU_INSTANCE_DESCRIPTOR_BINDING 2

const float pi_half = 1.570795;
uint instance_id;

struct BoundingSphere
{
    vec3 center;
    float radius;
};

struct BoundingCone
{
    vec3 normal;
    float angle;
};

struct ClusterDescriptor
{
    BoundingSphere sphere;
    BoundingCone cone;
    uint instance_idx;
};

struct InstanceData
{
    mat4 mvp_matrix;  // mvp matrix.
    vec4 frustum_planes[6];  // six frustum planes
    mat4 model_matrix_transpose_inverse;  // inverse transpose of model matrix.
    vec3 view_origin;  // view original
};

struct InstanceDescriptor
{
uint begin;
uint end;
uint cluster_count;
uint debug;
BoundingSphere sphere;
InstanceData instance_data;
};

struct DrawElementsCommand{
  uint indexcount;
  uint instanceCount;
  uint firstIndex;
  int vertexoffset;
  uint firstInstance;
  uint cluster_id;
};

// indexed mode
out gl_PerClusterHUAWEI{
  uint gl_IndexCountHUAWEI;
  uint gl_InstanceCountHUAWEI;
  uint gl_FirstIndexHUAWEI;
  int gl_VertexOffsetHUAWEI;
  uint gl_FirstInstanceHUAWEI;
  uint gl_ClusterIDHUAWEI;
};

layout(binding = GPU_CLUSTER_DESCRIPTOR_BINDING, std430) readonly buffer cluster_descriptor_ssbo
{
  ClusterDescriptor cluster_descriptors[];
};

layout(binding = GPU_DRAW_BUFFER_BINDING, std430) buffer draw_indirect_ssbo
{
  DrawElementsCommand draw_commands[];
};

layout(binding = GPU_INSTANCE_DESCRIPTOR_BINDING, std430) buffer instance_descriptor_ssbo
{
  InstanceDescriptor instance_descriptors[];
};

bool isFrontFaceVisible( vec3 sphere_center, float sphere_radius, vec3 cone_normal, float cone_angle )
{
  vec3 sphere_center_dir = normalize(sphere_center -
float sin_cone_angle = sin(min(cone_angle, pi_half));
return dot(cone_normal, sphere_center_dir) < sin_cone_angle;

bool isSphereOutsideFrustum( vec3 sphere_center, float sphere_radius )
{
  bool isInside = false;
  for(int i = 0; i < 6; i++)
  {
    isInside = isInside ||
    (dot(instance_descriptors[instance_id].instance_data.frustum_planes[i].xyz, sphere_center) + instance_descriptors[instance_id].instance_data.frustum_planes[i].w < sphere_radius);
  }
  return isInside;
}

void main()
{
  uint cluster_id = gl_GlobalInvocationID.x;
  ClusterDescriptor desc = cluster_descriptors[cluster_id];

  // get instance description
  instance_id = desc.instance_idx;
  InstanceDescriptor inst_desc = instance_descriptors[instance_id];

  //instance based culling
  bool instance_render = !isSphereOutsideFrustum(inst_desc.sphere.center, inst_desc.sphere.radius);

  if( instance_render )
  {
    // cluster based culling
    bool render = (!isSphereOutsideFrustum(desc.sphere.center, desc.sphere.radius) && isFrontFaceVisible(desc.sphere.center, desc.sphere.radius, desc.cone.norm, desc.cone.angle));

    if (render)
    {
      // this cluster passed coarse-level culling, update built-in output variable.
      // in case of indexed mode:
      gl_IndexCountHUAWEI = draw_commands[cluster_id].indexcount;
      gl_InstanceCountHUAWEI = draw_commands[cluster_id].instanceCount;
    }
  }
}
Example of graphics pipeline creation with cluster culling shader

```c
// create a cluster culling shader stage info structure.
VkPipelineShaderStageCreateInfo ccsStageInfo{};
ccsStageInfo.sType = VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_CREATE_INFO;
ccsStageInfo.stage = VK_SHADER_STAGE_CLUSTER_CULLING_BIT_HUAWEI;
ccsStageInfo.module = clustercullingshaderModule;
ccsStageInfo.pName = "main";

// pipeline shader stage creation
VkPipelineShaderStageCreateInfo shaderStages[] = { ccsStageInfo,
vertexShaderStageInfo, fragmentShaderStageInfo };

// create graphics pipeline
VkGraphicsPipelineCreateInfo pipelineInfo{};
pipelineInfo.sType = VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_CREATE_INFO;
pipelineInfo.stageCount = 3;
pipelineInfo.pStage = shaderStages;
pipelineInfo.pVertexInputState = &vertexInputInfo;
// ...
VkPipeline graphicsPipeline;
VkCreateGraphicsPipelines(device, VK_NULL_HANDLE, 1, &pipelineInfo, nullptr,
&graphicsPipeline);
```

Example of launching the execution of cluster culling shader

```c
vkCmdBindPipeline(commandBuffer, VK_PIPELINE_BIND_POINT_GRAPHICS, graphicsPipeline);
vkCmdDrawClusterHUAWEI(commandBuffer, groupCountX, 1, 1);
vkCmdEndRenderPass(commandBuffer);
```

- Shaozhuang Shi, Huawei
- Hailong Chu, Huawei
Description
The rays to trace may be sparse in some use cases. For example, the scene only have a few regions to reflect. Providing an invocation mask image to the ray tracing commands could potentially give the hardware the hint to do certain optimization without invoking an additional pass to compact the ray buffer.

New Commands
- `vkCmdBindInvocationMaskHUAWEI`

New Structures
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceInvocationMaskFeaturesHUAWEI`
- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_INVOCATION_MASK_READ_BIT_HUAWEI`
- Extending `VkImageUsageFlagBits`:
  - `VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_INVOCATION_MASK_BIT_HUAWEI`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INVOCATION_MASK_FEATURES_HUAWEI`

New Enum Constants
- `VK_HUAWEI_INVOCATION_MASK_EXTENSION_NAME`
- `VK_HUAWEI_INVOCATION_MASK_SPEC_VERSION`
- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_INVOCATION_MASK_READ_BIT_HUAWEI`
- Extending `VkImageUsageFlagBits`:
  - `VK_IMAGE_USAGE_INVOCATION_MASK_BIT_HUAWEI`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_INVOCATIONMASK_BIT_HUAWEI`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INVOCATION_MASK_FEATURES_HUAWEI`

Examples
RT mask is updated before each `traceRay`.

Step 1. Generate InvocationMask.

```glsl
//the rt mask image bind as color attachment in the fragment shader
Layout(location = 2) out vec4 outRTmask
vec4 mask = vec4(x,x,x,x);
outRTmask = mask;
```

Step 2. `traceRay` with InvocationMask

```glsl
vkCmdBindPipeline(
    commandBuffers[imageIndex],
```
VK_PIPELINE_BIND_POINT_RAY_TRACING_KHR, m_rtPipeline);
vkCmdBindDescriptorSets(commandBuffers[imageIndex],
VK_PIPELINE_BIND_POINT_RAY_TRACING_NV,
m_rtPipelineLayout, 0, 1, &m_rtDescriptorSet,
0, nullptr);

vkCmdBindInvocationMaskHUAWEI(
    commandBuffers[imageIndex],
    InvocationMask imageView,
    InvocationMask imageLayout);

vkCmdTraceRaysKHR(
    commandBuffers[imageIndex],
pRaygenShaderBindingTable,
pMissShaderBindingTable,
swapChainExtent.width,
swapChainExtent.height, 1);

• Renmiao Lu, Huawei
• Pan Gao, Huawei

Description

This extension allows applications to execute a subpass shading pipeline in a subpass of a render pass in order to save memory bandwidth for algorithms like tile-based deferred rendering and forward plus. A subpass shading pipeline is a pipeline with the compute pipeline ability, allowed to read values from input attachments, and only allowed to be dispatched inside a stand-alone subpass. Its work dimension is defined by the render pass's render area size. Its workgroup size (width, height) shall be a power-of-two number in width or height, with minimum value from 8, and maximum value shall be decided from the render pass attachments and sample counts but depends on implementation.

The `GlobalInvocationId.xy` of a subpass shading pipeline is equal to the `FragCoord.xy` of a graphic pipeline in the same render pass subtracted the `offset` of the `VkRenderPassBeginInfo::renderArea`. `GlobalInvocationId.z` is mapped to the Layer if `VK_EXT_shader_viewport_index_layer` is supported. The `GlobalInvocationId.xy` is equal to the index of the local workgroup multiplied by the size of the local workgroup plus the `LocalInvocationId` and the `offset` of the `VkRenderPassBeginInfo::renderArea`.

This extension allows a subpass's pipeline bind point to be `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI`.

New Commands

• `vkCmdSubpassShadingHUAWEI`
• `vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI`

New Structures

• Extending `VkComputePipelineCreateInfo`:
  ◦ `VkSubpassShadingPipelineCreateInfoHUAWEI`
• Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
- `VkPhysicalDeviceSubpassShadingFeaturesHUAWEI`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceSubpassShadingPropertiesHUAWEI`

## New Enum Constants

- `VK_HUAWEI_SUBPASS_SHADING_EXTENSION_NAME`
- `VK_HUAWEI_SUBPASS_SHADING_SPEC_VERSION`

- Extending `VkPipelineBindPoint`:
  - `VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI`

  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SUBPASS_SHADING_PROPERTIES_HUAWEI`
  - `VK_STRUCTURE_TYPE_SUBPASS_SHADING_PIPELINE_CREATE_INFO_HUAWEI`

### Sample Code

#### Example of subpass shading in a GLSL shader

```glsl
#extension GL_HUAWEI_subpass_shading: enable
#extension GL_KHR_shader_subgroup_arithmetic: enable

layout(constant_id = 0) const uint tileWidth = 8;
layout(constant_id = 1) const uint tileHeight = 8;
layout(local_size_x_id = 0, local_size_y_id = 1, local_size_z = 1) in;
layout(set=0, binding=0, input_attachment_index=0) uniform subpassInput depth;

void main()
{
    float d = subpassLoad(depth).x;
    float minD = subgroupMin(d);
    float maxD = subgroupMax(d);
}
```

#### Example of subpass shading dispatching in a subpass

```glsl
vkCmdNextSubpass(commandBuffer, VK_SUBPASS_CONTENTS_INLINE);
```
vkCmdBindPipeline(commandBuffer, VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI, subpassShadingPipeline);
vkCmdBindDescriptorSets(commandBuffer, VK_PIPELINE_BIND_POINT_SUBPASS_SHADING_HUAWEI, subpassShadingPipelineLayout, 
    firstSet, descriptorSetCount, pDescriptorSets, dynamicOffsetCount, pDynamicOffsets);
vkCmdSubpassShadingHUAWEI(commandBuffer);
vkCmdEndRenderPass(commandBuffer);

Example of subpass shading render pass creation

```c
VkAttachmentDescription2 attachments[] = {

Version History

- Revision 3, 2023-06-19 (Pan Gao)
  - Rename VK_PIPELINE_STAGE_2_SUBPASS_SHADING_BIT_HUAWEI to VK_PIPELINE_STAGE_2_SUBPASS_SHADER_BIT_HUAWEI to better aligned with naming of other
pipeline stages

- Revision 2, 2021-06-28 (Hueilong Wang)
  - Change `vkGetSubpassShadingMaxWorkgroupSizeHUAWEI` to `vkGetDeviceSubpassShadingMaxWorkgroupSizeHUAWEI` to resolve issue `pub1564`

- Revision 1, 2020-12-15 (Hueilong Wang)
  - Initial draft.

**VK_IMG_filter_cubic**

**Name String**

- `VK_IMG_filter_cubic`

**Extension Type**

- Device extension

**Registered Extension Number**

- 16

**Revision**

- 1

**Ratification Status**

- Not ratified

**Extension and Version Dependencies**

**Contact**

- Tobias Hector @tobski

**Other Extension Metadata**

**Last Modified Date**

- 2016-02-23

**Contributors**

- Tobias Hector, Imagination Technologies

**Description**

`VK_IMG_filter_cubic` adds an additional, high quality cubic filtering mode to Vulkan, using a Catmull-Rom bicubic filter. Performing this kind of filtering can be done in a shader by using 16 samples and a number of instructions, but this can be inefficient. The cubic filter mode exposes an optimized high quality texture sampling using fixed texture sampling functionality.

**New Enum Constants**

- `VK_IMG_FILTER_CUBIC_EXTENSION_NAME`
Extending `VkFilter`:

- `VK_FILTER_CUBIC_IMG`

Extending `VkFormatFeatureFlagBits`:

- `VK_FORMAT_FEATURE_SAMPLED_IMAGE_FILTER_CUBIC_BIT_IMG`

**Example**

Creating a sampler with the new filter for both magnification and minification

```c
VkSamplerCreateInfo createInfo = {
    VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO // sType
    // Other members set to application-desired values
};

createInfo.magFilter = VK_FILTER_CUBIC_IMG;
createInfo.minFilter = VK_FILTER_CUBIC_IMG;

VkSampler sampler;
VkResult result = vkCreateSampler(
    device,
    &createInfo,
    &sampler);
```

Description
This extension allows an application to capture performance data to be interpreted by an external application or library.

Such a library is available at: https://github.com/intel/metrics-discovery

Performance analysis tools such as Graphics Performance Analyzers make use of this extension and the metrics-discovery library to present the data in a human readable way.

New Object Types

VK_INTEL_shader_integer_functions2

Name String
  VK_INTEL_shader_integer_functions2

Extension Type
  Device extension
This extension adds support for several new integer instructions in SPIR-V for use in graphics shaders. Many of these instructions have pre-existing counterparts in the Kernel environment.

The added integer functions are defined by the \texttt{SPV\_INTEL\_shader\_integer\_functions2} SPIR-V extension and can be used with the \texttt{GL\_INTEL\_shader\_integer\_functions2} GLSL extension.

### New Structures

- Extending \texttt{VkPhysicalDeviceFeatures2, VkDeviceCreateInfo}:
  - \texttt{VkPhysicalDeviceShaderIntegerFunctions2Features\_INTEL}

### New Enum Constants

- \texttt{VK\_INTEL\_SHADER\_INTEGER\_FUNCTIONS\_2\_EXTENSION\_NAME}
• **VK_INTEL_SHADER_INTEGER_FUNCTIONS_2_SPEC_VERSION**

Extending **VkStructureType**:

  ◦ **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_INTEGER_FUNCTIONS_2_FEATURES_INTEL**

**New SPIR-V Capabilities**

  • **IntegerFunctions2INTEL**

• Daniel Koch, NVIDIA

Description
The VK_NN_vi_surface extension is an instance extension. It provides a mechanism to create a VkSurfaceKHR object (defined by the VK_KHR_surface extension) associated with an nn::vi::Layer.

New Commands
• vkCreateViSurfaceNN

New Structures
• VkViSurfaceCreateInfoNN

New Bitmasks
• VkViSurfaceCreateFlagsNN
New Enum Constants

• VK_NN_VI_SURFACE_EXTENSION_NAME
• VK_NN_VI_SURFACE_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_VI_SURFACE_CREATE_INFO_NN

Issues

1) Does VI need a way to query for compatibility between a particular physical device (and queue family?) and a specific VI display?

RESOLVED: No. It is currently always assumed that the device and display will always be compatible.

2) VkViSurfaceCreateInfoNN::pWindow is intended to store an nn::vi::NativeWindowHandle, but its declared type is a bare void* to store the window handle. Why the discrepancy?

RESOLVED: It is for C compatibility. The definition for the VI native window handle type is defined inside the nn::vi C++ namespace. This prevents its use in C source files. nn::vi::NativeWindowHandle is always defined to be void*, so this extension uses void* to match.

Version History

• Revision 1, 2016-12-2 (Michael Chock)

VK_NV_acquire_winrt_display

Name String

VK_NV_acquire_winrt_display

Extension Type

Device extension

Registered Extension Number

346

Revision

1

Ratification Status

Not ratified

Extension and Version Dependencies

VK_EXT_direct_mode_display
Description

This extension allows an application to take exclusive control of a display on Windows 10 provided that the display is not already controlled by a compositor. Examples of compositors include the Windows desktop compositor, other applications using this Vulkan extension, and applications that “Acquire” a “DisplayTarget” using a “WinRT” command such as “winrt::Windows::Devices::Display::Core::DisplayManager.TryAcquireTarget()”.

When control is acquired the application has exclusive access to the display until control is released or the application terminates. An application’s attempt to acquire is denied if a different application has already acquired the display.

New Commands

- `vkAcquireWinrtDisplayNV`
- `vkGetWinrtDisplayNV`

New Enum Constants

- `VK_NV_ACQUIRE_WINRT_DISPLAY_EXTENSION_NAME`
- `VK_NV_ACQUIRE_WINRT_DISPLAY_SPEC_VERSION`

Issues

1) What should the platform substring be for this extension:

**RESOLVED**: The platform substring is “Winrt”.

The substring “Winrt” matches the fact that the OS API exposing the acquire and release functionality is called “WinRT”.

The substring “Win32” is wrong because the related “WinRT” API is explicitly not a “Win32” API. “WinRT” is a competing API family to the “Win32” API family.
The substring “Windows” is suboptimal because there could be more than one relevant API on the Windows platform. There is preference to use the more-specific substring “Winrt”.

2) Should \texttt{vkAcquireWinrtDisplayNV} take a winRT DisplayTarget, or a Vulkan display handle as input?

\textbf{RESOLVED}: A Vulkan display handle. This matches the design of \texttt{vkAcquireXlibDisplayEXT}.

3) Should the acquire command be platform-independent named “\texttt{vkAcquireDisplayNV}”, or platform-specific named “\texttt{vkAcquireWinrtDisplayNV}”?

\textbf{RESOLVED}: Add a platform-specific command.

The inputs to the Acquire command are all Vulkan types. None are WinRT types. This opens the possibility of the winrt extension defining a platform-independent acquire command.

The X11 acquire command does need to accept a platform-specific parameter. This could be handled by adding to a platform-independent acquire command a params struct to which platform-dependent types can be chained by \texttt{pNext} pointer.

The prevailing opinion is that it would be odd to create a second platform-independent function that is used on the Windows 10 platform, but that is not used for the X11 platform. Since a Windows 10 platform-specific command is needed anyway for converting between \texttt{vkDisplayKHR} and platform-native handles, opinion was to create a platform-specific acquire function.

4) Should the \texttt{vkGetWinrtDisplayNV} parameter identifying a display be named “deviceRelativeId” or “adapterRelativeId”?

\textbf{RESOLVED}: The WinRT name is “AdapterRelativeId”. The name “adapter” is the Windows analog to a Vulkan “physical device”. Vulkan already has precedent to use the name \texttt{deviceLUID} for the concept that Windows APIs call “AdapterLuid”. Keeping form with this precedent, the name “deviceRelativeId” is chosen.

5) Does \texttt{vkAcquireWinrtDisplayNV} cause the Windows desktop compositor to release a display?

\textbf{RESOLVED}: No. \texttt{vkAcquireWinrtDisplayNV} does not itself cause the Windows desktop compositor to release a display. This action must be performed outside of Vulkan.

Beginning with Windows 10 version 2004 it is possible to cause the Windows desktop compositor to release a display by using the “Advanced display settings” sub-page of the “Display settings” control panel. See https://docs.microsoft.com/en-us/windows-hardware/drivers/display/specialized-monitors

6) Where can one find additional information about custom compositors for Windows 10?

\textbf{RESOLVED}: Relevant references are as follows.

According to Microsoft’s documentation on “building a custom compositor”, the ability to write a custom compositor is not a replacement for a fullscreen desktop window. The feature is for writing compositor apps that drive specialized hardware.
Only certain editions of Windows 10 support custom compositors, "documented here". The product type can be queried from Windows 10. See https://docs.microsoft.com/en-us/windows/win32/api/sysinfoapi/nf-sysinfoapi-getproductinfo

**Version History**

- Kedarnath Thangudu, NVIDIA

**Description**

Virtual Reality (VR) applications often involve a post-processing step to apply a “barrel” distortion to the rendered image to correct the “pincushion” distortion introduced by the optics in a VR device. The barrel distorted image has lower resolution along the edges compared to the center. Since the original image is rendered at high resolution, which is uniform across the complete image, a lot of pixels towards the edges do not make it to the final post-processed image.
This extension provides a mechanism to render VR scenes at a non-uniform resolution, in particular a resolution that falls linearly from the center towards the edges. This is achieved by scaling the \( w \) coordinate of the vertices in the clip space before perspective divide. The clip space \( w \) coordinate of the vertices can be offset as a function of \( x \) and \( y \) coordinates as follows:

\[ w' = w + Ax + By \]

In the intended use case for viewport position scaling, an application should use a set of four viewports, one for each of the four quadrants of a Cartesian coordinate system. Each viewport is set to the dimension of the image, but is scissored to the quadrant it represents. The application should specify \( A \) and \( B \) coefficients of the \( w \)-scaling equation above, that have the same value, but different signs, for each of the viewports. The signs of \( A \) and \( B \) should match the signs of \( x \) and \( y \) for the quadrant that they represent such that the value of \( w' \) will always be greater than or equal to the original \( w \) value for the entire image. Since the offset to \( w \), \((Ax + By)\), is always positive, and increases with the absolute values of \( x \) and \( y \), the effective resolution will fall off linearly from the center of the image to its edges.

**New Commands**

- `vkCmdSetViewportWScalingNV`

**New Structures**

- `VkViewportWScalingNV`
- Extending `VkPipelineViewportStateCreateInfo`:
  - `VkPipelineViewportWScalingStateCreateInfoNV`

**New Enum Constants**

- `VK_NV_CLIP_SPACE_W_SCALING_EXTENSION_NAME`
- `VK_NV_CLIP_SPACE_W_SCALING_SPEC_VERSION`
- Extending `VkDynamicState`:
  - `VK_DYNAMIC_STATE_VIEWPORT_W_SCALING_NV`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_W_SCALING_STATE_CREATE_INFO_NV`

**Issues**

1) Is the pipeline struct name too long?

**RESOLVED**: It fits with the naming convention.

2) Separate \( W \) scaling section or fold into coordinate transformations?

**RESOLVED**: Leaving it as its own section for now.
Examples

```c
VkViewport viewports[4];
VkRect2D scissors[4];
VkViewportWScalingNV scalings[4];

for (int i = 0; i < 4; i++) {
    int x = (i & 2) ? currentWindowWidth / 2; // Adjust x coordinate
    int y = (i & 1) ? currentWindowHeight / 2; // Adjust y coordinate

    viewports[i].x = 0;
    viewports[i].y = 0;
    viewports[i].width = currentWindowWidth;
    viewports[i].height = currentWindowHeight;
    viewports[i].minDepth = 0.0f;
    viewports[i].maxDepth = 1.0f;

    scissors[i].offset.x = x;
    scissors[i].offset.y = y;
    scissors[i].extent.width = currentWindowWidth / 2;
    scissors[i].extent.height = currentWindowHeight / 2;

    const float factor = 0.15;
    scalings[i].xcoeff = ((i & 2) ? -1.0 : 1.0) * factor;
    scalings[i].ycoeff = ((i & 1) ? -1.0 : 1.0) * factor;
}

VkPipelineViewportWScalingStateCreateInfoNV vpWScalingStateInfo = {
    VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_W_SCALING_STATE_CREATE_INFO_NV
};

vpWScalingStateInfo.viewportWScalingEnable = VK_TRUE;
vpWScalingStateInfo.viewportCount = 4;
vpWScalingStateInfo.pViewportWScalings = &scalings[0];

VkPipelineViewportStateCreateInfo vpStateInfo = {
    VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_STATE_CREATE_INFO
};

vpStateInfo.viewportCount = 4;
vpStateInfo.pViewports = &viewports[0];
vpStateInfo.scissorCount = 4;
vpStateInfo.pScissors = &scissors[0];
vpStateInfo.pNext = &vpWScalingStateInfo;
```

Example shader to read from a w-scaled texture:

```glsl
// Vertex Shader
// Draw a triangle that covers the whole screen
const vec4 positions[3] = vec4[3](vec4(-1, -1, 0, 1),
                                     vec4( 3, -1, 0, 1),
                                     vec4(-1,  3, 0, 1));
```
out vec2 uv;
void main()
{
    vec4 pos = positions[ gl_VertexID ];
    gl_Position = pos;
    uv = pos.xy;
}

// Fragment Shader
uniform sampler2D tex;
uniform float xcoeff;
uniform float ycoeff;
out vec4 Color;
in vec2 uv;

void main()
{
    // Handle uv as if upper right quadrant
    vec2 uvabs = abs(uv);

    // unscale: transform w-scaled image into an unscaled image
    // scale: transform unscaled image int a w-scaled image
    float unscale = 1.0 / (1 + xcoeff * uvabs.x + xcoeff * uvabs.y);
    //float scale = 1.0 / (1 - xcoeff * uvabs.x - xcoeff * uvabs.y);
    
    vec2 P = vec2(unscale * uvabs.x, unscale * uvabs.y);

    // Go back to the right quadrant
    P *= sign(uv);

    Color = texture(tex, P * 0.5 + 0.5);
}

Interactions and External Dependencies
• This extension requires SPV_NV_compute_shader_derivatives
• This extension provides API support for GL_NV_compute_shader_derivatives

Contributors
• Pat Brown, NVIDIA

Description
This extension adds Vulkan support for the SPV_NV_compute_shader_derivatives SPIR-V extension.

The SPIR-V extension provides two new execution modes, both of which allow compute shaders to use built-ins that evaluate compute derivatives explicitly or implicitly. Derivatives will be computed via differencing over a 2x2 group of shader invocations. The DerivativeGroupQuadsNV execution mode assembles shader invocations into 2x2 groups, where each group has x and y coordinates of the local invocation ID of the form (2m+{0,1}, 2n+{0,1}). The DerivativeGroupLinearNV execution mode assembles shader invocations into 2x2 groups, where each group has local invocation index values of the form 4m+{0,1,2,3}.

New Structures
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceComputeShaderDerivativesFeaturesNV

New Enum Constants
• VK_NV_COMPUTE_SHADER_DERIVATIVES_EXTENSION_NAME
• `VK_NV_COMPUTE_SHADER_DERIVATIVES_SPEC_VERSION`

Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COMPUTE_SHADER_DERIVATIVES_FEATURES_NV`

**New SPIR-V Capability**

• `ComputeDerivativeGroupQuadsNV`

• `ComputeDerivativeGroupLinearNV`

**Issues**

(1) Should we specify that the groups of four shader invocations used for derivatives in a compute shader are the same groups of four invocations that form a “quad” in shader subgroups?

**Resolved**: Yes.

**Examples**

None.

Interactions and External Dependencies

• This extension requires SPV_NV_cooperative_matrix
• This extension provides API support for GL_NV_cooperative_matrix

Contributors

• Jeff Bolz, NVIDIA
• Markus Tavenrath, NVIDIA
• Daniel Koch, NVIDIA

Description

This extension adds support for using cooperative matrix types in SPIR-V. Cooperative matrix types are medium-sized matrices that are primarily supported in compute shaders, where the storage for the matrix is spread across all invocations in some scope (usually a subgroup) and those invocations cooperate to efficiently perform matrix multiplies.

Cooperative matrix types are defined by the SPV_NV_cooperative_matrix SPIR-V extension and can be used with the GL_NV_cooperative_matrix GLSL extension.

This extension includes support for enumerating the matrix types and dimensions that are supported by the implementation.

New Commands

• vkGetPhysicalDeviceCooperativeMatrixPropertiesNV

New Structures

• VkCooperativeMatrixPropertiesNV
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  • VkPhysicalDeviceCooperativeMatrixFeaturesNV
• Extending VkPhysicalDeviceProperties2:
  • VkPhysicalDeviceCooperativeMatrixPropertiesNV

New Enums

• VkComponentTypeNV
• VkScopeNV
New Enum Constants

- VK_NV_COOPERATIVE_MATRIX_EXTENSION_NAME
- VK_NV_COOPERATIVE_MATRIX_SPEC_VERSION

Extending VkComponentTypeKHR:

- VK_COMPONENT_TYPE_FLOAT16_NV
- VK_COMPONENT_TYPE_FLOAT32_NV
- VK_COMPONENT_TYPE_FLOAT64_NV
- VK_COMPONENT_TYPE_SINT16_NV
- VK_COMPONENT_TYPE_SINT32_NV
- VK_COMPONENT_TYPE_SINT64_NV
- VK_COMPONENT_TYPE_SINT8_NV
- VK_COMPONENT_TYPE_UINT16_NV
- VK_COMPONENT_TYPE_UINT32_NV
- VK_COMPONENT_TYPE_UINT64_NV
- VK_COMPONENT_TYPE_UINT8_NV

Extending VkScopeKHR:

- VK_SCOPE_DEVICE_NV
- VK_SCOPE_QUEUE_FAMILY_NV
- VK_SCOPE_SUBGROUP_NV
- VK_SCOPE_WORKGROUP_NV

Extending VkStructureType:

- VK_STRUCTURE_TYPE_COOPERATIVE_MATRIX_PROPERTIES_NV
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_FEATURES_NV
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_COOPERATIVE_MATRIX_PROPERTIES_NV

New SPIR-V Capabilities

- CooperativeMatrixNV

Issues

(1) What matrix properties will be supported in practice?

RESOLVED: In NVIDIA’s initial implementation, we will support:

- AType = BType = fp16 CType = DType = fp16 MxNxK = 16x8x16 scope = Subgroup
- AType = BType = fp16 CType = DType = fp16 MxNxK = 16x8x8 scope = Subgroup
- AType = BType = fp16 CType = DType = fp32 MxNxK = 16x8x16 scope = Subgroup

• Chris Lentini, NVIDIA

Description
This extension adds support for a new image organization, which this extension refers to as “corner-sampled” images. A corner-sampled image differs from a conventional image in the following ways:

• Texels are centered on integer coordinates. See Unnormalized Texel Coordinate Operations
• Normalized coordinates are scaled using coord × (dim - 1) rather than coord × dim, where dim is the size of one dimension of the image. See normalized texel coordinate transform.
• Partial derivatives are scaled using coord × (dim - 1) rather than coord × dim. See Scale Factor Operation.
• Calculation of the next higher LOD size goes according to ⌈dim / 2⌉ rather than ⌊dim / 2⌋. See Image Mip Level Sizing.
• The minimum level size is 2x2 for 2D images and 2x2x2 for 3D images. See Image Mip Level Sizing.

This image organization is designed to facilitate a system like Ptex with separate textures for each face of a subdivision or polygon mesh. Placing sample locations at pixel corners allows applications to maintain continuity between adjacent patches by duplicating values along shared edges. Additionally, using the modified mipmapping logic along with texture dimensions of the form $2^n + 1$ allows continuity across shared edges even if the adjacent patches use different LOD values.

New Structures
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceCornerSampledImageFeaturesNV
New Enum Constants

- VK_NV_CORNER_SAMPLED_IMAGE_EXTENSION_NAME
- VK_NV_CORNER_SAMPLED_IMAGE_SPEC_VERSION
- Extending VkImageCreateFlagBits:
  - VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_CORNER_SAMPLED_IMAGE_FEATURES_NV

Issues

1. What should this extension be named?

   DISCUSSION: While naming this extension, we chose the most distinctive aspect of the image organization and referred to such images as “corner-sampled images”. As a result, we decided to name the extension NV_corner_sampled_image.

2. Do we need a format feature flag so formats can advertise if they support corner-sampling?

   DISCUSSION: Currently NVIDIA supports this for all 2D and 3D formats, but not for cube maps or depth-stencil formats. A format feature might be useful if other vendors would only support this on some formats.

3. Do integer texel coordinates have a different range for corner-sampled images?

   RESOLVED: No, these are unchanged.

4. Do unnormalized sampler coordinates work with corner-sampled images? Are there any functional differences?

   RESOLVED: Yes. Unnormalized coordinates are treated as already scaled for corner-sample usage.

5. Should we have a diagram in the “Image Operations” chapter demonstrating different texel sampling locations?

   UNRESOLVED: Probably, but later.

Description

When using a framebuffer with mixed samples, a per-fragment coverage reduction operation is performed which generates color sample coverage from the pixel coverage. This extension defines the following modes to control how this reduction is performed.

• Merge: When there are more samples in the pixel coverage than color samples, there is an implementation-dependent association of each pixel coverage sample to a color sample. In the merge mode, the color sample coverage is computed such that only if any associated sample in the pixel coverage is covered, the color sample is covered. This is the default mode.

• Truncate: When there are more raster samples (N) than color samples(M), there is one to one association of the first M raster samples to the M color samples; other raster samples are ignored.
When the number of raster samples is equal to the color samples, there is a one to one mapping between them in either of the above modes.

The new command `vkGetPhysicalDeviceSupportedFramebufferMixedSamplesCombinationsNV` can be used to query the various raster, color, depth/stencil sample count and reduction mode combinations that are supported by the implementation. This extension would allow an implementation to support the behavior of both `VK_NV_framebuffer_mixed_samples` and `VK_AMD_mixed_attachment_samples` extensions simultaneously.

Description

This extension allows applications to insert markers in the command stream and associate them with custom data.

If a device lost error occurs, the application may then query the implementation for the last markers to cross specific implementation-defined pipeline stages, in order to narrow down which commands were executing at the time and might have caused the failure.

Interactions and External Dependencies

- This extension requires Vulkan 1.1
- This extension requires VK_EXT_buffer_device_address or VK_KHR_buffer_device_address or Vulkan 1.2 for the ability to bind vertex and index buffers on the device.
- This extension interacts with VK_NV_mesh_shader. If the latter extension is not supported, remove the command token to initiate mesh tasks drawing in this extension.

Description

This extension allows the device to generate a number of critical graphics commands for command buffers.

When rendering a large number of objects, the device can be leveraged to implement a number of critical functions, like updating matrices, or implementing occlusion culling, frustum culling, front to back sorting, etc. Implementing those on the device does not require any special extension, since an application is free to define its own data structures, and just process them using shaders.

However, if the application desires to quickly kick off the rendering of the final stream of objects, then unextended Vulkan forces the application to read back the processed stream and issue graphics command from the host. For very large scenes, the synchronization overhead and cost to generate the command buffer can become the bottleneck. This extension allows an application to generate a device side stream of state changes and commands, and convert it efficiently into a command buffer without having to read it back to the host.

Furthermore, it allows incremental changes to such command buffers by manipulating only partial sections of a command stream — for example pipeline bindings. Unextended Vulkan requires recreation of entire command buffers in such a scenario, or updates synchronized on the host.

The intended usage for this extension is for the application to:
• create `VkBuffer` objects and retrieve physical addresses from them via `vkGetBufferDeviceAddressEXT`

• create a graphics pipeline using `VkGraphicsPipelineShaderGroupsCreateInfoNV` for the ability to change shaders on the device.

• create a `VkIndirectCommandsLayoutNV`, which lists the `VkIndirectCommandsTokenTypeNV` it wants to dynamically execute as an atomic command sequence. This step likely involves some internal device code compilation, since the intent is for the GPU to generate the command buffer in the pipeline.

• fill the input stream buffers with the data for each of the inputs it needs. Each input is an array that will be filled with token-dependent data.

• set up a preprocess `VkBuffer` that uses memory according to the information retrieved via `vkGetGeneratedCommandsMemoryRequirementsNV`.

• optionally preprocess the generated content using `vkCmdPreprocessGeneratedCommandsNV`, for example on an asynchronous compute queue, or for the purpose of re-using the data in multiple executions.

• call `vkCmdExecuteGeneratedCommandsNV` to create and execute the actual device commands for all sequences based on the inputs provided.

For each draw in a sequence, the following can be specified:

• a different shader group

• a number of vertex buffer bindings

• a different index buffer, with an optional dynamic offset and index type

• a number of different push constants

• a flag that encodes the primitive winding

While the GPU can be faster than a CPU to generate the commands, it will not happen asynchronously to the device, therefore the primary use case is generating “less” total work (occlusion culling, classification to use specialized shaders, etc.).

**New Object Types**

• `VkIndirectCommandsLayoutNV`

**New Commands**

• `vkCmdBindPipelineShaderGroupNV`

• `vkCmdExecuteGeneratedCommandsNV`

• `vkCmdPreprocessGeneratedCommandsNV`

• `vkCreateIndirectCommandsLayoutNV`

• `vkDestroyIndirectCommandsLayoutNV`

• `vkGetGeneratedCommandsMemoryRequirementsNV`

  ◦ `VK_STRUCTURE_TYPE_GENERATED_COMMANDS_MEMORY_REQUIREMENTS_INFO_NV`
  ◦ `VK_STRUCTURE_TYPE_GRAPHICS_PIPELINE_SHADER_GROUPS_CREATE_INFO_NV`
  ◦ `VK_STRUCTURE_TYPE_GRAPHICS_SHADER_GROUP_CREATE_INFO_NV`
  ◦ `VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_CREATE_INFO_NV`
  ◦ `VK_STRUCTURE_TYPE_INDIRECT_COMMANDS_LAYOUT_TOKEN_NV`
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_FEATURES_NV`
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DEVICE_GENERATED_COMMANDS_PROPERTIES_NV`

**Issues**

1) How to name this extension?

`VK_NV_device_generated_commands`

As usual, one of the hardest issues ;)

Alternatives: `VK_gpu_commands`, `VK_execute_commands`, `VK_device_commands`, `VK_device_execute_commands`, `VK_device_execute`, `VK_device_created_commands`, `VK_device_recorded_commands`, `VK_device_generated_commands`

2) Should we use a serial stateful token stream or stateless sequence descriptions?

Similarly to `VkPipeline`, fixed layouts have the most likelihood to be cross-vendor adoptable. They also benefit from being processable in parallel. This is a different design choice compared to the serial command stream generated through `GL_NV_command_list`.

3) How to name a sequence description?

`VkIndirectCommandsLayout` as in the NVX extension predecessor.

Alternative: `VkGeneratedCommandsLayout`

4) Do we want to provide `indirectCommands` inputs with layout or at `indirectCommands` time?

Separate layout from data as Vulkan does. Provide full flexibility for `indirectCommands`.

5) Should the input be provided as SoA or AoS?

Both ways are desirable. AoS can provide portability to other APIs and easier to setup, while SoA allows to update individual inputs in a cache-efficient manner, when others remain static.
6) How do we make developers aware of the memory requirements of implementation-dependent data used for the generated commands?

Make the API explicit and introduce a `preprocess VkBuffer`. Developers have to allocate it using `vkGetGeneratedCommandsMemoryRequirementsNV`.

In the NVX version the requirements were hidden implicitly as part of the command buffer reservation process, however as the memory requirements can be substantial, we want to give developers the ability to budget the memory themselves. By lowering the `maxSequencesCount` the memory consumption can be reduced. Furthermore reuse of the memory is possible, for example for doing explicit preprocessing and execution in a ping-pong fashion.

The actual buffer size is implementation-dependent and may be zero, i.e. not always required.

When making use of Graphics Shader Groups, the programs should behave similar with regards to vertex inputs, clipping and culling outputs of the geometry stage, as well as sample shading behavior in fragment shaders, to reduce the amount of the worst-case memory approximation.

7) Should we allow additional per-sequence dynamic state changes?

Yes

Introduced a lightweight indirect state flag `VkIndirectStateFlagBitsNV`. So far only switching front face winding state is exposed. Especially in CAD/DCC mirrored transforms that require such changes are common, and similar flexibility is given in the ray tracing instance description.

The flag could be extended further, for example to switch between primitive-lists or -strips, or make other state modifications.

Furthermore, as new tokens can be added easily, future extension could add the ability to change any `VkDynamicState`.

8) How do we allow re-using already “generated” indirectCommands?

Expose a `preprocessBuffer` to reuse implementation-dependencyFlags data. Set the `isPreprocessed` to true in `vkCmdExecuteGeneratedCommandsNV`.

9) Under which conditions is `vkCmdExecuteGeneratedCommandsNV` legal?

It behaves like a regular draw call command.

10) Is `vkCmdPreprocessGeneratedCommandsNV` copying the input data or referencing it?

There are multiple implementations possible:

- one could have some emulation code that parses the inputs, and generates an output command buffer, therefore copying the inputs.
- one could just reference the inputs, and have the processing done in pipe at execution time.

If the data is mandated to be copied, then it puts a penalty on implementation that could process the inputs directly in pipe. If the data is “referenced”, then it allows both types of implementation.
The inputs are “referenced”, and **must** not be modified after the call to `vkCmdExecuteGeneratedCommandsNV` has completed.

11) Which buffer usage flags are required for the buffers referenced by `VkGeneratedCommandsInfoNV`?

Reuse existing `VK_BUFFER_USAGE INDIRECT_BUFFER_BIT`

- `VkGeneratedCommandsInfoNV::preprocessBuffer`
- `VkGeneratedCommandsInfoNV::sequencesCountBuffer`
- `VkGeneratedCommandsInfoNV::sequencesIndexBuffer`
- `VkIndirectCommandsStreamNV::buffer`

12) In which pipeline stage does the device generated command expansion happen?

`vkCmdPreprocessGeneratedCommandsNV` is treated as if it occurs in a separate logical pipeline from either graphics or compute, and that pipeline only includes `VK_PIPELINE_STAGE_TOP_OF_PIPE_BIT`, a new stage `VK_PIPELINE_STAGE_COMMAND_PREPROCESS_BIT_NV`, and `VK_PIPELINE_STAGE_BOTTOM_OF_PIPE_BIT`. This new stage has two corresponding new access types, `VK_ACCESS_COMMAND_PREPROCESS_READ_BIT_NV` and `VK_ACCESS_COMMAND_PREPROCESS_WRITE_BIT_NV`, used to synchronize reading the buffer inputs and writing the preprocess memory output.

The generated output written in the preprocess buffer memory by `vkCmdExecuteGeneratedCommandsNV` is considered to be consumed by the `VK_PIPELINE_STAGE_DRAW INDIRECT_BIT` pipeline stage.

Thus, to synchronize from writing the input buffers to preprocessing via `vkCmdPreprocessGeneratedCommandsNV`, use:

- `dstStageMask = VK_PIPELINE_STAGE_COMMAND_PREPROCESS_BIT_NV`
- `dstAccessMask = VK_ACCESS_COMMAND_PREPROCESS_READ_BIT_NV`

To synchronize from `vkCmdPreprocessGeneratedCommandsNV` to executing the generated commands by `vkCmdExecuteGeneratedCommandsNV`, use:

- `srcStageMask = VK_PIPELINE_STAGE_COMMAND_PREPROCESS_BIT_NV`
- `srcAccessMask = VK_ACCESS_COMMAND_PREPROCESS_WRITE_BIT_NV`
- `dstStageMask = VK_PIPELINE_STAGE_DRAW INDIRECT_BIT`
- `dstAccessMask = VK_ACCESS INDIRECT_COMMAND_READ_BIT`

When `vkCmdExecuteGeneratedCommandsNV` is used with a `isPreprocessed` of `VK_FALSE`, the generated commands are implicitly preprocessed, therefore one only needs to synchronize the inputs via:

- `dstStageMask = VK_PIPELINE_STAGE_DRAW INDIRECT_BIT`
- `dstAccessMask = VK_ACCESS INDIRECT_COMMAND_READ_BIT`

13) What if most token data is “static”, but we frequently want to render a subsection?
Added “sequencesIndexBuffer”. This allows to easier sort and filter what should actually be executed.

14) What are the changes compared to the previous NVX extension?

- Compute dispatch support was removed (was never implemented in drivers). There are different approaches how dispatching from the device should work, hence we defer this to a future extension.
- The `ObjectTableNVX` was replaced by using physical buffer addresses and introducing Shader Groups for the graphics pipeline.
- Less state changes are possible overall, but the important operations are still there (reduces complexity of implementation).
- The API was redesigned so all inputs must be passed at both preprocessing and execution time (this was implicit in NVX, now it is explicit)
- The reservation of intermediate command space is now mandatory and explicit through a preprocess buffer.
- The `VkIndirectStateFlagBitsNV` were introduced

15) When porting from other APIs, their indirect buffers may use different enums, for example for index buffer types. How to solve this?

Added “pIndexTypeValues” to map custom `uint32_t` values to corresponding `VkIndexType`.

16) Do we need more shader group state overrides?

The NVX version allowed all PSO states to be different, however as the goal is not to replace all state setup, but focus on highly-frequent state changes for drawing lots of objects, we reduced the amount of state overrides. Especially `VkPipelineLayout` as well as `VkRenderPass` configuration should be left static, the rest is still open for discussion.

The current focus is just to allow VertexInput changes as well as shaders, while all shader groups use the same shader stages.

Too much flexibility will increase the test coverage requirement as well. However, further extensions could allow more dynamic state as well.

17) Do we need more detailed physical device feature queries/enables?

An EXT version would need detailed implementor feedback to come up with a good set of features. Please contact us if you are interested, we are happy to make more features optional, or add further restrictions to reduce the minimum feature set of an EXT.

18) Is there an interaction with VK_KHR_pipeline_library planned?

Yes, a future version of this extension will detail the interaction, once VK_KHR_pipeline_library is no longer provisional.
Example Code

Open-Source samples illustrating the usage of the extension can be found at the following location (may not yet exist at time of writing):

https://github.com/nvpro-samples/vk_device_generated_cmds

Description

This extension adds support for allocating memory which can be used for remote direct memory access (RDMA) from other devices.

New Base Types

- VkRemoteAddressNV

New Commands

- vkGetMemoryRemoteAddressNV

New Structures

- VkMemoryGetRemoteAddressInfoNV
  - Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
    - VkPhysicalDeviceExternalMemoryRDMAFeaturesNV

New Enum Constants

- VK_NV_EXTERNAL_MEMORY_RDMA_EXTENSION_NAME
- VK_NV_EXTERNAL_MEMORY_RDMA_SPEC_VERSION
  - Extending VkExternalMemoryHandleTypeFlagBits:
    - VK_EXTERNAL_MEMORY_HANDLE_TYPE_RDMA_ADDRESS_BIT_NV
  - Extending VkMemoryPropertyFlagBits:
    - VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV
  - Extending VkStructureType:
    - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_RDMA_FEATURES_NV
    - VK_STRUCTURE_TYPE_MEMORY_GET_REMOTE_ADDRESS_INFO_NV

Issues

Examples

```c
VkPhysicalDeviceMemoryBudgetPropertiesEXT memoryBudgetProperties = {
    VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_BUDGET_PROPERTIES_EXT};
VkPhysicalDeviceMemoryProperties2 memoryProperties2 = {
    VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PROPERTIES_2, &memoryBudgetProperties};
vkGetPhysicalDeviceMemoryProperties2(physicalDevice, &memoryProperties2);
uint32_t heapIndex = (uint32_t)-1;
```
for (uint32_t memoryType = 0; memoryType < memoryProperties2.memoryProperties
    .memoryTypeCount; memoryType++) {
    if (memoryProperties2.memoryProperties.memoryTypes[memoryType].propertyFlags &
        VK_MEMORY_PROPERTY_RDMA_CAPABLE_BIT_NV) {
        heapIndex = memoryProperties2.memoryProperties.memoryTypes[memoryType
    ].heapIndex;
        break;
    }
}
if ((heapIndex == (uint32_t)-1) ||

**Description**
This extension adds a new `VkPolygonMode` enum where a triangle is rasterized by computing and filling its axis-aligned screen-space bounding box, disregarding the actual triangle edges. This can be useful for drawing a rectangle without being split into two triangles with an internal edge. It is also useful to minimize the number of primitives that need to be drawn, particularly for a user interface.

**Name String**
`VK_NV_fragment_coverage_to_color`

**Extension Type**
Device extension

**Registered Extension Number**
150
Description

This extension allows the fragment coverage value, represented as an integer bitmask, to be substituted for a color output being written to a single-component color attachment with integer components (e.g. `VK_FORMAT_R8_UINT`). The functionality provided by this extension is different from simply writing the `SampleMask` fragment shader output, in that the coverage value written to the framebuffer is taken after stencil test and depth test, as well as after fragment operations such as alpha-to-coverage.

This functionality may be useful for deferred rendering algorithms, where the second pass needs to know which samples belong to which original fragments.

- Jeff Bolz, NVIDIA

**Description**

This extension builds on the fragment shading rate functionality provided by the VK_KHR_fragment_shading_rate extension, adding support for “supersample” fragment shading rates that trigger multiple fragment shader invocations per pixel as well as a “no invocations” shading rate that discards any portions of a primitive that would use that shading rate.

**New Commands**

- vkCmdSetFragmentShadingRateEnumNV
New Structures

- Extending `VkGraphicsPipelineCreateInfo`:
  - `VkPipelineFragmentShadingRateEnumStateCreateInfoNV`

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFragmentShadingRateEnumsFeaturesNV`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFragmentShadingRateEnumsPropertiesNV`

New Enums

- `VkFragmentShadingRateNV`
- `VkFragmentShadingRateTypeNV`

New Enum Constants

- `VK_NV_FRAGMENT_SHADING_RATE_ENUMS_EXTENSION_NAME`
- `VK_NV_FRAGMENT_SHADING_RATE_ENUMS_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_FEATURES_NV`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADING_RATE_ENUMS_PROPERTIES_NV`
  - `VK_STRUCTURE_TYPE_PIPELINE_FRAGMENT_SHADING_RATE_ENUM_STATE_CREATE_INFO_NV`

Issues

1. Why was this extension created? How should it be named?

   **RESOLVED**: The primary goal of this extension was to expose support for supersample and “no invocations” shading rates, which are supported by the VK_NV_shading_rate_image extension but not by VK_KHR_fragment_shading_rate. Because VK_KHR_fragment_shading_rate specifies the primitive shading rate using a fragment size in pixels, it lacks a good way to specify supersample rates. To deal with this, we defined enums covering shading rates supported by the KHR extension as well as the new shading rates and added structures and APIs accepting shading rate enums instead of fragment sizes.

   Since this extension adds two different types of shading rates, both expressed using enums, we chose the extension name `VK_NV_fragment_shading_rate Enums`.

2. Is this a standalone extension?

   **RESOLVED**: No, this extension requires VK_KHR_fragment_shading_rate. In order to use the features of this extension, applications must enable the relevant features of KHR extension.

3. How are the shading rate enums used, and how were the enum values assigned?
RESOLVED: The shading rates supported by the enums in this extension are accepted as pipeline, primitive, and attachment shading rates and behave identically. For the shading rates also supported by the KHR extension, the values assigned to the corresponding enums are identical to the values already used for the primitive and attachment shading rates in the KHR extension. For those enums, bits 0 and 1 specify the base two logarithm of the fragment height and bits 2 and 3 specify the base two logarithm of the fragment width. For the new shading rates added by this extension, we chose to use 11 through 14 (10 plus the base two logarithm of the invocation count) for the supersample rates and 15 for the “no invocations” rate. None of those values are supported as primitive or attachment shading rates by the KHR extension.

4. Between this extension, VK_KHR_fragment_shading_rate, and VK_NV_shading_rate_image, there are three different ways to specify shading rate state in a pipeline. How should we handle this?

RESOLVED: We do not allow the concurrent use of VK_NV_shading_rate_image and VK_KHR_fragment_shading_rate; it is an error to enable shading rate features from both extensions. But we do allow applications to enable this extension together with VK_KHR_fragment_shading_rate together. While we expect that applications will never attach pipeline CreateInfo structures for both this extension and the KHR extension concurrently, Vulkan does not have any precedent forbidding such behavior and instead typically treats a pipeline created without an extension-specific CreateInfo structure as equivalent to one containing default values specified by the extension. Rather than adding such a rule considering the presence or absence of our new CreateInfo structure, we instead included a shadingRateType member to VkPipelineFragmentShadingRateEnumStateCreateInfoNV that selects between using state specified by that structure and state specified by VkPipelineFragmentShadingRateStateCreateInfoKHR.

Device extension

Registered Extension Number

153

Revision

1

Ratification Status

Not ratified
Description

This extension allows multisample rendering with a raster and depth/stencil sample count that is larger than the color sample count. Rasterization and the results of the depth and stencil tests together determine the portion of a pixel that is “covered”. It can be useful to evaluate coverage at a higher frequency than color samples are stored. This coverage is then “reduced” to a collection of covered color samples, each having an opacity value corresponding to the fraction of the color sample covered. The opacity can optionally be blended into individual color samples.

Rendering with fewer color samples than depth/stencil samples greatly reduces the amount of memory and bandwidth consumed by the color buffer. However, converting the coverage values into opacity introduces artifacts where triangles share edges and may not be suitable for normal triangle mesh rendering.

One expected use case for this functionality is Stencil-then-Cover path rendering (similar to the OpenGL GL_NV_path_rendering extension). The stencil step determines the coverage (in the stencil buffer) for an entire path at the higher sample frequency, and then the cover step draws the path into the lower frequency color buffer using the coverage information to antialias path edges. With this two-step process, internal edges are fully covered when antialiasing is applied and there is no corruption on these edges.

The key features of this extension are:

- It allows render pass and framebuffer objects to be created where the number of samples in the depth/stencil attachment in a subpass is a multiple of the number of samples in the color attachments in the subpass.
- A coverage reduction step is added to Fragment Operations which converts a set of covered raster/depth/stencil samples to a set of color samples that perform blending and color writes. The coverage reduction step also includes an optional coverage modulation step, multiplying color values by a fractional opacity corresponding to the number of associated raster/depth/stencil samples covered.

Interactions and External Dependencies

- This extension requires `SPV_NV_geometry_shader_passthrough`
- This extension provides API support for `GL_NV_geometry_shader_passthrough`
- This extension requires the `geometryShader` feature.

Contributors

- Piers Daniell, NVIDIA
- Jeff Bolz, NVIDIA

Description

This extension adds support for the following SPIR-V extension in Vulkan:

- `SPV_NV_geometry_shader_passthrough`

Geometry shaders provide the ability for applications to process each primitive sent through the graphics pipeline using a programmable shader. However, one common use case treats them largely as a “passthrough”. In this use case, the bulk of the geometry shader code simply copies inputs from each vertex of the input primitive to corresponding outputs in the vertices of the output primitive. Such shaders might also compute values for additional built-in or user-defined per-primitive attributes (e.g., `Layer`) to be assigned to all the vertices of the output primitive.

This extension provides access to the `PassthroughNV` decoration under the `GeometryShaderPassthroughNV` capability. Adding this to a geometry shader input variable specifies that the values of this input are copied to the corresponding vertex of the output primitive.

When using GLSL source-based shading languages, the `passthrough` layout qualifier from `GL_NV_geometry_shader_passthrough` maps to the `PassthroughNV` decoration. To use the `passthrough` layout, in GLSL the `GL_NV_geometry_shader_passthrough` extension must be enabled. Behaviour is described in the `GL_NV_geometry_shader_passthrough` extension specification.

New Enum Constants

- `VK_NV_GEOMETRY_SHADER_PASSTHROUGH_EXTENSION_NAME`
- `VK_NV_GEOMETRY_SHADER_PASSTHROUGH_SPEC_VERSION`

New Variable Decoration

- `PassthroughNV` in `Geometry Shader Passthrough`

New SPIR-V Capabilities

- `GeometryShaderPassthroughNV`

Issues

1) Should we require or allow a passthrough geometry shader to specify the output layout qualifiers for the output primitive type and maximum vertex count in the SPIR-V?
RESOLVED: Yes they should be required in the SPIR-V. Per GL_NV_geometry_shader_passthrough they are not permitted in the GLSL source shader, but SPIR-V is lower-level. It is straightforward for the GLSL compiler to infer them from the input primitive type and to explicitly emit them in the SPIR-V according to the following table.

<table>
<thead>
<tr>
<th>Input Layout</th>
<th>Implied Output Layout</th>
</tr>
</thead>
<tbody>
<tr>
<td>points</td>
<td>layout(points, max_vertices=1)</td>
</tr>
<tr>
<td>lines</td>
<td>layout(line_strip, max_vertices=2)</td>
</tr>
<tr>
<td>triangles</td>
<td>layout(triangle_strip, max_vertices=3)</td>
</tr>
</tbody>
</table>

2) How does interface matching work with passthrough geometry shaders?

RESOLVED: This is described in Passthrough Interface Matching. In GL when using passthrough geometry shaders in separable mode, all inputs must also be explicitly assigned location layout qualifiers. In Vulkan all SPIR-V shader inputs (except built-ins) must also have location decorations specified. Redeclarations of built-in variables that add the passthrough layout qualifier are exempted from the rule requiring location assignment because built-in variables do not have locations and are matched by BuiltIn decoration.

Sample Code

Consider the following simple geometry shader in unextended GLSL:

```glsl
layout(triangles) in;
layout(triangle_strip) out;
layout(max_vertices=3) out;

in Inputs {
    vec2 texcoord;
    vec4 baseColor;
} v_in[];
out Outputs {
    vec2 texcoord;
    vec4 baseColor;
};

void main()
{
    int layer = compute_layer();
    for (int i = 0; i < 3; i++) {
        gl_Position = gl_in[i].gl_Position;
        texcoord = v_in[i].texcoord;
        baseColor = v_in[i].baseColor;
        gl_Layer = layer;
        EmitVertex();
    }
}
```
In this shader, the inputs \texttt{gl\_Position}, \texttt{Inputs\_texcoord}, and \texttt{Inputs\_baseColor} are simply copied from the input vertex to the corresponding output vertex. The only “interesting” work done by the geometry shader is computing and emitting a \texttt{gl\_Layer} value for the primitive.

The following geometry shader, using this extension, is equivalent:

```glsl
#extension GL_NV_geometry_shader_passthrough : require

layout(triangles) in;
// No output primitive layout qualifiers required.

// Redeclare \texttt{gl\_PerVertex} to pass through "gl\_Position".
layout(passthrough) in gl\_PerVertex {
  vec4 gl\_Position;
} gl\_in[];

// Declare "Inputs" with "passthrough" to automatically copy members.
layout(passthrough) in Inputs {
  vec2 texcoord;
  vec4 baseColor;
} v\_in[];

// No output block declaration required.

void main()
{
  // The shader simply computes and writes \texttt{gl\_Layer}. We do not
  // loop over three vertices or call EmitVertex().
  gl\_Layer = compute\_layer();
}
```

Description

This extension adds the ability for a secondary command buffer to inherit the dynamic viewport and scissor state from a primary command buffer, or a previous secondary command buffer executed within the same `vkCmdExecuteCommands` call. It addresses a frequent scenario in applications that deal with window resizing and want to improve utilization of re-usable secondary command buffers. The functionality is provided through `VkCommandBufferInheritanceViewportScissorInfoNV`. Viewport inheritance is effectively limited to the 2D rectangle; secondary command buffers must re-specify the inherited depth range values.

New Structures

• Extending `VkCommandBufferInheritanceInfo`:
  ◦ `VkCommandBufferInheritanceViewportScissorInfoNV`
• Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceInheritedViewportScissorFeaturesNV`

New Enum Constants

• `VK_NV_INHERITED_VIEWPORT_SCISSOR_EXTENSION_NAME`
• `VK_NV_INHERITED_VIEWPORT_SCISSOR_SPEC_VERSION`
• Extending `VkStructureType`:
Issues

(1) Why are viewport depth values configured in the VkCommandBufferInheritanceViewportScissorInfoNV struct, rather than by a vkCmd… function?

DISCUSSION:

We considered both adding a new vkCmdSetViewportDepthNV function, and modifying vkCmdSetViewport to ignore the x, y, width, and height values when called with a secondary command buffer that activates this extension.

The primary design considerations for this extension are debuggability and easy integration into existing applications. The main issue with adding a new vkCmdSetViewportDepthNV function is reducing ease-of-integration. A new function pointer will have to be loaded, but more importantly, a new function would require changes to be supported in graphics debuggers; this would delay widespread adoption of the extension.

The proposal to modify vkCmdSetViewport would avoid these issues. However, we expect that the intent of applications using this extension is to have the viewport values used for drawing exactly match the inherited values; thus, it would be better for debuggability if no function for modifying the viewport depth alone is provided. By specifying viewport depth values when starting secondary command buffer recording, and requiring the specified depth values to match the inherited depth values, we allow for validation layers that flag depth changes as errors.

This design also better matches the hardware model. In fact, there is no need to re-execute a depth-setting command. The graphics device retains the viewport depth state; it is the CPU-side state of VkCommandBuffer that must be re-initialized.

(2) Why are viewport depth values specified as a partial VkViewport struct, rather than a leaner depth-only struct?

DISCUSSION:

We considered adding a new VkViewportDepthNV struct containing only minDepth and maxDepth. However, as application developers would need to maintain both a VK_NV_inherited_viewport_scissor code path and a fallback code path (at least in the short term), we ultimately chose to continue using the existing VkViewport structure. Doing so would allow application developers to reuse the same VkViewport structure for both code paths, rather than constructing separate VkViewportDepthNV and VkViewport arrays for each code path.

Interactions and External Dependencies
• This extension requires VK_KHR_format_feature_flags2

Contributors
• Pat Brown, NVIDIA
• Piers Daniell, NVIDIA
• Sourav Parmar, NVIDIA

Description
This extension expands support for using VK_IMAGE_TILING_LINEAR images as color attachments when all the color attachments in the render pass instance have VK_IMAGE_TILING_LINEAR tiling. This extension adds a new flag bit VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV that extends the existing VkFormatFeatureFlagBits2KHR bits. This flag can be set for renderable color formats in the VkFormatProperties3KHR::linearTilingFeatures format properties structure member. Formats with the VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV flag may be used as color attachments as long as all the color attachments in the render pass instance have VK_IMAGE_TILING_LINEAR tiling, and the formats their images views are created with have VkFormatProperties3KHR::linearTilingFeatures which include VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV. This extension supports both dynamic rendering and traditional render passes.
New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceLinearColorAttachmentFeaturesNV`

New Enum Constants

- `VK_NV_LINEAR_COLOR_ATTACHMENT_EXTENSION_NAME`
- `VK_NV_LINEAR_COLOR_ATTACHMENT_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_LINEAR_COLOR_ATTACHMENT_FEATURES_NV`

If `VK_KHR_format_feature_flags2` is supported:

- Extending `VkFormatFeatureFlagBits2`:
  - `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV`

Other Extension Metadata
Description

This extension adds the `VkQueryLowLatencySupportNV` structure, a structure used to query support for NVIDIA Reflex.

New Structures

- Extending `VkSemaphoreCreateInfo`:
  - `VkQueryLowLatencySupportNV`

New Enum Constants

- `VK_NV_LOW_LATENCY_EXTENSION_NAME`
- `VK_NV_LOW_LATENCY_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_QUERY_LOW_LATENCY_SUPPORT_NV`

Issues

1) Why does `VkQueryLowLatencySupportNV` have output parameters in an input chain?

**RESOLVED:** We are stuck with this for legacy reasons - we are aware this is bad behavior and this should not be used as a precedent for future extensions.

Version History

Interactions and External Dependencies

- This extension requires 
  \texttt{SPV\_NV\_mesh\_shader}
- This extension provides API support for \texttt{GLSL\_NV\_mesh\_shader}

Contributors

- Pat Brown, NVIDIA
- Jeff Bolz, NVIDIA
- Daniel Koch, NVIDIA
- Piers Daniell, NVIDIA
- Pierre Boudier, NVIDIA

Description

This extension provides a new mechanism allowing applications to generate collections of geometric primitives via programmable mesh shading. It is an alternative to the existing programmable primitive shading pipeline, which relied on generating input primitives by a fixed function assembler as well as fixed function vertex fetch.

There are new programmable shader types — the task and mesh shader — to generate these collections to be processed by fixed-function primitive assembly and rasterization logic. When task and mesh shaders are dispatched, they replace the core \textit{pre-rasterization stages}, including vertex array attribute fetching, vertex shader processing, tessellation, and geometry shader processing.

This extension also adds support for the following SPIR-V extension in Vulkan:

- \texttt{SPV\_NV\_mesh\_shader}

New Commands

- \texttt{vkCmdDrawMeshTasksIndirectCountNV}
- \texttt{vkCmdDrawMeshTasksIndirectNV}
- \texttt{vkCmdDrawMeshTasksNV}

New Structures

- \texttt{VkDrawMeshTasksIndirectCommandNV}
- Extending \texttt{VkPhysicalDeviceFeatures2, VkDeviceCreateInfo}:
  - \texttt{VkPhysicalDeviceMeshShaderFeaturesNV}
- Extending \texttt{VkPhysicalDeviceProperties2}:
  - \texttt{VkPhysicalDeviceMeshShaderPropertiesNV}

New Enum Constants

- \texttt{VK\_NV\_MESH\_SHADER\_EXTENSION\_NAME}
• **VK_NV_MESH_SHADER_SPEC_VERSION**

• **Extending VkPipelineStageFlagBits:**
  - VK_PIPELINE_STAGE_MESH_SHADER_BIT_NV
  - VK_PIPELINE_STAGE_TASK_SHADER_BIT_NV

• **Extending VkShaderStageFlagBits:**
  - VK_SHADER_STAGE_MESH_BIT_NV
  - VK_SHADER_STAGE_TASK_BIT_NV

• **Extending VkStructureType:**
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_FEATURES_NV
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MESH_SHADER_PROPERTIES_NV

---

**New or Modified Built-In Variables**

  - (modified) LocalInvocationIndex
  - (modified) DrawIndex
  - (modified) ViewportMaskNV
  - (modified) PositionPerViewNV
New SPIR-V Capability

- *MeshShadingNV*

Issues

1. How to name this extension?

   **RESOLVED:** VK_NV_mesh_shader

   Other options considered:
   
   ◦ VK_NV_mesh_shading
   ◦ VK_NV_programmable_mesh_shading
   ◦ VK_NV_primitive_group_shading
   ◦ VK_NV_grouped_drawing

2. Do we need a new VkPrimitiveTopology?

   **RESOLVED:** No. We skip the InputAssembler stage.

3. Should we allow Instancing?

   **RESOLVED:** No. There is no fixed function input, other than the IDs. However, allow offsetting with a “first” value.

4. Should we use existing vkCmdDraw or introduce new functions?

   **RESOLVED:** Introduce new functions.

   New functions make it easier to separate from “programmable primitive shading” chapter, less “dual use” language about existing functions having alternative behavior. The text around the existing “draws” is heavily based around emitting vertices.

5. If new functions, how to name?

   **RESOLVED:** CmdDrawMeshTasks*

   Other options considered:
   
   ◦ CmdDrawMeshed
   ◦ CmdDrawTasked
   ◦ CmdDrawGrouped

6. Should VK_SHADER_STAGE_ALL_GRAPHICS be updated to include the new stages?

   **RESOLVED:** No. If an application were to be recompiled with headers that include additional shader stage bits in VK_SHADER_STAGE_ALL_GRAPHICS, then the previously valid application...
would no longer be valid on implementations that do not support mesh or task shaders. This
means the change would not be backwards compatible. It is too bad VkShaderStageFlagBits
does not have a dedicated “all supported graphics stages” bit like VK_PIPELINE_STAGE_ALL_GRAPHICS_BIT, which would have avoided this problem.

Description

Optical flow are fundamental algorithms in computer vision (CV) area. This extension allows applications to estimate 2D displacement of pixels between two frames.

Note

This extension is designed to be used with upcoming NVIDIA Optical Flow SDK Version 5 which will be available on NVIDIA Developer webpage.

New Object Types

- VkOpticalFlowSessionNV

New Commands

- vkBindOpticalFlowSessionImageNV
- vkCmdOpticalFlowExecuteNV
- vkCreateOpticalFlowSessionNV
- vkDestroyOpticalFlowSessionNV
- vkGetPhysicalDeviceOpticalFlowImageFormatsNV

New Structures

- VkOpticalFlowExecuteInfoNV
- VkOpticalFlowImageFormatPropertiesNV
- VkOpticalFlowSessionCreateInfoNV
- Extending VkOpticalFlowSessionCreateInfoNV:
  - VkOpticalFlowSessionCreatePrivateDataInfoNV
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceOpticalFlowFeaturesNV
- Extending VkPhysicalDeviceImageFormatInfo2, VkImageCreateInfo:
  - VkOpticalFlowImageFormatInfoNV
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceOpticalFlowPropertiesNV

New Enums

- VkOpticalFlowExecuteFlagBitsNV
- VkOpticalFlowGridSizeFlagBitsNV
- VkOpticalFlowPerformanceLevelNV
• VkOpticalFlowSessionBindingPointNV
• VkOpticalFlowSessionCreateFlagBitsNV
• VkOpticalFlowUsageFlagBitsNV

**New Bitmasks**

• VkOpticalFlowExecuteFlagsNV
• VkOpticalFlowGridSizeFlagsNV
• VkOpticalFlowSessionCreateFlagsNV
• VkOpticalFlowUsageFlagsNV

**New Enum Constants**

• VK_NV_OPTICAL_FLOW_EXTENSION_NAME
• VK_NV_OPTICAL_FLOW_SPEC_VERSION

Extending VkAccessFlagBits2:

◦ VK_ACCESS_2_OPTICAL_FLOW_READ_BIT_NV
◦ VK_ACCESS_2_OPTICAL_FLOW_WRITE_BIT_NV

Extending VkFormat:

◦ VK_FORMAT_R16G16_S10_5_NV

Extending VkFormatFeatureFlagBits2:

◦ VK_FORMAT_FEATURE_2_OPTICAL_FLOW_COST_BIT_NV
◦ VK_FORMAT_FEATURE_2_OPTICAL_FLOW_IMAGE_BIT_NV
◦ VK_FORMAT_FEATURE_2_OPTICAL_FLOW_VECTOR_BIT_NV

Extending VkObjectType:

◦ VK_OBJECT_TYPE_OPTICAL_FLOW_SESSION_NV

Extending VkPipelineStageFlagBits2:

◦ VK_PIPELINE_STAGE_2_OPTICAL_FLOW_BIT_NV

Extending VkQueueFlagBits:

◦ VK_QUEUE_OPTICAL_FLOW_BIT_NV

Extending VkStructureType:

◦ VK_STRUCTURE_TYPE_OPTICAL_FLOW_EXECUTE_INFO_NV
◦ VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_INFO_NV
◦ VK_STRUCTURE_TYPE_OPTICAL_FLOW_IMAGE_FORMAT_PROPERTIES_NV
◦ VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_INFO_NV
◦ VK_STRUCTURE_TYPE_OPTICAL_FLOW_SESSION_CREATE_PRIVATE_DATA_INFO_NV
◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_OPTICAL_FLOW_FEATURES_NV

4337
**Examples**

```cpp
// Example querying available input formats
VkOpticalFlowImageFormatInfoNV ofFormatInfo = {
    VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_INFO_NV,
};
ofFormatInfo.usage = VK_PHYSICAL_DEVICE_IMAGE_USAGE_INPUT_BIT_NV;

uint32_t count = 0;
vkGetPhysicalDeviceOpticalFlowImageFormatsNV(physicalDevice, &ofFormatInfo, &count, NULL);
VkOpticalFlowImageFormatPropertiesNV* fmt = new VkOpticalFlowImageFormatPropertiesNV[count];
memset(fmt, 0, count * sizeof(VkOpticalFlowImageFormatPropertiesNV));
for (uint32_t i = 0; i < count; i++) {
    fmt[i].sType = VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_PROPERTIES_NV;
}
vkGetPhysicalDeviceOpticalFlowImageFormatsNV(physicalDevice, &ofFormatInfo, &count, fmt);

// Pick one of the available formats
VkFormat inputFormat = fmt[0].format;

// Check feature support for optimal tiling
VkFormatProperties3 formatProperties3 = {
    VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_3,
};
VkFormatProperties2 formatProperties2 = {
    VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_2,
    &formatProperties3,
};

Description
This extension adds support for synchronizing corresponding presentation requests across multiple swapchains using the \textit{present barrier}.

New Structures
- Extending \texttt{VkPhysicalDeviceFeatures2, VkDeviceCreateInfo}:
  - \texttt{VkPhysicalDevicePresentBarrierFeaturesNV}
- Extending \texttt{VkSurfaceCapabilities2KHR}:
  - \texttt{VkSurfaceCapabilitiesPresentBarrierNV}
- Extending \texttt{VkSwapchainCreateInfoKHR}:
  - \texttt{VkSwapchainPresentBarrierCreateInfoNV}

New Enum Constants
- \texttt{VK_NV_PRESENT_BARRIER_EXTENSION_NAME}
- \texttt{VK_NV_PRESENT_BARRIER_SPEC_VERSION}
- Extending \texttt{VkStructureType}:
  - \texttt{VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRESENT_BARRIER_FEATURES_NV}
  - \texttt{VK_STRUCTURE_TYPE_SURFACE_CAPABILITIES_PRESENT_BARRIER_NV}
  - \texttt{VK_STRUCTURE_TYPE_SWAPCHAIN_PRESENT_BARRIER_CREATE_INFO_NV}

Issues
1) Is there a query interface to check if a swapchain is using the present barrier?

\textbf{RESOLVED}. There is no such query interface. When creating a swapchain, an application can specify to use the \textit{present barrier}, and if the swapchain is created successfully, this swapchain will be using the present barrier.

2) Do we need an extra interface to set up the present barrier across distributed systems?

\textbf{RESOLVED}. If the required hardware is presented in the system, and all settings for the physical synchronization with other systems are set up, an implementation manages the configuration automatically when creating a swapchain, without any extra calls from the application.

Description

Rasterization has been the dominant method to produce interactive graphics, but increasing performance of graphics hardware has made ray tracing a viable option for interactive rendering. Being able to integrate ray tracing with traditional rasterization makes it easier for applications to incrementally add ray traced effects to existing applications or to do hybrid approaches with rasterization for primary visibility and ray tracing for secondary queries.

To enable ray tracing, this extension adds a few different categories of new functionality:

- Acceleration structure objects and build commands
- A new pipeline type with new shader domains
- An indirection table to link shader groups with acceleration structure items

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_NV_ray_tracing

New Object Types

- VkAccelerationStructureNV

New Commands

- vkBindAccelerationStructureMemoryNV
- vkCmdBuildAccelerationStructureNV
- vkCmdCopyAccelerationStructureNV
- vkCmdTraceRaysNV
- vkCmdWriteAccelerationStructuresPropertiesNV

New SPIR-V Capabilities

- RayTracingNV

Issues

1) Are there issues?

RESOLVED: Yes.

Sample Code

Example ray generation GLSL shader

```glsl
#version 450 core
#extension GL_NV_ray_tracing : require
layout(set = 0, binding = 0, rgba8) uniform image2D image;
layout(set = 0, binding = 1) uniform accelerationStructureNV as;
layout(location = 0) rayPayloadNV float payload;

void main()
{
    vec4 col = vec4(0, 0, 0, 1);
}
```
vec3 origin = vec3(float(gl_LaunchIDNV.x)/float(gl_LaunchSizeNV.x), float(gl_LaunchIDNV.y)/float(gl_LaunchSizeNV.y), 1.0);
vec3 dir = vec3(0.0, 0.0, -1.0);

traceNV(as, 0, 0xff, 0, 1, 0, origin, 0.0, dir, 1000.0, 0);

col.y = payload;

imageStore(image, ivec2(gl_LaunchIDNV.xy), col);

---

**Version History**

- Revision 1, 2018-09-11 (Robert Stepinski, Nuno Subtil, Eric Werness)
  - Internal revisions
- Revision 2, 2018-10-19 (Eric Werness)
  - rename to VK_NV_ray_tracing, add support for callables.
  - too many updates to list
- Revision 3, 2018-11-20 (Daniel Koch)
  - update to use InstanceId instead of InstanceIndex as implemented.

• Ashwin Lele, NVIDIA

Description

The ray tracing pipeline API provides some ability to reorder for locality, but it is useful to have more control over how the reordering happens and what information is included in the reordering. The shader API provides a hit object to contain result information from the hit which can be used as part of the explicit sorting plus options that contain an integer for hint bits to use to add more locality.

New Structures

- This extension provides API support for GL_NV_ray_tracing_motion_blur

**Contributors**
- Eric Werness, NVIDIA
- Ashwin Lele, NVIDIA

**Description**
Ray tracing support in the API provides an efficient mechanism to intersect rays against static geometry, but rendering algorithms often want to support motion, which is more efficiently supported with motion-specific algorithms. This extension adds a set of mechanisms to support fast tracing of moving geometry:

- A ray pipeline trace call which takes a time parameter
- Flags to enable motion support in an acceleration structure
- Support for time-varying vertex positions in a geometry
- Motion instances to move existing instances over time
The motion represented here is parameterized across a normalized timestep between 0.0 and 1.0. A motion trace using `OpTraceRayMotionNV` provides a time within that normalized range to be used when intersecting that ray with geometry. The geometry can be provided with motion by a combination of adding a second vertex position for time of 1.0 using `VkAccelerationStructureGeometryMotionTrianglesDataNV` and providing multiple transforms in the instance using `VkAccelerationStructureMotionInstanceNV`.

**New Structures**

- `VkAccelerationStructureMatrixMotionInstanceNV`
- `VkAccelerationStructureStructureMotionInstanceNV`
- `VkAccelerationStructureSRTMotionInstanceNV`
- `VkSRTDataNV`
- Extending `VkAccelerationStructureCreateInfoKHR`:
  - `VkAccelerationStructureMotionInfoNV`
- Extending `VkAccelerationStructureGeometryTrianglesDataKHR`:
  - `VkAccelerationStructureGeometryMotionTrianglesDataNV`
- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRayTracingMotionBlurFeaturesNV`

**New Unions**

- `VkAccelerationStructureMotionInstanceDataNV`

**New Enums**

- `VkAccelerationStructureMotionInstanceTypeNV`

**New Bitmasks**

- `VkAccelerationStructureMotionInfoFlagsNV`
- `VkAccelerationStructureMotionInstanceFlagsNV`

**New Enum Constants**

- `VK_NV_RAY_TRACING_MOTION_BLUR_EXTENSION_NAME`
- `VK_NV_RAY_TRACING_MOTION_BLUR_SPEC_VERSION`
- Extending `VkAccelerationStructureCreateInfoFlagBitsKHR`:
  - `VK_ACCELERATION_STRUCTURE_CREATE_MOTION_BIT_NV`
- Extending `VkBuildAccelerationStructureFlagBitsKHR`:
  - `VK_BUILD_ACCELERATION_STRUCTURE_MOTION_BIT_NV`
- Extending `VkPipelineCreateFlagBits`:

---

4351
Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_GEOMETRY_MOTION_TRIANGLES_DATA_NV`
- `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_MOTION_INFO_NV`
- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICERAY_TRACING_MOTION_BLUR_FEATURES_NV`

Issues

1. What size is `VkAccelerationStructureMotionInstanceNV`?
   - Added a note on the structure size and made the stride explicit in the language.

2. Allow `arrayOfPointers` for motion TLAS?
   - Yes, with a packed encoding to minimize the amount of data sent for metadata.

Description

This extension provides a new representative fragment test that allows implementations to reduce the amount of rasterization and fragment processing work performed for each point, line, or triangle primitive. For any primitive that produces one or more fragments that pass all other early fragment tests, the implementation is permitted to choose one or more “representative” fragments for processing and discard all other fragments. For draw calls rendering multiple points, lines, or triangles arranged in lists, strips, or fans, the representative fragment test is performed independently for each of those primitives.

This extension is useful for applications that use an early render pass to determine the full set of primitives that would be visible in the final scene. In this render pass, such applications would set up a fragment shader that enables early fragment tests and writes to an image or shader storage buffer to record the ID of the primitive that generated the fragment. Without this extension, the shader would record the ID separately for each visible fragment of each primitive. With this extension, fewer stores will be performed, particularly for large primitives.

The representative fragment test has no effect if early fragment tests are not enabled via the fragment shader. The set of fragments discarded by the representative fragment test is implementation-dependent and may vary from frame to frame. In some cases, the representative fragment test may not discard any fragments for a given primitive.

New Structures

- Extending `VkGraphicsPipelineCreateInfo`:
  - `VkPipelineRepresentativeFragmentTestStateCreateInfoNV`

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceRepresentativeFragmentTestFeaturesNV`

New Enum Constants

- `VK_NV_REPRESENTATIVE_FRAGMENT_TEST_EXTENSION_NAME`
- `VK_NV_REPRESENTATIVE_FRAGMENT_TEST_SPEC_VERSION`
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_REPRESENTATIVE_FRAGMENT_TEST_FEATURES_NV
  ◦ VK_STRUCTURE_TYPE_PIPELINE_REPRESENTATIVE_FRAGMENT_TEST_STATE_CREATE_INFO_NV

Issues

(1) Is the representative fragment test guaranteed to have any effect?

**RESOLVED**: No. As specified, we only guarantee that each primitive with at least one fragment that passes prior tests will have one fragment passing the representative fragment tests. We do not guarantee that any particular fragment will fail the test.

In the initial implementation of this extension, the representative fragment test is treated as an optimization that may be completely disabled for some pipeline states. This feature was designed for a use case where the fragment shader records information on individual primitives using shader storage buffers or storage images, with no writes to color or depth buffers.

(2) Will the set of fragments that pass the representative fragment test be repeatable if you draw the same scene over and over again?

**RESOLVED**: No. The set of fragments that pass the representative fragment test is implementation-dependent and may vary due to the timing of operations performed by the GPU.

(3) What happens if you enable the representative fragment test with writes to color and/or depth render targets enabled?

**RESOLVED**: If writes to the color or depth buffer are enabled, they will be performed for any fragments that survive the relevant tests. Any fragments that fail the representative fragment test will not update color buffers. For the use cases intended for this feature, we do not expect color or depth writes to be enabled.

(4) How do derivatives and automatic texture LOD computations work with the representative fragment test enabled?

**RESOLVED**: If a fragment shader uses derivative functions or texture lookups using automatic LOD computation, derivatives will be computed identically whether or not the representative fragment test is enabled. For the use cases intended for this feature, we do not expect the use of derivatives in the fragment shader.

- Jeff Bolz, NVIDIA

**Description**

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_NV_sample_mask_override_coverage

The extension provides access to the OverrideCoverageNV decoration under the SampleMaskOverrideCoverageNV capability. Adding this decoration to a variable with the SampleMask builtin decoration allows the shader to modify the coverage mask and affect which samples are used to process the fragment.
When using GLSL source-based shader languages, the override_coverage layout qualifier from GL_NV_sample_mask_override_coverage maps to the OverrideCoverageNV decoration. To use the override_coverage layout qualifier in GLSL the GL_NV_sample_mask_override_coverage extension must be enabled. Behavior is described in the GL_NV_sample_mask_override_coverage extension spec.

Description
This extension adds support for an exclusive scissor test to Vulkan. The exclusive scissor test behaves like the scissor test, except that the exclusive scissor test fails for pixels inside the corresponding rectangle and passes for pixels outside the rectangle. If the same rectangle is used for both the scissor and exclusive scissor tests, the exclusive scissor test will pass if and only if the scissor test fails.

Version 2 of this extension introduces `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV` and `vkCmdSetExclusiveScissorEnableNV`. Applications that use this dynamic state must ensure the implementation advertises at least `specVersion 2` of this extension.

New Commands
• `vkCmdSetExclusiveScissorEnableNV`
• `vkCmdSetExclusiveScissorNV`

New Structures
• Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceExclusiveScissorFeaturesNV`
• Extending `VkPipelineViewportStateCreateInfo`:
  ◦ `VkPipelineViewportExclusiveScissorStateCreateInfoNV`

New Enum Constants
• `VK_NV_SCISSOR_EXCLUSIVE_EXTENSION_NAME`
• `VK_NV_SCISSOR_EXCLUSIVE_SPEC_VERSION`
• Extending `VkDynamicState`:
  ◦ `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_ENABLE_NV`
  ◦ `VK_DYNAMIC_STATE_EXCLUSIVE_SCISSOR_NV`

• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXCLUSIVE_SCISSOR_FEATURES_NV`
  ◦ `VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_EXCLUSIVE_SCISSOR_STATE_CREATE_INFO_NV`

Issues

1) For the scissor test, the viewport state must be created with a matching number of scissor and viewport rectangles. Should we have the same requirement for exclusive scissors?

RESOLVED: For exclusive scissors, we relax this requirement and allow an exclusive scissor rectangle count that is either zero or equal to the number of viewport rectangles. If you pass in an exclusive scissor count of zero, the exclusive scissor test is treated as disabled.

Interactions and External Dependencies

• This extension requires SPV_NV_shader_image_footprint
• This extension provides API support for GL_NV_shader_texture_footprint

Contributors
• Pat Brown, NVIDIA
• Chris Lentini, NVIDIA
• Daniel Koch, NVIDIA
• Jeff Bolz, NVIDIA

Description

This extension adds Vulkan support for the SPV_NV_shader_image_footprint SPIR-V extension. That SPIR-V extension provides a new instruction OpImageSampleFootprintNV allowing shaders to determine the set of texels that would be accessed by an equivalent filtered texture lookup.

Instead of returning a filtered texture value, the instruction returns a structure that can be interpreted by shader code to determine the footprint of a filtered texture lookup. This structure includes integer values that identify a small neighborhood of texels in the image being accessed and a bitfield that indicates which texels in that neighborhood would be used. The structure also includes a bitfield where each bit identifies whether any texel in a small aligned block of texels would be fetched by the texture lookup. The size of each block is specified by an access granularity provided by the shader. The minimum granularity supported by this extension is 2x2 (for 2D textures) and 2x2x2 (for 3D textures); the maximum granularity is 256x256 (for 2D textures) or 64x32x32 (for 3D textures). Each footprint query returns the footprint from a single texture level. When using minification filters that combine accesses from multiple mipmap levels, shaders must perform separate queries for the two levels accessed (“fine” and “coarse”). The footprint query also returns a flag indicating if the texture lookup would access texels from only one mipmap level or from two neighboring levels.

This extension should be useful for multi-pass rendering operations that do an initial expensive rendering pass to produce a first image that is then used as a texture for a second pass. If the second pass ends up accessing only portions of the first image (e.g., due to visibility), the work spent rendering the non-accessed portion of the first image was wasted. With this feature, an application can limit this waste using an initial pass over the geometry in the second image that performs a footprint query for each visible pixel to determine the set of pixels that it needs from the first image. This pass would accumulate an aggregate footprint of all visible pixels into a separate “footprint image” using shader atomics. Then, when rendering the first image, the application can kill all shading work for pixels not in this aggregate footprint.
This extension has a number of limitations. The OpImageSampleFootprintNV instruction only supports for two- and three-dimensional textures. Footprint evaluation only supports the CLAMP_TO_EDGE wrap mode; results are undefined for all other wrap modes. Only a limited set of granularity values and that set does not support separate coverage information for each texel in the original image.

When using SPIR-V generated from the OpenGL Shading Language, the new instruction will be generated from code using the new textureFootprint*NV built-in functions from the GL_NV_shader_texture_footprint shading language extension.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceShaderImageFootprintFeaturesNV

New Enum Constants

- VK_NV_SHADER_IMAGE_FOOTPRINT_EXTENSION_NAME
- VK_NV_SHADER_IMAGE_FOOTPRINT_SPEC_VERSION

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_IMAGE_FOOTPRINT_FEATURES_NV

New SPIR-V Capability

- ImageFootprintNV

Issues

(1) The footprint returned by the SPIR-V instruction is a structure that includes an anchor, an offset, and a mask that represents a 8x8 or 4x4x4 neighborhood of texel groups. But the bits of the mask are not stored in simple pitch order. Why is the footprint built this way?

**RESOLVED**: We expect that applications using this feature will want to use a fixed granularity and accumulate coverage information from the returned footprints into an aggregate “footprint image” that tracks the portions of an image that would be needed by regular texture filtering. If an application is using a two-dimensional image with 4x4 pixel granularity, we expect that the footprint image will use 64-bit texels where each bit in an 8x8 array of bits corresponds to coverage for a 4x4 block in the original image. Texel (0,0) in the footprint image would correspond to texels (0,0) through (31,31) in the original image.

In the usual case, the footprint for a single access will fully contained in a 32x32 aligned region of the original texture, which corresponds to a single 64-bit texel in the footprint image. In that case, the implementation will return an anchor coordinate pointing at the single footprint image texel, an offset vector of (0,0), and a mask whose bits are aligned with the bits in the footprint texel. For this case, the shader can simply atomically OR the mask bits into the contents of the footprint texel to accumulate footprint coverage.

In the worst case, the footprint for a single access spans multiple 32x32 aligned regions and may require updates to four separate footprint image texels. In this case, the implementation will return...
an anchor coordinate pointing at the lower right footprint image texel and an offset will identify how many “columns” and “rows” of the returned 8x8 mask correspond to footprint texels to the left and above the anchor texel. If the anchor is (2,3), the 64 bits of the returned mask are arranged spatially as follows, where each 4x4 block is assigned a bit number that matches its bit number in the footprint image texels:

+-------------------------+-------------------------+
| -- -- -- -- -- -- -- -- | -- -- -- -- -- -- -- -- |
| -- -- -- -- -- -- -- -- | -- -- -- -- -- -- -- -- |
| -- -- -- -- -- -- -- -- | -- -- -- -- -- -- -- -- |
| -- -- -- -- -- -- -- -- | -- -- -- -- -- -- -- -- |
| -- -- -- -- -- -- 46 47 | 40 41 42 43 44 45 -- -- |
| -- -- -- -- -- -- 54 55 | 48 49 50 51 52 53 -- -- |
| -- -- -- -- -- -- 62 63 | 56 57 58 59 60 61 -- -- |
+-------------------------+-------------------------+
| -- -- -- -- -- -- 06 07 | 00 01 02 03 04 05 -- -- |
| -- -- -- -- -- -- 14 15 | 08 09 10 11 12 13 -- -- |
| -- -- -- -- -- -- 22 23 | 16 17 18 19 20 21 -- -- |
| -- -- -- -- -- -- 30 31 | 24 25 26 27 28 29 -- -- |
| -- -- -- -- -- -- 38 39 | 32 33 34 35 36 37 -- -- |
+-------------------------+-------------------------+

To accumulate coverage for each of the four footprint image texels, a shader can AND the returned mask with simple masks derived from the x and y offset values and then atomically OR the updated mask bits into the contents of the corresponding footprint texel.

```c
uint64_t returnedMask = (uint64_t)(footprint.mask.x) | (uint64_t)(footprint.mask.y) << 32);
uint64_t rightMask  = ((0xFF >> footprint.offset.x) * 0x0101010101010101UL);
uint64_t bottomMask = 0xFFFFFFFFFFFFFFFFUL >> (8 * footprint.offset.y);
uint64_t bottomRight = returnedMask & bottomMask & rightMask;
uint64_t bottomLeft  = returnedMask & bottomMask & (~rightMask);
uint64_t topRight    = returnedMask & (~bottomMask) & rightMask;
uint64_t topLeft     = returnedMask & (~bottomMask) & (~rightMask);
```

(2) What should an application do to ensure maximum performance when accumulating footprints into an aggregate footprint image?

**RESOLVED**: We expect that the most common usage of this feature will be to accumulate aggregate footprint coverage, as described in the previous issue. Even if you ignore the anisotropic filtering case where the implementation may return a granularity larger than that requested by the caller, each shader invocation will need to use atomic functions to update up to four footprint image texels for each LOD accessed. Having each active shader invocation perform multiple atomic operations can be expensive, particularly when neighboring invocations will want to update the
same footprint image texels.

Techniques can be used to reduce the number of atomic operations performed when accumulating coverage include:

• Have logic that detects returned footprints where all components of the returned offset vector are zero. In that case, the mask returned by the footprint function is guaranteed to be aligned with the footprint image texels and affects only a single footprint image texel.

• Have fragment shaders communicate using built-in functions from the `VK_NV_shader_subgroup_partitioned` extension or other shader subgroup extensions. If you have multiple invocations in a subgroup that need to update the same texel (x,y) in the footprint image, compute an aggregate footprint mask across all invocations in the subgroup updating that texel and have a single invocation perform an atomic operation using that aggregate mask.

• When the returned footprint spans multiple texels in the footprint image, each invocation need to perform four atomic operations. In the previous issue, we had an example that computed separate masks for “topLeft”, “topRight”, “bottomLeft”, and “bottomRight”. When the invocations in a subgroup have good locality, it might be the case the “top left” for some invocations might refer to footprint image texel (10,10), while neighbors might have their “top left” texels at (11,10), (10,11), and (11,11). If you compute separate masks for even/odd x and y values instead of left/right or top/bottom, the “odd/odd” mask for all invocations in the subgroup hold coverage for footprint image texel (11,11), which can be updated by a single atomic operation for the entire subgroup.

Examples

**VK_NV_shader_sm_builtins**

Name String

`VK_NV_shader_sm_builtins`

Extension Type

Device extension

Registered Extension Number

155
Description

This extension provides the ability to determine device-specific properties on NVIDIA GPUs. It provides the number of streaming multiprocessors (SMs), the maximum number of warps (subgroups) that can run on an SM, and shader builtins to enable invocations to identify which SM and warp a shader invocation is executing on.

This extension enables support for the SPIR-V ShaderSMBuiltinsNV capability.

These properties and built-ins should typically only be used for debugging purposes.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceShaderSMBuiltinsFeaturesNV
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceShaderSMBuiltinsPropertiesNV

New Enum Constants

- VK_NV_SHADER_SM_BUILTINS_EXTENSION_NAME
- VK_NV_SHADER_SM_BUILTINS_SPEC_VERSION
• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_FEATURES_NV
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_SM_BUILTINS_PROPERTIES_NV

New or Modified Built-In Variables

• WarpsPerSMNV
• SMCountNV
• WarpIDNV
• SMIDNV

New SPIR-V Capabilities

• ShaderSMBuiltinsNV

Issues

1. What should we call this extension?

   RESOLVED: NV_shader_sm_builtins. Other options considered included:

   ◦ NV_shader_smid - but SMID is really easy to typo/confuse as SIMD.
   ◦ NV_shader_sm_info - but Info is typically reserved for input structures

VK_NV_shading_rate_image

Name String

VK_NV_shading_rate_image

Extension Type

Device extension
This extension allows applications to use a variable shading rate when processing fragments of rasterized primitives. By default, Vulkan will spawn one fragment shader for each pixel covered by a primitive. In this extension, applications can bind a shading rate image that can be used to vary the number of fragment shader invocations across the framebuffer. Some portions of the screen may be configured to spawn up to 16 fragment shaders for each pixel, while other portions may use a single fragment shader invocation for a 4x4 block of pixels. This can be useful for use cases like eye tracking, where the portion of the framebuffer that the user is looking at directly can be processed at high frequency, while distant corners of the image can be processed at lower frequency. Each texel in the shading rate image represents a fixed-size rectangle in the framebuffer, covering 16x16 pixels in the initial implementation of this extension. When rasterizing a primitive covering one of these rectangles, the Vulkan implementation reads a texel in the bound shading rate image and looks up the fetched value in a palette to determine a base shading rate.
In addition to the API support controlling rasterization, this extension also adds Vulkan support for the \texttt{SPV_NV_shading_rate} extension to SPIR-V. That extension provides two fragment shader variable decorations that allow fragment shaders to determine the shading rate used for processing the fragment:

- \texttt{FragmentSizeNV}, which indicates the width and height of the set of pixels processed by the fragment shader.
- \texttt{InvocationsPerPixel}, which indicates the maximum number of fragment shader invocations that could be spawned for the pixel(s) covered by the fragment.

When using SPIR-V in conjunction with the OpenGL Shading Language (GLSL), the fragment shader capabilities are provided by the \texttt{GL_NV_shading_rate_image} language extension and correspond to the built-in variables \texttt{gl_FragmentSizeNV} and \texttt{gl_InvocationsPerPixelNV}, respectively.

- VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_SHADING_RATE_IMAGE_STATE_CREATE_INFO_NV

**Issues**

1) When using shading rates specifying “coarse” fragments covering multiple pixels, we will generate a combined coverage mask that combines the coverage masks of all pixels covered by the fragment. By default, these masks are combined in an implementation-dependent order. Should we provide a mechanism allowing applications to query or specify an exact order?

**RESOLVED:** Yes, this feature is useful for cases where most of the fragment shader can be evaluated once for an entire coarse fragment, but where some per-pixel computations are also required. For example, a per-pixel alpha test may want to kill all the samples for some pixels in a coarse fragment. This sort of test can be implemented using an output sample mask, but such a shader would need to know which bit in the mask corresponds to each sample in the coarse fragment. We are including a mechanism to allow applications to specify the orders of coverage samples for each shading rate and sample count, either as static pipeline state or dynamically via a command buffer. This portion of the extension has its own feature bit.

We will not be providing a query to determine the implementation-dependent default ordering. The thinking here is that if an application cares enough about the coarse fragment sample ordering to perform such a query, it could instead just set its own order, also using custom per-pixel sample locations if required.

2) For the pipeline stage VK_PIPELINE_STAGE_SHADING_RATE_IMAGE_BIT_NV, should we specify a precise location in the pipeline the shading rate image is accessed (after geometry shading, but before the early fragment tests) or leave it under-specified in case there are other implementations that access the image in a different pipeline location?

**RESOLVED** We are specifying the pipeline stage to be between the final pre-rasterization shader...
stage (VK_PIPELINE_STAGE_GEOMETRY_SHADER_BIT) and before the first stage used for fragment processing (VK_PIPELINE_STAGE_EARLY_FRAGMENT_TESTS_BIT), which seems to be the natural place to access the shading rate image.

(3) How do centroid-sampled variables work with fragments larger than one pixel?

**RESOLVED** For single-pixel fragments, fragment shader inputs decorated with *Centroid* are sampled at an implementation-dependent location in the intersection of the area of the primitive being rasterized and the area of the pixel that corresponds to the fragment. With multi-pixel fragments, we follow a similar pattern, using the intersection of the primitive and the set of pixels corresponding to the fragment.

One important thing to keep in mind when using such “coarse” shading rates is that fragment attributes are sampled at the center of the fragment by default, regardless of the set of pixels/samples covered by the fragment. For fragments with a size of 4x4 pixels, this center location will be more than two pixels (1.5 * sqrt(2)) away from the center of the pixels at the corners of the fragment. When rendering a primitive that covers only a small part of a coarse fragment, sampling a color outside the primitive can produce overly bright or dark color values if the color values have a large gradient. To deal with this, an application can use centroid sampling on attributes where “extrapolation” artifacts can lead to overly bright or dark pixels. Note that this same problem also exists for multisampling with single-pixel fragments, but is less severe because it only affects certain samples of a pixel and such bright/dark samples may be averaged with other samples that do not have a similar problem.

Interactions and External Dependencies
• This extension requires SPV_NV_viewport_array2
• This extension provides API support for GL_NV_viewport_array2
• This extension requires the geometryShader and multiViewport features.
• This extension interacts with the tessellationShader feature.

Contributors
• Piers Daniell, NVIDIA
• Jeff Bolz, NVIDIA

Description

This extension adds support for the following SPIR-V extension in Vulkan:

• SPV_NV_viewport_array2

which allows a single primitive to be broadcast to multiple viewports and/or multiple layers. A new shader built-in output ViewportMaskNV is provided, which allows a single primitive to be output to multiple viewports simultaneously. Also, a new SPIR-V decoration is added to control whether the effective viewport index is added into the variable decorated with the Layer built-in decoration. These capabilities allow a single primitive to be output to multiple layers simultaneously.

This extension allows variables decorated with the Layer and ViewportIndex built-ins to be exported from vertex or tessellation shaders, using the ShaderViewportIndexLayerNV capability.

This extension adds a new ViewportMaskNV built-in decoration that is available for output variables in vertex, tessellation evaluation, and geometry shaders, and a new ViewportRelativeNV decoration that can be added on variables decorated with Layer when using the ShaderViewportMaskNV capability.

When using GLSL source-based shading languages, the gl_ViewportMask[] built-in output variable and viewport_relative layout qualifier from GL_NV_viewport_array2 map to the ViewportMaskNV and ViewportRelativeNV decorations, respectively. Behaviour is described in the GL_NV_viewport_array2 extension specification.
The ShaderViewportIndexLayerNV capability is equivalent to the ShaderViewportIndexLayerEXT capability added by VK_EXT_shader_viewport_index_layer.

Interactions and External Dependencies
- This extension requires multiViewport and geometryShader features to be useful.

Contributors
- Daniel Koch, NVIDIA
- Jeff Bolz, NVIDIA

Description
This extension provides a new per-viewport swizzle that can modify the position of primitives sent to each viewport. New viewport swizzle state is added for each viewport, and a new position vector is computed for each vertex by selecting from and optionally negating any of the four components of the original position vector.

This new viewport swizzle is useful for a number of algorithms, including single-pass cube map rendering (broadcasting a primitive to multiple faces and reorienting the vertex position for each face) and voxel rasterization. The per-viewport component remapping and negation provided by the swizzle allows application code to re-orient three-dimensional geometry with a view along any of the X, Y, or Z axes. If a perspective projection and depth buffering is required, 1/W buffering should be used, as described in the single-pass cube map rendering example in the “Issues” section below.

New Structures
- VkViewportSwizzleNV
- Extending VkPipelineViewportStateCreateInfo:
  - VkPipelineViewportSwizzleStateCreateInfoNV

New Enums
- VkViewportCoordinateSwizzleNV

New Bitmasks
- VkPipelineViewportSwizzleStateCreateFlagsNV
New Enum Constants

- VK_NV_VIEWPORT_SWIZZLE_EXTENSION_NAME
- VK_NV_VIEWPORT_SWIZZLE_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PIPELINE_VIEWPORT_SWIZZLE_STATE_CREATE_INFO_NV

Issues

1) Where does viewport swizzling occur in the pipeline?

**RESOLVED:** Despite being associated with the viewport, viewport swizzling must happen prior to the viewport transform. In particular, it needs to be performed before clipping and perspective division.

The viewport mask expansion (VK_NV_viewport_array2) and the viewport swizzle could potentially be performed before or after transform feedback, but feeding back several viewports worth of primitives with different swizzles does not seem particularly useful. This specification applies the viewport mask and swizzle after transform feedback, and makes primitive queries only count each primitive once.

2) Any interesting examples of how this extension, VK_NV_viewport_array2, and VK_NV_geometry_shader_passthrough can be used together in practice?

**RESOLVED:** One interesting use case for this extension is for single-pass rendering to a cube map. In this example, the application would attach a cube map texture to a layered FBO where the six cube faces are treated as layers. Vertices are sent through the vertex shader without applying a projection matrix, where the gl_Position output is (x,y,z,1) and the center of the cube map is at (0,0,0). With unextended Vulkan, one could have a conventional instanced geometry shader that looks something like the following:

```cpp
layout(invocations = 6) in; // separate invocation per face
layout(triangles) in;
layout(triangle_strip) out;
layout(max_vertices = 3) out;

in Inputs {
  vec2 texcoord;
  vec3 normal;
  vec4 baseColor;
} v[];

out Outputs {
  vec2 texcoord;
  vec3 normal;
  vec4 baseColor;
};
```
void main()
{
    int face = gl_InvocationID;  // which face am I?

    // Project gl_Position for each vertex onto the cube map face.
    vec4 positions[3];
    for (int i = 0; i < 3; i++) {
        positions[i] = rotate(gl_in[i].gl_Position, face);
    }

    // If the primitive does not project onto this face, we are done.
    if (shouldCull(positions)) {
        return;
    }

    // Otherwise, emit a copy of the input primitive to the appropriate face (using gl_Layer).
    for (int i = 0; i < 3; i++) {
        gl_Layer = face;
        gl_Position = positions[i];
        texcoord = v[i].texcoord;
        normal = v[i].normal;
        baseColor = v[i].baseColor;
        EmitVertex();
    }
}

With passthrough geometry shaders, this can be done using a much simpler shader:

layout(triangles) in;
layout(passthrough) in Inputs {
    vec2 texcoord;
    vec3 normal;
    vec4 baseColor;
}
layout(passthrough) in gl_PerVertex {
    vec4 gl_Position;
} gl_in[];
layout(viewport_relative) out int gl_Layer;

void main()
{
    // Figure out which faces the primitive projects onto and generate a corresponding viewport mask.
    uint mask = 0;
    for (int i = 0; i < 6; i++) {
        if (!shouldCull(face)) {
            mask |= 1U << i;
        }
    }
}
glViewportMask = mask;
gl_Layer = 0;
}

The application code is set up so that each of the six cube faces has a separate viewport (numbered 0 to 5). Each face also has a separate swizzle, programmed via the VkPipelineViewportSwizzleStateCreateInfoNV pipeline state. The viewport swizzle feature performs the coordinate transformation handled by the rotate() function in the original shader. The viewport_relative layout qualifier says that the viewport number (0 to 5) is added to the base gl_Layer value of 0 to determine which layer (cube face) the primitive should be sent to.

Note that the use of the passed through input normal in this example suggests that the fragment shader in this example would perform an operation like per-fragment lighting. The viewport swizzle would transform the position to be face-relative, but normal would remain in the original coordinate system. It seems likely that the fragment shader in either version of the example would want to perform lighting in the original coordinate system. It would likely do this by reconstructing the position of the fragment in the original coordinate system using gl_FragCoord, a constant or uniform holding the size of the cube face, and the input gl_ViewpoitIndex (or gl_Layer), which identifies the cube face. Since the value of normal is in the original coordinate system, it would not need to be modified as part of this coordinate transformation.

Note that while the rotate() operation in the regular geometry shader above could include an arbitrary post-rotation projection matrix, the viewport swizzle does not support arbitrary math. To get proper projection, 1/W buffering should be used. To do this:

1. Program the viewport swizzles to move the pre-projection W eye coordinate (typically 1.0) into the Z coordinate of the swizzle output and the eye coordinate component used for depth into the W coordinate. For example, the viewport corresponding to the +Z face might use a swizzle of (+X, -Y, +W, +Z). The Z normalized device coordinate computed after swizzling would then be \( \frac{z'}{w'} = \frac{1}{Z_{\text{eye}}} \).

2. On NVIDIA implementations supporting floating-point depth buffers with values outside \([0,1]\), prevent unwanted near plane clipping by enabling depthClampEnable. Ensure that the depth clamp does not mess up depth testing by programming the depth range to very large values, such as \( \text{minDepthBounds} = -z, \text{maxDepthBounds} = +z \), where \( z = 2^{127} \). It should be possible to use IEEE infinity encodings also (0xFF800000 for -INF, 0x7F800000 for +INF). Even when near/far clipping is disabled, primitives extending behind the eye will still be clipped because one or more vertices will have a negative W coordinate and fail X/Y clipping tests.

On other implementations, scale X, Y, and Z eye coordinates so that vertices on the near plane have a post-swizzle W coordinate of 1.0. For example, if the near plane is at \( Z_{\text{eye}} = 1/256 \), scale X, Y, and Z by 256.

3. Adjust depth testing to reflect the fact that 1/W values are large near the eye and small away from the eye. Clear the depth buffer to zero (infinitely far away) and use a depth test of VK_COMPARE_OP_GREATER instead of VK_COMPARE_OP_LESS.

VK_NVX_multiview_per_view_attributes

Name String
VK_NVX_multiview_per_view_attributes

Extension Type
Device extension
Description

This extension adds a new way to write shaders to be used with multiview subpasses, where the attributes for all views are written out by a single invocation of the pre-rasterization shader stages. Related SPIR-V and GLSL extensions `SPV_NVX_multiview_per_view_attributes` and `GL_NVX_multiview_per_view_attributes` introduce per-view position and viewport mask attributes arrays, and this extension defines how those per-view attribute arrays are interpreted by Vulkan. Pipelines using per-view attributes may only execute the pre-rasterization shader stages once for all views rather than once per-view, which reduces redundant shading work.

A subpass creation flag controls whether the subpass uses this extension. A subpass must either exclusively use this extension or not use it at all.

Some Vulkan implementations only support the position attribute varying between views in the X component. A subpass can declare via a second creation flag whether all pipelines compiled for this subpass will obey this restriction.
Shaders that use the new per-view outputs (e.g. \texttt{gl\_PositionPerViewNV}) \textbf{must} also write the non-per-view output (\texttt{gl\_Position}), and the values written \textbf{must} be such that \texttt{gl\_Position = gl\_PositionPerViewNV[gl\_ViewIndex]} for all views in the subpass. Implementations are free to either use the per-view outputs or the non-per-view outputs, whichever would be more efficient.

If \texttt{VK\_NV\_viewport\_array2} is not also supported and enabled, the per-view viewport mask \textbf{must} not be used.

**New Structures**

- Extending \texttt{VkPhysicalDeviceProperties2}:
  - \texttt{VkPhysicalDeviceMultiviewPerViewAttributesPropertiesNVX}

**New Enum Constants**

Description

This extension allows an application to specify offsets to a fragment density map attachment, changing the framebuffer location where density values are applied to without having to regenerate the fragment density map.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceFragmentDensityMapOffsetFeaturesQCOM`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFragmentDensityMapOffsetPropertiesQCOM`
- Extending `VkSubpassEndInfo`:
  - `VkSubpassFragmentDensityMapOffsetEndInfoQCOM`

New Enum Constants

- `VK_QCOM_FRAGMENT_DENSITY_MAP_OFFSET_EXTENSION_NAME`
- `VK_QCOM_FRAGMENT_DENSITY_MAP_OFFSET_SPEC_VERSION`
- Extending `VkImageCreateFlagBits`:
  - `VK_IMAGE_CREATE_FRAGMENT_DENSITY_MAP_OFFSET_BIT_QCOM`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_FEATURES_QCOM`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_DENSITY_MAP_OFFSET_PROPERTIES_QCOM`
  - `VK_STRUCTURE_TYPE_SUBPASS_FRAGMENT_DENSITY_MAP_OFFSET_END_INFO_QCOM`

Version History

- Revision 1, 2021-09-03 (Matthew Netsch)
  - Initial version

Extension Proposal
VK_QCOM_image_processing

Other Extension Metadata

Last Modified Date
2022-07-08

Interactions and External Dependencies
• This extension requires SPV_QCOM_image_processing
• This extension provides API support for GL_QCOM_image_processing

Contributors
• Jeff Leger, Qualcomm Technologies, Inc.
• Ruihao Zhang, Qualcomm Technologies, Inc.

Description

GPUs are commonly used to process images for various applications from 3D graphics to UI and from composition to compute applications. Simple scaling and filtering can be done with bilinear filtering, which comes for free during texture sampling. However, as screen sizes get larger and more use cases rely on GPU such as camera and video post-processing needs, there is increasing demand for GPU to support higher order filtering and other advanced image processing.

This extension introduces a new set of SPIR-V built-in functions for image processing. It exposes the following new imaging operations

• The OpImageSampleWeightedQCOM instruction takes 3 operands: sampled image, weight image, and texture coordinates. The instruction computes a weighted average of an MxN region of texels in the sampled image, using a set of MxN weights in the weight image.

• The OpImageBoxFilterQCOM instruction takes 3 operands: sampled image, box size, and texture coordinates. Note that box size specifies a floating point width and height in texels. The instruction computes a weighted average of all texels in the sampled image that are covered (either partially or fully) by a box with the specified size and centered at the specified texture coordinates.
The `OpImageBlockMatchSADQCOM` and `OpImageBlockMatchSSDQCOM` instructions each take 5 operands: *target image*, *target coordinates*, *reference image*, *reference coordinates*, and *block size*. Each instruction computes an error metric, that describes whether a block of texels in the *target image* matches a corresponding block of texels in the *reference image*. The error metric is computed per-component. `OpImageBlockMatchSADQCOM` computes "Sum Of Absolute Difference" and `OpImageBlockMatchSSDQCOM` computes "Sum of Squared Difference".

Each of the image processing instructions operate only on 2D images. The instructions do not support sampling of mipmap, multi-plane, multi-layer, multi-sampled, or depth/stencil images. The instructions can be used in any shader stage.

Implementations of this extension should support these operations natively at the HW instruction level, offering potential performance gains as well as ease of development.

### New Structures

- Extending `VkImageViewCreateInfo`:
  - `VkImageViewSampleWeightCreateInfoQCOM`

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceImageProcessingFeaturesQCOM`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceImageProcessingPropertiesQCOM`

### New Enum Constants

- `VK_QCOM_IMAGE_PROCESSING_EXTENSION_NAME`
- `VK_QCOM_IMAGE_PROCESSING_SPEC_VERSION`

- Extending `VkDescriptorType`:
  - `VK_DESCRIPTOR_TYPE_BLOCK_MATCH_IMAGE_QCOM`
  - `VK_DESCRIPTOR_TYPE_SAMPLE_WEIGHT_IMAGE_QCOM`

- Extending `VkImageUsageFlagBits`:
  - `VK_IMAGE_USAGE_SAMPLE_BLOCK_MATCH_BIT_QCOM`
  - `VK_IMAGE_USAGE_SAMPLE_WEIGHT_BIT_QCOM`

- Extending `VkSamplerCreateFlagBits`:
  - `VK_SAMPLER_CREATE_IMAGE_PROCESSING_BIT_QCOM`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_IMAGE_VIEW_SAMPLE_WEIGHT_CREATE_INFO_QCOM`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_FEATURES_QCOM`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_PROCESSING_PROPERTIES_QCOM`

If `VK_KHR_format_feature_flags2` is supported:
• Extending VkFormatFeatureFlagBits2:
  ◦ VK_FORMAT_FEATURE_2_BLOCK_MATCHING_BIT_QCOM
  ◦ VK_FORMAT_FEATURE_2_BOX_FILTER_SAMPLED_BIT_QCOM
  ◦ VK_FORMAT_FEATURE_2_WEIGHT_IMAGE_BIT_QCOM
  ◦ VK_FORMAT_FEATURE_2_WEIGHT_SAMPLED_IMAGE_BIT_QCOM

Interactions and External Dependencies
• This extension interacts with VK_KHR_dynamic_rendering
• This extension interacts with VK_QCOM_render_pass_transform

Contributors
• Jeff Leger, Qualcomm
• Jonathan Tinkham, Qualcomm
Description

Certain use cases (e.g., side-by-side VR rendering) use multiview and render to distinct regions of the framebuffer for each view. On some implementations, there may be a performance benefit for providing per-view render areas to the implementation. Such per-view render areas can be used by the implementation to reduce the pixels that are affected by attachment load, store, and multisample resolve operations.

The extension enables a multiview render pass instance to define per-view render areas. For each view of a multiview render pass instance, only those pixels in the per-view render area are affected by load, store and resolve operations.

New Structures

• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceMultiviewPerViewRenderAreasFeaturesQCOM

• Extending VkRenderPassBeginInfo, VkRenderingInfo:
  ◦ VkMultiviewPerViewRenderAreasRenderPassBeginInfoQCOM

New Enum Constants

• VK_QCOM_MULTIVIEW_PER_VIEW_RENDER_AREAS_EXTENSION_NAME
• VK_QCOM_MULTIVIEW_PER_VIEW_RENDER_AREAS_SPEC_VERSION

• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_MULTIVIEW_PER_VIEW_RENDER_AREAS_RENDER_PASS_BEGIN_INFO_QCOM
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_RENDER_AREAS_FEATURES_QCOM

Issues

1) Do the per-view renderAreas interact with vkGetRenderAreaGranularity?

**RESOLVED:** There is no change. The granularity returned by vkGetRenderAreaGranularity also applies to the per-view renderAreas.

2) How does this extension interact with VK_QCOM_render_pass_transform?

**RESOLVED:** When VK_QCOM_render_pass_transform is enabled, the application provides render area in non-rotated coordinates which is rotated by the implementation to the rotated coordinate system. When this extension is used in combination with VK_QCOM_render_pass_transform, then the renderArea provided in VkRenderingInfo::renderArea, VkRenderPassBeginInfo::renderArea, or VkCommandBufferInheritanceRenderPassTransformInfoQCOM::renderArea is rotated by the implementation. The per-view render areas are not rotated.

3) How does this extension interact with VK_QCOM_multiview_per_view_viewports
**RESOLVED**: There is no direct interaction. The per-view viewports and the per-view renderAreas are orthogonal features.

4) When a per-view `renderArea` is specified, must multiview rendering for each view of a multiview render pass be contained within the per-view `renderArea`?

**RESOLVED**: Yes, and the `VK_QCOM_multiview_per_view_viewports` may help here since it provides per-view scissors.

5) When per-view render areas are specified, what purpose if any do `VkRenderPassBeginInfo::renderArea` and `VkRenderingInfo::renderArea` serve?

**RESOLVED**: The per-view `renderArea` effectively overrides the per-renderpass `renderArea`. The per-view `renderArea` defines the regions of the attachments that are effected by load, store, and multisample resolve operations. A valid implementation could ignore the per-renderpass `renderArea`. However, as an aid to the implementation, the application must set the per-renderpass `renderArea` to an area that is at least as large as the union of all the per-view render areas. Pixels that are within the per-renderpass `renderArea` but not within any per-view render area must not be affected by load, store, or multisample resolve operations.

Interactions and External Dependencies
- This extension interacts with VK_KHR_dynamic_rendering
- This extension interacts with VK_EXT_extended_dynamic_state

Contributors
- Jeff Leger, Qualcomm
- Jonathan Tinkham, Qualcomm
- Jonathan Wicks, Qualcomm

Description
Certain use cases for multiview have a need for specifying a separate viewport and scissor for each view, without using shader-based viewport indexing as introduced with VK_EXT_shader_viewport_index_layer.

This extension adds a new way to control ViewportIndex with multiview. When the multiviewPerViewViewports feature is enabled and if the last pre-rasterization shader entry point’s interface does not use the ViewportIndex built-in decoration, then each view of a multiview render pass instance will use a viewport and scissor index equal to the ViewIndex.

New Structures
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceMultiviewPerViewViewportsFeaturesQCOM

New Enum Constants
- VK_QCOM_MULTIVIEW_PER_VIEW_VIEWPORTS_EXTENSION_NAME
- VK_QCOM_MULTIVIEW_PER_VIEW_VIEWPORTS_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MULTIVIEW_PER_VIEW_VIEWPORTS_FEATURES_QCOM

Issues
1) Is is possible to enable/disable the multiviewPerViewViewports feature for individual render pass instances?

RESOLVED: No, when the multiviewPerViewViewports feature is enabled during vkCreateDevice,
then all created render pass instances (including dynamic render passes from `VK_KHR_dynamic_rendering`) and all created VkPipelines will have the feature enabled. This approach was chosen because it simplifies application code and there is no known use case to enable/disable the feature for individual render passes or pipelines.

2) When this extension is used, is the value of `ViewportIndex` implicitly written by the last pre-rasterization shader stage and can the value of `ViewportIndex` be read in the fragment shader?

**RESOLVED:** No, use of the extension extension does not add an implicit write to `ViewportIndex` in any shader stage, and additionally, the value of `ViewportIndex` in the fragment shader is undefined.

**Description**

This extension allows a shader resolve to replace fixed-function resolve.

Fixed-function resolve is limited in function to simple filters of multisample buffers to a single sample buffer.

Fixed-function resolve is more performance efficient and/or power efficient than shader resolve for such simple filters.

Shader resolve allows a shader writer to create complex, non-linear filtering of a multisample buffer in the last subpass of a subpass dependency chain.

This extension also provides a bit which **can** be used to enlarge a sample region dependency to a fragment region dependency, so that a framebuffer-region dependency **can** replace a framebuffer-global dependency in some cases.

**New Enum Constants**

- `VK_QCOM_RENDER_PASS_SHADER_RESOLVE_EXTENSION_NAME`
- `VK_QCOM_RENDER_PASS_SHADER_RESOLVE_SPEC_VERSION`
- Extending `VkSubpassDescriptionFlagBits`:
  - `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_QCOM`
  - `VK_SUBPASS_DESCRIPTION_SHADER_RESOLVE_BIT_QCOM`

**Issues**

1) Should this extension be named render_pass_shader_resolve?

**RESOLVED** Yes.

This is part of suite of small extensions to render pass.

Following the style guide, instead of following VK_KHR_create_renderpass2.

2) Should the `VK_SAMPLE_COUNT_1_BIT` be required for each pColorAttachment and the DepthStencilAttachment?

**RESOLVED** No.

While this may not be a common use case, and while most fixed-function resolve hardware has this limitation, there is little reason to require a shader resolve to resolve to a single sample buffer.
3) Should a shader resolve subpass be the last subpass in a render pass?

**RESOLVED** Yes.

To be more specific, it should be the last subpass in a subpass dependency chain.

4) Do we need the `VK_SUBPASS_DESCRIPTION_FRAGMENT_REGION_BIT_QCOM` bit?

**RESOLVED** Yes.

This applies when an input attachment's sample count is equal to `rasterizationSamples`. Further, if `sampleShading` is enabled (explicitly or implicitly) then `minSampleShading` must equal 0.0.

However, this bit may be set on any subpass, it is not restricted to a shader resolve subpass.

**Version History**

  - Added issues
- Revision 3, 2019-11-07 (wwlk)
  - Typos
  - Additional issues
  - Clarified that a shader resolve subpass is the last subpass in a subpass dependency chain
- Revision 4, 2020-01-06 (wwlk)
  - Change resolution of Issue 1 (`render_pass`, not `renderpass`)

**VK_QCOM_render_pass_store_ops**

**Name String**

`VK_QCOM_render_pass_store_ops`

**Extension Type**

Device extension

**Registered Extension Number**

302

**Revision**

2

**Ratification Status**

Not ratified
Render pass attachments can be read-only for the duration of a render pass. Examples include input attachments and depth attachments where depth tests are enabled but depth writes are not enabled. In such cases, there can be no contents generated for an attachment within the render area.

This extension adds a new VkAttachmentStoreOp `VK_ATTACHMENT_STORE_OP_NONE_QCOM` specifying that the contents within the render area may not be written to memory, but that the prior contents of the attachment in memory are preserved. However, if any contents were generated within the render area during rendering, the contents of the attachment will be undefined inside the render area.

Note

The `VkAttachmentStoreOp VK_ATTACHMENT_STORE_OP_STORE` may force an implementation to assume that the attachment was written and force an implementation to flush data to memory or to a higher level cache. The `VkAttachmentStoreOp VK_ATTACHMENT_STORE_OP_NONE_QCOM` may allow an implementation to assume that the attachment was not written and allow an implementation to avoid such a flush.

New Enum Constants

- `VK_QCOM_RENDER_PASS_STORE_OPS_EXTENSION_NAME`
- `VK_QCOM_RENDER_PASS_STORE_OPS_SPEC_VERSION`
- Extending `VkAttachmentStoreOp`:
  - `VK_ATTACHMENT_STORE_OP_NONE_QCOM`

• This extension interacts with `VK_QCOM_tile_properties`

**Contributors**

• Jeff Leger, Qualcomm Technologies, Inc.

• Brandon Light, Qualcomm Technologies, Inc.

• Matthew Netsch, Qualcomm Technologies, Inc.
**Description**

This extension provides a mechanism for applications to enable driver support for render pass transform.

Mobile devices can be rotated and mobile applications need to render properly when a device is held in a landscape or portrait orientation. When the current orientation differs from the device’s native orientation, a rotation is required so that the “up” direction of the rendered scene matches the current orientation.

If the Display Processing Unit (DPU) does not natively support rotation, the Vulkan presentation engine can handle this rotation in a separate composition pass. Alternatively, the application can render frames “pre-rotated” to avoid this extra pass. The latter is preferred to reduce power consumption and achieve the best performance because it avoids tasking the GPU with extra work to perform the copy/rotate operation.

Unlike OpenGL ES, the burden of pre-rotation in Vulkan falls on the application. To implement pre-rotation, applications render into swapchain images matching the device native aspect ratio of the display and “pre-rotate” the rendering content to match the device’s current orientation. The burden is more than adjusting the Model View Projection (MVP) matrix in the vertex shader to account for rotation and aspect ratio. The coordinate systems of scissors, viewports, derivatives and several shader built-ins may need to be adapted to produce the correct result.

It is difficult for some game engines to manage this burden; many chose to simply accept the performance/power overhead of performing rotation in the presentation engine.

This extension allows applications to achieve the performance benefits of pre-rotated rendering by moving much of the above-mentioned burden to the graphics driver. The following is unchanged with this extension:

- Applications create a swapchain matching the native orientation of the display. Applications must also set the `VkSwapchainCreateInfoKHR::preTransform` equal to the `currentTransform` as returned by `vkGetPhysicalDeviceSurfaceCapabilitiesKHR`.

The following is changed with this extension:

- At `vkCmdBeginRenderPass`, the application provides extension struct `VkRenderPassTransformBeginInfoQCOM` specifying the render pass transform parameters.
- At `vkBeginCommandBuffer` for secondary command buffers, the application provides extension struct `VkCommandBufferInheritanceRenderPassTransformInfoQCOM` specifying the render pass transform parameters.
- The `renderArea`, viewports, scissors, and `fragmentSize` are all provided in the current (non-rotated) coordinate system. The implementation will transform those into the native (rotated) coordinate system.
- The implementation is responsible for transforming shader built-ins (`FragCoord`, `PointCoord`, `SamplePosition`, `PrimitiveShadingRateKHR`, `interpolateAt()`, `dFdx`, `dFdy`, `fWidth`) into the rotated coordinate system.
- The implementation is responsible for transforming `position` to the rotated coordinate system.
If this extension is used with `VK_QCOM_tile_properties`, then `vkGetFramebufferTilePropertiesQCOM` and `vkGetDynamicRenderingTilePropertiesQCOM` return tile properties in the rotated coordinate space.

**New Structures**

- Extending `VkCommandBufferInheritanceInfo`:
  - `VkCommandBufferInheritanceRenderPassTransformInfoQCOM`

- Extending `VkRenderPassBeginInfo`:
  - `VkRenderPassTransformBeginInfoQCOM`

**New Enum Constants**

- `VK_QCOM_RENDER_PASS_TRANSFORM_EXTENSION_NAME`
- `VK_QCOM_RENDER_PASS_TRANSFORM_SPEC_VERSION`

- Extending `VkRenderPassCreateFlagBits`:
  - `VK_RENDER_PASS_CREATE_TRANSFORM_BIT_QCOM`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_COMMAND_BUFFER_INHERITANCE_RENDER_PASS_TRANSFORM_INFO_QCOM`
  - `VK_STRUCTURE_TYPE_RENDER_PASS_TRANSFORM_BEGIN_INFO_QCOM`

**Issues**

1) Some early Adreno drivers (October 2019 through March 2020) advertised support for this extension but expected `VK_STRUCTURE_TYPE` values different from those in the vulkan headers. To cover all Adreno devices on the market, applications need to detect the driver version and use the appropriate `VK_STRUCTURE_TYPE` values from the table below.

The driver version reported in `VkPhysicalDeviceProperties.driverVersion` is a `uint32_t` type. You can decode the `uint32_t` value into a major.minor.patch version as shown below:

```c
uint32_t major = ((driverVersion) >> 22);
uint32_t minor = ((driverVersion) >> 12) & 0x3ff;
uint32_t patch = ((driverVersion) & 0xfff);
```

If the Adreno major.minor.patch version is greater than or equal to 512.469.0, then simply use the `VK_STRUCTURE_TYPE` values as defined in `vulkan_core.h`. If the version is less than or equal to 512.468.0, then use the alternate values for the two `VK_STRUCTURE_TYPE` values in the table below.

**Table 98. Adreno Driver Requirements**

<table>
<thead>
<tr>
<th>Adreno Driver Version</th>
</tr>
</thead>
<tbody>
<tr>
<td>512.468.0 and earlier</td>
</tr>
<tr>
<td>512.469.0 and later</td>
</tr>
</tbody>
</table>
2) Should the extension support only rotations (e.g. 90, 180, 270-degrees), or also mirror transforms (e.g. vertical flips)? Mobile use cases only require rotation. Other display systems such as projectors might require a flipped transform.

**RESOLVED:** In this version of the extension, the functionality is restricted to 90, 180, and 270-degree rotations to address mobile use cases.

3) How does this extension interact with VK_EXT_fragment_density_map?

**RESOLVED** Some implementations may not be able to support a render pass that enables both render pass transform and fragment density maps. For simplicity, this extension disallows enabling both features within a single render pass.

4) What should this extension be named?

We considered names such as “rotated_rendering”, “pre_rotation” and others. Since the functionality is limited to a render pass, it seemed the name should include “render_pass”. While the current extension is limited to rotations, it could be extended to other transforms (like mirror) in the future.

**RESOLVED** The name “render_pass_transform” seems like the most accurate description of the introduced functionality.

5) How does this extension interact with VK_KHR_fragment_shading_rate?

**RESOLVED:** For the same reasons as issue 3, this extension disallows enabling both pFragmentShadingRateAttachment and render pass transform within a single render pass.

However, pipeline shading rate and primitive shading rate are supported, and their respective fragmentSize and PrimitiveShadingRateKHR are provided in the current (non-rotated) coordinate system. The implementation is responsible for transforming them to the rotated coordinate system.

The set of supported shading rates may be different per transform. Supported rates queried from vkGetPhysicalDeviceFragmentShadingRatesKHR are in the native (rotated) coordinate system. This means that the application must swap the x/y of the reported rates to get the set of rates supported for 90 and 270 degree rotation.

Description

This extension extends adds an optional rotation transform to copy commands
vkCmdBlitImage2KHR, vkCmdCopyImageToBuffer2KHR and vkCmdCopyBufferToImage2KHR. When copying between two resources, where one resource contains rotated content and the other does not, a rotated copy may be desired. This extension may be used in combination with VK_QCOM_render_pass_transform which adds rotated render passes.

This extension adds an extension structure to the following commands: vkCmdBlitImage2KHR, vkCmdCopyImageToBuffer2KHR and vkCmdCopyBufferToImage2KHR

Issues

1) What is an appropriate name for the added extension structure? The style guide says “Structures which extend other structures through the pNext chain should reflect the name of the base structure they extend.”, but in this case a single extension structure is used to extend three base structures (vkCmdBlitImage2KHR, vkCmdCopyImageToBuffer2KHR and vkCmdCopyBufferToImage2KHR). Creating three identical structures with unique names seemed undesirable.

RESOLVED: Deviate from the style guide for extension structure naming.

2) Should this extension add a rotation capability to vkCmdCopyImage2KHR?

RESOLVED: No. Use of rotated vkCmdBlitImage2KHR can fully address this use case.

3) Should this extension add a rotation capability to vkCmdResolveImage2KHR?

RESOLVED No. Use of vkCmdResolveImage2KHR is very slow and extremely bandwidth intensive on Qualcomm’s GPU architecture and use of pResolveAttachments in vkRenderPass is the strongly preferred approach. Therefore, we choose not to introduce a rotation capability to vkCmdResolveImage2KHR.

Description
This extension enables an application to import QNX Screen _screen_buffer objects created outside of the Vulkan device into Vulkan memory objects, where they can be bound to images and buffers.

Some _screen_buffer images have implementation-defined external formats that may not correspond to Vulkan formats. Sampler Y’CbCr conversion can be used to sample from these images and convert them to a known color space.

_screen_buffer is strongly typed, so naming the handle type is redundant. The internal layout and therefore size of a _screen_buffer image may depend on native usage flags that do not have corresponding Vulkan counterparts.

New Commands
• vkGetScreenBufferPropertiesQNX

New Structures
• VkScreenBufferPropertiesQNX
• Extending VkImageCreateInfo, VkSamplerYcbcrConversionCreateInfo:
  ◦ VkExternalFormatQNX
• Extending VkMemoryAllocateInfo:
  ◦ VkImportScreenBufferInfoQNX
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
New Enum Constants

- VK_QNX_EXTERNAL_MEMORY_SCREEN_BUFFER_EXTENSION_NAME
- VK_QNX_EXTERNAL_MEMORY_SCREEN_BUFFER_SPEC_VERSION

Extending VkExternalMemoryHandleTypeFlagBits:
- VK_EXTERNAL_MEMORY_HANDLE_TYPE_SCREEN_BUFFER_BIT_QNX

Extending VkStructureType:
- VK_STRUCTURE_TYPE_EXTERNAL_FORMAT_QNX
- VK_STRUCTURE_TYPE_IMPORT_SCREEN_BUFFER_INFO_QNX
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_MEMORY_SCREEN_BUFFER_FEATURES_QNX
- VK_STRUCTURE_TYPE_SCREEN_BUFFER_FORMAT_PROPERTIES_QNX
- VK_STRUCTURE_TYPE_SCREEN_BUFFER_PROPERTIES_QNX

Extension and Version Dependencies
VK_KHR_surface
The **VK_QNX_screen_surface** extension is an instance extension. It provides a mechanism to create a **VkSurfaceKHR** object (defined by the **VK_KHR_surface** extension) that refers to a QNX Screen window, as well as a query to determine support for rendering to a QNX Screen compositor.

**New Commands**
- `vkCreateScreenSurfaceQNX`
- `vkGetPhysicalDeviceScreenPresentationSupportQNX`

**New Structures**
- `VkScreenSurfaceCreateInfoQNX`

**New Bitmasks**
- `VkScreenSurfaceCreateFlagsQNX`

**New Enum Constants**

Description

This extension is intended to communicate information from layered API implementations such as ANGLE to internal proprietary system schedulers. It has no behavioural implications beyond enabling more intelligent behaviour from the system scheduler.

Application developers should avoid using this extension. It is documented solely for the benefit of tools and layer developers, who may need to manipulate `pNext` chains that include these structures.

Note
There is currently no specification language written for this extension. The links to
APIs defined by the extension are to stubs that only include generated content such as API declarations and implicit valid usage statements.

**Note**
This extension is only intended for use in specific embedded environments with known implementation details, and is therefore undocumented.

### New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceAmigoProfilingFeaturesSEC`
- Extending `VkSubmitInfo`:
  - `VkAmigoProfilingSubmitInfoSEC`

### New Enum Constants

- `VK_SEC_AMIGO_PROFILING_EXTENSION_NAME`
- `VK_SEC_AMIGO_PROFILING_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_AMIGO_PROFILING_SUBMIT_INFO_SEC`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_AMIGO_PROFILING_FEATURES_SEC`

### Stub API References

There is currently no specification language written for this type. This section acts only as placeholder and to avoid dead links in the specification and reference pages.

```c
// Provided by VK_SEC_amigo_profiling
typedef struct VkPhysicalDeviceAmigoProfilingFeaturesSEC {
    VkStructureType sType;
    void* pNext;
    VkBool32 amigoProfiling;
} VkPhysicalDeviceAmigoProfilingFeaturesSEC;
```

### Valid Usage (Implicit)

- **VUID-VkPhysicalDeviceAmigoProfilingFeaturesSEC-sType-sType**
  - `sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_AMIGO_PROFILING_FEATURES_SEC`

There is currently no specification language written for this type. This section acts only as placeholder and to avoid dead links in the specification and reference pages.
typedef struct VkAmigoProfilingSubmitInfoSEC {
    VkStructureType sType;
    const void* pNext;
    uint64_t firstDrawTimestamp;
    uint64_t swapBufferTimestamp;
} VkAmigoProfilingSubmitInfoSEC;

Valid Usage (Implicit)

- VUID-VkAmigoProfilingSubmitInfoSEC-sType-sType
  sType must be VK_STRUCTURE_TYPE_AMIGO_PROFILING_SUBMIT_INFO_SEC

Other Extension Metadata
Description

This extension allows applications to directly query a host pointer for a \texttt{VkDescriptorSet} which \textbf{can} be used to copy descriptors between descriptor sets without the use of an API command. Memory offsets and sizes for descriptors \textbf{can} be queried from a \texttt{VkDescriptorSetLayout} as well.

\begin{itemize}
  \item \textbf{Note} There is currently no specification language written for this extension. The links to APIs defined by the extension are to stubs that only include generated content such as API declarations and implicit valid usage statements.
  
  \item \textbf{Note} This extension is only intended for use in specific embedded environments with known implementation details, and is therefore undocumented.
\end{itemize}

New Commands

\begin{itemize}
  \item \texttt{vkGetDescriptorSetHostMappingVALVE}
  \item \texttt{vkGetDescriptorSetLayoutHostMappingInfoVALVE}
\end{itemize}

New Structures

\begin{itemize}
  \item \texttt{VkDescriptorSetBindingReferenceVALVE}
  \item \texttt{VkDescriptorSetLayoutHostMappingInfoVALVE}
  \item Extending \texttt{VkPhysicalDeviceFeatures2, VkDeviceCreateInfo}:
    \begin{itemize}
      \item \texttt{VkPhysicalDeviceDescriptorSetHostMappingFeaturesVALVE}
    \end{itemize}
\end{itemize}

New Enum Constants

\begin{itemize}
  \item \texttt{VK\/VALVE\_DESCRIPTION\_SET\_HOST\_MAPPING\_EXTENSION\_NAME}
  \item \texttt{VK\/VALVE\_DESCRIPTION\_SET\_HOST\_MAPPING\_SPEC\_VERSION}
  \item Extending \texttt{VkStructureType}:

    \end{itemize}
\end{itemize}
Stub API References

There is currently no specification language written for this command. This section acts only as placeholder and to avoid dead links in the specification and reference pages.

```c
// Provided by VK_VALVE_descriptor_set_host_mapping
void vkGetDescriptorSetLayoutHostMappingInfoVALVE(
    VkDevice device,
    const VkDescriptorSetBindingReferenceVALVE* pBindingReference,
    VkDescriptorSetLayoutHostMappingInfoVALVE* pHostMapping);
```

**Valid Usage (Implicit)**

- VUID-vkGetDescriptorSetLayoutHostMappingInfoVALVE-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetDescriptorSetLayoutHostMappingInfoVALVE-pBindingReference-parameter
  pBindingReference must be a valid pointer to a valid VkDescriptorSetBindingReferenceVALVE structure

- VUID-vkGetDescriptorSetLayoutHostMappingInfoVALVE-pHostMapping-parameter
  pHostMapping must be a valid pointer to a VkDescriptorSetLayoutHostMappingInfoVALVE structure

There is currently no specification language written for this command. This section acts only as placeholder and to avoid dead links in the specification and reference pages.

```c
// Provided by VK_VALVE_descriptor_set_host_mapping
void vkGetDescriptorSetHostMappingVALVE(
    VkDevice device,
    VkDescriptorSet descriptorSet,
    void** ppData);
```

**Valid Usage (Implicit)**

- VUID-vkGetDescriptorSetHostMappingVALVE-device-parameter
  device must be a valid VkDevice handle

- VUID-vkGetDescriptorSetHostMappingVALVE-descriptorSet-parameter
  descriptorSet must be a valid VkDescriptorSet handle

- VUID-vkGetDescriptorSetHostMappingVALVE-ppData-parameter
  ppData must be a valid pointer to a pointer value

There is currently no specification language written for this type. This section acts only as placeholder and to avoid dead links in the specification and reference pages.
typedef struct VkPhysicalDeviceDescriptorSetHostMappingFeaturesVALVE {
    VkStructureType sType;
    void* pNext;
    VkBool32 descriptorSetHostMapping;
} VkPhysicalDeviceDescriptorSetHostMappingFeaturesVALVE;

Valid Usage (Implicit)

- VUID-VkPhysicalDeviceDescriptorSetHostMappingFeaturesVALVE-sType-sType
  sType must be VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_SET_HOST_MAPPING_FEATURES_VALVE

There is currently no specification language written for this type. This section acts only as placeholder and to avoid dead links in the specification and reference pages.

typedef struct VkDescriptorSetBindingReferenceVALVE {
    VkStructureType sType;
    const void* pNext;
    VkDescriptorSetLayout descriptorSetLayout;
    uint32_t binding;
} VkDescriptorSetBindingReferenceVALVE;

Valid Usage (Implicit)

- VUID-VkDescriptorSetBindingReferenceVALVE-sType-sType
  sType must be VK_STRUCTURE_TYPE_DESCRIPTOR_SET_BINDING_REFERENCE_VALVE

- VUID-VkDescriptorSetBindingReferenceVALVE-pNext-pNext
  pNext must be NULL

- VUID-VkDescriptorSetBindingReferenceVALVE-descriptorSetLayout-parameter
  descriptorSetLayout must be a valid VkDescriptorSetLayout handle

There is currently no specification language written for this type. This section acts only as placeholder and to avoid dead links in the specification and reference pages.

typedef struct VkDescriptorSetLayoutHostMappingInfoVALVE {
    VkStructureType sType;
    void* pNext;
    size_t descriptorOffset;
    uint32_t descriptorSize;
} VkDescriptorSetLayoutHostMappingInfoVALVE;
**Valid Usage (Implicit)**

- **VUID-VkDescriptorSetLayoutHostMappingInfoVALVE-sType-sType**
  `sType` **must** be `VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_HOST_MAPPING_INFO_VALVE`

- **VUID-VkDescriptorSetLayoutHostMappingInfoVALVE-pNext-pNext**
  `pNext` **must** be `NULL`

Description

The `VK_KHR_portability_subset` extension allows a non-conformant Vulkan implementation to be built on top of another non-Vulkan graphics API, and identifies differences between that implementation and a fully-conformant native Vulkan implementation.

This extension provides Vulkan implementations with the ability to mark otherwise-required capabilities as unsupported, or to establish additional properties and limits that the application should adhere to in order to guarantee portable behaviour and operation across platforms, including platforms where Vulkan is not natively supported.

The goal of this specification is to document, and make queryable, capabilities which are required to be supported by a fully-conformant Vulkan 1.0 implementation, but may be optional for an implementation of the Vulkan 1.0 Portability Subset.

The intent is that this extension will be advertised only on implementations of the Vulkan 1.0 Portability Subset, and not on conformant implementations of Vulkan 1.0. Fully-conformant Vulkan implementations provide all the required capabilities, and so will not provide this extension. Therefore, the existence of this extension can be used to determine that an implementation is likely not fully conformant with the Vulkan spec.

If this extension is supported by the Vulkan implementation, the application must enable this extension.

This extension defines several new structures that can be chained to the existing structures used by certain standard Vulkan calls, in order to query for non-conformant portable behavior.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDevicePortabilitySubsetFeaturesKHR`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDevicePortabilitySubsetPropertiesKHR`

New Enum Constants

- `VK_KHR_PORTABILITY_SUBSET_EXTENSION_NAME`
- `VK_KHR_PORTABILITY_SUBSET_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PORTABILITY_SUBSET_PROPERTIES_KHR`

Issues

None.

Description

This extension builds upon the VK_KHR_video_queue extension by adding common APIs specific to video encoding and thus enabling implementations to expose queue families supporting video encode operations.

More specifically, it adds video encode specific capabilities and a new command buffer command that allows recording video encode operations against a video session.

This extension is to be used in conjunction with other codec specific video encode extensions that enable encoding video sequences of specific video compression standards.

New Commands

- vkCmdEncodeVideoKHR
- vkGetEncodedVideoSessionParametersKHR
- vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR

New Structures

- VkPhysicalDeviceVideoEncodeQualityLevelInfoKHR
- VkVideoEncodeInfoKHR
- VkVideoEncodeQualityLevelPropertiesKHR
- VkVideoEncodeRateControlLayerInfoKHR
- VkVideoEncodeSessionParametersFeedbackInfoKHR
- VkVideoEncodeSessionParametersGetInfoKHR
- Extending VkQueryPoolCreateInfo:
  - VkQueryPoolVideoEncodeFeedbackCreateInfoKHR
- Extending VkVideoCapabilitiesKHR:
  - VkVideoEncodeCapabilitiesKHR
- Extending VkVideoCodingControlInfoKHR, VkVideoBeginCodingInfoKHR:
- `VkVideoEncodeRateControlInfoKHR`

  • Extending `VkVideoCodingControlInfoKHR, VkVideoSessionParametersCreateInfoKHR`:
    - `VkVideoEncodeQualityLevelInfoKHR`

  • Extending `VkVideoProfileInfoKHR, VkQueryPoolCreateInfo`:
    - `VkVideoEncodeUsageInfoKHR`

**New Enums**

- `VkVideoEncodeCapabilityFlagBitsKHR`
- `VkVideoEncodeContentFlagBitsKHR`
- `VkVideoEncodeFeedbackFlagBitsKHR`
- `VkVideoEncodeRateControlModeFlagBitsKHR`
- `VkVideoEncodeTuningModeKHR`
- `VkVideoEncodeUsageFlagBitsKHR`

**New Bitmasks**

- `VkVideoEncodeCapabilityFlagsKHR`
- `VkVideoEncodeContentFlagsKHR`
- `VkVideoEncodeFeedbackFlagsKHR`
- `VkVideoEncodeFlagsKHR`
- `VkVideoEncodeRateControlFlagsKHR`
- `VkVideoEncodeRateControlModeFlagsKHR`
- `VkVideoEncodeUsageFlagsKHR`

**New Enum Constants**

- `VK_KHR_VIDEO_ENCODE_QUEUE_EXTENSION_NAME`
- `VK_KHR_VIDEO_ENCODE_QUEUE_SPEC_VERSION`

  • Extending `VkAccessFlagBits2`:
    - `VK_ACCESS_2_VIDEO_ENCODE_READ_BIT_KHR`
    - `VK_ACCESS_2_VIDEO_ENCODE_WRITE_BIT_KHR`

  • Extending `VkBufferUsageFlagBits`:
    - `VK_BUFFER_USAGE_VIDEO_ENCODE_DST_BIT_KHR`
    - `VK_BUFFER_USAGE_VIDEO_ENCODE_SRC_BIT_KHR`

  • Extending `VkFormatFeatureFlagBits`:
    - `VK_FORMAT_FEATURE_VIDEO_ENCODE_DPB_BIT_KHR`
    - `VK_FORMAT_FEATURE_VIDEO_ENCODE_INPUT_BIT_KHR`
Extending VkImageLayout:
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_DPB_KHR
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_DST_KHR
- VK_IMAGE_LAYOUT_VIDEO_ENCODE_SRC_KHR

Extending VkImageUsageFlagBits:
- VK_IMAGE_USAGE_VIDEO_ENCODE_DPB_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_DST_BIT_KHR
- VK_IMAGE_USAGE_VIDEO_ENCODE_SRC_BIT_KHR

Extending VkPipelineStageFlagBits2:
- VK_PIPELINE_STAGE_2_VIDEO_ENCODE_BIT_KHR

Extending VkQueryType:
- VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR

Extending VkQueueFlagBits:
- VK_QUEUE_VIDEO_ENCODE_BIT_KHR

Extending VkResult:
- VK_ERROR_INVALID_VIDEO_STD_PARAMETERS_KHR

Extending VkStructureType:
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR
- VK_STRUCTURE_TYPE_QUERY_POOL_VIDEO_ENCODE_FEEDBACK_CREATE_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_CAPABILITIES_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_QUALITY_LEVEL_PROPERTIES_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_RATE_CONTROL_LAYER_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_FEEDBACK_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_SESSION_PARAMETERS_GET_INFO_KHR
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_USAGE_INFO_KHR

Extending VkVideoCodingControlFlagBitsKHR:
- VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR
- VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR

Extending VkVideoSessionCreateFlagBitsKHR:
- VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR

If VK_KHR_format_feature_flags2 is supported:

4422
• Extending VkFormatFeatureFlagBits2:
  ◦ VK_FORMAT_FEATURE_2_VIDEO_ENCODE_DPB_BIT_KHR
  ◦ VK_FORMAT_FEATURE_2_VIDEO_ENCODE_INPUT_BIT_KHR

Issues

1) Why is there no VK_PIPELINE_STAGE_VIDEO_ENCODE_BIT_KHR?

RESOLVED: This extension requires VK_KHR_synchronization2 because the new access flags introduced did not fit in the 32-bit enum VkAccessFlagBits. Accordingly, all new pipeline stage and access flags have been added to the corresponding 64-bit enum and no new flags have been added to the legacy 32-bit enums. While the new pipeline stage flag introduced uses bit #27 which would also fit in the legacy VkPipelineStageFlagBits enum, there is no real benefit to include it. Instead the bit is marked reserved.

Version History

• Revision 1, 2018-07-23 (Ahmed Abdelkhalek)
  ◦ Initial draft
• Revision 1.1, 10/29/2019 (Tony Zlatinski)
  ◦ Updated the reserved spec tokens and renamed VkVideoEncoderKHR to VkVideoSessionKHR
• Revision 1.6, Jan 08 2020 (Tony Zlatinski)
  ◦ API unify with the video_decode_queue spec
• Revision 2, March 29 2021 (Tony Zlatinski)
  ◦ Spec and API updates.
• Revision 3, 2021-09-30 (Jon Leech)
  ◦ Add interaction with VK_KHR_format_feature_flags2 to vk.xml
• Revision 4, 2022-02-10 (Ahmed Abdelkhalek)
  ◦ Updates to encode capability interface
• Revision 5, 2022-03-31 (Ahmed Abdelkhalek)
  ◦ Remove redundant VkVideoEncodeInfoKHR.codedExtent
• Revision 6, 2022-07-18 (Daniel Rakos)
  ◦ Remove VkVideoEncodeRateControlFlagBitsKHR and VkVideoEncodeFlagBitsKHR as they contain no defined flags for now
  ◦ Add VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_BIT_KHR and VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_LAYER_BIT_KHR to indicate rate control and rate control layer change requests, respectively, in video coding control operations
• Revision 7, 2022-08-12 (Daniel Rakos)
  ◦ Add VkVideoEncodeUsageInfoKHR structure and related flags
• Revision 8, 2023-03-06 (Daniel Rakos)
Replace `VK_QUERY_TYPE_VIDEO_ENCODE_BITSTREAM_BUFFER_RANGE_KHR` queries with more generic `VK_QUERY_TYPE_VIDEO_ENCODE_FEEDBACK_KHR` queries that can be extended in the future with more feedback values.

Rename `dstBitstreamBuffer`, `dstBitstreamBufferOffset`, and `dstBitstreamBufferMaxRange` in `VkVideoEncodeInfoKHR` to `dstBuffer`, `dstBufferOffset`, and `dstBufferRange`, respectively, for consistency with the naming convention in the video decode extensions.

Change the type of `rateControlLayerCount` and `qualityLevelCount` in `VkVideoEncodeCapabilitiesKHR` from `uint8_t` to `uint32_t` and rename them to `maxRateControlLayers` and `maxQualityLevels`, respectively.

Change the type of `averageBitrate` and `maxBitrate` in `VkVideoEncodeRateControlLayerInfoKHR` from `uint32_t` to `uint64_t`.

Fixed the definition of rate control flag bits and added the new `VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DEFAULT_KHR` constant to indicate implementation-specific automatic rate control.

Change the type of `VkVideoEncodeRateControlInfoKHR::layerCount` from `uint8_t` to `uint32_t`.

Rename `pLayerConfigs` to `pLayers` in `VkVideoEncodeRateControlInfoKHR`.

• Revision 9, 2023-03-28 (Daniel Rakos)
  • Removed `VK_VIDEO_CODING_CONTROL_ENCODE_RATE_CONTROL_LAYER_BIT_KHR` and the ability to change the state of individual rate control layers.
  • Added new `VK_VIDEO_ENCODE_FEEDBACK_BITSTREAM_HAS_OVERRIDES_BIT_KHR` flag to video encode feedback queries.
  • Added new video session create flag `VK_VIDEO_SESSION_CREATE_ALLOW_ENCODE_PARAMETER_OPTIMIZATIONS_BIT_KHR` to opt-in to video session and encoding parameter optimizations.
  • Added the `vkGetEncodedVideoSessionParametersKHR` command to enable retrieving encoded video session parameter data.
  • Moved `virtualBufferSizeInMs` and `initialVirtualBufferSizeInMs` from `VkVideoEncodeRateControlLayerInfoKHR` to `VkVideoEncodeRateControlInfoKHR`.
  • Added `maxBitrate` capability.
  • Renamed `inputImageDataFillAlignment` capability to `encodeInputPictureGranularity` to better reflect its purpose.
  • Added new `vkGetPhysicalDeviceVideoEncodeQualityLevelPropertiesKHR` command and related structures to enable querying recommended settings for video encode quality levels.
  • Added `VK_VIDEO_CODING_CONTROL_ENCODE_QUALITY_LEVEL_BIT_KHR` flag and `VkVideoEncodeQualityLevelInfoKHR` structure to allow controlling video encode quality level and removed `qualityLevel` from the encode operation parameters.

- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_ADD_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_CREATE_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_FEEDBACK_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H264_SESSION_PARAMETERS_GET_INFO_EXT

Extending VkVideoCodecOperationFlagBitsKHR:

- VK_VIDEO_CODEC_OPERATION_ENCODE_H264_BIT_EXT

Version History

- Revision 0, 2018-7-23 (Ahmed Abdelkhalek)
  - Initial draft
- Revision 0.5, 2020-02-13 (Tony Zlatinski)
- General Spec cleanup
- Added DPB structures
- Change the VCL frame encode structure
- Added a common Non-VCL Picture Parameters structure

Revision 1, 2021-03-29 (Tony Zlatinski)
- Spec and API updates

Revision 2, August 1 2021 (Srinath Kumarapuram)
- Rename VkVideoEncodeH264CapabilitiesFlagsEXT to VkVideoEncodeH264CapabilityFlagsEXT and VkVideoEncodeH264CapabilitiesFlagsEXT to VkVideoEncodeH264CapabilityFlagsEXT, following Vulkan naming conventions.

Revision 3, 2021-12-08 (Ahmed Abdelkhalek)
- Rate control updates

Revision 4, 2022-02-04 (Ahmed Abdelkhalek)
- Align VkVideoEncodeH264VclFrameInfoEXT structure to similar one in VK_EXT_video_encode_h265 extension

Revision 5, 2022-02-10 (Ahmed Abdelkhalek)
- Updates to encode capability interface

Revision 6, 2022-03-16 (Ahmed Abdelkhalek)
- Relocate Std header version reporting/requesting from this extension to VK_KHR_video_queue extension.
- Remove redundant maxPictureSizeInMbs from VkVideoEncodeH264SessionCreateInfoEXT.
- Remove the now empty VkVideoEncodeH264SessionCreateInfoEXT.

Revision 7, 2022-04-06 (Ahmed Abdelkhalek)
- Add capability flag to report support to use B frame in L1 reference list.
- Add capability flag to report support for disabling SPS direct_8x8_inference_flag.

Revision 8, 2022-07-18 (Daniel Rakos)
- Replace VkVideoEncodeH264RateControlStructureFlagBitsEXT bit enum with VkVideoEncodeH264RateControlStructureEXT enum
- Rename VkVideoEncodeH264ProfileEXT to VkVideoEncodeH264ProfileInfoEXT
- Rename VkVideoEncodeH264ReferenceListsEXT to VkVideoEncodeH264ReferenceListsInfoEXT
- Rename VkVideoEncodeH264EmitPictureParametersEXT to VkVideoEncodeH264EmitPictureParametersInfoEXT
- Rename VkVideoEncodeH264NaluSliceEXT to VkVideoEncodeH264NaluSliceInfoEXT

Revision 9, 2022-09-18 (Daniel Rakos)
- Rename spsStdCount, pSpsStd, ppsStdCount, and pPpsStd to stdSPSCount, pStdSPSs, stdPPSCount, and pStdPPSs, respectively, in VkVideoEncodeH264SessionParametersAddInfoEXT
- Rename maxSpsStdCount and maxPpsStdCount to maxStdSPSCount and maxStdPPSCount,
respectively, in VkVideoEncodeH264SessionParametersCreateInfoEXT

- Revision 10, 2023-03-06 (Daniel Rakos)
  - Removed VkVideoEncodeH264EmitPictureParametersInfoEXT
  - Changed member types in VkVideoEncodeH264CapabilitiesEXT and VkVideoEncodeH264ReferenceListsInfoEXT from uint8_t to uint32_t
  - Changed the type of VkVideoEncodeH264RateControlInfoEXT::temporalLayerCount and VkVideoEncodeH264RateControlLayerInfoEXT::temporalLayerId from uint8_t to uint32_t
  - Removed VkVideoEncodeH264InputModeFlagsEXT and VkVideoEncodeH264OutputModeFlagsEXT as we only support frame-in-frame-out mode for now
  - Rename pCurrentPictureInfo in VkVideoEncodeH264VclFrameInfoEXT to pStdPictureInfo
  - Rename pSliceHeaderStd in VkVideoEncodeH264NaluSliceInfoEXT to pStdSliceHeader
  - Rename pReferenceFinalLists in VkVideoEncodeH264VclFrameInfoEXT and VkVideoEncodeH264NaluSliceInfoEXT to pStdReferenceFinalLists
  - Removed the slotIndex member of VkVideoEncodeH264DpbSlotInfoEXT and changed it to be chained to VkVideoReferenceSlotInfoKHR
  - Replaced VkVideoEncodeH264ReferenceListsInfoEXT with the new Video Std header structure StdVideoEncodeH264ReferenceLists that also includes data previously part of the now removed StdVideoEncodeH264RefMemMgmtCtrlOperations structure
  - Added new capability flag VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT

- Revision 11, 2023-05-22 (Daniel Rakos)
  - Renamed VkVideoEncodeH264VclFrameInfoEXT to VkVideoEncodeH264PictureInfoEXT
  - Added VkVideoEncodeH264PictureInfoEXT::generatePrefixNalu and VK_VIDEO_ENCODE_H264_CAPABILITY_GENERATE_PREFIX_NALU_BIT_EXT to enable the generation of H.264 prefix NALUs when supported by the implementation
  - Removed VkVideoEncodeH264RateControlLayerInfoEXT::temporalLayerId
  - Added expectDyadicTemporalLayerPattern capability
  - Added the VkVideoEncodeH264SessionParametersGetInfoEXT structure to identify the H.264 parameter sets to retrieve encoded parameter data for, and the VkVideoEncodeH264SessionParametersFeedbackInfoEXT structure to retrieve H.264 parameter set override information when using the new vkGetEncodedVideoSessionParametersKHR command
  - Added VkVideoEncodeH264NaluSliceInfoEXT::constantQp to specify per-slice constant QP when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR
  - Added VkVideoEncodeH264QualityLevelPropertiesEXT for retrieving H.264 specific quality level recommendations
  - Replaced VkVideoEncodeH264RateControlStructureEXT enum with the flags type VkVideoEncodeH264RateControlFlagsEXT and bits defined in VkVideoEncodeH264RateControlFlagBitsEXT and added HRD compliance flag
  - Removed useInitialRcQp and initialRcQp members of
VkVideoEncodeH264RateControlLayerInfoEXT
- Added `prefersGopRemainingFrames` and `requiresGopRemainingFrames`, and the new `VkVideoEncodeH264GopRemainingFrameInfoEXT` structure to allow specifying remaining frames of each type in the rate control GOP
- Added `maxTemporalLayers`, `maxQp`, and `minQp` capabilities
- Added `maxLevelIdc` capability and new `VkVideoEncodeH264SessionCreateInfoEXT` structure to specify upper bounds on the H.264 level of the produced video bitstream
- Moved capability flags specific to codec syntax restrictions from `VkVideoEncodeH264CapabilityFlagsEXT` to the new `VkVideoEncodeH264StdFlagsEXT` which is now included as a separate `stdSyntaxFlags` member in `VkVideoEncodeH264CapabilitiesEXT`
- Removed codec syntax override values from `VkVideoEncodeH264CapabilitiesEXT`
- Removed `VkVideoEncodeH264NaluSliceInfoEXT::mbCount` and `VK_VIDEO_ENCODE_H264_CAPABILITY_SLICE_MB_COUNT_BIT_EXT`
- Replaced `VK_VIDEO_ENCODE_H264_CAPABILITY_MULTIPLE_SLICES_PER_FRAME_BIT_EXT` with the new `maxSliceCount` capability
- Removed capability flag `VK_VIDEO_ENCODE_H264_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT` and removed `pStdReferenceFinalLists` members from the `VkVideoEncodeH264PictureInfoEXT` and `VkVideoEncodeH264NaluSliceInfoEXT` structures as reference lists info is now included in `pStdPictureInfo`
- Added capability flag `VK_VIDEO_ENCODE_H264_CAPABILITY_BFRAME_IN_L0_LIST_BIT_EXT`

`VK_KHR_video_encode_queue`

- This is a *provisional* extension and must be used with caution. See the description of provisional header files for enablement and stability details.
Description

This extension builds upon the \texttt{VK_KHR_video_encode_queue} extension by adding support for encoding elementary video stream sequences compliant with the H.265/HEVC video compression standard.

New Structures

- \texttt{VkVideoEncodeH265FrameSizeEXT}
- \texttt{VkVideoEncodeH265NaluSliceSegmentInfoEXT}
- \texttt{VkVideoEncodeH265QpEXT}
- Extending \texttt{VkVideoBeginCodingInfoKHR}:
  - \texttt{VkVideoEncodeH265GopRemainingFrameInfoEXT}
- Extending \texttt{VkVideoCapabilitiesKHR}:
  - \texttt{VkVideoEncodeH265CapabilitiesEXT}
- Extending \texttt{VkVideoCodingControlInfoKHR, VkVideoBeginCodingInfoKHR}:
  - \texttt{VkVideoEncodeH265RateControlInfoEXT}
- Extending \texttt{VkVideoEncodeInfoKHR}:
•VkVideoEncodeH265PictureInfoEXT

•ExtendingVkVideoEncodeQualityLevelPropertiesKHR:
  •VkVideoEncodeH265QualityLevelPropertiesEXT

•ExtendingVkVideoEncodeRateControlLayerInfoKHR:
  •VkVideoEncodeH265RateControlLayerInfoEXT

•ExtendingVkVideoEncodeSessionParametersFeedbackInfoKHR:
  •VkVideoEncodeH265SessionParametersFeedbackInfoEXT

•ExtendingVkVideoEncodeSessionParametersGetInfoKHR:
  •VkVideoEncodeH265SessionParametersGetInfoEXT

•ExtendingVkVideoProfileInfoKHR,VkQueryPoolCreateInfo:
  •VkVideoEncodeH265ProfileInfoEXT

•ExtendingVkVideoReferenceSlotInfoKHR:
  •VkVideoEncodeH265DpbSlotInfoEXT

•ExtendingVkVideoSessionCreateInfoKHR:
  •VkVideoEncodeH265SessionCreateInfoEXT

•ExtendingVkVideoSessionParametersCreateInfoKHR:
  •VkVideoEncodeH265SessionParametersCreateInfoEXT

•ExtendingVkVideoSessionParametersUpdateInfoKHR:
  •VkVideoEncodeH265SessionParametersAddInfoEXT

New Enums

•VkVideoEncodeH265CapabilityFlagBitsEXT
•VkVideoEncodeH265CtbSizeFlagBitsEXT
•VkVideoEncodeH265RateControlFlagBitsEXT
•VkVideoEncodeH265StdFlagBitsEXT
•VkVideoEncodeH265TransformBlockSizeFlagBitsEXT

New Bitmasks

•VkVideoEncodeH265CapabilityFlagsEXT
•VkVideoEncodeH265CtbSizeFlagsEXT
•VkVideoEncodeH265RateControlFlagsEXT
•VkVideoEncodeH265StdFlagsEXT
•VkVideoEncodeH265TransformBlockSizeFlagsEXT
New Enum Constants

- VK_EXT_VIDEO_ENCODE_H265_EXTENSION_NAME
- VK_EXT_VIDEO_ENCODE_H265_SPEC_VERSION

Extending VkStructureType:
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_CAPABILITIES_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_DPB_SLOT_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_GOP_REMAINING_FRAME_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_NALU_SLICE_SEGMENT_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PICTURE_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_PROFILE_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_QUALITY_LEVEL_PROPERTIES_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_RATE_CONTROL_LAYER_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_CREATE_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_ADD_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_CREATE_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_FEEDBACK_INFO_EXT
- VK_STRUCTURE_TYPE_VIDEO_ENCODE_H265_SESSION_PARAMETERS_GET_INFO_EXT

Extending VkVideoCodecOperationFlagBitsKHR:
- VK_VIDEO_CODEC_OPERATION_ENCODE_H265_BIT_EXT

Version History

- Revision 0, 2019-11-14 (Ahmed Abdelkhalek)
  - Initial draft
- Revision 0.5, 2020-02-13 (Tony Zlatinski)
  - General Spec cleanup
  - Added DPB structures
  - Change the VCL frame encode structure
  - Added a common Non-VCL Picture Parameters structure
- Revision 2, Oct 10 2021 (Srinath Kumarapuram)
  - Vulkan Video Encode h.265 update and spec edits
- Revision 3, 2021-12-08 (Ahmed Abdelkhalek)
  - Rate control updates
- Revision 4, 2022-01-11 (Ahmed Abdelkhalek)
• Replace occurrences of “slice” by “slice segment” and rename structures/enums to reflect this.

• Revision 5, 2022-02-10 (Ahmed Abdelkhalek)
  ◦ Updates to encode capability interface

• Revision 6, 2022-03-16 (Ahmed Abdelkhalek)
  ◦ Relocate Std header version reporting/requesting from this extension to VK_KHR_video_queue extension.
  ◦ Remove the now empty VkVideoEncodeH265SessionCreateInfoEXT.
VK_VIDEO_ENCODE_H264NALU_SLICE_INFO_EXT to pStdReferenceFinalLists

- Removed the slotIndex member of VkVideoEncodeH265DpbSlotInfoEXT and changed it to be chained to VK_VIDEOREFERENCE_SLOT_INFO_KHR
- Replaced VkVideoEncodeH265ReferenceListsInfoEXT with the new Video Std header structure StdVideoEncodeH265ReferenceLists

- Added the new capability flag VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT

Revision 11, 2023-05-26 (Daniel Rakos)

- Renamed VkVideoEncodeH265VclFrameInfoEXT to VkVideoEncodeH265PictureInfoEXT
- Removed VkVideoEncodeH265RateControlLayerInfoEXT::temporalId
- Added expectDyadicTemporalSubLayerPattern capability
- Added the VkVideoEncodeH265SessionParametersGetInfoEXT structure to identify the H.265 parameter sets to retrieve encoded parameter data for, and the VkVideoEncodeH265SessionParametersFeedbackInfoEXT structure to retrieve H.265 parameter set override information when using the new vkGetEncodedVideoSessionParametersKHR command
- Added VkVideoEncodeH265NaluSliceSegmentInfoEXT::constantQp to specify per-slice segment constant QP when rate control mode is VK_VIDEO_ENCODE_RATE_CONTROL_MODE_DISABLED_BIT_KHR
- Added VkVideoEncodeH265QualityLevelPropertiesEXT for retrieving H.265 specific quality level recommendations
- Replaced VkVideoEncodeH265RateControlStructureEXT enum with the flags type VkVideoEncodeH265RateControlFlagsEXT and bits defined in VkVideoEncodeH265RateControlFlagBitsEXT and added HRD compliance flag
- Removed useInitialRcQp and initialRcQp members of VkVideoEncodeH265RateControlLayerInfoEXT
- Added prefersGopRemainingFrames and requiresGopRemainingFrames, and the new VkVideoEncodeH265GopRemainingFrameInfoEXT structure to allow specifying remaining frames of each type in the rate control GOP
- Renamed maxSubLayersCount capability to maxSubLayerCount
- Added maxQp, and minQp capabilities
- Added maxLevelIdc capability and new VkVideoEncodeH265SessionCreateInfoEXT structure to specify upper bounds on the H.265 level of the produced video bitstream
- Moved capability flags specific to codec syntax restrictions from VkVideoEncodeH265CapabilityFlagsEXT to the new VkVideoEncodeH265StdFlagsEXT which is now included as a separate stdSyntaxFlags member in VkVideoEncodeH265CapabilitiesEXT
- Added std prefix to codec syntax capabilities in VkVideoEncodeH265CapabilitiesEXT
- Removed VkVideoEncodeH265NaluSliceSegmentInfoEXT::ctbCount and VK_VIDEO_ENCODE_H265_CAPABILITY_SLICE_SEGMENT_CTB_COUNT_BIT_EXT
- Replaced VK_VIDEO_ENCODE_H265_CAPABILITY_MULTIPLE_SLICE_SEGMENTS_PER_FRAME_BIT_EXT with the new maxSliceSegmentCount capability
- Added `maxTiles` capability
- Removed codec syntax min/max capabilities from `VkVideoEncodeH265CapabilitiesEXT`
- Removed capability flag `VK_VIDEO_ENCODE_H265_CAPABILITY_DIFFERENT_REFERENCE_FINAL_LISTS_BIT_EXT` and removed `pStdReferenceFinalLists` members from the `VkVideoEncodeH265PictureInfoEXT` and `VkVideoEncodeH265NaluSliceSegmentInfoEXT` structures as reference lists info is now included in `pStdPictureInfo`
- Added capability flag `VK_VIDEO_ENCODE_H265_CAPABILITY_B_FRAME_IN_L0_LIST_BIT_EXT`

Description

Ray tracing can very efficiently render from geometry which has very fine detail, but when using only a basic triangle representation, memory consumption can be an issue. This extension adds the ability to add a displacement map to add more detail to triangles in an acceleration structure with an efficient in-memory format. The format is externally visible to allow the application to compress its internal geometry representations into the compressed format ahead of time. This format adds displacements along a defined vector to subtriangle vertices which are subdivided from the main triangles.

This extension provides:

- a new `VkMicromapTypeEXT` format for the displacement micromap,
- a structure to extend `VkAccelerationStructureGeometryTrianglesDataKHR` to attach a displacement micromap to the geometry of the acceleration structure,
- enums extending `VkBuildAccelerationStructureFlagBitsKHR` to allow for updates.

New Structures

- Extending `VkAccelerationStructureGeometryTrianglesDataKHR`:
  - `VkAccelerationStructureTrianglesDisplacementMicromapNV`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceDisplacementMicromapFeaturesNV`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceDisplacementMicromapPropertiesNV`

New Enums

- `VkDisplacementMicromapFormatNV`

New Enum Constants

- `VK_NV_DISPLACEMENT_MICROMAP_EXTENSION_NAME`
- `VK_NV_DISPLACEMENT_MICROMAP_SPEC_VERSION`
- Extending `VkBuildAccelerationStructureFlagBitsKHR`:
  - `VK_BUILD_ACCELERATION_STRUCTURE_ALLOW_DISPLACEMENT_MICROMAP_UPDATE_NV`
- Extending `VkMicromapTypeEXT`:
  - `VK_MICROMAP_TYPE_DISPLACEMENT_MICROMAP_NV`
- Extending `VkPipelineCreateFlagBits`:
  - `VK_PIPELINE_CREATE_RAY_TRACING_DISPLACEMENT_MICROMAP_BIT_NV`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_ACCELERATION_STRUCTURE_TRIANGLES_DISPLACEMENT_MICROMAP_NV`
Issues

(1) What is the status of this extension?

• Provisional and expected to change. The broad structure and encoding format are stable, but there will likely be changes to the structures, enumerant values, and shader interface.

Version History

• Revision 1, 2023-03-17 (Eric Werness)
  ◦ Initial public revision

• Joerg Wagner, ARM
• Neil Henning, Codeplay
Description

The `VK_KHR_16bit_storage` extension allows use of 16-bit types in shader input and output interfaces, and push constant blocks. This extension introduces several new optional features which map to SPIR-V capabilities and allow access to 16-bit data in Block-decorated objects in the `Uniform` and the `StorageBuffer` storage classes, and objects in the `PushConstant` storage class. This extension allows 16-bit variables to be declared and used as user-defined shader inputs and outputs but does not change location assignment and component assignment rules.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. However, if Vulkan 1.1 is supported and this extension is not, the `storageBuffer16BitAccess` capability is optional. The original type, enum and command names are still available as aliases of the core functionality.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDevice16BitStorageFeaturesKHR`

New Enum Constants

- `VK_KHR_16BIT_STORAGE_EXTENSION_NAME`
- `VK_KHR_16BIT_STORAGE_SPEC_VERSION`

New SPIR-V Capabilities

- `StorageBuffer16BitAccess`
- `UniformAndStorageBuffer16BitAccess`
- `StoragePushConstant16`
- `StorageInputOutput16`

Version History

Description

The VK_KHR_8bit_storage extension allows use of 8-bit types in uniform and storage buffers, and push constant blocks. This extension introduces several new optional features which map to SPIR-V...
capabilities and allow access to 8-bit data in Block-decorated objects in the Uniform and the StorageBuffer storage classes, and objects in the PushConstant storage class.

The StorageBuffer8BitAccess capability must be supported by all implementations of this extension. The other capabilities are optional.

**Promotion to Vulkan 1.2**

Functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the StorageBuffer8BitAccess capability is optional. The original type, enum and command names are still available as aliases of the core functionality.

**New Structures**

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDevice8BitStorageFeaturesKHR

**New Enum Constants**

- VK_KHR_8BIT_STORAGE_EXTENSION_NAME
- VK_KHR_8BIT_STORAGE_SPEC_VERSION

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_8BIT_STORAGE_FEATURES_KHR

**New SPIR-V Capabilities**

- StorageBuffer8BitAccess
- UniformAndStorageBuffer8BitAccess
- StoragePushConstant8

**Version History**

- Revision 1, 2018-02-05 (Alexander Galazin)
  - Initial draft

Description
This extension provides versions of `vkBindBufferMemory` and `vkBindImageMemory` that allow multiple bindings to be performed at once, and are extensible.

This extension also introduces `VK_IMAGE_CREATE_ALIAS_BIT_KHR`, which allows “identical” images that alias the same memory to interpret the contents consistently, even across image layout changes.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Commands
• `vkBindBufferMemory2KHR`
• `vkBindImageMemory2KHR`
New Structures

- VkBindBufferMemoryInfoKHR
- VkBindImageMemoryInfoKHR

New Enum Constants

- VK_KHR_BIND_MEMORY_2_EXTENSION_NAME
- VK_KHR_BIND_MEMORY_2_SPEC_VERSION
- Extending VkImageCreateFlagBits:
  - VK_IMAGE_CREATE_ALIAS_BIT_KHR
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_BIND_BUFFER_MEMORY_INFO_KHR
  - VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_INFO_KHR

Version History

- Revision 1, 2017-05-19 (Tobias Hector)
  - Pulled bind memory functions into their own extension

**Other Extension Metadata**

**Last Modified Date**

2019-06-24

**IP Status**

No known IP claims.

**Interactions and External Dependencies**

- Promoted to Vulkan 1.2 Core
- This extension requires `SPV_KHR_physical_storage_buffer`
- This extension provides API support for `GL_EXT_buffer_reference` and `GL_EXT_buffer_reference2` and `GL_EXT_buffer_reference_uvec2`

**Contributors**

- Jeff Bolz, NVIDIA
- Neil Henning, AMD
- Tobias Hector, AMD
- Faith Ekstrand, Intel
- Baldur Karlsson, Valve
- Jan-Harald Fredriksen, Arm

**Description**

This extension allows the application to query a 64-bit buffer device address value for a buffer, which can be used to access the buffer memory via the `PhysicalStorageBuffer` storage class in the `GL_EXT_buffer_reference` GLSL extension and `SPV_KHR_physical_storage_buffer` SPIR-V extension.

Another way to describe this extension is that it adds “pointers to buffer memory in shaders”. By calling `vkGetBufferDeviceAddress` with a `VkBuffer`, it will return a `VkDeviceAddress` value which represents the address of the start of the buffer.

`vkGetBufferOpaqueCaptureAddress` and `vkGetDeviceMemoryOpaqueCaptureAddress` allow opaque addresses for buffers and memory objects to be queried for the current process. A trace capture and replay tool can then supply these addresses to be used at replay time to match the addresses used when the trace was captured. To enable tools to insert these queries, new memory allocation flags must be specified for memory objects that will be bound to buffers accessed via the `PhysicalStorageBuffer` storage class. Note that this mechanism is intended only to support capture/replay tools, and is not recommended for use in other applications.
There are various use cases this extension is designed for. It is required for ray tracing, useful for DX12 portability, and by allowing buffer addresses to be stored in memory it enables more complex data structures to be created.

This extension can also be used to hardcode a dedicated debug channel into all shaders by querying a pointer at startup and pushing that into shaders as a run-time constant (e.g. specialization constant) that avoids impacting other descriptor limits.

There are examples of usage in the GL_EXT_buffer_reference spec for how to use this in a high-level shading language such as GLSL. The GL_EXT_buffer_reference2 and GL_EXT_buffer_reference_uvec2 extensions were also added to help cover a few additional edge cases.

**Promotion to Vulkan 1.2**

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the bufferDeviceAddress feature is optional. The original type, enum and command names are still available as aliases of the core functionality.

**Promotion to Vulkan 1.3**

Support for the bufferDeviceAddress feature is mandatory in Vulkan 1.3, regardless of whether this extension is supported.

**New Commands**

- vkGetBufferDeviceAddressKHR
- vkGetBufferOpaqueCaptureAddressKHR
- vkGetDeviceMemoryOpaqueCaptureAddressKHR

**New Structures**

- VkBufferDeviceAddressInfoKHR
- VkDeviceMemoryOpaqueCaptureAddressInfoKHR
- Extending VkBufferCreateInfo:
  - VkBufferOpaqueCaptureAddressCreateInfoKHR
- Extending VkMemoryAllocateInfo:
  - VkMemoryOpaqueCaptureAddressAllocateInfoKHR
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceBufferDeviceAddressFeaturesKHR

**New Enum Constants**

- VK_KHR_BUFFER_DEVICE_ADDRESS_EXTENSION_NAME
- VK_KHR_BUFFER_DEVICE_ADDRESS_SPEC_VERSION
• Extending VkBufferCreateFlagBits:
  ◦ VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_KHR

• Extending VkBufferUsageFlagBits:

Description

This extension provides extensible versions of the Vulkan buffer and image copy commands. The new commands are functionally identical to the core commands, except that their copy parameters are specified using extensible structures that can be used to pass extension-specific information.

The following extensible copy commands are introduced with this extension: vkCmdCopyBuffer2KHR, vkCmdCopyImage2KHR, vkCmdCopyBufferToImage2KHR, vkCmdCopyImageToBuffer2KHR, vkCmdBlitImage2KHR, and vkCmdResolveImage2KHR. Each command contains an *Info2KHR structure parameter that includes sType/pNext members. Lower level structures describing each region to be copied are also extended with sType/pNext members.

New Commands

• vkCmdBlitImage2KHR
• vkCmdCopyBuffer2KHR
• vkCmdCopyBufferToImage2KHR
• vkCmdCopyImage2KHR
• vkCmdCopyImageToBuffer2KHR
• `vkCmdResolveImage2KHR`

**New Structures**

• `VkBlitImageInfo2KHR`
• `VkBufferCopy2KHR`
• `VkBufferImageCopy2KHR`
• `VkCopyBufferInfo2KHR`
• `VkCopyBufferToImageInfo2KHR`
• `VkCopyImageInfo2KHR`
• `VkCopyImageToBufferInfo2KHR`
• `VkImageBlit2KHR`
• `VkImageCopy2KHR`
• `VkImageResolve2KHR`
• `VkResolveImageInfo2KHR`

**New Enum Constants**

• `VK_KHR_COPY_COMMANDS_2_EXTENSION_NAME`
• `VK_KHR_COPY_COMMANDS_2_SPEC_VERSION`

Extending `VkStructureType`:

◦ `VK_STRUCTURE_TYPE_BLIT_IMAGE_INFO_2_KHR`
◦ `VK_STRUCTURE_TYPE_BUFFER_COPY_2_KHR`
◦ `VK_STRUCTURE_TYPE_BUFFER_IMAGE_COPY_2_KHR`
◦ `VK_STRUCTURE_TYPE_COPY_BUFFER_INFO_2_KHR`
◦ `VK_STRUCTURE_TYPE_COPY_BUFFER_TO_IMAGE_INFO_2_KHR`
◦ `VK_STRUCTURE_TYPE_COPY_IMAGE_INFO_2_KHR`
◦ `VK_STRUCTURE_TYPE_COPY_IMAGE_TO_BUFFER_INFO_2_KHR`
◦ `VK_STRUCTURE_TYPE_IMAGE_BLIT_2_KHR`
◦ `VK_STRUCTURE_TYPE_IMAGE_COPY_2_KHR`
◦ `VK_STRUCTURE_TYPE_IMAGE_RESOLVE_2_KHR`
◦ `VK_STRUCTURE_TYPE_RESOLVE_IMAGE_INFO_2_KHR`

**Promotion to Vulkan 1.3**

Functionality in this extension is included in core Vulkan 1.3, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Description

This extension provides a new entry point to create render passes in a way that can be easily
extended by other extensions through the substructures of render pass creation. The Vulkan 1.0 render pass creation sub-structures do not include sType/pNext members. Additionally, the render pass begin/next/end commands have been augmented with new extensible structures for passing additional subpass information.

The VkRenderPassMultiviewCreateInfo and VkInputAttachmentAspectReference structures that extended the original VkRenderPassCreateInfo are not accepted into the new creation functions, and instead their parameters are folded into this extension as follows:

- Elements of VkRenderPassMultiviewCreateInfo::pViewMasks are now specified in VkSubpassDescription2KHR::viewMask.
- Elements of VkRenderPassMultiviewCreateInfo::pViewOffsets are now specified in VkSubpassDependency2KHR::viewOffset.
- VkRenderPassMultiviewCreateInfo::correlationMaskCount and VkRenderPassMultiviewCreateInfo::pCorrelationMasks are directly specified in VkRenderPassCreateInfo2KHR.
- VkInputAttachmentAspectReference::aspectMask is now specified in the relevant input attachment reference in VkAttachmentReference2KHR::aspectMask.

The details of these mappings are explained fully in the new structures.

Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Commands

- vkCmdBeginRenderPass2KHR
- vkCmdEndRenderPass2KHR
- vkCmdNextSubpass2KHR
- vkCreateRenderPass2KHR

New Structures

- VkAttachmentDescription2KHR
- VkAttachmentReference2KHR
- VkRenderPassCreateInfo2KHR
- VkSubpassBeginInfoKHR
- VkSubpassDependency2KHR
- VkSubpassDescription2KHR
- VkSubpassEndInfoKHR
New Enum Constants

Interactions and External Dependencies
- Promoted to Vulkan 1.1 Core

Contributors
- Jeff Bolz, NVIDIA
- Faith Ekstrand, Intel

Description
This extension enables resources to be bound to a dedicated allocation, rather than suballocated. For any particular resource, applications can query whether a dedicated allocation is recommended, in which case using a dedicated allocation may improve the performance of access to that resource. Normal device memory allocations must support multiple resources per allocation, memory aliasing and sparse binding, which could interfere with some optimizations. Applications should query the implementation for when a dedicated allocation may be beneficial by adding a VkMemoryDedicatedRequirementsKHR structure to the pNext chain of the VkMemoryRequirements2 structure passed as the pMemoryRequirements parameter of a call to vkGetBufferMemoryRequirements2 or vkGetImageMemoryRequirements2. Certain external handle types and external images or buffers may also depend on dedicated allocations on implementations that associate image or buffer metadata with OS-level memory objects.

This extension adds a two small structures to memory requirements querying and memory allocation: a new structure that flags whether an image/buffer should have a dedicated allocation, and a structure indicating the image or buffer that an allocation will be bound to.

Promotion to Vulkan 1.1
All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Structures
- Extending VkMemoryAllocateInfo:
  - VkMemoryDedicatedAllocateInfoKHR
- Extending VkMemoryRequirements2:
  - VkMemoryDedicatedRequirementsKHR
New Enum Constants

- VK_KHR_DEDICATED_ALLOCATION_EXTENSION_NAME
- VK_KHR_DEDICATED_ALLOCATION_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO_KHR
  - VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS_KHR

Examples

```c
// Create an image with a dedicated allocation based on the
// implementation's preference

VkImageCreateInfo imageCreateInfo =
{
    // Image creation parameters
};

VkImage image;
VkResult result = vkCreateImage(
    device,
    &imageCreateInfo,
    NULL,          // pAllocator
    &image);

VkMemoryDedicatedRequirementsKHR dedicatedRequirements =
{
    VK_STRUCTURE_TYPE_MEMORY_DEDICATED_REQUIREMENTS_KHR,
    NULL,       // pNext
};

VkMemoryRequirements2 memoryRequirements =
{
    VK_STRUCTURE_TYPE_MEMORY_REQUIREMENTS_2,
    &dedicatedRequirements, // pNext
};

const VkImageMemoryRequirementsInfo2 imageRequirementsInfo =
{
    VK_STRUCTURE_TYPE_IMAGE_MEMORY_REQUIREMENTS_INFO_2,
    NULL,     // pNext
    image
};

vkGetImageMemoryRequirements2(
    device,
    &imageRequirementsInfo,
    &memoryRequirements);
```
if (dedicatedRequirements.prefersDedicatedAllocation) {
    // Allocate memory with VkMemoryDedicatedAllocateInfoKHR::image
    // pointing to the image we are allocating the memory for

    VkMemoryDedicatedAllocateInfoKHR dedicatedInfo =
    {
        VK_STRUCTURE_TYPE_MEMORY_DEDICATED_ALLOCATE_INFO_KHR,   // sType
        NULL,                                                      // pNext
        image,                                                    // image
        VK_NULL_HANDLE,                                           // buffer
    };

    VkMemoryAllocateInfo memoryAllocateInfo =
    {
        VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO,   // sType
        &dedicatedInfo,                           // pNext
        memoryRequirements.size,                 // allocationSize
        FindMemoryTypeIndex(memoryRequirements.memoryTypeBits), // memoryTypeIndex
    };

    VkDeviceMemory memory;
    vkAllocateMemory(
        device,
        &memoryAllocateInfo,
        NULL,                                     // pAllocator
        &memory);

    // Bind the image to the memory

    vkBindImageMemory(
        device,
        image,
        memory,
        0);
} else {
    // Take the normal memory sub-allocation path
}

Version History

• Revision 1, 2017-02-27 (James Jones)
  ◦ Copy content from VK_NV_dedicated_allocation
  ◦ Add some references to external object interactions to the overview.
• Revision 2, 2017-03-27 (Faith Ekstrand)
  ◦ Rework the extension to be query-based
• Revision 3, 2017-07-31 (Faith Ekstrand)
Clarify that memory objects allocated with VkMemoryDedicatedAllocateInfoKHR can only have the specified resource bound and no others.

**Description**

This extension adds support for automatically resolving multisampled depth/stencil attachments in
a subpass in a similar manner as for color attachments.

Multisampled color attachments can be resolved at the end of a subpass by specifying pResolveAttachments entries corresponding to the pColorAttachments array entries. This does not allow for a way to map the resolve attachments to the depth/stencil attachment. The vkCmdResolveImage command does not allow for depth/stencil images. While there are other ways to resolve the depth/stencil attachment, they can give sub-optimal performance. Extending the VkSubpassDescription2 in this extension allows an application to add a pDepthStencilResolveAttachment, that is similar to the color pResolveAttachments, that the pDepthStencilAttachment can be resolved into.

Depth and stencil samples are resolved to a single value based on the resolve mode. The set of possible resolve modes is defined in the VkResolveModeFlagBits enum. The VK_RESOLVE_MODE_SAMPLE_ZERO_BIT mode is the only mode that is required of all implementations (that support the extension or support Vulkan 1.2 or higher). Some implementations may also support averaging (the same as color sample resolve) or taking the minimum or maximum sample, which may be more suitable for depth/stencil resolve.

**Promotion to Vulkan 1.2**

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Interactions and External Dependencies
  • Interacts with VK_KHR_push_descriptor
  • Promoted to Vulkan 1.1 Core
Contributors

- Jeff Bolz, NVIDIA
- Michael Worcester, Imagination Technologies

Description

Applications may wish to update a fixed set of descriptors in a large number of descriptor sets very frequently, i.e. during initialization phase or if it is required to rebuild descriptor sets for each frame. For those cases it is also not unlikely that all information required to update a single descriptor set is stored in a single struct. This extension provides a way to update a fixed set of descriptors in a single VkDescriptorSet with a pointer to a user defined data structure describing the new descriptors.

Promotion to Vulkan 1.1

vkCmdPushDescriptorSetWithTemplateKHR is included as an interaction with VK_KHR_push_descriptor. If Vulkan 1.1 and VK_KHR_push_descriptor are supported, this is included by VK_KHR_push_descriptor.

The base functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Object Types

- VkDescriptorUpdateTemplateKHR

New Commands

- vkCreateDescriptorUpdateTemplateKHR
- vkDestroyDescriptorUpdateTemplateKHR
- vkUpdateDescriptorSetWithTemplateKHR

If VK_KHR_push_descriptor is supported:

- vkCmdPushDescriptorSetWithTemplateKHR

Interactions and External Dependencies
• This extension requires SPV_KHR_device_group
• Promoted to Vulkan 1.1 Core

Contributors
• Jeff Bolz, NVIDIA
• Tobias Hector, Imagination Technologies

Description
This extension provides functionality to use a logical device that consists of multiple physical devices, as created with the VK_KHR_device_group_creation extension. A device group can allocate memory across the subdevices, bind memory from one subdevice to a resource on another subdevice, record command buffers where some work executes on an arbitrary subset of the subdevices, and potentially present a swapchain image from one or more subdevices.

Promotion to Vulkan 1.1

The following enums, types and commands are included as interactions with VK_KHR_swapchain:

• VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_CAPABILITIES_KHR
• VK_STRUCTURE_TYPE_IMAGE_SWAPCHAIN_CREATE_INFO_KHR
• VK_STRUCTURE_TYPE_BIND_IMAGE_MEMORY_SWAPCHAIN_INFO_KHR
• VK_STRUCTURE_TYPE_ACQUIRE_NEXT_IMAGE_INFO_KHR
• VK_STRUCTURE_TYPE_DEVICE_GROUP_PRESENT_INFO_KHR
• VK_STRUCTURE_TYPE_DEVICE_GROUP_SWAPCHAIN_CREATE_INFO_KHR

4464
VK_SWAPCHAIN_CREATE_SPLIT_INSTANCE_BIND_REGIONS_BIT_KHR

VkDeviceGroupPresentModeFlagBitsKHR

VkDeviceGroupPresentCapabilitiesKHR

VkImageSwapchainCreateInfoKHR

VkBindImageMemorySwapchainInfoKHR

VkAcquireNextImageInfoKHR

VkDeviceGroupPresentInfoKHR

VkDeviceGroupSwapchainCreateInfoKHR

vkGetDeviceGroupPresentCapabilitiesKHR

vkGetDeviceGroupSurfacePresentModesKHR

vkGetPhysicalDevicePresentRectanglesKHR

vkAcquireNextImage2KHR

If Vulkan 1.1 and VK_KHR_swapchain are supported, these are included by VK_KHR_swapchain.

The base functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

**New Commands**

- `vkCmdDispatchBaseKHR`
- `vkCmdSetDeviceMaskKHR`
- `vkGetDeviceGroupPeerMemoryFeaturesKHR`

If VK_KHR_surface is supported:

- `vkGetDeviceGroupPresentCapabilitiesKHR`
- `vkGetDeviceGroupSurfacePresentModesKHR`
- `vkGetPhysicalDevicePresentRectanglesKHR`

If VK_KHR_swapchain is supported:

- `vkAcquireNextImage2KHR`

**New Structures**

- Extending `VkBindSparseInfo`:
  - `VkDeviceGroupBindSparseInfoKHR`

- Extending `VkCommandBufferBeginInfo`:
  - `VkDeviceGroupCommandBufferBeginInfoKHR`

- Extending `VkMemoryAllocateInfo`:
  - `VkMemoryAllocateFlagsInfoKHR`
• Extending `VkRenderPassBeginInfo`, `VkRenderingInfo`:
  ◦ `VkDeviceGroupRenderPassBeginInfoKHR`

• Extending `VkSubmitInfo`:
  ◦ `VkDeviceGroupSubmitInfoKHR`

If `VK_KHR_bind_memory2` is supported:

• Extending `VkBindBufferMemoryInfo`:
  ◦ `VkBindBufferMemoryDeviceGroupInfoKHR`

• Extending `VkBindImageMemoryInfo`:
  ◦ `VkBindImageMemoryDeviceGroupInfoKHR`

If `VK_KHR_surface` is supported:

• `VkDeviceGroupPresentCapabilitiesKHR`

If `VK_KHR_swapchain` is supported:

• `VkAcquireNextImageInfoKHR`

• Extending `VkBindImageMemoryInfo`:
  ◦ `VkBindImageMemorySwapchainInfoKHR`

• Extending `VkImageCreateInfo`:
  ◦ `VkImageSwapchainCreateInfoKHR`

• Extending `VkPresentInfoKHR`:
  ◦ `VkDeviceGroupPresentInfoKHR`

• Extending `VkSwapchainCreateInfoKHR`:
  ◦ `VkDeviceGroupSwapchainCreateInfoKHR`

**New Enums**

• `VkMemoryAllocateFlagBitsKHR`

• `VkPeerMemoryFeatureFlagBitsKHR`

If `VK_KHR_surface` is supported:

• `VkDeviceGroupPresentModeFlagBitsKHR`

**New Bitmasks**

• `VkMemoryAllocateFlagsKHR`

• `VkPeerMemoryFeatureFlagsKHR`

If `VK_KHR_surface` is supported:
New Enum Constants

- `VK_KHR_DEVICE_GROUP_EXTENSION_NAME`
- `VK_KHR_DEVICE_GROUP_SPEC_VERSION`

Extending `VkDependencyFlagBits`:
- `VK_DEPENDENCY_DEVICE_GROUP_BIT_KHR`

Extending `VkMemoryAllocateFlagBits`:
- `VK_MEMORY_ALLOCATE_DEVICE_MASK_BIT_KHR`

Extending `VkPeerMemoryFeatureFlagBits`:

Description
This extension provides instance-level commands to enumerate groups of physical devices, and to create a logical device from a subset of one of those groups. Such a logical device can then be used with new features in the VK_KHR_device_group extension.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Commands
  • vkEnumeratePhysicalDeviceGroupsKHR

New Structures
  • VkPhysicalDeviceGroupPropertiesKHR
  • Extending VkDeviceCreateInfo:
    ◦ VkDeviceGroupDeviceCreateInfoKHR

New Enum Constants
  • VK_KHR_DEVICE_GROUP_CREATION_EXTENSION_NAME
• **VK_KHRDEVICEGROUPCREATIONSPECVERSION**
• **VK_MAXDEVICEGROUPSIZE_KHR**

**Extending VkMemoryHeapFlagBits:**
  ◦ **VK_MEMORY_HEAP_MULTI_INSTANCE_BIT_KHR**

**Extending VkStructureType:**
  ◦ **VK_STRUCTURETYPEDEVICEGROUPDEVICECREATEINFO_KHR**
  ◦ **VK_STRUCTURETYPEPHYSICALDEVICEGROUPPROPERTIES_KHR**

**Examples**

```c
VkDeviceCreateInfo devCreateInfo = { VK_STRUCTURE_TYPE_DEVICE_CREATE_INFO }; // (not shown) fill out devCreateInfo as usual.
uint32_t deviceGroupCount = 0;
VkPhysicalDeviceGroupPropertiesKHR *props = NULL;

// Query the number of device groups
vkEnumeratePhysicalDeviceGroupsKHR(g_vkInstance, &deviceGroupCount, NULL);

// Allocate and initialize structures to query the device groups
props = (VkPhysicalDeviceGroupPropertiesKHR *)malloc(deviceGroupCount*sizeof(VkPhysicalDeviceGroupPropertiesKHR));
for (i = 0; i < deviceGroupCount; ++i) {
    props[i].sType = VK_STRUCTURETYPEPHYSICALDEVICEGROUPPROPERTIES_KHR;
    props[i].pNext = NULL;
}
vkEnumeratePhysicalDeviceGroupsKHR(g_vkInstance, &deviceGroupCount, props);

// If the first device group has more than one physical device, create
// a logical device using all of the physical devices.
VkDeviceGroupDeviceCreateInfoKHR deviceGroupInfo = {
    VK_STRUCTURETYPEDEVICEGROUPDEVICECREATEINFO_KHR
};
if (props[0].physicalDeviceCount > 1) {
    deviceGroupInfo.physicalDeviceCount = props[0].physicalDeviceCount;
    deviceGroupInfo.pPhysicalDevices = props[0].pPhysicalDevices;
    devCreateInfo.pNext = &deviceGroupInfo;
}

vkCreateDevice(props[0].pPhysicalDevices[0], &devCreateInfo, NULL, &g_vkDevice);
free(props);
```

Description
This extension is based off the VK_AMD_draw_indirect_count extension. This extension allows an application to source the number of draws for indirect drawing calls from a buffer.
Applications might want to do culling on the GPU via a compute shader prior to drawing. This enables the application to generate an arbitrary number of drawing commands and execute them without host intervention.

**Promotion to Vulkan 1.2**

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the entry points `vkCmdDrawIndirectCount` and `vkCmdDrawIndexedIndirectCount` are optional. The original type, enum and command names are still available as aliases of the core functionality.

**New Commands**

- `vkCmdDrawIndexedIndirectCountKHR`
- `vkCmdDrawIndirectCountKHR`

Description
This extension allows applications to create single-pass render pass instances without needing to create render pass objects or framebuffers. Dynamic render passes can also span across multiple
primary command buffers, rather than relying on secondary command buffers.

This extension also incorporates \texttt{VK_ATTACHMENT_STORE_OP_NONE_KHR} from \texttt{VK_QCOM_render_pass_store_ops}, enabling applications to avoid unnecessary synchronization when an attachment is not written during a render pass.

**New Commands**
- \texttt{vkCmdBeginRenderingKHR}
- \texttt{vkCmdEndRenderingKHR}

**New Structures**
- \texttt{VkRenderingAttachmentInfoKHR}
- \texttt{VkRenderingInfoKHR}
- Extending \texttt{VkCommandBufferInheritanceInfo}:
  - \texttt{VkCommandBufferInheritanceRenderingInfoKHR}
- Extending \texttt{VkGraphicsPipelineCreateInfo}:
  - \texttt{VkPipelineRenderingCreateInfoKHR}
- Extending \texttt{VkPhysicalDeviceFeatures2}, \texttt{VkDeviceCreateInfo}:
  - \texttt{VkPhysicalDeviceDynamicRenderingFeaturesKHR}

If \texttt{VK_AMD_mixed_attachment_samples} is supported:
- Extending \texttt{VkCommandBufferInheritanceInfo}, \texttt{VkGraphicsPipelineCreateInfo}:
  - \texttt{VkAttachmentSampleCountInfoAMD}

If \texttt{VK_EXT_fragment_density_map} is supported:
- Extending \texttt{VkRenderingInfo}:
  - \texttt{VkRenderingFragmentDensityMapAttachmentInfoEXT}

If \texttt{VK_KHR_fragment_shading_rate} is supported:
- Extending \texttt{VkRenderingInfo}:
  - \texttt{VkRenderingFragmentShadingRateAttachmentInfoKHR}

If \texttt{VK_NV_framebuffer_mixed_samples} is supported:
- Extending \texttt{VkCommandBufferInheritanceInfo}, \texttt{VkGraphicsPipelineCreateInfo}:
  - \texttt{VkAttachmentSampleCountInfoNV}

If \texttt{VK_NVX_multiview_per_view_attributes} is supported:
- Extending \texttt{VkCommandBufferInheritanceInfo}, \texttt{VkGraphicsPipelineCreateInfo}, \texttt{VkRenderingInfo}:
  - \texttt{VkMultiviewPerViewAttributesInfoNVX}
New Enums

- VkRenderingFlagBitsKHR

New Bitmasks

- VkRenderingFlagsKHR

New Enum Constants

- VK_KHR_DYNAMIC_RENDERING_EXTENSION_NAME
- VK_KHR_DYNAMIC_RENDERING_SPEC_VERSION

Extending VkAttachmentStoreOp:
- VK_ATTACHMENT_STORE_OP_NONE_KHR

Extending VkStructureType:
- VK_STRUCTURE_TYPE_COMMAND_BUFFER_INHERITANCE_RENDERING_INFO_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DYNAMIC_RENDERING_FEATURES_KHR
- VK_STRUCTURE_TYPE_PIPELINE_RENDERING_CREATE_INFO_KHR
- VK_STRUCTURE_TYPE_RENDERING_ATTACHMENT_INFO_KHR
- VK_STRUCTURE_TYPE_RENDERING_INFO_KHR

If VK_AMD_mixed_attachment_samples is supported:

Extending VkStructureType:
- VK_STRUCTURE_TYPE_ATTACHMENT_SAMPLE_COUNT_INFO_AMD

If VK_EXT_fragment_density_map is supported:

Extending VkPipelineCreateFlagBits:
- VK_PIPELINE_CREATE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT
- VK_PIPELINE_RASTERIZATION_STATE_CREATE_FRAGMENT_DENSITY_MAP_ATTACHMENT_BIT_EXT

Extending VkStructureType:
- VK_STRUCTURE_TYPE_RENDERING_FRAGMENT_DENSITY_MAP_ATTACHMENT_INFO_EXT

If VK_KHR_fragment_shading_rate is supported:

Extending VkPipelineCreateFlagBits:
- VK_PIPELINE_CREATE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR
- VK_PIPELINE_RASTERIZATION_STATE_CREATE_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

Extending VkStructureType:
- VK_STRUCTURE_TYPE_RENDERING_FRAGMENT_SHADING_RATE_ATTACHMENT_INFO_KHR

If VK_NV_framebuffer_mixed_samples is supported:
• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_ATTACHMENT_SAMPLE_COUNT_INFO_NV`

If `VK_NVX_multiview_per_view_attributes` is supported:

• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_MULTIVIEW_PER_VIEW_ATTRIBUTES_INFO_NVX`

**Promotion to Vulkan 1.3**

Description

An application may wish to reference device fences in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension provides a set of capability queries and handle definitions that allow an application to determine what types of “external” fence handles an implementation supports for a given set of use cases.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Commands

- `vkGetPhysicalDeviceExternalFencePropertiesKHR`

New Structures

- `VkExternalFencePropertiesKHR`
- `VkPhysicalDeviceExternalFenceInfoKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceIDPropertiesKHR`

New Enums

- `VkExternalFenceFeatureFlagBitsKHR`
- `VkExternalFenceHandleTypeFlagBitsKHR`

New Bitmasks

- `VkExternalFenceFeatureFlagsKHR`
- `VkExternalFenceHandleTypeFlagsKHR`

New Enum Constants

- `VK_KHR_EXTERNAL_FENCE_CAPABILITIES_EXTENSION_NAME`
- `VK_KHR_EXTERNAL_FENCE_CAPABILITIES_SPEC_VERSION`
- `VK_LUID_SIZE_KHR`
- Extending `VkExternalFenceFeatureFlagBits`:
- **VK_EXTERNAL_FENCE_FEATURE_EXPORTABLE_BIT_KHR**
- **VK_EXTERNAL_FENCE_FEATURE_IMPORTABLE_BIT_KHR**

- Extending **VkExternalFenceHandleTypeFlagBits**:
  - **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_FD_BIT_KHR**
  - **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_BIT_KHR**
  - **VK_EXTERNAL_FENCE_HANDLE_TYPE_OPAQUE_WIN32_KMT_BIT_KHR**
  - **VK_EXTERNAL_FENCE_HANDLE_TYPE_SYNC_FD_BIT_KHR**

- Extending **VkStructureType**:
  - **VK_STRUCTURE_TYPE_EXTERNAL_FENCE_PROPERTIES_KHR**
  - **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_FENCE_INFO_KHR**
  - **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ID_PROPERTIES_KHR**

Description
An application may wish to reference device memory in multiple Vulkan logical devices or instances, in multiple processes, and/or in multiple APIs. This extension enables an application to export non-Vulkan handles from Vulkan memory objects such that the underlying resources can be referenced outside the scope of the Vulkan logical device that created them.

Promotion to Vulkan 1.1
All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Structures
- Extending VkBufferCreateInfo:
  - VkExternalMemoryBufferCreateInfoKHR
- Extending VkImageCreateInfo:
- **VkExternalMemoryImageCreateInfoKHR**
- **Extending VkMemoryAllocateInfo:**
  - **VkExportMemoryAllocateInfoKHR**

**New Enum Constants**

- **VK_KHR_EXTERNAL_MEMORY_EXTENSION_NAME**
- **VK_KHR_EXTERNAL_MEMORY_SPEC_VERSION**
- **VK_QUEUE_FAMILY_EXTERNAL_KHR**

**Extending VkResult:**

- **VK_ERROR_INVALID_EXTERNAL_HANDLE_KHR**

**Extending VkStructureType:**

- **VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO_KHR**
- **VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_BUFFER_CREATE_INFO_KHR**
- **VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO_KHR**

**Issues**

1) How do applications correlate two physical devices across process or Vulkan instance boundaries?

**RESOLVED:** New device ID fields have been introduced by **VK_KHR_external_memory_capabilities**. These fields, combined with the existing **VkPhysicalDeviceProperties::driverVersion** field can be used to identify compatible devices across processes, drivers, and APIs. **VkPhysicalDeviceProperties::pipelineCacheUUID** is not sufficient for this purpose because despite its description in the specification, it need only identify a unique pipeline cache format in practice. Multiple devices may be able to use the same pipeline cache data, and hence it would be desirable for all of them to have the same pipeline cache UUID. However, only the same concrete physical device can be used when sharing memory, so an actual unique device ID was introduced. Further, the pipeline cache UUID was specific to Vulkan, but correlation with other, non-extensible APIs is required to enable interoperation with those APIs.

2) If memory objects are shared between processes and APIs, is this considered aliasing according to the rules outlined in the **Memory Aliasing** section?

**RESOLVED:** Yes. Applications must take care to obey all restrictions imposed on aliased resources when using memory across multiple Vulkan instances or other APIs.

3) Are new image layouts or metadata required to specify image layouts and layout transitions compatible with non-Vulkan APIs, or with other instances of the same Vulkan driver?

**RESOLVED:** Separate instances of the same Vulkan driver running on the same GPU should have identical internal layout semantics, so applications have the tools they need to ensure views of images are consistent between the two instances. Other APIs will fall into two categories: Those that are Vulkan-compatible, and those that are Vulkan-incompatible. Vulkan-incompatible APIs will
require the image to be in the GENERAL layout whenever they are accessing them.

Note this does not attempt to address cross-device transitions, nor transitions to engines on the same device which are not visible within the Vulkan API. Both of these are beyond the scope of this extension.

4) Is a new barrier flag or operation of some type needed to prepare external memory for handoff to another Vulkan instance or API and/or receive it from another instance or API?

RESOLVED: Yes. Some implementations need to perform additional cache management when transitioning memory between address spaces and other APIs, instances, or processes which may operate in a separate address space. Options for defining this transition include:

- A new structure that can be added to the pNext list in VkMemoryBarrier, VkBufferMemoryBarrier, and VkImageMemoryBarrier.
- A new bit in VkAccessFlags that can be set to indicate an “external” access.
- A new bit in VkDependencyFlags
- A new special queue family that represents an “external” queue.

A new structure has the advantage that the type of external transition can be described in as much detail as necessary. However, there is not currently a known need for anything beyond differentiating between external and internal accesses, so this is likely an over-engineered solution. The access flag bit has the advantage that it can be applied at buffer, image, or global granularity, and semantically it maps pretty well to the operation being described. Additionally, the API already includes VK_ACCESS_MEMORY_READ_BIT and VK_ACCESS_MEMORY_WRITE_BIT which appear to be intended for this purpose. However, there is no obvious pipeline stage that would correspond to an external access, and therefore no clear way to use VK_ACCESS_MEMORY_READ_BIT or VK_ACCESS_MEMORY_WRITE_BIT. VkDependencyFlags and VkPipelineStageFlags operate at command granularity rather than image or buffer granularity, which would make an entire pipeline barrier an internal → external or external → internal barrier. This may not be a problem in practice, but seems like the wrong scope. Another downside of VkDependencyFlags is that it lacks inherent directionality: there are no src and dst variants of it in the barrier or dependency description semantics, so two bits might need to be added to describe both internal → external and external → internal transitions. Transitioning a resource to a special queue family corresponds well with the operation of transitioning to a separate Vulkan instance, in that both operations ideally include scheduling a barrier on both sides of the transition: Both the releasing and the acquiring queue or process. Using a special queue family requires adding an additional reserved queue family index. Re-using VK_QUEUE_FAMILY_IGNORED would have left it unclear how to transition a concurrent usage resource from one process to another, since the semantics would have likely been equivalent to the currently-ignored transition of VK_QUEUE_FAMILY_IGNORED → VK_QUEUE_FAMILY_IGNORED. Fortunately, creating a new reserved queue family index is not invasive.

Based on the above analysis, the approach of transitioning to a special “external” queue family was chosen.

5) Do internal driver memory arrangements and/or other internal driver image properties need to be exported and imported when sharing images across processes or APIs.
6) Most prior interoperation and cross-process sharing APIs have been based on image-level sharing. Should Vulkan sharing be based on memory-object sharing or image sharing?

**RESOLVED:** These extensions have assumed memory-level sharing is the correct granularity. Vulkan is a lower-level API than most prior APIs, and as such attempts to closely align with the underlying primitives of the hardware and system-level drivers it abstracts. In general, the resource that holds the backing store for both images and buffers of various types is memory. Images and buffers are merely metadata containing brief descriptions of the layout of bits within that memory.

Because memory object-based sharing is aligned with the overall Vulkan API design, it enables the full range of Vulkan capabilities with external objects. External memory can be used as backing for sparse images, for example, whereas such usage would be awkward at best with a sharing mechanism based on higher-level primitives such as images. Further, aligning the mechanism with the API in this way provides some hope of trivial compatibility with future API enhancements. If new objects backed by memory objects are added to the API, they too can be used across processes with minimal additions to the base external memory APIs.

Earlier APIs implemented interop at a higher level, and this necessitated entirely separate sharing APIs for images and buffers. To co-exist and interoperate with those APIs, the Vulkan external sharing mechanism must accommodate their model. However, if it can be agreed that memory-based sharing is the more desirable and forward-looking design, legacy interoperation constraints can be considered another reason to favor memory-based sharing: while native and legacy driver primitives that may be used to implement sharing may not be as low-level as the API here suggests, raw memory is still the least common denominator among the types. Image-based sharing can be cleanly derived from a set of base memory-object sharing APIs with minimal effort, whereas image-based sharing does not generalize well to buffer or raw-memory sharing. Therefore, following the general Vulkan design principle of minimalism, it is better to expose interoperability with image-based native and external primitives via the memory sharing API, and place sufficient limits on their usage to ensure they can be used only as backing for equivalent Vulkan images. This provides a consistent API for applications regardless of which platform or external API they are targeting, which makes development of multi-API and multi-platform applications simpler.

7) Should Vulkan define a common external handle type and provide Vulkan functions to facilitate cross-process sharing of such handles rather than relying on native handles to define the external objects?

**RESOLVED:** No. Cross-process sharing of resources is best left to native platforms. There are myriad security and extensibility issues with such a mechanism, and attempting to re-solve all those issues within Vulkan does not align with Vulkan’s purpose as a graphics API. If desired, such a mechanism could be built as a layer or helper library on top of the opaque native handle defined in this family of extensions.
8) Must implementations provide additional guarantees about state implicitly included in memory objects for those memory objects that may be exported?

**RESOLVED:** Implementations must ensure that sharing memory objects does not transfer any information between the exporting and importing instances and APIs other than that required to share the data contained in the memory objects explicitly shared. As specific examples, data from previously freed memory objects that used the same underlying physical memory, and data from memory objects using adjacent physical memory must not be visible to applications importing an exported memory object.

9) Must implementations validate external handles the application provides as inputs to memory import operations?

**RESOLVED:** Implementations must return an error to the application if the provided memory handle cannot be used to complete the requested import operation. However, implementations need not validate handles are of the exact type specified by the application.

- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_BUFFER_INFO_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTERNAL_IMAGE_FORMAT_INFO_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ID_PROPERTIES_KHR

Issues

1) Why do so many external memory capabilities need to be queried on a per-memory-handle-type basis?
PROPOSED RESOLUTION: This is because some handle types are based on OS-native objects that have far more limited capabilities than the very generic Vulkan memory objects. Not all memory handle types can name memory objects that support 3D images, for example. Some handle types cannot even support the deferred image and memory binding behavior of Vulkan and require specifying the image when allocating or importing the memory object.

2) Do the VkExternalImageFormatPropertiesKHR and VkExternalBufferPropertiesKHR structs need to include a list of memory type bits that support the given handle type?

PROPOSED RESOLUTION: No. The memory types that do not support the handle types will simply be filtered out of the results returned by vkGetImageMemoryRequirements and vkGetBufferMemoryRequirements when a set of handle types was specified at image or buffer creation time.

3) Should the non-opaque handle types be moved to their own extension?

PROPOSED RESOLUTION: Perhaps. However, defining the handle type bits does very little and does not require any platform-specific types on its own, and it is easier to maintain the bitfield values in a single extension for now. Presumably more handle types could be added by separate extensions though, and it would be midly weird to have some platform-specific ones defined in the core spec and some in extensions.

4) Do we need a D3D11_TILEPOOL type?

PROPOSED RESOLUTION: No. This is technically possible, but the synchronization is awkward. D3D11 surfaces must be synchronized using shared mutexes, and these synchronization primitives are shared by the entire memory object, so D3D11 shared allocations divided among multiple buffer and image bindings may be difficult to synchronize.

5) Should the Windows 7-compatible handle types be named “KMT” handles or “GLOBAL_SHARE” handles?

PROPOSED RESOLUTION: KMT, simply because it is more concise.

6) How do applications identify compatible devices and drivers across instance, process, and API boundaries when sharing memory?

PROPOSED RESOLUTION: New device properties are exposed that allow applications to correctly correlate devices and drivers. A device and driver UUID that must both match to ensure sharing compatibility between two Vulkan instances, or a Vulkan instance and an extensible external API are added. To allow correlating with Direct3D devices, a device LUID is added that corresponds to a DXGI adapter LUID. A driver ID is not needed for Direct3D because mismatched driver component versions are not currently supported on the Windows OS. Should support for such configurations be introduced at the OS level, further Vulkan extensions would be needed to correlate userspace component builds.

**Description**

An application using external memory may wish to synchronize access to that memory using semaphores. This extension enables an application to create semaphores from which non-Vulkan handles that reference the underlying synchronization primitive can be exported.

**Promotion to Vulkan 1.1**

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

**New Structures**

- Extending `VkSemaphoreCreateInfo`:
  - `VkExportSemaphoreCreateInfoKHR`

**New Enums**

- `VkSemaphoreImportFlagBitsKHR`

**New Bitmasks**

- `VkSemaphoreImportFlagsKHR`

**New Enum Constants**

- `VK_KHR_EXTERNAL_SEMAPHORE_EXTENSION_NAME`
- `VK_KHR_EXTERNAL_SEMAPHORE_SPEC_VERSION`
- Extending `VkSemaphoreImportFlagBits`:
  - `VK_SEMAPHORE_IMPORT_TEMPORARY_BIT_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_EXPORT_SEMAPHORE_CREATE_INFO_KHR`

**Issues**

1) Should there be restrictions on what side effects can occur when waiting on imported semaphores that are in an invalid state?

**RESOLVED:** Yes. Normally, validating such state would be the responsibility of the application, and the implementation would be free to enter an undefined state if valid usage rules were violated. However, this could cause security concerns when using imported semaphores, as it would require the importing application to trust the exporting application to ensure the state is valid. Requiring this level of trust is undesirable for many potential use cases.

2) Must implementations validate external handles the application provides as input to semaphore state import operations?
RESOLVED: Implementations must return an error to the application if the provided semaphore state handle cannot be used to complete the requested import operation. However, implementations need not validate handles are of the exact type specified by the application.

Description

An application may wish to reference device semaphores in multiple Vulkan logical devices or
instances, in multiple processes, and/or in multiple APIs. This extension provides a set of capability
queries and handle definitions that allow an application to determine what types of “external”
semaphore handles an implementation supports for a given set of use cases.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The
original type, enum and command names are still available as aliases of the core functionality.

Description
This extension adds a new VkFormatFeatureFlagBits2KHR 64bits format feature flag type to extend the existing VkFormatFeatureFlagBits which is limited to 31 flags. At the time of this writing 29 bits of VkFormatFeatureFlagBits are already used.

Because VkFormatProperties2 is already defined to extend the Vulkan 1.0 vkGetPhysicalDeviceFormatProperties entry point, this extension defines a new VkFormatProperties3KHR to extend the VkFormatProperties.

On top of replicating all the bits from VkFormatFeatureFlagBits, VkFormatFeatureFlagBits2KHR adds the following bits:

• VK_FORMAT_FEATURE_2_STORAGE_READ_WITHOUT_FORMAT_BIT_KHR and VK_FORMAT_FEATURE_2_STORAGE_WRITE_WITHOUT_FORMAT_BIT_KHR indicate that an implementation supports respectively reading and writing a given VkFormat through storage operations without specifying the format in the shader.

• VK_FORMAT_FEATURE_2_SAMPLED_IMAGE_DEPTH_COMPARISON_BIT_KHR indicates that an implementation supports depth comparison performed by OpImage*Dref* instructions on a given VkFormat. Previously the result of executing a OpImage*Dref* instruction on an image view, where the format was not one of the depth/stencil formats with a depth component, was undefined. This bit clarifies on which formats such instructions can be used.

Prior to version 2 of this extension, implementations exposing the shaderStorageImageReadWithoutFormat and shaderStorageImageWriteWithoutFormat features may not report VK_FORMAT_FEATURE_2_STORAGE_READWITHOUT_FORMAT_BIT_KHR and VK_FORMAT_FEATURE_2_STORAGE_WRITEWITHOUT_FORMAT_BIT_KHR in VkFormatProperties3KHR::bufferFeatures. Despite this, buffer reads/writes are supported as intended by the original
features.

New Structures

Description

This extension provides new queries for device features, device properties, and format properties that can be easily extended by other extensions, without introducing any further queries. The Vulkan 1.0 feature/limit/formatproperty structures do not include sType/pNext members. This extension wraps them in new structures with sType/pNext members, so an application can query a chain of feature/limit/formatproperty structures by constructing the chain and letting the implementation fill them in. A new command is added for each vkGetPhysicalDevice* command in core Vulkan 1.0. The new feature structure (and a pNext chain of extending structures) can also be passed in to device creation to enable features.

This extension also allows applications to use the physical-device components of device extensions before vkCreateDevice is called.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Commands

- vkGetPhysicalDeviceFeatures2KHR
- vkGetPhysicalDeviceFormatProperties2KHR
- vkGetPhysicalDeviceImageFormatProperties2KHR
- vkGetPhysicalDeviceMemoryProperties2KHR
- vkGetPhysicalDeviceProperties2KHR
- vkGetPhysicalDeviceQueueFamilyProperties2KHR
- vkGetPhysicalDeviceSparseImageFormatProperties2KHR

**New Structures**

- VkFormatProperties2KHR
- VkImageFormatProperties2KHR
- VkPhysicalDeviceImageFormatInfo2KHR
- VkPhysicalDeviceMemoryProperties2KHR
- VkPhysicalDeviceProperties2KHR
- VkPhysicalDeviceSparseImageFormatInfo2KHR
- VkQueueFamilyProperties2KHR
- VkSparseImageFormatProperties2KHR

**Extending VkDeviceCreateInfo:**

- VkPhysicalDeviceFeatures2KHR

**New Enum Constants**

- VK_KHR_GET_PHYSICAL_DEVICE_PROPERTIES_2_EXTENSION_NAME
- VK_KHR_GET_PHYSICAL_DEVICE_PROPERTIES_2_SPEC_VERSION

**Extending VkStructureType:**

- VK_STRUCTURE_TYPE_FORMAT_PROPERTIES_2_KHR
- VK_STRUCTURE_TYPE_IMAGE_FORMAT_PROPERTIES_2_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_FORMAT_INFO_2_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MEMORY_PROPERTIES_2_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PROPERTIES_2_KHR
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SPARSE_IMAGE_FORMAT_INFO_2_KHR
- VK_STRUCTURE_TYPE_QUEUE_FAMILY_PROPERTIES_2_KHR
- VK_STRUCTURE_TYPE_SPARSE_IMAGE_FORMAT_PROPERTIES_2_KHR

**Examples**

```cpp
// Get features with a hypothetical future extension.
VkHypotheticalExtensionFeaturesKHR hypotheticalFeatures = {
    VK_STRUCTURE_TYPE_HYPOTHETICAL_FEATURES_KHR,
    NULL, // sType
    NULL, // pNext
}
```
VkPhysicalDeviceFeatures2KHR features =
{
    VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2_KHR,  // sType
    &hypotheticalFeatures,                             // pNext
};

// After this call, features and hypotheticalFeatures have been filled out.
vkGetPhysicalDeviceFeatures2KHR(physicalDevice, &features);

// Properties/limits can be chained and queried similarly.

// Enable some features:
VkHypotheticalExtensionFeaturesKHR enabledHypotheticalFeatures =
{
    VK_STRUCTURE_TYPE_HYPOTHETICAL_FEATURES_KHR,    // sType
    NULL,                                           // pNext
};

VkPhysicalDeviceFeatures2KHR enabledFeatures =
{
    VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FEATURES_2_KHR, // sType
    &enabledHypotheticalFeatures,                    // pNext
};

enabledFeatures.features.xyz = VK_TRUE;
enabledHypotheticalFeatures.abc = VK_TRUE;

VkDeviceCreateInfo deviceCreateInfo =
{
    VK_STRUCTURE_TYPE_DEVICE_CREATE_INFO,             // sType
    &enabledFeatures,                                 // pNext
    ...                                               // pEnabledFeatures
};

VkDevice device;
vkCreateDevice(physicalDevice, &deviceCreateInfo, NULL, &device);

Version History

Description

On some implementations, setting the VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT on image creation can cause access to that image to perform worse than an equivalent image created without VK_IMAGE_CREATE_MUTABLE_FORMAT_BIT because the implementation does not know what view formats
This extension allows an application to provide the list of all formats that can be used with an image when it is created. The implementation may then be able to create a more efficient image that supports the subset of formats required by the application without having to support all formats in the format compatibility class of the image format.

**Promotion to Vulkan 1.2**

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Description

This extension allows framebuffers to be created without the need for creating images first, allowing more flexibility in how they are used, and avoiding the need for many of the confusing compatibility rules.

Framebuffers are now created with a small amount of additional metadata about the image views that will be used in VkFramebufferAttachmentsCreateInfoKHR, and the actual image views are provided at render pass begin time via VkRenderPassAttachmentBeginInfoKHR.

Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

• Tom Olson, ARM

Description

**VK_KHR_maintenance1** adds a collection of minor features that were intentionally left out or overlooked from the original Vulkan 1.0 release.

The new features are as follows:

• Allow 2D and 2D array image views to be created from 3D images, which can then be used as color framebuffer attachments. This allows applications to render to slices of a 3D image.

• Support `vkCmdCopyImage` between 2D array layers and 3D slices. This extension allows copying from layers of a 2D array image to slices of a 3D image and vice versa.

• Allow negative height to be specified in the `VkViewport::height` field to perform y-inversion of the clip-space to framebuffer-space transform. This allows apps to avoid having to use `gl_Position.y = -gl_Position.y` in shaders also targeting other APIs.

• Allow implementations to express support for doing just transfers and clears of image formats that they otherwise support no other format features for. This is done by adding new format feature flags `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT_KHR` and `VK_FORMAT_FEATURE_TRANSFER_DST_BIT_KHR`. 
• Support `vkCmdFillBuffer` on transfer-only queues. Previously `vkCmdFillBuffer` was defined to only work on command buffers allocated from command pools which support graphics or compute queues. It is now allowed on queues that just support transfer operations.

• Fix the inconsistency of how error conditions are returned between the `vkCreateGraphicsPipelines` and `vkCreateComputePipelines` functions and the `vkAllocateDescriptorSets` and `vkAllocateCommandBuffers` functions.

• Add new `VK_ERROR_OUT_OF_POOL_MEMORY_KHR` error so implementations can give a more precise reason for `vkAllocateDescriptorSets` failures.

• Add a new command `vkTrimCommandPoolKHR` which gives the implementation an opportunity to release any unused command pool memory back to the system.

**Promotion to Vulkan 1.1**

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

**New Commands**

• `vkTrimCommandPoolKHR`

**New Bitmasks**

• `VkCommandPoolTrimFlagsKHR`

**New Enum Constants**

• `VK_KHR_MAINTENANCE1_EXTENSION_NAME`
• `VK_KHR_MAINTENANCE1_SPEC_VERSION`
• `VK_KHR_MAINTENANCE_1_EXTENSION_NAME`
• `VK_KHR_MAINTENANCE_1_SPEC_VERSION`

• Extending `VkFormatFeatureFlagBits`:
  ◦ `VK_FORMAT_FEATURE_TRANSFER_DST_BIT_KHR`
  ◦ `VK_FORMAT_FEATURE_TRANSFER_SRC_BIT_KHR`

• Extending `VkImageCreateFlagBits`:
  ◦ `VK_IMAGE_CREATE_2D_ARRAY_COMPATIBLE_BIT_KHR`

• Extending `VkResult`:
  ◦ `VK_ERROR_OUT_OF_POOL_MEMORY_KHR`

**Issues**

1. Are viewports with zero height allowed?

   **RESOLVED**: Yes, although they have low utility.

Description

`VK_KHR_maintenance2` adds a collection of minor features that were intentionally left out or overlooked from the original Vulkan 1.0 release.

The new features are as follows:

- Allow the application to specify which aspect of an input attachment might be read for a given subpass.
- Allow implementations to express the clipping behavior of points.
- Allow creating images with usage flags that may not be supported for the base image's format, but are supported for image views of the image that have a different but compatible format.
- Allow creating uncompressed image views of compressed images.
- Allow the application to select between an upper-left and lower-left origin for the tessellation domain space.
- Adds two new image layouts for depth stencil images to allow either the depth or stencil aspect to be read-only while the other aspect is writable.

Input Attachment Specification

Input attachment specification allows an application to specify which aspect of a multi-aspect image (e.g. a depth/stencil format) will be accessed via a `subpassLoad` operation.

On some implementations, there may be a performance penalty if the implementation does not know (at `vkCreateRenderPass` time) which aspect(s) of multi-aspect images can be accessed as input attachments.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Structures

- `VkInputAttachmentAspectReferenceKHR`
- Extending `VkImageViewCreateInfo`:
  - `VkImageViewUsageCreateInfoKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDevicePointClippingPropertiesKHR`
- Extending `VkPipelineTessellationStateCreateInfo`:
  - `VkPipelineTessellationDomainOriginStateCreateInfoKHR`
• Extending `VkRenderPassCreateInfo`:
  ◦ `VkRenderPassInputAttachmentAspectCreateInfoKHR`

New Enums

• `VkPointClippingBehaviorKHR`
• `VkTessellationDomainOriginKHR`

New Enum Constants

• `VK_KHR_MAINTENANCE2_EXTENSION_NAME`
• `VK_KHR_MAINTENANCE2_SPEC_VERSION`
• `VK_KHR_MAINTENANCE_2_EXTENSION_NAME`
• `VK_KHR_MAINTENANCE_2_SPEC_VERSION`

• Extending `VkImageCreateFlagBits`:
  ◦ `VK_IMAGE_CREATE_BLOCK_TEXEL_VIEW_COMPATIBLE_BIT_KHR`
  ◦ `VK_IMAGE_CREATE_EXTENDED_USAGE_BIT_KHR`

• Extending `VkImageLayout`:
  ◦ `VK_IMAGE_LAYOUT_DEPTH_ATTACHMENT_STENCIL_READ_ONLY_OPTIMAL_KHR`
  ◦ `VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_STENCIL_ATTACHMENT_OPTIMAL_KHR`

• Extending `VkPointClippingBehavior`:
  ◦ `VK_POINT_CLIPPING_BEHAVIOR_ALL_CLIP_PLANES_KHR`
  ◦ `VK_POINT_CLIPPING_BEHAVIOR_USER_CLIP_PLANES_ONLY_KHR`

• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_IMAGE_VIEW_USAGE_CREATE_INFO_KHR`
  ◦ `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_POINT_CLIPPING_PROPERTIES_KHR`
  ◦ `VK_STRUCTURE_TYPE_PIPELINE_TESSELLATION_DOMAIN_ORIGIN_STATE_CREATE_INFO_KHR`
  ◦ `VK_STRUCTURE_TYPE_RENDER_PASS_INPUT_ATTACHMENT_ASPECT_CREATE_INFO_KHR`

• Extending `VkTessellationDomainOrigin`:
  ◦ `VK_TESSELLATION_DOMAIN_ORIGIN_LOWER_LEFT_KHR`
  ◦ `VK_TESSELLATION_DOMAIN_ORIGIN_UPPER_LEFT_KHR`

Input Attachment Specification Example

Consider the case where a render pass has two subpasses and two attachments.

Attachment 0 has the format `VK_FORMAT_D24_UNORM_S8_UINT`, attachment 1 has some color format.

Subpass 0 writes to attachment 0, subpass 1 reads only the depth information from attachment 0 (using inputAttachmentRead) and writes to attachment 1.
VkInputAttachmentAspectReferenceKHR references[] = {
    {
        .subpass = 1,
        .inputAttachmentIndex = 0,
        .aspectMask = VK_IMAGE_ASPECT_DEPTH_BIT
    }
};

VkRenderPassInputAttachmentAspectCreateInfoKHR specifyAspects = {
    .sType = VK_STRUCTURE_TYPE_RENDER_PASS_INPUT_ATTACHMENT_ASPECT_CREATE_INFO_KHR,
    .pNext = NULL,
    .aspectReferenceCount = 1,
    .pAspectReferences = references
};

VkRenderPassCreateInfo createInfo = {
    ...
    .pNext = &specifyAspects,
    ...
};

vkCreateRenderPass(...);

**Issues**

1) What is the default tessellation domain origin?

**RESOLVED:** Vulkan 1.0 originally inadvertently documented a lower-left origin, but the conformance tests and all implementations implemented an upper-left origin. This extension adds a control to select between lower-left (for compatibility with OpenGL) and upper-left, and we retroactively fix unextended Vulkan to have a default of an upper-left origin.

**Version History**

- Revision 1, 2017-04-28

**VK_KHR_maintenance3**

**Name String**

VK_KHR_maintenance3

**Extension Type**

Device extension

**Registered Extension Number**

169
Description

VK_KHR_maintenance3 adds a collection of minor features that were intentionally left out or overlooked from the original Vulkan 1.0 release.

The new features are as follows:

- A limit on the maximum number of descriptors that are supported in a single descriptor set layout. Some implementations have a limit on the total size of descriptors in a set, which cannot be expressed in terms of the limits in Vulkan 1.0.

- A limit on the maximum size of a single memory allocation. Some platforms have kernel interfaces that limit the maximum size of an allocation.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Commands

- vkGetDescriptorSetLayoutSupportKHR
New Structures

- VkDescriptorSetLayoutSupportKHR
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceMaintenance3PropertiesKHR

New Enum Constants

- VK_KHR_MAINTENANCE3_EXTENSION_NAME
- VK_KHR_MAINTENANCE3_SPEC_VERSION
- VK_KHR_MAINTENANCE_3_EXTENSION_NAME
- VK_KHR_MAINTENANCE_3_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_SUPPORT_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_3_PROPERTIES_KHR

Interactions and External Dependencies

• Promoted to Vulkan 1.3 Core
• Requires SPIR-V 1.2 for LocalSizeId

Contributors

• Lionel Duc, NVIDIA
• Faith Ekstrand, Intel
• Spencer Fricke, Samsung
• Tobias Hector, AMD
• Lionel Landwerlin, Intel
• Graeme Leese, Broadcom
• Tom Olson, Arm
• Stu Smith, AMD
• Yiwei Zhang, Google

Description

VK_KHR_maintenance4 adds a collection of minor features, none of which would warrant an entire extension of their own.

The new features are as follows:

• Allow the application to destroy their VkPipelineLayout object immediately after it was used to create another object. It is no longer necessary to keep its handle valid while the created object is in use.

• Add a new maxBufferSize implementation-defined limit for the maximum size VkBuffer that can be created.

• Add support for the SPIR-V 1.2 LocalSizeId execution mode, which can be used as an alternative to LocalSize to specify the local workgroup size with specialization constants.

• Add a guarantee that images created with identical creation parameters will always have the same alignment requirements.

• Add new vkGetDeviceBufferMemoryRequirementsKHR, vkGetDeviceImageMemoryRequirementsKHR, and vkGetDeviceImageSparseMemoryRequirementsKHR to allow the application to query the image memory requirements without having to create an image object and query it.

• Relax the requirement that push constants must be initialized before they are dynamically accessed.

• Relax the interface matching rules to allow a larger output vector to match with a smaller input
vector, with additional values being discarded.

- Add a guarantee for buffer memory requirement that the size memory requirement is never greater than the result of aligning create size with the alignment memory requirement.

**New Commands**

- `vkGetDeviceBufferMemoryRequirementsKHR`
- `vkGetDeviceImageMemoryRequirementsKHR`
- `vkGetDeviceImageSparseMemoryRequirementsKHR`

**New Structures**

- `VkDeviceBufferMemoryRequirementsKHR`
- `VkDeviceImageMemoryRequirementsKHR`
- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceMaintenance4FeaturesKHR`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceMaintenance4PropertiesKHR`

**New Enum Constants**

- `VK_KHR_MAINTENANCE_4_EXTENSION_NAME`
- `VK_KHR_MAINTENANCE_4_SPEC_VERSION`
- Extending `VkImageAspectFlagBits`:
  - `VK_IMAGE_ASPECT_NONE_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DEVICE_BUFFER_MEMORY_REQUIREMENTS_KHR`
  - `VK_STRUCTURE_TYPE_DEVICE_IMAGE_MEMORY_REQUIREMENTS_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MAINTENANCE_4_PROPERTIES_KHR`

**Promotion to Vulkan 1.3**

Functionality in this extension is included in core Vulkan 1.3, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

**Issues**

None.

Interactions and External Dependencies

- Promoted to Vulkan 1.1 Core
- This extension requires SPV_KHR_multiview
- This extension provides API support for GL_EXT_multiview
Description

This extension has the same goal as the OpenGL ES GL_OVR_multiview extension. Multiview is a rendering technique originally designed for VR where it is more efficient to record a single set of commands to be executed with slightly different behavior for each “view”.

It includes a concise way to declare a render pass with multiple views, and gives implementations freedom to render the views in the most efficient way possible. This is done with a multiview configuration specified during render pass creation with the VkRenderPassMultiviewCreateInfo passed into VkRenderPassCreateInfo::pNext.

This extension enables the use of the SPV_KHR_multiview shader extension, which adds a new ViewIndex built-in type that allows shaders to control what to do for each view. If using GLSL there is also the GL_EXT_multiview extension that introduces a highp int gl_ViewIndex; built-in variable for vertex, tessellation, geometry, and fragment shaders.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceMultiviewFeaturesKHR

Interactions and External Dependencies
• Promoted to Vulkan 1.2 Core

Contributors
• Tobias Hector, Imagination Technologies
• Jon Leech, Khronos

Description
VK_KHR_sampler_mirror_clamp_to_edge extends the set of sampler address modes to include an additional mode (VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE) that effectively uses a texture map twice as large as the original image in which the additional half of the new image is a mirror image of the original image.

This new mode relaxes the need to generate images whose opposite edges match by using the original image to generate a matching “mirror image”. This mode allows the texture to be mirrored only once in the negative s, t, and r directions.

Promotion to Vulkan 1.2
All functionality in this extension is included in core Vulkan 1.2. However, if Vulkan 1.2 is supported and this extension is not, the VkSamplerAddressMode VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE is optional. Since the original extension did not use an author suffix on the enum VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE, it is used by both core and extension implementations.

New Enum Constants
• VK_KHR_SAMPLER_MIRROR_CLAMP_TO_EDGE_EXTENSION_NAME
• VK_KHR_SAMPLER_MIRROR_CLAMP_TO_EDGE_SPEC_VERSION
• Extending VkSamplerAddressMode:
  ◦ VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE
  ◦ VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE_KHR

Example
Creating a sampler with the new address mode in each dimension

```c
VkSamplerCreateInfo createInfo = {
    VK_STRUCTURE_TYPE_SAMPLER_CREATE_INFO, // sType
    // Other members set to application-desired values
}```
createInfo.addressModeU = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE;
createInfo.addressModeV = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE;
createInfo.addressModeW = VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE;

VkSampler sampler;
VkResult result = vkCreateSampler(
    device,
    &createInfo,
    &sampler);

Issues

1) Why are both KHR and core versions of the VK_SAMPLER_ADDRESS_MODE_MIRROR_CLAMP_TO_EDGE token present?

**RESOLVED**: This functionality was intended to be required in Vulkan 1.0. We realized shortly before public release that not all implementations could support it, and moved the functionality into an optional extension, but did not apply the KHR extension suffix. Adding a KHR-suffixed alias of the non-suffixed enum has been done to comply with our own naming rules.

In a related change, before spec revision 1.1.121 this extension was hardwiring into the spec Makefile so it was always included with the Specification, even in the core-only versions. This has now been reverted, and it is treated as any other extension.

Version History

- Revision 1, 2016-02-16 (Tobias Hector)
  - Initial draft
- Revision 2, 2019-08-14 (Jon Leech)
  - Add KHR-suffixed alias of non-suffixed enum.
- Revision 3, 2019-08-17 (Jon Leech)
  - Add an issue explaining the reason for the extension API not being suffixed with KHR.

The use of Y′CₙCₚ sampler conversion is an area in 3D graphics not used by most Vulkan developers. It is mainly used for processing inputs from video decoders and cameras. The use of the extension assumes basic knowledge of Y′CₙCₚ concepts.

This extension provides the ability to perform specified color space conversions during texture sampling operations for the Y′CₙCₚ color space natively. It also adds a selection of multi-planar formats, image aspect plane, and the ability to bind memory to the planes of an image collectively or separately.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted. However, if Vulkan 1.1 is supported and this extension is not, the samplerYcbcrConversion capability is optional. The original type, enum and command names are still available as aliases of the core functionality.

New Object Types

- VkSamplerYcbcrConversionKHR

New Commands

- vkCreateSamplerYcbcrConversionKHR
- vkDestroySamplerYcbcrConversionKHR

New Structures

**Interactions and External Dependencies**

- Promoted to Vulkan 1.2 Core

**Contributors**

- Daniel Koch, NVIDIA
- Jeff Bolz, NVIDIA
- Jesse Barker, Unity
- Tobias Hector, AMD

**Description**

This extension allows image memory barriers for depth/stencil images to have just one of the `VK_IMAGE_ASPECT_DEPTH_BIT` or `VK_IMAGE_ASPECT_STENCIL_BIT` aspect bits set, rather than require both. This allows their layouts to be set independently. To support depth/stencil images with different layouts for the depth and stencil aspects, the depth/stencil attachment interface has been updated to support a separate layout for stencil.

**Promotion to Vulkan 1.2**

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

**New Structures**

- Extending `VkAttachmentDescription2`:
  - `VkAttachmentDescriptionStencilLayoutKHR`

  • This extension provides API support for GL_ARB_gpu_shader_int64 and GL_EXT_shader_atomic_int64
Contributors

- Aaron Hagan, AMD
- Daniel Rakos, AMD
- Jeff Bolz, NVIDIA
- Neil Henning, Codeplay

Description

This extension advertises the SPIR-V Int64Atomics capability for Vulkan, which allows a shader to contain 64-bit atomic operations on signed and unsigned integers. The supported operations include OpAtomicMin, OpAtomicMax, OpAtomicAnd, OpAtomicOr, OpAtomicXor, OpAtomicAdd, OpAtomicExchange, and OpAtomicCompareExchange.

Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the shaderBufferInt64Atomics capability is optional. The original type, enum and command names are still available as aliases of the core functionality.

Description
This extension adds support for the following SPIR-V extension in Vulkan:

• SPV_KHR_shader_draw_parameters
The extension provides access to three additional built-in shader variables in Vulkan:

- **BaseInstance**, containing the `firstInstance` parameter passed to drawing commands,
- **BaseVertex**, containing the `firstVertex` or `vertexOffset` parameter passed to drawing commands, and
- **DrawIndex**, containing the index of the draw call currently being processed from an indirect drawing call.

When using GLSL source-based shader languages, the following variables from `GL_ARB_shader_draw_parameters` can map to these SPIR-V built-in decorations:

- `in int gl_BaseInstanceARB;` → **BaseInstance**,
- `in int gl_BaseVertexARB;` → **BaseVertex**, and
- `in int gl_DrawIDARB;` → **DrawIndex**.

**Promotion to Vulkan 1.1**

All functionality in this extension is included in core Vulkan 1.1. However, the `shaderDrawParameters` feature bit was added to distinguish whether it is actually available or not.

**New Enum Constants**

- `VK_KHR_SHADER_DRAW_PARAMETERS_EXTENSION_NAME`
- `VK_KHR_SHADER_DRAW_PARAMETERS_SPEC_VERSION`

**New Built-In Variables**

- **BaseInstance**
- **BaseVertex**
- **DrawIndex**

**New SPIR-V Capabilities**

- **DrawParameters**

**Issues**

1) Is this the same functionality as `GL_ARB_shader_draw_parameters`?

**RESOLVED**: It is actually a superset, as it also adds in support for arrayed drawing commands.

In GL for `GL_ARB_shader_draw_parameters`, `gl_BaseVertexARB` holds the integer value passed to the parameter to the command that resulted in the current shader invocation. In the case where the command has no `baseVertex` parameter, the value of `gl_BaseVertexARB` is zero. This means that `gl_BaseVertexARB = baseVertex` (for `glDrawElements` commands with `baseVertex`) or 0. In particular there are no `glDrawArrays` commands that take a `baseVertex` parameter.
Now in Vulkan, we have $\text{BaseVertex} = \text{vertexOffset}$ (for indexed drawing commands) or $\text{firstVertex}$ (for arrayed drawing commands), and so Vulkan's version is really a superset of GL functionality.

Description
The VK_KHR_shader_float16_int8 extension allows use of 16-bit floating-point types and 8-bit integer types in shaders for arithmetic operations.

It introduces two new optional features shaderFloat16 and shaderInt8 which directly map to the Float16 and the Int8 SPIR-V capabilities. The VK_KHR_shader_float16_int8 extension also specifies precision requirements for half-precision floating-point SPIR-V operations. This extension does not enable use of 8-bit integer types or 16-bit floating-point types in any shader input and output interfaces and therefore does not supersede the VK_KHR_8bit_storage or VK_KHR_16bit_storage extensions.

Promotion to Vulkan 1.2
All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, both the shaderFloat16 and shaderInt8 capabilities are optional. The original type, enum and command names are still available as aliases of the core functionality.

Description

The `VK_KHR_shader_float_controls` extension enables efficient use of floating-point computations through the ability to query and override the implementation’s default behavior for rounding modes, denormals, signed zero, and infinity.

Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Structures

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceFloatControlsPropertiesKHR`

New Enums

- `VkShaderFloatControlsIndependenceKHR`

New Enum Constants

- `VK_KHR_SHADER_FLOAT_CONTROLS_EXTENSION_NAME`
- `VK_KHR_SHADER_FLOAT_CONTROLS_SPEC_VERSION`
- Extending `VkShaderFloatControlsIndependence`:
  - `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_32_BIT_ONLY_KHR`
  - `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_ALL_KHR`
  - `VK_SHADER_FLOAT_CONTROLS_INDEPENDENCE_NONE_KHR`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FLOAT_CONTROLS_PROPERTIES_KHR`

New SPIR-V Capabilities

- `DenormPreserve`
- `DenormFlushToZero`
- `SignedZeroInfNanPreserve`
- `RoundingModeRTE`
- `RoundingModeRTZ`
Issues

1) Which instructions must flush denorms?

**RESOLVED:** Only floating-point conversion, floating-point arithmetic, floating-point relational (except `OpIsNaN`, `OpIsInf`), and floating-point GLSL.std.450 extended instructions must flush denormals.

2) What is the denorm behavior for intermediate results?

**RESOLVED:** When a SPIR-V instruction is implemented as a sequence of other instructions:

- in the `DenormFlushToZero` execution mode, the intermediate instructions may flush denormals, the final result of the sequence **must** not be denormal.
- in the `DenormPreserve` execution mode, denormals must be preserved throughout the whole sequence.

3) Do denorm and rounding mode controls apply to `OpSpecConstantOp`?

**RESOLVED:** Yes, except when the opcode is `OpQuantizeToF16`.

4) The SPIR-V specification says that `OpConvertFToU` and `OpConvertFToS` unconditionally round towards zero. Do the rounding mode controls specified through the execution modes apply to them?

**RESOLVED:** No, these instructions unconditionally round towards zero.

5) Do any of the “Pack” GLSL.std.450 instructions count as conversion instructions and have the rounding mode applied?

**RESOLVED:** No, only instructions listed in “section 3.32.11. Conversion Instructions” of the SPIR-V specification count as conversion instructions.

6) When using inf/nan-ignore mode, what is expected of `OpIsNan` and `OpIsInf`?

**RESOLVED:** These instructions must always accurately detect inf/nan if it is passed to them.

Version 4 API incompatibility

The original versions of `VK_KHR_shader_float_controls` shipped with booleans named “separateDenormSettings” and “separateRoundingModeSettings”, which at first glance could have indicated “they can all be set independently, or not”. However the spec language as written indicated that the 32-bit value could always be set independently, and only the 16- and 64-bit controls needed to be the same if these values were `VK_FALSE`.

As a result of this slight disparity, and lack of test coverage for this facet of the extension, we ended up with two different behaviors in the wild, where some implementations worked as written, and others worked based on the naming. As these are hard limits in hardware with reasons for exposure as written, it was not possible to standardise on a single way to make this work within the existing API.
No known users of this part of the extension exist in the wild, and as such the Vulkan WG took the unusual step of retroactively changing the once boolean value into a tri-state enum, breaking source compatibility. This was however done in such a way as to retain ABI compatibility, in case any code using this did exist; with the numerical values 0 and 1 retaining their original specified meaning, and a new value signifying the additional “all need to be set together” state. If any applications exist today, compiled binaries will continue to work as written in most cases, but will need changes before the code can be recompiled.

  or
**Description**

This extension adds Vulkan support for the `SPV_KHR_terminate_invocation` SPIR-V extension. That SPIR-V extension provides a new instruction, `OpTerminateInvocation`, which causes a shader invocation to immediately terminate and sets the coverage of shaded samples to 0; only previously executed instructions will have observable effects. The `OpTerminateInvocation` instruction, along with the `OpDemoteToHelperInvocation` instruction from the `VK_EXT_shader_demote_to_helper_invocation` extension, together replace the `OpKill` instruction, which could behave like either of these instructions. `OpTerminateInvocation` provides the behavior required by the GLSL `discard` statement, and should be used when available by GLSL compilers and applications that need the GLSL `discard` behavior.

**New Structures**

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceShaderTerminateInvocationFeaturesKHR`
New Enum Constants

- VK_KHR_SHADER_TERMINATE_INVOCATION_EXTENSION_NAME
- VK_KHR_SHADER_TERMINATE_INVOCATION_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_SHADER_TERMINATE_INVOCATION_FEATURES_KHR

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Other Extension Metadata
This extension allows the use of SPIR-V 1.4 shader modules. SPIR-V 1.4’s new features primarily make it an easier target for compilers from high-level languages, rather than exposing new hardware functionality.

SPIR-V 1.4 incorporates features that are also available separately as extensions. SPIR-V 1.4 shader modules do not need to enable those extensions with the OpExtension opcode, since they are integral parts of SPIR-V 1.4.

SPIR-V 1.4 introduces new floating point execution mode capabilities, also available via SPV_KHR_float_controls. Implementations are not required to support all of these new capabilities; support can be queried using VkPhysicalDeviceFloatControlsPropertiesKHR from the VK_KHR_shader_float_controls extension.

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Enum Constants

- VK_KHR_SPIRV_1_4_EXTENSION_NAME
- VK_KHR_SPIRV_1_4_SPEC_VERSION

Issues

1. Should we have an extension specific to this SPIR-V version, or add a version-generic query for
SPIR-V version? SPIR-V 1.4 does not need any other API changes.

**RESOLVED:** Just expose SPIR-V 1.4.

Most new SPIR-V versions introduce optionally-required capabilities or have implementation-defined limits, and would need more API and specification changes specific to that version to make them available in Vulkan. For example, to support the subgroup capabilities added in SPIR-V 1.3 required introducing `VkPhysicalDeviceSubgroupProperties` to allow querying the supported group operation categories, maximum supported subgroup size, etc. While we could expose the parts of a new SPIR-V version that do not need accompanying changes generically, we will still end up writing extensions specific to each version for the remaining parts. Thus the generic mechanism will not reduce future spec-writing effort. In addition, making it clear which parts of a future version are supported by the generic mechanism and which cannot be used without specific support would be difficult to get right ahead of time.

2. Can different stages of the same pipeline use shaders with different SPIR-V versions?

**RESOLVED:** Yes.

Mixing SPIR-V versions 1.0-1.3 in the same pipeline has not been disallowed, so it would be inconsistent to disallow mixing 1.4 with previous versions. SPIR-V 1.4 does not introduce anything that should cause new difficulties here.

3. Must Vulkan extensions corresponding to SPIR-V extensions that were promoted to core in 1.4 be enabled in order to use that functionality in a SPIR-V 1.4 module?

**RESOLVED:** No, with caveats.

The SPIR-V 1.4 module does not need to declare the SPIR-V extensions, since the functionality is now part of core, so there is no need to enable the Vulkan extension that allows SPIR-V modules to declare the SPIR-V extension. However, when the functionality that is now core in SPIR-V 1.4 is optionally supported, the query for support is provided by a Vulkan extension, and that query can only be used if the extension is enabled.

This applies to any SPIR-V version; specifically for SPIR-V 1.4 this only applies to the functionality from `SPV_KHR_float_controls`, which was made available in Vulkan by `VK_KHR_shader_float_controls`. Even though the extension was promoted in SPIR-V 1.4, the capabilities are still optional in implementations that support `VK_KHR_spirv_1_4`.

A SPIR-V 1.4 module does not need to enable `SPV_KHR_float_controls` in order to use the capabilities, so if the application has a priori knowledge that the implementation supports the capabilities, it does not need to enable `VK_KHR_shader_float_controls`. However, if it does not have this knowledge and has to query for support at runtime, it must enable `VK_KHR_shader_float_controls` in order to use `VkPhysicalDeviceFloatControlsPropertiesKHR`.

Description

This extension modifies the original core synchronization APIs to simplify the interface and improve usability of these APIs. It also adds new pipeline stage and access flag types that extend into the 64-bit range, as we have run out within the 32-bit range. The new flags are identical to the old values within the 32-bit range, with new stages and bits beyond that.

Pipeline stages and access flags are now specified together in memory barrier structures, making the connection between the two more obvious. Additionally, scoping the pipeline stages into the barrier structs allows the use of the MEMORY_READ and MEMORY_WRITE flags without sacrificing precision. The per-stage access flags should be used to disambiguate specific accesses in a given stage or set of stages - for instance, between uniform reads and sampling operations.

Layout transitions have been simplified as well; rather than requiring a different set of layouts for depth/stencil/color attachments, there are generic VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL_KHR and VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR layouts which are contextually applied based on the image format. For example, for a depth format image, VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR is equivalent to VK_IMAGE_LAYOUT_DEPTH_READ_ONLY_OPTIMAL_KHR. VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR also functionally replaces VK_IMAGE_LAYOUT_SHADER_READ_ONLY_OPTIMAL.

Events are now more efficient, because they include memory dependency information when you set them on the device. Previously, this information was only known when waiting on an event, so the dependencies could not be satisfied until the wait occurred. That sometimes meant stalling the pipeline when the wait occurred. The new API provides enough information for implementations to satisfy these dependencies in parallel with other tasks.

Queue submission has been changed to wrap command buffers and semaphores in extensible structures, which incorporate changes from Vulkan 1.1, VK_KHR_device_group, and VK_KHR_timeline_semaphore. This also adds a pipeline stage to the semaphore signal operation, mirroring the existing pipeline stage specification for wait operations.

Other miscellaneous changes include:

- Events can now be specified as interacting only with the device, allowing more efficient access to the underlying object.
- Image memory barriers that do not perform an image layout transition can be specified by setting oldLayout equal to newLayout.
  - E.g. the old and new layout can both be set to VK_IMAGE_LAYOUT_UNDEFINED, without discarding data in the image.
- Queue family ownership transfer parameters are simplified in some cases.
• Where two synchronization commands need to be matched up (queue transfer operations, events), the dependency information specified in each place must now match completely for consistency.

• Extensions with commands or functions with a `VkPipelineStageFlags` or `VkPipelineStageFlagBits` parameter have had those APIs replaced with equivalents using `VkPipelineStageFlags2KHR`.

• The new event and barrier interfaces are now more extensible for future changes.

• Relevant pipeline stage masks can now be specified as empty with the new `VK_PIPELINE_STAGE_NONE_KHR` and `VK_PIPELINE_STAGE_2_NONE_KHR` values.

• `VkMemoryBarrier2KHR` can be chained to `VkSubpassDependency2`, overriding the original 32-bit stage and access masks.

**New Base Types**

• `VkFlags64`

**New Commands**

• `vkCmdPipelineBarrier2KHR`
• `vkCmdResetEvent2KHR`
• `vkCmdSetEvent2KHR`
• `vkCmdWaitEvents2KHR`
• `vkCmdWriteTimestamp2KHR`
• `vkQueueSubmit2KHR`

**If VK_AMD_buffer_marker is supported:**

• `vkCmdWriteBufferMarker2AMD`

**If VK_NV_device_diagnostic_checkpoints is supported:**

• `vkGetQueueCheckpointData2NV`

**New Structures**

• `VkBufferMemoryBarrier2KHR`
• `VkCommandBufferSubmitInfoKHR`
• `VkDependencyInfoKHR`
• `VkImageMemoryBarrier2KHR`
• `VkSemaphoreSubmitInfoKHR`
• `VkSubmitInfo2KHR`

• Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceSynchronization2FeaturesKHR`
• Extending `VkSubpassDependency2`:
  ◦ `VkMemoryBarrier2KHR`

If `VK_NV_device_diagnostic_checkpoints` is supported:

• `VkCheckpointData2NV`
• Extending `VkQueueFamilyProperties2`:
  ◦ `VkQueueFamilyCheckpointProperties2NV`

New Enums

• `VkAccessFlagBits2KHR`
• `VkPipelineStageFlagBits2KHR`
• `VkSubmitFlagBitsKHR`

New Bitmasks

• `VkAccessFlags2KHR`
• `VkPipelineStageFlags2KHR`
• `VkSubmitFlagsKHR`

New Enum Constants

• `VK_KHR_SYNCHRONIZATION_2_EXTENSION_NAME`
• `VK_KHR_SYNCHRONIZATION_2_SPEC_VERSION`
• Extending `VkAccessFlagBits`:
  ◦ `VK_ACCESS_NONE_KHR`
• Extending `VkEventCreateFlagBits`:
  ◦ `VK_EVENT_CREATE_DEVICE_ONLY_BIT_KHR`
• Extending `VkImageLayout`:
  ◦ `VK_IMAGE_LAYOUT_ATTACHMENT_OPTIMAL_KHR`
  ◦ `VK_IMAGE_LAYOUT_READ_ONLY_OPTIMAL_KHR`
• Extending `VkPipelineStageFlagBits`:
  ◦ `VK_PIPELINE_STAGE_NONE_KHR`
• Extending `VkStructureType`:
  ◦ `VK_STRUCTURE_TYPE_BUFFER_MEMORY_BARRIER_2_KHR`
  ◦ `VK_STRUCTURE_TYPE_COMMAND_BUFFER_SUBMIT_INFO_KHR`
  ◦ `VK_STRUCTURE_TYPE_DEPENDENCY_INFO_KHR`
  ◦ `VK_STRUCTURE_TYPE_IMAGE_MEMORY_BARRIER_2_KHR`
  ◦ `VK_STRUCTURE_TYPE_MEMORY_BARRIER_2_KHR`
If \textbf{VK\_EXT\_blend\_operation\_advanced} is supported:

- Extending \texttt{VkAccessFlagBits2}:
  - \texttt{VK\_ACCESS\_2\_COLOR\_ATTACHMENT\_READ\_NONCOHERENT\_BIT\_EXT}

If \textbf{VK\_EXT\_conditional\_rendering} is supported:

- Extending \texttt{VkAccessFlagBits2}:
  - \texttt{VK\_ACCESS\_2\_CONDITIONAL\_RENDERING\_READ\_BIT\_EXT}
- Extending \texttt{VkPipelineStageFlagBits2}:
  - \texttt{VK\_PIPELINE\_STAGE\_2\_CONDITIONAL\_RENDERING\_BIT\_EXT}

If \textbf{VK\_EXT\_fragment\_density\_map} is supported:

- Extending \texttt{VkAccessFlagBits2}:
  - \texttt{VK\_ACCESS\_2\_FRAGMENT\_DENSITY\_MAP\_READ\_BIT\_EXT}
- Extending \texttt{VkPipelineStageFlagBits2}:
  - \texttt{VK\_PIPELINE\_STAGE\_2\_FRAGMENT\_DENSITY\_PROCESS\_BIT\_EXT}

If \textbf{VK\_EXT\_mesh\_shader} is supported:

- Extending \texttt{VkPipelineStageFlagBits2}:
  - \texttt{VK\_PIPELINE\_STAGE\_2\_MESH\_SHADER\_BIT\_EXT}
  - \texttt{VK\_PIPELINE\_STAGE\_2\_TASK\_SHADER\_BIT\_EXT}

If \textbf{VK\_EXT\_transform\_feedback} is supported:

- Extending \texttt{VkAccessFlagBits2}:
  - \texttt{VK\_ACCESS\_2\_TRANSFORM\_FEEDBACK\_COUNTER\_READ\_BIT\_EXT}
  - \texttt{VK\_ACCESS\_2\_TRANSFORM\_FEEDBACK\_COUNTER\_WRITE\_BIT\_EXT}
  - \texttt{VK\_ACCESS\_2\_TRANSFORM\_FEEDBACK\_WRITE\_BIT\_EXT}
- Extending \texttt{VkPipelineStageFlagBits2}:
  - \texttt{VK\_PIPELINE\_STAGE\_2\_TRANSFORM\_FEEDBACK\_BIT\_EXT}

If \textbf{VK\_KHR\_acceleration\_structure} is supported:

- Extending \texttt{VkAccessFlagBits2}:
  - \texttt{VK\_ACCESS\_2\_ACCELERATION\_STRUCTURE\_READ\_BIT\_KHR}
  - \texttt{VK\_ACCESS\_2\_ACCELERATION\_STRUCTURE\_WRITE\_BIT\_KHR}
• Extending VkPipelineStageFlagBits2:
  ◦ VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_KHR

If VK_KHR_fragment_shading_rate is supported:

• Extending VkAccessFlagBits2:
  ◦ VK_ACCESS_2_FRAGMENT_SHADING_RATE_ATTACHMENT_READ_BIT_KHR

• Extending VkPipelineStageFlagBits2:
  ◦ VK_PIPELINE_STAGE_2_FRAGMENT_SHADING_RATE_ATTACHMENT_BIT_KHR

If VK_KHR_ray_tracing_pipeline is supported:

• Extending VkPipelineStageFlagBits2:
  ◦ VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_KHR

If VK_KHR_device_diagnostic_checkpoints is supported:

• Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_CHECKPOINT_DATA_2_NV
  ◦ VK_STRUCTURE_TYPE_QUEUE_FAMILY_CHECKPOINT_PROPERTIES_2_NV

If VK_NV_device_generated_commands is supported:

• Extending VkAccessFlagBits2:
  ◦ VK_ACCESS_2_COMMAND_PREPROCESS_READ_BIT_NV
  ◦ VK_ACCESS_2_COMMAND_PREPROCESS_WRITE_BIT_NV

• Extending VkPipelineStageFlagBits2:
  ◦ VK_PIPELINE_STAGE_2_COMMAND_PREPROCESS_BIT_NV

If VK_NV_mesh_shader is supported:

• Extending VkPipelineStageFlagBits2:
  ◦ VK_PIPELINE_STAGE_2_MESH_SHADER_BIT_NV
  ◦ VK_PIPELINE_STAGE_2_TASK_SHADER_BIT_NV

If VK_NV_ray_tracing is supported:

• Extending VkAccessFlagBits2:
  ◦ VK_ACCESS_2_ACCELERATION_STRUCTURE_READ_BIT_NV
  ◦ VK_ACCESS_2_ACCELERATION_STRUCTURE_WRITE_BIT_NV

• Extending VkPipelineStageFlagBits2:
  ◦ VK_PIPELINE_STAGE_2_ACCELERATION_STRUCTURE_BUILD_BIT_NV
  ◦ VK_PIPELINE_STAGE_2_RAY_TRACING_SHADER_BIT_NV
If `VK_NV_shading_rate_image` is supported:

- Extending `VkAccessFlagBits2`:
  - `VK_ACCESS_2_SHADING_RATE_IMAGE_READ_BIT_NV`
- Extending `VkPipelineStageFlagBits2`:
  - `VK_PIPELINE_STAGE_2_SHADING_RATE_IMAGE_BIT_NV`

**Promotion to Vulkan 1.3**

Functionality in this extension is included in core Vulkan 1.3, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

- Ray Smith, Arm

Description
This extension introduces a new type of semaphore that has an integer payload identifying a point in a timeline. Such timeline semaphores support the following operations:

- Host query - A host operation that allows querying the payload of the timeline semaphore.
- Host wait - A host operation that allows a blocking wait for a timeline semaphore to reach a specified value.
- Host signal - A host operation that allows advancing the timeline semaphore to a specified value.
- Device wait - A device operation that allows waiting for a timeline semaphore to reach a specified value.
- Device signal - A device operation that allows advancing the timeline semaphore to a specified value.

Promotion to Vulkan 1.2
All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.
New Commands

- vkGetSemaphoreCounterValueKHR
- vkSignalSemaphoreKHR
- vkWaitSemaphoresKHR

New Structures

- VkSemaphoreSignalInfoKHR
- VkSemaphoreWaitInfoKHR

Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceTimelineSemaphoreFeaturesKHR

Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceTimelineSemaphorePropertiesKHR

Extending VkSemaphoreCreateInfo, VkPhysicalDeviceExternalSemaphoreInfo:
  - VkSemaphoreTypeCreateInfoKHR

Extending VkSubmitInfo, VkBindSparseInfo:
  - VkTimelineSemaphoreSubmitInfoKHR

New Enums

- VkSemaphoreTypeKHR
- VkSemaphoreWaitFlagBitsKHR

New Bitmasks

- VkSemaphoreWaitFlagsKHR

New Enum Constants

- VK_KHR_TIMELINE_SEMAPHORE_EXTENSION_NAME
- VK_KHR_TIMELINE_SEMAPHORE_SPEC_VERSION

Extending VkSemaphoreType:
  - VK_SEMAPHORE_TYPE_BINARY_KHR
  - VK_SEMAPHORE_TYPE_TIMELINE_KHR

Extending VkSemaphoreWaitFlagBits:
  - VK_SEMAPHORE_WAIT_ANY_BIT_KHR

Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_FEATURES_KHR
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TIMELINE_SEMAPHORE_PROPERTIES_KHR
Issues

1) Do we need a new object type for this?

**RESOLVED:** No, we just introduce a new type of semaphore object, as `VK_KHR_external_semaphore_win32` already uses semaphores as the destination for importing D3D12 fence objects, which are semantically close/identical to the proposed synchronization primitive.

2) What type of payload the new synchronization primitive has?

**RESOLVED:** A 64-bit unsigned integer that can only be set to strictly increasing values by signal operations and is not changed by wait operations.

3) Does the new synchronization primitive have the same signal-before-wait requirement as the existing semaphores do?

**RESOLVED:** No. Timeline semaphores support signaling and waiting entirely asynchronously. It is the responsibility of the client to avoid deadlock.

4) Does the new synchronization primitive allow resetting its payload?

**RESOLVED:** No, allowing the payload value to “go backwards” is problematic. Applications looking for reset behavior should create a new instance of the synchronization primitive instead.

5) How do we enable host waits on the synchronization primitive?

**RESOLVED:** Both a non-blocking query of the current payload value of the synchronization primitive, and a blocking wait operation are provided.

6) How do we enable device waits and signals on the synchronization primitive?

**RESOLVED:** Similar to `VK_KHR_external_semaphore_win32`, this extension introduces a new structure that can be chained to `VkSubmitInfo` to specify the values signaled semaphores should be set to, and the values waited semaphores need to reach.

7) Can the new synchronization primitive be used to synchronize presentation and swapchain image acquisition operations?

**RESOLVED:** Some implementations may have problems with supporting that directly, thus it is not allowed in this extension.

8) Do we want to support external sharing of the new synchronization primitive type?

**RESOLVED:** Yes. Timeline semaphore specific external sharing capabilities can be queried using `vkGetPhysicalDeviceExternalSemaphoreProperties` by chaining the new
VkSemaphoreTypeCreateInfoKHR structure to its pExternalSemaphoreInfo structure. This allows having a different set of external semaphore handle types supported for timeline semaphores vs. binary semaphores.

9) Do we need to add a host signal operation for the new synchronization primitive type?

**RESOLVED**: Yes. This helps in situations where one host thread submits a workload but another host thread has the information on when the workload is ready to be executed.

10) How should the new synchronization primitive interact with the ordering requirements of the original VkSemaphore?

**RESOLVED**: Prior to calling any command which may cause a wait operation on a binary semaphore, the client must ensure that the semaphore signal operation that has been submitted for execution and any semaphore signal operations on which it depends (if any) must have also been submitted for execution.

11) Should we have separate feature bits for different sub-features of timeline semaphores?

**RESOLVED**: No. The only feature which cannot be supported universally is timeline semaphore import/export. For import/export, the client is already required to query available external handle types via vkGetPhysicalDeviceExternalSemaphoreProperties and provide the semaphore type by adding a VkSemaphoreTypeCreateInfoKHR structure to the pNext chain of VkPhysicalDeviceExternalSemaphoreInfo so no new feature bit is required.

**Version History**

- Revision 1, 2018-05-10 (Faith Ekstrand)
  - Initial version
- Revision 2, 2019-06-12 (Faith Ekstrand)
  - Added an initialValue parameter to timeline semaphore creation

Description

This extension enables tighter array and struct packing to be used with uniform buffers.

It modifies the alignment rules for uniform buffers, allowing for tighter packing of arrays and structures. This allows, for example, the std430 layout, as defined in GLSL to be supported in uniform buffers.

Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

New Structures

- Stephen Clarke, Imagination Technologies
- Faith Ekstrand, Intel
- Jesse Hall, Google

Description

The `VK_KHR_variable_pointers` extension allows implementations to indicate their level of support for the `SPV_KHR_variable_pointers` SPIR-V extension. The SPIR-V extension allows shader modules to use invocation-private pointers into uniform and/or storage buffers, where the pointer values can be dynamic and non-uniform.

The `SPV_KHR_variable_pointers` extension introduces two capabilities. The first, `VariablePointersStorageBuffer`, must be supported by all implementations of this extension. The second, `VariablePointers`, is optional.

Promotion to Vulkan 1.1

All functionality in this extension is included in core Vulkan 1.1, with the KHR suffix omitted, however support for the `variablePointersStorageBuffer` feature is made optional. The original type, enum and command names are still available as aliases of the core functionality.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceVariablePointerFeaturesKHR`
  - `VkPhysicalDeviceVariablePointersFeaturesKHR`

New Enum Constants

- `VK_KHR_VARIABLE_POINTERS_EXTENSION_NAME`
- `VK_KHR_VARIABLE_POINTERS_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTERS_FEATURES_KHR`
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VARIABLE_POINTER_FEATURES_KHR`
New SPIR-V Capabilities

- VariablePointers
- VariablePointersStorageBuffer

Issues

1) Do we need an optional property for the SPIR-V VariablePointersStorageBuffer capability or should it be mandatory when this extension is advertised?

RESOLVED: Add it as a distinct feature, but make support mandatory. Adding it as a feature makes the extension easier to include in a future core API version. In the extension, the feature is mandatory, so that presence of the extension guarantees some functionality. When included in a core API version, the feature would be optional.

2) Can support for these capabilities vary between shader stages?

RESOLVED: No, if the capability is supported in any stage it must be supported in all stages.

3) Should the capabilities be features or limits?

RESOLVED: Features, primarily for consistency with other similar extensions.

Revision

3

Ratification Status

Ratified

Extension and Version Dependencies

VK_KHR_get_physical_device_properties2
Description

The VK_KHR_vulkan_memory_model extension allows use of the features guarded by the VulkanMemoryModel, VulkanMemoryModelDeviceScope, and VulkanMemoryModelAvailabilityVisibilityChains capabilities in shader modules. The Vulkan Memory Model formally defines how to synchronize memory accesses to the same memory locations performed by multiple shader invocations.

Note

Version 3 of the spec added a member (vulkanMemoryModelAvailabilityVisibilityChains) to VkPhysicalDeviceVulkanMemoryModelFeaturesKHR, which is an incompatible change from version 2.

Promotion to Vulkan 1.2

All functionality in this extension is included in core Vulkan 1.2, with the KHR suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the vulkanMemoryModel capability is optional. The original type, enum and command names are still available as aliases of the core functionality.
New Structures

- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceVulkanMemoryModelFeaturesKHR`

New Enum Constants

- `VK_KHR_VULKAN_MEMORY_MODEL_EXTENSION_NAME`
- `VK_KHR_VULKAN_MEMORY_MODEL_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_VULKAN_MEMORY_MODEL_FEATURES_KHR`

New SPIR-V Capabilities

- `VulkanMemoryModelKHR`

Version History

- Revision 1, 2018-06-24 (Jeff Bolz)
  - Initial draft
- Revision 3, 2018-12-10 (Jeff Bolz)
  - Add `vulkanMemoryModelAvailabilityVisibilityChains` member to the `VkPhysicalDeviceVulkanMemoryModelFeaturesKHR` structure.

Extension and Version Dependencies

- `VK_KHR_get_physical_device_properties2`

Deprecation state

- *Promoted to* Vulkan 1.3
Description

This extension allows the use of a null constant initializer on shader Workgroup memory variables, allowing implementations to expose any special hardware or instructions they may have. Zero initialization is commonly used by applications running untrusted content (e.g. web browsers) as way of defeating memory-scraping attacks.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceZeroInitializeWorkgroupMemoryFeaturesKHR

New Enum Constants

- VK_KHR_ZERO_INITIALIZE_WORKGROUP_MEMORY_EXTENSION_NAME
- VK_KHR_ZERO_INITIALIZE_WORKGROUP_MEMORY_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_ZERO_INITIALIZE_WORKGROUP_MEMORY_FEATURES_KHR

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the KHR suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Description
This extension defines the \texttt{VK_FORMAT_A4R4G4B4_UNORM_PACK16_EXT} and
VK_FORMAT_A4B4G4R4_UNORM_PACK16_EXT formats which are defined in other current graphics APIs.

This extension may be useful for building translation layers for those APIs or for porting applications that use these formats without having to resort to swizzles.

When VK_EXT_custom_border_color is used, these formats are not subject to the same restrictions for border color without format as with VK_FORMAT_B4G4R4A4_UNORM_PACK16.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDevice4444FormatsFeaturesEXT

New Enum Constants

- VK_EXT_4444_FORMATS_EXTENSION_NAME
- VK_EXT_4444_FORMATS_SPEC_VERSION

- Extending VkFormat:
  ◦ VK_FORMAT_A4B4G4R4_UNORM_PACK16_EXT
  ◦ VK_FORMAT_A4R4G4B4_UNORM_PACK16_EXT

- Extending VkStructureType:
  ◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_4444_FORMATS_FEATURES_EXT

Promotion to Vulkan 1.3

This extension has been partially promoted. The format enumerants introduced by the extension are included in core Vulkan 1.3, with the EXT suffix omitted. However, runtime support for these formats is optional in core Vulkan 1.3, while if this extension is supported, runtime support is mandatory. The feature structure is not promoted. The original enum names are still available as aliases of the core functionality.

Interactions and External Dependencies

- This extension requires SPV_EXT_physical_storage_buffer
- This extension provides API support for GLSL_EXT_buffer_reference and GLSL_EXT_buffer_reference_uvec2

Contributors

- Jeff Bolz, NVIDIA
- Neil Henning, AMD
- Tobias Hector, AMD
- Faith Ekstrand, Intel
- Baldur Karlsson, Valve

Description

This extension allows the application to query a 64-bit buffer device address value for a buffer, which can be used to access the buffer memory via the PhysicalStorageBufferEXT storage class in the GL_EXT_buffer_reference GLSL extension and SPV_EXT_physical_storage_buffer SPIR-V extension.

It also allows buffer device addresses to be provided by a trace replay tool, so that it matches the address used when the trace was captured.
New Commands

• vkGetBufferDeviceAddressEXT

New Structures

• VkBufferDeviceAddressInfoEXT

• Extending VkBufferCreateInfo:
  ◦ VkBufferDeviceAddressCreateInfoEXT

• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  ◦ VkPhysicalDeviceBufferAddressFeaturesEXT
  ◦ VkPhysicalDeviceBufferDeviceAddressFeaturesEXT

New Enum Constants

• VK_EXT_BUFFER_DEVICE_ADDRESS_EXTENSION_NAME
• VK_EXT_BUFFER_DEVICE_ADDRESS_SPEC_VERSION

• Extending VkBufferCreateFlagBits:
  ◦ VK_BUFFER_CREATE_DEVICE_ADDRESS_CAPTURE_REPLAY_BIT_EXT

• Extending VkBufferUsageFlagBits:
  ◦ VK_BUFFER_USAGE_SHADER_DEVICE_ADDRESS_BIT_EXT

• Extending VkResult:
  ◦ VK_ERROR_INVALID_DEVICE_ADDRESS_EXT

Description

The **VK_EXT_debug_marker** extension is a device extension. It introduces concepts of object naming and tagging, for better tracking of Vulkan objects, as well as additional commands for recording annotations of named sections of a workload to aid organization and offline analysis in external tools.

New Commands

- `vkCmdDebugMarkerBeginEXT`
- `vkCmdDebugMarkerEndEXT`
- `vkCmdDebugMarkerInsertEXT`
- `vkDebugMarkerSetObjectNameEXT`
- `vkDebugMarkerSetObjectTagEXT`

New Structures

- `VkDebugMarkerMarkerInfoEXT`
- `VkDebugMarkerObjectNameInfoEXT`
- `VkDebugMarkerObjectTagInfoEXT`

New Enums

- `VkDebugReportObjectTypeEXT`

New Enum Constants

- `VK_EXT_DEBUG_MARKER_EXTENSION_NAME`
- `VK_EXT_DEBUG_MARKER_SPEC_VERSION`

Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_DEBUG_MARKER_MARKER_INFO_EXT`
- `VK_STRUCTURE_TYPE_DEBUG_MARKER_OBJECT_NAME_INFO_EXT`
- `VK_STRUCTURE_TYPE_DEBUG_MARKER_OBJECT_TAG_INFO_EXT`

Examples

Example 1

Associate a name with an image, for easier debugging in external tools or with validation layers that can print a friendly name when referring to objects in error messages.
extern VkDevice device;
extern VkImage image;

// Must call extension functions through a function pointer:
PFN_vkDebugMarkerSetObjectNameEXT pfnDebugMarkerSetObjectNameEXT = (PFN_vkDebugMarkerSetObjectNameEXT)vkGetDeviceProcAddr(device, "vkDebugMarkerSetObjectNameEXT");

// Set a name on the image
const VkDebugMarkerObjectNameInfoEXT imageNameInfo = {
    VK_STRUCTURE_TYPE_DEBUG_MARKER_OBJECT_NAME_INFO_EXT, // sType
    NULL, // pNext
    VK_DEBUG_REPORT_OBJECT_TYPE_IMAGE_EXT, // objectType
    (uint64_t)image, // object
    "Brick Diffuse Texture", // pObjectName
};

pfnDebugMarkerSetObjectNameEXT(device, &imageNameInfo);

// A subsequent error might print:
// Image 'Brick Diffuse Texture' (0xc0dec0dedeadbeef) is used in a command buffer with no memory bound to it.

Example 2

Annotating regions of a workload with naming information so that offline analysis tools can display a more usable visualisation of the commands submitted.

extern VkDevice device;
extern VkCommandBuffer commandBuffer;

// Must call extension functions through a function pointer:
PFN_vkCmdDebugMarkerBeginEXT pfnCmdDebugMarkerBeginEXT = (PFN_vkCmdDebugMarkerBeginEXT)vkGetDeviceProcAddr(device, "vkCmdDebugMarkerBeginEXT");
PFN_vkCmdDebugMarkerEndEXT pfnCmdDebugMarkerEndEXT = (PFN_vkCmdDebugMarkerEndEXT)vkGetDeviceProcAddr(device, "vkCmdDebugMarkerEndEXT");
PFN_vkCmdDebugMarkerInsertEXT pfnCmdDebugMarkerInsertEXT = (PFN_vkCmdDebugMarkerInsertEXT)vkGetDeviceProcAddr(device, "vkCmdDebugMarkerInsertEXT");

// Describe the area being rendered
const VkDebugMarkerMarkerInfoEXT houseMarker = {
    VK_STRUCTURE_TYPE_DEBUG_MARKER_MARKER_INFO_EXT, // sType
    NULL, // pNext
    "Brick House", // pMarkerName
    { 1.0f, 0.0f, 0.0f, 1.0f }, // color
};
// Start an annotated group of calls under the 'Brick House' name
PFN_CmdDebugMarkerBeginEXT(commandBuffer, &houseMarker);
{
    // A mutable structure for each part being rendered
    VkDebugMarkerMarkerInfoEXT housePartMarker = {
        VK_STRUCTURE_TYPE_DEBUG_MARKER_MARKER_INFO_EXT, // sType
        NULL, // pNext
        NULL, // pMarkerName
        { 0.0f, 0.0f, 0.0f, 0.0f }, // color
    };

    // Set the name and insert the marker
    housePartMarker.pMarkerName = "Walls";
    pfn_CmdDebugMarkerInsertEXT(commandBuffer, &housePartMarker);

    // Insert the drawcall for the walls
    vk_CmdDrawIndexed(commandBuffer, 1000, 1, 0, 0, 0);

    // Insert a recursive region for two sets of windows
    housePartMarker.pMarkerName = "Windows";
    pfn_CmdDebugMarkerBeginEXT(commandBuffer, &housePartMarker);
    {
        vk_CmdDrawIndexed(commandBuffer, 75, 6, 1000, 0, 0);
        vk_CmdDrawIndexed(commandBuffer, 100, 2, 1450, 0, 0);
    }
    pfn_CmdDebugMarkerEndEXT(commandBuffer);

    housePartMarker.pMarkerName = "Front Door";
    pfn_CmdDebugMarkerInsertEXT(commandBuffer, &housePartMarker);

    vk_CmdDrawIndexed(commandBuffer, 350, 1, 1650, 0, 0);

    housePartMarker.pMarkerName = "Roof";
    pfn_CmdDebugMarkerInsertEXT(commandBuffer, &housePartMarker);

    vk_CmdDrawIndexed(commandBuffer, 500, 1, 2000, 0, 0);
}
// End the house annotation started above
pfn_CmdDebugMarkerEndEXT(commandBuffer);

Issues

1) Should the tag or name for an object be specified using the pNext parameter in the object's Vk*CreateInfo structure?

RESOLVED: No. While this fits with other Vulkan patterns and would allow more type safety and future proofing against future objects, it has notable downsides. In particular passing the name at Vk*CreateInfo time does not allow renaming, prevents late binding of naming information, and
does not allow naming of implicitly created objects such as queues and swapchain images.

2) Should the command annotation functions `vkCmdDebugMarkerBeginEXT` and `vkCmdDebugMarkerEndEXT` support the ability to specify a color?

**Resolved**: Yes. The functions have been expanded to take an optional color which can be used at will by implementations consuming the command buffer annotations in their visualisation.

3) Should the functions added in this extension accept an extensible structure as their parameter for a more flexible API, as opposed to direct function parameters? If so, which functions?

**Resolved**: Yes. All functions have been modified to take a structure type with extensible `pNext` pointer, to allow future extensions to add additional annotation information in the same commands.

**Version History**

- Revision 1, 2016-02-24 (Baldur Karlsson)
  - Initial draft, based on LunarG marker spec
- Revision 2, 2016-02-26 (Baldur Karlsson)
  - Renamed `Dbg` to `DebugMarker` in function names
  - Allow markers in secondary command buffers under certain circumstances
  - Minor language tweaks and edits
- Revision 3, 2016-04-23 (Baldur Karlsson)
  - Reorganise spec layout to closer match desired organisation
  - Added optional color to markers (both regions and inserted labels)
  - Changed functions to take extensible structs instead of direct function parameters
- Revision 4, 2017-01-31 (Baldur Karlsson)
  - Added explicit dependency on `VK_EXT_debug_report`
  - Moved definition of `VkDebugReportObjectTypeEXT` to debug report chapter.
  - Fixed typo in dates in revision history

Description
Due to the nature of the Vulkan interface, there is very little error information available to the developer and application. By enabling optional validation layers and using the VK_EXT_debug_report extension, developers can obtain much more detailed feedback on the application’s use of Vulkan. This extension defines a way for layers and the implementation to call back to the application for events of interest to the application.

New Object Types
• VkDebugReportCallbackEXT

New Commands
• vkCreateDebugReportCallbackEXT
• vkDebugReportMessageEXT
• vkDestroyDebugReportCallbackEXT
New Structures

- Extending `VkInstanceCreateInfo`:
  - `VkDebugReportCallbackCreateInfoEXT`

New Function Pointers

- `PFN_vkDebugReportCallbackEXT`

New Enums

- `VkDebugReportFlagBitsEXT`
- `VkDebugReportObjectTypeEXT`

New Bitmasks

- `VkDebugReportFlagsEXT`

New Enum Constants

- `VK_EXT_DEBUG_REPORT_EXTENSION_NAME`
- `VK_EXT_DEBUG_REPORT_SPEC_VERSION`
- Extending `VkObjectType`:
  - `VK_OBJECT_TYPE_DEBUG_REPORT_CALLBACK_EXT`
- Extending `VkResult`:
  - `VK_ERROR_VALIDATION_FAILED_EXT`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DEBUG_REPORT_CALLBACK_CREATE_INFO_EXT`
  - `VK_STRUCTURE_TYPE_DEBUG_REPORT_CREATE_INFO_EXT`

If Version 1.1 is supported:

- Extending `VkDebugReportObjectTypeEXT`:
  - `VK_DEBUG_REPORT_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_EXT`
  - `VK_DEBUG_REPORT_OBJECT_TYPE_SAMPLER_YCBCR_CONVERSION_EXT`

Examples

`VK_EXT_debug_report` allows an application to register multiple callbacks with the validation layers. Some callbacks may log the information to a file, others may cause a debug break point or other application defined behavior. An application can register callbacks even when no validation layers are enabled, but they will only be called for loader and, if implemented, driver events.

To capture events that occur while creating or destroying an instance an application can link a `VkDebugReportCallbackCreateInfoEXT` structure to the `pNext` element of the `VkInstanceCreateInfo`
structure given to `vkCreateInstance`.

Example uses: Create three callback objects. One will log errors and warnings to the debug console using Windows `OutputDebugString`. The second will cause the debugger to break at that callback when an error happens and the third will log warnings to stdout.

```c
VkResult res;
VkDebugReportCallbackEXT cb1, cb2, cb3;

VkDebugReportCallbackCreateInfoEXT callback1 = {
    VK_STRUCTURE_TYPE_DEBUG_REPORT_CALLBACK_CREATE_INFO_EXT, // sType
    NULL, // pNext
    VK_DEBUG_REPORT_ERROR_BIT_EXT | VK_DEBUG_REPORT_WARNING_BIT_EXT, // flags
    myOutputDebugString, // pfnCallback
    NULL // pUserData
};

res = vkCreateDebugReportCallbackEXT(instance, &callback1, &cb1);
if (res != VK_SUCCESS) /* Do error handling for VK_ERROR_OUT_OF_MEMORY */
    callback.flags = VK_DEBUG_REPORT_ERROR_BIT_EXT;
    callback.pfnCallback = myDebugBreak;
    callback.pUserData = NULL;
res = vkCreateDebugReportCallbackEXT(instance, &callback, &cb2);
if (res != VK_SUCCESS) /* Do error handling for VK_ERROR_OUT_OF_MEMORY */

VkDebugReportCallbackCreateInfoEXT callback3 = {
    VK_STRUCTURE_TYPE_DEBUG_REPORT_CALLBACK_CREATE_INFO_EXT, // sType
    NULL, // pNext
    VK_DEBUG_REPORT_WARNING_BIT_EXT, // flags
    mystdOutLogger, // pfnCallback
    NULL // pUserData
};

res = vkCreateDebugReportCallbackEXT(instance, &callback3, &cb3);
if (res != VK_SUCCESS) /* Do error handling for VK_ERROR_OUT_OF_MEMORY */
...

/* remove callbacks when cleaning up */
vkDestroyDebugReportCallbackEXT(instance, cb1);
vkDestroyDebugReportCallbackEXT(instance, cb2);
vkDestroyDebugReportCallbackEXT(instance, cb3);
```

**Note**

In the initial release of the `VK_EXT_debug_report` extension, the token `VK_STRUCTURE_TYPE_DEBUG_REPORT_CREATE_INFO_EXT` was used. Starting in version 2 of
the extension branch, `VK_STRUCTURE_TYPE_DEBUG_REPORT_CALLBACK_CREATE_INFO_EXT` is used instead for consistency with Vulkan naming rules. The older enum is still available for backwards compatibility.

**Note**

In the initial release of the `VK_EXT_debug_report` extension, the token `VK_DEBUG_REPORT_OBJECT_TYPE_DEBUG_REPORT_EXT` was used. Starting in version 8 of the extension branch, `VK_DEBUG_REPORT_OBJECT_TYPE_DEBUG_REPORT_CALLBACK_EXT_EXT` is used instead for consistency with Vulkan naming rules. The older enum is still available for backwards compatibility.

**Issues**

1) What is the hierarchy / seriousness of the message flags? E.g. `ERROR > WARN > PERF_WARN` ...

**RESOLVED:** There is no specific hierarchy. Each bit is independent and should be checked via bitwise AND. For example:

```c
if (localFlags & VK_DEBUG_REPORT_ERROR_BIT_EXT) {
    process error message
}
if (localFlags & VK_DEBUG_REPORT_DEBUG_BIT_EXT) {
    process debug message
}
```

The validation layers do use them in a hierarchical way (`ERROR > WARN > PERF, WARN > DEBUG > INFO`) and they (at least at the time of this writing) only set one bit at a time. But it is not a requirement of this extension.

It is possible that a layer may intercept and change, or augment the flags with extension values the application's debug report handler may not be familiar with, so it is important to treat each flag independently.

2) Should there be a VU requiring `VkDebugReportCallbackCreateInfoEXT::msgFlags` to be non-zero?

**RESOLVED:** It may not be very useful, but we do not need VU statement requiring the `VkDebugReportCallbackCreateInfoEXT::msgFlags` at create-time to be non-zero. One can imagine that apps may prefer it as it allows them to set the mask as desired - including nothing - at runtime without having to check.

3) What is the difference between `VK_DEBUG_REPORT_DEBUG_BIT_EXT` and `VK_DEBUG_REPORT_INFORMATION_BIT_EXT`?

**RESOLVED:** `VK_DEBUG_REPORT_DEBUG_BIT_EXT` specifies information that could be useful debugging the Vulkan implementation itself.

4) How do you compare handles returned by the debug_report callback to the application's handles?
RESOLVED: Due to the different nature of dispatchable and nondispatchable handles there is no generic way (that we know of) that works for common compilers with 32bit, 64bit, C and C++. We recommend applications use the same cast that the validation layers use:

```cpp
reinterpret_cast<uint64_t>(dispatchableHandle)
reinterpret_cast<uint64_t>(nondispatchableHandle)
```

This does require that the app treat dispatchable and nondispatchable handles differently.

**Version History**

- Revision 1, 2015-05-20 (Courtney Goetzenleuchter)
  - Initial draft, based on LunarG KHR spec, other KHR specs
- Revision 2, 2016-02-16 (Courtney Goetzenleuchter)
  - Update usage, documentation
- Revision 3, 2016-06-14 (Courtney Goetzenleuchter)
  - Update VK_EXT_DEBUG_REPORT_SPEC_VERSION to indicate added support for vkCreateInstance and vkDestroyInstance
- Revision 4, 2016-12-08 (Mark Lobodzinski)
  - Added Display_KHR, DisplayModeKHR extension objects
  - Added ObjectTable_NVX, IndirectCommandsLayout_NVX extension objects
  - Bumped spec revision
  - Retroactively added version history
- Revision 5, 2017-01-31 (Baldur Karlsson)
  - Moved definition of VkDebugReportObjectTypeEXT from debug marker chapter
- Revision 6, 2017-01-31 (Baldur Karlsson)
  - Added VK_DEBUG_REPORT_OBJECT_TYPE_DESCRIPTOR_UPDATE_TEMPLATE_KHR_EXT
- Revision 7, 2017-04-20 (Courtney Goeltzenleuchter)
  - Clarify wording and address questions from developers.
- Revision 8, 2017-04-21 (Courtney Goeltzenleuchter)
  - Remove unused enum VkDebugReportErrorEXT
- Revision 9, 2017-09-12 (Tobias Hector)
  - Added interactions with Vulkan 1.1
- Revision 10, 2020-12-14 (Courtney Goetzenleuchter)
  - Add issue 4 discussing matching handles returned by the extension, based on suggestion in public issue 368.

Interactions and External Dependencies

• Promoted to Vulkan 1.2 Core
• This extension requires SPV_EXT_descriptor_indexing
• This extension provides API support for GL_EXT_nonuniform_qualifier

Contributors

• Jeff Bolz, NVIDIA
• Daniel Rakos, AMD
• Slawomir Grajewski, Intel
• Tobias Hector, Imagination Technologies

Description

This extension adds several small features which together enable applications to create large
descriptor sets containing substantially all of their resources, and selecting amongst those resources with dynamic (non-uniform) indexes in the shader. There are feature enables and SPIR-V capabilities for non-uniform descriptor indexing in the shader, and non-uniform indexing in the shader requires use of a new NonUniformEXT decoration defined in the SPV_EXT_descriptor_indexing SPIR-V extension. There are descriptor set layout binding creation flags enabling several features:

- Descriptors can be updated after they are bound to a command buffer, such that the execution of the command buffer reflects the most recent update to the descriptors.
- Descriptors that are not used by any pending command buffers can be updated, which enables writing new descriptors for frame N+1 while frame N is executing.
- Relax the requirement that all descriptors in a binding that is “statically used” must be valid, such that descriptors that are not accessed by a submission need not be valid and can be updated while that submission is executing.
- The final binding in a descriptor set layout can have a variable size (and unsized arrays of resources are allowed in the GL_EXT_nonuniform_qualifier and SPV_EXT_descriptor_indexing extensions).

Note that it is valid for multiple descriptor arrays in a shader to use the same set and binding number, as long as they are all compatible with the descriptor type in the pipeline layout. This means a single array binding in the descriptor set can serve multiple texture dimensionalities, or an array of buffer descriptors can be used with multiple different block layouts.

There are new descriptor set layout and descriptor pool creation flags that are required to opt in to the update-after-bind functionality, and there are separate maxPerStage* and maxDescriptorSet* limits that apply to these descriptor set layouts which may be much higher than the pre-existing limits. The old limits only count descriptors in non-updateAfterBind descriptor set layouts, and the new limits count descriptors in all descriptor set layouts in the pipeline layout.

**New Structures**

- Extending VkDescriptorSetAllocateInfo:
  - VkDescriptorSetVariableDescriptorCountAllocateInfoEXT
- Extending VkDescriptorSetLayoutCreateInfo:
  - VkDescriptorSetLayoutBindingFlagsCreateInfoEXT
- Extending VkDescriptorSetLayoutSupport:
  - VkDescriptorSetVariableDescriptorCountLayoutSupportEXT
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceDescriptorIndexingFeaturesEXT
- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceDescriptorIndexingPropertiesEXT

**New Enums**

- VkDescriptorBindingFlagBitsEXT
New Bitmasks

- VkDescriptorBindingFlagsEXT

New Enum Constants

- VK_EXT_DESCRIPTOR_INDEXING_EXTENSION_NAME
- VK_EXT_DESCRIPTOR_INDEXING_SPEC_VERSION

Extending VkDescriptorBindingFlagBits:

- VK_DESCRIPTOR_BINDING_PARTIALLY_BOUND_BIT_EXT
- VK_DESCRIPTOR_BINDING_UPDATE_AFTER_BIND_BIT_EXT
- VK_DESCRIPTOR_BINDING_UPDATE_UNUSED_WHILE_PENDING_BIT_EXT
- VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT_EXT

Extending VkDescriptorPoolCreateFlagBits:

- VK_DESCRIPTOR_POOL_CREATE_UPDATE_AFTER_BIND_BIT_EXT

Extending VkDescriptorSetLayoutCreateFlagBits:

- VK_DESCRIPTOR_SET_LAYOUT_CREATE_UPDATE_AFTER_BIND_POOL_BIT_EXT

Extending VkResult:

- VK_ERROR_FRAGMENTATION_EXT

Extending VkStructureType:

- VK_STRUCTURE_TYPE_DESCRIPTOR_SET_LAYOUT_BINDING_FLAGS_CREATE_INFO_EXT
- VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_ALLOCATE_INFO_EXT
- VK_STRUCTURE_TYPE_DESCRIPTOR_SET_VARIABLE_DESCRIPTOR_COUNT_LAYOUT_SUPPORT_EXT
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_FEATURES_EXT
- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_DESCRIPTOR_INDEXING_PROPERTIES_EXT

Promotion to Vulkan 1.2

Functionality in this extension is included in core Vulkan 1.2, with the EXT suffix omitted. However, if Vulkan 1.2 is supported and this extension is not, the descriptorIndexing capability is optional. The original type, enum and command names are still available as aliases of the core functionality.

   • Jeff Bolz, NVIDIA
Description

This extension adds some more dynamic state to support applications that need to reduce the number of pipeline state objects they compile and bind.

New Commands

• `vkCmdBindVertexBuffer2EXT`
• `vkCmdSetCullModeEXT`
• `vkCmdSetDepthBoundsTestEnableEXT`
• `vkCmdSetDepthCompareOpEXT`
• `vkCmdSetDepthTestEnableEXT`
• `vkCmdSetDepthWriteEnableEXT`
• `vkCmdSetFrontFaceEXT`
• `vkCmdSetPrimitiveTopologyEXT`
• `vkCmdSetScissorWithCountEXT`
• `vkCmdSetStencilOpEXT`
• `vkCmdSetStencilTestEnableEXT`
• `vkCmdSetViewportWithCountEXT`

New Structures

• Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  ◦ `VkPhysicalDeviceExtendedDynamicStateFeaturesEXT`

New Enum Constants

• `VK_EXT_EXTENDED_DYNAMIC_STATE_EXTENSION_NAME`
• `VK_EXT_EXTENDED_DYNAMIC_STATE_SPEC_VERSION`
• Extending `VkDynamicState`:
  ◦ `VK_DYNAMIC_STATE_CULL_MODE_EXT`
  ◦ `VK_DYNAMIC_STATE_DEPTH_BOUNDS_TEST_ENABLE_EXT`
  ◦ `VK_DYNAMIC_STATE_DEPTH_COMPARE_OP_EXT`
  ◦ `VK_DYNAMIC_STATE_DEPTH_TEST_ENABLE_EXT`
  ◦ `VK_DYNAMIC_STATE_DEPTH_WRITE_ENABLE_EXT`
• VK_DYNAMIC_STATE_FRONT_FACE_EXT
• VK_DYNAMIC_STATE_PRIMITIVE_TOPOLOGY_EXT
• VK_DYNAMIC_STATE_SCISSOR_WITH_COUNT_EXT
• VK_DYNAMIC_STATE_STENCIL_OP_EXT
• VK_DYNAMIC_STATE_STENCIL_TEST_ENABLE_EXT
• VK_DYNAMIC_STATE_VERTEX_INPUT_BINDING_STRIDE_EXT
• VK_DYNAMIC_STATE_VIEWPORT_WITH_COUNT_EXT
  • Extending VkStructureType:
    • VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_EXTENDED_DYNAMIC_STATE_FEATURES_EXT

**Promotion to Vulkan 1.3**

This extension has been partially promoted. All dynamic state enumerants and entry points in this extension are included in core Vulkan 1.3, with the EXT suffix omitted. The feature structure is not promoted. Extension interfaces that were promoted remain available as aliases of the core functionality.

**Issues**

*Why are the values of pStrides in vkCmdBindVertexBuffers2 limited to be between 0 and the maximum extent of the binding, when this restriction is not present for the same static state?*

Implementing these edge cases adds overhead to some implementations that would require significant cost when calling this function, and the intention is that this state should be more or less free to change.

*VK_EXT_vertex_input_dynamic_state* allows the stride to be changed freely when supported via vkCmdSetVertexInputEXT[].

Description

In Vulkan, users can specify device-scope queue priorities. In some cases it may be useful to extend this concept to a system-wide scope. This extension provides a mechanism for callers to set their system-wide priority. The default queue priority is VK_QUEUE_GLOBAL_PRIORITY_MEDIUM_EXT.

The driver implementation will attempt to skew hardware resource allocation in favour of the higher-priority task. Therefore, higher-priority work may retain similar latency and throughput characteristics even if the system is congested with lower priority work.

The global priority level of a queue shall take precedence over the per-process queue priority (VkDeviceQueueCreateInfo::pQueuePriorities).

Abuse of this feature may result in starving the rest of the system from hardware resources. Therefore, the driver implementation may deny requests to acquire a priority above the default priority (VK_QUEUE_GLOBAL_PRIORITY_MEDIUM_EXT) if the caller does not have sufficient privileges. In this scenario VK_ERROR_NOT_PERMITTED_EXT is returned.

The driver implementation may fail the queue allocation request if resources required to complete the operation have been exhausted (either by the same process or a different process). In this scenario VK_ERROR_INITIALIZATION_FAILED is returned.
New Structures

- Extending `VkDeviceQueueCreateInfo`:
  - `VkDeviceQueueGlobalPriorityCreateInfoEXT`

New Enums

- `VkQueueGlobalPriorityEXT`

New Enum Constants

- `VK_EXT_GLOBAL_PRIORITY_EXTENSION_NAME`
- `VK_EXT_GLOBAL_PRIORITY_SPEC_VERSION`

Extending `VkResult`:

- `VK_ERROR_NOT_PERMITTED_EXT`

Extending `VkStructureType`:

- `VK_STRUCTURE_TYPE_DEVICE_QUEUE_GLOBAL_PRIORITY_CREATE_INFO_EXT`

Version History

- Revision 2, 2017-11-03 (Andres Rodriguez)
  - Fixed `VkQueueGlobalPriorityEXT` missing _EXT suffix
- Revision 1, 2017-10-06 (Andres Rodriguez)
  - First version.

**Last Modified Date**  
2021-03-29

**IP Status**  
No known IP claims.

**Contributors**  
- Yiwei Zhang, Google

**Description**

This device extension allows applications to query the global queue priorities supported by a queue family. It allows implementations to report which global priority levels are treated differently by the implementation, instead of silently mapping multiple requested global priority levels to the same internal priority, or using device creation failure to signal that a requested priority is not supported. It is intended primarily for use by system integration along with certain platform-specific priority enforcement rules.

**New Structures**

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:  
  - VkPhysicalDeviceGlobalPriorityQueryFeaturesEXT
- Extending VkQueueFamilyProperties2:  
  - VkQueueFamilyGlobalPriorityPropertiesEXT

**New Enum Constants**

- VK_EXT_GLOBAL_PRIORITY_QUERY_EXTENSION_NAME
- VK_EXT_GLOBAL_PRIORITY_QUERY_SPEC_VERSION
- VK_MAX_GLOBAL_PRIORITY_SIZE_EXT
- Extending VkStructureType:  
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_GLOBAL_PRIORITY_QUERY_FEATURES_EXT
  - VK_STRUCTURE_TYPE_QUEUE_FAMILY_GLOBAL_PRIORITY_PROPERTIES_EXT
Issues

1) Can we additionally query whether a caller is permitted to acquire a specific global queue priority in this extension?

RESOLVED: No. Whether a caller has enough privilege goes with the OS, and the Vulkan driver cannot really guarantee that the privilege will not change in between this query and the actual queue creation call.

2) If more than 1 queue using global priority is requested, is there a good way to know which queue is failing the device creation?

RESOLVED: No. There is not a good way at this moment, and it is also not quite actionable for the applications to know that because the information may not be accurate. Queue creation can fail because of runtime constraints like insufficient privilege or lack of resource, and the failure is not necessarily tied to that particular queue configuration requested.

Description

This extension adds stricter requirements for how out of bounds reads from images are handled. Rather than returning undefined values, most out of bounds reads return R, G, and B values of zero and alpha values of either zero or one. Components not present in the image format may be set to zero or to values based on the format as described in Conversion to RGBA.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceImageRobustnessFeaturesEXT

New Enum Constants

- VK_EXT_IMAGE_ROBUSTNESS_EXTENSION_NAME
- VK_EXT_IMAGE_ROBUSTNESS_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_IMAGE_ROBUSTNESS_FEATURES_EXT

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Issues

1. How does this extension differ from VK_EXT_robustness2?

The guarantees provided by this extension are a subset of those provided by the robustImageAccess2 feature of VK_EXT_robustness2. Where this extension allows return values of (0, 0, 0, 0) or (0, 0, 0, 1), robustImageAccess2 requires that a particular value dependent on the image format be returned. This extension provides no guarantees about the values returned for an access to an invalid Lod.

Examples

None.

Description
This extension introduces the ability to back uniform blocks directly with descriptor sets by storing inline uniform data within descriptor pool storage. Compared to push constants this new construct allows uniform data to be reused across multiple disjoint sets of drawing or dispatching commands and may enable uniform data to be accessed with fewer indirections compared to uniforms backed by buffer memory.
New Structures

- Extending VkDescriptorPoolCreateInfo:
  - VkDescriptorPoolInlineUniformBlockCreateInfo

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceInlineUniformBlockFeaturesEXT

- Extending VkPhysicalDeviceProperties2:
  - VkPhysicalDeviceInlineUniformBlockPropertiesEXT

- Extending VkWriteDescriptorSet:
  - VkWriteDescriptorSetInlineUniformBlockEXT

New Enum Constants

- VK_EXT_INLINE_UNIFORM_BLOCK_EXTENSION_NAME
- VK_EXT_INLINE_UNIFORM_BLOCK_SPEC_VERSION

- Extending VkDescriptorType:
  - VK_DESCRIPTOR_TYPE_INLINE_UNIFORM_BLOCK_EXT

- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_DESCRIPTOR_POOL_INLINE_UNIFORM_BLOCK_CREATE_INFO_EXT
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_FEATURES_EXT
  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_INLINE_UNIFORM_BLOCK_PROPERTIES_EXT
  - VK_STRUCTURE_TYPE_WRITE_DESCRIPTOR_SET_INLINE_UNIFORM_BLOCK_EXT

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Vulkan 1.3 adds additional functionality related to this extension in the form of the maxInlineUniformTotalSize limit.

Issues

1) Do we need a new storage class for inline uniform blocks vs. uniform blocks?

**RESOLVED**: No. The Uniform storage class is used to allow the same syntax used for both uniform buffers and inline uniform blocks.

2) Is the descriptor array index and array size expressed in terms of bytes or dwords for inline uniform block descriptors?

**RESOLVED**: In bytes, but both must be a multiple of 4, similar to how push constant ranges are specified. The descriptorCount of VkDescriptorSetLayoutBinding thus provides the total number of
bytes a particular binding with an inline uniform block descriptor type can hold, while the
srcArrayElement, dstArrayElement, and descriptorCount members of VkWriteDescriptorSet,
VkCopyDescriptorSet, and VkDescriptorUpdateTemplateEntry (where applicable) specify the byte offset
and number of bytes to write/copy to the binding’s backing store. Additionally, the stride member
of VkDescriptorUpdateTemplateEntry is ignored for inline uniform blocks and a default value of one
is used, meaning that the data to update inline uniform block bindings with must be contiguous in
memory.

3) What layout rules apply for uniform blocks corresponding to inline constants?

**RESOLVED:** They use the same layout rules as uniform buffers.

4) Do we need to add non-uniform indexing features/properties as introduced by
VK_EXT_descriptor_indexing for inline uniform blocks?

**RESOLVED:** No, because inline uniform blocks are not allowed to be “arrayed”. A single binding
with an inline uniform block descriptor type corresponds to a single uniform block instance and
the array indices inside that binding refer to individual offsets within the uniform block (see issue
#2). However, this extension does introduce new features/properties about the level of support for
update-after-bind inline uniform blocks.

5) Is the descriptorBindingVariableDescriptorCount feature introduced by
VK_EXT_descriptor_indexing supported for inline uniform blocks?

**RESOLVED:** Yes, as long as other inline uniform block specific limits are respected.

6) Do the robustness guarantees of robustBufferAccess apply to inline uniform block accesses?

**RESOLVED:** No, similarly to push constants, as they are not backed by buffer memory like uniform
buffers.

Description
This extension adds flags to Vk*PipelineCreateInfo and VkPipelineCacheCreateInfo structures with the aim of improving the predictability of pipeline creation cost. The goal is to provide information about potentially expensive hazards within the client driver during pipeline creation to the application before carrying them out rather than after.
**Background**

Pipeline creation is a costly operation, and the explicit nature of the Vulkan design means that cost is not hidden from the developer. Applications are also expected to schedule, prioritize, and load balance all calls for pipeline creation. It is strongly advised that applications create pipelines sufficiently ahead of their usage. Failure to do so will result in an unresponsive application, intermittent stuttering, or other poor user experiences. Proper usage of pipeline caches and/or derivative pipelines help mitigate this but is not assured to eliminate disruption in all cases. In the event that an ahead-of-time creation is not possible, considerations should be taken to ensure that the current execution context is suitable for the workload of pipeline creation including possible shader compilation.

Applications making API calls to create a pipeline must be prepared for any of the following to occur:

- OS/kernel calls to be made by the ICD
- Internal memory allocation not tracked by the `pAllocator` passed to `vkCreate*Pipelines`
- Internal thread synchronization or yielding of the current thread's core
- Extremely long (multi-millisecond+), blocking, compilation times
- Arbitrary call stacks depths and stack memory usage

The job or task based game engines that are being developed to take advantage of explicit graphics APIs like Vulkan may behave exceptionally poorly if any of the above scenarios occur. However, most game engines are already built to “stream” in assets dynamically as the user plays the game. By adding control by way of `VkPipelineCreateFlags`, we can require an ICD to report back a failure in critical execution paths rather than forcing an unexpected wait.

Applications can prevent unexpected compilation by setting `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT` on `Vk*PipelineCreateInfo::flags`. When set, an ICD must not attempt pipeline or shader compilation to create the pipeline object. In such a case, if the implementation fails to create a pipeline without compilation, the implementation **must** return the result `VK_PIPELINE_COMPILE_REQUIRED_EXT` and return `VK_NULL_HANDLE` for the pipeline.

By default `vkCreate*Pipelines` calls must attempt to create all pipelines before returning. Setting `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT_EXT` on `Vk*PipelineCreateInfo::flags` can be used as an escape hatch for batched pipeline creates.

Hidden locks also add to the unpredictability of the cost of pipeline creation. The most common case of locks inside the `vkCreate*Pipelines` is internal synchronization of the `VkPipelineCache` object. `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT_EXT` can be set when calling `vkCreatePipelineCache` to state the cache is externally synchronized.

The hope is that armed with this information application and engine developers can leverage existing asset streaming systems to recover from ”just-in-time” pipeline creation stalls.
New Structures

- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDevicePipelineCreationCacheControlFeaturesEXT`

New Enums

- `VkPipelineCacheCreateFlagBits`

New Enum Constants

- `VK_EXT_PIPELINE_CREATION_CACHE_CONTROL_EXTENSION_NAME`
- `VK_EXT_PIPELINE_CREATION_CACHE_CONTROL_SPEC_VERSION`

- Extending `VkPipelineCacheCreateFlagBits`:
  - `VK_PIPELINE_CACHE_CREATE_EXTERNALLY_SYNCHRONIZED_BIT_EXT`

- Extending `VkPipelineCreateFlagBits`:
  - `VK_PIPELINE_CREATE_EARLY_RETURN_ON_FAILURE_BIT_EXT`
  - `VK_PIPELINE_CREATE_FAIL_ON_PIPELINE_COMPILE_REQUIRED_BIT_EXT`

- Extending `VkResult`:
  - `VK_ERROR_PIPELINE_COMPILE_REQUIRED_EXT`
  - `VK_PIPELINE_COMPILE_REQUIRED_EXT`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PIPELINE_CREATION_CACHE_CONTROL_FEATURES_EXT`

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Description

This extension is a device extension which enables attaching arbitrary payloads to Vulkan objects. It introduces the idea of private data slots as a means of storing a 64-bit unsigned integer of application defined data. Private data slots can be created or destroyed any time an associated device is available. Private data slots can be reserved at device creation time, and limiting use to the amount reserved will allow the extension to exhibit better performance characteristics.
New Object Types

- VkPrivateDataSlotEXT

New Commands

- vkCreatePrivateDataSlotEXT
- vkDestroyPrivateDataSlotEXT
- vkGetPrivateDataEXT
- vkSetPrivateDataEXT

New Structures

- VkPrivateDataSlotCreateInfoEXT
- Extending VkDeviceCreateInfo:
  - VkDevicePrivateDataCreateInfoEXT
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDevicePrivateDataFeaturesEXT

New Bitmasks

- VkPrivateDataSlotCreateFlagsEXT

New Enum Constants

  - VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_PRIVATE_DATA_FEATURES_EXT
  - VK_STRUCTURE_TYPE_PRIVATE_DATA_SLOT_CREATE_INFO_EXT

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Examples

- In progress
Issues

(1) If I have to create a *VkPrivateDataSlot* to store and retrieve data on an object, how does this extension help me? Will I not need to store the *VkPrivateDataSlot* mapping with each object, and if I am doing that, I might as well just store the original data!

**RESOLVED:** The *VkPrivateDataSlot* can be thought of as an opaque index into storage that is reserved in each object. That is, you can use the same *VkPrivateDataSlot* with each object for a specific piece of information. For example, if a layer wishes to track per-object information, the layer only needs to allocate one *VkPrivateDataSlot* per device and it can use that private data slot for all of the device’s child objects. This allows multiple layers to store private data without conflicting with each other’s and/or the application’s private data.

(2) What if I need to store more than 64-bits of information per object?

**RESOLVED:** The data that you store per object could be a pointer to another object or structure of your own allocation.

Description
In unextended Vulkan, minification and magnification filters such as LINEAR allow sampled image lookups to return a filtered texel value produced by computing a weighted average of a collection of texels in the neighborhood of the texture coordinate provided.

This extension provides a new sampler parameter which allows applications to produce a filtered texel value by computing a component-wise minimum (MIN) or maximum (MAX) of the texels that would normally be averaged. The reduction mode is orthogonal to the minification and magnification filter parameters. The filter parameters are used to identify the set of texels used to produce a final filtered value; the reduction mode identifies how these texels are combined.

Promotion to Vulkan 1.2
All functionality in this extension is included in core Vulkan 1.2, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Interactions and External Dependencies

- This extension requires SPV_EXT_demote_to_helper_invocation
- This extension provides API support for GL_EXT_demote_to_helper_invocation

Contributors

- Jeff Bolz, NVIDIA

Description

This extension adds Vulkan support for the SPV_EXT_demote_to_helper_invocation SPIR-V extension. That SPIR-V extension provides a new instruction OpDemoteToHelperInvocationEXT allowing shaders to “demote” a fragment shader invocation to behave like a helper invocation for its duration. The demoted invocation will have no further side effects and will not output to the framebuffer, but remains active and can participate in computing derivatives and in group operations. This is a better match for the “discard” instruction in HLSL.

New Structures

- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceShaderDemoteToHelperInvocationFeaturesEXT

New Enum Constants

Interactions and External Dependencies
  • This extension requires SPV_KHR_shader_ballot
  • This extension provides API support for GL_ARB_shader_ballot

Contributors
  • Jeff Bolz, NVIDIA
  • Neil Henning, Codeplay
  • Daniel Koch, NVIDIA Corporation
Description

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_KHR_shader_ballot

This extension provides the ability for a group of invocations, which execute in parallel, to do limited forms of cross-invocation communication via a group broadcast of an invocation value, or broadcast of a bitarray representing a predicate value from each invocation in the group.

This extension provides access to a number of additional built-in shader variables in Vulkan:

- SubgroupEqMaskKHR, containing the subgroup mask of the current subgroup invocation,
- SubgroupGeMaskKHR, containing the subgroup mask of the invocations greater than or equal to the current invocation,
- SubgroupGtMaskKHR, containing the subgroup mask of the invocations greater than the current invocation,
- SubgroupLeMaskKHR, containing the subgroup mask of the invocations less than or equal to the current invocation,
- SubgroupLtMaskKHR, containing the subgroup mask of the invocations less than the current invocation,
- SubgroupLocalInvocationId, containing the index of an invocation within a subgroup, and
- SubgroupSize, containing the maximum number of invocations in a subgroup.

Additionally, this extension provides access to the new SPIR-V instructions:

- OpSubgroupBallotKHR,
- OpSubgroupFirstInvocationKHR, and
- OpSubgroupReadInvocationKHR,

When using GLSL source-based shader languages, the following variables and shader functions from GL_ARB_shader_ballot can map to these SPIR-V built-in decorations and instructions:

- in uint64_t gl_SubGroupEqMaskARB; → SubgroupEqMaskKHR,
- in uint64_t gl_SubGroupGeMaskARB; → SubgroupGeMaskKHR,
- in uint64_t gl_SubGroupGtMaskARB; → SubgroupGtMaskKHR,
- in uint64_t gl_SubGroupLeMaskARB; → SubgroupLeMaskKHR,
- in uint64_t gl_SubGroupLtMaskARB; → SubgroupLtMaskKHR,
- in uint gl_SubGroupInvocationARB; → SubgroupLocalInvocationId,
- uniform uint gl_SubGroupSizeARB; → SubgroupSize,
- ballotARB() → OpSubgroupBallotKHR,
- readFirstInvocationARB() → OpSubgroupFirstInvocationKHR, and
- readInvocationARB() → OpSubgroupReadInvocationKHR.
**Deprecated by Vulkan 1.2**

Most of the functionality in this extension is superseded by the core Vulkan 1.1 subgroup operations. However, Vulkan 1.1 required the `OpGroupNonUniformBroadcast` “Id” to be constant. This restriction was removed in Vulkan 1.2 with the addition of the `subgroupBroadcastDynamicId` feature.

**New Enum Constants**

- `VK_EXT_SHADER_SUBGROUP_BALLOT_EXTENSION_NAME`
- `VK_EXT_SHADER_SUBGROUP_BALLOT_SPEC_VERSION`

**New Built-In Variables**

- `SubgroupEqMaskKHR`
- `SubgroupGeMaskKHR`
- `SubgroupGtMaskKHR`
- `SubgroupLeMaskKHR`
- `SubgroupLtMaskKHR`
- `SubgroupLocalInvocationId`
- `SubgroupSize`

**New SPIR-V Capabilities**

- `SubgroupBallotKHR`

Interactions and External Dependencies
• This extension requires SPV_KHR_subgroup_vote
• This extension provides API support for GL_ARB_shader_group_vote

Contributors
• Neil Henning, Codeplay
• Daniel Koch, NVIDIA Corporation

Description
This extension adds support for the following SPIR-V extension in Vulkan:

• SPV_KHR_subgroup_vote

This extension provides new SPIR-V instructions:

• OpSubgroupAllKHR,
• OpSubgroupAnyKHR, and
• OpSubgroupAllEqualKHR.

to compute the composite of a set of boolean conditions across a group of shader invocations that are running concurrently (a subgroup). These composite results may be used to execute shaders more efficiently on a VkPhysicalDevice.

When using GLSL source-based shader languages, the following shader functions from GL_ARB_shader_group_vote can map to these SPIR-V instructions:

• anyInvocationARB() → OpSubgroupAnyKHR,
• allInvocationsARB() → OpSubgroupAllKHR, and
• allInvocationsEqualARB() → OpSubgroupAllEqualKHR.

The subgroup across which the boolean conditions are evaluated is implementation-dependent, and this extension provides no guarantee over how individual shader invocations are assigned to subgroups. In particular, a subgroup has no necessary relationship with the compute shader local workgroup — any pair of shader invocations in a compute local workgroup may execute in different subgroups as used by these instructions.

Compute shaders operate on an explicitly specified group of threads (a local workgroup), but many implementations will also group non-compute shader invocations and execute them concurrently. When executing code like

```c
if (condition) {
    result = do_fast_path();
} else {
    result = do_general_path();
}
```

where condition diverges between invocations, an implementation might first execute do_fast_path() for the invocations where condition is true and leave the other invocations dormant. Once do_fast_path() returns, it might call do_general_path() for invocations where condition is false and leave the other invocations dormant. In this case, the shader executes both the fast and the general path and might be better off just using the general path for all invocations.

This extension provides the ability to avoid divergent execution by evaluating a condition across an entire subgroup using code like:

```c
if (allInvocationsARB(condition)) {
    result = do_fast_path();
} else {
    result = do_general_path();
}
```

The built-in function allInvocationsARB() will return the same value for all invocations in the group, so the group will either execute do_fast_path() or do_general_path(), but never both. For example, shader code might want to evaluate a complex function iteratively by starting with an approximation of the result and then refining the approximation. Some input values may require a small number of iterations to generate an accurate result (do_fast_path) while others require a larger number (do_general_path). In another example, shader code might want to evaluate a complex function (do_general_path) that can be greatly simplified when assuming a specific value for one of its inputs (do_fast_path).

**Deprecated by Vulkan 1.1**

All functionality in this extension is superseded by the core Vulkan 1.1 subgroup operations.

Interactions and External Dependencies

- Promoted to Vulkan 1.2 Core
- This extension requires SPV_EXT_shader_viewport_index_layer
- This extension provides API support for GL_ARB_shader_viewport_layer_array
This extension adds support for the `ShaderViewportIndexLayerEXT` capability from the `SPV_EXT_shader_viewport_index_layer` extension in Vulkan.

This extension allows variables decorated with the `Layer` and `ViewportIndex` built-ins to be exported from vertex or tessellation shaders, using the `ShaderViewportIndexLayerEXT` capability.

When using GLSL source-based shading languages, the `gl_ViewportIndex` and `gl_Layer` built-in variables map to the SPIR-V `ViewportIndex` and `Layer` built-in decorations, respectively. Behaviour of these variables is extended as described in the `GL_ARB_shader_viewport_layer_array` (or the precursor `GL_AMD_vertex_shader_layer`, `GL_AMD_vertex_shader_viewport_index`, and `GL_NV_viewport_array2` extensions).

![Note]

The `ShaderViewportIndexLayerEXT` capability is equivalent to the `ShaderViewportIndexLayerNV` capability added by `VK_NV_viewport_array2`.

**Promotion to Vulkan 1.2**

All functionality in this extension is included in core Vulkan 1.2.

The single `ShaderViewportIndexLayerEXT` capability from the `SPV_EXT_shader_viewport_index_layer` extension is replaced by the `ShaderViewportIndex` and `ShaderLayer` capabilities from SPIR-V 1.5 which are enabled by the `shaderOutputViewportIndex` and `shaderOutputLayer` features, respectively. Additionally, if Vulkan 1.2 is supported but this extension is not, these capabilities are optional.

Enabling both features is equivalent to enabling the `VK_EXT_shader_viewport_index_layer` extension.

Description

This extension enables an implementation to control the subgroup size by allowing a varying subgroup size and also specifying a required subgroup size.

It extends the subgroup support in Vulkan 1.1 to allow an implementation to expose a varying subgroup size. Previously Vulkan exposed a single subgroup size per physical device, with the expectation that implementations will behave as if all subgroups have the same size. Some implementations may dispatch shaders with a varying subgroup size for different subgroups. As a result they could implicitly split a large subgroup into smaller subgroups or represent a small subgroup as a larger subgroup, some of whose invocations were inactive on launch.

To aid developers in understanding the performance characteristics of their programs, this extension exposes a minimum and maximum subgroup size that a physical device supports and a pipeline create flag to enable that pipeline to vary its subgroup size. If enabled, any SubgroupSize decorated variables in the SPIR-V shader modules provided to pipeline creation may vary between the minimum and maximum subgroup sizes.

An implementation is also optionally allowed to support specifying a required subgroup size for a given pipeline stage. Implementations advertise which stages support a required subgroup size, and any pipeline of a supported stage can be passed a VkPipelineShaderStageRequiredSubgroupSizeCreateInfoEXT structure to set the subgroup size for that shader stage of the pipeline. For compute shaders, this requires the developer to query the maxComputeWorkgroupSubgroups and ensure that:

\[ s = \text{WorkGroupSize.x} \times \text{WorkGroupSize.y} \times \text{WorkGroupSize.z} \leq \text{SubgroupSize} \times \text{maxComputeWorkgroupSubgroups} \]

Developers can also specify a new pipeline shader stage create flag that requires the implementation to have fully populated subgroups within local workgroups. This requires the workgroup size in the X dimension to be a multiple of the subgroup size.
New Structures

- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT`

- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceSubgroupSizeControlPropertiesEXT`

- Extending `VkPipelineShaderStageCreateInfo, VkShaderCreateInfoEXT`:
  - `VkPipelineShaderStageRequiredSubgroupSizeCreateInfoEXT`

New Enum Constants

- `VK_EXT_SUBGROUP_SIZE_CONTROL_EXTENSION_NAME`
- `VK_EXT_SUBGROUP_SIZE_CONTROL_SPEC_VERSION`

- Extending `VkPipelineShaderStageCreateFlagBits`:
  - `VK_PIPELINE_SHADER_STAGE_CREATE_ALLOW VARYING SUBGROUP SIZE_BIT_EXT`
  - `VK_PIPELINE_SHADER_STAGE_CREATE_REQUIRE FULL SUBGROUPS BIT_EXT`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL DEVICE SUBGROUP SIZE CONTROL FEATURES_EXT`
  - `VK_STRUCTURE_TYPE_PHYSICAL DEVICE SUBGROUP SIZE CONTROL PROPERTIES_EXT`
  - `VK_STRUCTURE_TYPE_PIPELINE_SHADER_STAGE_REQUIRED SUBGROUP SIZE CREATE INFO_EXT`

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Version History

- Revision 1, 2019-03-05 (Neil Henning)
  - Initial draft

- Revision 2, 2019-07-26 (Faith Ekstrand)
  - Add the missing `VkPhysicalDeviceSubgroupSizeControlFeaturesEXT` for querying subgroup size control features.

VK_EXT_texel_buffer_alignment

Name String

`VK_EXT_texel_buffer_alignment`

Extension Type

Device extension
This extension adds more expressive alignment requirements for uniform and storage texel buffers. Some implementations have single texel alignment requirements that cannot be expressed via `VkPhysicalDeviceLimits::minTexelBufferOffsetAlignment`.

New Structures

- Extending `VkPhysicalDeviceFeatures2, VkDeviceCreateInfo`:
  - `VkPhysicalDeviceTexelBufferAlignmentFeaturesEXT`
- Extending `VkPhysicalDeviceProperties2`:
  - `VkPhysicalDeviceTexelBufferAlignmentPropertiesEXT`
New Enum Constants

• VK_EXT_TEXEL_BUFFER_ALIGNMENT_EXTENSION_NAME
• VK_EXT_TEXEL_BUFFER_ALIGNMENT_SPEC_VERSION

Extending VkStructureType:

◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_FEATURES_EXT
◦ VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TEXEL_BUFFER_ALIGNMENT_PROPERTIES_EXT

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. However, only the properties structure is promoted. The feature structure is not promoted and texelBufferAlignment is enabled if using a Vulkan 1.3 instance. The original type name is still available as an alias of the core functionality.

Description
This extension adds support for textures compressed using the Adaptive Scalable Texture Compression (ASTC) High Dynamic Range (HDR) profile.

When this extension is enabled, the HDR profile is supported for all ASTC formats listed in ASTC Compressed Image Formats.

New Structures
- Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  - VkPhysicalDeviceTextureCompressionASTCHDRFeaturesEXT

New Enum Constants
- VK_EXT_TEXTURE_COMPRESSION_ASTC_HDR_EXTENSION_NAME
- VK_EXT_TEXTURE_COMPRESSION_ASTC_HDR_SPEC_VERSION
- Extending VkFormat:
  - VK_FORMAT_ASTC_10x10_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_10x5_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_10x6_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_10x8_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_12x10_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_12x12_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_4x4_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_5x4_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_5x5_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_6x5_SFLOAT_BLOCK_EXT
  - VK_FORMAT_ASTC_6x6_SFLOAT_BLOCK_EXT
Promotion to Vulkan 1.3

This extension has been partially promoted. Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. However, the feature is made optional in Vulkan 1.3. The original type, enum and command names are still available as aliases of the core functionality.

Issues

1) Should we add a feature or limit for this functionality?

Yes. It is consistent with the ASTC LDR support to add a feature like textureCompressionASTC_HDR. The feature is strictly speaking redundant as long as this is just an extension; it would be sufficient to just enable the extension. But adding the feature is more forward-looking if wanted to make this an optional core feature in the future.

2) Should we introduce new format enums for HDR?

Yes. Vulkan 1.0 describes the ASTC format enums as UNORM, e.g. VK_FORMAT_ASTC_4x4_UNORM_BLOCK, so it is confusing to make these contain HDR data. Note that the OpenGL (ES) extensions did not make this distinction because a single ASTC HDR texture may contain both unorm and float blocks. Implementations may not be able to distinguish between LDR and HDR ASTC textures internally and just treat them as the same format, i.e. if this extension is supported then sampling from a VK_FORMAT_ASTC_4x4_UNORM_BLOCK image format may return HDR results. Applications can get predictable results by using the appropriate image format.

Version History

  - Initial version

VK_EXT_tooling_info

Name String
   VK_EXT_tooling_info

Extension Type
   Device extension

Registered Extension Number
   246
Description

When an error occurs during application development, a common question is "What tools are actually running right now?" This extension adds the ability to query that information directly from the Vulkan implementation.

Outdated versions of one tool might not play nicely with another, or perhaps a tool is not actually running when it should have been. Trying to figure that out can cause headaches as it is necessary to consult each known tool to figure out what is going on — in some cases the tool might not even be known.

Typically, the expectation is that developers will simply print out this information for visual inspection when an issue occurs, however a small amount of semantic information about what the tool is doing is provided to help identify it programmatically. For example, if the advertised limits or features of an implementation are unexpected, is there a tool active which modifies these limits? Or if an application is providing debug markers, but the implementation is not actually doing anything with that information, this can quickly point that out.

New Commands

• vkGetPhysicalDeviceToolPropertiesEXT
New Structures

- VkPhysicalDeviceToolPropertiesEXT

New Enums

- VkToolPurposeFlagBitsEXT

New Bitmasks

- VkToolPurposeFlagsEXT

New Enum Constants

- VK_EXT_TOOLING_INFO_EXTENSION_NAME
- VK_EXT_TOOLING_INFO_SPEC_VERSION

Extending VkStructureType:

- VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_TOOL_PROPERTIES_EXT

If VK_EXT_debug_marker is supported:

- Extending VkToolPurposeFlagBits:
  - VK_TOOL_PURPOSE_DEBUG_MARKERS_BIT_EXT

If VK_EXT_debug_report is supported:

- Extending VkToolPurposeFlagBits:
  - VK_TOOL_PURPOSE_DEBUG_REPORTING_BIT_EXT

If VK_EXT_debug_utils is supported:

- Extending VkToolPurposeFlagBits:
  - VK_TOOL_PURPOSE_DEBUG_MARKERS_BIT_EXT
  - VK_TOOL_PURPOSE_DEBUG_REPORTING_BIT_EXT

Promotion to Vulkan 1.3

Functionality in this extension is included in core Vulkan 1.3, with the EXT suffix omitted. The original type, enum and command names are still available as aliases of the core functionality.

Examples

Printing Tool Information

```c
uint32_t num_tools;
VkPhysicalDeviceToolPropertiesEXT *pToolProperties;
vkGetPhysicalDeviceToolPropertiesEXT(physicalDevice, &num_tools, NULL);
```
Issues

1) Why is this information separate from the layer mechanism?

Some tooling may be built into a driver, or be part of the Vulkan loader etc. Tying this information directly to layers would have been awkward at best.

Description

This extension adds some Y'C'B'C'R formats that are in common use for video encode and decode, but were not part of the `VK_KHR_sampler_ycbcr_conversion` extension.

New Structures

- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceYcbcr2Plane444FormatsFeaturesEXT`

New Enum Constants

- `VK_EXT_YCBCR_2PLANE_444_FORMATS_EXTENSION_NAME`
- `VK_EXT_YCBCR_2PLANE_444_FORMATS_SPEC_VERSION`

- Extending `VkFormat`:
  - `VK_FORMAT_G10X6_B10X6R10X6_2PLANE_444_UNORM_3PACK16_EXT`
  - `VK_FORMAT_G12X4_B12X4R12X4_2PLANE_444_UNORM_3PACK16_EXT`
  - `VK_FORMAT_G16_B16R16_2PLANE_444_UNORM_EXT`
  - `VK_FORMAT_G8_B8R8_2PLANE_444_UNORM_EXT`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_YCBCR_2_PLANE_444_FORMATSFEATURES_EXT`

Promotion to Vulkan 1.3

This extension has been partially promoted. The format enumerants introduced by the extension are included in core Vulkan 1.3, with the EXT suffix omitted. However, runtime support for these formats is optional in core Vulkan 1.3, while if this extension is supported, runtime support is mandatory. The feature structure is not promoted. The original enum names are still available as aliases of the core functionality.

Description
This extension allows an application to specify a negative viewport height. The result is that the viewport transformation will flip along the y-axis.

- Allow negative height to be specified in the `VkViewport::height` field to perform y-inversion of the clip-space to framebuffer-space transform. This allows apps to avoid having to use `gl_Position.y = -gl_Position.y` in shaders also targeting other APIs.

Obsoletion by **VK_KHR_maintenance1 and Vulkan 1.1**
Functionality in this extension is included in **VK_KHR_maintenance1** and subsequently Vulkan 1.1. Due to some slight behavioral differences, this extension must not be enabled alongside **VK_KHR_maintenance1**, or in an instance created with version 1.1 or later requested in `VkApplicationInfo::apiVersion`.

New Enum Constants

Description
Render passes, and specifically subpass dependencies, enable much of the same functionality as the framebuffer fetch and pixel local storage extensions did for OpenGL ES. But certain techniques such as programmable blending are awkward or impractical to implement with these alone, in part because a self-dependency is required every time a fragment will read a value at a given sample coordinate.

This extension extends the mechanism of input attachments to allow access to framebuffer attachments when used as both input and color, or depth/stencil, attachments from one fragment to the next, in rasterization order, without explicit synchronization.

New Structures
• Extending VkPhysicalDeviceFeatures2, VkDeviceCreateInfo:
  • VkPhysicalDeviceRasterizationOrderAttachmentAccessFeaturesARM
New Enum Constants

- `VK_ARM_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_EXTENSION_NAME`
- `VK_ARM_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_SPEC_VERSION`
- Extending `VkPipelineColorBlendStateCreateFlagBits`:
  - `VK_PIPELINE_COLOR_BLEND_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_BIT_ARM`
- Extending `VkPipelineDepthStencilStateCreateFlagBits`:
  - `VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_ARM`
  - `VK_PIPELINE_DEPTH_STENCIL_STATE_CREATE_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_ARM`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_RASTERIZATION_ORDER_ATTACHMENT_ACCESS_FEATURES_ARM`
- Extending `VkSubpassDescriptionFlagBits`:
  - `VK_SUBPASS_DESCRIPTION_RASTERIZATION_ORDER_ATTACHMENT_COLOR_ACCESS_BIT_ARM`
  - `VK_SUBPASS_DESCRIPTION_RASTERIZATION_ORDER_ATTACHMENT_DEPTH_ACCESS_BIT_ARM`
  - `VK_SUBPASS_DESCRIPTION_RASTERIZATION_ORDER_ATTACHMENT_STENCIL_ACCESS_BIT_ARM`

Issues

1) Is there any interaction with the `VK_KHR_dynamic_rendering` extension?

No. This extension only affects reads from input attachments. Render pass instances begun with `vkCmdBeginRenderingKHR` do not have input attachments and a different mechanism will be needed to provide similar functionality in this case.

Examples

None.

Description

This extension allows device memory to be allocated for a particular buffer or image resource, which on some devices can significantly improve the performance of that resource. Normal device memory allocations must support memory aliasing and sparse binding, which could interfere with optimizations like framebuffer compression or efficient page table usage. This is important for render targets and very large resources, but need not (and probably should not) be used for smaller resources that can benefit from suballocation.

This extension adds a few small structures to resource creation and memory allocation: a new structure that flags whether an image/buffer will have a dedicated allocation, and a structure indicating the image or buffer that an allocation will be bound to.

New Structures

- Extending `VkBufferCreateInfo`:
  - `VkDedicatedAllocationBufferCreateInfoNV`
- Extending `VkImageCreateInfo`:
  - `VkDedicatedAllocationImageCreateInfoNV`
- Extending `VkMemoryAllocateInfo`:
  - `VkDedicatedAllocationMemoryAllocateInfoNV`

New Enum Constants

- `VK_NV_DEDICATED_ALLOCATION_EXTENSION_NAME`
- `VK_NV_DEDICATED_ALLOCATION_SPEC_VERSION`
- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_BUFFER_CREATE_INFO_NV`
  - `VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_IMAGE_CREATE_INFO_NV`
Examples

// Create an image with
// VkDedicatedAllocationImageCreateInfoNV::dedicatedAllocation
// set to VK_TRUE

VkDedicatedAllocationImageCreateInfoNV dedicatedImageInfo =
{
    VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_IMAGE_CREATE_INFO_NV,  // sType
    NULL,  // pNext
    VK_TRUE,  // dedicatedAllocation
};

VkImageCreateInfo imageCreateInfo =
{
    VK_STRUCTURE_TYPE_IMAGE_CREATE_INFO, // sType
    &dedicatedImageInfo,  // pNext
    // Other members set as usual
};

VkImage image;
VkResult result = vkCreateImage(
    device,
    &imageCreateInfo,
    NULL,  // pAllocator
    &image);

VkMemoryRequirements memoryRequirements;
vkGetImageMemoryRequirements(
    device,
    image,
    &memoryRequirements);

// Allocate memory with VkDedicatedAllocationMemoryAllocateInfoNV::image
// pointing to the image we are allocating the memory for

VkDedicatedAllocationMemoryAllocateInfoNV dedicatedInfo =
{
    VK_STRUCTURE_TYPE_DEDICATED_ALLOCATION_MEMORY_ALLOCATE_INFO_NV,  // sType
    NULL,  // pNext
    image,  // image
    VK_NULL_HANDLE,  // image
};
buffer

```c
VkMemoryAllocateInfo memoryAllocateInfo = {
    VK_STRUCTURE_TYPE_MEMORY_ALLOCATE_INFO, // sType
    &dedicatedInfo, // pNext
    memoryRequirements.size, // allocationSize
    FindMemoryTypeIndex(memoryRequirements.memoryTypeBits), // memoryTypeIndex
};

VkDeviceMemory memory;
vkAllocateMemory(  
    device,  
    &memoryAllocateInfo,  
    NULL, // pAllocator  
    &memory);  

// Bind the image to the memory

vkBindImageMemory(  
    device,  
    image,  
    memory,  
    0);  
```

Description

Applications may wish to export memory to other Vulkan instances or other APIs, or import memory from other Vulkan instances or other APIs to enable Vulkan workloads to be split up across application module, process, or API boundaries. This extension enables applications to create exportable Vulkan memory objects such that the underlying resources can be referenced outside the Vulkan instance that created them.

New Structures

- Extending VkImageCreateInfo:
  - VkExternalMemoryImageCreateInfoNV
- Extending VkMemoryAllocateInfo:
  - VkExportMemoryAllocateInfoNV

New Enum Constants

- VK_NV_EXTERNAL_MEMORY_EXTENSION_NAME
- VK_NV_EXTERNAL_MEMORY_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_EXPORT_MEMORY_ALLOCATE_INFO_NV
  - VK_STRUCTURE_TYPE_EXTERNAL_MEMORY_IMAGE_CREATE_INFO_NV
Issues

1) If memory objects are shared between processes and APIs, is this considered aliasing according to the rules outlined in the Memory Aliasing section?

**RESOLVED:** Yes, but strict exceptions to the rules are added to allow some forms of aliasing in these cases. Further, other extensions may build upon these new aliasing rules to define specific support usage within Vulkan for imported native memory objects, or memory objects from other APIs.

2) Are new image layouts or metadata required to specify image layouts and layout transitions compatible with non-Vulkan APIs, or with other instances of the same Vulkan driver?

**RESOLVED:** No. Separate instances of the same Vulkan driver running on the same GPU should have identical internal layout semantics, so applications have the tools they need to ensure views of images are consistent between the two instances. Other APIs will fall into two categories: Those that are Vulkan compatible (a term to be defined by subsequent interoperability extensions), or Vulkan incompatible. When sharing images with Vulkan incompatible APIs, the Vulkan image must be transitioned to the `VK_IMAGE_LAYOUT_GENERAL` layout before handing it off to the external API.

Note this does not attempt to address cross-device transitions, nor transitions to engines on the same device which are not visible within the Vulkan API. Both of these are beyond the scope of this extension.

Examples

```cpp
// TODO: Write some sample code here.
```

Description
Applications may wish to import memory from the Direct 3D API, or export memory to other Vulkan instances. This extension provides a set of capability queries that allow applications to determine what types of win32 memory handles an implementation supports for a given set of use cases.

New Commands
- vkGetPhysicalDeviceExternalImageFormatPropertiesNV

New Structures
- VkExternalImageFormatPropertiesNV

New Enums
- VkExternalMemoryFeatureFlagBitsNV
- VkExternalMemoryHandleTypeFlagBitsNV
New Bitmasks

- VkExternalMemoryFeatureFlagsNV
- VkExternalMemoryHandleTypeFlagsNV

New Enum Constants

- VK_NV_EXTERNAL_MEMORY_CAPABILITIES_EXTENSION_NAME
- VK_NV_EXTERNAL_MEMORY_CAPABILITIES_SPEC_VERSION

Issues

1) Why do so many external memory capabilities need to be queried on a per-memory-handle-type basis?

**RESOLVED**: This is because some handle types are based on OS-native objects that have far more limited capabilities than the very generic Vulkan memory objects. Not all memory handle types can name memory objects that support 3D images, for example. Some handle types cannot even support the deferred image and memory binding behavior of Vulkan and require specifying the image when allocating or importing the memory object.

2) Does the VkExternalImageFormatPropertiesNV struct need to include a list of memory type bits that support the given handle type?

**RESOLVED**: No. The memory types that do not support the handle types will simply be filtered out of the results returned by vkGetImageMemoryRequirements when a set of handle types was specified at image creation time.

3) Should the non-opaque handle types be moved to their own extension?

**RESOLVED**: Perhaps. However, defining the handle type bits does very little and does not require any platform-specific types on its own, and it is easier to maintain the bitmask values in a single extension for now. Presumably more handle types could be added by separate extensions though, and it would be midly weird to have some platform-specific ones defined in the core spec and some in extensions

Version History

  - Initial version

**VK_NV_external_memory_win32**

Name String

VK_NV_external_memory_win32

Extension Type

Device extension
Applications may wish to export memory to other Vulkan instances or other APIs, or import memory from other Vulkan instances or other APIs to enable Vulkan workloads to be split up across application module, process, or API boundaries. This extension enables win32 applications to export win32 handles from Vulkan memory objects such that the underlying resources can be referenced outside the Vulkan instance that created them, and import win32 handles created in the Direct3D API to Vulkan memory objects.

**New Commands**

- `vkGetMemoryWin32HandleNV`

**New Structures**

- Extending `VkMemoryAllocateInfo`:
  - `VkExportMemoryWin32HandleInfoNV`
New Enum Constants

- VK_NV_EXTERNAL_MEMORY_WIN32_EXTENSION_NAME
- VK_NV_EXTERNAL_MEMORY_WIN32_SPEC_VERSION
- Extending VkStructureType:
  - VK_STRUCTURE_TYPE_EXPORT_MEMORY_WIN32_HANDLE_INFO_NV
  - VK_STRUCTURE_TYPE_IMPORT_MEMORY_WIN32_HANDLE_INFO_NV

Issues

1) If memory objects are shared between processes and APIs, is this considered aliasing according to the rules outlined in the Memory Aliasing section?

**RESOLVED:** Yes, but strict exceptions to the rules are added to allow some forms of aliasing in these cases. Further, other extensions may build upon these new aliasing rules to define specific support usage within Vulkan for imported native memory objects, or memory objects from other APIs.

2) Are new image layouts or metadata required to specify image layouts and layout transitions compatible with non-Vulkan APIs, or with other instances of the same Vulkan driver?

**RESOLVED:** No. Separate instances of the same Vulkan driver running on the same GPU should have identical internal layout semantics, so applications have the tools they need to ensure views of images are consistent between the two instances. Other APIs will fall into two categories: Those that are Vulkan compatible (a term to be defined by subsequent interoperability extensions), or Vulkan incompatible. When sharing images with Vulkan incompatible APIs, the Vulkan image must be transitioned to the VK_IMAGE_LAYOUT_GENERAL layout before handing it off to the external API.

Note this does not attempt to address cross-device transitions, nor transitions to engines on the same device which are not visible within the Vulkan API. Both of these are beyond the scope of this extension.

3) Do applications need to call CloseHandle() on the values returned from vkGetMemoryWin32HandleNV when handleType is VK_EXTERNAL_MEMORY_HANDLE_TYPE_OPAQUE_WIN32_BIT_NV?

**RESOLVED:** Yes, unless it is passed back in to another driver instance to import the object. A successful get call transfers ownership of the handle to the application, while an import transfers ownership to the associated driver. Destroying the memory object will not destroy the handle or the handle’s reference to the underlying memory resource.

Examples

```c
// Create an exportable memory object and export an external handle from it.
```
// Pick an external format and handle type.
static const VkFormat format = VK_FORMAT_R8G8B8A8_UNORM;
static const VkExternalMemoryHandleTypeFlagsNV handleType =

Last Modified Date

2018-08-03

IP Status

No known IP claims.

Interactions and External Dependencies

- This extension requires SPV_NV_fragment_shader_barycentric
- This extension provides API support for GL_NV_fragment_shader_barycentric

Contributors

- Pat Brown, NVIDIA
- Daniel Koch, NVIDIA

Description

This extension adds support for the following SPIR-V extension in Vulkan:

- SPV_NV_fragment_shader_barycentric

The extension provides access to three additional fragment shader variable decorations in SPIR-V:

- PerVertexNV, which indicates that a fragment shader input will not have interpolated values, but instead must be accessed with an extra array index that identifies one of the vertices of the primitive producing the fragment
- BaryCoordNV, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using perspective interpolation
- BaryCoordNoPerspNV, which indicates that the variable is a three-component floating-point vector holding barycentric weights for the fragment produced using linear interpolation

When using GLSL source-based shader languages, the following variables from GL_NV_fragment_shader_barycentric maps to these SPIR-V built-in decorations:

- in vec3 gl_BaryCoordNV; → BaryCoordNV
- in vec3 gl_BaryCoordNoPerspNV; → BaryCoordNoPerspNV

GLSL variables declared using the __pervertexNV GLSL qualifier are expected to be decorated with
PerVertexNV in SPIR-V.

**Promotion to VK_KHR_fragment_shader_barycentric**

All functionality in this extension is included in **VK_KHR_fragment_shader_barycentric**, with the suffix changed to KHR.

**New Structures**

- Extending **VkPhysicalDeviceFeatures2, VkDeviceCreateInfo**:
  - **VkPhysicalDeviceFragmentShaderBarycentricFeaturesNV**

**New Enum Constants**

- **VK_NV_FRAGMENT_SHADER_BARYCENTRIC_EXTENSION_NAME**
- **VK_NV_FRAGMENT_SHADER_BARYCENTRIC_SPEC_VERSION**
- Extending **VkStructureType**:
  - **VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_FRAGMENT_SHADER_BARYCENTRIC_FEATURES_NV**

**New Built-In Variables**

- **BaryCoordNV**
- **BaryCoordNoPerspNV**

**New SPIR-V Decorations**

- **PerVertexNV**

**New SPIR-V Capabilities**

- **FragmentBarycentricNV**

**Issues**

(1) The AMD_shader_explicit_vertex_parameter extension provides similar functionality. Why write a new extension, and how is this extension different?

**RESOLVED:** For the purposes of Vulkan/SPIR-V, we chose to implement a separate extension due to several functional differences.

First, the hardware supporting this extension can provide a three-component barycentric weight vector for variables decorated with **BaryCoordNV**, while variables decorated with **BaryCoordSmoothAMD** provide only two components. In some cases, it may be more efficient to explicitly interpolate an attribute via:

```c
float value = (baryCoordNV.x * v[0].attrib + baryCoordNV.y * v[1].attrib +
```

4660
instead of

```c
float value = (baryCoordSmoothAMD.x * (v[0].attrib - v[2].attrib) +
             baryCoordSmoothAMD.y * (v[1].attrib - v[2].attrib) +
             v[2].attrib);
```

Additionally, the semantics of the decoration `BaryCoordPullModelAMD` do not appear to map to anything supported by the initial hardware implementation of this extension.

This extension provides a smaller number of decorations than the AMD extension, as we expect that shaders could derive variables decorated with things like `BaryCoordNoPerspCentroidAMD` with explicit attribute interpolation instructions. One other relevant difference is that explicit per-vertex attribute access using this extension does not require a constant vertex number.

(2) Why do the built-in SPIR-V decorations for this extension include two separate built-ins `BaryCoordNV` and `BaryCoordNoPerspNV` when a “no perspective” variable could be decorated with `BaryCoordNV` and `NoPerspective`?

**RESOLVED:** The SPIR-V extension for this feature chose to mirror the behavior of the GLSL extension, which provides two built-in variables. Additionally, it is not clear that its a good idea (or even legal) to have two variables using the “same attribute”, but with different interpolation modifiers.

Description

This extension allows GLSL shaders written to the `GL_KHR_vulkan_gls1` extension specification to be used instead of SPIR-V. The implementation will automatically detect whether the shader is SPIR-V or GLSL, and compile it appropriately.

Deprecation

Functionality in this extension is outside of the scope of Vulkan and is better served by a compiler library such as glslang. No new implementations will support this extension, so applications should not use it.

New Enum Constants

- `VK_NV_GLSL_SHADER_EXTENSION_NAME`
- `VK_NV_GLSL_SHADER_SPEC_VERSION`
- Extending `VkResult`:
  - `VK_ERROR_INVALID_SHADER_NV`

Examples

Example 1

Passing in GLSL code

```c
char const vss[] =
    "#version 450 core\n",
    "layout(location = 0) in vec2 aVertex;\n",
    "layout(location = 1) in vec4 aColor;\n"
```
"out vec4 vColor;\n" 
"void main()\n" 
"{\n" 
    vColor = aColor;\n" 
    gl_Position = vec4(aVertex, 0, 1);\n" 
}\n"

; 
VkShaderModuleCreateInfo vertexShaderInfo = { 
VK_STRUCTURE_TYPE_SHADER_MODULE_CREATE_INFO }; 
vertexShaderInfo.codeSize = sizeof vss; 
vertexShaderInfo.pCode = vss; 
VkShaderModule vertexShader; 
vkCreateShaderModule(device, &vertexShaderInfo, 0, &vertexShader);
Applications that wish to import Direct3D 11 memory objects into the Vulkan API may wish to use the native keyed mutex mechanism to synchronize access to the memory between Vulkan and Direct3D. This extension provides a way for an application to access the keyed mutex associated with an imported Vulkan memory object when submitting command buffers to a queue.

**New Structures**

- Extending `VkSubmitInfo, VkSubmitInfo2`:
  - `VkWin32KeyedMutexAcquireReleaseInfoNV`

**New Enum Constants**

- `VK_NV_WIN32_KEYED_MUTEX_EXTENSION_NAME`
- `VK_NV_WIN32_KEYED_MUTEX_SPEC_VERSION`

- Extending `VkStructureType`:
  - `VK_STRUCTURE_TYPE_WIN32_KEYED_MUTEX_ACQUIRE_RELEASE_INFO_NV`

**Examples**

```c

// Import a memory object from Direct3D 11, and synchronize access to it in Vulkan using keyed mutex objects.

extern VkPhysicalDevice physicalDevice;
extern VkDevice device;
extern HANDLE sharedNtHandle;

static const VkFormat format = VK_FORMAT_R8G8B8A8_UNORM;
static const VkExternalMemoryHandleTypeFlagsNV handleType = VK_EXTERNAL_MEMORY_HANDLE_TYPE_D3D11_IMAGE_BIT_NV;

VkPhysicalDeviceMemoryProperties memoryProperties;
VkExternalImageFormatPropertiesNV properties;
```
VkExternalMemoryImageCreateInfoNV externalMemoryImageCreateInfo;
VkImageCreateInfo imageCreateInfo;
VkImage image;
VkMemoryRequirements imageMemoryRequirements;
uint32_t numMemoryTypes;
uint32_t memoryType;
VkImportMemoryWin32HandleInfoNV importMemoryInfo;
VkMemoryAllocateInfo memoryAllocateInfo;
VkDeviceMemory mem;
VkResult result;

// Figure out how many memory types the device supports
vkGetPhysicalDeviceMemoryProperties(physicalDevice,
    &memoryProperties);
numMemoryTypes = memoryProperties.memoryTypeCount;

// Check the external handle type capabilities for the chosen format
// Importable 2D image support with at least 1 mip level, 1 array
// layer, and VK_SAMPLE_COUNT_1_BIT using optimal tiling and supporting
// texturing and color rendering is required.
result = vkGetPhysicalDeviceExternalImageFormatPropertiesNV(
    physicalDevice,
    format,
    VK_IMAGE_TYPE_2D,
    VK_IMAGE_TILING_OPTIMAL,
    VK_IMAGE_USAGE_SAMPLED_BIT |
    VK_IMAGE_USAGE_COLOR_ATTACHMENT_BIT,
    0,
    handleType,
    &properties);

if ((result != VK_SUCCESS) ||
    !(properties.externalMemoryFeatures &

Version History

• Revision 2, 2016-08-11 (James Jones)
  ◦ Updated sample code based on the NV external memory extensions.
  ◦ Renamed from NVX to NV extension.
  ◦ Added Overview and Description sections.
  ◦ Updated sample code to use the NV external memory extensions.

• Revision 1, 2016-06-14 (Carsten Rohde)
  ◦ Initial draft.

**Last Modified Date**

2020-12-02

**IP Status**

No known IP claims.

**Contributors**

- Joshua Ashton, Valve
- Hans-Kristian Arntzen, Valve

**Description**

This extension allows applications to reduce descriptor memory footprint by allowing a descriptor to be able to mutate to a given list of descriptor types depending on which descriptor types are written into, or copied into a descriptor set.

The main use case this extension intends to address is descriptor indexing with `VK_DESCRIPTOR_BINDING_VARIABLE_DESCRIPTOR_COUNT_BIT` where the descriptor types are completely generic, as this means applications can allocate one large descriptor set, rather than having one large descriptor set per descriptor type, which significantly bloats descriptor memory usage and causes performance issues.

This extension also adds a mechanism to declare that a descriptor pool, and therefore the descriptor sets that are allocated from it, reside only in host memory; as such these descriptors can only be updated/copied, but not bound.

These features together allow much more efficient emulation of the raw D3D12 binding model. This extension is primarily intended to be useful for API layering efforts.

**New Structures**

- `VkMutableDescriptorTypeListVALVE`
- Extending `VkDescriptorSetLayoutCreateInfo`, `VkDescriptorPoolCreateInfo`:
  - `VkMutableDescriptorTypeCreateInfoVALVE`
- Extending `VkPhysicalDeviceFeatures2`, `VkDeviceCreateInfo`:
  - `VkPhysicalDeviceMutableDescriptorTypeFeaturesVALVE`
New Enum Constants

- `VKVALVEMUTABLE_DESCRIPTOR_TYPE_EXTENSION_NAME`
- `VKVALVEMUTABLE_DESCRIPTOR_TYPE_SPEC_VERSION`

Extending `VkDescriptorPoolCreateFlagBits`:
- `VK_DESCRIPTOR_POOL_CREATE_HOST_ONLY_BIT_VALVE`

Extending `VkDescriptorSetLayoutCreateFlagBits`:
- `VK_DESCRIPTOR_SET_LAYOUT_CREATE_HOST_ONLY_POOL_BIT_VALVE`

Extending `VkDescriptorType`:
- `VK_DESCRIPTOR_TYPE_MUTABLE_VALVE`

Extending `VkStructureType`:
- `VK_STRUCTURE_TYPE_MUTABLE_DESCRIPTOR_TYPE_CREATE_INFO_VALVE`
- `VK_STRUCTURE_TYPE_PHYSICAL_DEVICE_MUTABLE_DESCRIPTOR_TYPE_FEATURES_VALVE`

Version History

- Revision 1, 2020-12-01 (Joshua Ashton, Hans-Kristian Arntzen)
  - Initial specification, squashed from public draft.
Appendix F: Vulkan Roadmap Milestones

Roadmap milestones are intended to be supported by mid-to-high-end smartphones, tablets, laptops, consoles, and desktop devices.

Each milestone indicates support for a set of extensions, features, limits, and formats across these devices, and should be supported by all such new hardware shipping by the end of the target year or shortly thereafter.

Roadmap 2022

The Roadmap 2022 milestone is intended to be supported by newer mid-to-high-end devices shipping in 2022 or shortly thereafter across mainstream smartphone, tablet, laptops, console and desktop devices.

Required API versions

This profile requires Vulkan 1.3.

Required Features

The following core optional features are required to be supported:

- Vulkan 1.0 Optional Features
  - fullDrawIndexUint32
  - imageCubeArray
  - independentBlend
  - sampleRateShading
  - drawIndirectFirstInstance
  - depthClamp
  - depthBiasClamp
  - samplerAnisotropy
  - occlusionQueryPrecise
  - fragmentStoresAndAtomics
  - shaderStorageImageExtendedFormats
  - shaderUniformBufferArrayDynamicIndexing
  - shaderSampledImageArrayDynamicIndexing
  - shaderStorageBufferArrayDynamicIndexing
  - shaderStorageImageArrayDynamicIndexing
- Vulkan 1.1 Optional Features
  - samplerYcbcrConversion
Vulkan 1.2 Optional Features

- `samplerMirrorClampToEdge`
- `descriptorIndexing`
- `shaderUniformTexelBufferArrayDynamicIndexing`
- `shaderStorageTexelBufferArrayDynamicIndexing`
- `shaderUniformBufferArrayNonUniformIndexing`
- `shaderSampledImageArrayNonUniformIndexing`
- `shaderStorageBufferArrayNonUniformIndexing`
- `descriptorBindingSampledImageUpdateAfterBind`
- `descriptorBindingStorageImageUpdateAfterBind`
- `descriptorBindingStorageBufferUpdateAfterBind`
- `descriptorBindingUniformTexelBufferUpdateAfterBind`
- `descriptorBindingStorageTexelBufferUpdateAfterBind`
- `descriptorBindingUpdateUnusedWhilePending`
- `descriptorBindingPartiallyBound`
- `descriptorBindingVariableDescriptorCount`
- `runtimeDescriptorArray`
- `scalarBlockLayout`

**Required Limits**

The following core increased limits are **required**

*Table 99. Vulkan 1.0 Limits*

**Required extensions**

The following extensions are **required**

*VK_KHR_global_priority*
Appendix G: API Boilerplate

This appendix defines Vulkan API features that are infrastructure required for a complete functional description of Vulkan, but do not logically belong elsewhere in the Specification.

Vulkan Header Files

Vulkan is defined as an API in the C99 language. Khronos provides a corresponding set of header files for applications using the API, which may be used in either C or C++ code. The interface descriptions in the specification are the same as the interfaces defined in these header files, and both are derived from the \texttt{vk.xml} XML API Registry, which is the canonical machine-readable description of the Vulkan API. The Registry, scripts used for processing it into various forms, and documentation of the registry schema are available as described at \url{https://registry.khronos.org/vulkan/#apiregistry}.

Language bindings for other languages can be defined using the information in the Specification and the Registry. Khronos does not provide any such bindings, but third-party developers have created some additional bindings.

Vulkan Combined API Header \texttt{vulkan.h} (Informative)

Applications normally will include the header \texttt{vulkan.h}. In turn, \texttt{vulkan.h} always includes the following headers:

- \texttt{vk_platform.h}, defining platform-specific macros and headers.
- \texttt{vulkan_core.h}, defining APIs for the Vulkan core and all registered extensions other than window system-specific and provisional extensions, which are included in separate header files.

In addition, specific preprocessor macros defined at the time \texttt{vulkan.h} is included cause header files for the corresponding window system-specific and provisional interfaces to be included, as described below.

Vulkan Platform-Specific Header \texttt{vk_platform.h} (Informative)

Platform-specific macros and interfaces are defined in \texttt{vk_platform.h}. These macros are used to control platform-dependent behavior, and their exact definitions are under the control of specific platforms and Vulkan implementations.

Platform-Specific Calling Conventions

On many platforms the following macros are empty strings, causing platform- and compiler-specific default calling conventions to be used.

\texttt{VKAPI_ATTR} is a macro placed before the return type in Vulkan API function declarations. This macro controls calling conventions for C++11 and GCC/Clang-style compilers.

\texttt{VKAPI_CALL} is a macro placed after the return type in Vulkan API function declarations. This macro controls calling conventions for MSVC-style compilers.
VKAPI_PTR is a macro placed between the '(' and '*' in Vulkan API function pointer declarations. This macro also controls calling conventions, and typically has the same definition as VKAPI_ATTR or VKAPI_CALL, depending on the compiler.

With these macros, a Vulkan function declaration takes the form of:

\[
\text{VKAPI_ATTR <return_type> VKAPI_CALL <command_name>(<command_parameters>)};
\]

Additionally, a Vulkan function pointer type declaration takes the form of:

\[
\text{typedef <return_type> (VKAPI_PTR *PFN_<command_name>)(<command_parameters>)};
\]

Platform-Specific Header Control

If the VK_NO_STDINT_H macro is defined by the application at compile time, extended integer types used by the Vulkan API, such as uint8_t, must also be defined by the application. Otherwise, the Vulkan headers will not compile. If VK_NO_STDINT_H is not defined, the system <stdint.h> is used to define these types. There is a fallback path when Microsoft Visual Studio version 2008 and earlier versions are detected at compile time.

If the VK_NO_STDDEF_H macro is defined by the application at compile time, size_t, must also be defined by the application. Otherwise, the Vulkan headers will not compile. If VK_NO_STDDEF_H is not defined, the system <stddef.h> is used to define this type.

Vulkan Core API Header vulkan_core.h

Applications that do not make use of window system-specific extensions may simply include vulkan_core.h instead of vulkan.h, although there is usually no reason to do so. In addition to the Vulkan API, vulkan_core.h also defines a small number of C preprocessor macros that are described below.

Vulkan Header File Version Number

VK_HEADER_VERSION is the version number of the vulkan_core.h header. This value is kept synchronized with the patch version of the released Specification.

// Provided by VK_VERSION_1_0
// Version of this file
#define VK_HEADER_VERSION 257

VK_HEADER_VERSION_COMPLETE is the complete version number of the vulkan_core.h header, comprising the major, minor, and patch versions. The major/minor values are kept synchronized with the complete version of the released Specification. This value is intended for use by automated tools to identify exactly which version of the header was used during their generation.

Applications should not use this value as their VkApplicationInfo::apiVersion. Instead applications
should explicitly select a specific fixed major/minor API version using, for example, one of the `VK_API_VERSION_*_*` values.

```c
// Provided by VK_VERSION_1_0
// Complete version of this file
#define VK_HEADER_VERSION_COMPLETE VK_MAKE_API_VERSION(0, 1, 3, VK_HEADER_VERSION)
```

`VK_API_VERSION` is now commented out of `vulkan_core.h` and cannot be used.

```c
// Provided by VK_VERSION_1_0
// DEPRECATED: This define has been removed. Specific version defines (e.g.
// VK_API_VERSION_1_0), or the VK_MAKE_VERSION macro, should be used instead.
// #define VK_API_VERSION VK_MAKE_API_VERSION(0, 1, 0, 0) // Patch version should
always be set to 0
```

**Vulkan Handle Macros**

`VK_DEFINE_HANDLE` defines a dispatchable handle type.

```c
// Provided by VK_VERSION_1_0

#define VK_DEFINE_HANDLE(object) typedef struct object##_T* object;
```

- `object` is the name of the resulting C type.

The only dispatchable handle types are those related to device and instance management, such as `VkDevice`.

`VK_DEFINE_NON_DISPATCHABLE_HANDLE` defines a non-dispatchable handle type.

```c
// Provided by VK_VERSION_1_0

#ifndef VK_DEFINE_NON_DISPATCHABLE_HANDLE
#if (VK_USE_64_BIT_PTR_DEFINES==1)
#define VK_DEFINE_NON_DISPATCHABLE_HANDLE(object) typedef struct object##_T* object;
#else
#define VK_DEFINE_NON_DISPATCHABLE_HANDLE(object) typedef uint64_t object;
#endif
#endif
```

- `object` is the name of the resulting C type.

Most Vulkan handle types, such as `VkBuffer`, are non-dispatchable.

---

**Note**
The `vulkan_core.h` header allows the `VK_DEFINE_NON_DISPATCHABLE_HANDLE` and `VK_NULL_HANDLE` definitions to be overridden by the application. If `VK_DEFINE_NON_DISPATCHABLE_HANDLE` is already defined when `vulkan_core.h` is compiled, the default definitions for `VK_DEFINE_NON_DISPATCHABLE_HANDLE` and `VK_NULL_HANDLE` are skipped. This allows the application to define a binary-compatible custom handle which may provide more type-safety or other features needed by the application. Applications must not define handles in a way that is not binary compatible - where binary compatibility is platform dependent.

`VK_NULL_HANDLE` is a reserved value representing a non-valid object handle. It may be passed to and returned from Vulkan commands only when specifically allowed.

```c
// Provided by VK_VERSION_1_0

#ifndef VK_DEFINE_NON_DISPATCHABLE_HANDLE
 #if (VK_USE_64_BIT_PTR_DEFINES==1)
   #if (defined(__cplusplus) && (__cplusplus >= 201103L)) || (defined(_MSVC_LANG) && (_MSVC_LANG >= 201103L))
     #define VK_NULL_HANDLE nullptr
   #else
     #define VK_NULL_HANDLE ((void*)0)
   #endif
 #else
 #define VK_NULL_HANDLE 0ULL
 #endif
#endif

#ifndef VK_NULL_HANDLE
 #define VK_NULL_HANDLE 0
#endif

VK_USE_64_BIT_PTR_DEFINES defines whether the default non-dispatchable handles are declared using either a 64-bit pointer type or a 64-bit unsigned integer type.

`VK_USE_64_BIT_PTR_DEFINES` is set to '1' to use a 64-bit pointer type or any other value to use a 64-bit unsigned integer type.

```c
// Provided by VK_VERSION_1_0

#ifndef VK_USE_64_BIT_PTR_DEFINES
 #if defined(__LP64__) || defined(_WIN64) || (defined(__x86_64__) && !defined(__ILP32__)) || defined(_M_X64) || defined(__ia64) || defined (_M_IA64) || defined(__aarch64__) || defined(__powerpc64__)
   #define VK_USE_64_BIT_PTR_DEFINES 1
 #else
   #define VK_USE_64_BIT_PTR_DEFINES 0
 #endif
#endif
```
Note
The `vulkan_core.h` header allows the `VK_USE_64_BIT_PTR_DEFINES` definition to be overridden by the application. This allows the application to select either a 64-bit pointer type or a 64-bit unsigned integer type for non-dispatchable handles in the case where the predefined preprocessor check does not identify the desired configuration.

Note
This macro was introduced starting with the Vulkan 1.2.174 headers, and its availability can be checked at compile time by requiring `VK_HEADER_VERSION >= 174`.

It is not available if you are using older headers, such as may be shipped with an older Vulkan SDK. Developers requiring this functionality may wish to include a copy of the current Vulkan headers with their project in this case.

Window System-Specific Header Control (Informative)

To use a Vulkan extension supporting a platform-specific window system, header files for that window system must be included at compile time, or platform-specific types must be forward-declared. The Vulkan header files are unable to determine whether or not an external header is available at compile time, so platform-specific extensions are provided in separate headers from the core API and platform-independent extensions, allowing applications to decide which ones they need to be defined and how the external headers are included.

Extensions dependent on particular sets of platform headers, or that forward-declare platform-specific types, are declared in a header named for that platform. Before including these platform-specific Vulkan headers, applications must include both `vulkan_core.h` and any external native headers the platform extensions depend on.

As a convenience for applications that do not need the flexibility of separate platform-specific Vulkan headers, `vulkan.h` includes `vulkan_core.h`, and then conditionally includes platform-specific Vulkan headers and the external headers they depend on. Applications control which platform-specific headers are included by #defining macros before including `vulkan.h`.

The correspondence between platform-specific extensions, external headers they require, the platform-specific header which declares them, and the preprocessor macros which enable inclusion by `vulkan.h` are shown in the following table.

<table>

**Note**

This section describes the purpose of the headers independently of the specific underlying functionality of the window system extensions themselves. Each extension name will only link to a description of that extension when viewing a specification built with that extension included.
Provisional Extension Header Control (Informative)

Provisional extensions should not be used in production applications. The functionality defined by such extensions may change in ways that break backwards compatibility between revisions, and before final release of a non-provisional version of that extension.

Provisional extensions are defined in a separate provisional header, vulkan_beta.h, allowing applications to decide whether or not to include them. The mechanism is similar to window system-specific headers: before including vulkan_beta.h, applications must include vulkan_core.h.

Note

Sometimes a provisional extension will include a subset of its interfaces in vulkan_core.h. This may occur if the provisional extension is promoted from an existing vendor or EXT extension and some of the existing interfaces are defined as aliases of the provisional extension interfaces. All other interfaces of that provisional extension which are not aliased will be included in vulkan_beta.h.

As a convenience for applications, vulkan.h conditionally includes vulkan_beta.h. Applications can control inclusion of vulkan_beta.h by #defining the macro VK_ENABLE_BETA_EXTENSIONS before including vulkan.h.

Note

Starting in version 1.2.171 of the Specification, all provisional enumerants are protected by the macro VK_ENABLE_BETA_EXTENSIONS. Applications needing to use provisional extensions must always define this macro, even if they are explicitly including vulkan_beta.h. This is a minor change to behavior, affecting only provisional extensions.

Note

This section describes the purpose of the provisional header independently of the specific provisional extensions which are contained in that header at any given time. The extension appendices for provisional extensions note their provisional status, and link back to this section for more information. Provisional extensions are intended to provide early access for bleeding-edge developers, with the understanding that extension interfaces may change in response to developer feedback. Provisional extensions are very likely to eventually be updated and released as non-provisional extensions, but there is no guarantee this will happen, or how long it will take if it does happen.

Video Std Headers

Performing video coding operations usually involves the application having to provide various parameters, data structures, or other syntax elements specific to the particular video compression standard used, and the associated semantics are covered by the specification of those.

The interface descriptions of these are available in the header files derived from the video.xml XML
file, which is the canonical machine-readable description of data structures and enumerations that are associated with the externally-provided video compression standards.

Appendix H: Invariance

The Vulkan specification is not pixel exact. It therefore does not guarantee an exact match between images produced by different Vulkan implementations. However, the specification does specify exact matches, in some cases, for images produced by the same implementation. The purpose of this appendix is to identify and provide justification for those cases that require exact matches.

Repeatability

The obvious and most fundamental case is repeated issuance of a series of Vulkan commands. For any given Vulkan and framebuffer state vector, and for any Vulkan command, the resulting Vulkan and framebuffer state must be identical whenever the command is executed on that initial Vulkan and framebuffer state. This repeatability requirement does not apply when using shaders containing side effects (image and buffer variable stores and atomic operations), because these memory operations are not guaranteed to be processed in a defined order.

The repeatability requirement does not apply for rendering done using a graphics pipeline that uses `VK_RASTERIZATION_ORDER_RELAXED_AMD`.

One purpose of repeatability is avoidance of visual artifacts when a double-buffered scene is redrawn. If rendering is not repeatable, swapping between two buffers rendered with the same command sequence may result in visible changes in the image. Such false motion is distracting to the viewer. Another reason for repeatability is testability.

Repeatability, while important, is a weak requirement. Given only repeatability as a requirement, two scenes rendered with one (small) polygon changed in position might differ at every pixel. Such a difference, while within the law of repeatability, is certainly not within its spirit. Additional invariance rules are desirable to ensure useful operation.

Multi-pass Algorithms

Invariance is necessary for a whole set of useful multi-pass algorithms. Such algorithms render multiple times, each time with a different Vulkan mode vector, to eventually produce a result in the framebuffer. Examples of these algorithms include:

- “Erasing” a primitive from the framebuffer by redrawing it, either in a different color or using the XOR logical operation.
- Using stencil operations to compute capping planes.

Invariance Rules

For a given Vulkan device:

Rule 1 For any given Vulkan and framebuffer state vector, and for any given Vulkan command, the resulting Vulkan and framebuffer state must be identical each time the command is executed on that initial Vulkan and framebuffer state.
Rule 2 Changes to the following state values have no side effects (the use of any other state value is not affected by the change):

**Required:**

- Color and depth/stencil attachment contents
- Scissor parameters (other than enable)
- Write masks (color, depth, stencil)
- Clear values (color, depth, stencil)

**Strongly suggested:**

- Stencil parameters (other than enable)
- Depth test parameters (other than enable)
- Blend parameters (other than enable)
- Logical operation parameters (other than enable)

Corollary 1 Fragment generation is invariant with respect to the state values listed in Rule 2.

Rule 3 The arithmetic of each per-fragment operation is invariant except with respect to parameters that directly control it.

Corollary 2 Images rendered into different color attachments of the same framebuffer, either simultaneously or separately using the same command sequence, are pixel identical.

Rule 4 Identical pipelines will produce the same result when run multiple times with the same input. The wording “Identical pipelines” means VkPipeline objects that have been created with identical SPIR-V binaries and identical state, which are then used by commands executed using the same Vulkan state vector. Invariance is relaxed for shaders with side effects, such as performing stores or atomics.

Rule 5 All fragment shaders that either conditionally or unconditionally assign FragCoord.z to FragDepth are depth-invariant with respect to each other, for those fragments where the assignment to FragDepth actually is done.

If a sequence of Vulkan commands specifies primitives to be rendered with shaders containing side effects (image and buffer variable stores and atomic operations), invariance rules are relaxed. In particular, rule 1, corollary 2, and rule 4 do not apply in the presence of shader side effects.

The following weaker versions of rules 1 and 4 apply to Vulkan commands involving shader side effects:

**Rule 6** For any given Vulkan and framebuffer state vector, and for any given Vulkan command, the contents of any framebuffer state not directly or indirectly affected by results of shader image or buffer variable stores or atomic operations must be identical each time the command is executed on that initial Vulkan and framebuffer state.

**Rule 7** Identical pipelines will produce the same result when run multiple times with the same input.
as long as:

- shader invocations do not use image atomic operations;
- no framebuffer memory is written to more than once by image stores, unless all such stores write the same value; and
- no shader invocation, or other operation performed to process the sequence of commands, reads memory written to by an image store.

**Note**

The OpenGL specification has the following invariance rule: Consider a primitive p' obtained by translating a primitive p through an offset (x, y) in window coordinates, where x and y are integers. As long as neither p' nor p is clipped, it must be the case that each fragment f' produced from p' is identical to a corresponding fragment f from p except that the center of f' is offset by (x, y) from the center of f.

This rule does not apply to Vulkan and is an intentional difference from OpenGL.

When any sequence of Vulkan commands triggers shader invocations that perform image stores or atomic operations, and subsequent Vulkan commands read the memory written by those shader invocations, these operations must be explicitly synchronized.

**Tessellation Invariance**

When using a pipeline containing tessellation evaluation shaders, the fixed-function tessellation primitive generator consumes the input patch specified by an application and emits a new set of primitives. The following invariance rules are intended to provide repeatability guarantees. Additionally, they are intended to allow an application with a carefully crafted tessellation evaluation shader to ensure that the sets of triangles generated for two adjacent patches have identical vertices along shared patch edges, avoiding “cracks” caused by minor differences in the positions of vertices along shared edges.

**Rule 1** When processing two patches with identical outer and inner tessellation levels, the tessellation primitive generator will emit an identical set of point, line, or triangle primitives as long as the pipeline used to process the patch primitives has tessellation evaluation shaders specifying the same tessellation mode, spacing, vertex order, and point mode decorations. Two sets of primitives are considered identical if and only if they contain the same number and type of primitives and the generated tessellation coordinates for the vertex numbered m of the primitive numbered n are identical for all values of m and n.

**Rule 2** The set of vertices generated along the outer edge of the subdivided primitive in triangle and quad tessellation, and the tessellation coordinates of each, depend only on the corresponding outer tessellation level and the spacing decorations in the tessellation shaders of the pipeline.

**Rule 3** The set of vertices generated when subdividing any outer primitive edge is always symmetric. For triangle tessellation, if the subdivision generates a vertex with tessellation coordinates of the form (0, x, 1-x), (x, 0, 1-x), or (x, 1-x, 0), it will also generate a vertex with coordinates of exactly (0, 1-x, x),
(1-x, 0, x), or (1-x, x, 0), respectively. For quad tessellation, if the subdivision generates a vertex with coordinates of (x, 0) or (0, x), it will also generate a vertex with coordinates of exactly (1-x, 0) or (0, 1-x), respectively. For isoline tessellation, if it generates vertices at (0, x) and (1, x) where x is not zero, it will also generate vertices at exactly (0, 1-x) and (1, 1-x), respectively.

**Rule 4** The set of vertices generated when subdividing outer edges in triangular and quad tessellation must be independent of the specific edge subdivided, given identical outer tessellation levels and spacing. For example, if vertices at (x, 1-x, 0) and (1-x, x, 0) are generated when subdividing the w = 0 edge in triangular tessellation, vertices must be generated at (x, 0, 1-x) and (1-x, 0, x) when subdividing an otherwise identical v = 0 edge. For quad tessellation, if vertices at (x, 0) and (1-x, 0) are generated when subdividing the v = 0 edge, vertices must be generated at (0, x) and (0, 1-x) when subdividing an otherwise identical u = 0 edge.

**Rule 5** When processing two patches that are identical in all respects enumerated in rule 1 except for vertex order, the set of triangles generated for triangle and quad tessellation must be identical except for vertex and triangle order. For each triangle n1 produced by processing the first patch, there must be a triangle n2 produced when processing the second patch each of whose vertices has the same tessellation coordinates as one of the vertices in n1.

**Rule 6** When processing two patches that are identical in all respects enumerated in rule 1 other than matching outer tessellation levels and/or vertex order, the set of interior triangles generated for triangle and quad tessellation must be identical in all respects except for vertex and triangle order. For each interior triangle n1 produced by processing the first patch, there must be a triangle n2 produced when processing the second patch each of whose vertices has the same tessellation coordinates as one of the vertices in n1. A triangle produced by the tessellator is considered an interior triangle if none of its vertices lie on an outer edge of the subdivided primitive.

**Rule 7** For quad and triangle tessellation, the set of triangles connecting an inner and outer edge depends only on the inner and outer tessellation levels corresponding to that edge and the spacing decorations.

**Rule 8** The value of all defined components of TessCoord will be in the range [0, 1]. Additionally, for any defined component x of TessCoord, the results of computing 1.0-x in a tessellation evaluation shader will be exact. If any floating-point values in the range [0, 1] fail to satisfy this property, such values must not be used as tessellation coordinate components.
Appendix I: Lexicon

This appendix defines terms, abbreviations, and API prefixes used in the Specification.

Glossary

The terms defined in this section are used consistently throughout the Specification and may be used with or without capitalization.

Accessible (Descriptor Binding)

A descriptor binding is accessible to a shader stage if that stage is included in the stageFlags of the descriptor binding. Descriptors using that binding can only be used by stages in which they are accessible.

Acquire Operation (Resource)

An operation that acquires ownership of an image subresource or buffer range.

Active (Descriptor Type)

When a descriptor with mutable type is updated with vkUpdateDescriptorSets, the active descriptor type changes. When the descriptor is consumed by shaders, it is the active descriptor type which determines validity, i.e. VkDescriptorSetLayoutBinding::descriptorType is replaced with the active descriptor type. A mismatch in active descriptor type and consumption by shader is considered an undefined descriptor.

Active (Transform Feedback)

Transform feedback is made active after vkCmdBeginTransformFeedbackEXT executes and remains active until vkCmdEndTransformFeedbackEXT executes. While transform feedback is active, data written to variables in the output interface of the last pre-rasterization shader stage of the graphics pipeline are captured to the bound transform feedback buffers if those variables are decorated for transform feedback.

Adjacent Vertex

A vertex in an adjacency primitive topology that is not part of a given primitive, but is accessible in geometry shaders.

Active Object (Ray Tracing)

A primitive or instance in a ray tracing acceleration structure which has a corresponding ID, and is not inactive (meaning that it is visible to rays).

Advanced Blend Operation

Blending performed using one of the blend operation enums introduced by the VK_EXT_blend_operation_advanced extension. See Advanced Blending Operations.

Alias (API type/command)

An identical definition of another API type/command with the same behavior but a different name.
Aliased Range (Memory)
A range of a device memory allocation that is bound to multiple resources simultaneously.

Allocation Scope
An association of a host memory allocation to a parent object or command, where the allocation's lifetime ends before or at the same time as the parent object is freed or destroyed, or during the parent command.

Aspect (Image)
Some image types contain multiple kinds (called “aspects”) of data for each pixel, where each aspect is used in a particular way by the pipeline and may be stored differently or separately from other aspects. For example, the color components of an image format make up the color aspect of the image, and can be used as a framebuffer color attachment. Some operations, like depth testing, operate only on specific aspects of an image.

Attachment (Render Pass)
A zero-based integer index name used in render pass creation to refer to a framebuffer attachment that is accessed by one or more subpasses. The index also refers to an attachment description which includes information about the properties of the image view that will later be attached.

Availability Operation
An operation that causes the values generated by specified memory write accesses to become available for future access.

Available
A state of values written to memory that allows them to be made visible.

Axis-aligned Bounding Box
A box bounding a region in space defined by extents along each axis and thus representing a box where each edge is aligned to one of the major axes.

Back-Facing
See Facingness.

Batch
A single structure submitted to a queue as part of a queue submission command, describing a set of queue operations to execute.

Backwards Compatibility
A given version of the API is backwards compatible with an earlier version if an application, relying only on valid behavior and functionality defined by the earlier specification, is able to correctly run against each version without any modification. This assumes no active attempt by that application to not run when it detects a different version.

Binary Semaphore
A semaphore with a boolean payload indicating whether the semaphore is signaled or unsignaled. Represented by a VkSemaphore object created with a semaphore type of
**Binding (Memory)**
An association established between a range of a resource object and a range of a memory object. These associations determine the memory locations affected by operations performed on elements of a resource object. Memory bindings are established using the `vkBindBufferMemory` command for non-sparse buffer objects, using the `vkBindImageMemory` command for non-sparse image objects, and using the `vkQueueBindSparse` command for sparse resources.

**Blend Constant**
Four floating point (RGBA) values used as an input to blending.

**Blending**
Arithmetic operations between a fragment color value and a value in a color attachment that produce a final color value to be written to the attachment.

**Buffer**
A resource that represents a linear array of data in device memory. Represented by a `VkBuffer` object.

**Buffer Device Address**
A 64-bit value used in a shader to access buffer memory through the `PhysicalStorageBuffer` storage class.

**Buffer View**
An object that represents a range of a specific buffer, and state controlling how the contents are interpreted. Represented by a `VkBufferView` object.

**Built-In Variable**
A variable decorated in a shader, where the decoration makes the variable take values provided by the execution environment or values that are generated by fixed-function pipeline stages.

**Built-In Interface Block**
A block defined in a shader containing only variables decorated with built-in decorations, and is used to match against other shader stages.

**Clip Coordinates**
The homogeneous coordinate space in which vertex positions (`Position` decoration) are written by pre-rasterization shader stages.

**Clip Distance**
A built-in output from pre-rasterization shader stages defining a clip half-space against which the primitive is clipped.

**Clip Volume**
The intersection of the view volume with all clip half-spaces.
**Color Attachment**
A subpass attachment point, or image view, that is the target of fragment color outputs and blending.

**Color Fragment**
A unique color value within a pixel of a multisampled color image. The *fragment mask* will contain indices to the *color fragment*.

**Color Renderable Format**
A *VkFormat* where `VK_FORMAT_FEATURE_COLOR_ATTACHMENT_BIT` is set in one of the following, depending on the image's tiling:

- `VkFormatProperties::linearTilingFeatures`
- `VkFormatProperties::optimalTilingFeatures` or a *VkFormat* where `VK_FORMAT_FEATURE_2_LINEAR_COLOR_ATTACHMENT_BIT_NV` is set in `VkFormatProperties::linearTilingFeatures`
- `VkDrmFormatModifierPropertiesEXT::drmFormatModifierTilingFeatures`

**Combined Image Sampler**
A descriptor type that includes both a sampled image and a sampler.

**Command Buffer**
An object that records commands to be submitted to a queue. Represented by a *VkCommandBuffer* object.

**Command Pool**
An object that command buffer memory is allocated from, and that owns that memory. Command pools aid multithreaded performance by enabling different threads to use different allocators, without internal synchronization on each use. Represented by a *VkCommandPool* object.

**Compatible Allocator**
When allocators are compatible, allocations from each allocator *can* be freed by the other allocator.

**Compatible Image Formats**
When formats are compatible, images created with one of the formats *can* have image views created from it using any of the compatible formats. Also see *Size-Compatible Image Formats*.

**Compatible Queues**
Queues within a queue family. Compatible queues have identical properties.

**Complete Mipmap Chain**
The entire set of mip levels that can be provided for an image, from the largest application specified mip level size down to the *minimum mip level size*. See *Image Mip Level Sizing*.

**Completed Operation**
A deferred operation whose corresponding command has been executed to completion. See
Deferred Host Operations

Component (Format)
A distinct part of a format. Color components are represented with R, G, B, and A. Depth and stencil components are represented with D and S. Formats can have multiple instances of the same component. Some formats have other notations such as E or X which are not considered a component of the format.

Compressed Texel Block
An element of an image having a block-compressed format, comprising a rectangular block of texel values that are encoded as a single value in memory. Compressed texel blocks of a particular block-compressed format have a corresponding width, height, and depth defining the dimensions of these elements in units of texels, and a size in bytes of the encoding in memory.

Constant Integral Expressions
A SPIR-V constant instruction whose type is OpTypeInt. See Constant Instruction in section 2.2.1 “Instructions” of the Khronos SPIR-V Specification.

Cooperative Matrix
A SPIR-V type where the storage for and computations performed on the matrix are spread across a set of invocations such as a subgroup.

Corner-Sampled Image
A VkImage where unnormalized texel coordinates are centered on integer values instead of half-integer values. Specified by setting the VK_IMAGE_CREATE_CORNER_SAMPLED_BIT_NV bit on VkImageCreateInfo::flags at image creation.

Coverage Index
The index of a sample in the coverage mask.

Coverage Mask
A bitfield associated with a fragment representing the samples that were determined to be covered based on the result of rasterization, and then subsequently modified by fragment operations or the fragment shader.

Cull Distance
A built-in output from pre-rasterization shader stages defining a cull half-space where the primitive is rejected if all vertices have a negative value for the same cull distance.

Cull Volume
The intersection of the view volume with all cull half-spaces.

Decode Output Picture
A video picture resource used to store the result of a video decode operation.

Decoded Picture Buffer
An indexed set of reference pictures used by a video session. Abbreviated as DPB.
Decoded Picture Buffer Slot
An entry within a DPB that can be associated with a particular reference picture.

Decoded Picture Buffer Slot Index
The index of a DPB slot within its encompassing DPB.

Decoration (SPIR-V)
Auxiliary information such as built-in variables, stream numbers, invariance, interpolation type, relaxed precision, etc., added to variables or structure-type members through decorations.

Deferrable Command
A command which allows deferred execution of host-side work. See Deferred Host Operations.

Deferrable Operation
A single logical item of host-side work which can be deferred. Represented by the VkDeferredOperationKHR object. See Deferred Host Operations.

Deprecated (feature)
A feature is deprecated if it is no longer recommended as the correct or best way to achieve its intended purpose.

Depth/Stencil Attachment
A subpass attachment point, or image view, that is the target of depth and/or stencil test operations and writes.

Depth/Stencil Format
A VkFormat that includes depth and/or stencil components.

Depth/Stencil Image (or ImageView)
A VkImage (or VkImageView) with a depth/stencil format.

Depth/Stencil Resolve Attachment
A subpass attachment point, or image view, that is the target of a multisample resolve operation from the corresponding depth/stencil attachment at the end of the subpass.

Derivative Group
A set of fragment or compute shader invocations that cooperate to compute derivatives, including implicit derivatives for sampled image operations.

Descriptor
Information about a resource or resource view written into a descriptor set that is used to access the resource or view from a shader.

Descriptor Binding
An entry in a descriptor set layout corresponding to zero or more descriptors of a single descriptor type in a set. Defined by a VkDescriptorSetLayoutBinding structure.
**Descriptor Pool**
An object that descriptor sets are allocated from, and that owns the storage of those descriptor sets. Descriptor pools aid multithreaded performance by enabling different threads to use different allocators, without internal synchronization on each use. Represented by a VkDescriptorPool object.

**Descriptor Set**
An object that resource descriptors are written into via the API, and that can be bound to a command buffer such that the descriptors contained within it can be accessed from shaders. Represented by a VkDescriptorSet object.

**Descriptor Set Layout**
An object defining the set of resources (types and counts) and their relative arrangement (in the binding namespace) within a descriptor set. Used when allocating descriptor sets and when creating pipeline layouts. Represented by a VkDescriptorSetLayout object.

**Device**
The processor(s) and execution environment that perform tasks requested by the application via the Vulkan API.

**Device Group**
A set of physical devices that support accessing each other's memory and recording a single command buffer that can be executed on all the physical devices.

**Device Index**
A zero-based integer that identifies one physical device from a logical device. A device index is valid if it is less than the number of physical devices in the logical device.

**Device Mask**
A bitmask where each bit represents one device index. A device mask value is valid if every bit that is set in the mask is at a bit position that is less than the number of physical devices in the logical device.

**Device Memory**
Memory accessible to the device. Represented by a VkDeviceMemory object.

**Device-Level Command**
Any command that is dispatched from a logical device, or from a child object of a logical device.

**Device-Level Functionality**
All device-level commands and objects, and their structures, enumerated types, and enumerants. Additionally, physical-device-level functionality defined by a device extension is also considered device-level functionality.

**Device-Level Object**
Logical device objects and their child objects. For example, VkDevice, VkQueue, and VkCommandBuffer objects are device-level objects.
Device-Local Memory
Memory that is connected to the device, and may be more performant for device access than host-local memory.

Direct Drawing Commands
*Drawing commands* that take all their parameters as direct arguments to the command (and not sourced via structures in buffer memory as the *indirect drawing commands*). Includes `vkCmdDrawMultiIndexedEXT`, `vkCmdDrawMultiEXT`, `vkCmdDrawMeshTasksNV`, `vkCmdDrawMeshTasksEXT`, `vkCmdDraw`, and `vkCmdDrawIndexed`.

Disjoint
*Disjoint planes* are *image planes* to which memory is bound independently. A *disjoint image* consists of multiple *disjoint planes*, and is created with the `VK_IMAGE_CREATE_DISJOINT_BIT` bit set.

Dispatchable Command
A non-global command. The first argument to each dispatchable command is a dispatchable handle type.

Dispatchable Handle
A handle of a pointer handle type which may be used by layers as part of intercepting API commands.

Dispatching Commands
Commands that provoke work using a compute pipeline. Includes `vkCmdDispatch` and `vkCmdDispatchIndirect`.

Drawing Commands

Duration (Command)
The *duration* of a Vulkan command refers to the interval between calling the command and its return to the caller.

Dynamic Storage Buffer
A storage buffer whose offset is specified each time the storage buffer is bound to a command buffer via a descriptor set.

Dynamic Uniform Buffer
A uniform buffer whose offset is specified each time the uniform buffer is bound to a command
buffer via a descriptor set.

**Dynamically Uniform**
See *Dynamically Uniform* in section 2.2 “Terms” of the Khronos SPIR-V Specification.

**Encode Input Picture**
A video picture resource used as the input of a video encode operation.

**Element**
Arrays are composed of multiple elements, where each element exists at a unique index within that array. Used primarily to describe data passed to or returned from the Vulkan API.

**Explicitly-Enabled Layer**
A layer enabled by the application by adding it to the enabled layer list in `vkCreateInstance` or `vkCreateDevice`.

**Event**
A synchronization primitive that is signaled when execution of previous commands completes through a specified set of pipeline stages. Events can be waited on by the device and polled by the host. Represented by a `VkEvent` object.

**Executable State (Command Buffer)**
A command buffer that has ended recording commands and can be executed. See also Initial State and Recording State.

**Execution Dependency**
A dependency that guarantees that certain pipeline stages' work for a first set of commands has completed execution before certain pipeline stages' work for a second set of commands begins execution. This is accomplished via pipeline barriers, subpass dependencies, events, or implicit ordering operations.

**Execution Dependency Chain**
A sequence of execution dependencies that transitively act as a single execution dependency.

**Explicit chroma reconstruction**
An implementation of sampler Y’CnCp conversion which reconstructs reduced-resolution chroma samples to luma resolution and then separately performs texture sample interpolation. This is distinct from an implicit implementation, which incorporates chroma sample reconstruction into texture sample interpolation.

**Extension Scope**
The set of objects and commands that can be affected by an extension. Extensions are either device scope or instance scope.

**Extending Structure**
A structure type which may appear in the `pNext chain` of another structure, extending the functionality of the other structure. Extending structures may be defined by either core API versions or extensions.
**External Handle**

A resource handle which has meaning outside of a specific Vulkan device or its parent instance. External handles may be used to share resources between multiple Vulkan devices in different instances, or between Vulkan and other APIs. Some external handle types correspond to platform-defined handles, in which case the resource may outlive any particular Vulkan device or instance and may be transferred between processes, or otherwise manipulated via functionality defined by the platform for that handle type.

**External synchronization**

A type of synchronization required of the application, where parameters defined to be externally synchronized must not be used simultaneously in multiple threads.

**Facingness (Polygon)**

A classification of a polygon as either front-facing or back-facing, depending on the orientation (winding order) of its vertices.

**Facingness (Fragment)**

A fragment is either front-facing or back-facing, depending on the primitive it was generated from. If the primitive was a polygon (regardless of polygon mode), the fragment inherits the facingness of the polygon. All other fragments are front-facing.

**Fence**

A synchronization primitive that is signaled when a set of batches or sparse binding operations complete execution on a queue. Fences can be waited on by the host. Represented by a VkFence object.

**Flat Shading**

A property of a vertex attribute that causes the value from a single vertex (the provoking vertex) to be used for all vertices in a primitive, and for interpolation of that attribute to return that single value unaltered.

**Format Features**

A set of features from VkFormatFeatureFlagBits that a VkFormat is capable of using for various commands. The list is determined by factors such as VkImageTiling.

**Fragment**

A rectangular framebuffer region with associated data produced by rasterization and processed by fragment operations including the fragment shader.

**Fragment Area**

The width and height, in pixels, of a fragment.

**Fragment Density**

The ratio of fragments per framebuffer area in the x and y direction.

**Fragment Density Texel Size**

The (w,h) framebuffer region in pixels that each texel in a fragment density map applies to.
**Fragment Input Attachment Interface**
Variables with `UniformConstant` storage class and a decoration of `InputAttachmentIndex` that are statically used by a fragment shader’s entry point, which receive values from input attachments.

**Fragment Mask**
A lookup table that associates color samples with color fragment values.

**Fragment Output Interface**
A fragment shader entry point's variables with `Output` storage class, which output to color and/or depth/stencil attachments.

**Frame (Video)**
A multi-dimensional array of luma samples and an optional multi-dimensional array of chroma samples.

**Fragment Tile Image Interface**
A fragment shader entry point's variables with `TileImageEXT` storage class and a decoration of `Location`, which are used to read values from color attachments.

**Framebuffer**
A collection of image views and a set of dimensions that, in conjunction with a render pass, define the inputs and outputs used by drawing commands. Represented by a `VkFramebuffer` object.

**Framebuffer Attachment**
One of the image views used in a framebuffer.

**Framebuffer Coordinates**
A coordinate system in which adjacent pixels' coordinates differ by 1 in x and/or y, with (0,0) in the upper left corner and pixel centers at half-integers.

**Framebuffer-Space**
Operating with respect to framebuffer coordinates.

**Framebuffer-Local**
A framebuffer-local dependency guarantees that only for a single framebuffer region, the first set of operations happens-before the second set of operations.

**Framebuffer-Global**
A framebuffer-global dependency guarantees that for all framebuffer regions, the first set of operations happens-before the second set of operations.

**Framebuffer Region**
A framebuffer region is a set of sample (x, y, layer, sample) coordinates that is a subset of the entire framebuffer.

**Front-Facing**
See Facingness.
**Full Compatibility**

A given version of the API is fully compatible with another version if an application, relying only on valid behavior and functionality defined by either of those specifications, is able to correctly run against each version without any modification. This assumes no active attempt by that application to not run when it detects a different version.

**Global Command**

A Vulkan command for which the first argument is not a dispatchable handle type.

**Global Workgroup**

A collection of local workgroups dispatched by a single dispatching or single mesh task drawing command.

**Handle**

An opaque integer or pointer value used to refer to a Vulkan object. Each object type has a unique handle type.

**Happen-after, happens-after**

A transitive, irreflexive and antisymmetric ordering relation between operations. An execution dependency with a source of A and a destination of B enforces that B happens-after A. The inverse relation of happens-before.

**Happen-before, happens-before**

A transitive, irreflexive and antisymmetric ordering relation between operations. An execution dependency with a source of A and a destination of B enforces that A happens-before B. The inverse relation of happens-after.

**Helper Invocation**

A fragment shader invocation that is created solely for the purposes of evaluating derivatives for use in non-helper fragment shader invocations, and which does not have side effects.

**Host**

The processor(s) and execution environment that the application runs on, and that the Vulkan API is exposed on.

**Host Mapped Device Memory**

Device memory that is mapped for host access using `vkMapMemory`.

**Host Mapped Foreign Memory**

Memory owned by a foreign device that is mapped for host access.

**Host Memory**

Memory not accessible to the device, used to store implementation data structures.

**Host-Accessible Subresource**

A buffer, or a linear image subresource in either the `VK_IMAGE_LAYOUT_PREINITIALIZED` or `VK_IMAGE_LAYOUT_GENERAL` layout. Host-accessible subresources have a well-defined addressing scheme which can be used by the host.
Host-Local Memory
Memory that is not local to the device, and may be less performant for device access than device-local memory.

Host-Visible Memory
Device memory that can be mapped on the host and can be read and written by the host.

ICD
Installable Client Driver. An ICD is represented as a VkPhysicalDevice.

Identically Defined Objects
Objects of the same type where all arguments to their creation or allocation functions, with the exception of pAllocator, are

1. Vulkan handles which refer to the same object or
2. identical scalar or enumeration values or
3. Host pointers which point to an array of values or structures which also satisfy these three constraints.

Image
A resource that represents a multi-dimensional formatted interpretation of device memory. Represented by a VkImage object.

Image Subresource
A specific mipmap level, layer, and set of aspects of an image.

Image Subresource Range
A set of image subresources that are contiguous mipmap levels and layers.

Image View
An object that represents an image subresource range of a specific image, and state controlling how the contents are interpreted. Represented by a VkImageView object.

Immutable Sampler
A sampler descriptor provided at descriptor set layout creation time for a specific binding. This sampler is then used for that binding in all descriptor sets allocated with the layout, and it cannot be changed.

Implicit chroma reconstruction
An implementation of sampler Y'CbCr conversion which reconstructs the reduced-resolution chroma samples directly at the sample point, as part of the normal texture sampling operation. This is distinct from an explicit chroma reconstruction implementation, which reconstructs the reduced-resolution chroma samples to the resolution of the luma samples, then filters the result as part of texture sample interpolation.

Implicitly-Enabled Layer
A layer enabled by a loader-defined mechanism outside the Vulkan API, rather than explicitly by the application during instance or device creation.
Inactive Object (Ray Tracing)

A primitive or instance in a ray tracing acceleration structure which has a corresponding ID, but which will never report an intersection with any ray.

Index Buffer

A buffer bound via `vkCmdBindIndexBuffer` which is the source of index values used to fetch vertex attributes for a `vkCmdDrawIndexed` or `vkCmdDrawIndexedIndirect` command.

Indexed Drawing Commands

*Drawing commands* which use an *index buffer* as the source of index values used to fetch vertex attributes for a drawing command. Includes `vkCmdDrawIndexed`, `vkCmdDrawIndexedIndirectCount`, `vkCmdDrawIndexedIndirectCountKHR`, `vkCmdDrawIndexedIndirectCountAMD`, `vkCmdDrawMultiIndexedEXT`, and `vkCmdDrawIndexedIndirect`.

Indirect Commands

Drawing or dispatching commands that source some of their parameters from structures in buffer memory. Includes `vkCmdDrawIndirect`, `vkCmdDrawIndexedIndirect`, `vkCmdDrawIndirectCount`, `vkCmdDrawIndexedIndirectCount`, `vkCmdDrawIndirectCountKHR`, `vkCmdDrawIndirectCountKHR`, `vkCmdDrawIndirectCountAMD`, `vkCmdDrawIndirectCountAMD`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, and `vkCmdDispatchIndirect`.

Indirect Commands Layout

A definition of a sequence of commands, that are generated on the device via `vkCmdPreprocessGeneratedCommandsNV` and `vkCmdExecuteGeneratedCommandsNV`. Each sequence is comprised of multiple `VkIndirectCommandsTokenTypeNV`, which represent a subset of traditional command buffer commands. Represented as `VkIndirectCommandsLayoutNV`.

Indirect Drawing Commands

*Drawing commands* that source some of their parameters from structures in buffer memory. Includes `vkCmdDrawIndirect`, `vkCmdDrawIndirectCount`, `vkCmdDrawIndexedIndirectCount`, `vkCmdDrawIndexedIndirectCountKHR`, `vkCmdDrawIndexedIndirectCountKHR`, `vkCmdDrawIndexedIndirectCountAMD`, `vkCmdDrawIndexedIndirectCountAMD`, `vkCmdDrawMeshTasksIndirectNV`, `vkCmdDrawMeshTasksIndirectCountNV`, `vkCmdDrawMeshTasksIndirectCountEXT`, `vkCmdDrawMeshTasksIndirectCountEXT`, and `vkCmdDrawIndexedIndirect`.

Initial State (Command Buffer)

A command buffer that has not begun recording commands. See also Recording State and Executable State.

Inline Uniform Block

A descriptor type that represents uniform data stored directly in descriptor sets, and supports read-only access in a shader.
**Input Attachment**

A descriptor type that represents an image view, and supports unfiltered read-only access in a shader, only at the fragment’s location in the view.

**Instance**

The top-level Vulkan object, which represents the application’s connection to the implementation. Represented by a `VkInstance` object.

**Instance-Level Command**

Any command that is dispatched from an instance, or from a child object of an instance, except for physical devices and their children.

**Instance-Level Functionality**

All instance-level commands and objects, and their structures, enumerated types, and enumerants.

**Instance-Level Object**

High-level Vulkan objects, which are not physical devices, nor children of physical devices. For example, `VkInstance` is an instance-level object.

**Instance (Memory)**

In a logical device representing more than one physical device, some device memory allocations have the requested amount of memory allocated multiple times, once for each physical device in a device mask. Each such replicated allocation is an instance of the device memory.

**Instance (Resource)**

In a logical device representing more than one physical device, buffer and image resources exist on all physical devices but can be bound to memory differently on each. Each such replicated resource is an instance of the resource.

**Internal Synchronization**

A type of synchronization required of the implementation, where parameters not defined to be externally synchronized may require internal mutexing to avoid multithreaded race conditions.

**Invocation (Shader)**

A single execution of an entry point in a SPIR-V module. For example, a single vertex's execution of a vertex shader or a single fragment’s execution of a fragment shader.

**Invocation Group**

A set of shader invocations that are executed in parallel and that must execute the same control flow path in order for control flow to be considered dynamically uniform.

**Invocation Repack Instruction**

A ray tracing shader call instruction where the implementation may change the set of invocations that are executing.

**Join (Deferred Host Operations)**

The act of instructing a thread to participate in the execution of a deferred operation. See
Deferred Host Operations.

Linear Color Attachment
A color attachment with linear tiling

Linear Resource
A resource is *linear* if it is one of the following:

- a `VkBuffer`
- a `VkImage` created with `VK_IMAGE_TILING_LINEAR`
- a `VkImage` created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and whose Linux DRM format modifier is `DRM_FORMAT_MOD_LINEAR`
- a `VkAccelerationStructureNV`

Because a `VkAccelerationStructureKHR` resource does not have memory bound to it directly, it is considered neither linear nor non-linear. However, the `VkBuffer` on which a `VkAccelerationStructureKHR` resource is placed is a linear resource.

A resource is *non-linear* if it is one of the following:

- a `VkImage` created with `VK_IMAGE_TILING_OPTIMAL`
- a `VkImage` created with `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT` and whose Linux DRM format modifier is not `DRM_FORMAT_MOD_LINEAR`

Linux DRM Format Modifier
A 64-bit, vendor-prefixed, semi-opaque unsigned integer describing vendor-specific details of an image's memory layout. In Linux graphics APIs, *modifiers* are commonly used to specify the memory layout of externally shared images. An image has a *modifier* if and only if it is created with *tiling* equal to `VK_IMAGE_TILING_DRM_FORMAT_MODIFIER_EXT`. For more details, refer to the appendix for extension `VK_EXT_image_drm_format_modifier`.

Local Workgroup
A collection of compute shader invocations invoked by a single dispatching command, which share data via `WorkgroupLocal` variables and can synchronize with each other.

Logical Device
An object that represents the application's interface to the physical device. The logical device is the parent of most Vulkan objects. Represented by a `VkDevice` object.

Logical Operation
Bitwise operations between a fragment color value and a value in a color attachment, that produce a final color value to be written to the attachment.

Lost Device
A state that a logical device *may* be in as a result of unrecoverable implementation errors, or other exceptional conditions.
Mappable
See Host-Visible Memory.

Memory Dependency
A memory dependency is an execution dependency which includes availability and visibility operations such that:

• The first set of operations happens-before the availability operation
• The availability operation happens-before the visibility operation
• The visibility operation happens-before the second set of operations

Memory Domain
A memory domain is an abstract place to which memory writes are made available by availability operations and memory domain operations. The memory domains correspond to the set of agents that the write can then be made visible to. The memory domains are host, device, shader, workgroup instance (for workgroup instance there is a unique domain for each compute workgroup) and subgroup instance (for subgroup instance there is a unique domain for each subgroup).

Memory Domain Operation
An operation that makes the writes that are available to one memory domain available to another memory domain.

Memory Heap
A region of memory from which device memory allocations can be made.

Memory Type
An index used to select a set of memory properties (e.g. mappable, cached) for a device memory allocation.

Mesh Shading Pipeline
A graphics pipeline where the primitives are assembled explicitly in the shader stages. In contrast to the primitive shading pipeline where input primitives are assembled by fixed function processing.

Mesh Tasks Drawing Commands
Drawing commands which create shader invocations organized in workgroups for drawing mesh tasks. Includes vkCmdDrawMeshTasksNV, vkCmdDrawMeshTasksIndirectNV, and vkCmdDrawMeshTasksIndirectCountNV, vkCmdDrawMeshTasksEXT, vkCmdDrawMeshTasksIndirectEXT, and vkCmdDrawMeshTasksIndirectCountEXT.

Minimum Mip Level Size
The smallest size that is permitted for a mip level. For conventional images this is 1x1x1. For corner-sampled images, this is 2x2x2. See Image Mip Level Sizing.

Mip Tail Region
The set of mipmap levels of a sparse residency texture that are too small to fill a sparse block, and that must all be bound to memory collectively andopaquely.
Multi-planar

A multi-planar format (or “planar format”) is an image format consisting of more than one plane, identifiable with a _2PLANE or _3PLANE component to the format name and listed in Formats requiring sampler Y'CbCr conversion for VK_IMAGE_ASPECT_COLOR_BIT image views. A multi-planar image (or “planar image”) is an image of a multi-planar format.

Non-Dispatchable Handle

A handle of an integer handle type. Handle values may not be unique, even for two objects of the same type.

Non-Indexed Drawing Commands

Drawing commands for which the vertex attributes are sourced in linear order from the vertex input attributes for a drawing command (i.e. they do not use an index buffer). Includes vkCmdDraw, vkCmdDrawIndirectCount, vkCmdDrawIndirectCountKHR, vkCmdDrawIndirectCountAMD, vkCmdDrawMultiEXT, and vkCmdDrawIndirect.

Normalized

A value that is interpreted as being in the range [0,1] as a result of being implicitly divided by some other value.

Normalized Device Coordinates

A coordinate space after perspective division is applied to clip coordinates, and before the viewport transformation converts them to framebuffer coordinates.

Obsoleted (feature)

A feature is obsolete if it can no longer be used.

Opaque Capture Address

A 64-bit value representing the device address of a buffer or memory object that is expected to be used by trace capture/replay tools in combination with the bufferDeviceAddress feature.

Overlapped Range (Aliased Range)

The aliased range of a device memory allocation that intersects a given image subresource of an image or range of a buffer.

Ownership (Resource)

If an entity (e.g. a queue family) has ownership of a resource, access to that resource is well-defined for access by that entity.

Packed Format

A format whose components are stored as a single texel block in memory, with their relative locations defined within that element.

Passthrough Geometry Shader

A geometry shader which uses the PassthroughNV decoration on a variable in its input interface. Output primitives in a passthrough geometry shader always have the same topology as the input primitive and are not produced by emitting vertices.
Payload
Importable or exportable reference to the internal data of an object in Vulkan.

Per-View
A variable that has an array of values which are output, one for each view that is being generated. A mesh shader which uses the `PerViewNV` decoration on a variable in its output interface.

Peer Memory
An instance of memory corresponding to a different physical device than the physical device performing the memory access, in a logical device that represents multiple physical devices.

Physical Device
An object that represents a single device in the system. Represented by a `VkPhysicalDevice` object.

Physical-Device-Level Command
Any command that is dispatched from a physical device.

Physical-Device-Level Functionality
All physical-device-level commands and objects, and their structures, enumerated types, and enumerants.

Physical-Device-Level Object
Physical device objects. For example, `VkPhysicalDevice` is a physical-device-level object.

Pipeline
An object controlling how graphics or compute work is executed on the device. A pipeline includes one or more shaders, as well as state controlling any non-programmable stages of the pipeline. Represented by a `VkPipeline` object.

Pipeline Barrier
An execution and/or memory dependency recorded as an explicit command in a command buffer, that forms a dependency between the previous and subsequent commands.

Pipeline Cache
An object that can be used to collect and retrieve information from pipelines as they are created, and can be populated with previously retrieved information in order to accelerate pipeline creation. Represented by a `VkPipelineCache` object.

Pipeline Layout
An object defining the set of resources (via a collection of descriptor set layouts) and push constants used by pipelines that are created using the layout. Used when creating a pipeline and when binding descriptor sets and setting push constant values. Represented by a `VkPipelineLayout` object.

Pipeline Library
A pipeline that cannot be directly used, instead defining a set of shaders and shader groups
which will be linked into other pipelines.

**Pipeline Stage**

A logically independent execution unit that performs some of the operations defined by an action command.

**Pipeline Trace Ray Instruction**

A ray tracing instruction which traces a ray into an acceleration structure when using ray tracing pipelines. One of OpTraceNV, OpTraceRayMotionNV, OpTraceMotionNV, OpTraceRayKHR.

**pNext Chain**

A set of structures chained together through their pNext members.

**Planar**

See multi-planar.

**Plane**

An image plane is part of the representation of an image, containing a subset of the color components necessary to represent the texels in the image and with a contiguous mapping of coordinates to bound memory. Most images consist only of a single plane, but some formats spread the components across multiple image planes. The host-accessible properties of each image plane are accessible for a linear layout using vkGetImageSubresourceLayout. If a multi-planar image is created with the VK_IMAGE_CREATE_DISJOINT_BIT bit set, the image is described as disjoint, and its planes are therefore bound to memory independently.

**Point Sampling (Rasterization)**

A rule that determines whether a fragment sample location is covered by a polygon primitive by testing whether the sample location is in the interior of the polygon in framebuffer-space, or on the boundary of the polygon according to the tie-breaking rules.

**Potential Format Features**

The union of all VkFormatFeatureFlagBits that the implementation supports for a specified VkFormat, over all supported image tilings. For Android external formats the VkFormatFeatureFlagBits is provided by the implementation. For QNX Screen external formats the VkFormatFeatureFlagBits is provided by the implementation.

**Pre-rasterization**

Operations that execute before rasterization, and any state associated with those operations.

**Presentable image**

A VkImage object obtained from a VkSwapchainKHR used to present to a VkSurfaceKHR object.

**Preserve Attachment**

One of a list of attachments in a subpass description that is not read or written by the subpass, but that is read or written on earlier and later subpasses and whose contents must be preserved through this subpass.
**Primary Command Buffer**
A command buffer that **can** execute secondary command buffers, and **can** be submitted directly to a queue.

**Primitive Shading Pipeline**
A graphics pipeline where input primitives are assembled by fixed function processing. It is the counterpart to mesh shading.

**Primitive Topology**
State controlling how vertices are assembled into primitives, e.g. as lists of triangles, strips of lines, etc.

**Promoted (feature)**
A feature from an older extension is considered promoted if it is made available as part of a new core version or newer extension with wider support.

**Protected Buffer**
A buffer to which protected device memory **can** be bound.

**Protected-capable Device Queue**
A device queue to which protected command buffers **can** be submitted.

**Protected Command Buffer**
A command buffer which **can** be submitted to a protected-capable device queue.

**Protected Device Memory**
Device memory which **can** be visible to the device but **must** not be visible to the host.

**Protected Image**
An image to which protected device memory **can** be bound.

**Provisional**
A feature is released provisionally in order to get wider feedback on the functionality before it is finalized. Provisional features may change in ways that break backwards compatibility, and thus are not recommended for use in production applications.

**Provoking Vertex**
The vertex in a primitive from which flat shaded attribute values are taken. This is generally the “first” vertex in the primitive, and depends on the primitive topology.

**Push Constants**
A small bank of values writable via the API and accessible in shaders. Push constants allow the application to set values used in shaders without creating buffers or modifying and binding descriptor sets for each update.

**Push Constant Interface**
The set of variables with `PushConstant` storage class that are statically used by a shader entry point, and which receive values from push constant commands.
Push Descriptors
Descriptors that are written directly into a command buffer rather than into a descriptor set. Push descriptors allow the application to set descriptors used in shaders without allocating or modifying descriptor sets for each update.

Descriptor Update Template
An object specifying a mapping from descriptor update information in host memory to elements in a descriptor set, which helps enable more efficient descriptor set updates.

Query Pool
An object containing a number of query entries and their associated state and results. Represented by a VkQueryPool object.

Queue
An object that executes command buffers and sparse binding operations on a device. Represented by a VkQueue object.

Queue Family
A set of queues that have common properties and support the same functionality, as advertised in VkQueueFamilyProperties.

Queue Operation
A unit of work to be executed by a specific queue on a device, submitted via a queue submission command. Each queue submission command details the specific queue operations that occur as a result of calling that command. Queue operations typically include work that is specific to each command, and synchronization tasks.

Queue Submission
Zero or more batches and an optional fence to be signaled, passed to a command for execution on a queue. See the Devices and Queues chapter for more information.

Ray Tracing Command
Commands that provoke work using a ray tracing pipeline. Includes vkCmdTraceRaysNV, vkCmdTraceRaysKHR, and vkCmdTraceRaysIndirectKHR.

Reconstructed Picture
A video picture resource reconstructed from a compressed bitstream using video decode or encode operations that can be used as a reference picture by future video decode or encode operations with the same video session.

Recording State (Command Buffer)
A command buffer that is ready to record commands. See also Initial State and Executable State.

Reference Picture
A video picture resource used by video decode and encode operations to provide predictions of the values of samples in the subsequently decoded or encoded pictures.
Reference Picture Metadata
Opaque state associated with a DPB slot, maintained by a video session.

Release Operation (Resource)
An operation that releases ownership of an image subresource or buffer range.

Render Pass
An object that represents a set of framebuffer attachments and phases of rendering using those attachments. Represented by a VkRenderPass object.

Render Pass Instance
A use of a render pass in a command buffer.

Required Extensions
Extensions that must be enabled alongside extensions dependent on them (see Extension Dependencies).

Reset (Command Buffer)
Resetting a command buffer discards any previously recorded commands and puts a command buffer in the initial state.

Residency Code
An integer value returned by sparse image instructions, indicating whether any sparse unbound texels were accessed.

Resolve Attachment
A subpass attachment point, or image view, that is the target of a multisample resolve operation from the corresponding color attachment at the end of the subpass.

Retired Swapchain
A swapchain that has been used as the oldSwapchain parameter to vkCreateSwapchainKHR. Images cannot be acquired from a retired swapchain, however images that were acquired (but not presented) before the swapchain was retired can be presented.

Sample Index
The index of a sample within a single set of samples.

Sample Shading
Invoking the fragment shader multiple times per fragment, with the covered samples partitioned among the invocations.

Sampled Image
A descriptor type that represents an image view, and supports filtered (sampled) and unfiltered read-only access in a shader.

Sampler
An object containing state controlling how sampled image data is sampled (or filtered) when accessed in a shader. Also a descriptor type describing the object. Represented by a VkSampler
Secondary Command Buffer

A command buffer that can be executed by a primary command buffer, and must not be submitted directly to a queue.

Self-Dependency

A subpass dependency from a subpass to itself, i.e. with srcSubpass equal to dstSubpass. A self-dependency is not automatically performed during a render pass instance, rather a subset of it can be performed via vkCmdPipelineBarrier during the subpass.

Semaphore

A synchronization primitive that supports signal and wait operations, and can be used to synchronize operations within a queue or across queues. Represented by a VkSemaphore object.

Shader

Instructions selected (via an entry point) from a shader module, which are executed in a shader stage.

Shader Call

An instruction which may cause execution to continue in a different shader stage.

Shader Code

A stream of instructions used to describe the operation of a shader.

Shader Group

A set of Shader Stages that are part of a VkPipeline containing multiple of such sets. This allows the device to make use of all the shader groups from the bound pipeline independently.

Shader Module

A collection of shader code, potentially including several functions and entry points, that is used to create shaders in pipelines. Represented by a VkShaderModule object.

Shader Stage

A stage of the graphics or compute pipeline that executes shader code.

Shading Rate

The ratio of the number of fragment shader invocations generated in a fully covered framebuffer region to the size (in pixels) of that region.

Shading Rate Image

An image used to establish the shading rate for a framebuffer region, where each pixel controls the shading rate for a corresponding framebuffer region.

Shared presentable image

A presentable image created from a swapchain with VkPresentModeKHR set to either VK_PRESENT_MODE_SHARED_DEMAND_REFRESH_KHR or VK_PRESENT_MODE_SHARED_CONTINUOUS_REFRESH_KHR.
**Side Effect**
A store to memory or atomic operation on memory from a shader invocation.

**Single-plane format**
A format that is not *multi-planar*.

**Size-Compatible Image Formats**
When a compressed image format and an uncompressed image format are size-compatible, it means that the texel block size of the uncompressed format must equal the texel block size of the compressed format.

**Sparse Block**
An element of a sparse resource that can be independently bound to memory. Sparse blocks of a particular sparse resource have a corresponding size in bytes that they use in the bound memory.

**Sparse Image Block**
A sparse block in a sparse partially-resident image. In addition to the sparse block size in bytes, sparse image blocks have a corresponding width, height, and depth defining the dimensions of these elements in units of texels or compressed texel blocks, the latter being used in case of sparse images having a block-compressed format.

**Sparse Unbound Texel**
A texel read from a region of a sparse texture that does not have memory bound to it.

**SRT**
A decomposition of a spatial transform separating out scale, rotation, and translation which has better linear interpolation properties for representing motion.

**Static Use**
An object in a shader is statically used by a shader entry point if any function in the entry point’s call tree contains an instruction using the object. A reference in the entry point’s interface list does not constitute a static use. Static use is used to constrain the set of descriptors used by a shader entry point.

**Storage Buffer**
A descriptor type that represents a buffer, and supports reads, writes, and atomics in a shader.

**Storage Image**
A descriptor type that represents an image view, and supports unfiltered loads, stores, and atomics in a shader.

**Storage Texel Buffer**
A descriptor type that represents a buffer view, and supports unfiltered, formatted reads, writes, and atomics in a shader.

**Subgroup**
A set of shader invocations that can synchronize and share data with each other efficiently. In
compute shaders, the *local workgroup* is a superset of the subgroup.

**Subgroup Mask**
A bitmask for all invocations in the current subgroup with one bit per invocation, starting with the least significant bit in the first vector component, continuing to the last bit (less than *SubgroupSize*) in the last required vector component.

**Subpass**
A phase of rendering within a render pass, that reads and writes a subset of the attachments.

**Subpass Dependency**
An execution and/or memory dependency between two subpasses described as part of render pass creation, and automatically performed between subpasses in a render pass instance. A subpass dependency limits the overlap of execution of the pair of subpasses, and can provide guarantees of memory coherence between accesses in the subpasses.

**Subpass Description**
Lists of attachment indices for input attachments, color attachments, depth/stencil attachment, resolve attachments, depth/stencil resolve, and preserve attachments used by the subpass in a render pass.

**Subset (Self-Dependency)**
A subset of a self-dependency is a pipeline barrier performed during the subpass of the self-dependency, and whose stage masks and access masks each contain a subset of the bits set in the identically named mask in the self-dependency.

**Texel Block**
A single addressable element of an image with an uncompressed *VkFormat*, or a single compressed block of an image with a compressed *VkFormat*.

**Texel Block Size**
The size (in bytes) used to store a texel block of a compressed or uncompressed image.

**Texel Coordinate System**
One of three coordinate systems (normalized, unnormalized, integer) defining how texel coordinates are interpreted in an image or a specific mipmap level of an image.

**Tile Image**
A per-tile view of a framebuffer attachment. If the *VK_EXT_shader_tile_image* extension is enabled, the framebuffer is considered to be divided into tiles.

**Timeline Semaphore**
A semaphore with a strictly increasing 64-bit unsigned integer payload indicating whether the semaphore is signaled with respect to a particular reference value. Represented by a *VkSemaphore* object created with a semaphore type of *VK_SEMAPHORE_TYPE_TIMELINE*.

**Uniform Texel Buffer**
A descriptor type that represents a buffer view, and supports unfiltered, formatted, read-only
access in a shader.

**Uniform Buffer**
A descriptor type that represents a buffer, and supports read-only access in a shader.

**Units in the Last Place (ULP)**
A measure of floating-point error loosely defined as the smallest representable step in a floating-point format near a given value. For the precise definition see Precision and Operation of SPIR-V instructions or Jean-Michel Muller, “On the definition of ulp(x)”, RR-5504, INRIA. Other sources may also use the term “unit of least precision”.

**Unnormalized**
A value that is interpreted according to its conventional interpretation, and is not normalized.

**Unprotected Buffer**
A buffer to which unprotected device memory can be bound.

**Unprotected Command Buffer**
A command buffer which can be submitted to an unprotected device queue or a protected-capable device queue.

**Unprotected Device Memory**
Device memory which can be visible to the device and can be visible to the host.

**Unprotected Image**
An image to which unprotected device memory can be bound.

**User-Defined Variable Interface**
A shader entry point’s variables with Input or Output storage class that are not built-in variables.

**Vertex Input Attribute**
A graphics pipeline resource that produces input values for the vertex shader by reading data from a vertex input binding and converting it to the attribute’s format.

**Vertex Stream**
A vertex stream is where the last pre-rasterization shader stages outputs vertex data, which then goes to the rasterizer, is captured to a transform feedback buffer, or both. Geometry shaders can emit primitives to multiple independent vertex streams. Each vertex emitted by the geometry shader is directed at one of the vertex streams.

**Validation Cache**
An object that can be used to collect and retrieve validation results from the validation layers, and can be populated with previously retrieved results in order to accelerate the validation process. Represented by a VkValidationCacheEXT object.

**Variable-Sized Descriptor Binding**
A descriptor binding whose size will be specified when a descriptor set is allocated using this layout.
**Vertex Input Binding**
A graphics pipeline resource that is bound to a buffer and includes state that affects addressing calculations within that buffer.

**Vertex Input Interface**
A vertex shader entry point’s variables with *Input* storage class, which receive values from vertex input attributes.

**Video Bitstream Buffer**
A resource that represents a linear array of data in device memory storing encoded video data. Represented by a *VkBuffer* object.

**Video Coding Scope**
A series of subsequent commands recorded into a command buffer starting with a *vkCmdBeginVideoCodingKHR* command and ending with a *vkCmdEndVideoCodingKHR* command that encompasses a set of video decode or encode operations.

**Video Coding Operations**
Any operations recorded into a command buffer within a video coding scope, including video decode and encode operations.

**Video Decode Operation**
An operation consuming data from a video bitstream buffer and zero or more reference pictures, and producing data to a decode output picture and an optional reconstructed picture.

**Video Encode Operation**
An operation consuming data from an encode input picture and zero or more reference pictures, and producing data to a video bitstream buffer and an optional reconstructed picture.

**Video Picture Resource**
A resource that represents a multi-dimensional formatted interpretation of device memory to be used with a video session as a decode output picture, encode input picture, reconstructed picture, and/or reference picture. It *may* contain metadata associated with a particular video session it is used with. Represented by a *VkImage* object and referred to using *VkImageView* objects created from it.

**Video Session**
A resource that represents and maintains the state needed to perform video decode or encode operations. Represented by a *VkVideoSessionKHR* object.

**Video Session Parameters**
A resource that stores preprocessed codec-specific parameters used with a compatible video session in video codec operations. Represented by a *VkVideoSessionParametersKHR* object.

**Video Transcoding**
The process of using the outputs of video decoding operations as inputs in video encoding operations.
**View Mask**

When multiview is enabled, a view mask is a property of a subpass controlling which views the rendering commands are broadcast to.

**View Volume**

A subspace in homogeneous coordinates, corresponding to post-projection x and y values between -1 and +1, and z values between 0 and +1.

**Viewport Transformation**

A transformation from normalized device coordinates to framebuffer coordinates, based on a viewport rectangle and depth range.

**Visibility Operation**

An operation that causes available values to become visible to specified memory accesses.

**Visible**

A state of values written to memory that allows them to be accessed by a set of operations.

**Common Abbreviations**

The abbreviations and acronyms defined in this section are sometimes used in the Specification and the API where they are considered clear and commonplace.

**Src**

Source

**Dst**

Destination

**Min**

Minimum

**Max**

Maximum

**Rect**

Rectangle

**Info**

Information

**LOD**

Level of Detail

**Log**

Logarithm
Video-Specific Abbreviations

The following abbreviations and acronyms are used in the context of video decode and encode operations to refer to commonly used video compression terms in their usual abbreviated form:

**AVC**
Advanced Video Coding

**Bipred**
Bidirectional Prediction

**CABAC**
Context-Adaptive Binary Arithmetic Coding

**CAVLC**
Context-Adaptive Variable-Length Coding

**CBR**
Constant Bit Rate
CTB  
Coding Tree Block

Diff  
Difference

DPB  
Decoded Picture Buffer

GOP  
Group Of Pictures

HDR  
High Dynamic Range

HEVC  
High Efficiency Video Coding

HRD  
Hypothetical Reference Decoder

IDC  
Indicator

IDR  
Instantaneous Decoder Refresh

MB  
Macroblock

MV  
Motion Vector

NALU  
Network Abstraction Layer Unit

PCM  
Pulse-Code Modulation

Pic  
Picture

Pred  
Prediction

PPS  
Picture Parameter Set
Prefixes

Prefixes are used in the API to denote specific semantic meaning of Vulkan names, or as a label to avoid name clashes, and are explained here:

**VK/Vk/vk**
- Vulkan namespace
- All types, commands, enumerants and defines in this specification are prefixed with these two characters.

**PFN/pfn**
- Function Pointer
- Denotes that a type is a function pointer, or that a variable is of a pointer type.

**P**
- Pointer
- Variable is a pointer.

**vkCmd**
- Commands that record commands in command buffers
- These API commands do not result in immediate processing on the device. Instead, they record the requested action in a command buffer for execution when the command buffer is submitted to a queue.

**s**
- Structure
- Used to denote the `VK_STRUCTURE_TYPE*` member of each structure in `sType`
Appendix J: Credits (Informative)

Vulkan 1.3 is the result of contributions from many people and companies participating in the Khronos Vulkan Working Group, as well as input from the Vulkan Advisory Panel.

Members of the Working Group, including the company that they represented at the time of their most recent contribution, are listed in the following section. Some specific contributions made by individuals are listed together with their name.

Working Group Contributors to Vulkan

- Aaron Greig, Codeplay Software Ltd. (version 1.1)
- Aaron Hagan, AMD (version 1.1)
- Adam Jackson, Red Hat (versions 1.0, 1.1)
- Adam Śmigielski, Mobica (version 1.0)
- Aditi Verma, Qualcomm (version 1.3)
- Ahmed Abdelkhalek, AMD (version 1.3)
- Aidan Fabius, Core Avionics & Industrial Inc. (version 1.2)
- Alan Baker, Google (versions 1.1, 1.2, 1.3)
- Alan Ward, Google (versions 1.1, 1.2)
- Alejandro Piñeiro, Igalia (version 1.1)
- Alex Bourd, Qualcomm Technologies, Inc. (versions 1.0, 1.1)
- Alex Crabb, Caster Communications (versions 1.2, 1.3)
- Alex Walters, Imagination Technologies (versions 1.2, 1.3)
- Alexander Galazin, Arm (versions 1.0, 1.1, 1.2, 1.3)
- Alexey Sachkov, Intel (version 1.3)
- Allan MacKinnon, Google (version 1.3)
- Allen Hux, Intel (version 1.0)
- Alon Or-bach, Google (versions 1.0, 1.1, 1.2, 1.3) (WSI technical sub-group chair)
- Anastasia Stulova, Arm (versions 1.2, 1.3)
- Andreas Vasilakis, Think Silicon (version 1.2)
- Andres Gomez, Igalia (version 1.1)
- Andrew Cox, Samsung Electronics (version 1.0)
- Andrew Ellem, Google (version 1.3)
- Andrew Garrard, Imagination Technologies (versions 1.0, 1.1, 1.2, 1.3) (format wrangler)
- Andrew Poole, Samsung Electronics (version 1.0)
- Andrew Rafter, Samsung Electronics (version 1.0)
• Andrew Richards, Codeplay Software Ltd. (version 1.0)
• Andrew Woloszyn, Google (versions 1.0, 1.1)
• Ann Thorsnes, Khronos (versions 1.2, 1.3)
• Antoine Labour, Google (versions 1.0, 1.1)
• Aras Pranckevičius, Unity Technologies (version 1.0)
• Arseny Kapoulkine, Roblox (version 1.3)
• Ashwin Kolhe, NVIDIA (version 1.0)
• Baldur Karlsson, Valve Software (versions 1.1, 1.2, 1.3)
• Barthold Lichtenbelt, NVIDIA (version 1.1)
• Bas Nieuwenhuizen, Google (versions 1.1, 1.2)
• Ben Bowman, Imagination Technologies (version 1.0)
• Benj Lipchak, Unknown (version 1.0)
• Bill Hollings, Brenwill (versions 1.0, 1.1, 1.2, 1.3)
• Bill Licea-Kane, Qualcomm Technologies, Inc. (versions 1.0, 1.1)
• Blaine Kohl, Khronos (versions 1.2, 1.3)
• Bob Fraser, Google (version 1.3)
• Boris Zanin, Mobica (versions 1.2, 1.3)
• Brent E. Insko, Intel (version 1.0)
• Brian Ellis, Qualcomm Technologies, Inc. (version 1.0)
• Brian Paul, VMware (versions 1.2, 1.3)
• Caio Marcelo de Oliveira Filho, Intel (versions 1.2, 1.3)
• Cass Everitt, Oculus VR (versions 1.0, 1.1)
• Cemil Azizoglu, Canonical (version 1.0)
• Lina Versace, Google (versions 1.0, 1.1, 1.2)
• Chang-Hyo Yu, Samsung Electronics (version 1.0)
• Charles Giessen, LunarG (version 1.3)
• Chia-I Wu, LunarG (version 1.0)
• Chris Frascati, Qualcomm Technologies, Inc. (version 1.0)
• Chris Glover, Google (version 1.3)
• Christian Forfang, Arm (version 1.3)
• Christoph Kubisch, NVIDIA (version 1.3)
• Christophe Riccio, Unity Technologies (versions 1.0, 1.1)
• Cody Northrop, Unity Technologies (version 1.0)
• Colin Riley, AMD (version 1.1)
• Cort Stratton, Google (versions 1.1, 1.2)
• Courtney Goeltzenleuchter, Google (versions 1.0, 1.1, 1.3)
• Craig Davies, Huawei (version 1.2)
• Dae Kim, Imagination Technologies (version 1.1)
• Damien Leone, NVIDIA (version 1.0)
• Dan Baker, Oxide Games (versions 1.0, 1.1)
• Dan Ginsburg, Valve Software (versions 1.0, 1.1, 1.2, 1.3)
• Daniel Johnston, Intel (versions 1.0, 1.1)
• Daniel Koch, NVIDIA (versions 1.0, 1.1, 1.2, 1.3)
• Daniel Rakos, AMD (versions 1.0, 1.1, 1.2, 1.3)
• Daniel Stone, Collabora (versions 1.1, 1.2)
• Daniel Vetter, Intel (version 1.2)
• David Airlie, Red Hat (versions 1.0, 1.1, 1.2, 1.3)
• David Mao, AMD (versions 1.0, 1.2)
• David Miller, Miller & Mattson (versions 1.0, 1.1) (Vulkan reference card)
• David Neto, Google (versions 1.0, 1.1, 1.2, 1.3)
• David Pankratz, Huawei (version 1.3)
• David Wilkinson, AMD (version 1.2)
• David Yu, Pixar (version 1.0)
• Dejan Mircevski, Google (version 1.1)
• Diego Novillo, Google (version 1.3)
• Dimitris Georgakakis, Think Silicon (version 1.3)
• Dominik Witczak, AMD (versions 1.0, 1.1, 1.3)
• Donald Scorgie, Imagination Technologies (version 1.2)
• Dzmitry Malyshau, Mozilla (versions 1.1, 1.2, 1.3)
• Ed Hutchins, Oculus (version 1.2)
• Emily Stearns, Khronos (versions 1.2, 1.3)
• François Duranleau, Gameloft (version 1.3)
• Fred Liao, Mediatek (version 1.0)
• Gabe Dagani, Freescale (version 1.0)
• Gabor Sines, AMD (version 1.2)
• Graeme Leese, Broadcom (versions 1.0, 1.1, 1.2, 1.3)
• Graham Connor, Imagination Technologies (version 1.0)
• Graham Sellers, AMD (versions 1.0, 1.1)
• Graham Wihlidal, Electronic Arts (version 1.3)
• Greg Fischer, LunarG (version 1.1)
• Gregory Grebe, AMD (version 1.3)
• Hai Nguyen, Google (versions 1.2, 1.3)
• Hans-Kristian Arntzen, Valve Software (versions 1.1, 1.2, 1.3)
• Henri Verbeet, Codeweavers (version 1.2)
• Huei Long Wang, Huawei (version 1.3)
• Hwanyong Lee, Kyungpook National University (version 1.0)
• Iago Toral, Igalia (versions 1.1, 1.2)
• Ian Elliott, Google (versions 1.0, 1.1, 1.2)
• Ian Romanick, Intel (versions 1.0, 1.1, 1.3)
• Ivan Briano, Intel (version 1.3)
• James Fitzpatrick, Imagination (version 1.3)
• James Hughes, Oculus VR (version 1.0)
• James Jones, NVIDIA (versions 1.0, 1.1, 1.2, 1.3)
• James Riordon, Khronos (versions 1.2, 1.3)
• Jamie Madill, Google (version 1.3)
• Jan Hermes, Continental Corporation (versions 1.0, 1.1)
• Jan-Harald Fredriksen, Arm (versions 1.0, 1.1, 1.2, 1.3)
• Faith Ekstrand, Intel (versions 1.0, 1.1, 1.2, 1.3)
• Jean-François Roy, Google (versions 1.1, 1.2, 1.3)
• Jeff Bolz, NVIDIA (versions 1.0, 1.1, 1.2, 1.3)
• Jeff Juliano, NVIDIA (versions 1.0, 1.1, 1.2)
• Jeff Leger, Qualcomm Technologies, Inc. (versions 1.1, 1.3)
• Jeff Phillips, Khronos (version 1.3)
• Jeff Vigil, Samsung Electronics (versions 1.0, 1.1, 1.2, 1.3)
• Jens Owen, Google (versions 1.0, 1.1)
• Jeremy Hayes, LunarG (version 1.0)
• Jesse Barker, Unity Technologies (versions 1.0, 1.1, 1.2, 1.3)
• Jesse Hall, Google (versions 1.0, 1.1, 1.2, 1.3)
• Joe Davis, Samsung Electronics (version 1.1)
• Johannes van Waveren, Oculus VR (versions 1.0, 1.1)
• John Anthony, Arm (version 1.2, 1.3)
• John Kessenich, Google (versions 1.0, 1.1, 1.2, 1.3) (SPIR-V and GLSL for Vulkan spec author)
• John McDonald, Valve Software (versions 1.0, 1.1, 1.2, 1.3)
• John Zulauf, LunarG (versions 1.1, 1.2, 1.3)
- Jon Ashburn, LunarG (version 1.0)
- Jon Leech, Independent (versions 1.0, 1.1, 1.2, 1.3) (XML toolchain, normative language, release wrangler)
- Jonas Gustavsson, Samsung Electronics (versions 1.0, 1.1)
- Jonas Meyer, Epic Games (versions 1.2, 1.3)
- Jonathan Hamilton, Imagination Technologies (version 1.0)
- Jordan Justen, Intel (version 1.1)
- Joshua Ashton, Valve Software (version 1.3)
- Jungwoo Kim, Samsung Electronics (versions 1.0, 1.1)
- Jörg Wagner, Arm (version 1.1)
- Kalle Raita, Google (version 1.1)
- Karen Ghavam, LunarG (versions 1.1, 1.2, 1.3)
- Karl Schultz, LunarG (versions 1.1, 1.2)
- Kathleen Mattson, Khronos (versions 1.0, 1.1, 1.2)
- Kaye Mason, Google (version 1.2)
- Keith Packard, Valve (version 1.2)
- Kenneth Benzie, Codeplay Software Ltd. (versions 1.0, 1.1)
- Kenneth Russell, Google (version 1.1)
- Kerch Holt, NVIDIA (versions 1.0, 1.1)
- Kevin O'Neil, AMD (version 1.1)
- Kevin Petit, Arm (version 1.3)
- Kris Rose, Khronos (versions 1.2, 1.3)
- Kristian Kristensen, Intel (versions 1.0, 1.1)
- Krzysztof Iwanicki, Samsung Electronics (version 1.0)
- Larry Seiler, Intel (version 1.0)
- Laura Shubel, Caster Communications (version 1.3)
- Lauri Ilola, Nokia (version 1.1)
- Lei Zhang, Google (version 1.2)
- Lenny Komow, LunarG (versions 1.1, 1.2)
- Liam Middlebrook, NVIDIA (version 1.3)
- Lionel Landwerlin, Intel (versions 1.1, 1.2)
- Lisie Aartsen, Khronos (version 1.3)
- Liz Maitral, Khronos (version 1.2)
- Lou Kramer, AMD (version 1.3)
- Lutz Latta, Lucasfilm (version 1.0)
• Maciej Jesionowski, AMD (version 1.1)
• Mais Alnasser, AMD (version 1.1)
• Marcin Kantoch, AMD (version 1.3)
• Marcin Rogucki, Mobica (version 1.1)
• Maria Rovatsou, Codeplay Software Ltd. (version 1.0)
• Mariusz Merecki, Intel (version 1.3)
• Mark Bellamy, Arm (version 1.2, 1.3)
• Mark Callow, Independent (versions 1.0, 1.1, 1.2, 1.3)
• Mark Kilgard, NVIDIA (versions 1.1, 1.2)
• Mark Lobodzinski, LunarG (versions 1.0, 1.1, 1.2)
• Mark Young, LunarG (versions 1.1, 1.3)
• Markus Tavenrath, NVIDIA (version 1.1)
• Marty Johnson, Khronos (version 1.3)
• Mateusz Przybyliski, Intel (version 1.0)
• Mathias Heyer, NVIDIA (versions 1.0, 1.1)
• Mathias Schott, NVIDIA (versions 1.0, 1.1)
• Mathieu Robart, Arm (version 1.2)
• Matt Netsch, Qualcomm Technologies, Inc. (version 1.1)
• Matthew Rusch, NVIDIA (version 1.3)
• Matthäus Chajdas, AMD (versions 1.1, 1.2, 1.3)
• Maurice Ribble, Qualcomm Technologies, Inc. (versions 1.0, 1.1)
• Maxim Lukyanov, Samsung Electronics (version 1.0)
• Michael Blumenkrantz, Self (version 1.3)
• Michael Lentine, Google (version 1.0)
• Michael O’Hara, AMD (version 1.1)
• Michael Phillip, Samsung Electronics (version 1.2)
• Michael Wong, Codeplay Software Ltd. (version 1.1)
• Michael Worcester, Imagination Technologies (versions 1.0, 1.1)
• Michal Pietrasiuk, Intel (versions 1.0, 1.3)
• Mika Isojarvi, Google (versions 1.0, 1.1)
• Mike Schuchardt, LunarG (versions 1.1, 1.2)
• Mike Stroyan, LunarG (version 1.0)
• Mike Weiblen, LunarG (versions 1.1, 1.2, 1.3)
• Minyoung Son, Samsung Electronics (version 1.0)
• Mitch Singer, AMD (versions 1.0, 1.1, 1.2, 1.3)
• Mythri Venugopal, Samsung Electronics (version 1.0)
• Naveen Leekha, Google (version 1.0)
• Neil Henning, AMD (versions 1.0, 1.1, 1.2, 1.3)
• Neil Hickey, Arm (version 1.2)
• Neil Trevett, NVIDIA (versions 1.0, 1.1, 1.2, 1.3)
• Nick Penwarden, Epic Games (version 1.0)
• Nicolai Hähnle, AMD (version 1.1)
• Niklas Smedberg, Unity Technologies (version 1.0)
• Norbert Nopper, Independent (versions 1.0, 1.1)
• Nuno Subtil, NVIDIA (versions 1.1, 1.2, 1.3)
• Pat Brown, NVIDIA (version 1.0)
• Patrick Cozzi, Independent (version 1.1)
• Patrick Doane, Blizzard Entertainment (version 1.0)
• Peter Lohrmann, AMD (versions 1.0, 1.2)
• Petros Bantolas, Imagination Technologies (version 1.1)
• Philip Rebohle, Valve Software (version 1.3)
• Pierre Boudier, NVIDIA (versions 1.0, 1.1, 1.2, 1.3)
• Pierre-Loup Griffais, Valve Software (versions 1.0, 1.1, 1.2, 1.3)
• Piers Daniell, NVIDIA (versions 1.0, 1.1, 1.2, 1.3)
• Ping Liu, Intel (version 1.3)
• Piotr Bialecki, Intel (version 1.0)
• Piotr Byszewski, Mobica (version 1.3)
• Prabindh Sundareson, Samsung Electronics (version 1.0)
• Pyry Haulos, Google (versions 1.0, 1.1) (Vulkan conformance test subcommittee chair)
• Rachel Bradshaw, Caster Communications (version 1.3)
• Rajeev Rao, Qualcomm (version 1.2)
• Ralph Potter, Samsung Electronics (versions 1.1, 1.2, 1.3)
• Raun Krisch, Samsung Electronics (version 1.3)
• Ray Smith, Arm (versions 1.0, 1.1, 1.2)
• Ricardo Garcia, Igalia (version 1.3)
• Richard Huddy, Samsung Electronics (versions 1.2, 1.3)
• Rob Barris, NVIDIA (version 1.1)
• Rob Stepinski, Transgaming (version 1.0)
• Robert Simpson, Qualcomm Technologies, Inc. (versions 1.0, 1.1, 1.3)
• Rolando Caloca Olivares, Epic Games (versions 1.0, 1.1, 1.2, 1.3)
Ronan Keryell, Xilinx (version 1.3)
Roy Ju, Mediatek (version 1.0)
Rufus Hamade, Imagination Technologies (version 1.0)
Ruihao Zhang, Qualcomm Technologies, Inc. (versions 1.1, 1.2, 1.3)
Samuel Huang, Mediatek (version 1.3)
Samuel Iglesias Gonsalvez, Igalia (version 1.3)
Sascha Willems, Self (version 1.3)
Sean Ellis, Arm (version 1.0)
Sean Harmer, KDAB Group (versions 1.0, 1.1)
Shannon Woods, Google (versions 1.0, 1.1, 1.2, 1.3)
Slawomir Cygan, Intel (versions 1.0, 1.1, 1.3)
Slawomir Grajewski, Intel (versions 1.0, 1.1, 1.3)
Sorel Bosan, AMD (version 1.1)
Spencer Fricke, Samsung Electronics (versions 1.2, 1.3)
Stefanus Du Toit, Google (version 1.0)
Stephen Huang, Mediatek (version 1.1)
Steve Hill, Broadcom (versions 1.0, 1.2)
Steve Viggers, Core Avionics & Industrial Inc. (versions 1.0, 1.2)
Steve Winston, Holochip (version 1.3)
Stuart Smith, AMD (versions 1.0, 1.1, 1.2, 1.3)
Sujeewan Rajayogam, Google (version 1.3)
Tilmann Scheller, Samsung Electronics (version 1.1)
Tim Foley, Intel (version 1.0)
Tim Lewis, Khronos (version 1.3)
Timo Suoranta, AMD (version 1.0)
Timothy Lottes, AMD (versions 1.0, 1.1)
Tobias Hector, AMD (versions 1.0, 1.1, 1.2, 1.3) (validity language and toolchain)
Tobin Ehlis, LunarG (version 1.0)
Tom Olson, Arm (versions 1.0, 1.1, 1.2, 1.3) (Working Group chair)
Tomasz Bednarz, Independent (version 1.1)
Tomasz Kubale, Intel (version 1.0)
Tony Barbour, LunarG (versions 1.0, 1.1, 1.2)
Tony Zlatinski, NVIDIA (version 1.3)
Victor Eruhimov, Unknown (version 1.1)
Vikram Kushwaha, NVIDIA (version 1.3)
Other Credits

The Vulkan Advisory Panel members provided important real-world usage information and advice that helped guide design decisions.

The wider Vulkan community have provided useful feedback, questions and specification changes that have helped improve the quality of the Specification via GitHub.

Administrative support to the Working Group for Vulkan 1.1, 1.2, and 1.3 was provided by Khronos staff including Ann Thorsnes, Blaine Kohl, Dominic Agoro-Ombaka, Emily Stearns, Jeff Phillips, Lisie Aartsen, Liz Maitral, Marty Johnson, Tim Lewis, and Xiao-Yu CHENG; and by Alex Crabb, Laura Shubel, and Rachel Bradshaw of Caster Communications.

Administrative support for Vulkan 1.0 was provided by Andrew Riegel, Elizabeth Riegel, Glenn Fredericks, Kathleen Mattson and Michelle Clark of Gold Standard Group.

Technical support was provided by James Riordon, site administration of Khronos.org and OpenGL.org.
